As I do not presume to determine what were the antecedent internal elements out of which the Hellenic aggregate was formed, so I confess myself equally uninformed with regard to its external constituents. Kadmus, Danaus, Kekrops, — the eponyms of the Kadmeians, of the Danaans, and of the Attic Kekropia, — present themselves to my vision as creatures of legend, and in that character I have already adverted to them. That there may have been very early settlements in continental Greece, from Phœnicia and Egypt, is nowise impossible; but I see neither positive proof, nor ground for probable inference, that there were any such, though traces of Phœnician settlements in some of the islands may doubtless be pointed out. And if we examine the character and aptitudes of Greeks, as compared either with Egyptians or Phœnicians, it will appear that there is not only no analogy, but an obvious and fundamental contrast: the Greek may occasionally be found as a borrower from these ultramarine contemporaries, but he cannot be looked upon as their offspring or derivative. Nor can I bring myself to accept an hypothesis which implies (unless we are to regard the supposed foreign emigrants as very

made of its various dialects and diversities), as contrasted with Persian, Phœnician, or Latin, — and of Italian generally, as contrasted with German or English. It is this comparison which Herodotus is taking, when he describes the language spoken by the people of Krêstôn and Plakia, and which he notes by the word βάρβαρον as opposed to Ἑλληνικόν: it is with reference to this comparison that χαρακτὴρ γλώσσης, in the fifty-seventh chapter, is to be construed. The word βάρβαρος is the usual and recognized antithesis of Ἕλλην, or Ἑλληνικός.

It is not the least remarkable part of the statement of Herodotus, that the language spoken at Krêstôn and at Plakia was the same, though the places were so far apart from each other. This identity of itself shows that he meant to speak of a substantive language, not of a "strange jargon."

I think it, therefore, certain that Herodotus pronounces the Pelasgians of his day to speak a substantive language different from Greek; but whether differing from it in a greater or less degree (*e. g.* in the degree of Latin or of Phœnician), we have no means of deciding.

few in number, in which case the question loses most of its importance) that the Hellenic language — the noblest among the many varieties of human speech, and possessing within itself a pervading symmetry and organization — is a mere confluence of two foreign barbaric languages (Phœnician and Egyptian) with two or more internal barbaric languages, — Pelasgian, Lelegian, etc. In the mode of investigation pursued by different historians into this question of early foreign colonies, there is great difference (as in the case of the Pelasgi) between the different authors, — from the acquiescent Euemerism of Raoul Rochette to the refined distillation of Dr. Thirlwall, in the third chapter of his History. It will be found that the amount of positive knowledge which Dr. Thirlwall guarantees to his readers in that chapter is extremely inconsiderable; for though he proceeds upon the general theory (different from that which I hold) that historical matter may be distinguished and elicited from the legends, yet when the question arises respecting any definite historical result, his canon of credibility is too just to permit him to overlook the absence of positive evidence, even when all intrinsic incredibility is removed. That which I note as Terra Incognita, is in his view a land which may be known up to a certain point; but the map which he draws of it contains so few ascertained places as to differ very little from absolute vacuity.

The most ancient district called Hellas is affirmed by Aristotle to have been near Dôdôna and the river Achelôus, — a description which would have been unintelligible (since the river does not flow near Dôdôna), if it had not been qualified by the remark, that the river had often in former times changed its course. He states, moreover, that the deluge of Deukaliôn took place chiefly in this district, which was in those early days inhabited by the Selli, and by the people then called Græci, but now Hellenes.[1] The Selli (called by Pindar, Helli) are mentioned in the Iliad as the ministers of the Dodonæan Zeus, — "men who slept on the ground, and never washed their feet;" and Hesiod, in one of the lost poems (the Eoiai), speaks of the fat land and rich pastures of the land called Hellopia, wherein Dôdôna was situated.[2] On

[1] Aristotel. Meteorol. i. 14.

[2] Homer, Iliad, xvi. 234; Hesiod, Fragm. 149, ed. Marktscheffel; Sophokl. Trachin. 1174; Strabo, vii. p. 328.

what authority Aristotle made his statement, we do not know; but the general feeling of the Greeks was different, — connecting Deukaliôn, Hellen, and the Hellenes, primarily and specially with the territory called Achaia Phthiôtis, between Mount Othrys and Œta. Nor can we either affirm or deny his assertion that the people in the neighborhood of Dôdôna were called Græci before they were called Hellenes. There is no ascertained instance of the mention of a people called Græci, in any author earlier than this Aristotelian treatise; for the allusions to Alkman and Sophoklês prove nothing to the point.[1] Nor can we explain how it came to pass that the Hellenes were known to the Romans only under the name of Græci, or Graii. But the name by which a people is known to foreigners is often completely different from its own domestic name, and we are not less at a loss to assign the reason, how the Rasena of Etruria came to be known to the Romans by the name of Tuscans, or Etruscans.

CHAPTER III.

MEMBERS OF THE HELLENIC AGGREGATE, SEPARATELY TAKEN. — GREEKS NORTH OF PELOPONNESUS.

HAVING in the preceding chapter touched upon the Greeks in their aggregate capacity, I now come to describe separately the portions of which this aggregate consisted, as they present themselves at the first discernible period of history.

[1] Stephan. Byz. v. Γραικός. — Γραῖκες δὲ παρὰ τῷ Ἀλκμᾶνι αἱ τῶν Ἑλλήνων μητέρες, καὶ παρὰ Σοφοκλεῖ ἐν Ποίμεσιν. ἐστὶ δὲ ἡ μεταπλασμὸς, ἢ τῆς Γραῖξ εὐθείας κλίσις ἐστίν.

The word Γραῖκες, in Alkman, meaning "the mothers of the Hellenes," may well be only a dialectic variety of γρᾶες, analogous to κλᾷξ and ὄρνιξ, for κλεὶς, ὄρνις, etc. (Ahrens, De Dialecto Dorica, sect. 11, p. 91; and sect. 31, p. 242), perhaps declined like γυναῖκες.

The term used by Sophoklês, if we may believe Photius, was not Γραικὸς, but Ῥαικός (Photius, p. 480, 15; Dindorf, Fragment. Soph. 933: compare 655). Eustathius (p. 890) seems undecided between the two

It has already been mentioned that the twelve races or subdivisions, members of what is called the Amphiktyonic convocation, were as follows: —

North of the pass of Thermopylæ,— Thessalians, Perrhæbians Magnêtes, Achæans, Melians, Ænianes, Dolopes.

South of the pass of Thermopylæ,— Dorians, Ionians, Bœotians, Lokrians, Phokians.

Other Hellenic races, not comprised among the Amphiktyons, were —

The Ætolians and Akarnanians, north of the gulf of Corinth.

The Arcadians, Eleians, Pisatans, and Triphylians, in the central and western portion of Peloponnêsus: I do not here name the Achæans, who occupied the southern or Peloponnesian coast of the Corinthian gulf, because they may be presumed to have been originally of the same race as the Phthiot Achæans, and therefore participant in the Amphiktyonic constituency, though their actual connection with it may have been disused.

The Dryopes, an inconsiderable, but seemingly peculiar subdivision, who occupied some scattered points on the sea-coast, — Hermionê on the Argolic peninsula; Styrus and Karystus in Eubœa; the island of Kythnus, etc.

Though it may be said, in a general way, that our historical discernment of the Hellenic aggregate, apart from the illusions of legend, commences with 776 B. C., yet, with regard to the larger number of its subdivisions just enumerated, we can hardly be said to possess any specific facts anterior to the invasion of Xerxes in 480 B. C. Until the year 560 B C., (the epoch of Crœsus in Asia Minor, and of Peisistratus at Athens,) the history of the Greeks presents hardly anything of a collective character: the movements of each portion of the Hellenic world begin and end apart from the rest. The destruction of Kirrha by the Amphiktyons is the first historical incident which brings into play, in defence of the Delphian temple, a common Hellenic feeling of active obligation.

But about 560 B. C., two important changes are seen to come into operation, which alter the character of Grecian history, — extricating it out of its former chaos of detail, and centralizing its isolated phenomena: 1. The subjugation of the Asiatic Greeks by Lydia and by Persia, followed by their struggles for

emancipation, — wherein the European Greeks became implicated, first as accessories, and afterwards as principals. 2. The combined action of the large mass of Greeks under Sparta, as their most powerful state and acknowledged chief, succeeded by the rapid and extraordinary growth of Athens, the complete development of Grecian maritime power, and the struggle between Athens and Sparta for the headship. These two causes, though distinct in themselves, must, nevertheless, be regarded as working together to a certain degree, — or rather, the second grew out of the first. For it was the Persian invasions of Greece which first gave birth to a wide-spread alarm and antipathy among the leading Greeks (we must not call it Pan-Hellenic, since more than half of the Amphiktyonic constituency gave earth and water to Xerxes) against the barbarians of the East, and impressed them with the necessity of joint active operations under a leader. The idea of a leadership or hegemony of collective Hellas, as a privilege necessarily vested in some one state for common security against the barbarians, thus became current, — an idea foreign to the mind of Solôn, or any one of the same age. Next, came the miraculous development of Athens, and the violent contest between her and Sparta, which should be the leader; the larger portion of Hellas taking side with one or the other, and the common quarrel against the Persian being for the time put out of sight. Athens is put down, Sparta acquires the undisputed hegemony, and again the anti-barbaric feeling manifests itself, though faintly, in the Asiatic expeditions of Agesilaus. But the Spartans, too incompetent either to deserve or maintain this exalted position, are overthrown by the Thebans, — themselves not less incompetent, with the single exception of Epameinondas. The death of that single man extinguishes the pretensions of Thebes to the hegemony, and Hellas is left, like the deserted Penelopê in the Odyssey, worried by the competition of several suitors, none of whom is strong enough to stretch the bow on which the prize depends.[1] Such a manifestation of force, as well as the trampling down of

[1] Xenophon, Hellen. vii. 5, 27; Demosthenes, De Coron. c. 7, p. 231 — *ἀλλά τις ἦν ἀκριτος καὶ παρὰ τούτοις καὶ παρὰ τοῖς ἄλλοις Ἕλλησιν ἔρις καὶ ταραχή.*

the competing suitors, is reserved, not for any legitimate Hellenic arm, but for a semi-Hellenized[1] Macedonian, "brought up at Pella," and making good his encroachments gradually from the north of Olympus. The hegemony of Greece thus passes forever out of Grecian hands; but the conqueror finds his interest in rekindling the old sentiment under the influence of which it had first sprung up. He binds to him the discordant Greeks, by the force of their ancient and common antipathy against the Great King, until the desolation and sacrilege once committed by Xerxes at Athens is avenged by annihilation of the Persian empire. And this victorious consummation of Pan-Hellenic antipathy, — the dream of Xenophon[2] and the Ten Thousand Greeks after the battle of Kunaxa, — the hope of Jason of Pheræ, — the exhortation of Isokratês,[3] — the project of Philip, and the achievement of Alexander, — while it manifests the irresistible might of Hellenic ideas and organization in the then existing state of the world, is at the same time the closing scene of substantive Grecian life. The citizen-feelings of Greece become afterwards merely secondary forces, subordinate to the preponderance of Greek mercenaries under Macedonian order, and to the rudest of all native Hellens, — the Ætolian mountaineers. Some few individuals are indeed found, even in the third century B. C., worthy of the best times of Hellas, and the Achæan confederation of that century is an honorable attempt to contend against irresistible difficulties: but on the whole, that free, social, and political march, which gives so much interest to the earlier centuries, is irrevocably banished from Greece after the generation of Alexander the Great.

The foregoing brief sketch will show that, taking the period from Crœsus and Peisistratus down to the generation of Alexander (560–300 B. C.), the phenomena of Hellas generally, and

[1] Demosthen. de Coron. c. 21, p. 247.

[2] Xenophon, Anabas. iii. 2, 25–26.

[3] Xenophon, Hellen. vi. 1, 12; Isocrates, Orat. ad Philipp., Orat. v. p. 107. This discourse of Isokratês is composed expressly for the purpose of calling on Philip to put himself at the head of united Greece against the Persians the Oratio iv, called Panegyrica, recommends a combination of all Greeks for the same purpose, but under the hegemony of Athens, putting aside all intestine differences: see Orat. iv. pp. 45–68.

her relations both foreign and inter-political, admit of being grouped together in masses, with continued dependence on one or a few predominant circumstances. They may be said to constitute a sort of historical epopee, analogous to that which Herodotus has constructed out of the wars between Greeks and barbarians, from the legends of Iô and Eurôpa down to the repulse of Xerxes. But when we are called back to the period between 776 and 560 B. C., the phenomena brought to our knowledge are scanty in number, — exhibiting few common feelings or interests, and no tendency towards any one assignable purpose. To impart attraction to this first period, so obscure and unpromising, we shall be compelled to consider it in its relation with the second; partly as a preparation, partly as a contrast.

Of the extra-Peloponnesian Greeks north of Attica, during these two centuries, we know absolutely nothing; but it will be possible to furnish some information respecting the early condition and struggles of the great Dorian states in Peloponnesus, and respecting the rise of Sparta from the second to the first place in the comparative scale of Grecian powers. Athens becomes first known to us at the legislation of Drako and the attempt of Kylôn (620 B. C.) to make himself despot; and we gather some facts concerning the Ionic cities in Eubœa and Asia Minor, during the century of their chief prosperity, prior to the reign and conquests of Crœsus. In this way, we shall form to ourselves some idea of the growth of Sparta and Athens, — of the short-lived and energetic development of the Ionic Greeks, — and of the slow working of those causes which tended to bring about increased Hellenic intercommunication, — as contrasted with the enlarged range of ambition, the grand Pan-Hellenic ideas, the systematized party-antipathies, and the intensified action, both abroad and at home, which grew out of the contest with Persia.

There are also two or three remarkable manifestations which will require special notice during this first period of Grecian history: 1. The great multiplicity of colonies sent forth by individual cities, and the rise and progress of these several colonies; 2. The number of despots who arose in the various Grecian cities; 3. The lyric poetry; 4. The rudiments of that

which afterwards ripened into moral philosophy, as manifested in gnomes, or aphorisms, — or the age of the Seven Wise Men.

But before I proceed to relate those earliest proceedings (unfortunately too few) of the Dorians and Ionians during the historical period, together with the other matters just alluded to, it will be convenient to go over the names and positions of those other Grecian states respecting which we have no information during these first two centuries. Some idea will thus be formed of the less important members of the Hellenic aggregate, previous to the time when they will be called into action. We begin by the territory north of the pass of Thermopylæ.

Of the different races who dwelt between this celebrated pass and the mouth of the river Peneius, by far the most powerful and important were the Thessalians. Sometimes, indeed, the whole of this area passes under the name of Thessaly, — since nominally, though not always really, the power of the Thessalians extended over the whole. We know that the Trachinian Herakleia, founded by the Lacedæmonians in the early years of the Peloponnesian war, close at the pass of Thermopylæ, was planted upon the territory of the Thessalians.[1] But there were also within these limits other races, inferior and dependent on the Thessalians, yet said to be of more ancient date, and certainly not less genuine subdivisions of the Hellenic name. The Perrhæbi[2] occupied the northern portion of the territory between the lower course of the river Peneius and Mount Olympus. The Magnêtes[3] dwelt along the eastern coast, between Mount Ossa and Pelion on one side and the Ægean on the other, comprising the south-eastern cape and the eastern coast of the gulf of Pagasæ as far as Iôlkos. The Achæans occupied the territory called Phthiôtis, extending from near Mount Pindus on the west to the gulf of Pagasæ on the east,[4] — along the mountain chain

[1] Thucyd. iii. 93. Οἱ Θεσσαλοὶ ἐν δυνάμει ὄντες τῶν ταύτῃ χωρίων, καὶ ὧν ἐπὶ τῇ γῇ ἐκτίζετο (Herakleia), etc.

[2] Herodot. vii. 173; Strabo, ix. pp. 440–441. Herodotus notices the pass over the chain of Olympus or the Cambunian mountains by which Xerxes and his army passed out of Macedonia into Perrhæbia; see the description of the pass and the neighboring country in Leake, Travels in Northern Greece, ch. xxviii. vol. iii. pp. 338–348; compare Livy, xlii. 53.

[3] Skylax, Periplus, c. 66; Herodot. vii. 183–188.

[4] Skylax, Peripl. c. 64; Strabo, ix. pp. 433–434. Sophoklês included the territory of Trachin in the limits of Phthiôtis (Strabo, *l. c.*). Herodotus considers Phthiôtis as terminating a little north of the river Spercheius (vii. 198).

of Othrys with its lateral projections northerly into the Thessalian plain, and southerly even to its junction with Œta. The three tribes of the Malians dwelt between Achæa Phthiôtis and Thermopylæ, including both Trachin and Herakleia. Westward of Achæa Phthiôtis, the lofty region of Pindus or Tymphrêstus, with its declivities both westward and eastward, was occupied by the Dolopes.

All these five tribes, or subdivisions, — Perrhæbians, Magnetes, Achæans of Phthiôtis, Malians, and Dolopes, together with certain Epirotic and Macedonian tribes besides, beyond the boundaries of Pindus and Olympus, — were in a state of irregular dependence upon the Thessalians, who occupied the central plain or basin drained by the Peneius. That river receives the streams from Olympus, from Pindus, and from Othrys, — flowing through a region which was supposed by its inhabitants to have been once a lake, until Poseidôn cut open the defile of Tempê, through which the waters found an efflux. In travelling northward from Thermopylæ, the commencement of this fertile region — the amplest space of land continuously productive which Hellas presents — is strikingly marked by the steep rock and ancient fortress of Thaumaki;[1] from whence the traveller, passing over the mountains of Achæa Phthiôtis and Othrys, sees before him the plains and low declivities which reach northward across Thessaly to Olympus. A narrow strip of coast — in the interior of the gulf of Pagasæ, between the Magnêtes and the Achæans, and containing the towns of Amphanæum and Pagasæ[2] — belonged to

[1] See the description of Thaumaki in Livy, xxxii. 4, and in Dr. Holland's Travels, ch. xvii. vol. ii. p. 112, — now Thomoko.

[2] Skylax, Peripl. c. 65. Hesychius (v. Παγασίτης Ἀπόλλων) seems to reckon Pagasæ as Achæan.

About the towns in Thessaly, and their various positions, see Mannert, Geograph. der Gr. und Römer, part vii. book iii. ch. 8 and 9.

There was an ancient religious ceremony, celebrated by the Delphians every ninth year (Ennaëtêris): a procession was sent from Delphi to the pass of Tempê, consisting of well-born youths under an archi-theôr, who represented the proceeding ascribed by an old legend to Apollo; that god was believed to have gone thither to receive expiation after the slaughter of

this proper territory of Thessaly, but its great expansion was inland: within it were situated the cities of Pheræ, Pharsalus, Skotussa, Larissa, Krannôn, Atrax, Pharkadôn, Trikka, Metropolis, Pelinna, etc.

The abundance of corn and cattle from the neighboring plains sustained in these cities a numerous population, and above all a proud and disorderly noblesse, whose manners bore much resemblance to those of the heroic times. They were violent in their behavior, eager in armed feud, but unaccustomed to political discussion or compromise; faithless as to obligations, yet at the same time generous in their hospitalities, and much given to the enjoyments of the table.[1] Breeding the finest horses in Greece, they were distinguished for their excellence as cavalry; but their infantry is little noticed, nor do the Thessalian cities seem to have possessed that congregation of free and tolerably equal citizens, each master of his own arms, out of whom the ranks of

the serpent Pytho: at least, this was one among several discrepant legends. The chief youth plucked and brought back a branch from the sacred laurel at Tempê, as a token that he had fulfilled his mission: he returned by "the sacred road," and broke his fast at a place called Δειπνιὰς, near Larissa. A solemn festival, frequented by a large concourse of people from the surrounding regions, was celebrated on this occasion at Tempê, in honor of Apollo Tempeitês (Ἀπλοῦνι Τεμπείτᾳ, in the Æolic dialect of Thessaly: see Inscript. in Boeckh, Corp. Ins. No. 1767). The procession was accompanied by a flute-player.

See Plutarch, Quæst. Græc. ch. xi. p. 292; De Musicâ, ch. xiv. p. 1136, Ælian, V. H. iii. 1: Stephan. Byz. v. Δειπνιάς.

It is important to notice these religious processions as establishing intercourse and sympathies between the distant members of Hellas: but the inferences which O. Müller (Dorians, b. ii. 1, p. 222) would build upon them, as to the original seat of the Dorians and the worship of Apollo, are not to be trusted.

[1] Plato, Krito, c. 15, p. 53. ἐκεῖ γὰρ δὴ πλείστη ἀταξία καὶ ἀκολασία (compare the beginning of the Menôn) — a remark the more striking, since he had just before described the Bœotian Thebes as a well-regulated city, though both Dikæarchus and Polybius represent it in their times as so much the contrary.

See also Demosthen. Olynth. i. c. 9, p. 16, cont. Aristokrat. c. 29, p. 657; Schol. Eurip. Phœniss. 1466; Theopomp. Fragment. 54–178, ed. Didot; Aristophanês, Plut. 521.

The march of political affairs in Thessaly is understood from Xenoph. Hellen. vi. 1: compare Anabas. i. 1, 10, and Thucyd. iv. 78.

hoplites were constituted, — the warlike nobles, such as the Aleuadæ at Larissa, or the Skopadæ at Krannon, despising everything but equestrian service for themselves, furnished, from their extensive herds on the plain, horses for the poorer soldiers. These Thessalian cities exhibit the extreme of turbulent oligarchy, occasionally trampled down by some one man of great vigor, but little tempered by that sense of political communion and reverence for established law, which was found among the better cities of Hellas. Both in Athens and Sparta, so different in many respects from each other, this feeling will be found, if not indeed constantly predominant, yet constantly present and operative. Both of them exhibit a contrast with Larissa or Pheræ not unlike that between Rome and Capua, — the former, with her endless civil disputes constitutionally conducted, admitting the joint action of parties against a common foe; the latter, with her abundant soil enriching a luxurious oligarchy, and impelled according to the feuds of her great proprietors, the Magii, Blossii, and Jubellii.[1]

The Thessalians are, indeed, in their character and capacity as much Epirotic or Macedonian as Hellenic, forming a sort of link between the two. For the Macedonians, though trained in aftertimes upon Grecian principles by the genius of Philip and Alexander, so as to constitute the celebrated heavy-armed phalanx, were originally (even in the Peloponnesian war) distinguished chiefly for the excellence of their cavalry, like the Thessalians;[2] while the broad-brimmed hat, or kausia, and the short spreading-mantle, or chlamys, were common to both.

We are told that the Thessalians were originally emigrants from Thesprotia in Epirus, and conquerors of the plain of the Peneius, which (according to Herodotus) was then called Æolis, and which they found occupied by the Pelasgi.[3] It may be doubted whether the great Thessalian families, — such as the Aleuadæ of Larissa, descendants from Hêraklês, and placed by

[1] See Cicero, Orat. in Pison. c. 11; De Leg. Agrar. cont. Rullum, c. 34–35.

[2] Compare the Thessalian cavalry as described by Polybius, iv. 8, with the Macedonian as described by Thucydidês, ii. 100.

[3] Herodot. vii. 176; Thucyd. i. 12.

Pindar on the same level as the Lacedæmonian kings[1] — would have admitted this Thesprotian origin; nor does it coincide with the tenor of those legends which make the eponym, Thessalus, son of Hêraklês. Moreover, it is to be remarked that the language of the Thessalians was Hellenic, a variety of the Æolic dialect;[2] the same (so far as we can make out) as that of the people whom they must have found settled in the country at their first conquest. If then it be true that, at some period anterior to the commencement of authentic history, a body of Thesprotian warriors crossed the passes of Pindus, and established themselves as conquerors in Thessaly, we must suppose them to have been more warlike than numerous, and to have gradually dropped their primitive language.

In other respects, the condition of the population of Thessaly, such as we find it during the historical period, favors the supposition of an original mixture of conquerors and conquered: for it seems that there was among the Thessalians and their dependents a triple gradation, somewhat analogous to that of Laconia. First, a class of rich proprietors distributed throughout the principal cities, possessing most of the soil, and constituting separate oligarchies, loosely hanging together.[3] Next, the subject Achæans, Magnêtes, Perrhæbi, differing from the Laconian Periœki in this point, that they retained their ancient tribe-name and separate Amphiktyonic franchise. Thirdly, a class of serfs, or dependent cultivators, corresponding to the Laconian Helots, who, tilling the lands of the wealthy oligarchs, paid over a proportion of its produce, furnished the retainers by which these great families were surrounded, served as their followers in the cavalry, and were in a condition of villanage, — yet with the important reserve, that they could not be sold out of the country,[4] that they

[1] Pindar, Pyth. x. init. with the Scholia, and the valuable comment of Boeckh, in reference to the Aleuadæ; Schneider ad Aristot. Polit. v. 5, 9; and the Essay of Buttmann, Von dem Geschlecht der Aleuaden, art. xxii. vol. ii. p. 254, of the collection called "Mythologus."

[2] Ahrens, De Dialect. Æolicâ, c. 1, 2.

[3] See Aristot. Polit. ii. 6, 3; Thucyd. ii. 99–100.

[4] The words ascribed by Xenophon (Hellen. vi. 1, 11) to Jason of Pheræ as well as to Theocritus (xvi. 34), attest the numbers and vigor of the Thessalian Penestæ, and the great wealth of the Aleuadæ and Skopadæ. Both those families acquired celebrity from the verses of Simonides: he was pa

had a permanent tenure in the soil, and that they maintained among one another the relations of family and village. This last mentioned order of men, in Thessaly called the Penestæ, is assimilated by all ancient authors to the Helots of Laconia, and in both cases the danger attending such a social arrangement is noticed by Plato and Aristotle. For the Helots as well as the Penestæ had their own common language and mutual sympathies, a separate residence, arms, and courage; to a certain extent, also, they possessed the means of acquiring property, since we are told that some of the Penestæ were richer than their masters.[1] So many means of action, combined with a degraded social position, gave rise to frequent revolt and incessant apprehensions. As a general rule, indeed, the cultivation of the soil by slaves, or dependents, for the benefit of proprietors in the cities, prevailed throughout most parts of Greece. The rich men of Thebes, Argos, Athens, or Elis, must have derived their incomes in the same manner; but it seems that there was often, in other places, a larger intermixture of bought foreign slaves, and also that the number, fellow-feeling, and courage of the degraded village population was nowhere so great as in Thessaly and Laconia. Now the origin of the Penestæ, in Thessaly, is ascribed to the conquest of

tronized and his muse invoked by both of them; see Ælian, V. H. xii. 1; Ovid, Ibis, 512; Quintilian, xi. 2, 15. Pindar also boasts of his friendship with Thorax the Aleuad (Pyth. x. 99).

The Thessalian *ἀνδραποδισταὶ*, alluded to in Aristophanes (Plutus, 521), must have sold men out of the country for slaves, — either refractory Penestæ, or Perrhæbian, Magnetic, and Achæan freemen, seized by violence: the Athenian comic poet Mnêsimachus, in jesting on the voracity of the Pharsalians, exclaims, ap. Athenæ. x. p. 418 —

ἀρά που
ὀπτὴν κατεσθίουσι πόλιν Ἀχαϊκήν;

Pagasæ was celebrated as a place of export for slaves (Hermippus ap. Athenæ. i. 49).

Menôn of Pharsalus assisted the Athenians against Amphipolis with 200, or 300 "Penestæ, on horseback, of his own" — (*Πενέσταις ἰδίοις*) Demosthen. *περὶ Συνταξ.* c. 9, p. 173, cont. Aristokrat. c. 51, p. 687.

[1] Archemachus ap. Athenæ. vi. p. 264; Plato, Legg. vi. p. 777; Aristot. Polit. ii. 6, 3; vii. 9, 9; Dionys. Halic. A. R. ii. 84.

Both Plato and Aristotle insist on the extreme danger of having numerous slaves, fellow-countrymen and of one language — (*ὁμόφυλοι, ὁμόφωνοι πατρίωται ἀλλήλων*).

the territory by the Thesprotians, as that of the Helots in Laconia is traced to the Dorian conquest. The victors in both countries are said to have entered into a convention with the vanquished population, whereby the latter became serfs and tillers of the land for the benefit of the former, but were at the same time protected in their holdings, constituted subjects of the state, and secured against being sold away as slaves. Even in the Thessalian cities, though inhabited in common by Thessalian proprietors and their Penestæ, the quarters assigned to each were to a great degree separated: what was called the Free Agora could not be trodden by any Penest, except when specially summoned.[1]

Who the people were, whom the conquest of Thessaly by the Thesprotians reduced to this predial villanage, we find differently stated. According to Theopompus, they were Perrhæbians and Magnêtes; according to others, Pelasgians; while Archemachus alleged them to have been Bœotians of the territory of Arnê,[2] — some emigrating, to escape the conquerors, others remaining and accepting the condition of serfs. But the conquest, assuming it as a fact, occurred at far too early a day to allow of our making out either the manner in which it came to pass, or the state of things which preceded it. The Pelasgians whom Herodotus saw at Krêstôn are affirmed by him to have been the descendants of those who quitted Thessaly to escape[3] the invading Thesprotians; though others held that the Bœotians, driven on this occasion from their habitations on the gulf of Pagasæ near the Achæans of Phthiôtis, precipitated themselves on Orchomenus and Bœotia, and settled in it, expelling the Minyæ and the Pelasgians.

[1] Aristot. Polit. vii. 11, 2.

[2] Theopompus and Archemachus ap. Athenæ. vi. pp. 264–265; compare Thucyd. ii. 12; Steph. Byz. v. Ἄρνη — the converse of this story in Strabo, ix. pp. 401–411, of the Thessalian Arnê being settled from Bœotia. That the villains or Penestæ were completely distinct from the circumjacent dependents, — Achæans, Magnêtes, Perrhæbians, we see by Aristot. Polit. ii. 6, 3. They had their eponymous hero Penestês, whose descent was traced to Thessalus son of Hêraklês; they were thus connected with the mythical father of the nation (Schol. Aristoph. Vesp. 1271).

[3] Herodot. i. 56: compare vii. 176.

Passing over the legends on this subject, and confining ourselves to historical time, we find an established quadruple division of Thessaly, said to have been introduced in the time of Aleuas, the ancestor (real or mythical) of the powerful Aleuadæ, — Thessaliôtis, Pelasgiôtis, Histiæôtis, Phthiôtis.[1] In Phthiôtis were comprehended the Achæans, whose chief towns were Melitæa, Itônus, Thebæ, Phthiôtides, Alos, Larissa, Kremastê, and Pteleon, on or near the western coast of the gulf of Pagasæ. Histiæôtis, to the north of the Peneius, comprised the Perrhæbians, with numerous towns strong in situation, but of no great size or importance; they occupied the passes of Olympus[2] and are sometimes considered as extending westward across Pindus. Pelasgiôtis included the Magnêtes, together with that which was called the Pelasgic plain, bordering on the western side of Pelion and Ossa.[3] Thessaliôtis comprised the central plain of Thessaly and the upper course of the river Peneius. This was the political classification of the Thessalian power, framed to suit a time when the separate cities were maintained in harmonious action by favorable circumstances, or by some energetic individual ascendency; for their union was in general interrupted and disorderly, and we find certain cities standing aloof while the rest went to war.[4] Though a certain political junction, and obligations of some kind towards a common authority, were recognized in theory by all, and a chief, or Tagus,[5] was nominated to enforce

[1] Hellanikus, Fragm. 28, ed. Didot; Harpocration, v. Τετραρχία: the quadruple division was older than Hekatæus (Steph. Byz. v. Κράννων).

Hekatæus connected the Perrhæbians with the genealogy of Æolus through Tyrô, the daughter of Salmôneus: they passed as Αἰολεῖς (Hekatæus, Frag 334, ed. Didot; Stephan. Byz. v. Φάλαννα and Γόννοι).

The territory of the city of Histiæa (in the north part of the island of Eubœa) was also called Histiæôtis. The double occurrence of this name (no uncommon thing in ancient Greece) seems to have given rise to the statement, that the Perrhæbi had subdued the northern parts of Eubœa, and carried over the inhabitants of the Eubœan Histiæa captive into the north west of Thessaly (Strabo, ix. p. 437, x. p. 446).

[3] Strabo, ix. p. 443.

[4] Diodor. xviii. 11; Thucyd. ii. 22.

[5] The Inscription No. 1770 in Boeckh's Corpus Inscript. contains a letter of the Roman consul, Titus Quinctius Flamininus, addressed to the city of

obedience, — yet it frequently happened that the disputes of the cities among themselves prevented the choice of a Tagus, or drove him out of the country; and left the alliance little more than nominal. Larissa, Pharsalus,[1] and Pheræ, — each with its cluster of dependent towns as adjuncts, — seem to have been nearly on a par in strength, and each torn by intestine faction, so that not only was the supremacy over common dependents relaxed, but even the means of repelling invaders greatly enfeebled. The dependence of the Perrhæbians, Magnetes, Achæans, and Malians, might, under these circumstances, be often loose and easy. But the condition of the Penestæ — who occupied the villages belonging to these great cities, in the central plain of Pelasgiôtis and Thessaliôtis, and from whom the Aleuadæ and Skopadæ derived their exuberance of landed produce — was noway mitigated, if it was not even aggravated, by such constant factions. Nor were there wanting cases in which the discontent of this subject-class was employed by members of the native oligarchy,[2] or even by foreign states, for the purpose of bringing about political revolutions.

"When Thessaly is under her Tagus, all the neighboring people pay tribute to her; she can send into the field six thousand cavalry and ten thousand hoplites, or heavy-armed infantry,"[3] observed Jason, despot of Pheræ, to Polydamas of Pharsalus, in endeavoring to prevail on the latter to second his pretensions to that dignity. The impost due from the tributaries, seemingly considerable, was then realized with arrears, and the duties upon

Kyretiæ (north of Atrax in Perrhæbia). The letter is addressed, *Κυρετιέωι τοῖς ταγοῖς καὶ τῇ πόλει*, — the title of Tagi seems thus to have been given to the magistrates of separate Thessalian cities. The Inscriptions of Thaumaki (No. 1773–1774) have the title *ἄρχοντες*, not *ταγοί*. The title *ταγὸς* was peculiar to Thessaly (Pollux, i. 128).

[1] Xenophon, Hellen. vi. 1, 9; Diodor. xiv. 82; Thucyd. i. 3. Herod. vii. 6, calls the Aleuadæ *Θεσσαλίης βασιλῆες*.

[2] Xenophon, Memorab. i. 2, 24; Hellenic. ii. 3, 37. The loss of the comedy called *Πόλεις* of Eupolis (see Meineke, Fragm. Comicor. Græc. p. 513) probably prevents us from understanding the sarcasm of Aristophanes (Vesp. 1263) about the *παραπρέσβεια* of Amynias among the Penestæ of Pharsalus; but the incident there alluded to can have nothing to do with the proceedings of Kritias, touched upon by Xenophon

[3] Xenophon, Hellen. vi. 1, 9–12

imports at the harbors of the Pagasæan gulf, imposed for the benefit of the confederacy, were then enforced with strictness; but the observation shows that, while unanimous Thessaly was very powerful, her periods of unanimity were only occasional.[1] Among the nations which thus paid tribute to the fulness of Thessalian power, we may number not merely the Perrhæbi, Magnêtes, and Achæans of Phthiôtis, but also the Malians and Dolopes, and various tribes of Epirots extending to the westward of Pindus.[2] We may remark that they were all (except the Malians) javelin-men, or light-armed troops, not serving in rank with the full panoply; a fact which, in Greece, counts as presumptive evidence of a lower civilization: the Magnêtes, too, had a peculiar close-fitting mode of dress, probably suited to movements in a mountainous country.[3] There was even a time when the Thessalian power threatened to extend southward of Thermopylæ, subjugating the Phokians, Dorians, and Lokrians. So much were the Phokians alarmed at this danger, that they had built a wall across the pass of Thermopylæ, for the purpose of more easily defending it against Thessalian invaders, who are reported to have penetrated more than once into the Phokian valleys, and to have sustained some severe defeats.[4] At what precise time these events happened, we find no information; but it must have been considerably earlier than the invasion of Xerxes, since the defensive wall which had been built at Thermopylæ, by the Phokians, was found by Leonidas in a state of ruin. But the Phokians, though they no longer felt the necessity of keeping up this wall, had not ceased to fear and hate the Thessalians, — an antipathy which will be found to manifest itself palpably in connection with the Persian invasion. On the

[1] Demosthen. Olynth. i. c. 3, p. 15; ii. c. 5. p. 21. The orator had occasion to denounce Philip, as having got possession of the public authority of the Thessalian confederation, partly by intrigue, partly by force; and we thus hear of the *λιμένες* and the *ἀγοραὶ*, which formed the revenue of the confederacy.

[2] Xenophon (Hellen. vi. 1, 7) numbers the *Μαρακοὶ* among these tributaries along with the Dolopes: the Maraces are named by Pliny (H. N iv 3), also, along with the Dolopes, but we do not know where they dwelt.

[3] Xenophon, Hellen. vi. 1, 9; Pindar, Pyth. iv. 80.

[4] Herodot. vii. 176; viii. 27–28.

whole, the resistance of the Phokians was successful, for the power of the Thessalians never reached southward of the pass.[1]

It will be recollected that these different ancient races, Perrhæbi, Magnêtes, Achæans, Malians, Dolopes, — though tributaries of the Thessalians, still retained their Amphiktyonic franchise, and were considered as legitimate Hellenes: all except the Malians are, indeed, mentioned in the Iliad. We shall rarely have occasion to speak much of them in the course of this history: they are found siding with Xerxes (chiefly by constraint) in his attack of Greece, and almost indifferent in the struggle between Sparta and Athens. That the Achæans of Phthiôtis are a portion of the same race as the Achæans of Peloponnesus it seems reasonable to believe, though we trace no historical evidence to authenticate it. Achæa Phthiôtis is the seat of Hellên, the patriarch of the entire race, — of the primitive Hellas, by some treated as a town, by others as a district of some breadth, — and of the great national hero, Achilles. Its connection with the Peloponnesian Achæans is not unlike that of Doris with the Peloponnesian Dorians.[2] We have, also, to notice another ethnical kindred, the date and circumstances of which are given to us only in a mythical form, but which seems, nevertheless, to be in itself a reality, — that of the Magnêtes on Pelion and Ossa, with the two divisions of Asiatic Magnêtes, or Magnesia, on Mount Sipylus and Magnesia on the river Mæander. It is said that these two Asiatic homonymous towns were founded by migrations of the Thessalian Magnêtes, a body of whom became consecrated to the Delphian god, and chose a new abode under his directions. According to one story, these emigrants were warriors, returning from the Siege of Troy; according to another, they sought fresh seats, to escape from the Thesprotian conquerors of Thessaly. There was a third story, according to which the Thessalian Magnêtes themselves were represented as colonists[3] from Delphi. Though we can elicit no

[1] The story of invading Thessalians at Kerêssus, near Leuktra in Bœotia, (Pausan ix. 13, 1,) is not at all probable.

[2] One story was, that these Achæans of Phthia went into Peloponnesus with Pelops, and settled in Laconia (Strabo, viii. p. 365).

[3] Aristoteles ap. Athenæ. iv. p. 173 Conon, Narrat. 29; Strabo, xiv. p. 647

distinct matter of fact from these legends, we may, nevertheless, admit the connection of race between the Thessalian and the Asiatic Magnêtes, as well as the reverential dependence of both, manifested in this supposed filiation, on the temple of Delphi Of the Magnêtes in Krete, noticed by Plato as long extinct in his time, we cannot absolutely verify even the existence.

Of the Malians, Thucydidês notices three tribes (*γένη*) as existing in his time, — the Paralii, the Hierês (priests), and the Trachinii, or men of Trachin:[1] it is possible that the second of the two may have been possessors of the sacred spot on which the Amphiktyonic meetings were held. The prevalence of the hoplites or heavy-armed infantry among the Malians, indicates that we are stepping from Thessalian to more southerly Hellenic habits: the Malians recognized every man as a qualified citizen, who either had served, or was serving, in the ranks with his full panoply.[2] Yet the panoply was probably not perfectly suitable to the mountainous regions by which they were surrounded; for, at the beginning of the Peloponnesian war, the aggressive mountaineers of the neighboring region of Œta, had so harassed and

Hoeck (Kreta, b. iii. vol. ii. p. 409) attempts (unsuccessfully, in my judgment) to reduce these stories into the form of substantial history.

[1] Thucyd. iii. 92. The distinction made by Skylax (c. 61) and Diodorus (xviii. 11) between Μηλιεῖς and Μαλιεῖς — the latter adjoining the former on the north — appears inadmissible, though Letronne still defends it (Périple de Marcien d'Héraclée, etc., Paris, 1839, p. 212).

Instead of Μαλιεῖς, we ought to read Λαμιεῖς, as O. Müller observes (Dorians, i. 6, p. 48).

It is remarkable that the important town of Lamia (the modern Zeitun) is not noticed either by Herodotus, Thucydidês, or Xenophon; Skylax is the first who mentions it. The route of Xerxes towards Thermopylæ lay along the coast from Alos.

The Lamieis (assuming that to be the correct reading) occupied the northern coast of the Maliac gulf, from the north bank of the Spercheius to the town of Echinus; in which position Dr. Cramer places the Μηλιεῖς Παράλιοι — an error, I think (Geography of Greece, vol. i. p. 436).

It is not improbable that Lamia first acquired importance during the course of those events towards the close of the Peloponnesian war, when the Lacedæmonians, in defence of Herakleia, attacked the Achæans of Phthiôtis and even expelled the Œtæans for a time from their seats (see Thucyd. viii 3; Diodor. xiv. 38).

[2] Aristot. Polit. iv. 10, 10.

overwhelmed them in war, that they were forced to throw themselves on the protection of Sparta; and the establishment of the Spartan colony of Herakleia, near Trachin, was the result of their urgent application. Of these mountaineers, described under the general name of Œtæans, the principal were the Ænianes, (ὁ Ἐνιῆνες, as they are termed in the Homeric Catalogue, as well as by Herodotus),— an ancient Hellenic[1] Amphiktyonic race, who are said to have passed through several successive migrations in Thessaly and Epirus, but who, in the historical times, had their settlement and their chief town, Hypata, in the upper valley of the Spercheius, on the northern declivity of Mount Œta. But other tribes were probably also included in the name, such as those Ætolian tribes, the Bomians and Kallians, whose high and cold abodes approached near to the Maliac gulf. It is in this sense that we are to understand the name, as comprehending all the predatory tribes along this extensive mountain range, when we are told of the damage done by the Œtæans, both to the Malians on the east, and to the Dorians on the south: but there are some cases in which the name Œtæans seems to designate expressly the Ænianes, especially when they are mentioned as exercising the Amphiktyonic franchise.[2]

The fine soil, abundant moisture, and genial exposure of the southern declivities of Othrys,[3] — especially the valley of the Spercheius, through which river all these waters pass away, and which annually gives forth a fertilizing inundation, — present a marked contrast with the barren, craggy, and naked masses of Mount Œta, which forms one side of the pass of Thermopylæ. Southward of the pass, the Lokrians, Phokians, and Dorians, occupied the mountains and passes between Thessaly and Bœotia. The coast opposite to the western side of Eubœa, from the neighborhood of Thermopylæ, as far as the Bœotian frontier at Anthêdôn, was possessed by the Lokrians, whose northern frontier town, Alpêni, was conterminous with the Malians. There was, however, one narrow strip of Phokis — the town of Daphnus, where the Phokians also touched the Eubœan sea — which broke this continuity, and divided the Lokrians into two sections, — Lokrians of Mount Knêmis, or Epiknemidian Lokrians, and Lokrians of Opus, or Opuntian Lokrians. The mountain called Knêmis, running southward parallel to the coast from the end of Œta, divided the former section from the inland Phokians and the upper valley of the Kephisus: farther southward, joining continuously with Mount Ptôon by means of an intervening mountain which is now called Chlomo, it separated the Lokrians of Opus from the territories of Orchomenus, Thebes, and Anthêdôn, the north-eastern portions of Bœotia. Besides these two sections of the Lokrian name, there was also a third, completely separate, and said to have been colonized out from Opus, — the Lokrians surnamed Ozolæ, — who dwelt apart on the western side of Phokis, along the northern coast of the Corinthian gulf. They reached from Amphissa — which overhung the plain of Krissa, and stood within seven miles of Delphi — to Naupaktus, near the narrow entrance of the gulf; which latter town was taken from these Lokrians by the Athenians, a little before the Peloponnesian war. Opus prided itself on being the mother-city of the Lokrian name, and the legends of Deukaliôn and Pyrrha found a home there as well as in Phthiôtis. Alpeni, Nikæa, Thronium, and Skarpheia, were towns, ancient but unimportant, of the Epiknemidian Lokrians; but the whole length of this Lokrian coast is celebrated for its beauty and fertility, both by ancient and modern observers.[1]

[1] Plutarch, Quæstion. Græc. p. 294.

[2] Thucyd. iii. 92–97; viii. 3. Xenoph. Hellen. i. 2, 18; in another passage Xenophon expressly distinguishes the Œtæi and the Ænianes (Hellen. iii 5, 6). Diodor. xiv. 38. Æschines, De Fals. Leg. c. 44, p. 290.

[3] About the fertility as well as the beauty of this valley, see Dr. Holland's Travels, ch. xvii. vol. ii. p. 108, and Forchhammer (Hellenika, Griechenland, im Neuen das Alte, Berlin, 1837). I do not concur with the latter in his attempts to resolve the mythes of Hêraklês, Achilles, and others, into physical phenomena; but his descriptions of local scenery and attributes are most vivid and masterly.

[1] Strabo, ix. p. 425; Forchhammer, Hellenika, pp. 11–12. Kynus is sometimes spoken of as the harbor of Opus, but it was a city of itself as old as the Homeric Catalogue, and of some moment in the later wars of Greece, when military position came to be more valued than legendary celebrity (Livy, xxviii. 6; Pausan. x. 1, 1; Skylax, c. 61–62); the latter counts Thronium and Knêmis or Knêmides as being Phokian, not Lokrian; which they were for a short time, during the prosperity of the Phokians, at the beginning of the Sacred War, though not permanently (Æschin. Fals. Legat. c. 42. p

The Phokians were bounded on the north by the little territories called Doris and Dryopis, which separated them from the Malians, — on the north-east, east, and south-west, by the different branches of Lokrians, — and on the south-east, by the Bœotians. They touched the Eubœan sea, (as has been mentioned) at Daphnus, the point where it approaches nearest to their chief town, Elateia; their territory also comprised most part of the lofty and bleak range of Parnassus, as far as its southerly termination, where a lower portion of it, called Kirphis, projects into the Corinthian gulf, between the two bays of Antikyra and Krissa; the latter, with its once fertile plain, lay immediately under the sacred rock of the Delphian Apollo. Both Delphi and Krissa originally belonged to the Phokian race, but the sanctity of the temple, together with Lacedæmonian aid, enabled the Delphians to set up for themselves, disavowing their connection with the Phokian brotherhood. Territorially speaking, the most valuable part of Phokis[1] consisted in the valley of the river Kephisus, which takes its rise from Parnassus, not far from the Phokian town of Lilæa, passes between Œta and Knêmis on one side, and Parnassus on the other, and enters Bœotia near Chæroneia, discharging itself into the lake Kôpaïs. It was on the projecting mountain ledges and rocks on each side of this river, that the numerous little Phokian towns were situated. Twenty-two of them were destroyed and broken up into villages by the Amphiktyonic order, after the second Sacred War; Abæ (one of the few, if not the only one, that was spared) being protected by the sanctity of its temple and oracle. Of these cities, the most important was Elateia, situated on the left bank of the Kephisus, and on the road from Lokris into Phokis, in the natural march of an army from Thermopylæ into Bœotia. The Phokian towns[2] were embodied in an ancient confederacy,

46). This serves as one presumption about the age of the Periplus of Skylax (see the notes of Klausen ad Skyl. p. 269). These Lokrian towns lay along the important road from Thermopylæ to Elateia and Bœotia (Pausan vii. 15, 2; Livy, xxxiii. 3)

[1] Pausan. x. 33, 4.

[2] Pausan. x. 5, 1; Demosth. Fals. Leg. c. 22–28; Diodor. xvi. 60, with the note of Wesseling

The tenth book of Pausanias, though the larger half of it is devoted to

which held its periodical meetings at a temple between Daulis and Delphi.

The little territory called Doris and Dryopis, occupied the southern declivity of Mount Œta, dividing Phokis on the north and north-west, from the Ætolians, Ænianes, and Malians. That which was called Doris in the historical times, and which reached, in the time of Herodotus, nearly as far eastward as the Maliac gulf, is said to have formed a part of what had been once called Dryopis; a territory which had comprised the summit of Œta as far as the Spercheius, northward, and which had been inhabited by an old Hellenic tribe called Dryopes. The Dorians acquired their settlement in Dryopis by gift from Hêraklês, who, along with the Malians (so ran the legend), had expelled the Dryopes, and compelled them to find for themselves new seats at Hermionê, and Asinê, in the Argolic peninsula of Peloponnesus, — at Styra and Karystus in Eubœa, — and in the island of Kythnus;[1] it is only in these five last-mentioned places, that history recognizes them. The territory of Doris was distributed into four little townships, — Pindus, or Akyphas, Bœon, Kytinion, and Erineon, — each of which seems to have occupied a separate valley belonging to one of the feeders of the river Kephisus, — the only narrow spaces of cultivated ground which this "small and sad" region presented.[2] In itself, this tetrapolis is so insignificant, that we shall rarely find occasion to mention it; but it acquired a factitious consequence by being regarded as the metropolis of the great Dorian cities in Peloponnesus, and receiving on that ground special protection from Sparta. I do not here touch upon that string of ante-historical migrations — stated by

Delphi, tells us all that we know respecting the less important towns of Phokis. Compare also Dr. Cramer's Geography of Greece, vol. ii. sect. 10; and Leake's Travels in Northern Greece, vol. ii. ch. 13.

Two funeral monuments of the Phokian hero Schedius (who commands the Phokian troops before Troy, and is slain in the Iliad) marked the two extremities of Phokis, — one at Daphnus on the Eubœan sea, the other at Antikyra on the Corinthian gulf (Strabo, ix. p. 425; Pausan. x. 36, 4).

[1] Herodot. viii. 31, 43, 46; Diodor. iv. 57; Aristot. ap. Strabo, viii. p. 373.

O. Müller (History of the Dorians, book i. ch. ii.) has given all that can be known about Doris and Dryopis, together with some matters which appear to me very inadequately authenticated.

[2] Πόλεις μικραὶ καὶ λυπρόχωροι, Strabo, ix. p. 427

Herodotus, and illustrated by the ingenuity as well as deco. ated by the fancy of O. Müller — through which the Dorians are affiliated with the patriarch of the Hellenic race, — moving originally out of Phthiôtis to Histiæôtis, then to Pindus, and lastly to Doris. The residence of Dorians in Doris, is a fact which meets us at the commencement of history, like that of the Phokians and Lokrians in their respective territories.

We next pass to the Ætolians, whose extreme tribes covered the bleak heights of Œta and Korax, reaching almost within sight of the Maliac gulf, where they bordered on the Dorians and Malians, — while their central and western tribes stretched along the frontier of the Ozolian Lokrians to the flat plain, abundant in marsh and lake, near the mouth of the Euênus. In the time of Herodotus and Thucydidês, they do not seem to have extended so far westward as the Achelôus; but in later times, this latter river, throughout the greater part of its lower course, divided them from the Akarnanians:[1] on the north, they touched upon the Dolopians, and upon a parallel of latitude nearly as far north as Ambrakia. There were three great divisions of the Ætolian name, — the Apodôti, Ophioneis, and Eurytanes, — each of which was subdivided into several different village tribes. The northern and eastern portion of the territory[2] consisted of very high mountain ranges, and even in the southern portion, the mountains Arakynthus, Kurion, Chalkis, Taphiassus, are found at no great distance from the sea; while the chief towns in Ætolia, Kalydôn, Pleurôn, Chalkis, — seem to have been situated eastward of the Euênus, between the last-mentioned mountains and the sea.[3] The first two towns have been greatly ennobled in legend, but

[1] Herod. vii. 126; Thucyd. ii. 102.

[2] See the difficult journey of Fiedler from Wrachori northward by Karpenitz, and then across the north-western portion of the mountains of the ancient Eurytanes (the southern continuation of Mount Tymphrêstus and Œta), into the upper valley of the Spercheius (Fiedler's Reise in Griechenland, vol. i. pp. 177–191), a part of the longer journey from Missolonghi to Zeitun.

Skylax (c. 35) reckons Ætolia as extending inland as far as the boundaries of the Ænianes on the Spercheius — which is quite correct — Ætolia Epiktêtus — *μέχρι τῆς Οἰταίας*, Strabo, x. p. 450.

[3] Strabo, x. pp. 459–460. There is, however, great uncertainty about the position of these ancient towns: compare Kruse, Hellas, vol. iii. ch. xi. pp 233–255, and Brandstäter, Geschichte des Ætolischen Landes, pp. 121–134.

are little named in history; while, on the contrary, Thermus, the chief town of the historical Ætolians, and the place where the aggregate meeting and festival of the Ætolian name, for the choice of a Pan-Ætolic general, was convoked, is not noticed by any one earlier than Ephorus.[1] It was partly legendary renown, partly ethnical kindred (publicly acknowledged on both sides) with the Eleians in Peloponnesus, which authenticated the title of the Ætolians to rank as Hellens. But the great mass of the Apodôti, Eurytanes, and Ophioneis in the inland mountains, were so rude in their manners, and so unintelligible[2] in their speech (which, however, was not barbaric, but very bad Hellenic,) that this title might well seem disputable, — in point of fact it was disputed, in later times, when the Ætolian power and depredations had become obnoxious nearly to all Greece. And it is, probably, to this difference of manners between the Ætolians on the sea-coast and those in the interior, that we are to trace a geographical division mentioned by Strabo, into ancient Ætolia, and Ætolia Epiktêtus, or acquired. When or by whom this division was introduced, we do not know. It cannot be founded upon any conquest, for the inland Ætolians were the most unconquerable of mankind: and the affirmation which Ephorus applied to the whole Ætolian race, — that it had never been reduced to subjection by any one, — is, most of all, beyond dispute concerning the inland portion of it.[3]

Adjoining the Ætolians were the Akarnanians, the westernmost of extra-Peloponnesian Greeks. They extended to the Ionian sea, and seem, in the time of Thucydidês, to have occupied

[1] Ephorus, Fragm. 29, Marx. ap. Strabo, p. 463. The situation of Thermus, "the acropolis as it were of all Ætolia," and placed on a spot almost unapproachable by an army, is to a certain extent, though not wholly, capable of being determined by the description which Polybius gives of the rapid march of Philip and the Macedonian army to surprise it. The maps, both of Kruse and Kiepert, place it too much on the north of the lake Trichônis: the map of Fiedler notes it, more correctly, to the east of that lake (Polyb v. 7–8; compare Brandstäter, Geschichte des Ætol. Landes, p. 133).

[2] Thucyd. iii. 102. — *ἀγνωστότατοι δὲ γλῶσσάν εἰσι, καὶ ὠμόφαγοι ὡς λέγονται.* It seems that Thucydidês had not himself seen or conversed with them, but he does not call them *βάρβαροι*.

[3] Ephorus, Fragment. 29, ed. Marx.; Skymn. Chius, v. 471; Strabo, x. p 451.

both banks of the river Achelôus, in the lower part of its course, — though the left bank appears afterwards as belonging to the Ætolians, so that the river came to constitute the boundary, often disputed and decided by arms, between them. The principal Akarnanian towns, Stratus and Œniadæ, were both on the right bank; the latter on the marshy and overflowed land near its mouth. Near the Akarnanians, towards the gulf of Ambrakia, were found barbarian, or non-Hellenic nations, — the Agræans and the Amphilochians: in the midst of the latter, on the shores of the Ambrakian gulf, the Greek colony, called Argos Amphilochicum, was established.

Of the five Hellenic subdivisions now enumerated, — Lokrians, Phokians, Dorians (of Doris), Ætolians, and Akarnanians (of whom Lokrians, Phokians, and Ætolians are comprised in the Homeric catalogue), — we have to say the same as of those north of Thermopylæ: there is no information respecting them from the commencement of the historical period down to the Persian war. Even that important event brings into action only the Lokrians of the Eubœan sea, the Phokians, and the Dorians: we have to wait until near the Peloponnesian war, before we require information respecting the Ozolian Lokrians, the Ætolians, and the Akarnanians. These last three were unquestionably the most backward members of the Hellenic aggregate. Though not absolutely without a central town, they lived dispersed in villages, retiring, when attacked, to inaccessible heights, perpetually armed and in readiness for aggression and plunder wherever they found an opportunity.[1] Very different was the condition of the Lokrians opposite Eubœa, the Phokians, and the Dorians. These were all orderly town communities, small, indeed, and poor, but not less well administered than the average of Grecian townships, and perhaps exempt from those individual violences which so frequently troubled the Bœotian Thebes or the great cities of Thessaly. Timæus affirmed (contrary, as it seems, to the supposition of Aristotle) that, in early times, there were no

[1] Thucyd. i. 6; iii. 94. Aristotle, however, included, in his large collection of Πολιτείαι, an Ἀκαρνάνων Πολιτεία as well as an Αἰτωλῶν Πολιτεία (Aristotelis Rerum Publicarum Reliquiæ, ed. Neumann, p. 102; Strabo vii p. 321).

slaves either among the Lokrians or Phokians, and that the work required to be done for proprietors was performed by poor freemen;[1] a habit which is alleged to have been continued until the temporary prosperity of the second Sacred War, when the plunder of the Delphian temple so greatly enriched the Phokian leaders. But this statement is too briefly given, and too imperfectly authenticated, to justify any inferences.

We find in the poet Alkman (about 610 B. C.), the Erysichæan, or Kalydonian shepherd, named as a type of rude rusticity, — the antithesis of Sardis, where the poet was born.[2] And among the suitors who are represented as coming forward to claim the daughter of the Sikyonian Kleisthenes in marriage, there appears both the Thessalian Diaktoridês from Krannôn, a member of the Skopad family, — and the Ætolian Malês, brother of that Titormus who in muscular strength surpassed all his contemporary Greeks, and who had seceded from mankind into the inmost recesses of Ætolia: this Ætolian seems to be set forth as a sort of antithesis to the delicate Smindyridês of Sybaris, the most luxurious of mankind. Herodotus introduces these characters into his dramatic picture of this memorable wedding.[3]

Between Phokis and Lokris on one side, and Attica (from which it is divided by the mountains Kithærôn and Parnês) on the other, we find the important territory called Bœotia, with its ten or twelve autonomous cities, forming a sort of confederacy under the presidency of Thebes, the most powerful among them. Even of this territory, destined during the second period of this history, to play a part so conspicuous and effective, we know nothing during the first two centuries after 776 B. C. We first acquire some insight into it, on occasion of the disputes between Thebes and Platæa, about the year 520 B. C. Orchomenus, on the north-west of the lake Kôpaïs, forms throughout the historical times one of the cities of the Bœotian league, seemingly the second after Thebes. But I have already stated that the Orcho-

[2] This brief fragment of the Παρθενεῖα of Alkman is preserved by Stephan. Byz. (Ἐρυσίχη), and alluded to by Strabo, x. p. 460: see Welcker Alkm. Fragm. xi. and Bergk, Alk. Fr. xii.

[3] Herodot. vi. 127.

menian legends, the Catalogue, and other allusions in Homer, and the traces of past power and importance yet visible in the historical age, attest the early political existence of Orchomenus and its neighborhood apart from Bœotia.[1] The Amphiktyony in which Orchomenus participated, at the holy island of Kalauria near the Argolic peninsula, seems to show that it must once have possessed a naval force and commerce, and that its territory must have touched the sea at Halæ and the lower town of Larymna, near the southern frontier of Lokris; this sea is separated by a very narrow space from the range of mountains which join Knêmis and Ptôon, and which inclose on the east both the basin of Orchomenus, Asplêdôn, and Kôpæ, and the lake Kôpaïs. The migration of the Bœotians out of Thessaly into Bœotia (which is represented as a consequence of the conquest of the former country by the Thesprotians) is commonly assigned as the compulsory force which Bœotized Orchomenus. By whatever cause, or at whatever time (whether before or after 776 B. C.) the transition may have been effected, we find Orchomenus completely Bœotian throughout the known historical age, — yet still retaining its local Minyeian legends, and subject to the jealous rivalry[2] of Thebes, as being the second city in the Bœotian league. The direct road from the passes of Phokis southward into Bœotia went through Chæroneia, leaving Lebadeia on the right, and Orchomenus on the left hand, and passed the south-western edge of the lake

[1] See an admirable topographical description of the north part of Bœotia, — the lake Kôpaïs and its environs, in Forchhammer's Hellenika, pp. 159–186, with an explanatory map. The two long and laborious tunnels constructed by the old Orchomenians for the drainage of the lake, as an aid to the insufficiency of the natural Katabothra, are there very clearly laid down: one goes to the sea, the other into the neighboring lake Hylika, which is surrounded by high rocky banks and can take more water without overflowing. The lake Kôpaïs is an inclosed basin, receiving all the water from Doris and Phokis through the Kêphisus. A copy of Forchhammer's map will be found at the end of the present volume.

Forchhammer thinks that it was nothing but the similarity of the name Itônea (derived from *Itéa, a willow-tree*) which gave rise to the tale of an emigration of people from the Thessalian to the Bœotian Itônê (p. 148).

The Homeric Catalogue presents Kôpæ, on the north of the lake, as Bœotian, but not Orchomenus nor Asplêdôn (Iliad, ii. 502).

[2] See O. Müller, Orchomenos, cap. xx. p. 418, *seq.*

Kôpaïs near the towns of Koroneia, Alalkomenæ, and Haliartus, — all situated on the mountain Tilphôssion, an outlying ridge connected with Helicon by the intervention of Mount Leïbethrius. The Tilphossæon was an important military post, commanding that narrow pass between the mountain and the lake which lay in the great road from Phokis to Thebes.[1] The territory of this latter city occupied the greater part of central Bœotia, south of the lake Kôpaïs; it comprehended Akræphia and Mount Ptôon, and probably touched the Eubœan sea at the village of Salganeus south of Anthêdôn. South-west of Thebes, occupying the southern descent of lofty Helicon towards the inmost corner of the Corinthian gulf, and bordering on the south-eastern extremity of Phokis with the Phokian town of Bulis, stood the city of Thespiæ. Southward of the Asôpus, between that river and Mount Kithæron, were Platæa and Tanagra; in the south-eastern corner of Bœotia stood Orôpus, the frequent subject of contention between Thebes and Athens; and in the road between the Eubœan Chalkis and Thebes, the town of Mykalêssus.

From our first view of historical Bœotia downward, there appears a confederation which embraces the whole territory: and during the Peloponnesian war, the Thebans invoke "the ancient constitutional maxims of the Bœotians" as a justification of extreme rigor, as well as of treacherous breach of the peace, against the recusant Platæans.[2] Of this confederation, the greater cities were primary members, while the lesser were attached to one or other of them in a kind of dependent union. Neither the names nor the number of these primary members can be certainly known: there seem grounds for including Thebes, Orchomenus, Lebadeia, Korôneia, Haliartus, Kôpæ, Anthêdôn, Tanagra, Thespiæ, and Platæa before its secession.[3]

[1] See Demosthen. De Fals. Legat. c. 43–45. Another portion of this narrow road is probably meant by the pass of Korôneia — *τὰ περὶ Κορώνειαν στενὰ* (Diodor. xv. 52; Xenoph. Hellen. iv. 3, 15) — which Epameinondas occupied to prevent the invasion of Kleombrotus from Phokis.

[2] Thucyd. ii. 2 — *κατὰ τὰ πάτρια τῶν πάντων Βοιωτῶν*: compare the speech of the Thebans to the Lacedæmonians after the capture of Platæa. iii. 61, 65, 66.

[3] Thucyd. iv. 91; C. F. Hermann, Griechische Staats Alterthümer, sect

Akræphia, with the neighboring Mount Ptôon and its oracle, Skôlus, Glisas, and other places, were dependencies of Thebes: Chæroneia, Asplêdôn, Holmônes, and Hyêttus, of Orchomenus: Siphæ, Leuktra, Kerêssus, and Thisbê, of Thespiæ.[1] Certain generals or magistrates, called Bœotarchs, were chosen annually to manage the common affairs of the confederation. At the time of the battle of Delium in the Peloponnesian war, they were eleven in number, two of them from Thebes; but whether this number was always maintained, or in what proportions the choice was made by the different cities, we find no distinct information. There were likewise, during the Peloponnesian war, four different senates, with whom the Bœotarchs consulted on matters of importance; a curious arrangement, of which we have no explanation. Lastly, there was the general concilium and religious festival,— the Pambœotia,— held periodically at Korôneia. Such were the forms, as far as we can make them out, of the Bœotian confederacy; each of the separate cities possessing its own senate and constitution, and having its political consciousness as an autonomous unit, yet with a certain habitual deference to the federal obligations. Substantially, the affairs of the confederation will be found in the hands of Thebes, managed in the interests of Theban ascendency, which appears to have been sustained by no other feeling except respect for superior force and bravery. The discontents of the minor Bœotian towns, harshly repressed and punished, form an uninviting chapter in Grecian history.

One piece of information we find, respecting Thebes singly and apart from the other Bœotian towns anterior to the year 700 B. C. Though brief, and incompletely recorded, it is yet highly valuable, as one of the first incidents of solid and positive Grecian history. Dioklês, the Corinthian, stands enrolled as Olympic victor in the 13th Olympiad, or 728 B. C., at a time when the oligarchy called Bacchiadæ possessed the government of Corinth. The beauty of his person attracted towards him the attachment of Philolaus, one of the members of this oligarchical body, — a sentiment

79; Herodot. v. 79; Boeckh, Commentat. ad Inscript. Bœotic. ap. Corp. Ins. Gr. part v. p. 726.

[1] Herodot. viii. 135; ix. 15–43. Pausan ix. 13, 1; ix. 23, 3; ix. 24, 3 ix. 32, 1–4. Xenophon, Hellen. vi. 4, 3–4: compare O. Müller, Orchomenos, cap. xx. p. 403

which Grecian manners did not proscribe; but it also provoked an incestuous passion on the part of his own mother, Halcyonê, from which Dioklês shrunk with hatred and horror. He abandoned forever his native city and retired to Thebes, whither he was followed by Philolaus, and where both of them lived and died. Their tombs were yet shown in the time of Aristotle, close adjoining to each other, yet with an opposite frontage; that of Philolaus being so placed that the inmate could command a view of the lofty peak of his native city, while that of Dioklês was so disposed as to block out all prospect of the hateful spot. That which preserves to us the memory of so remarkable an incident, is, the esteem entertained for Philolaus by the Thebans, — a feeling so profound, that they invited him to make laws for them. We shall have occasion to point out one or two similar cases, in which Grecian cities invoked the aid of an intelligent stranger; and the practice became common, among the Italian republics in the Middle Ages, to nominate a person not belonging to their city either as podesta or as arbitrator in civil dissensions. It would have been highly interesting to know, at length, what laws Philolaus made for the Thebans; but Aristotle, with his usual conciseness, merely alludes to his regulations respecting the adoption of children and respecting the multiplication of offspring in each separate family. His laws were framed with the view to maintain the original number of lots of land, without either subdivision or consolidation; but by what means the purpose was to be fulfilled we are not informed.[1] There existed a law at

[1] Aristot. Polit. ii. 9, 6–7. Νομοθέτης δ' αὐτοῖς (to the Thebans) ἐγένετο Φιλόλαος περί τ' ἄλλων τινῶν καὶ περὶ τῆς παιδοποιίας, οὓς καλοῦσιν ἐκεῖνοι νόμους θετικούς· καὶ τοῦτ' ἐστὶν ἰδίως ὑπ' ἐκείνου νενομοθετημένον, ὅπως ὁ ἀριθμὸς σώζηται τῶν κλήρων. A perplexing passage follows within three lines of this, — Φιλολάου δὲ ἴδιον ἐστιν ἡ τῶν οὐσιῶν ἀνομάλωσις, — which raises two questions: first, whether Philolaus can really be meant in the second passage, which talks of what is ἴδιον to Philolaus, while the first passage had already spoken of something ἰδίως νενομοθετημένον by the same person. Accordingly, Göttling and M. Barthélemy St. Hilaire follow one of the MSS. by writing Φαλέου in place of Φιλολάου. Next, what is the meaning of ἀνομάλωσις? O. Müller (Dorians, ch. x. 5, p. 209) considers it to mean a "fresh equalization, just as ἀναδασμὸς means a fresh division," adopting the translation of Victorius and Schlösser.

The point can hardly be decisively settled; but if this translation of ἀνο

Thebes, which perhaps may have been part of the scheme of Philolaus, prohibiting exposure of children, and empowering a father, under the pressure of extreme poverty, to bring his new-born infant to the magistrates, who sold it for a price to any citizen-purchaser, — taking from him the obligation to bring it up, but allowing him in return, to consider the adult as his slave.[1] From these brief allusions, coming to us without accompanying illustration, we can draw no other inference, except that the great problem of population—the relation between the well-being of the citizens and their more or less rapid increase in numbers—had engaged the serious attention even of the earliest Grecian legislators. We may, however, observe that the old Corinthian legislator, Pheidôn, (whose precise date cannot be fixed) is stated by Aristotle,[2] to have contemplated much the same object as that which is ascribed to Philolaus at Thebes; an unchangeable number both of citizens and of lots of land, without any attempt to alter the unequal ratio of the lots, one to the other.

CHAPTER IV.

EARLIEST HISTORICAL VIEW OF PELOPONNESUS. DORIANS IN ARGOS AND THE NEIGHBORING CITIES.

We now pass from the northern members to the heart and head of Greece, — Peloponnesus and Attica, taking the former first in order, and giving as much as can be ascertained respecting its early historical phenomena.

The traveller who entered Peloponnesus from Bœotia during the youthful days of Herodotus and Thucydidês, found an array

---

διάλωσις be correct, there is good ground for preferring the word *Φαλέου* to *Φιλολάου*; since the proceeding described would harmonize better with the ideas of Phaleas (Aristot. Pol. ii. 4, 3).

[1] Ælian, V. H. ii. 7.

[2] Aristot Polit. ii. 3, 7 This Pheidôn seems different from Pheidôn of Argos, as far as we are enabled to judge

of powerful Doric cities conterminous to each other, and beginning at the isthmus of Corinth. First came Megara, stretching across the isthmus from sea to sea, and occupying the high and rugged mountain-ridge called Geraneia; next Corinth, with its strong and conspicuous acropolis, and its territory including Mount Oneion as well as the portion of the isthmus at once most level and narrowest, which divided its two harbors called Lechæum and Kenchreæ. Westward of Corinth, along the Corinthian gulf, stood Sikyôn, with a plain of uncommon fertility, between the two towns: southward of Sikyôn and Corinth were Phlius and Kleonæ, both conterminous, as well as Corinth, with Argos and the Argolic peninsula. The inmost bend of the Argolic gulf, including a considerable space of flat and marshy ground adjoining to the sea, was possessed by Argos; the Argolic peninsula was divided by Argos with the Doric cities of Epidaurus and Trœzen, and the Dryopian city of Hermionê, the latter possessing the south-western corner. Proceeding southward along the western coast of the gulf, and passing over the little river called Tanos, the traveller found himself in the dominion of Sparta, which comprised the entire southern region of the peninsula from its eastern to its western sea, where the river Neda flows into the latter. He first passed from Argos across the difficult mountain range called Parnôn (which bounds to the west the southern portion of Argolis), until he found himself in the valley of the river Œnus, which he followed until it joined the Eurotas. In the larger valley of the Eurotas, far removed from the sea, and accessible only through the most impracticable mountain roads, lay the five unwalled, unadorned, adjoining villages, which bore collectively the formidable name of Sparta. The whole valley of the Eurotas, from Skiritis and Beleminatis at the border of Arcadia, to the Laconian gulf, — expanding in several parts into fertile plain, especially near to its mouth, where the towns of Gythium and Helos were found, — belonged to Sparta; together with the cold and high mountain range to the eastward, which projects into the promontory of Malea,— and the still loftier chain of Taygetus to the westward, which ends in the promontory of Tænarus. On the other side of Taygetus, on the banks of the river Pamisus, which there flows into the Messenian gulf, lay the plain of Messênê, the richest land in the

peninsula. This plain had once yielded its ample produce to the free Messenians Dorians, resident in the towns of Stenyklêrus and Andania. But in the time of which we speak, the name of Messenians was borne only by a body of brave but homeless exiles, whose restoration to the land of their forefathers over passed even the exile's proverbially sanguine hope. Their land was confounded with the western portion of Laconia, which reached in a south-westerly direction down to the extreme point of Cape Akritas, and northward as far as the river Neda.

Throughout his whole journey to the point last mentioned, from the borders of Bœotia and Megaris, the traveller would only step from one Dorian state into another. But on crossing from the south to the north bank of the river Neda, at a point near to its mouth, he would find himself out of Doric land altogether: first, in the territory called Triphylia, — next, in that of Pisa, or the Pisatid, — thirdly, in the more spacious and powerful state called Elis; these three comprising the coast-land of Peloponnesus from the mouth of the Neda to that of the Larissus. The Triphylians, distributed into a number of small townships, the largest of which was Lepreon, — and the Pisatans, equally destitute of any centralizing city, — had both, at the period of which we are now speaking, been conquered by their more powerful northern neighbors of Elis, who enjoyed the advantage of a spacious territory united under one government; the middle portion, called the Hollow Elis, being for the most part fertile, though the tracts near the sea were more sandy and barren. The Eleians were a section of Ætolian emigrants into Peloponnesus, but the Pisatans and Triphylians had both been originally independent inhabitants of the peninsula, — the latter being affirmed to belong to the same race as the Minyæ who had occupied the ante-Bœotian Orchomenos: both, too, bore the ascendency of Elis with perpetual murmur and occasional resistance.

Crossing the river Larissus, and pursuing the northern coast of Peloponnesus south of the Corinthian gulf, the traveller would pass into Achaia, — a name which designated the narrow strip of level land, and the projecting spurs and declivities, between that gulf and the northernmost mountains of the peninsula, — Skollis, Erymanthus, Aroania, Krathis, and the towering eminence called

Kyllênê. Achæan cities, — twelve in number at least, if not more, — divided this long strip of land amongst them, from the mouth of the Larissus and the north-western Cape Araxus on one side, to the western boundary of the Sikyonian territory on the other. According to the accounts of the ancient legends and the belief of Herodotus, this territory had once been occupied by Ionian inhabitants whom the Achæans had expelled.

In making this journey, the traveller would have finished the circuit of Peloponnesus; but he would still have left untrodden the great central region, inclosed between the territories just enumerated, — approaching nearest to the sea on the borders of Triphylia, but never touching it anywhere. This region was Arcadia, possessed by inhabitants who are uniformly represented as all of one race, and all aboriginal. It was high and bleak, full of wild mountain, rock, and forest, and abounding, to a degree unusual even in Greece, with those land-locked basins from whence the water finds only a subterraneous issue. It was distributed among a large number of distinct villages and cities. Many of the village tribes, — the Mænalii, Parrhasii, Azanes, etc., occupying the central and the western regions, were numbered among the rudest of the Greeks: but along its eastern frontier there were several Arcadian cities which ranked deservedly among the more civilized Peloponnesians. Tegea, Mantineia, Orchomenus, Stymphalus, Pheneus, possessed the whole eastern frontier of Arcadia from the borders of Laconia to those of Sikyôn and Pellênê in Achaia: Phigaleia at the south western corner, near the borders of Triphylia, and Heræa, on the north bank of the Alpheius, near the place where that river quits Arcadia to enter the Pisatis, were also towns deserving of notice. Towards the north of this cold and thinly-peopled region, near Pheneos, was situated the small town of Nonakris, adjoining to which rose the hardly accessible crags where the rivulet of Styx[1]

[1] Herodot. vi. 74; Pausan. viii. 18, 2. See the description and print of the river Styx, and the neighboring rocks, in Fiedler's Reise durch Griechenland, vol. i. p. 400.

He describes a scene amidst these rocks, in 1826, when the troops of Ibrahim Pasha were in the Morea, which realizes the fearful pictures of war after the manner of the ancient Gauls, or Thracians. A crowd of five thousand Greeks, of every age and sex, had found shelter in a grassy and bushy

flowed down: a point of common feeling for all Arcadians, from the terrific sanction which this water was understood to impart to their oaths.

The distribution of Peloponnesus here sketched, suitable to the Persian invasion and the succeeding half century, may also be said (with some allowances) to be adapted to the whole interval between about B. C. 550–370; from the time of the conquest of Thyreatis by Sparta to the battle of Leuktra. But it is not the earliest distribution which history presents to us. Not presuming to criticize the Homeric map of Peloponnesus, and going back only to 776 B. C., we find this material difference, — that Sparta occupies only a very small fraction of the large territory above described as belonging to her. Westward of the summit of Mount Taygetus are found another section of Dorians, independent of Sparta: the Messenian Dorians, whose city is on the hill of Stenyklêrus, near the south-western boundary of Arcadia, and whose possessions cover the fertile plain of Messêne along the river Pamisus to its mouth in the Messenian gulf: it is to be noted that Messênê was then the name of the plain generally, and that no town so called existed until after the battle of Leuktra. Again, eastward of the valley of the Eurotas, the mountainous region and the western shores of the Argolic gulf down to Cape Malea are also independent of Sparta; belonging to Argos, or rather to Dorian towns in unison with Argos. All the great Dorian towns, from the borders of the Megarid to the eastern frontier of Arcadia, as above enumerated, appear to have existed in 776 B. C.: Achaia was in the same condition, so far as we are able to judge, as well as Arcadia, except in regard to its southern frontier, conterminous with Sparta, of which more will hereafter be said. In respect to the western portion of Peloponnesus, Elis (properly so called) appears to have embraced the same

spot embosomed amidst these crags, — few of them armed. They were pursued by five thousand Egyptians and Arabians: a very small resistance, in such ground, would have kept the troops at bay, but the poor men either could not or would not offer it. They were forced to surrender: the youngest and most energetic cast themselves headlong from the rocks and perished: three thousand prisoners were carried away captive, and sold for slaves at Corinth, Patras, and Modon: all those who were unfit for sale were massacred on the spot by the Egyptian troops.

territory in 776 B. C. as in 550 B. C.: but the Pisatid had been recently conquered, and was yet imperfectly subjected by the Eleians; while Triphylia seems to have been quite independent of them. Respecting the south-western promontory of Peloponnesus down to Cape Akritas, we are altogether without information: reasons will hereafter be given for believing that it did not at that time form part of the territory of the Messenian Dorians.

Of the different races or people whom Herodotus knew in Peloponnesus, he believed three to be aboriginal, — the Arcadians, the Achæans, and the Kynurians. The Achæans, though belonging indigenously to the peninsula, had yet removed from the southern portion of it to the northern, expelling the previous Ionian tenants: this is a part of the legend respecting the Dorian conquest, or Return of the Herakleids, and we can neither verify nor contradict it. But neither the Arcadians nor the Kynurians had ever changed their abodes. Of the latter, I have not before spoken, because they were never (so far as history knows them) an independent population. They occupied the larger portion[1] of the territory of Argolis, from Orneæ, near the northern[2] or Phliasian border, to Thyrea and the Thyreatis, on the Laconian border: and though belonging originally (as Herodotus imagines rather than asserts) to the Ionic race — they had been so long subjects of Argos in his time, that almost all evidence of their ante-Dorian condition had vanished.

But the great Dorian states in Peloponnesus — the capital powers in the peninsula — were all originally emigrants, according to the belief not only of Herodotus, but of all the Grecian world: so also were the Ætolians of Elis, the Triphylians, and the Dryopes at Hermionê and Asinê. All these emigrations are so described as to give them a root in the Grecian legendary world: the Triphylians are traced back to Lemnos, as the offspring of the Argonautic heroes,[3] and we are too uninformed

[1] This is the only way of reconciling Herodotus (viii. 73) with Thucydidês (iv. 56, and v. 41). The original extent of the Kynurian territory is a point on which neither of them had any means of very correct information, but there is no occasion to reject the one in favor of the other.

[2] Herod. viii. 73. Οἱ δὲ Κυνούριοι, αὐτόχθονες ἐόντες, δοκέουσι μοῦνοι εἶναι Ἰωνες · ἐκδεδωρίευνται δὲ, ὑπό τε Ἀργείων ἀρχόμενοι καὶ τοῦ χρόνου ἐόντες Ὀρνιᾶται καὶ περίοικοι.

[3] Herodot. iv. 145–148.

about them to venture upon any historical guesses. But respecting the Dorians, it may perhaps be possible, by examining the first historical situation in which they are presented to us, to offer some conjectures as to the probable circumstances under which they arrived. The legendary narrative of it has already been given in the first chapter of this volume, — that great mythical event called the Return of the Children of Hêraklês, by which the first establishment of the Dorians in the promised land of Peloponnesus was explained to the full satisfaction of Grecian faith. One single armament and expedition, acting by the special direction of the Delphian god, and conducted by three brothers, lineal descendants of the principal Achæo-Dorian heroes through Hyllus, (the eponymus of the principal tribe,) — the national heroes of the preëxisting population vanquished and expelled, and the greater part of the peninsula both acquired and partitioned at a stroke, — the circumstances of the partition adjusted to the historical relations of Laconia and Messenia, — the friendly power of Ætolian Elis, with its Olympic games as the bond of union in Peloponnesus, attached to this event as an appendage, in the person of Oxylus, — all these particulars compose a narrative well calculated to impress the retrospective imagination of a Greek. They exhibit an epical fitness and sufficiency which it would be unseasonable to impair by historical criticism.

The Alexandrine chronology sets down a period of 328 years from the Return of the Herakleids to the first Olympiad (1104 B. C. – 776 B. C.), — a period measured by the lists of the kings of Sparta, on the trustworthiness of which some remarks have already been offered. Of these 328 years, the first 250, at the least, are altogether barren of facts; and even if we admitted them to be historical, we should have nothing to recount except a succession of royal names. Being unable either to guarantee the entire list, or to discover any valid test for discriminating the historical and the non-historical items, I here enumerate the Lacedæmonian kings as they appear in Mr. Clinton's Fasti Hellenici. There were two joint kings at Sparta, throughout nearly all the historical time of independent Greece, deducing their descent from Hêraklês through Eurysthenês and Proklès, the twin sons of Aristodêmus; the latter being one of those three

Herakleid brothers to whom the conquest of the peninsula is ascribed: —

Line of Eurysthenês.			*Line of Proklês.*		
Eurysthenês	reigned	42 years.	Proklês	reigned	51 years.
Agis	"	31 "	Sõus	"	—
Echestratus	"	35 "	Eurypôn	"	—
Labôtas	"	37 "	Prytanis	"	49 "
Doryssus	"	29 "	Eunomus	"	45 "
Agesilaus	"	44 "	Charilaus	"	60 "
Archelaus	"	60 "	Nikander	"	38 "
Teleklus	"	40 "	Theopompus	"	10 "
Alkamenês	"	10 "			
		328			

Both Theopompus and Alkamenês reigned considerably longer; but the chronologists affirm that the year 776 B. C. (or the first Olympiad) occurred in the tenth year of each of their reigns. It is necessary to add, with regard to this list, that there are some material discrepancies between different authors even as to the names of individual kings, and still more as to the duration of their reigns, as may be seen both in Mr. Clinton's chronology and in Müller's Appendix to the History of the Dorians.[1] The alleged sum total cannot be made to agree with the items without great license of conjecture. O. Müller observes,[2] in reference to this Alexandrine chronology, "that our materials only enable us to restore it to its original state, not to verify its correctness."

[1] Herodotus omits Sõus between Proklês and Eurypôn, and inserts Polydektês between Prytanis and Eunomus: moreover, the accounts of the Lacedæmonians, as he states them, represented Lykurgus, the law-giver, as uncle and guardian of Labôtas, of *the Eurysthenid house*, — while Simonidês made him son of Prytanis, and others made him son of Eunomus, of *the Proklid line*: compare Herod. i. 65; viii. 131. Plutarch, Lycurg. c. 2.

Some excellent remarks on this early series of Spartan kings will be found in Mr. G. C. Lewis's article in the Philological Museum, vol. ii. pp. 42–48. in a review of Dr. Arnold on the Spartan Constitution.

Compare also Larcher, Chronologie d'Hérodote. ch. 13, pp. 484–514. He lengthens many of the reigns considerably, in order to suit the earlier epoch which he assigns to the capture of Troy and the Return of the Herakleids.

[2] History of the Dorians, vol. ii. Append. p. 442.

In point of fact they are insufficient even for the former purpose, as the dissensions among learned critics attest.

We have a succession of names, still more barren of facts, in the case of the Dorian sovereigns of Corinth. This city had its own line of Herakleids, descended from Hêraklês, but not through Hyllus. Hippotês, the progenitor of the Corinthian Herakleids, was reported in the legend to have originally joined the Dorian invaders of the Peloponnesus, but to have quitted them in consequence of having slain the prophet Karnus.[1] The three brothers, when they became masters of the peninsula, sent for Alêtês, the son of Hippotês, and placed him in possession of Corinth, over which the chronologists make him begin to reign thirty years after the Herakleid conquest. His successors are thus given:—

[1] This story — that the heroic ancestor of the great Corinthian Bacchiadæ had slain the holy man Karnus, and had been punished for it by long banishment and privation — leads to the conjecture, that the Corinthians did not celebrate the festival of the Karneia, common to the Dorians generally.

Herodotus tells us, with regard to the Ionic cities, that all of them celebrated the festival of Apaturia, except Ephesus and Kolophon; and that these two cities did not celebrate it, "because of a certain reason of murder committed," — *οὗτοι γὰρ μοῦνοι Ἰώνων οὐκ ἄγουσιν Ἀπατούρια· καὶ οὗτοι κατὰ φόνου τινα σκῆψιν* (Herod. i. 147).

The murder of Karnus by Hippotês was probably the *φόνου σκῆψις* which forbade the Corinthians from celebrating the Karneia; at least, this supposition gives to the legend a special pertinence which is otherwise wanting to it. Respecting the Karneia and Hyacinthia, see Schoell De Origine Græcæ ramatis, pp. 70–78. Tübingen, 1828.

There were various singular customs connected with the Grecian festivals

Such was the celebrity of Bacchis, we are told, that those who succeeded him took the name of Bacchiads in place of Aletiads or Herakleids. One year after the accession of Automenês, the family of the Bacchiads generally, amounting to 200 persons, determined to abolish royalty, to constitute themselves a standing oligarchy, and to elect out of their own number an annual Prytanis. Thus commenced the oligarchy of the Bacchiads, which lasted for ninety years, until it was subverted by Kypselus in 657 B. C.[1] Reckoning the thirty years previous to the beginning of the reign of Alêtês, the chronologists thus provide an interval of 447 years between the Return of the Herakleids and the accession of Kypselus, and 357 years between the same period and the commencement of the Bacchiad oligarchy. The Bacchiad oligarchy is unquestionably historical; the conquest of the Herakleids belongs to the legendary world; while the interval between the two is filled up, as in so many other cases, by a mere barren genealogy.

When we jump this vacant space, and place ourselves at the first opening of history, we find that, although ultimately Sparta came to hold the first place, not only in Peloponnesus, but in all Hellas, this was not the case at the earliest moment of which we have historical cognizance. Argos, and the neighboring towns connected with her by a bond of semi-religious, semi-political union, — Sikyôn, Phlius, Epidaurus, and Trœzên, — were at first of greater power and consideration than Sparta; a fact which the legend of the Herakleids seems to recognize by making Tê-

which it was usual to account for by some legendary tale. Thus, no native of Elis ever entered himself as a competitor, or contended for the prize, at the Isthmian games. The legendary reason given for this was, that Hêraklês had waylaid and slain (at Kleônæ) the two Molionid brothers, when they were proceeding to the Isthmian games as Theôrs or sacred envoys from the Eleian king Augeas. Redress was in vain demanded for this outrage, and Molionê, mother of the slain envoys, imprecated a curse upon the Eleians generally if they should ever visit the Isthmian festival. This legend is the *φόνου σκῆψις*, explaining why no Eleian runner or wrestler was ever known to contend there (Pausan. ii. 15, 1; v. 2, 1–4. Ister, Fragment. 46, ed. Didot).

[1] Diodor. Fragm. lib. vii. p. 14, with the note of Wesseling. Strabo (viii. p. 378) states the Bacchiad oligarchy to have lasted nearly two hundred years.

menus the eldest brother of the three. And Herodotus assures us that at one time all the eastern coast of Peloponnesus down to Cape Melea, including the island of Cythêra, all which came afterwards to constitute a material part of Laconia, had belonged to Argos.[1] Down to the time of the first Messenian war, the comparative importance of the Dorian establishments in Peloponnesus appears to have been in the order in which the legend placed them, — Argos first,[2] Sparta second, Messênê third. It will be seen hereafter that the Argeians never lost the recollection of this early preëminence, from which the growth of Sparta had extruded them; and the liberties of entire Hellas were more than once in danger from their disastrous jealousy of a more fortunate competitor.

At a short distance of about three miles from Argos, and at the exact point where that city approaches nearest to the sea,[3] was situated the isolated hillock called Temenion, noticed both by Strabo and Pausanias. It was a small village, deriving both its name and its celebrity from the chapel and tomb of the hero Têmenus, who was there worshipped by the Dorians; and the statement which Pausanias heard was, that Têmenus, with his invading Dorians, had seized and fortified the spot, and employed it as an armed post to make war upon Tisamenus and the Achæans. What renders this report deserving of the greater attention, is, that the same thing is affirmed with regard to the eminence called Solygeius, near Corinth: this too was believed to be the place which the Dorian assailants had occupied and fortified against

[1] Herodot. i. 82. The historian adds, besides Cythêra, *καὶ αἱ λοιπαὶ τῶν νήσων*. What other islands are meant, I do not distinctly understand.

[2] So Plato (Legg. iii. p. 692), whose mind is full of the old mythe and the tripartite distribution of Peloponnesus among the Herakleids, — *ἡ δ' αὖ, πρωτεύουσα ἐν τοῖς τότε χρόνοις τοῖς περὶ τὴν διανομὴν, ἡ περὶ τὸ Ἄργος*, etc.

[3] Pausan. ii. 38, 1; Strabo, viii. p. 368. Professor Ross observes, respecting the line of coast near Argos, "The sea-side is thoroughly flat, and for the most part marshy; only at the single point where Argos comes nearest to the coast, — between the mouth, now choked by sand, of the united Inachus and Charadrus, and the efflux of the Erasinus, overgrown with weeds and bulrushes, — stands an eminence of some elevation and composed of firmer earth, upon which the ancient Temenion was placed." (Reisen im Peloponnes, vol. i. sect. 5, p. 149, Berlin, 1841.)

the preëxisting Corinthians in the city. Situated close upon the Saronic gulf, it was the spot which invaders landing from that gulf would naturally seize upon, and which Nikias with his powerful Athenian fleet did actually seize and occupy against Corinth in the Peloponnesian war.[1] In early days, the only way of overpowering the inhabitants of a fortified town, generally also planted in a position itself very defensible, was, — that the invaders, entrenching themselves in the neighborhood, harassed the inhabitants and ruined their produce until they brought them to terms. Even during the Peloponnesian war, when the art of besieging had made some progress, we read of several instances in which this mode of aggressive warfare was adopted with efficient results.[2] We may readily believe that the Dorians obtained admittance both into Argos and Corinth in this manner. And it is remarkable that, except Sikyôn (which is affirmed to have been surprised by night), these were the only towns in the Argolic region which are said to have resisted them; the story being, that Phlius, Epidaurus, and Trœzên had admitted the Dorian intruders without opposition, although a certain portion of the previous inhabitants seceded. We shall hereafter see that the non-Dorian population of Sikyôn and Corinth still remained considerable.

The separate statements which we thus find, and the position of the Temenion and the Solygeius, lead to two conjectures, — first, that the acquisitions of the Dorians in Peloponnesus were also isolated and gradual, not at all conformable to the rapid strides of the old Herakleid legend; next, that the Dorian invaders of Argos and Corinth made their attack from the Argolic and the Saronic gulfs, — by sea and not by land. It is, indeed, difficult to see how they can have got to the Temenion in any other way than by sea; and a glance at the map will show that the eminence Solygeius presents itself,[3] with reference to Corinth, as the nearest and most convenient holding-ground for a maritime invader, conformably to the scheme of operations laid by Nikias. To illustrate the supposition of a Dorian attack by sea on Corinth, we may refer to a story quoted from Aristotle (which

[1] Thucyd. iv. 42. Thucyd. i. 122; iii 85, vii. 18–27; viii. 38–40.

[2] Thucyd. iv. 42.

we find embodied in the explanation of an old adage), representing Hippotês the father of Alêtês as having crossed the Maliac gulf[1] (the sea immediately bordering on the ancient Maleans, Dryopians, and Dorians) in ships, for the purpose of colonizing. And if it be safe to trust the mention of Dorians in the Odyssey, as a part of the population of the island of Crete, we there have an example of Dorian settlements which must have been effected by sea, and that too at a very early period. "We must suppose (observes O. Müller,[2] in reference to these Kretan Dorians) that the Dorians, pressed by want or restless from inactivity, constructed piratical canoes, manned these frail and narrow barks with soldiers who themselves worked at the oar, and thus being changed from mountaineers into seamen, — the Normans of Greece, — set sail for the distant island of Krête." In the same manner, we may conceive the expeditions of the Dorians against Argos and Corinth to have been effected; and whatever difficulties may attach to this hypothesis, certain it is that the difficulties of a long land-march, along such a territory as Greece, are still more serious.

The supposition of Dorian emigrations by sea, from the Maliac gulf to the north-eastern promontory of Peloponnesus, is farther borne out by the analogy of the Dryopes, or Dryopians. During the historical times, this people occupied several detached settlements in various parts of Greece, all maritime, and some insular; — they were found at Hermionê, Asinê, and Eiôn, in the Argolic peninsula (very near to the important Dorian towns

[1] Aristot. ap. Prov. Vatican. iv. 4, *Μηλιακὸν πλοῖον*, — also, Prov. Suidas x. 2.

[2] Hist. of Dorians, ch. i. 9. Andrôn positively affirms that the Dorians came from Histiæôtis to Krête; but his affirmation does not seem to me to constitute any additional evidence of the fact: it is a conjecture adapted to the passage in the Odyssey (xix. 174), as the mention of Achæans and Pelasgians evidently shows.

Aristotle (ap. Strab. viii. p. 374) appears to have believed that the Heraklеids returned to Argos out of the Attic Tetrapolis (where, according to the Athenian legend, they had obtained shelter when persecuted by Eurystheus), accompanying a body of Ionians who then settled at Epidaurus. He cannot, therefore, have connected the Dorian occupation of Argos with the expedition from Naupaktus.

constituting the Amphiktyony of Argos,[1]) — at Styra and Karystus in the island of Eubœa, — in the island of Kythnus, and even at Cyprus. These dispersed colonies can only have been planted by expeditions over the sea. Now we are told that the original Dryopis, the native country of this people, comprehended both the territory near the river Spercheius, and north of Œta, afterwards occupied by the Malians, as well as the neighboring district south of Œta, which was afterwards called Doris. From hence the Dryopians were expelled, — according to one story, by the Dorians, — according to another, by Hêraklês and the Malians: however this may be, it was from the Maliac gulf that they started on shipboard in quest of new homes, which some of them found on the headlands of the Argolic peninsula.[2] And it was from this very country, according to Herodotus,[3] that the Dorians also set forth, in order to reach Peloponnesus. Nor does it seem unreasonable to imagine, that the same means of conveyance, which bore the Dryopians from the Maliac gulf to Hermionê and Asinê, also carried the Dorians from the same place to the Temenion, and the hill Solygeius.

The legend represents Sikyôn, Epidaurus, Trœzen, Phlius, and Kleônæ, as all occupied by Dorian colonists from Argos, under the different sons of Têmenus: the first three are on the sea, and fit places for the occupation of maritime invaders. Argos and the Dorian towns in and near the Argolic peninsula are to be regarded as a cluster of settlements by themselves, completely distinct from Sparta and the Messenian Stenyklêrus, which appear to have been formed under totally different conditions. First, both of them are very far inland, — Stenyklêrus not easy, Sparta very difficult of access from the sea; next, we know that the conquests of Sparta were gradually made down the valley of the Eurotas seaward. Both these acquisitions present the appearance of having been made from the land-side, and

[3] Herodot. i. 56. — *ἐνθεῦτεν δὲ αὖτις ἐς τὴν Δρυοπίδα μετέβη, καὶ ἐκ τῆς Δρυοπίδος οὕτως ἐς Πελοπόννησον ἐλθὸν, Δωρικὸν ἐκλήθη*, — to the same purpose, viii. 31–43.

perhaps in the direction which the Herakleid legend describes, — by warriors entering Peloponnesus across the narrow mouth of the Corinthian gulf, through the aid or invitation of those Ætolian settlers who at the same time colonized Elis. The early and intimate connection (on which I shall touch presently) between Sparta and the Olympic games as administered by the Eleians, as well as the leading part ascribed to Lykurgus in the constitution of the solemn Olympic truce, tend to strengthen such a persuasion.

In considering the early affairs of the Dorians in Peloponnesus, we are apt to have our minds biased, first, by the Herakleid legend, which imparts to them an impressive, but deceitful, epical unity; next, by the aspect of the later and better-known history, which presents the Spartan power as unquestionably preponderant, and Argos only as second by a long interval. But the first view (as I have already remarked) which opens to us, of real Grecian history, a little before 776 B. C., exhibits Argos with its alliance or confederacy of neighboring cities colonized from itself, as the great seat of Dorian power in the peninsula, and Sparta as an outlying state of inferior consequence. The recollection of this state of things lasted after it had ceased to be a reality, and kept alive pretensions on the part of Argos to the headship of the Greeks as a matter of right, which she became quite incapable of sustaining either by adequate power or by statesmanlike sagacity. The growth of Spartan power was a succession of encroachments upon Argos.[1]

How Sparta came constantly to gain upon Argos will be matter for future explanation: at present, it is sufficient to remark, that the ascendency of Argos was derived not exclusively from her own territory, but came in part from her position as metropolis of an alliance of autonomous neighboring cities, all Dorian and all colonized from herself, — and this was an element of power

[1] See Herodot. vii. 148. The Argeians say to the Lacedæmonians, in reference to the chief command of the Greeks — *καίτοι κατά γε τὸ δίκαιον γίνεσθαι τὴν ἡγεμονίην ἐμέων*, etc. Schweighauser and others explain the point by reference to the command of Agamemnôn; but this is at best only a part of the foundation of their claim: they had a more recent historical reality to plead also: compare Strabo, viii. p. 376.

essentially fluctuating. What Thêbes was to the cities of Bœotia, of which she either was, or professed to have been, the founder, the same was Argos in reference to Kleônæ, Phlius, Sikyôn, Epidaurus, Trœzên, and Ægina. These towns formed, in mythical language, "the lot of Têmenus,"[2] — in real matter of fact, the confederated allies or subordinates of Argos: the first four of them were said to have been *Dorized* by the sons or immediate relatives of Têmenus; and the kings of Argos, as acknowledged descendants of the latter, claimed and exercised a sort of *suzeraineté* over them. Hermionê, Asinê, and Nauplia seem also to have been under the supremacy of Argos, though not colonies.[3] But this supremacy was not claimed directly and nakedly: agreeably to the ideas of the time, the ostensible purposes of the Argeian confederacy or Amphiktyony were religious, though its secondary and not less real effects, were political. The great patron-god of the league was Apollo Pythaëus, in whose name the obligations incumbent on the members of the league were imposed. While in each of the confederated cities there was a temple to this god, his most holy and central sanctuary was on the Larissa or acropolis of Argos. At this central Argeian sanctuary, solemn sacrifices were offered by Epidaurus as well as by other members of the confederacy, and, as it should seem, accompanied by money-

[1] Ἡμῶν κτισάντων (so runs the accusation of the Theban orators against the captive Platæans, before their Lacedæmonian judges, Thucyd. iii. 61.) Πλάταιαν ὕστερον τῆς ἄλλης Βοιωτίας — οὐκ ἠξίουν αὐτοὶ, ὥσπερ ἐτάχθη τὸ πρῶτον, ἡγεμονεύεσθαι ὑφ' ἡμῶν, ἔξω δὲ τῶν ἄλλων Βοιωτῶν παραβαίνοντες τὰ πάτρια, ἐπειδὴ προσηναγκάζοντο, προσεχώρησαν πρὸς Ἀθηναίους καὶ μετ' αὐτῶν πολλὰ ἡμᾶς ἔβλαπτον.

[2] Respecting Pheidôn, king of Argos, Ephorus said, — τὴν λῆξιν ὅλην ἐνέλαβε τὴν Τημένου διεσπασμένην εἰς πλείω μέρη (ap. Strabo. viii. p. 358).

[3] The worship of Apollo Pythaëus, adopted from Argos both at Hermionê and Asinê, shows the connection between them and Argos (Pausan. ii. 35, 2; ii. 36, 5): but Pausanias can hardly be justified in saying that the Argeians actually *Dorized* Hermionê: it was Dryopian in the time of Herodotus, and seemingly for a long time afterwards (Herodot. viii. 43). The Hermionian Inscription, No. 1193, in Boeckh's Collection, recognizes their old Dryopian connection with Asinê in Laconia: that town had once been neighbor of Hermionê, but was destroyed by the Argeians, and the inhabitants received a new home from the Spartans. The dialect of the Hermionians (probably that of the Dryopians generally) was Doric. See Ahrens, De Dialecto Dorică, pp. 2–12.

payments,[1] — which the Argeians, as chief administrators on behalf of the common god, took upon them to enforce against defaulters, and actually tried to enforce during the Peloponnesian war against Epidaurus. On another occasion, during the 66th Olympiad (B. C. 514), they imposed the large fine of 500 talents upon each of the two states Sikyôn and Ægina, for having lent ships to the Spartan king Kleomenes, wherewith he invaded the Argeian territory. The Æginetans set the claim at defiance, but the Sikyonians acknowledged its justice, and only demurred to its amount, professing themselves ready to pay 100 talents.[2] There can be no doubt that, at this later period, the ascendency of Argos over the members of her primitive confederacy had become practically inoperative; but the tenor of the cases mentioned shows that her claims were revivals of bygone privileges, which had once been effective and valuable.

How valuable the privileges of Argos were, before the great rise of the Spartan power, — how important an ascendency they conferred, in the hands of an energetic man, and how easily they admitted of being used in furtherance of ambitious views, is shown by the remarkable case of Pheidôn, the Temenid. The few facts which we learn respecting this prince exhibit to us, for the first time, something like a real position of parties in the Peloponnesus, wherein the actual conflict of living historical men and cities, comes out in tolerable distinctness.

Pheidôn was designated by Ephorus as the tenth, and by Theopompus as the sixth, in lineal descent from Têmenus. Respecting the date of his existence, opinions the most discrepant and irreconcilable have been delivered; but there seems good reason for referring him to the period a little before and a little after the 8th Olympiad, — between 770 B. C. and 730

[1] Thucyd. v. 53. Κυριώτατοι τοῦ ἱεροῦ ἦσαν οἱ Ἀργεῖοι. The word εἰσπραξις, which the historian uses in regard to the claim of Argos against Epidaurus, seems to imply a money-payment withheld: compare the offerings exacted by Athens from Epidaurus (Herod. v. 82).

The peculiar and intimate connection between the Argeians, and Apollo, with his surname of Pythaëus, was dwelt upon by the Argeian poetess Telesilla (Pausan. ii. 36, 2).

[2] Herodot. vi. 92. See O. Müller History of the Dorians, ch. 7, 13.

B. C.[1] Of the preceding kings of Argos we hear little: one of them, Eratus, is said to have expelled the Dryopian inhabitants of Asinê from their town on the Argolic peninsula, in consequence of their having coöperated with the Spartan king, Nikander, when he invaded the Argeian territory, seemingly during the generation preceding Pheidôn; there is another, Damokratidas, whose date cannot be positively determined, but he appears rather as subsequent than as anterior to Pheidôn.[2] We are informed, however, that these anterior kings, even beginning with Medôn, the grandson of Têmenus, had been forced to submit to great abridgment of their power and privileges, and that a form of government substantially popular, though nominally regal, had been established.[3] Pheidôn, breaking through

[1] Ephor. Fragm. 15, ed. Marx; ap. Strabo, viii. p. 358; Theopompus, Fragm. 30, ed. Didot; ap. Diodor. Fragm. lib. iv.

The Parian Marble makes Pheidôn the eleventh from Hêraklês, and places him B. C. 895; Herodotus, on the contrary (in a passage which affords considerable grounds for discussion), places him at a period which cannot be much higher than 600 B. C. (vi. 127.) Some authors suspect the text of Herodotus to be incorrect: at any rate, the real epoch of Pheidôn is determined by the 8th Olympiad. Several critics suppose *two* Pheidôns, each king of Argos, — among others, O. Müller (Dorians, iii. 6, 10); but there is nothing to countenance this, except the impossibility of reconciling Herodotus with the other authorities. And Weissenborn, in a dissertation of some length, vindicates the emendation of Pausanias proposed by some former critics, — altering the 8th Olympiad, which now stands in the text of Pausanias, into the *twenty-eighth*, as the date of Pheidon's usurpation at the Olympic games. Weissenborn endeavors to show that Pheidôn cannot have flourished earlier than 660 B. C.; but his arguments do not appear to me very forcible, and certainly not sufficient to justify so grave an alteration in the number of Pausanias (Beiträge zur Griechischen Alterthumskunde, p. 18, Jena, 1844). Mr. Clinton (Fasti Hellenici, vol. i. App. 1, p. 249) places Pheidôn between 783 and 744 B. C.; also, Boeckh. ad Corp. Inscript. No. 2374, p. 335, and Müller, Æginetica, p. 63.

[2] Pausan. ii. 36, 5; iv. 35, 2.

[3] Pausan. ii. 19, 1. Ἀργεῖοι δὲ, ὰτε ἰσηγορίαν καὶ τὸ αὐτόνομον ἀγαπῶντες ἐκ παλαιοτάτου, τὰ τῆς ἐξουσίας τῶν βασιλέων ἐς ἐλάχιστον προήγαγον, ὡς Μήδωνι τῷ Κείσου καὶ τοῖς ἀπογόνοις τὸ ὄνομα λειφθῆναι τοῦ βασιλέως μόνον This passage has all the air of transferring back to the *early* government of Argos, feelings which were only true of the *later*. It is curious that, in this chapter, though devoted to the Argeian regal line and government, Pausanias takes no notice of Pheidôn: he mentions him only with reference to the disputed Olympic ceremony.

the limits imposed, made himself despot of Argos. He then re-established the power of Argos over all the cities of her confederacy, which had before been so nearly dissolved as to leave all the members practically independent.[1] Next, he is said to have acquired dominion over Corinth, and to have endeavored to assure it, by treacherously entrapping a thousand of her warlike citizens; but his artifice was divulged and frustrated by Abrôn, one of his confidential friends.[2] He is farther reported to have aimed at extending his sway over the greater part of Peloponnesus, — laying claim, as the descendant of Hêraklês, through the eldest son of Hyllus, to all the cities which that restless and irresistible hero had ever taken.[3] According to Grecian ideas, this legendary title was always seriously construed, and often admitted as conclusive; though of course, where there were strong opposing interests, reasons would be found to elude it. Pheidôn would have the same ground of right as that which, two hundred and fifty years afterwards, determined the Herakleid Dôrieus, brother of Kleomenês king of Sparta, to acquire for himself the territory near Mount Eryx in Sicily, because his progenitor,[4] Hêraklês, had conquered it before him. So numerous, however, were the legends respecting the conquests of Hêraklês, that the claim of Pheidôn must have covered the greater part of Peloponnesus, except Sparta and the plain of Messênê, which were already in the hands of Herakleids.

Nor was the ambition of Pheidôn satisfied even with these large pretensions. He farther claimed the right of presiding at the celebration of those religious games, or Agônes, which had

[1] Ephorus, *ut suprà*. *Φείδωνα τὸν Ἀργεῖον, δέκατον ὄντα ἀπὸ Τημένου, δυνάμει δὲ ὑπερβεβλημένον τοὺς κατ' αὐτὸν, ἀφ' ἧς τήν τε λῆξιν ὅλην ἀνέλαβε τὴν Τημένου διεσπασμένην εἰς πλείω μέρη*, etc. What is meant by *the lot of Têmenus* has been already explained.

[2] Plutarch, Narrat. Amator. p. 772; Schol. Apollon. Rhod. iv. 1212; compare Didymus, ap. Schol. Pindar. Olymp. xiii. 27.

I cannot, however, believe that Pheidôn, the ancient Corinthian law giver mentioned by Aristotle, is the same person as Pheidôn the king of Argos (Polit. ii. 6, 4).

[3] Ephor. *ut suprà*. *Πρὸς τοῦτοις, ἐπιθέσθαι καὶ ταῖς ὑφ' Ἡρακλέους αἱρυθείσαις πόλεσι, καὶ τοὺς ἀγῶνας ἀξιοῦν τιθέναι αὐτὸν, οὓς ἐκεῖνος ἔθηκε τούτων δὲ εἶναι καὶ τὸν Ὀλυμπιακὸν*, etc. [4] Herodot. v. 43

been instituted by Hêraklês, — and among these was numbered the Olympic Agôn, then, however, enjoying but a slender fraction of the lustre which afterwards came to attach to it. The presidency of any of the more celebrated festivals current throughout Greece, was a privilege immensely prized. It was at once dignified and lucrative, and the course of our history will present more than one example in which blood was shed to determine what state should enjoy it. Pheidôn marched to Olympia, at the epoch of the 8th recorded Olympiad, or 747 B. C.; on the occasion of which event we are made acquainted with the real state of parties in the peninsula.

The plain of Olympia, — now ennobled only by immortal recollections, but once crowded with all the decorations of religion and art, and forming for many centuries the brightest centre of attraction known in the ancient world, — was situated on the river Alpheius, in the territory called the Pisatid, hard by the borders of Arcadia. At what time its agonistic festival, recurring every fifth year, at the first full moon after the summer solstice, first began or first acquired its character of special sanctity, we have no means of determining. As with so many of the native waters of Greece, — we follow the stream upward to a certain point, but the fountain-head, and the earlier flow of history, is buried under mountains of unsearchable legend. The first celebration of the Olympic contests was ascribed by Grecian legendary faith to Hêraklês, — and the site of the place, in the middle of the Pisatid, with its eight small townships, is quite sufficient to prove that the inhabitants of that little territory were warranted in describing themselves as the original administrators of the ceremony.[1] But this state of things seems to have been altered by the Ætolian settlement in Elis, which is represented as having been conducted by Oxylus and identified with the Return of the Herakleids. The Ætolo-Eleians, bordering upon the Pisatid to the north, employed their superior power in subduing their weaker neighbors,[2] who thus lost their autonomy and became annexed to the territory of Elis. It was the general rule throughout Greece, that a victorious state undertook to perform[3]

[1] Xenoph. Hellen. vii. 4, 28; Diodor. xv. 78.

[2] Strabo, viii. p. 354. [3] Thucyd. iv. 98

the current services of the conquered people towards the gods, — such services being conceived as attaching to the soil: hence, the celebration of the Olympic games became numbered among the incumbences of Elis, just in the same way as the worship of the Eleusinian Dêmêtêr, when Eleusis lost its autonomy, was included among the religious obligations of Athens. The Pisatans, however, never willingly acquiesced in this absorption of what had once been their separate privilege; they long maintained their conviction, that the celebration of the games was their right, and strove on several occasions to regain it. On those occasions, the earliest, so far as we hear, was connected with the intervention of Pheidôn. It was at their invitation that the king of Argos went to Olympia, and celebrated the games himself, in conjunction with the Pisatans, as the lineal successor of Hêraklês; while the Eleians, being thus forcibly dispossessed, refused to include the 8th Olympiad in their register of the victorious runners. But their humiliation did not last long, for the Spartans took their part, and the contest ended in the defeat of Pheidôn. In the next Olympiad, the Eleian management and the regular enrolment appear as before, and the Spartans are even said to have confirmed Elis in her possession both of Pisatis and Triphylia.[1]

Unfortunately, these scanty particulars are all which we learn respecting the armed conflict at the 8th Olympiad, in which the religious and the political grounds of quarrel are so intimately blended, — as we shall find to be often the case in Grecian history. But there is one act of Pheidôn yet more memorable, of which also nothing beyond a meagre notice has come down to us. He first coined both copper and silver money in Ægina, and first established a scale of weights and measures,[2] which, through his influence, became adopted throughout Peloponnesus, and acquired, ultimately, footing both in all the Dorian states, and in Bœotia, Thessaly, northern Hellas generally, and Macedonia, — under the name of the Æginæan Scale. There arose

[1] Pausan. v. 22, 2; Strabo, viii. pp. 354–358; Herodot. vi. 127. The name of the victor (Antiklês the Messenian), however, belonging to the 8th Olympiad, appears July in the lists; it must have been supplied afterwards.

[2] Herodot. vi. 127; Ephor. ap. Strab. viii. pp. 358–376.

subsequently another rival scale in Greece, called the Euboic, differing considerably from the Æginæan. We do not know at what time it was introduced, but it was employed both at Athens and in the Ionic cities generally, as well as in Eubœa, — being modified at Athens, so far as money was concerned, by Solon's debasement of the coinage.

The copious and valuable information contained in M. Boeckh's recent publication on Metrology, has thrown new light upon these monetary and statical scales.[1] He has shown that both the Æginæan and the Euboic scales — the former standing to the latter in the proportion of 6 : 5 — had contemporaneous currency in different parts of the Persian empire; the divisions and denominations of the scale being the same in both, 100 drachmæ to a mina, and 60 minæ to a talent. The Babylonian talent, mina, and drachma are identical with the Æginæan: the word mina is of Asiatic origin; and it has now been rendered highly probable, that the scale circulated by Pheidôn was borrowed immediately from the Phœnicians, and by them originally from the Babylonians. The Babylonian, Hebraic, Phœnician, Egyptian,[2] and Grecian scales of weight (which were subsequently followed wherever coined money was introduced) are found to be so nearly conformable, as to warrant a belief that they are all deduced from one common origin; and that origin the Chaldæan priesthood of Babylon. It is to Pheidôn, and to his position as chief of the

[1] Metrologische Untersuchungen über Gewichte, Münzfusse, und Mässe des Alterthums in ihrem Zusammenhange dargestellt, von Aug. Boeckh; Berlin, 1838.

See chap. 7, 1–3. But I cannot agree with M. Boeckh, in thinking that Pheidôn, in celebrating the Olympic games, deduced from the Olympic stadium, and formally adopted, the measure of the *foot*, or that he at all settled measures of *length*. In general, I do not think that M. Boeckh's conclusions are well made out, in respect to the Grecian measures of *length* and *capacity*. In an examination of this eminently learned treatise (inserted in the Classical Museum, 1844, vol. i.), I endeavored to set forth both the new and interesting points established by the author, and the various others in which he appeared to me to have failed.

[2] I have modified this sentence as it stood in my first edition. It is not correct to speak of the Egyptian *money* scale: the Egyptians had no *coined money*. See a valuable article, in review of my History, in the Christian Reformer, by Mr. Kenrick, who pointed out this inaccuracy.

Argeian confederacy, that the Greeks owe the first introduction of the Babylonian scale of weight, and the first employment of coined and stamped money.

If we maturely weigh the few, but striking acts of Pheidôn which have been preserved to us, and which there is no reason to discredit, we shall find ourselves introduced to an early historical state of Peloponnesus very different from that to which another century will bring us. That Argos, with the federative cities attached to her, was at this early time decidedly the commanding power in that peninsula, is sufficiently shown by the establishment and reception of the Pheidonian weights, measures, and monetary system, — while the other incidents mentioned completely harmonize with the same idea. Against the oppressions of Elis, the Pisatans invoked Pheidon, — partly as exercising a primacy in Peloponnesus, just as the inhabitants of Lepreum in Triphylia,[1] three centuries afterwards, called in the aid of Sparta for the same object, at a time when Sparta possessed the headship, — and partly as the lineal representative of Hêraklês, who had founded those games from the management of which they had been unjustly extruded. On the other hand, Sparta appears as a second-rate power. The Æginæan scale of weight and measure was adopted there as elsewhere,[2] — the Messenian Dorians were still equal and independent, — and we find Sparta interfering to assist Elis by virtue of an obligation growing (so the legend represents it) out of the common Ætolo-Dorian emigration; not at all from any acknowledged primacy, such as we shall see her enjoying hereafter. The first coinage of copper and silver money is a capital event in Grecian history, and must be held to imply considerable commerce as well as those extensive views which belong only to a conspicuous and leading position. The ambition of Pheidôn to resume all the acquisitions made by his ancestor Hêraklês, suggests the same large estimate of his actual power. He is characterized as a despot, and even as the most insolent

[1] Thucyd. v. 31.

[2] Plutarch, Apophthegm. Laconic. p. 226; Dikæarchus ap. Athenæ. iv. p. 141.

The Æginæan mina, drachma, and obolus were the denominations employed in stipulations among the Peloponnesian states (Thucyd. v. 47).

of all despots:[1] how far he deserved such a reputation, we have no means of judging. We may remark, however, that he lived before the age of despots or tyrants, properly so called, and before the Herakleid lineage had yet lost its primary, half-political, half-religious character. Moreover, the later historians have invested his actions with a color of exorbitant aggression, by applying them to a state of things which belonged to their time and not to his. Thus Ephorus represents him as having deprived the Lacedæmonians of the headship of Peloponnesus, which they never possessed until long after him, — and also as setting at naught the sworn inviolability of the territory of the Eleians, enjoyed by the latter as celebrators of the Olympic games; whereas the Agonothesia, or right of superintendence claimed by Elis, had not at that time acquired the sanction of prescription, — while the conquest of Pisa by the Eleians themselves had proved that this sacred function did not protect the territory of a weaker people.

How Pheidôn fell, and how the Argeians lost that supremacy which they once evidently possessed, we have no positive details to inform us: with respect to the latter point, however, we can discern a sufficient explanation. The Argeians stood predominant as an entire and unanimous confederacy, which required a vigorous and able hand to render its internal organization effective or its ascendency respected without. No such leader afterwards appeared at Argos, the whole history of which city is destitute of eminent individuals: her line of kings continued at least down to the Persian war,[2] but seemingly with only titular functions, for the government had long been decidedly popular The statements, which represent the government as popular anterior to the time of Pheidôn, appear unworthy of trust. That prince is rather to be taken as wielding the old, undiminished prerogatives of the Herakleid kings but wielding them with unusual effect, — enforcing relaxed privileges, and appealing to the

[1] Herodot. vi. 127. *Φείδωνος τοῦ Ἀργείων τυράννου — τοῦ ὑβρίσαντος μέγιστα δὴ Ἑλλήνων ἁπάντων.* Pausanias (vi. 22, 2) copies the expression.

Aristotle cites Pheidôn as a person who, being a *βασιλεὺς*, made himself a *τύραννος* (Politic. viii. 8, 5).

[2] Herodot. vii. 149.

old heroic sentiment in reference to Hêraklês, rather than revolutionizing the existing relations either of Argos or of Peloponnesus. It was in fact the great and steady growth of Sparta, for three centuries after the Lykurgean institutions, which operated as a cause of subversion to the previous order of command and obedience in Greece.

The assertion made by Herodotus, — that, in earlier times, the whole eastern coast of Laconia as far as Cape Malea, including the island of Kythêra and several other islands, had belonged to Argos, — is referred by O. Muller to about the 50th Olympiad, or 580 B. C. Perhaps it had ceased to be true at that period; but that it was true in the age of Pheidôn, there seem good grounds for believing. What is probably meant is, that the Dorian towns on this coast, Prasiæ, Zarêx, Epidaurus Limêra, and Bœæ, were once autonomous, and members of the Argeian confederacy, — a fact highly probable, on independent evidence, with respect to Epidaurus Limêra, inasmuch as that town was a settlement from Epidaurus in the Argolic peninsula: and Bœæ too had its own œkist and eponymus, the Herakleid Bœus,[1] noway connected with Sparta, — perhaps derived from the same source as the name of the town Bœon in Doris. The Argeian confederated towns would thus comprehend the whole coast of the Argolic and Saronic gulfs, from Kythêra as far as Ægina, besides other islands which we do not know: Ægina had received a colony of Dorians from Argos and Epidaurus, upon which latter town it continued for some time in a state of dependence.[2] It will at once be seen that this extent of coast implies a considerable degree of commerce and maritime activity. We have besides to consider the range of Doric colonies in the southern islands of the Ægean and in the south-western corner of Asia Minor, — Krête, Kôs, Rhodes (with its three distinct cities), Halikarnassus, Knidus, Myndus, Nisyrus, Symê, Karpathus, Kalydna, etc. Of the Doric establishments here named, several are connected (as has been before stated) with the great emigration of the Têmenid Althæmenês from Argos: but what we particularly observe is, that they are often referred as colonies promiscuously to Argos, Trœzên,

[1] Pausan. iii. 22, 9; iii. 23, 4.
[2] Herodot. v. 83; Strabo, viii. p. 375.

RECONSTRUCTION OF THE ALTAR ON THE ACROPOLIS PERGAMON
Greece, vol. two.

Epidauras[1] — more frequently however, as it seems, to Argos. All these settlements are doubtless older than Pheidôn, and we may conceive them as proceeding conjointly from the allied Dorian towns in the Argolic peninsula, at a time when they were more in the habit of united action than they afterwards became: a captain of emigrants selected from the line of Hêraklês and Têmenus was suitable to the feelings of all of them. We may thus look back to a period, at the very beginning of the Olympiads, when the maritime Dorians on the east of Peloponnesus maintained a considerable intercourse and commerce, not only among themselves, but also with their settlements on the Asiatic coast and islands. That the Argolic peninsula formed an early centre for maritime rendezvous, we may farther infer from the very ancient Amphiktyony of the seven cities (Hermionê, Epidaurus, Ægina, Athens, Prasiæ, Nauplia, and the Minyeian Orchomenus), on the holy island of Kalauria, off the harbor of Trœzên.[2]

The view here given of the early ascendency of Argos, as the head of the Peloponnesian Dorians and the metropolis of the Asiatic Dorians, enables us to understand the capital innovation of Pheidôn, — the first coinage, and the first determinate scale of weight and measure, known in Greece. Of the value of such improvements, in the history of Grecian civilization, it is superfluous to speak, especially when we recollect that the Hellenic states, having no political unity, were only held together by the

---

[1] Rhodes, Kôs, Knidus, and Halikarnassus are all treated by Strabo (xiv p. 653) as colonies of Argos: Rhodes is so described by Thucydidês (vii. 57), and Kôs by Tacitus (xii. 61). Kôs, Kalydna, and Nisyrus are described by Herodotus as colonies of Epidaurus (vii. 99): Halikarnassus passes sometimes for a colony of Trœzên, sometimes of Trœzên and Argos conjointly: "Cum Melas et Areuanius ab Argis et Trœzene coloniam communem eo loco induxerunt, barbaros Caras et Leleges ejecerunt (Vitruv. ii. 8. 12; Steph. Byz. v. Ἁλικάρνασσος)." Compare Strabo, x. p. 479; Conon, Narr. 47; Diodor. v. 80.

Raoul Rochette (Histoire des Colonies Grecques, t. iii. ch. 9) and O. Müller (History of the Dorians, ch. 6) have collected the facts about these Asiatic Dorians.

The little town of Bœæ had its counterpart of the same name in Krête (Steph. Byz. v. Βοῖον).

[2] Strabo, p. 374.

aggregate of spontaneous uniformities, in language, religion, sympathies, recreations, and general habits. We see both how Pheidôn came to contract the wish, and how he acquired the power, to introduce throughout so much of the Grecian world an uniform scale; we also see that the Asiatic Dorians form the link between him and Phœnicia, from whence the scale was derived, just as the Euboic scale came, in all probability, through the Ionic cities in Asia, from Lydia. It is asserted by Ephorus, and admitted even by the ablest modern critics, that Pheidôn first coined money "in Ægina:"[1] other authors (erroneously believing that his scale was the Euboic scale) alleged that his coinage had been carried on "in a place of Argos called Eubœa."[2] Now both these statements appear highly improbable, and both are traceable to the same mistake, — of supposing that the title, by which the scale had come to be commonly known, must necessarily be derived from the place in which the coinage had been struck. There is every reason to conclude, that what Pheidôn did was done in Argos, and nowhere else: his coinage and scale were the earliest known in Greece, and seem to have been known by his own name, "the Pheidonian measures," under which designation they were described by Aristotle, in his account of the constitution of Argos.[3] They probably did not come to bear the specific epithet of *Æginæan* until there was another scale in vogue, the *Euboic*, from which to distinguish them; and both the epithets were probably derived, not from the place where the scale first originated, but from the people whose commercial activity tended to make them most generally known, — in the one case, the Æginetans; in the other case, the inhabitants of Chalkis and Eretria. I think, therefore, that we are to look upon the Pheidonian measures as emanating from Argos, and as having

no greater connection, originally, with Ægina, than with any other city dependent upon Argos.

There is, moreover, another point which deserves notice. What was known by the name of the Æginæan scale, as contrasted with and standing in a definite ratio (6: 5) with the Euboic scale, related only to weight and money, so far as our knowledge extends:[1] we have no evidence to show that the same ratio extended either to measures of length or measures of capacity. But there seems ground for believing that the Pheidonian regulations, taken in their full comprehension, embraced measures of capacity as well as weights: Pheidôn, at the same time when he determined the talent, mina, and drachm, seems also to have fixed the dry and liquid measures, — the medimnus and metrêtês, with their parts and multiples: and there existed[2] Pheidonian measures of capacity, though not of length, so far as we know. The Æginæan scale may thus have comprised only a portion of what was established by Pheidôn, namely, that which related to weight and money.

CHAPTER V.

ÆTOLO-DORIAN EMIGRATION INTO PELOPONNESUS. — ELIS, LACONIA, AND MESSENIA.

It has already been stated that the territory properly called Elis, apart from the enlargement which it acquired by conquest, included the westernmost land in Peloponnesus, south of Achaia, and west of Mount Pholoê and Olenus in Arcadia, — but not extending so far southward as the river Alpheius, the course of which lay along the southern portion of Pisatis and on the borders of Triphylia. This territory, which appears in the Odyssey

[1] This differs from Boeckh's opinion: see the note in page 315.

[2] Theophrast. Character. c. 13; Pollux, x. 179.

as "the divine Elis, where the Epeians hold sway,"[1] is in the historical times occupied by a population of Ætolian origin. The connection of race between the historical Eleians and the historical Ætolians was recognized by both parties, nor is there any ground for disputing it.[2]

That Ætolian invaders, or emigrants, into Elis, would cross from Naupaktus, or some neighboring point in the Corinthian gulf, is in the natural course of things, — and such is the course which Oxylus, the conductor of the invasion, is represented by the Herakleid legend as taking. That legend (as has been already recounted) introduces Oxylus as the guide of the three Herakleid brothers, — Têmenus, Kresphontês, and Aristodêmus, — and as stipulating with them that, in the new distribution about to take place of Peloponnesus, he shall be allowed to possess the Eleian territory, coupled with many holy privileges as to the celebration of the Olympic games.

In the preceding chapter, I have endeavored to show that the settlements of the Dorians in and near the Argolic peninsula, so far as the probabilities of the case enable us to judge, were not accomplished by any inroad in this direction. But the localities occupied by the Dorians of Sparta, and by the Dorians of Stenyklêrus, in the territory called Messênê, lead us to a different conclusion. The easiest and most natural road through which emigrants could reach either of these two spots, is through the Eleian and the Pisatid country. Colonel Leake observes,[3] that the direct road from the Eleian territory to Sparta, ascending the valley of the Alpheius, near Olympia, to the sources of its branch, the Theius, and from thence descending the Eurotas, affords the only easy march towards that very inaccessible city: and both ancients and moderns have remarked the vicinity of the source of the Alpheius to that of the Eurotas. The situation of Stenyklêrus and Andania, the original settlements of the Messenian Dorians, adjoining closely the Arcadian Parrhasii, is only at a short distance from the course of the Alpheius; being thus reached

[1] Odyss. xv. 297.

[2] Strabo, x. p. 479.

[3] Leake, Travels in Morea, vol. iii. ch. 23, p. 29; compare Diodor. xv. 66. The distance from Olympia to Sparta, as marked on a pillar which Pausanias saw at Olympia, was 660 stadia, — about 77 English miles (Pausan vi. 16, 6).

most easily by the same route. Dismissing the idea of a great collective Dorian armament, powerful enough to grasp at once the entire peninsula, — we may conceive two moderate detachments of hardy mountaineers, from the cold regions in and near Doris, attaching themselves to the Ætolians, their neighbors, who were proceeding to the invasion of Elis. After having aided the Ætolians, both to occupy Elis and to subdue the Pisatid, these Dorians advanced up the valley of the Alpheius in quest of settlements for themselves. One of these bodies ripens into the stately, stubborn, and victorious Spartans; the other, into the short-lived, trampled, and struggling Messenians.

Amidst the darkness which overclouds these original settlements, we seem to discern something like special causes to determine both of them. With respect to the Spartan Dorians, we are told that a person named Philonomus betrayed Sparta to them, persuading the sovereign in possession to retire with his people into the habitations of the Ionians, in the north of the peninsula, — and that he received as a recompense for this acceptable service Amyklæ, with the district around it. It is farther stated, — and this important fact there seems no reason to doubt, — that Amyklæ, — though only twenty stadia or two miles and a half distant from Sparta, retained both its independence and its Achæan inhabitants, long after the Dorian emigrants had acquired possession of the latter place, and was only taken by them under the reign of Têleklus, one generation before the first Olympiad.[1] Without presuming to fill up by conjecture incurable gaps in the statements of our authorities, we may from hence reasonably presume that the Dorians were induced to invade, and enabled to acquire, Sparta, by the invitation and assistance of a party in the interior of the country. Again, with res to the Messenian Dorians, a different, but not less effectual t tation was presented by the alliance of the Arcadians, in the south-western portion of that central region of Peloponnesus. Kresphontês, the Herakleid leader, it is said, espoused the daughter[2] of the Arcadian king, Kypselus, which procured for him the

[1] Strabo, viii. pp. 364, 365; Pausan. iii. 2 5: compare the story of Krius Pausan. iii. 13, 3.

[2] Pausan. iv. 3, 3; viii. 29, 4

support of a powerful section of Arcadia. His settlement at Stenyklêrus was a considerable distance from the sea, at the north-east corner of Messenia,[1] close to the Arcadian frontier; and it will be seen hereafter that this Arcadian alliance is a constant and material element in the disputes of the Messenian Dorians with Sparta.

We may thus trace a reasonable sequence of events, showing how two bodies of Dorians, having first assisted the Ætolo-Eleians to conquer the Pisatid, and thus finding themselves on the banks of the Alpheius, followed the upward course of that river, the one to settle at Sparta, the other at Stenyklêrus. The historian Ephorus, from whom our scanty fragments of information respecting these early settlements are derived, — it is important to note that he lived in the age immediately succeeding the first foundation of Messênê as a city, the restitution of the long-exiled Messenians, and the amputation of the fertile western half of Laconia, for their benefit, by Epameinondas, — imparts to these proceedings an immediate decisiveness of effect which does not properly belong to them: as if the Spartans had become at once possessed of all Laconia, and the Messenians of all Messenia: Pausanias, too, speaks as if the Arcadians collectively had assisted and allied themselves with Kresphontês. This is the general spirit which pervades his account, though the particular facts in so far as we find any such, do not always harmonize with it. Now we are ignorant of the preëxisting divisions of the country, either east or west of Mount Taygetus, at the time when the Dorians invaded it. But to treat the one and the other as integral kingdoms, handed over at once to two Dorian leaders, is an illusion borrowed from the old legend, from the historicizing fancies of Ephorus, and from the fact that, in the well-known times, this whole territory came to be really united under the Spartan power.

At what date the Dorian settlements at Sparta and Stenyklêrus were effected, we have no means of determining. Yet, that there existed between them in the earliest times a degree of fraternity which did not prevail between Lacedæmon and Argos,

[1] Strabo (viii. p. 366) blames Euripidês for calling Messênê an inland country; but the poet seems to have been quite correct in doing so.

we may fairly presume from the common temple, with joint religious sacrifices, of Artemis Limnatis, or Artemis on the Marsh, erected on the confines of Messenia and Laconia.[1] Our first view of the two, at all approaching to distinctness, seems to date from a period about half a century earlier than the first Olympiad (776 B. C.), — about the reign of king Têleklus of the Eurystheneid or Agid line, and the introduction of the Lykurgean discipline. Têleklus stands in the list as the eighth king dating from Eurysthenes. But how many of the seven kings before him are to be considered as real persons, — or how much, out of the brief warlike expeditions ascribed to them, is to be treated as authentic history, — I pretend not to define.

The earliest determinable event in the *internal* history of Sparta is the introduction of the Lykurgean discipline; the earliest *external* events are the conquest of Amyklæ, Pharis, and Geronthræ, effected by king Têleklus, and the first quarrel with the Messenians, in which that prince was slain. When we come to see how deplorably great was the confusion and ignorance which reigned with reference to a matter so preëminently important as Lykurgus and his legislation, we shall not be inclined to think that facts much less important, and belonging to an earlier epoch, can have been handed down upon any good authority. And in like manner, when we learn that Amyklæ, Pharis, and Geronthræ (all south of Sparta, and the first only two and a half miles distant from that city) were independent of the Spartans until the reign of Têleklus, we shall require some decisive testimony before we can believe that a community so small, and so hemmed in as Sparta must then have been, had in earlier times undertaken expeditions against Helos on the sea-coast, against Kleitor on the extreme northern side of Arcadia, against the Kynurians, or against the Argeians. If Helos and Kynuria were conquered by these early kings, it appears that they had to be conquered a second time by kings succeeding Têleklus. It would be more natural that we should hear when and how they conquered the places nearer to them, — Sellasia, or Belemina, the valley of the Œnus, or the upper valley of the Eurotas. But these seem to be

[1] Pausan. iv. 2, 2. *μετεῖχον δὲ αὐτοῦ κόνοι Δωρίεων οἵ τε Μεσσήνιοι καὶ Λακεδαιμόνιοι.*

assumed as matters of course; the proceedings ascribed to the early Spartan kings are such only as might beseem the palmy days when Sparta was undisputed mistress of all Laconia.

The succession of Messenian kings, beginning with Kresphontês, the Herakleid brother, and continuing from father to son, — Æpytus, Glaukus, Isthnius, Dotadas, Subotas, Phintas, the last being contemporary with Têleklus, — is still less marked by incident than that of the early Spartan kings. It is said that the reign of Kresphontês was troubled, and himself ultimately slain by mutinies among his subjects: Æpytus, then a youth, having escaped into Arcadia, was afterwards restored to the throne by the Arcadians, Spartans, and Argeians.[1] From Æpytus, the Messenian line of kings are stated to have been denominated Æpytids in preference to Herakleids, — which affords another proof of their intimate connection with the Arcadians, since Æpytus was a very ancient name in Arcadian heroic antiquity.[2]

There is considerable resemblance between the alleged behavior of Kresphontês on first settling at Stenyklêrus, and that of Eurysthenês and Proklês at Sparta, — so far as we gather from statements alike meagre and uncertified, resting on the authority of Ephorus. Both are said to have tried to place the preëxisting inhabitants of the country on a level with their own Dorian bands; both provoked discontents and incurred obloquy, with their contemporaries as well as with posterity, by the attempt; nor did either permanently succeed. Kresphontês was forced to concentrate all his Dorians in Stenyklêrus, while after all, the discontents ended in his violent death. And Agis, the son of Eurysthenês, is said to have reversed all the liberal tentatives of his father, so as to bring the whole of Laconia into subjection and dependence on the Dorians at Sparta, with the single exception of Amyklæ. So odious to the Spartan Dorians was the conduct of Eurysthenês, that they refused to acknowledge him as their œkist, and conferred that honor upon Agis; the two lines of kings being called Agiads

[1] Pausan. iv. 3, 5–6.

[2] Homer, Iliad, ii. 604. —

Οἳ δ' ἔχον Ἀρκαδίην, ὑπὸ Κυλλήνης ὄρος αἰπὺ,
Αἰπύτιον παρὰ τύμβον.

Scholi *ad loc.* ὁ δ' Αἰπυτος ἀρχαιότατος ἥρως, Ἀρκὰς τὸ γένος.

and Eurypontids, instead of Eurystheneids and Prokleids.[1] We see in these statements the same tone of mind as that which pervades the Panathenaic oration of Isokratês, the master of Ephorus, — the facts of an unknown period, so colored as to suit an *idéal* of haughty Dorian exclusiveness.

Again, as Eurysthenês and Proklês appear, in the picture of Ephorus, to carry their authority at once over the whole of Laconia, so too does Kresphontês over the whole of Messenia, — over the entire south-western region of Peloponnesus, westward of Mount Taygetus and Cape Tænarus, and southward of the river Neda. He sends an envoy to Pylus and Rhium, the western and southern portions of the south-western promontory of Peloponnesus, treating the entire territory as if it were one sovereignty, and inviting the inhabitants to submit under equal laws.[2] But it has already been observed, that this supposed

[1] Compare the two citations from Ephorus, Strabo, viii. pp. 361–365. Unfortunately, a portion of the latter citation is incurably mutilated in the text: O. Müller (History of the Dorians, book i. ch. v. 13) has proposed an ingenious conjecture, which, however, cannot be considered as trustworthy. Grosskurd, the German translator, usually skilful in these restorations, leaves the passage untouched.

For a new coloring of the death of Kresphontês, adjusted by Isokratês so as to suit the purpose of the address which he puts into the mouth of Archidamus king of Sparta, see the discourse in his works which passes under that name (Or. iv. pp. 120–122). Isokratês says that the Messenian Dorians slew Kresphontês, whose children fled as suppliants to Sparta, imploring revenge for the death of their father, and surrendering the territory to the Spartans. The Delphian god advised the latter to accept the tender, and they accordingly attacked the Messenians, avenged Kresphontês, and appropriated the territory.

Isokratês always starts from the basis of the old legend, — the triple Dorian conquest made all at once: compare Panathenaic. Or. xii. pp 270–287.

[2] Ephorus ap. Strabo, viii. p. 361. Dr. Thirlwall observes (History of Greece, ch. vii. p. 300, 2d edit.), "The Messenian Pylus seems long to have retained its independence, and to have been occupied for several centuries by one branch of the family of Neleus; for descendants of Nestor are mentioned as allies of the Messenians in their struggle with Sparta in the latter half of the seventh century B. C."

For this assertion, Dr. Thirlwall cites Strabo (viii. p. 355). I agree with him as to the matter of fact: I see no proof that the Dorians of Stenyklêrus ever ruled over what is called the Messenian Pylus; for, of course, if they

oneness and indivisibility is not less uncertified in regard to Messenia than in regard to Laconia. How large a proportion of the former territory these kings of Stenyklêrus may have ruled, we have no means of determining, but there were certainly portions of it which they did not rule, — not merely during the reign of Têleklus at Sparta, but still later, during the first Messenian war. For not only are we informed that Têleklus established three townships, Poiêessa, Echeiæ,[1] and Tragium, near the Messenian gulf, and on the course of the river Nedon, but we read also a farther matter of evidence in the roll of Olympic victors. Every competitor for the prize at one of these great festivals was always entered as member of some autonomous Hellenic community, which constituted his title to approach the lists; if successful, he was proclaimed with the name of the community to which he belonged. Now during the first ten Olympiads, seven winners are proclaimed as Messenians; in the 11th Olympiad, we find the name of Oxythemis Korônæus, — Oxythemis, not of Korôneia in Bœotia, but of Korônê in the western bend of the Messenian gulf,[2]

did not rule over it before the second Messenian war, they never acquired it at all. But on reference to the passage in Strabo, it will not be found to prove anything to the point; for Strabo is speaking, not of the Messenian Pylus, but of the *Triphylian Pylus:* he takes pains to show that Nestor had nothing to do with the *Messenian Pylus*, — *Νέστορος ἀπόγονοι* means the inhabitants of Triphylia, near Lepreum: compare p. 350.

[1] Strabo, viii. p. 360. Concerning the situation of Korônê, in the Messenian gulf, see Pausanias, iv. 34, 2; Strabo, viii. p. 361; and the observations of Colonel Leake, Travels in Morea, ch. x. vol. i. pp. 439–448. He places it near the modern Petalidhi, seemingly on good grounds.

[2] See Mr. Clinton's Chronological Tables for the year 732 B. C.; O. Müller (in the Chronological Table subjoined to his History of the Dorians) calls this victor, *Oxythemis of Korôneia*, in Bœotia. But this is inadmissible, on two grounds: 1. The occurrence of a Bœotian competitor in that early day at the Olympic games. The first eleven victors (I put aside Oxythemis, because he is the subject of the argument) are all from western and southern Peloponnesus; then come victors from Corinth, Megara, and Epidaurus; then from Athens; there is one from Thebes in the 41st Olympiad. I infer from hence that the celebrity and frequentation of the Olympic games increased only by degrees, and had not got beyond Peloponnesus in the eighth century B. C. 2. The name Coronæus, *Κορωναῖος*, is the proper and formal title for a citizen of Korônê, not for a citizen of Korôneia: the latter styles himself *Κορωνεύς*. The ethnical name *Κορωνεὺς*, as belonging to Korôneia in Bœotia, is placed beyond doubt by several inscriptions in Boeckh's collection; especially No. 1583, in which a citizen of that town is proclaimed as victorious at the festival of the Charitesia at Orchomenus: compare Nos 1587–1593, in which the same ethnical name occurs. The Bœotian Inscriptions attest in like manner the prevalence of the same etymological law in forming ethnical names, for the towns near Korôncia: thus, *Chærôneia* makes *Χαιρωνεὺς*; *Lebadeia*, *Λεβαδεὺς*; *Elateia*, *Ἐλατεὺς*, or *Ἐλατειεύς*

The Inscriptions afford evidence perfectly decisive as to the ethnical title under which a citizen of Korôneia in Bœotia would have caused himself to be entered and proclaimed at the Olympic games; better than the evidence of Herodotus and Thucydidês, who both call them *Κορωναῖοι* (Herodot. v. 79; Thucyd. iv. 93): Polybius agrees with the Inscription, and speaks of the *Κορωνεῖς*, *Λεβαδεῖς*, *Χαιρωνεῖς* (xxvii. 1). O. Müller himself admits, in another place (Orchomenos, p. 480), that the proper ethnical name is *Κορωνεύς*. The reading of Strabo (ix. p. 411) is not trustworthy: see Groskurd, *ad loc.*; compare Steph. Byz. *Κορώνεια* and *Κορώνη*.

In regard to the formation of ethnical names, it seems the general rule, that a town ending in *η* or *αι*, preceded by a consonant, had its ethnical derivative in *αιος*; such as *Σκιώνη*, *Τορώνη*, *Κύαι*, *Θῆβαι*, *Ἀθῆναι*; while names ending in *εια* had their ethnicon in *ευς*, as *Ἀλεξάνδρεια*, *Ἀμάσεια*, *Σελεύκεια*, *Ανσιμάχεια* (the recent cities thus founded by the successors of Alexander are perhaps the best evidences that can be taken of the analogies of the language), *Μελάμπεια*, *Μελίτεια*, in addition to the Bœotian names of towns above quoted. There is, however, great irregularity in particular cases, and the number of towns called by the same name created an anxiety to vary the ethnicon for each: see Stephan. Byz. v. *Ἡράκλεια*.

some miles on the right bank of the Pamisus, and a considerable distance to the north of the modern Coron. Now if Korônê had then been comprehended in Messenia, Oxythemis would have been proclaimed as a Messenian, like the seven winners who preceded him; and the fact of his being proclaimed as a Korônæan, proves that Korônê was then an independent community, not under the dominion of the Dorians of Stenyklêrus. It seems clear, therefore, that the latter did not reign over the whole territory commonly known as Messenia, though we are unable to assign the proportion of it which they actually possessed.

The Olympic festival, in its origin doubtless a privilege of the neighboring Pisatans, seems to have derived its great and gradually expanding importance from the Ætolo-Eleian settlement in Peloponnesus, combined with the Dorians of Laconia and Messenia. Lykurgus of Sparta, and Iphitus of Elis, are alleged to have joined their efforts for the purpose of establishing both the

sanctity of the Olympic truce and the inviolability of the Eleian territory. Hence, though this tale is not to be construed as matter of fact, we may see that the Lacedæmonians regarded the Olympic games as a portion of their own antiquities. Moreover, it is certain, both that the dignity of the festival increased simultaneously with their ascendency,[1] and that their peculiar fashions were very early introduced into the practice of the Olympic competitors. Probably, the three bands of coöperating invaders, Ætolians and Spartan and Messenian Dorians, may have adopted this festival as a periodical renovation of mutual union and fraternity; from which cause the games became an attractive centre for the western portion of Peloponnesus, before they were much frequented by people from the eastern, or still more from extra-Peloponnesian Hellas. For it cannot be altogether accidental, when we read the names of the first twelve proclaimed Olympic victors (occupying nearly half a century from 776 B. C. downwards), to find that seven of them are Messenians, three Eleians, one from Dymê, in Achaia, and one from Korônê; while after the 12th Olympiad, Corinthians and Megarians and Epidaurians begin to occur; later still, extra-Peloponnesian victors. We may reasonably infer from hence that the Olympic ceremonies were at this early period chiefly frequented by visitors and competitors from the western regions of Peloponnesus, and that the affluence to them, from the more distant parts of the Hellenic world, did not become considerable until the first Messenian war had closed.

Having thus set forth the conjectures, to which our very scanty knowledge points, respecting the first establishment of the Ætolian and Dorian settlements in Elis, Laconia, and Messenia, connected as they are with the steadily increasing dignity and frequentation of the Olympic festival, I proceed, in the next chapter, to that memorable circumstance which both determined the character, and brought about the political ascendency, of the Spartans separately: I mean, the laws and discipline of Lykurgus.

[1] The entire nakedness of the competitors at Olympia was adopted from the Spartan practice, seemingly in the 14th Olympiad, as is testified by the epigram on Orsippus the Megarian. Previous to that period, the Olympic competitors had *διαζώματα περὶ τὰ αἰδοῖα* (Thucyd. i. 6).

Of the preëxisting inhabitants of Laconia and Messenia, whom we are accustomed to call Achæans and Pylians, so little is known, that we cannot at all measure the difference between them and their Dorian invaders, either in dialect, in habits, or in intelligence. There appear no traces of any difference of dialect among the various parts of the population of Laconia: the Messenian allies of Athens, in the Peloponnesian war, speak the same dialect as the Helots, and the same also as the Ambrakiotic colonists from Corinth: all Doric.[1] Nor are we to suppose that the Doric dialect was at all peculiar to the people called Dorians. As far as can be made out by the evidence of Inscriptions, it seems to have been the dialect of the Phokians, Delphians, Lokrians, Ætolians, and Achæans of Phthiôtis: with respect to the latter, the Inscriptions of Thaumaki, in Achæa Phthiôtis, afford a proof the more curious and the more cogent of native dialect, because the Phthiôts were both immediate neighbors and subjects of the Thessalians, who spoke a variety of the Æolic. So, too, within Peloponnesus, we find evidences of Doric dialect among the Achæans in the north of Peloponnesus, — the Dryopic inhabitants of Hermionê,[2] — and the Eleuthero-Lacones, or Laconian townships (compounded of Periœki and Helots), emancipated by the Romans in the second century B. C. Concerning the speech of that population whom the invading Dorians found in Laconia, we have no means of judging: the presumption would rather be that it did not differ materially from the Doric. Thucydidês designates the Corinthians, whom the invading Dorians attacked from the hill Solygeius, as being Æolians, and Strabo speaks both of the Achæans as an Æolic nation, and of the Æolic dialect as having been originally preponderant in Peloponnesus.[3] But we do not readily see what means of information either of these authors possessed respecting the speech of a time which must have been four centuries anterior even to Thucydidês.

Of that which is called the Æolic dialect there are three

[1] Thucyd. iii. 112; iv. 41: compare vii. 44, about the sameness of sound of the war-shout, or pæan, as delivered by all the different Dorians.

[2] Corpus Inscript. Boeckh. Nos. 1771, 1772, 1773; Ahrens, De Dialecto Doricâ, sect. i–ii. 48.

[3] Thucyd. iv. 42; Strabo, viii. p. 333

marked and distinguishable varieties, — the Lesbian, the Thessalian, and the Bœotian; the Thessalian forming a mean term between the other two. Ahrens has shown that the ancient grammatical critics are accustomed to affirm peculiarities, as belonging to the Æolic dialect generally, which in truth belong only to the Lesbian variety of it, or to the poems of Alkæus and Sappho, which these critics attentively studied. Lesbian Æolic, Thessalian Æolic, and Bœotian Æolic, are all different: and if, abstracting from these differences, we confine our attention to that which is common to all three, we shall find little to distinguish this abstract Æolic from the abstract Doric, or that which is common to the many varieties of the Doric dialect.[1] These two are sisters, presenting, both of them, more or less the Latin side of the Greek language, while the relationship of either of them to the Attic and Ionic is more distant. Now it seems that, putting aside Attica, the speech of all Greece,[2] from Perrhæbia and Mount Olympus to Cape Malea and Cape Akritas, consisted of different varieties, either of the Doric or of the Æolic dialect; this being true (as far as we are able to judge) not less of the aboriginal Arcadians than of the rest. The Laconian dialect

[1] See the valuable work of Ahrens, De Dialecto Æolicâ, sect. 51. He observes, in reference to the Lesbian, Thessalian, and Bœotian dialects: "Tres illas dialectos, quæ optimo jure Æolicæ vocari videntur — quia, qui illis usi sunt, Æoles erant — comparantem mirum habere oportet, quod Asianorum Æolum et Bœotorum dialecti tantum inter se distant, quantum vix ab aliâ quâvis Græcæ linguæ dialecto." He then enumerates many points of difference: "Contra tot tantasque differentias pauca reperiuntur eaque fere levia, quæ utrique dialecto, neque simul Doricæ, communia sint..... Vides his comparatis tantum interesse inter utramque dialectum, ut dubitare liceat, an Æoles Bœoti non magis cum Æolibus Asianis conjuncti fuerint, quam qui hodie miro quodam casu Saxones vocantur cum antiquis Saxonibus. Nihilominus Thessalicâ dialecto in comparationem vocatâ, diversissima quæ videntur aliquo vinculo conjungere licet. Quamvis enim pauca de eâ comperta habeamus, nec tamen certum est, alia Thessalis cum Lesbiis, alia cum solis Bœotis communia esse." (P. 222-223.)

[2] About the Æolic dialect of the Perrhæbians, see Stephanus Byz. v. Γόννος, and ap. Eustath. ad Iliad. p. 335.

The Attic judgment, in comparing these different varieties of Greek speech, is expressed in the story of a man being asked — Whether the Bœotians or the Thessalians were most of barbarians? He answered — The Eleians (Eustath. ad Iliad. p 304).

contained more specialties of its own, and approached nearer to the Æolic and to the Eleian, than any other variety of the Dorian: it stands at the extreme of what has been classified as the strict Dorian, — that is, the farthest removed from Ionic and Attic. The Kretan towns manifest also a strict Dorism; as well as the Lacedæmonian colony of Tarentum, and, seemingly, most of the Italiotic Greeks, though some of them are called Achæan colonies. Most of the other varieties of the Doric dialect (Phokian, Lokrian, Delphian, Achæan of Phthiôtis) exhibit a form departing less widely from the Ionic and Attic: Argos, and the towns in the Argolic peninsula, seem to form a stepping-stone between the two.

These positions represent the little which can be known respecting those varieties of Grecian speech which are not known to us by written works. The little presumption which can be raised upon them favors the belief that the Dorian invaders of Laconia and Messenia found there a dialect little different from that which they brought with them, — a conclusion which it is the more necessary to state distinctly, since the work of O. Müller has caused an exaggerated estimate to be formed of the distinctive peculiarities whereby Dorism was parted off from the rest of Hellas

---

CHAPTER VI.

LAWS AND DISCIPLINE OF LYKURGUS AT SPARTA.

PLUTARCH begins his biography of Lykurgus with the following ominous words: —

"Concerning the lawgiver Lykurgus, we can assert absolutely nothing which is not controverted: there are different stories in respect to his birth, his travels, his death, and also his mode of proceeding, political as well as legislative: least of all is the time in which he lived agreed upon."

And this exordium is but too well borne out by the unsatisfactory nature of the accounts which we read, not only in Plutarch himself, but in those other authors out of whom we are obliged to make up our idea of the memorable Lykurgean system. If we examine the sources from which Plutarch's life of Lykurgus is deduced, it will appear that — excepting the poets Alkman, Tyrtæus, and Simonidês, from whom he has borrowed less than we could have wished — he has no authorities older than Xenophon and Plato: Aristotle is cited several times, and is unquestionably the best of his witnesses, but the greater number of them belong to the century subsequent to that philosopher. Neither Herodotus nor Ephorus are named, though the former furnishes some brief, but interesting particulars, — and the latter also (as far as we can judge from the fragments remaining) entered at large into the proceedings of the Spartan lawgiver.[1]

Lykurgus is described by Herodotus as uncle and guardian to king Labôtas, of the Eurystheneid or Agid line of Spartan kings; and this would place him, according to the received chronology, about 220 years before the first recorded Olympiad (about B. C. 996).[2] All the other accounts, on the contrary, seem to represent him as a younger brother, belonging to the other or Prokleid line of Spartan kings, though they do not perfectly agree respecting his parentage. While Simonidês stated him to be the son of Prytanis, Dieutychidas described him as grandson of Prytanis, son of Eunomus, brother of Polydektês, and uncle as well as guardian to Charilaus, — thus making him eleventh in descent from Hêraklês.[3] This latter account was adopted by Aristotle, coinciding, according to the received chronology, with the date of Iphitus the Eleian, and the first celebration of the Olympic games by Lykurgus and Iphitus conjointly,[4] which Aristotle

[1] See Heeren, Dissertatio de Fontibus Plutarchi, pp. 19–25.

[2] Herodot. i. 65. Moreover, Herodotus gives this as the statement of the Lacedæmonians themselves.

[3] Plutarch, Lykurg. c. 1. According to Dionys. Halik. (Ant. Rom. ii. 49) Lykurgus was uncle, not son, of Eunomus.

Aristotle considers Lykurgus as guardian of Charilaus (Politic. ii. 7, 1) compare v. 10, 3. See O. Müller (Hist. of Dorians, i. 7, 3).

[4] Phlegôn also adds Kleosthenês of Pisa (De Olympiis ap. Meursii Opp. vii. p. 128). It appears that there existed a quoit at Olympia, upon which

accepted as a fact. Lykurgus, on the hypothesis here mentioned, would stand about B. C. 880, a century before the recorded Olympiads. Eratosthenês and Apollodorus placed him "not a few years earlier than the first Olympiad." If they meant hereby the epoch commonly assigned as the Olympiad of Iphitus, their date would coincide pretty nearly with that of Herodotus: if, on the other hand, they meant the first recorded Olympiad (B. C. 776), they would be found not much removed from the opinion of Aristotle. An unequivocal proof of the inextricable confusion in ancient times respecting the epoch of the great Spartan lawgiver is indirectly afforded by Timæus, who supposed that there had existed two persons named Lykurgus, and that the acts of both had been ascribed to one. It is plain from hence that there was no certainty attainable, even in the third century before the Christian era, respecting the date or parentage of Lykurgus.

Thucydidês, without mentioning the name of Lykurgus, informs us that it was "400 years and somewhat more" anterior to the close of the Peloponnesian war,[1] when the Spartans emerged from their previous state of desperate internal disorder, and entered upon "their present polity." We may fairly presume that

the formula of the Olympic truce was inscribed, together with the names of Iphitus and Lykurgus as the joint authors and proclaimers of it. Aristotle believed this to be genuine, and accepted it as an evidence of the fact which it professed to certify: and O. Müller is also disposed to admit it as genuine, — that is, as *contemporary* with the times to which it professes to relate. I come to a different conclusion: that the quoit existed, I do not doubt; but that the inscription upon it was actually set down in writing, in or near B. C. 880, would be at variance with the reasonable probabilities resulting from Grecian palæography. Had this ancient and memorable instrument existed at Olympia in the days of Herodotus, he could hardly have assigned to Lykurgus the epoch which we now read in his writings.

The assertions in Müller's History of the Dorians (i. 7, 7), about Lykurgus, Iphitus, and Kleosthenês "drawing up the fundamental law of the Olympic armistice," are unsupported by any sufficient evidence. In the later times of established majesty of the Olympic festival, the Eleians did undoubtedly exercise the power which he describes; but to connect this with any deliberate regulation of Iphitus and Lykurgus, is in my judgment incorrect. See the mention of a similar truce proclaimed throughout Triphylia by the Makistians as presidents of the common festival at the temple of the Samian Poseidon (Strabo, viii. p. 343).

[1] Thucyd. i. 18.

this alludes to the Lykurgean discipline and constitution, which Thucydidês must thus have conceived as introduced about B. C. 830–820, — coinciding with something near the commencement of the reign of king Têleklus. In so far as it is possible to form an opinion, amidst evidence at once so scanty and so discordant, I incline to adopt the opinion of Thucydidês as to the time at which the Lykurgean constitution was introduced at Sparta. The state of "eunomy" and good order which that constitution brought about, — combined with the healing of great previous internal sedition, which had tended much to enfeeble them, — is represented (and with great plausibility) as the grand cause of the victorious career beginning with king Têleklus, the conqueror of Amyklæ, Pharis, and Geronthræ. Therefore it would seem, in the absence of better evidence, that a date, connecting the fresh stimulus of the new discipline with the reign of Têleklus, is more probable than any epoch either later or earlier.[1]

[1] Mr. Clinton fixes the legislation of Lykurgus, "in conformity with Thucydidês," at about 817 B. C., and his regency at 852 B. C., about thirty-five years previous (Fasti Hellen. v. i. c. 7, p. 141): he also places the Olympiad of Iphitus B. C. 828 (F. H. vol. ii. p. 410; App. c. 22).

In that chapter, Mr. Clinton collects and discusses the various statements respecting the date of Lykurgus: compare, also, Larcher ad Herodot. i. 67 and Chronologie, pp. 486–492.

The differences in these statements must, after all, be taken as they stand, for they cannot be reconciled except by the help of arbitrary suppositions, which only mislead us by producing a show of agreement where there is none in reality. I agree with Mr. Clinton, in thinking that the assertion of Thucydidês is here to be taken as the best authority. But I altogether dissent from the proceeding which he (in common with Larcher, Wesseling, Sir John Marsham, and others) employs with regard to the passage of Herodotus, where that author calls Lykurgus the guardian and uncle of Labôtas (of the Eurystheneid line). Mr. Clinton says: "From the notoriety of the fact that Lycurgus was ascribed to the other house (the Prokleids), it is manifest that *the passage must be corrupted*" (p. 144); and he then goes on to correct the text of Herodotus, agreeably to the proposition of Sir J. Marsham.

This proceeding seems to me inadmissible. The text of Herodotus reads perfectly well, and is not contradicted by anything to be found elsewhere *in Herodotus himself:* moreover, we have here a positive guarantee of its accuracy, for Mr. Clinton himself admits that it stood in the days of Pausanias just as we now read it (Pausan. iii. 2, 3). By what right, then, do we alter it? or what do we gain by doing so? Our only right to do so, is, the assumption that there must have been uniformity of belief and means of satisfactory ascertainment, (respecting facts and persons of the ninth and tenth centuries before the Christian era,) existing among Greeks of the fifth and succeeding centuries; an assumption which I hold to be incorrect. And all we gain is, an illusory unanimity produced, by gratuitously putting words into the mouth of one of our witnesses.

If we can prove Herodotus to have been erroneously informed, it is right to do so; but we have no ground for altering his deposition. It affords a clear proof that there were very different stories as to the mere question, to which of the two lines of Herakleids the Spartan lawgiver belonged, — and that there was an enormous difference as to the time in which he lived.

O. Müller after glancing at the strange and improbable circumstances handed down to us respecting Lykurgus, observes, "that we have absolutely no account of him as an individual person." This remark is perfectly just: but another remark, made by the same distinguished author, respecting the Lykurgean system of laws, appears to me erroneous, — and requires more especially to be noticed, inasmuch as the corollaries deduced from it pervade a large portion of his valuable History of the Dorians. He affirms that the laws of Sparta were considered the true Doric institutions, and that their origin was identical with that of the people: Sparta is, in his view, the full type of Dorian principles, tendencies, and sentiments, — and is so treated throughout his entire work.[2] But such an opinion is at once gratuitous (for the passage of Pindar cited in support of it is scarcely of any value) and contrary to the whole tenor of ancient evidence. The institutions of Sparta were not Dorian, but peculiar to herself;[3] distinguishing her not less from Argos, Corinth, Megara, Epidaurus, Sikyôn, Korkyra, or Knidus, than from Athens or Thebes. Krête was the only other portion of Greece in which there prevailed institutions in many respects analogous, yet still dissimilar in those two attributes which form the real mark and pinch of Spartan legislation, namely, the military discipline and the rigorous private training. There were doubtless Dorians in Krête, but we have no proof that these peculiar institutions belonged to

[1] History of the Dorians, i. 7, 6.

[2] History of the Dorians, iii. 1, 8. Alf. Kopstadt recognizes this as an error in Müller's work: see his recent valuable Dissertation "De Rerum Laconicarum Constitutionis Lycurgeæ Origine et Indole," Gryphiæ, 1849, sect. 3, p. 18.

[3] Among the many other evidences to this point, see Aristotle, Ethic. v 9; Xenophon, Republ. Laced. 10, 8.

them more than to the other inhabitants of the island. That the Spartans had an original organization, and tendencies common to them with the other Dorians, we may readily concede; but the Lykurgean constitution impressed upon them a peculiar tendency, which took them out of the general march, and rendered them the least fit of all states to be cited as an example of the class-attributes of Dorism. One of the essential causes, which made the Spartan institutions work so impressively upon the Grecian mind, was their perfect singularity, combined with the conspicuous ascendency of the state in which they were manifested; while the Kretan communities, even admitting their partial resemblance (which was chiefly in the institution of the Syssitia, and was altogether more in form than in spirit) to Sparta, were too insignificant to attract notice except from speculative observers. It is therefore a mistake on the part of O. Müller, to treat Sparta as the type and representative of Dorians generally, and very many of the positions advanced in his History of the Dorians require to be modified when this mistake is pointed out.

The first capital fact to notice respecting the institutions ascribed to Lykurgus, is the very early period at which they had their commencement: it seems impossible to place this period later than 825 B. C. We do not find, nor have we a right to expect, trustworthy history in reference to events so early. If we have one foot on historical ground, inasmuch as the institutions themselves are real, — the other foot still floats in the unfaithful region of mythe, when we strive to comprehend the generating causes: the mist yet prevails which hinders us from distinguishing between the god and the man. The light in which Lykurgus appeared, to an intelligent Greek of the fifth century before the Christian era, is so clearly, yet briefly depicted, in the following passage of Herodotus, that I cannot do better than translate it: —

"In the very early times (Herodotus observes) the Spartans were among themselves the most lawless of all Greeks, and unapproachable by foreigners. Their transition to good legal order took place in the following manner. When Lycurgus, a Spartan of consideration, visited Delphi to consult the oracle, the instant that he entered the sanctuary, the Pythian priestess exclaimed, —

"Thou art come, Lycurgus, to my fat shrine, beloved by Zeus,

and by all the Olympic gods. Is it as god or as man that I am to address thee in the spirit? I hesitate, — and yet, Lycurgus, I incline more to call thee a god."

So spake the Pythian priestess. "Moreover, in addition to these words, some affirm that the Pythia revealed to him the order of things now established among the Spartans. *But the Lacedæmonians themselves* say, that Lycurgus, when guardian of his nephew Labôtas, king of the Spartans, introduced these institutions out of Krete. No sooner had he obtained this guardianship, than he changed all the institutions into their present form, and took security against any transgression of it. Next, he constituted the military divisions, the Enômoties and the Triakads, as well as the Syssitia, or public mess: he also, farther, appointed the ephors and the senate. By this means the Spartans passed from bad to good order: to Lycurgus, after his death, they built a temple, and they still worship him reverentially. And as might naturally be expected in a productive soil, and with no inconsiderable numbers of men, they immediately took a start forward, and flourished so much that they could not be content to remain tranquil within their own limits," etc.

Such is our oldest statement (coming from Herodotus) respecting Lykurgus, ascribing to him that entire order of things which the writer witnessed at Sparta. Thucydidês also, though not mentioning Lykurgus, agrees in stating that the system among the Lacedæmonians, as he saw it, had been adopted by them four centuries previously, — had rescued them from the most intolerable disorders, and had immediately conducted them to prosperity and success.[1] Hellanikus, whose writings a little preceded those of Herodotus, not only did not (any more than Thucydidês) make mention of Lykurgus, but can hardly be thought to have attached any importance to the name; since he attributed the constitution of Sparta to the first kings, Eurysthenês and Prokles.[2]

But those later writers, from whom Plutarch chiefly compiled his biography, profess to be far better informed on the subject of Lykurgus, and enter more into detail. His father, we are told, was assassinated during the preceding state of lawlessness; his elder brother Polydektês died early, leaving a pregnant widow

[1] Herodot. i. 65–66; Thucyd. i. 18.

[2] Strabo, viii. p. 363

who made to Lykurgus propositions that he should marry her and become king. But Lykurgus, repudiating the offer with indignation, awaited the birth of his young nephew Charilaus, held up the child publicly in the agora, as the future king of Sparta, and immediately relinquished the authority which he had provisionally exercised. However, the widow and her brother Leonidas raised slanderous accusations against him, of designs menacing to the life of the infant king, — accusations which he deemed it proper to obviate, by a temporary absence. Accordingly, he left Sparta and went to Krête, where he studied the polity and customs of the different cities; next, he visited Ionia and Egypt, and (as some authors affirmed) Libya, Iberia, and even India. While in Ionia, he is reported to have obtained from the descendants of Kreophylus a copy of the Homeric poems, which had not up to that time become known in Peloponnesus: there were not wanting authors, indeed, who said that he had conversed with Homer himself.[1]

Meanwhile, the young king Charilaus grew up and assumed the sceptre, as representing the Prokleid or Eurypontid family. But the reins of government had become more relaxed, and the disorders worse than ever, when Lykurgus returned. Finding that the two kings as well as the people were weary of so disastrous a condition, he set himself to the task of applying a corrective, and with this view consulted the Delphian oracle; from which he received strong assurances of the divine encouragement, together with one or more special injunctions (the primitive Rhetræ of the constitution), which he brought with him to Sparta.[2] He then suddenly presented himself in the agora, with thirty of the most distinguished Spartans, all in arms, as his guards and partisans. King Charilaus, though at first terrified, when informed of the designs of his uncle, stood forward willingly to second them; while the bulk of the Spartans respectfully submitted to the venerable Herakleid, who came as reformer and missionary

[1] Plutarch, Lykurg. 3, 4, 5.

[2] For an instructive review of the text as well as the meaning of this ancient Rhetra, see Urlichs, Ueber die Lycurgischen Rhetren, published since the first edition of this History. His refutation of the rash charges of Göttling seems to me complete: but his own conjectures are not all equally plausible: nor can I subscribe to his explanation of *ἀφιστάσθαι*.

from Delphi.[1] Such were the steps by which Lykurgus acquired his ascendency: we have now to see how he employed it.

His first proceeding, pursuant to the Rhetra or Compact brought from Delphi, was to constitute the Spartan senate, consisting of twenty-eight ancient men; making an aggregate of thirty in conjunction with the two kings, who sat and voted in it. With this were combined periodical assemblies of the Spartan people, in the open air, between the river Knakiôn and the bridge Babyka. Yet no discussion was permitted in these assemblies, — their functions were limited to the simple acceptance or rejection of that which had previously been determined in the senate.[2] Such was the

[1] Plutarch. Lykurg. c. 5–6. Hermippus, the scholar of Aristotle, professed to give the names of twenty out of these thirty devoted partisans.

There was, however, a different story, which represented that Lykurgus, on his return from his travels, found Charilaus governing like a despot (Heraclid. Pontic. c. 2).

[2] The words of the old Rhetra — *Διὸς Ἑλλανίου καὶ Ἀθηνᾶς Ἑλλανίας ἱερὰν ἱδρυσάμενον, φυλὰς φυλάξαντα, καὶ ὠβὰς ὠβάξαντα, τριάκοντα, γερουσίαν σὺν ἀρχαγέταις, καταστήσαντα, ὥρας ἐξ ὥρας ἀπελλάζειν μεταξὺ Βαβύκας καὶ Κνακίωνος. οὕτως εἰσφέρειν τε καὶ ἀφίστασθαι· δάμῳ δ' ἀγορὰν εἶμεν καὶ κράτος.* (Plutarch, *ib.*)

The reading *ἀγορὰν* (last word but three) is that of Coray's edition: other readings proposed are *κυρίαν*, *ἀνωγὰν*, *ἀγορίαν*, etc. The MSS., however, are incurably corrupt, and none of the conjectures can be pronounced certain.

The Rhetra contains various remarkable archaisms, — *ἀπελλάζειν* — *ἀφίστασθαι*, — the latter word in the sense of putting the question for decision corresponding to the function of the Ἀφεστὴρ at Knidus, (Plutarch, Quæst. Græc. c. 4; see Schneider, Lexicon, *ad. voc.*)

O. Müller connects *τριάκοντα* with *ὠβὰς*, and lays it down that there were thirty Obes at Sparta: I rather agree with those critics who place the comma after *ὠβάξαντα*, and refer the number thirty to the senate. Urlichs, in his Dissertation Ueber Die Lykurgisch. Rhetren (published in the Rheinisches Museum for 1847, p. 204), introduces the word *πρεσβυγενέας* after *τριάκοντα*; which seems a just conjecture, when we look to the addition afterwards made by Theopompus. The statements of Müller about the Obes seem to me to rest on no authority.

The word Rhetra means a solemn compact, either originally emanating from, or subsequently sanctioned by, the gods, who are always parties to such agreements: see the old Treaty between the Eleians and Heræans, — Ἁ Ϝράτρα, between the two, — commemorated in the valuable inscription still preserved, — as ancient, according to Boeckh, as Olymp. 40–60, (Boeckh. Corp. Inscript. No. 2, p. 26, part i.) The words of Tyrtæus imply such a compact between contracting parties: first the kings, then the senate, lastly

Spartan political constitution as fixed by Lykurgus; but a century afterwards (so Plutarch's account runs), under the kings Polydôrus and Theopompus, two important alterations were made. A rider was then attached to the old Lykurgean Rhetra, by which it was provided that, "in case the people decided crookedly, the senate, with the kings, should reverse their decisions:"[1] while

the people — *εὐθείαις ῥήτραις ἀνταπαμειβομένους* — where the participle last occurring applies not to the people alone, but to all the three. The Rhetra of Lykurgus emanated from the Delphian god; but the kings, senate, and people all bound themselves, both to each other and to the gods, to obey it. The explanations given of the phrase by Nitzsch and Schömann (in Dr. Thirlwall's note, ch. viii. p. 334) seem to me less satisfactory than what appears in C. F. Hermann (Lehrbuch der Griech. Staatsalterthümer, s. 23).

Nitzsch (Histor. Homer. sect. xiv. pp. 50–55) does not take sufficient account of the distinction between the meaning of *ῥήτρα* in the early and in the later times. In the time of the Ephor Epitadeus, or of Agis the Third, he is right in saying that *ῥήτρα* is equivalent to *scitum*, — still, however, with an idea of greater solemnity and unchangeability than is implied in the word *νόμος*, analogous to what is understood by a fundamental or organic enactment in modern ideas. The old ideas, of a mandate from the Delphian god, and a compact between the kings and the citizens, which had once been connected with the word, gradually dropped away from it. There is no contradiction in Plutarch, therefore, such as that to which Nitzsch alludes (p. 54).

Kopstadt's Dissertation (pp. 22, 30) touches on the same subject. I agree with Kopstadt (Dissert. pp. 28-30), in thinking it probable that Plutarch copied the words of the old Lykurgean constitutional Rhetra, from the account given by Aristotle of the Spartan polity.

King Theopompus probably brought from the Delphian oracle the important rider which he tacked to the mandate as originally brought by Lykurgus — *οἱ βασιλεῖς Θεόπομπος καὶ Πολύδωρος τάδε τῇ ῥήτρᾳ παρενέγραψαν.* The authority of the oracle, together with their own influence, would enable them to get these words accepted by the people.

[1] *Αἰ δὲ σκολιὰν ὁ δᾶμος ἕλοιτο, τοὺς πρεσβυγένεας καὶ ἀρχαγέτας ἀποστατῆρας εἶμεν.* (Plutarch, *ib.*)

Plutarch tells us that the primitive Rhetra, anterior to this addition, specially enjoined the assembled citizens either to adopt or reject, without change, the Rhetra proposed by the kings and senate, and that the rider was introduced because the assembly had disobeyed this injunction, and adopted amendments of its own. It is this latter sense which he puts on the word *σκολιὰν*. Urlichs (Ueber Lyc. Rhetr. p. 232) and Nitzsch (Hist. Homer. p. 54) follow him, and the latter even construes the epithet *Εὐθείαις ῥήτραις ἀνταπαμειβομένους* of Tyrtæus in a corresponding sense: he says, "Populus iis (rhetris) *εὐθείαις*, i. e. *nihil inflexis*, suffragari jubetur: nam lex cujus Tyrtæus admonet, ita sanxerat — si populus rogationem *inflexam* (i. e. non

another change, perhaps intended as a sort of compensation for this bridle on the popular assembly, introduced into the constitution a new executive Directory of five men, called Ephors. This Board — annually chosen, by some capricious method, the result of which could not well be foreseen, and open to be filled by every Spartan citizen — either originally received, or gradually drew to itself, functions so extensive and commanding, in regard to internal administration and police, as to limit the authority of the kings to little more than the exclusive command of the military force. Herodotus was informed, at Sparta, that the ephors as well as the

nisi ad suum arbitrium immutatam) accipere voluerit, senatores et auctores abolento totam."

Now, in the first place, it seems highly improbable that the primitive Rhetra, with its antique simplicity, would contain any such preconceived speciality of restriction upon the competence of the assembly. That restriction received its formal commencement only from the rider annexed by king Theopompus, which evidently betokens a previous dispute and refractory behavior on the part of the assembly.

In the second place, the explanation which these authors give of the words *σκολιὰν* and *εὐθείαις*, is not conformable to the ancient Greek, as we find it in Homer and Hesiod: and these early analogies are the proper test, seeing that we are dealing with a very ancient document. In Hesiod, *ἰθύς* and *σκολιὸς* are used in a sense which almost exactly corresponds to *right* and *wrong* (which words, indeed, in their primitive etymology, may be traced back to the meaning of *straight* and *crooked*). See Hesiod, Opp. Di. 36, 192, 218, 221, 226, 230, 250, 262, 264; also Theogon. 97, and Fragm. 217, ed. Göttling; where the phrases are constantly repeated, *ἰθεῖαι δίκαι, σκολιαὶ δίκαι, σκολιοὶ μῦθοι.* There is also the remarkable expression, Opp. Di. 9. *ῥεῖα δέ τ' ἰθύνει σκολιὸν*: compare v. 263. *ἰθύνετε μύθους*: also Homer, Iliad, xvi. 387. *Οἳ βίῃ εἰν ἀγορῇ σκολιὰς κρίνωσι θέμιστας;* and xxiii. 580. *ἰθεῖα*; xviii. 508. *ὃς μετὰ τοῖσι δίκην ἰθύντατα εἴπῃ*, etc.

If we judge by these analogies, we shall see that the words of Tyrtæus, *εὐθείαις ῥήτραις*, mean "*straightforward, honest*, statutes or conventions" — not *propositions adopted without change*, as Nitzsch supposes. And so the words *σκολιὰν ἕλοιτο*, mean, "adopt a *wrong or dishonest determination*," — not a determination different from what was proposed to them.

These words gave to the kings and senate power to cancel any decision of the public assembly which they disapproved. It retained only the power of refusing assent to some substantive propositions of the authorities, first of the kings and senate, afterwards of the ephors. And this limited power it seems always to have preserved.

Kopstadt explains well the expression *σκολιὰν*, as the antithesis to the epithet of Tyrtæus, *εὐθείαις ῥήτραις* (Dissertat. sect. 15, p. 124).

senate had been constituted by Lykurgus; but the authority of Aristotle, as well as the internal probability of the case, sanctions the belief that they were subsequently added.[1]

Taking the political constitution of Sparta ascribed to Lykurgus, it appears not to have differed materially from the rude organization exhibited in the Homeric poems, where we always find a council of chiefs or old men, and occasional meetings of a listening agora. It is hard to suppose that the Spartan kings can ever have governed without some formalities of this sort; so that the innovation (if innovation there really was) ascribed to Lykurgus, must have consisted in some new details respecting the senate and the agora, — in fixing the number[2] thirty, and the life-tenure of the former, — and the special place of meeting of the latter, as well as the extent of privilege which it was to exercise; consecrating the whole by the erection of the temples of Zeus Hellanius and Athênê Hellania. The view of the subject presented by Plutarch as well as by Plato,[3] as if the senate were an entire novelty, does not consist with the pictures of the old epic. Hence we may more naturally imagine that the Lykurgean political constitution, apart from the ephors who were afterwards tacked to it, presents only the old features of the heroic government of Greece, defined and regularized in a particular manner. The presence of two coexistent and coördinate kings, indeed, succeeding in hereditary descent, and both belonging to the gens of Herakleids, is

[1] Herod. i. 65: compare Plutarch, Lycurg. c. 7; Aristotet. Polit. v. 9, 1 (where he gives the answer of king Theopompus).

Aristotle tells us that the ephors were chosen, but not *how* they were chosen; only, that it was in some manner excessively puerile, — *παιδαριώδης γάρ ἐστι λίαν* (ii. 6, 16).

M. Barthélemy St. Hilaire, in his note to the passage of Aristotle, presumes that they were of course chosen in the same manner as the senators; but there seems no sufficient ground in Aristotle to countenance this. Nor is it easy to reconcile the words of Aristotle respecting the election of the senators, where he assimilates it to an *αἵρεσις δυναστευτική* (Polit. v. 5, 8; ii. 6, 18), with the description which Plutarch (Lycurg. 26) gives of that election.

[2] Kopstadt agrees in this supposition, that the number of the senate was probably not peremptorily fixed before the Lykurgean reform (Dissertat. ad sup. sect. 13, p. 109).

[3] Plato, Legg. iii. p. 691; Plato Epist. viii. p. 354, B.

something peculiar to Sparta, — the origin of which receives no other explanation than a reference to the twin sons of Aristodêmus, Eurysthenês and Proklês. These two primitive ancestors are a type of the two lines of Spartan kings; for they are said to have passed their lives in perpetual dissensions, which was the habitual state of the two contemporaneous kings at Sparta. While the coexistence of the pair of kings, equal in power and constantly thwarting each other, had often a baneful effect upon the course of public measures, it was, nevertheless, a security to the state against successful violence,[1] ending in the establishment of a despotism, on the part of any ambitious individual among the regal line.

During five successive centuries of Spartan history, from Polydôrus and Theopompus downward, no such violence was attempted by any of the kings,[2] until the times of Agis the Third and Kleomenês the Third, — 240 B. C. to 220 B. C. The importance of Greece had at this last-mentioned period irretrievably declined, and the independent political action which she once possessed had become subordinate to the more powerful force either of the Ætolian mountaineers (the rudest among her own sons) or to Epirotic, Macedonian, and Asiatic foreigners, preparatory to the final absorption by the Romans. But amongst all the Grecian states, Sparta had declined the most; her ascendency was totally gone, and her peculiar training and discipline (to which she had chiefly owed it) had degenerated in every way. Under these untoward circumstances, two young kings, Agis and Kleomenês, — the former a generous enthusiast, the latter more violent and ambitious, — conceived the design of restoring the Lykurgean constitution in its supposed pristine purity, with the hope of reviving both the spirit of the people and the ascendency of the state. But the Lykurgean constitution had been, even in the

[1] Plato, Legg. iii. p. 691; Aristot. Polit. ii. 6, 20.

[2] The conspiracy of Pausanias, after the repulse of Xerxes, was against the liberty of combined Hellas, to constitute himself satrap of Hellas under the Persian monarch, rather than against the established Lacedæmonian government; though undoubtedly one portion of his project was to excite the Helots to revolt, and Aristotle treats him as specially aiming to put down the power of the ephors (Polit. v. 5, 6; compare Thucyd. i. 128–134 Herodot. v. 32).

time of Xenophon,[1] in part, an *idéal* not fully realized in practice — much less was it a reality in the days of Kleomenês and Agis moreover, it was an *idéal* which admitted of being colored according to the fancy or feelings of those reformers who professed, and probably believed, that they were aiming at its genuine restoration. What the reforming kings found most in their way, was the uncontrolled authority, and the conservative dispositions, of the ephors, — which they naturally contrasted with the original fulness of the kingly power, when kings and senate stood alone. Among the various ways in which men's ideas of what the primitive constitution *had* been, were modified by the feelings of their own time (we shall presently see some other instances of this), is probably to be reckoned the assertion of Kleomenês respecting the first appointment of the ephors. Kleomenês affirmed that the ephors had originally been nothing more than subordinates and deputies of the kings, chosen by the latter to perform for a time their duties during the long absence of the Messenian war. Starting from this humble position, and profiting by the dissensions of the two kings,[2] they had in process of time, especially by the ambition of the ephor Asterôpus, found means first to constitute themselves an independent board, then to usurp to themselves more and more of the kingly authority, until they at last reduced the kings to a state of intolerable humiliation and impotence. As a proof of the primitive relation between the kings and the ephors, he alluded to that which was the custom at Sparta in his own time. When the ephors sent for either of the kings, the latter had a right to refuse obedience to two successive summonses, but the third summons he was bound to obey.[3]

It is obvious that the fact here adduced by Kleomenês (a curious point in Spartan manners) contributes little to prove the conclusion which he deduced from it, of the original nomination of the ephors as mere deputies by the kings. That they were first appointed at the time of the Messenian war is probable, and coincides with the tale that king Theopompus was a consenting

[1] Xenophon, Republic. Laced. c. 14.

[2] Plutarch, Agis, c. 12. Τοῦτο γὰρ τὸ ἀρχεῖον (the ephors) *ἰσχύειν ἐκ διαφορᾶς τῶν βασιλέων*, etc.

[3] Plutarch, Kleomenês, c 10. *σημεῖον δὲ τούτου, τὸ μέχρι νῦν, μεταπεμπομένων τὸν βασιλέα τῶν Ἐφόρων*, etc.

party to the measure, — that their functions were at first comparatively circumscribed, and extended by successive encroachments, is also probable; but they seem to have been from the beginning a board of specially popular origin, in contraposition to the kings and the senate. One proof of this is to be found in the ancient oath, which was every month interchanged between the kings and the ephors; the king swearing for himself, that he would exercise his regal functions according to the established laws, — the ephors swearing on behalf of the city, that his authority should on that condition remain unshaken.[1] This mutual compact, which probably formed a part of the ceremony during the monthly sacrifices offered by the king,[2] continued down to a time when it must have become a pure form, and when the kings had long been subordinate in power to the ephors. But it evidently began first as a reality, — when the king was predominant and effective chief of the state, and when the ephors, clothed with functions chiefly defensive, served as guarantees to the people against abuse of the regal authority. Plato, Aristotle, and Cicero,[3] all interpret the original institution of the ephors as designed to protect the people and restrain the kings: the latter assimilates them to the tribunes at Rome.

Such were the relations which had once subsisted between the kings and the ephors: though in later times these relations had been so completely reversed, that Polybius considers the former as essentially subordinate to the latter, — reckoning it as a point of duty in the kings to respect the ephors "as their fathers."[4] And such is decidedly the state of things throughout

[1] Xenophon, Republic. Lacedæmon. c. 15. Καὶ *ὅρκους μὲν ἀλλήλοις κατὰ μῆνα ποιοῦνται· Ἔφοροι μὲν ὑπὲρ τῆς πόλεως, βασιλεὺς δ' ὑπὲρ ἑαυτοῦ. Ὁ δὲ ὅρκος ἐστὶ, τῷ μὲν βασιλεῖ, κατὰ τοὺς τῆς πόλεως κειμένους νόμους βασιλεύσειν. τῇ δὲ πόλει, ἐμπεδορκοῦντος ἐκείνου, ἀστυφέλικτον τὴν βασιλείαν παρέξειν.*

[4] Polyb. xxiv. 8.

all the better-known period of history which we shall hereafter traverse. The ephors are the general directors of public affairs[1] and the supreme controlling board, holding in check every other authority in the state, without any assignable limit to their powers. The extraordinary ascendency of these magistrates is particularly manifested in the fact stated by Aristotle, that they exempted themselves from the public discipline, so that their self-indulgent year of office stood in marked contrast with the toilsome exercises and sober mess common to rich and poor alike. The kings are reduced to a certain number of special functions, combined with privileges partly religious, partly honorary: their most important political attribute is, that they are *ex officio* generals of the military force on foreign expeditions. But even here, we trace the sensible decline of their power. For whereas Herodotus was informed, and it probably had been the old privilege, that the king could levy war against whomsoever he chose, and that no Spartan could impede him on pain of committing sacrilege,[2] — we shall see, throughout the best-known periods of this history, that it is usually the ephors (with or without the senate and public assembly) who determine upon war, — the king only takes the command when the army is put on the march. Aristotle seems to treat the Spartan king as a sort of hereditary general; but even in this privilege, shackles were put upon him, — for two, out of the five ephors, accompanied the army, and their power seems to have been not seldom invoked to insure obedience to his orders.[3]

The direct political powers of the kings were thus greatly curtailed; yet importance, in many ways, was still left to them.

[1] Aristot. Polit. ii. 6, 14–16; Ἐστὶ δὲ καὶ ἡ δίαιτα τῶν Ἐφόρων οὐχ ὁμολογουμένη τῷ βουλήματι τῆς πόλεως· αὐτὴ μὲν γὰρ ἀνειμένη λίαν ἐστί· ἐν δὲ τοῖς ἄλλοις μᾶλλον ὑπερβάλλει ἐπὶ τὸ σκληρὸν, etc.

A special restriction was put on the functions of the king, as military commander-in-chief, in 417 B. C., after the ill-conducted expedition of Agis, son of Archidamus, against Argos. It was then provided that ten Spartan counsellors should always accompany the king in every expedition (Thucyd. v. 63)

They possessed large royal domains, in many of the townships of the Perioeki: they received frequent occasional presents, and when victims were offered to the gods, the skins and other portions belonged to them as perquisites:[1] they had their votes in the senate, which, if they were absent, were given on their behalf, by such of the other senators as were most nearly related to them: the adoption of children received its formal accomplishment in their presence, — and conflicting claims at law, for the hand of an unbequeathed orphan heiress, were adjudicated by them. But above all, their root was deep in the religious feelings of the people. Their preëminent lineage connected the entire state with a divine paternity. They, the chiefs of the Herakleids, were the special grantees of the soil of Sparta from the gods,— the occupation of the Dorians being only sanctified and blest by Zeus for the purpose of establishing the children of Hêrakles in the valley of the Eurotas.[2] They represented the state in its relations with the gods, being by right priests of Zeus Lacedæmon, (the ideas of the god and the country coalescing into one), and of Zeus Uranius, and offering the monthly sacrifices necessary to insure divine protection to the people. Though individual persons might sometimes be put aside, nothing short of a new divine revelation could induce the Spartans to step out of the genuine lineage of Eurysthenês and Proklês. Moreover, the remarkable mourning ceremony, which took place at the death of every king, seems to indicate that the two kingly families — which counted themselves Achæan,[3] not Dorian —

[1] The hide-money (*δερματικὸν*) arising from the numerous victims offered at public sacrifices at Athens, is accounted for as a special item of the public revenue in the careful economy of that city: see Boeckh, Public Econ. of Athens, iii. 7, p. 333; Eng. Trans. Corpus Inscription. No. 157.

[2] Tyrtæus, Fragm. 1, ed. Bergk; Strabo, xviii. p. 362: —

Αὐτὸς γὰρ Κρονίων καλλιστεφάνου πόσις Ἥρης
Ζεὺς Ἡρακλείδαις τήνδε δέδωκε πόλιν·
Οἷσιν ἅμα προλιπόντες Ἐρίνεον ἠνεμόεντα
Εὐρεῖαν Πέλοπος νῆσον ἀφικόμεθα.

Compare Thucyd. v. 16; Herodot. v. 39; Xenoph. Hellen. iii. 3, 3; Plutarch, Lysand. c. 22.

[3] Herod. v. 72. See the account in Plutarch, of the abortive stratagem of Lysander, to make the kingly dignity elective, by putting forward a youth who passed for the son of Apollo (Plutarch, Lysand. c. 25–26).

were considered as the great common bond of union between the three component parts of the population of Laconia, — Spartans, Periœki, and Helots. Not merely was it required, on this occasion, that two members of every house in Sparta should appear in sackcloth and ashes, — but the death of the king was formally made known throughout every part of Laconia, and deputies from the townships of the Periœki, and the villages of the Helots, to the number of several thousand, were summoned to Sparta to take their share in the profuse and public demonstrations of sorrow,[1] which lasted for ten days, and which imparted to the funeral obsequies a superhuman solemnity. Nor ought we to forget, in enumerating the privileges of the Spartan king, that he (conjointly with two officers called Pythii, nominated by him,) carried on the communications between the state and the temple of Delphi, and had the custody of oracles and prophecies generally. In most of the Grecian states, such inspired declarations were treasured up, and consulted in cases of public emergency: but the intercourse of Sparta with the Delphian oracle was peculiarly frequent and intimate, and the responses of the Pythian priestess met with more reverential attention from the Spartans than from any other Greeks.[2] So much the more important were the king's functions, as the medium of this intercourse: the oracle always upheld his dignity, and often even seconded his underhand personal schemes.[3]

Sustained by so great a force of traditional reverence, a Spartan king, of military talent and individual energy, like Agesilaus, exercised great ascendency; but such cases were very rare, and we shall find the king throughout the historical period only a secondary force, available on special occasions. For real political orders, in the greatest cases as well as the least, the Spartan looks to the council of ephors, to whom obedience is paid with a degree of precision which nothing short of the Spartan discipline could have brought about, — by the most powerful

[2] For the privileges of the Spartan kings, see Herodot. vi. 56–57; Xenophon, Republ. Laced. c. 15; Plato, Alcib. i. p. 123.

Herodot. vi. 66, and Thucyd. v. 16, furnish examples of this.

citizens not less than by the meanest.[1] Both the internal police and the foreign affairs of the state are in the hands of the ephors, who exercise an authority approaching to despotism, and altogether without accountability. They appoint and direct the body of three hundred young and active citizens, who performed the immediate police service of Laconia: they cashier at pleasure any subordinate functionary, and inflict fine or arrest at their own discretion: they assemble the military force, on occasion of foreign war, and determine its destination, though the king has the actual command of it: they imprison on suspicion even the regent or the king himself:[2] they sit as judges, sometimes individually and sometimes as a board, upon causes and complaints of great moment, and they judge without the restraint of written laws, the use of which was peremptorily forbidden by a special Rhetra,[3]

[1] Xenophon, Republ. Laced. c. 8, 2, and Agesilaus, cap. 7, 2.

[2] Xenoph. Rep. Laced. 8, 4; Thucydid. i. 131; Aristot. Polit. ii. 6, 14 — ἀρχὴν λίαν μεγάλην καὶ ἰσοτύραννον Plutarch, Lycurg. c. 13, — μὴ χρῆσθαι νόμοις ἐγγράφοις.

Plato, in his Republic, in like manner disapproves of any general enactments, tying up beforehand the discretion of perfectly educated men, like his guardians, who will always do what is best on each special occasion (Republic, iv. p. 425).

[3] Besides the primitive constitutional Rhetra mentioned above, page 345, various other Rhetræ are also attributed to Lykurgus: and Plutarch singles out three under the title of "The Three Rhetræ," as if they were either the only genuine Lykurgean Rhetræ, or at least stood distinguished by some peculiar sanctity from all others (Plutarch, Quæst. Roman. c. 87. Agesilaus, c. 26).

These three were (Plutarch, Lycurg. c. 13; comp. Apophth. Lacon. p. 227): 1. Not to resort to written laws. 2. Not to employ in house-building any other tools than the axe and the saw. 3. Not to undertake military expeditions often against the same enemies.

I agree with Nitzsch (Histor. Homer. pp. 61–65) that these Rhetræ, though doubtless not actually Lykurgean, are, nevertheless, ancient (that is, probably dating somewhere between 650–550 B. C.) and not the mere fictions of recent writers, as Schömann (Ant. Jur. Pub. iv. 1; xiv. p. 132) and Urlichs (p. 241) seem to believe. And though Plutarch specifies the number *three*, yet there seems to have been still more, as the language of Tyrtæus must be held to indicate: out of which, from causes which we do not now understand, the three which Plutarch distinguishes excited particular notice.

These maxims or precepts of state were probably preserved along with the dicta of the Delphian oracle, from which authority, doubtless, many of them may have emanated, — such as the famous ancient prophecy Ἀ φιλοχρηματίᾱ

erroneously connected with Lykurgus himself, but at any rate ancient. On certain occasions of peculiar moment, they take the sense of the senate and the public assembly,[1] — such seems to have been the habit on questions of war and peace. It appears, however, that persons charged with homicide, treason, or capital offences generally, were tried before the senate. We read of several instances in which the kings were tried and severely fined, and in which their houses were condemned to be razed to the ground, probably by the senate, on the proposition of the ephors: in one instance, it seems that the ephors inflicted by their own authority a fine even upon Agesilaus.[2]

War and peace appear to have been submitted, on most, if not on all occasions, to the senate and the public assembly; no matter could reach the latter until it had passed through the former. And we find some few occasions on which the decision of the public assembly was a real expression of opinion, and operative as to the result, — as, for example, the assembly which immedi

---

Σπάρταν ὅλεῖ, ἄλλο δὲ οὐδὲν (Krebs, Lectiones Diodoreæ, p. 140. Aristotel. Περὶ Πολιτειῶν, ap. Schol. ad Eurip. Andromach. 446 Schömann, Comm. ad Plutarch. Ag. et Cleomen. p. 123).

Nitzsch has good remarks in explanation of the prohibition against "using written laws." This prohibition was probably called forth by the circumstance that other Grecian states were employing lawgivers like Zaleukus, Drako, Charondas, or Solon, — to present them, at once, with a series of written enactments, or provisions. Some Spartans may have proposed that an analogous lawgiver should be nominated for Sparta: upon which proposition a negative was put in the most solemn manner possible, by a formal Rhetra, perhaps passed after advice from Delphi. There is no such contradiction, therefore, (when we thus conceive the event,) as some authors represent, in forbidding the use of written laws by a Rhetra itself, put into writing. To employ a phrase in greater analogy with modern controversies — "The Spartans, on the direction of the oracle, resolve to retain their unwritten common law, and not to codify."

[1] Ἔδοξε τοῖς Ἐφόροις καὶ τῇ ἐκκλησίᾳ (Xen. Hellen. iii. 2, 23).

[2] The case of *Leotychides*, Herod. vi. 72; of *Pleistoanax*, Thucyd. ii. 21–v. 16; *Agis the Second*, Thucyd. v. 63; *Agis the Third*, Plutarch, Agis, c. 19: see Plutarch, Agesilaus, c. 5.

Respecting the ephors generally, see Wachsmuth, Hellen. Alterthumskunde, v. 4, 42, vol. i. p. 223; Cragius, Rep. Lac. ii. 4, p. 121.

Aristotle distinctly marks the ephors as ἀνυπεύθυνοι: so that the story alluded to briefly in the Rhetoric (iii. 18) is not easy to be understood.

ately preceded and resolved upon the Peloponnesian war. Here, in addition to the serious hazard of the case, and the general caution of a Spartan temperament, there was the great personal weight and experience of king Archidamus opposed to the war, though the ephors were favorable to it.[1] The public assembly, under such peculiar circumstances, really manifested an opinion and came to a division. But, for the most part, it seems to have been little better than an inoperative formality. The general rule permitted no open discussion, nor could any private citizen speak except by special leave from the magistrates. Perhaps even the general liberty to discuss, if given, might have been of no avail, for not only was there no power of public speaking, but no habit of canvassing public measures, at Sparta; nothing was more characteristic of the government than the extreme secrecy of its proceedings.[2] The propositions brought forward by the magistrates were either accepted or rejected, without any license of amending. There could be no attraction to invite the citizen to be present at such an assembly: and we may gather from the language of Xenophon that, in his time, it consisted only of a certain number of notables specially summoned in addition to the senate, which latter body is itself called "the lesser Ekklesia.[3]" Indeed, the constant and formidable diminution in the number of qualified citizens was alone sufficient to thin the attendance of the assembly, as well as to break down any imposing force which it might once have possessed.

---

[1] Thucyd. i. 67, 80, 87. *ξύλλογον σφῶν αὐτῶν τὸν εἰωθότα.*

[2] Thucyd. iv. 68. *τῆς πολιτείας τὸ κρυπτόν*: compare iv. 74; also, his remarkable expression about so distinguished a man as Brasidas, *ἦν δὲ οὐκ ἀδύνατος, ὡς Λακεδαιμόνιος, εἰπεῖν*, and iv. 24, about the Lacedæmonian envoys to Athens. Compare Schömann, Antiq. Jur. Pub. Græc. iv. 1, 10, p. 122. Aristotel. Polit. ii. 8, 3.

[3] *Τὴν μικρὰν καλουμένην ἐκκλησίαν* (Xenoph. Hellen. iii. 3, 8), which means the γέροντες, or senate, and none besides, except the ephors, who convoked it. (See Lachmann, Spart. Verfass. sect. 12, p. 216.) What is still more to be noted, is the expression *οἱ ἔκκλητοι* as the equivalent of *ἡ ἐκκλησία* (compare Hellen. v. 2, 11; vi. 3, 3), evidently showing a special and limited number of persons convened: see, also, ii. 4, 38; iv. 6, 3; v. 2, 33, Thucyd. v. 77.

The expression *οἱ ἔκκλητοι* could never have got into use as an equivalent for the Athenian ecclesia.

An assembly thus circumstanced, — though always retained as a formality, and though its consent on considerable matters and for the passing of laws (which, however, seems to have been a rare occurrence at Sparta) was indispensable, — could be very little of a practical check upon the administration of the ephors. The senate, a permanent body, with the kings included in it, was the only real check upon them, and must have been to a certain extent a concurrent body in the government, — though the large and imposing language in which its political supremacy is spoken of by Demosthenês and Isokratês exceeds greatly the reality of the case. Its most important function was that of a court of criminal justice, before whom every man put on trial for his life was arraigned.[1] But both in this and in their other duties, we find the senators as well as the kings and the ephors charged with corruption and venality.[2] As they were not appointed until sixty years of age, and then held their offices for life, we may readily believe that some of them continued to act after the period of extreme and disqualifying senility, — which, though the extraordinary respect of the Lacedæmonians for old age would doubtless tolerate it, could not fail to impair the influence of the body as a concurrent element of government.

The brief sketch here given of the Spartan government will show that, though Greek theorists found a difficulty in determining under what class they should arrange it,[3] it was in substance

[1] Xenoph. Republ. Laced. 10; Aristot. Polit. ii. 6, 17; iii. 1, 7; Demosthen. cont. Leptin. c. 23, p. 489; Isokratês, Or. xii. (Panathenaic.) p. 266. The language of Demosthenês seems particularly inaccurate.

Plutarch (Agesilaus, c. 32), on occasion of some suspected conspirators, who were put to death by Agesilaus and the ephors, when Sparta was in imminent danger from the attack of Epameinondas, asserts, that this was the first time that any Spartan had ever been put to death without trial.

[2] Aristot. Polit. ii. 6, 18. Compare, also, Thucydid. i. 131, about the guilty Pausanias, — *πιστεύων χρήμασι διαλύσειν τὴν διαβολήν*; Herodot. v. 72; Thucyd. v. 16, — about the kings Leotychides and Pleistoanax; the brave and able Gylippus, — Plutarch, Lysand. c. 16.

[3] The ephors are sometimes considered as a democratical element, because every Spartan citizen had a chance of becoming ephor; sometimes as a despotical element, because in the exercise of their power they were subject to little restraint and no responsibility: see Plato, Legg. iv. p. 712; Aristot. Polit. ii. 3, 10; iv. 7, 4, 5.

a close, unscrupulous, and well-obeyed oligarchy, — including within it, as subordinate, those portions which had once been dominant, the kings and the senate, and softening the odium, without abating the mischief, of the system, by its annual change of the ruling ephors. We must at the same time distinguish the government from the Lykurgean discipline and education, which doubtless tended much to equalize rich and poor, in respect to practical life, habits, and enjoyments. Herodotus (and seemingly, also, Xenophon) thought that the form just described was that which the government had originally received from the hand of Lykurgus. Now, though there is good reason for supposing otherwise, and for believing the ephors to be a subsequent addition, — yet, the mere fact that Herodotus was so informed at Sparta, points our attention to one important attribute of the Spartan polity, which it is proper to bring into view. This attribute is, its unparalleled steadiness, for four or five successive centuries, in the midst of governments like the Grecian, all of which had undergone more or less of fluctuation. No considerable revolution — not even any palpable or formal change — occurred in it, from the days of the Messenian war, down to those of Agis the Third: in spite of the irreparable blow which the power and territory of the state sustained from Epameinondas and the Thebans, the form of government, nevertheless, remained unchanged. It was the only government in Greece which could trace an unbroken, peaceable descent from a high antiquity, and from its real or supposed founder. Now this was one of the main circumstances (among others which will hereafter be mentioned) of the astonishing ascendency which the Spartans acquired over the Hellenic mind, and which they will not be found at all to deserve by any superior ability in the conduct of affairs. The steadiness of their political sympathies, — exhibited at one time, by putting down the tyrants, or despots, at another, by overthrowing the democracies, — stood in the place of ability; and even the recognized failings of their government were often covered by the sentiment of respect for its early commencement and uninterrupted continuance. If such a feeling acted on the Greeks generally,[1] much more powerful was its action upon the

[1] A specimen of the way in which this antiquity was lauded, may be seen in Isokratês, Or. xii. (Panathenaic.) p. 288

Spartans themselves, in inflaming that haughty exclusiveness for which they stood distinguished. And it is to be observed that the Spartan mind continued to be cast on the old-fashioned scale, and unsusceptible of modernizing influences, longer than that of most other people of Greece. The ancient legendary faith, and devoted submission to the Delphian oracle, remained among them unabated, at a time when various influences had considerably undermined it among their fellow-Hellens and neighbors. But though the unchanged title and forms of the government thus contributed to its imposing effect, both at home and abroad, the causes of internal degeneracy were not the less really at work, in undermining its efficiency. It has been already stated, that the number of qualified citizens went on continually diminishing, and even of this diminished number a larger proportion than before were needy, since the landed property tended constantly to concentrate itself in fewer hands. There grew up in this way a body of discontent, which had not originally existed, both among the poorer citizens, and among those who had lost their franchise as citizens; thus aggravating the danger arising from Periœki and Helots, who will be presently noticed.

We pass from the political constitution of Sparta to the civil ranks and distribution, economical relations, and lastly, the peculiar system of habits, education, and discipline, said to have been established among the Lacedæmonians by Lykurgus. Here, again, we shall find ourselves imperfectly informed as to the existing institutions, and surrounded by confusion when we try to explain how those institutions arose.

It seems, however, ascertained that the Dorians, in all their settlements, were divided into three tribes, — the Hylleis, the Pamphyli, and the Dymanes: in all Dorian cities, moreover, there were distinguished Herakleid families, from whom œkists were chosen when new colonies were formed. These three tribes can be traced at Argos, Sikyôn, Epidaurus, Trœzên, Megara, Korkyra, and seemingly, also, at Sparta.[1] The Hylleis recognized, as their eponym and progenitor, Hyllus, the son of Hêra-

[1] Herodot. v. 68; Stephan. Byz. Ὑλλέες and Δυμᾶν; O. Müller, Dorians, bi. 5, 2; Boeckh ad Corp. Inscrip. No. 1123.
Thucyd. i. 24, about Phalius, the Herakleid, at Corinth.

klês, and were therefore, in their own belief, descended from Hêraklês himself: we may suppose the Herakleids, specially so called, comprising the two regal families, to have been the elder brethren of the tribe of Hylleis, the whole of whom are sometimes spoken of as Herakleids, or descendants of Hêraklês.[1] But there seem to have been also at Sparta, as in other Dorian towns, non-Dorian inhabitants, apart from these three tribes, and embodied in tribes of their own. One of these, the Ægeids, said to have come from Thebes as allies of the Dorian invaders, is named by Aristotle, Pindar, and Herodotus,[2] — while the Ægialeis at Sikyôn, the tribe Hyrnêthia at Argos and Epidaurus, and others, whose titles we do not know, at Corinth, represent, in like manner, the non-Dorian portions of their respective communities.[3] At Corinth, the total number of tribes is said to have been eight.[4] But at Sparta, though we seem to make out the existence of the three Dorian tribes, we do not know how many tribes there were in all: still less do we know what relation the Obæ, or Obes, another subordinate distribution of the people, bore to the tribes. In the ancient Rhetra of Lykurgus, the Tribes and Obês are directed to be maintained unaltered: but the statement of O. Müller and Boeckh[5] — that there were thirty

[1] See Tyrtæus, Fragm. 8, 1, ed. Schneidewin, and Pindar, Pyth. i. 61, v. 71, where the expressions "descendants of Hêraklês" plainly comprehend more than the two kingly families. Plutarch, Lysand. c. 22; Diodor. xi. 58.

[2] Herodot. iv. 149; Pindar, Pyth. v. 67; Aristot. Λακων. Πολιτ. p. 127, Fragm. ed. Neuman. The Talthybiadæ, or heralds, at Sparta, formed a family or caste apart (Herod. vii. 134).

O. Müller supposes, without any proof, that the Ægeids *must* have been adopted into one of the three Dorian tribes; this is one of the corollaries from his fundamental supposition, that Sparta is the type of pure Dorism (vol ii. p. 78). Kopstadt thinks (Dissertat. p. 67) that I have done injustice to O. Müller, in not assenting to his proof: but, on studying the point over again, I can see no reason for modifying what is here stated in the text. The Section of Schömann's work (Antiq. Jur. Publ. Græc. iv. 1, 6, p. 115) on this subject asserts a great deal more than can be proved.

[3] Herod. v. 68-92; Boeckh, Corp. Inscrip. Nos. 1130, 1131; Stephan. Byz. v. Ὑρνίθιον; Pausan. ii. 28, 3.

[5] Müller, Dorians, iii. 5, 3-7; Boeckh. ad Corp. Inscription. part iv. sect. 3, p. 609.

Obês in all, ten to each tribe — rests upon no other evidence than a peculiar punctuation of this Rhetra, which various other critics reject; and seemingly, with good reason. We are thus left without any information respecting the Obê, though we know that it was an old, peculiar, and lasting division among the Spartan people, since it occurs in the oldest Rhetra of Lykurgus, as well as in late inscriptions of the date of the Roman empire. In similar inscriptions, and in the account of Pausanias, there is, however, recognized a classification of Spartans distinct from and independent of the three old Dorian tribes, and founded upon the different quarters of the city, — Limnæ, Mesoa, Pitanê, and Kynosura;[1] from one of these four was derived the usual description of a Spartan in the days of Herodotus. There is reason to suppose that the old Dorian tribes became antiquated at Sparta, (as the four old Ionian tribes did at Athens,) and that the topical classification derived from the quarters of the city superseded it, — these quarters having been originally the separate villages, of the aggregate of which Sparta was composed.[2] That the number of the old senators, thirty, was connected with the three Dorian tribes, deriving ten members from each, is probable enough, though there is no proof of it.

Of the population of Laconia, three main divisions are recognized, — Spartans, Periœki, and Helots. The first of the three were the full qualified citizens, who lived in Sparta itself, fulfilled all the exigences of the Lykurgean discipline, paid their quota to the Syssitia, or public mess, and were alone eligible to honors[3] or

[1] Pausan. iii. 16, 6; Herodot. iii. 55; Boeckh. Corp. Inscript. Nos. 1241 1338, 1347, 1425; Steph. Byz v. *Μεσόα*; Strabo, viii. p. 364; Hesych. v. *Πιτάνη*.

There is much confusion and discrepancy of opinion about the Spartan tribes. Cragius admits six (De Republ. Lacon. i. 6); Meursius, eight (Rep. Lacon. i. 7): Barthélemy (Voyage du Jeune Anacharsis, iv. p. 185) makes them five. Manso has discussed the subject at large, but I think not very satisfactorily, in the eighth Beilage to the first book of his History of Sparta (vol. ii. p. 125); and Dr. Thirlwall's second Appendix (vol. i. p. 517) both notices all the different modern opinions on this obscure topic, and adds several useful criticisms. Our scanty stock of original evidence leaves much room for divergent hypotheses, and little chance of any certain conclusion.

[2] Thucyd. i. 10.

[3] One or two Periœkic officers appear in military command towards the end of the Peloponnesian war (Thucyd. viii. 6, 22), but these seem rare exceptions, even as to foreign service by sea or land, while a Periœkus, as magistrate at Sparta, was unheard of.

public offices. These men had neither time, nor taste even, for cultivation of the land, still less for trade or handicraft: such occupations were inconsistent with the prescribed training, even if they had not been positively interdicted. They were maintained from the lands round the city, and from the large proportion of Laconia which belonged to them; the land being tilled for them by Helots, who seem to have paid over to them a fixed proportion of the produce; in some cases, at least, as much as one-half.[1] Each Spartan retained his qualification, and transmitted it to his children, on two conditions, — first, that of submitting to the prescribed discipline; next, that of paying, each, his stipulated quota to the public mess, which was only maintained by these individual contributions. The multiplication of children in the poorer families, after acquisitions of new territory ceased, continually augmented both the number and the proportion of citizens who were unable to fulfil the second of these conditions, and who therefore lost their franchise: so that there arose towards the close of the Peloponnesian war, a distinction, among the Spartans themselves, unknown to the earlier times, — the reduced number of fully qualified citizens being called The Equals, or Peers, — the disfranchised poor, The Inferiors. The latter, disfranchised as they were, nevertheless, did not become Periœki: it was probably still competent to them to resume their qualification, should any favorable accident enable them to make their contributions to the public mess.

The Periœkus was also a freeman and a citizen, not of Sparta, but of some one of the hundred townships of Laconia.[2] Both he

[1] One half was paid by the enslaved Messenians (Tyrtæus, Frag. 4, Bergk): *ἡμισυ πᾶν, ὅσσον ἀρότρον ἄρουρα φέρει.*

[2] Strabo, viii. p. 362. Stephanus Byz. alludes to this total of one hundred townships in his notice of several different items among them,— *Ἀνθάνα — πόλις Λακωνικὴ μία τῶν ἑκατον*; also, v. *Ἀφροδισιὰς, Βοῖαι, Δυρράχιον*, etc: but he probably copied Strabo, and, therefore, cannot pass for a distinct authority. The total of one hundred townships belongs to the maximum of Spartan power, after the conquest and before the severance of Messenia; for Aulôn, Boiæ, and Methônê (the extreme places) are included among them.

and the community to which he belonged received their orders only from Sparta, having no political sphere of their own, and no share in determining the movements of the Spartan authorities. In the island of Kythêra,[1] which formed one of the Periœkic townships, a Spartan bailiff resided as administrator. But whether the same was the case with others, we cannot affirm: nor is it safe to reason from one of these townships to all, — there may have been considerable differences in the mode of dealing with one and another. For they were spread through the whole of Laconia, some near and some distant from Sparta: the free inhabitants of Amyklæ must have been Periœki, as well as those of Kythêra, Thuria, Ætheia, or Aulôn: nor can we presume that the feeling on the part of the Spartan authorities towards all of them was the same. Between the Spartans and their neighbors, the numerous Periœki of Amyklæ, there must have subsisted a degree of intercourse and mutual relation in which the more distant Periœki did not partake,— besides, that both the religious edifices and the festivals of Amyklæ were most reverentially adopted by the Spartans and exalted into a national dignity: and we seem to perceive, on some occasions, a degree of consideration manifested for the Amyklæan hoplites,[2] such as perhaps other Periœki might not have obtained. The class-name, Periœki,[3] — circum-

Mr. Clinton (Fast. Hellen. ii. p. 401) has collected the names of above sixty out of the one hundred.

[1] Thucyd. iv. 53.

[2] Xenophon, Hellen. iv. 5, 11; Herod. ix. 7; Thucyd. v. 18–23. The Amyklæan festival of the Hyacinthia, and the Amyklæan temple of Apollo, seem to stand foremost in the mind of the Spartan authorities. *Αὐτοὶ καὶ οἱ ἐγγύτατα τῶν περιοίκων* (Thucyd. iv. 8), who are ready before the rest, and march against the Athenians at Pylus, probably include the Amyklæans.

Laconia generally is called by Thucydidês (iii. 16) as the *περιοικὶς* of Sparta.

[3] The word *περίοικοι* is sometimes used to signify simply "surrounding neighbor states," in its natural geographical sense: see Thucyd. i. 17, and Aristot. Polit. v. 7, 1.

But the more usual employment of it is, to mean, the unprivileged or less privileged members of the same political aggregate living without the city, in contrast with the full-privileged burghers who lived within it. Aristotle uses it to signify, in Krête, the class corresponding to the Lacedæmonian Helots (Pol. ii. 7, 3): there did not exist in Krête any class corresponding to the Lacedæmonian Periœki. In Krête, there were not two stages of inferiority, — there was only one, and that one is marked by the word *περίοικοι*; while the Lacedæmonian Periœkus had the Helot below him. To an Athenian the word conveyed the idea of undefined degradation.

residents, or dwellers around the city, — usually denoted native inhabitants of inferior political condition as contrasted with the

To understand better the *status* of the Periœkus, we may contrast him with the Metœkus, or Metic. The latter resides in the city, but he is an alien resident on sufferance, not a native: he pays a special tax, stands excluded from all political functions, and cannot even approach the magistrate except through a friendly citizen, or Prostatês) *ἐπὶ προστάτου οἰκεῖν* — Lycurgus cont. Leocrat. c. 21–53): he bears arms for the defence of the state. The situation of a Metic was, however, very different in different cities of Greece. At Athens, that class were well-protected in person and property, numerous and domiciliated: at Sparta, there were at first none, — the Xenêlasy excluded them; but this must have been relaxed long before the days of Agis the Third.

The Periœkus differs from the Metic, in being a native of the soil, subject by birth to the city law.

M. Kopstadt (in his Dissertation above cited, on Lacedæmonian affairs, sect. 7, p. 60) expresses much surprise at that which I advance in this note respecting Krête and Lacedæmon, — that in Krête there was no class of men analogous to the Lacedæmonian Periœki, but only two classes, — *i. e.* free citizens and Helots. He thinks that this position is "prorsus falsum."

But I advance nothing more here than what is distinctly stated by Aristotle, as Kopstadt himself admits (pp. 60, 71). Aristotle calls the subject class in Krête by the name of Περίοικοι. And in this case, the general presumptions go far to sustain the authority of Aristotle. For Sparta was a dominant or capital city, including in its dependence not only a considerable territory, but a considerable number of inferior, distinct, organized townships. In Krête, on the contrary, each autonomous state included only a town with its circumjacent territory, but without any annexed townships. There was, therefore, no basis for the intermediate class called, in Laconia, Periœki: just as Kopstadt himself remarks (p. 78) about the Dorian city of Megara. There were only the two classes of free Krêtan citizens, and serf-cultivators in various modifications and subdivisions.

Kopstadt (following Hoeck, Krêta, b. iii. vol. iii. p. 23) says that the authority of Aristotle on this point is overborne by that of Dosiadas and Sosikratês, — authors who wrote specially on Krêtan affairs. Now if we were driven to make a choice, I confess that I should prefer the testimony of Aristotle, — considering that we know little or nothing respecting the other two. But in this case I do not think that we are driven to make a choice: Dosiadas (ap. Athenæ. xiv. p. 143) is not cited in terms, so that we cannot affirm him to contradict Aristotle: and Sosikratês (upon whom Hoeck and Kopstadt rely) says something which does not necessarily contradict him

full-privileged burghers who lived in the city, but it did not mark any precise or uniform degree of inferiority. It is sometimes so used by Aristotle as to imply a condition no better than that of the Helots, so that, in a large sense, all the inhabitants of Laconia (Helots as well as the rest) might have been included in it. But when used in reference to Laconia, it bears a technical sense, whereby it is placed in contraposition with the Spartan on one side, and with the Helot on the other: it means, native freemen and proprietors, grouped in subordinate communities [1] with more or less power of local management, but (like the subject towns belonging to Bern, Zurich, and most of the old thirteen cantons of Switzerland) embodied in the Lacedæmonian aggregate, which was governed exclusively by the kings, senate, and citizens of Sparta.

When we come to describe the democracy of Athens after the revolution of Kleisthenes, we shall find the demes, or local townships and villages of Attica, incorporated as equal and constituent fractions of the integer called The Deme (or The City) of Athens, so that a demot of Acharnæ or Sphêttus is at the same time a full Athenian citizen. But the relation of the Periœkic townships to Sparta is one of inequality and obedience, though both belong to the same political aggregate, and make up together the free Lacedæmonian community. In like manner, Orneæ and other places were townships of men personally free, but politically dependent on Argos, — Akræphiæ on Thebes, — Chæroneia on Orchomenus, — and various Thessalian towns on Pharsalus and Larissa.[2] Such, moreover, was, in the main, the state into which

but admits of being explained so as to place the two witnesses in harmony with each other.

Sosikratês says (ap. Athenæ. vi. p. 263), Τὴν μὲν κοινὴν δουλείαν οἱ Κρῆτες καλοῦσι μνοίαν, τὴν δὲ ἰδίαν ἀφαμίωτας, τοὺς δὲ περιοίκους ὑπηκόους. Now the word περιοίκους seems to be here used just as Aristotle would have used it, to comprehend the Krêtan serfs universally: it is not distinguished from ἄνωιται and ἀφαμιῶται, but comprehends both of them as different species under a generic term The authority of Aristotle affords a reason for preferring to construe the passage in this manner, and the words appear to me to admit of it fairly.

[1] The πόλεις of the Lacedæmonian Periœki are often noticed: see Xenophon (Agesilaus, ii. 24; Laced. Repub. xv. 3; Hellenic. vi 5, 21).

[2] Herod. viii. 73–135; Xenoph. Hellen. vi. 1, 8; Thucyd. iv. 76–94.

Athens would have brought her allies, and Thebes the free Bœotian communities,[1] if the policy of either of these cities had permanently prospered. This condition carried with it a sentiment of degradation, and a painful negation of that autonomy for which every Grecian community thirsted; while being maintained through superior force, it had a natural tendency, perhaps without the deliberate wish of the reigning city, to degenerate into practical oppression. But in addition to this general tendency, the peculiar education of a Spartan, while it imparted force, fortitude, and regimental precision, was at the same time so rigorously peculiar, that it rendered him harsh, unaccommodating, and incapable of sympathizing with the ordinary march of Grecian feeling, — not to mention the rapacity and love of money, which is attested, by good evidence, as belonging to the Spartan character,[2] and which we should hardly have expected to find in the pupils of Lykurgus. As Harmosts out of their native city,[3] and in relations with inferiors, the Spartans seem to have been more unpopular than other Greeks, and we may presume that a similar haughty roughness pervaded their dealings with their own Periœki; who were bound to them certainly by no tie of affection, and who for the most part revolted after the battle of Leuktra, as soon as the invasion of Laconia by Epameinondas enabled them to do so with safety.

Isokratês, taking his point of departure from the old Herakleid legend, with its instantaneous conquest and triple partition of all Dorian Peloponnesus, among the three Herakleid brethren, deduces the first origin of the Periœkic townships from internal seditions among the conquerors of Sparta. According to him, the period immediately succeeding the conquest was one of fierce

[1] Xenoph. Hellen. vi. 3, 5, 9, 19. ·ês, writing in the days of Theban power, after the battle of Leuktra, characterizes the Bœotian towns as περίοικοι of Thebes (Or. viii. De Pace, p. 182); compare Orat. xiv. Plataic. pp. 299–303. Xenophon holds the same language, Hellen. v. 4, 46: compare Plutarch, Agesilaus, 28.

[2] Aristot. Polit. ii. 6, 23.

[3] Thucyd. i. 77–95; vi. 105. Isokratês (Panathenaic. Or. xii. p. 233), Σπαρτιάτας δὲ ὑπεροπτικοὺς καὶ πολεμικοὺς καὶ πλεονέκτας, οἵους περ αὐτοὺς εἶναι πάντες ὑπειλήφασι. Compare his Oratio de Pace (Or. viii. pp. 180–181); Oratio Panegyr. (Or. iv. pp. 64–67).

intestine warfare in newly-conquered Sparta, between the Few and the Many, — the oligarchy and the demus. The former being victorious, two important measures were the consequences of their victory. They banished the defeated Many from Sparta into Laconia, retaining the residence in Sparta exclusively for themselves; they assigned to them the smallest and least fertile half of Laconia, monopolizing the larger and better for themselves; and they disseminated them into many very small townships, or subordinate little communities, while they concentrated themselves entirely at Sparta. To these precautions for insuring dominion, they added another not less important. They established among their own Spartan citizens equality of legal privilege and democratical government, so as to take the greatest securities for internal harmony; which harmony, according to the judgment of Isokratês, had been but too effectually perpetuated, enabling the Spartans to achieve their dominion over oppressed Greece, — like the accord of pirates[1] for the spoliation of the peaceful. The Periœkic townships, he tells us, while deprived of all the privileges of freemen, were exposed to all the toils, as well as to an unfair share of the dangers, of war. The Spartan authorities put them in situations and upon enterprises which they deemed too dangerous for their own citizens; and, what was still worse, the ephors possessed the power of putting to death, without any form of preliminary trial, as many Periœki as they pleased.[2]

The statement here delivered by Isokratês, respecting the first origin of the distinction of Spartans and Periœki, is nothing better than a conjecture, nor is it even a probable conjecture, since it is based on the historical truth of the old Herakleid legend, and transports the disputes of his own time, between the oligarchy and the demus, into an early period, to which such disputes do not belong. Nor is there anything, so far as our knowledge of Grecian history extends, to bear out his assertion, that the Spartans took to themselves the least dangerous post in the field, and threw undue peril upon their Periœki. Such dastardly temper was not among the sins of Sparta; but it is undoubtedly true that, as the number of citizens continually diminished, so the Periœki came to constitute, in the later times, a larger and larger proportion of the Spartan force. Yet the power which Isokratês represents to have been vested in the ephors, of putting to death Periœki without preliminary trial, we may fully believe to be real, and to have been exercised as often as the occasion seemed to call for it. We shall notice, presently, the way in which these magistrates dealt with the Helots, and shall see ample reason from thence to draw the conclusion that, whenever the ephors believed any man to be dangerous to the public peace, — whether an inferior Spartan, a Periœkus, or a Helot, — the most summary mode of getting rid of him would be considered as the best. Towards Spartans of rank and consideration, they were doubtless careful and measured in their application of punishment, but the same necessity for circumspection did not exist with regard to the inferior classes: moreover, the feeling that the exigences of justice required a fair trial before punishment was inflicted, belongs to Athenian associations much more than to Spartan. How often any such summary executions may have taken place, we have no information.

We may remark that the account which Isokratês has here given of the origin of the Laconian Periœki is not essentially irreconcilable with that of Ephorus,[1] who recounted that Eurysthenês and Proklês, on first conquering Laconia, had granted to the preëxisting population equal rights with the Dorians, — but that Agis, son of Eurysthenês, had deprived them of this equal position, and degraded them into dependent subjects of the latter. At least, the two narratives both agree in presuming that the Periœki had once enjoyed a better position, from which they had been extruded by violence. And the policy which Isokratês ascribes to the victorious Spartan oligarchs, — of driving out the demus from concentrated residence in the city to disseminated

[1] Isokratês, Panathenaic Or. xii. p 280. *ὥστε οὐδεὶς ἂν αὐτοὺς διά γε τὴν ὁμόνοιαν δικαίως ἐπαινέσειεν, οὐδὲν μᾶλλον ἢ τοὺς καταποντιστὰς καὶ λῃστὰς καὶ τοὺς περὶ τὰς ἄλλας ἀδικίας ὄντας· καὶ γὰρ ἐκεῖνοι σφίσιν αὐτοῖς ὁμονοοῦντες τοὺς ἄλλους ἀπολλύουσι.*

[2] Isokratês, Orat. xii. (Panathenaic.) pp. 270–271. The statement in the same oration (p. 246), that the Lacedæmonians "had put to death without trial more *Greeks* (*πλείους τῶν Ἑλλήνων*) than had ever been tried at Athens since Athens was a city, refers to their allies or dependents out of Laconia

[1] Ephorus, Fragm. 18 ed. Marx; ap. Strabo, viii. p. 365.

residence in many separate and insignificant townships, — seems to be the expression of that proceeding which in his time was numbered among the most efficient precautions against refractory subjects, — the Diœkisis, or breaking up of a town-aggregate into villages. We cannot assign to the statement any historical authority.[1] Moreover, the division of Laconia into six districts, together with its distribution into townships (or the distribution of settlers into preëxisting townships), which Ephorus ascribed to the first Dorian kings, are all deductions from the primitive legendary account, which described the Dorian conquest as achieved by one stroke, and must all be dismissed, if we suppose it to have been achieved gradually. This gradual conquest is admitted by O. Müller, and by many of the ablest subsequent inquirers, — who, nevertheless, seem to have the contrary supposition involuntarily present to their minds when they criticize the early Spartan history, and always unconsciously imagine the Spartans as masters of all Laconia. We cannot even assert that Laconia was ever under one government before the consummation of the successive conquests of Sparta.

Of the assertion of O. Müller — repeated by Schömann[2] — "that the difference of races was strictly preserved, and that

[1] Dr. Arnold (in his Dissertation on the Spartan Constitution, appended to the first volume of his Thucydidês, p. 643) places greater confidence in the historical value of this narrative of Isokratês than I am inclined to do. On the other hand, Mr. G. C. Lewis, in his Review of Dr. Arnold's Dissertation (Philological Museum, vol. ii. p. 45), considers the "account of Isokratês as completely inconsistent with that of Ephorus;" which is saying rather more, perhaps, than the tenor of the two strictly warrants. In Mr. Lewis's excellent article, most of the difficult points respecting the Spartan constitution will be found raised and discussed in a manner highly instructive.

Another point in the statement of Isokratês is, that the Dorians, at the time of the original conquest of Laconia, were only two thousand in number (Or. xii. Panath. p. 286). Mr. Clinton rejects this estimate as too small, and observes, "I suspect that Isokratês, in describing the numbers of the Dorians at the original conquest, has adapted to the description the actual numbers of the Spartans in his own time.' (Fast. Hellen. ii. p. 408.)

This seems to me a probable conjecture, and it illustrates as well the absence of data under which Isokratês or his informants labored, as the method which they took to supply the deficiency

[2] Schömann, Antiq. Jurisp. Græcorum, iv. 1, 5, p. 112.

the Periœki were always considered as Achæans,"— I find no proof, and I believe it to be erroneous. Respecting Pharis, Geronthræ, and Amyklæ, three Periœkic towns, Pausanias gives us to understand that the preëxisting inhabitants either retired or were expelled on the Dorian conquest, and that a Dorian population replaced them.[1] Without placing great faith in this statement, for which Pausanias could hardly have any good authority, we may yet accept it as representing the probabilities of the case, and as counterbalancing the unsupported hypothesis of Müller. The Periœkic townships were probably composed either of Dorians entirely, or of Dorians incorporated in greater or less proportion with the preëxisting inhabitants. But whatever difference of race there may once have been, it was effaced before the historical times,[2] during which we find no proof of

[1] Pausan. iii. 2, 6; iii. 22, 5. The statement of Müller is to be found (History of the Dorians, iii. 2, 1): he quotes a passage of Pausanias, which is noway to the point.

Mr. G. C. Lewis (Philolog. Mus. *ut. sup.* p. 41) is of the same opinion as Müller.

[2] M. Kopstadt (in the learned Dissertation which I have before alluded to, De Rerum Laconicarum Constitutionis Lycurgeæ Origine et Indole, cap. ii p. 31) controverts this position respecting the Periœki. He appears to understand it in a sense which my words hardly present, — at least, a sense which I did not intend them to present: as if the majority of inhabitants in *each* of the hundred Periœkic towns were Dorians, — "ut per centum Laconiæ oppida distributi *ubique majorem* incolarum numerum efficerent," (p 32.) I meant only to affirm that some of the Periœkic towns, such as Amyklæ, were wholly, or almost wholly, Dorian; many others of them partially Dorian. But what may have been the comparative numbers (probably different in each town) of Dorian and non-Dorian inhabitants, — there are no means of determining. M. Kopstadt (p. 35) admits that Amyklæ, Pharis, and Geronthræ, were Periœkic towns peopled by Dorians; and if this be true, it negatives the general maxim on the faith of which he contradicts what I affirm: his maxim is — "nunquam Dorienses à Doriensibus nisi bello victi erant, civitate æquoque jure privati sunt," (p. 31.) It is very unsafe to lay down such large positions respecting a supposed uniformity of Dorian rules and practice. The high authority of O. Müller has been extremely misleading in this respect.

It is plain that Herodotus (compare his expression, viii. 73 and i. 145) conceived all the free inhabitants of Laconia not as Achæans, but as Dorians He believes in the story of the legend, that the Achæans, driven out of Laconia by the invading Dorians and Herakleidæ, occupied the territory in the

Achæans, known as such, in Laconia. The Herakleids, the Ægeids, and the Talthybiads, all of whom belong to Sparta, seem to be the only examples of separate races, partially distinguishable from Dorians, known after the beginning of authentic history. The Spartans and the Periœki constitute one political aggregate, and that too so completely melted together in the general opinion (speaking of the times before the battle of Leuktra), that the peace of Antalkidas, which guaranteed autonomy to every separate Grecian city, was never so construed as to divorce the Periœkic towns from Sparta. Both are known as Laconians, or Lacedæmonians, and Sparta is regarded by Herodotus only as the first and bravest among the many and brave Lacedæmonian cities.[1] The victors at Olympia are proclaimed, not as Spartans, but as Laconians, — a title alike borne by the Periœki. And many of the numerous winners, whose names we read in the Olympic lists as Laconians, may probably have belonged to Amyklæ or other Periœkic towns.

The Periœkic hoplites constituted always a large — in later times a preponderant — numerical proportion of the Lacedæmonian army, and must undoubtedly have been trained, more or less perfectly, in the peculiar military tactics of Sparta; since they were called upon to obey the same orders as the Spartans in the field,[2] and to perform the same evolutions. Some cases appear, though rare, in which a Periœkus has high command in a foreign expedition. In the time of Aristotle, the larger proportion of Laconia (then meaning only the country eastward of Taygetus,

north west of Peloponnesus which was afterwards called Achaia, — expelling from it the Ionians. Whatever may be the truth about this legendary statement, — and whatever may have been the original proportions of Dorians and Achæans in Laconia, — these two races had (in the fifth century B. C.) become confounded in one undistinguishable ethnical and political aggregate called Laconian, or Lacedæmonian, — comprising both Spartans and Periœki, though with very unequal political franchises, and very material differences in individual training and habits. The case was different in Thessaly, where the Thessalians held in dependence Magnêtes, Perrhæbi, and Achæans: the separate nationality of these latter was never lost.

[1] Herod. vii. 234.

[2] Thucyd. viii. 6–22. They did not, however, partake in the Lykurgean discipline; but they seem to be named *οἱ ἐκ τῆς χώρας παῖδες*, as contrasted with *οἱ ἐκ τῆς ἀγωγῆς* (Sosibius ap. Athenæ. xv. p. 674).

since the foundation of Messênê by Epameinondas had been consummated) belonged to Spartan citizens,[1] but the remaining smaller half must have been the property of the Periœki, who must besides have carried on most of the commerce of export and import, — the metallurgic enterprise, and the distribution of internal produce, — which the territory exhibited; since no Spartan ever meddled in such occupations. And thus the peculiar training of Lykurgus, by throwing all these employments into the hands of the Periœki, opened to them a new source of importance, which the dependent townships of Argos, of Thebes, or of Orchomenus, would not enjoy.

The Helots of Laconia were Coloni, or serfs, bound to the soil, who tilled it for the benefit of the Spartan proprietors certainly, — probably, of Periœkic proprietors also. They were the rustic population of the country, who dwelt, not in towns, but either in small villages[2] or in detached farms, both in the district imme-

[1] Aristot. Polit. ii. 6, 23. *διὰ γὰρ τὸ τῶν Σπαρτιατῶν εἶναι τὴν πλείστην γῆν, οὐκ ἐξετάζουσιν ἀλλήλων τὰς εἰσφοράς.*

Mr. G. C. Lewis, in the article above alluded to (Philolog. Mus. ii. p. 54), says, about the Periœki: "They lived in the country or in small towns of the Laconian territory, and cultivated the land, which they did not hold of any individual citizen, but paid for it a tribute or rent to the state; being exactly in the same condition as the *possessores* of the Roman domain, or the Ryots, in Hindostan, before the introduction of the Permanent Settlement." It may be doubted, I think, whether the Periœki paid any such rent or tribute as that which Mr. Lewis here supposes. The passage just cited from Aristotle seems to show that they paid direct taxation individually, and just upon the same principle as the Spartan citizens, who are distinguished only by being larger landed-proprietors. But though the principle of taxation be the same, there was practical injustice (according to Aristotle) in the mode of assessing it. "The Spartan citizens (he observes) being the largest landed-proprietors, take care not to canvass strictly *each other's payment of property-tax*," — *i. e.* they wink mutually at each other's evasions. If the Spartans had been the *only* persons who paid *εἰσφορὰ*, or property-tax, this observation of Aristotle would have had no meaning. In principle, the tax was assessed, both on their larger properties and on the smaller properties of the Periœki: in practice, the Spartans helped each other to evade the due proportion.

[2] The village-character of the Helots is distinctly marked by Livy, xxxiv. 27, in describing the inflictions of the despot Nabis: "Ilotarum quidam (hi sunt jam inde antiquitus *castellani*, agreste genus) transfugere voluisse insimulati, per omnes *vicos* sub verberibus acti necantur."

diately surrounding Sparta, and round the Periœkic Laconian towns also. Of course, there were also Helots who lived in Sparta and other towns, and did the work of domestic slaves, — but such was not the general character of the class. We cannot doubt that the Dorian conquest from Sparta found this class in the condition of villagers and detached rustics; but whether they were dependent upon preëxisting Achæan proprietors, or independent, like much of the Arcadian village population, is a question which we cannot answer. In either case, however, it is easy to conceive that the village lands (with the cultivators upon them) were the most easy to appropriate for the benefit of masters resident at Sparta; while the towns, with the district immediately around them, furnished both dwelling and maintenance to the outgoing detachments of Dorians. If the Spartans had succeeded in their attempt to enlarge their territory by the conquest of Arcadia,[1] they might very probably have converted Tegea and Mantineia into Periœkic towns, with a diminished territory inhabited (either wholly or in part) by Dorian settlers, — while they would have made over to proprietors in Sparta much of the village lands of the Mænalii, Azanes, and Parrhasii, Helotizing the inhabitants. The distinction between a town and a village population seems the main ground of the different treatment of Helots and Periœki in Laconia. A considerable proportion of the Helots were of genuine Dorian race, being the Dorian Messenians west of Mount Taygetus, subsequently conquered and aggregated to this class of dependent cultivators, who, as a class, must have begun to exist from the very first establishment of the invading Dorians in the district round Sparta. From whence the name of Helots arose, we do not clearly make out: Ephorus deduced it from the town of Helus, on the southern coast, which the Spartans are said to have taken after a resistance so obstinate as to provoke them to deal very rigorously with the captives. There are many reasons for rejecting this story, and another etymology has been proposed, according to which Helot is synonymous with *captive:* this is more plausible, yet still not convincing.[2] The Helots lived in the rural villages, as *adscripti glebæ*,

[1] Herodot. i. 66. *ἐχρηστηριάζοντο ἐν Δέλφοισι ἐπὶ πάσῃ τῇ Ἀρκάδων χώρῃ.*

[2] See O. Müller, Dorians, iii. 3, 1; Ephorus ap. Strabo, viii. p. 365: Harpocration, v. *Εἵλωτες.*

cultivating their lands and paying over their rent to the master at Sparta, but enjoying their homes, wives, families, and mutual neighborly feelings, apart from the master's view. They were never sold out of the country, and probably never sold at all; belonging, not so much to the master as to the state, which constantly called upon them for military service, and recompensed their bravery or activity with a grant of freedom. Meno, the Thessalian of Pharsalus, took out three hundred Penestæ of his own, to aid the Athenians against Amphipolis: these Thessalian Penestæ were in many points analogous to the Helots, but no individual Spartan possessed the like power over the latter. The Helots were thus a part of the state, having their domestic and social sympathies developed, a certain power of acquiring property,[1] and the consciousness of Grecian lineage and dialect,— points of marked superiority over the foreigners who formed the slave population of Athens or Chios. They seem to have been noway inferior to any village population of Greece; while the Grecian observer sympathized with them more strongly than with the bought slaves of other states, — not to mention that their homogeneous aspect, their numbers, and their employment in military service, rendered them more conspicuous to the eye.

The service in the Spartan house was all performed by members of the Helot class; for there seem to have been few, if any, other slaves in the country. The various anecdotes which are told respecting their treatment at Sparta, betoken less of cruelty than of ostentatious scorn,[2] — a sentiment which we are noway surprised to discover among the citizens at the mess-table. But the great mass of the Helots, who dwelt in the country, were objects of a very different sentiment on the part of the Spartan ephors, who knew their bravery, energy, and standing discontent,

[1] Kleomenes the Third, offered manumission to every Helot, who could pay down five Attic minæ: he was in great immediate want of money, and he raised, by this means, five hundred talents. Six thousand Helots must thus have been in a condition to find five minæ each, which was a very considerable sum (Plutarch, Kleomenes, c. 23).

[2] Such is the statement, that Helots were compelled to appear in a state of drunkenness, in order to excite in the youths a sentiment of repugnance against intoxication (Plutarch, Lycurg. c. 28; also, Adversus Stoicos de Commun. Notit. c. 19, p. 1067).

and yet were forced to employ them as an essential portion of the state army. The Helots commonly served as light-armed, in which capacity the Spartan hoplites could not dispense with their attendance. At the battle of Platæa, every Spartan hoplite had seven Helots,[1] and every Periœkic hoplite one Helot, to attend him:[2] but, even in camp, the Spartan arrangements were framed to guard against any sudden mutiny of these light-armed companions, while, at home, the citizen habitually kept his shield disjoined from its holding-ring, to prevent the possibility of its being snatched for the like purpose. Sometimes, select Helots were clothed in heavy armor, and thus served in the ranks, receiving manumission from the state as the reward of distinguished bravery.[3]

But Sparta, even at the maximum of her power, was more than once endangered by the reality, and always beset with the apprehension, of Helotic revolt. To prevent or suppress it, the ephors submitted to insert express stipulations for aid in their treaties with Athens, — to invite Athenian troops into the heart of Laconia, — and to practice combinations of cunning and atrocity which even yet stand without parallel in the long list of precautions for fortifying unjust dominion. It was in the eighth year of the Peloponnesian war, after the Helots had been called upon for signal military efforts in various ways, and when the Athenians and Messenians were in possession of Pylus, that the ephors felt especially apprehensive of an outbreak. Anxious to single

[1] Herod. ix. 29. The Spartans, at Thermopylæ, seem to have been attended each by only one Helot (vii. 229).

O. Müller seems to consider that the light-armed, who attended the Periœkic hoplites at Platæa, were *not* Helots (Dor. iii. 3, 6). Herodotus does not distinctly say that they were so, but I see no reason for admitting two different classes of light-armed in the Spartan military force.

The calculation which Müller gives of the number of Periœki and Helots altogether, proceeds upon very untrustworthy data. Among them is to be noticed his supposition that *πολιτικὴ χώρα* means the district of Sparta as distinguished from Laconia, which is contrary to the passage in Polybius (vi. 45): *πολιτικὴ χώρα*, in Polybius, means the territory of the state generally.

[2] Xenophon, Rep. Lac. c. 12, 4; Kritias, De Lacedæm. Repub. ap. Libanium, Orat. de Servitute, t. ii. p. 85, Reisk. *ὡς ἀπιστίας εἵνεκα τῆς πρὸς τοὺς Εἵλωτας ἐξαιρεῖ μὲν Σπαρτιατῆς οἵκοι τῆς ἀσπίδος τὴν πόρπακα*, etc.

[3] Thucyd. i. 101; iv. 80; v. 14–23.

out the most forward and daring Helots, as the men from whom they had most to dread, they issued proclamation that every member of that class who had rendered distinguished services should make his claims known at Sparta, promising liberty to the most deserving. A large number of Helots came forward to claim the boon: not less than two thousand of them were approved, formally manumitted, and led in solemn procession round the temples, with garlands on their heads, as an inauguration to their coming life of freedom. But the treacherous garland only marked them out as victims for the sacrifice: every man of them forthwith disappeared, — the manner of their death was an untold mystery.

For this dark and bloody deed, Thucydidês is our witness,[1] and Thucydidês describing a contemporary matter into which he had inquired. Upon any less evidence we should have hesitated to believe the statement; but standing as it thus does above all suspicion, it speaks volumes as to the inhuman character of the Lacedæmonian government, while it lays open to us at the same time the intensity of their fears from the Helots. In the assassination of this fated regiment of brave men, a large number of auxiliaries and instruments must have been concerned: yet Thucydidês, with all his inquiries, could not find out how any of them perished: he tells us, that no man knew. We see here a fact which demonstrates unequivocally the impenetrable mystery in which the proceedings of the Spartan governmentwere wrapped, — the absence not only of public discussion, but of public curiosity, — and the perfection with which the ephors reigned over the will, the hands, and the tongues, of their Spartan subjects. The Venetian Council of Ten, with all the facilities for nocturnal drowning which their city presented, could hardly have accomplished so vast a *coup-d'état* with such invisible means. And we may judge from hence, even if we had no other evidence, how little the habits of a public assembly could have suited either the temper of mind or the march of government at Sparta.

Other proceedings, ascribed to the ephors against the Helots, are conceived in the same spirit as the incident just recounted

[1] Thucyd. iv. 80. *οἱ δὲ οὐ πολλῷ ὕστερον ἠφάνισάν τε αὐτοὺς καὶ οἷσπερ ἐδόθη ὅτῳ τρόπῳ ἕκαστος διεφθάρη.*

from Thucydidès, though they do not carry with them the same certain attestation. It was a part of the institutions of Lykurgus (according to a statement which Plutarch professes to have borrowed from Aristotle) that the ephors should every year declare war against the Helots, in order that the murder of them might be rendered innocent; and that active young Spartans should be armed with daggers and sent about Laconia, in order that they might, either in solitude or at night, assassinate such of the Helots as were considered formidable.[1] This last measure passes by the name of the Krypteia, yet we find some difficulty in determining to what extent it was ever realized. That the ephors, indeed, would not be restrained by any scruples of justice or humanity, is plainly shown by the murder of the two thousand Helots above noticed; but this latter incident really answered its purpose, while a standing practice, such as that of the Krypteia, and a formal notice of war given beforehand, would provoke the reaction of despair rather than enforce tranquillity. There seems, indeed, good evidence that the Krypteia was a real practice,[2] — that the ephors kept up a system of police or espionage throughout Laconia, by the employment of active young citizens, who lived a hard and solitary life, and suffered their motions to be as little detected as possible. The ephors might naturally enough take this method of keeping watch both over the Periœkic townships and the Helot villages, and the assassination of individual Helots by these police-men, or Krypts, would probably pass unnoticed. But it is impossible to believe in any standing murderous order, or deliberate annual assassination of Helots, for the purpose of intimidation, as Aristotle is alleged to have represented, — for we may well doubt whether he really did make such a representation, when we see that he takes no notice of this measure in his Politics, where he speaks at some length both of the Spartan constitution and of the Helots. The well-known hatred and fear, entertained by the Spartans towards their Helots, has probably colored Plutarch's description of the Krypteia, so as to

[1] Plutarch, Lycurg. c. 28; Heraclides Pontic. p. 504, ed. Crag

[2] Plato, Legg. i. p. 633: the words of the Lacedæmonian Megillus designate an existing Spartan custom. Compare the same treatise, vi. p. 763, where Ast suspects, without reason, the genuineness of the word *κρυπτοί*.

exaggerate those unpunished murders which occasionally happened into a constant phenomenon with express design. A similar deduction is to be made from the statement of Myrôn of Priênê,[1] who alleged that they were beaten every year without any special fault, in order to put them in mind of their slavery, — and that those Helots, whose superior beauty or stature placed them above the visible stamp of their condition, were put to death; while such masters as neglected to keep down the spirit of their vigorous Helots were punished. That secrecy, for which the ephors were so remarkable, seems enough of itself to refute the assertion that they publicly proclaimed war against the Helots; though we may well believe that this unhappy class of men may have been noticed as objects for jealous observation in the annual ephoric oath of office. Whatever may have been the treatment of the Helots in later times, it is at all events hardly to be supposed that any regulation hostile to them can have emanated from Lykurgus. For the dangers arising from that source did not become serious until after the Messenian war, — nor, indeed, until after the gradual diminution of the number of Spartan citizens had made itself felt.

The manumitted Helots did not pass into the class of Periœki, — for this purpose a special grant, of the freedom of some Periœkic township, would probably be required, — but constituted a class apart, known at the time of the Peloponnesian war by the name of Neodamôdes. Being persons who had earned their liberty by signal bravery, they were of course regarded by the ephors with peculiar apprehension, and, if possible, employed on foreign service,[2] or planted on some foreign soil as settlers. In what manner these freedmen employed themselves, we find no distinct information; but we can hardly doubt that they quitted the Helot village and field, together with the rural costume (the leather cap and sheepskin) which the Helot commonly wore, and the change of which exposed him to suspicion, if not to punishment, from his jealous masters. Probably they, as well as the disfranchised Spartan citizens (called Hypomeiones,

[1] Myron. ap. Athenæ. xiv. p. 657. *ἐπικόπτειν τοὺς ἀδουμένους* does not strictly mean "to put to death."

[2] Thucyd. v. 34.

or Inferiors), became congregated at Sparta, and found employment either in various trades or in the service of the government.

It has been necessary to give this short sketch of the orders of men who inhabited Laconia, in order to enable us to understand the statements given about the legislation of Lykurgus. The arrangements ascribed to that lawgiver, in the way that Plutarch describes them, presuppose, and do not create, the three orders of Spartans, Periœki, and Helots. We are told by Plutarch that the disorders which Lykurgus found existing in the state arose in a great measure from the gross inequality of property, and from the luxurious indulgence and unprincipled rapacity of the rich, — who had drawn to themselves the greater proportion of the lands in the country, leaving a large body of poor, without any lot of land, in hopeless misery and degradation. To this inequality (according to Plutarch) the reforming legislator applied at once a stringent remedy. He redistributed the whole territory belonging to Sparta, as well as the remainder of Laconia; the former, in nine thousand equal lots, one to each Spartan citizen; the latter, in thirty thousand equal lots, one to each Periœkus: of this alleged distribution, I shall speak farther presently. Moreover, he banished the use of gold and silver money, tolerating nothing in the shape of circulating medium but pieces of iron, heavy and scarcely portable; and he forbade[1] to the Spartan citizen every species of industrious or money-seeking occupation, agriculture included. He farther constituted, — though not without strenuous opposition, during the course of which his eye is said to have been knocked out by a violent youth, named Alkander, — the Syssitia, or public mess. A certain number of joint tables were provided, and every citizen was required to belong to some one of them, and habitually to take his meals at it,[2] — no new member being admissible without an unanimous ballot in his favor by the previous occupants. Each provided from his lot of land a specified quota of barley-meal, wine, cheese, and figs, and a small contribution of money for condiments: game was obtained in addition by hunting in the

[1] Xenophon, Rep. Lac. c. 7.

[2] Plutarch, Lykurg. c. 15; substantially confirmed by Xenophon, Rep. Lac. c. 1, 5.

public forests of the state, while every one who sacrificed to the gods,[1] sent to his mess-table a part of the victim killed. From boyhood to old age, every Spartan citizen took his sober meals at this public mess, where all shared alike; nor was distinction of any kind allowed, except on signal occasions of service rendered by an individual to the state.

These public Syssitia, under the management of the Polemarchs, were connected with the military distribution, the constant gymnastic training, and the rigorous discipline of detail, enforced by Lykurgus. From the early age of seven years, throughout his whole life, as youth and man no less than as boy, the Spartan citizen lived habitually in public, always either himself under drill, gymnastic and military, or a critic and spectator of others, — always under the fetters and observances of a rule partly military, partly monastic, — estranged from the independence of a separate home, — seeing his wife, during the first years after marriage, only by stealth, and maintaining little peculiar relation with his children. The supervision, not only of his fellow-citizens, but also of authorized censors, or captains nominated by the state, was perpetually acting upon him: his day was passed in public exercises and meals, his nights in the public barrack to which he belonged. Besides the particular military drill, whereby the complicated movements required from a body of Lacedæmonian hoplites in the field, were made familiar to him from his youth, — he also became subject to severe bodily discipline of other kinds, calculated to impart strength, activity, and endurance. To manifest a daring and pugnacious spirit, — to sustain the greatest bodily torture unmoved, — to endure hunger and thirst, heat, cold, and fatigue, — to tread the worst ground barefoot, — to wear the same garment winter and summer, — to suppress external manifestations of feeling, and to exhibit in public, when action was not called for, a bearing shy, silent, and motionless as a statue, — all these were the virtues of the accomplished Spartan youth.[2] Two squadrons

[1] See the authors quoted in Athenæus, iv. p. 141.

[2] Xenoph. Rep. Lac. 2-3, 3-5, 4-6. The extreme pains taken to enforce καρτερία (fortitude and endurance) in the Spartan system is especially dwelt upon by Aristotle (Politica, ii. 6, 5-16); compare Plato, De Legibus, i. p

were often matched against each other to contend (without arms) in the little insular circumscription called the Platanistûs, and these contests were carried on, under the eye of the authorities, with the utmost extremity of fury. Nor was the competition among them less obstinate, to bear without murmuring the cruel scourgings inflicted before the altar of Artemis Orthia, supposed to be highly acceptable to the goddess, though they sometimes terminated even in the death of the uncomplaining sufferer.[1] Besides the various descriptions of gymnastic contests, the youths were instructed in the choric dances employed in festivals of the

633; Xenophon, De Laced. Repub. ii. 9, with the references in Schneider's note, — likewise Cragius, De Republica Laced. iii. 8, p. 325.

[1] It is remarkable that these violent contentions of the youth, wherein kicking, biting, gouging out each other's eyes, was resorted to, — as well as the *διαμαστίγωσις*, or scourging-match, before the altar of Artemis, — lasted down to the closing days of Sparta, and were actually seen by Cicero, Plutarch, and even Pausanias. Plutarch had seen several persons die under the suffering (Plutarch, Lykurg. c. 16, 18–30; and Instituta Laconica, p. 239; Pausan. iii. 14, 9, 16, 7; Cicero, Tuscul. Disp. ii. 15).

The voluntary tortures, undergone by the young men among the Mandan tribe of Indians, at their annual religious festival, in the presence of the elders of the tribe, — afford a striking illustration of the same principles and tendencies as this Spartan *διαμαστίγωσις*. They are endured partly under the influence of religious feelings, as an acceptable offering to the Great Spirit, — partly as a point of emulation and glory on the part of the young men, to show themselves worthy and unconquerable in the eyes of their seniors. The intensity of these tortures is, indeed, frightful to read, and far surpasses in that respect anything ever witnessed at Sparta. It would be incredible, were it not attested by a trustworthy eye-witness.

See Mr. Catlin's Letters on the North American Indians, Letter 22, vol. i. p. 157, *seq.*

"These religious ceremonies are held, in part, for the purpose of conducting all the young men of the tribe, as they annually arrive at manhood, through an ordeal of privation and torture; which, while it is supposed to harden their muscles and prepare them for extreme endurance, — enables the chiefs who are spectators of the scene, to decide upon their comparative bodily strength and ability, to endure the extreme privations and sufferings that often fall to the lot of Indian warriors; and that they may decide who is the most hardy and best able to lead a war-party in case of emergency." — Again, p. 173, etc.

The *καρτερία* or power of endurance (Aristot. Pol. ii. 6, 5–16) which formed one of the prominent objects of the Lycurgean training, dwindles into nothing compared to that of the Mandan Indians.

gods, which contributed to impart to them methodized and harmonious movements. Hunting in the woods and mountains of Laconia was encouraged, as a means of inuring them to fatigue and privation. The nourishment supplied to the youthful Spartans was purposely kept insufficient, but they were allowed to make up the deficiency not only by hunting, but even by stealing whatever they could lay hands upon, provided they could do so without being detected in the fact; in which latter case they were severely chastised.[1] In reference simply to bodily results,[2] the training at Sparta was excellent, combining strength and agility with universal aptitude and endurance, and steering clear of that mistake by which Thebes and other cities impaired the effect of their gymnastics, — the attempt to create an athletic habit, suited for the games, but suited for nothing else.

Of all the attributes of this remarkable community, there is none more difficult to make out clearly than the condition and character of the Spartan women. Aristotle asserts that, in his time, they were imperious and unruly, without being really so brave and useful in moments of danger as other Grecian females;[3] that they possessed great influence over the men, and even exercised much ascendency over the course of public affairs; and

[1] Xenophon, Anab. iv. 6, 14; and De Repub. Lac. c. 2, 6; Isokratês, Or. xii. (Panath.) p. 277. It is these licensed expeditions for thieving, I presume, to which Isokratês alludes, when he speaks of *τῆς παίδων αὐτονομίας* at Sparta, which, in its natural sense, would be the reverse of the truth (p. 277).

[2] Aristot. Polit. viii. 3, 3, — the remark is curious, — *νῦν μὲν οὖν αἱ μάλιστα δοκοῦσαι τῶν πόλεων ἐπιμελεῖσθαι τῶν παίδων αἱ μὲν ἀθλητικὴν ἕξιν ἐμποιοῦσι, λωβώμεναι τά τ' εἴδη καὶ τὴν αὔξησιν τῶν σωμάτων· οἱ δὲ Λάκωνες ταύτην μὲν οὐχ ἥμαρτον τὴν ἁμαρτίαν*, etc. Compare the remark in Plato, Protagor. p. 342.

[3] Aristot. Polit. ii. 6, 5; Plutarch, Agesilaus, c. 31. Aristotle alludes to the conduct of the Spartan women on the occasion of the invasion of Laconia by the Thebans, as an evidence of his opinion respecting their want of courage. His judgment in this respect seems hard upon them, and he probably had formed to himself exaggerated notions of what their courage under such circumstances ought to have been, as the result of their peculiar training. We may add that their violent demonstrations on that trying occasion may well have arisen quite as much from the agony of wounded honor as from fear, when we consider what an event the appearance of a conquering army in Sparta was.

that nearly half the landed property of Laconia had come to belong to them. The exemption of the women from all control, formed, in his eye, a pointed contrast with the rigorous discipline imposed upon the men, — and a contrast hardly less pointed with the condition of women in other Grecian cities, where they were habitually confined to the interior of the house, and seldom appeared in public. While the Spartan husband went through the hard details of his ascetic life, and dined on the plainest fare at the Pheidition, or mess, the wife (it appears) maintained an ample and luxurious establishment at home; and the desire to provide for such outlay was one of the causes of that love of money which prevailed among men forbidden to enjoy it in the ordinary ways. To explain this antithesis between the treatment of the two sexes at Sparta, Aristotle was informed that Lykurgus had tried to bring the women no less than the men under a system of discipline, but that they made so obstinate a resistance as to compel him to desist.[1]

The view here given by the philosopher, and deserving of course careful attention, is not easy to reconcile with that of Xenophon and Plutarch, who look upon the Spartan women from a different side, and represent them as worthy and homogeneous companions to the men. The Lykurgean system (as these authors describe it) considering the women as a part of the state, and not as a part of the house, placed them under training hardly less than the men. Its grand purpose, the maintenance of a vigorous breed of citizens, determined both the treatment of the younger women, and the regulations as to the intercourse of the sexes. "Female slaves are good enough (Lykurgus thought) to sit at home spinning and weaving, — but who can expect a splendid offspring, the appropriate mission and duty of a free Spartan woman towards her country, from mothers brought up in such occupations?"[2] Pursuant to these views, the Spartan damsels underwent a bodily training analogous to that of the Spartan youth, — being formally exercised, and contending with each other in running, wrestling, and boxing, agreeably to the forms of the Grecian agônes. They seem to have worn a

[1] Aristot. Polit. ii. 6, 5, 8, 11.

[2] Xenoph. Rep. Lac. i. 3–4; Plutarch, Lycurg. c. 13–14.

light tunic, cut open at the skirts, so as to leave the limbs both free and exposed to view, — hence Plutarch speaks of them as completely uncovered, while other critics, in different quarters of Greece, heaped similar reproach upon the practice, as if it had been perfect nakedness.[1] The presence of the Spartan youths, and even of the kings and the body of citizens, at these exercises, lent animation to the scene. In like manner, the young women marched in the religious processions, sung and danced at particular festivals, and witnessed as spectators the exercises and contentions of the youths; so that the two sexes were perpetually intermingled with each other in public, in a way foreign to the habits, as well as repugnant to the feelings, of other Grecian states. We may well conceive that such an education imparted to the women both a demonstrative character and an eager interest in masculine accomplishments, so that the expression of their praise was the strongest stimulus, and that of their reproach the bitterest humiliation, to the youthful troop who heard it.

The age of marriage (which in some of the unrestricted cities of Greece was so early as to deteriorate visibly the breed of citizens)[2] was deferred by the Spartan law, both in women and men, until the period supposed to be most consistent with the perfection of the offspring. And when we read the restriction which Spartan custom imposed upon the intercourse even between married persons, we shall conclude without hesitation that the public intermixture of the sexes, in the way just described, led to no such liberties, between persons not married, as might be likely to arise from it under other circumstances.[3]

[1] Eurip. Androm. 598; Cicero, Tuscul. Quæst. ii. 15. The epithet φαινομηρίδες, as old as the poet Ibykus, shows that the Spartan women were not uncovered (see Julius Pollux, vii. 55).

It is scarcely worth while to notice the poetical allusions of Ovid and Propertius.

How completely the practice of gymnastic and military training for young women, analogous to that of the other sex, was approved by Plato, may be seen from the injunctions in his Republic.

[2] Aristot. Polit. vii. 14, 4.

[3] "It is certain (observes Dr. Thirlwall, speaking of the Spartan unmarried women) that in this respect the Spartan morals were as pure as those of any ancient, perhaps of any modern, people." (History of Greece, ch. viii. vol i. p. 371.)

Marriage was almost universal among the citizens, enforced by general opinion at least, if not by law. The young Spartan carried away his bride by a simulated abduction, but she still seems, for some time at least, to have continued to reside with her family, visiting her husband in his barrack in the disguise of male attire, and on short and stolen occasions.[1] To some married couples, according to Plutarch, it happened, that they had been married long enough to have two or three children, while they had scarcely seen each other apart by daylight. Secret intrigue on the part of married women was unknown at Sparta; but to bring together the finest couples was regarded by the citizens as desirable, and by the lawgiver as a duty. No personal feeling or jealousy on the part of the husband found sympathy from any one, — and he permitted without difficulty, sometimes actively encouraged, compliances on the part of his wife, consistent with this generally acknowledged object. So far was such toleration carried, that there were some married women who were recognized mistresses of two houses,[2] and mothers of two distinct families,— a sort of bigamy strictly forbidden to the men, and never permitted, except in the remarkable case of king Anaxandrides, when the royal Herakleidan line of Eurysthenes was in danger of becoming extinct. The wife of Anaxandrides being childless, the ephors strongly urged him, on grounds of public necessity, to repudiate her and marry another. But he refused to dismiss a wife who had given him no cause of complaint; upon which, when they found him inexorable, they desired him to retain her, but to marry another wifebesides, in order that at any rate there might be issue to the Eurystheneid line. "He thus (says

[1] Plutarch, Lycurg. c. 15; Xenoph. Rep. Lac. i. 5. Xenophon does not make any allusion to the abduction as a general custom. There occurred cases in which it was real and violent: see Herod. v. 65. Demaratus carried off and married the betrothed bride of Leotychides.

[2] Xenoph. Rep. Lac. i. 9. *Εἰ δέ τις αὐ γυναικὶ μὲν συνοικεῖν μὴ βούλοιτο, τέκνων δὲ ἀξιολόγων ἐπιθυμοίη, καὶ τούτῳ νόμον ἐποίησεν, ἡντινα ἂν εὔτεκνον καὶ γενναίαν ὁρᾴη, πείσαντα τὸν ἔχοντα, ἐκ ταύτης τεκνοποιεῖσθαι.* **Καὶ πολλὰ μὲν τοιαῦτα συνεχώρει.** *Αἱ τε γὰρ γυναῖκες δίττους οἴκους βούλονται κατέχειν, οἵ τε ἀνδρες ἀδελφοὺς τοῖς παισὶ προσλαμβάνειν, οἱ τοῦ μὲν γένους καὶ τῆς δυνάμεως κοινωνοῦσι, τῶν δὲ χρημάτων οὐκ ἀντίποι σῶνται.*

Herodotus) married two wives, and inhabited two family-hearths, a proceeding unknown at Sparta;"[1] yet the same privilege which, according to Xenophon, some Spartan women enjoyed without reproach from any one, and with perfect harmony between the inmates of both their houses. O. Müller[2] remarks — and the evidence, as far as we know it, bears him out — that love-marriages and genuine affection towards a wife were more familiar to Sparta than to Athens; though in the former, marital jealousy was a sentiment neither indulged nor recognized, — while in the latter, it was intense and universal.[3]

To reconcile the careful gymnastic training, which Xenophon and Plutarch mention, with that uncontrolled luxury and relaxation which Aristotle condemns in the Spartan women, we may perhaps suppose that, in the time of the latter, the women of high position and wealth had contrived to emancipate themselves from the general obligation, and that it is of such particular cases that he chiefly speaks. He dwells especially upon the increasing tendency to accumulate property in the hands of the women,[4] which seems to have been still more conspicuous a century afterwards, in the reign of Agis the Third. And we may readily imagine that one of the employments of wealth thus acquired would be to purchase exemption from laborious training, — an object more easy to accomplish in their case than in that of the men, whose services were required by the state as soldiers. By what steps so large a proportion as two-fifths of the landed property of the state came to be possessed by women, he partially explains to us. There were (he says) many sole heiresses, — the dowries given by fathers to their daughters were very large, — and the father had unlimited power of testamentary bequest,

[1] Herodot. v. 39–40. *Μετὰ δὲ ταῦτα, γυναῖκας ἔχων δύο, διξὰς ἱστίας οἴκεε, ποιέων οὐδαμᾶ Σπαρτιητικά.*

[2] Müller, Hist. of Dorians, iv. 4, 1. The stories recounted by Plutarch, (Agis, c. 20; Kleomenês, c. 37–38,) of the conduct of Agesistrata and Kratesikleia, the wives of Agis and Kleomenês, and of the wife of Panteus (whom he does not name) on occasion of the deaths of their respective husbands, illustrate powerfully the strong conjugal affection of a Spartan woman, and her devoted adherence and fortitude in sharing with her husband the last extremities of suffering.

[3] See the Oration of Lysias, De Cæde Eratosthenis, Orat. i. p. 94. *seq*

[4] Plutarch, Agis, c. 4.

which he was disposed to use to the advantage of his daughter over his son. In conjunction with this last circumstance, we have to notice that peculiar sympathy and yielding disposition towards women in the Spartan mind, of which Aristotle also speaks,[1] and which he ascribes to the warlike temper both of the citizen and the state, — Arês bearing the yoke of Aphroditè. But, apart from such a consideration, if we suppose, on the part of a wealthy Spartan father, the simple disposition to treat sons and daughters alike as to bequest, — nearly one half of the inherited mass of property would naturally be found in the hands of the daughters, since on an average of families the number of the two sexes born is nearly equal. In most societies, it is the men who make new acquisitions: but this seldom or never happened with Spartan men, who disdained all money-getting occupations.

Xenophon, a warm panegyrist of Spartan manners, points with some pride to the tall and vigorous breed of citizens which the Lykurgic institutions had produced. The beauty of the Lacedæmonian women was notorious throughout Greece, and Lampitô, the Lacedæmonian woman introduced in the Lysistrata of Aristophanès, is made to receive from the Athenian women the loudest compliments upon her fine shape and masculine vigor.[2] We may remark that, on this as well as on the other points, Xenophon emphatically insists on the peculiarity of Spartan institutions, contradicting thus the views of those who regard them merely as something a little Hyper-Dorian. Indeed, such peculiarity seems never to have been questioned in antiquity, either by the enemies or by the admirers of Sparta. And those who censured the public masculine exercises of the Spartan maidens, as well as the liberty tolerated in married women, allowed at the same time that the feelings of both were actively identified with the state to a degree hardly known in Greece; that the patriotism of the men greatly depended upon the sympathy of the other sex, which manifested itself publicly, in a

[1] Aristot. Polit. ii. 6, 6; Plutarch, Agis, c. 4. *τοὺς Λακεδαιμονίους κατηκόους ὄντας ἀεὶ τῶν γυναικῶν, καὶ πλεῖον ἐκείναις τῶν δημοσίων, ἢ τῶν ἰδίων αὐτῷ οἷς, πολυπραγμονεῖν δίδοντας.*

[2] Aristophan. Lysistr. 80.

manner not compatible with the recluse life of Grecian women generally, to the exaltation of the brave as well as to the abasement of the recreant; and that the dignified bearing of the Spartan matrons under private family loss seriously assisted the state in the task of bearing up against public reverses. "Return either with your shield or upon it," was their exhortation to their sons when departing for foreign service: and after the fatal day of Leuktra, those mothers who had to welcome home their surviving sons in dishonor and defeat, were the bitter sufferers; while those whose sons had perished, maintained a bearing comparatively cheerful.[1]

Such were the leading points of the memorable Spartan discipline, strengthened in its effect on the mind by the absence of communication with strangers. For no Spartan could go abroad without leave, nor were strangers permitted to stay at Sparta they came thither, it seems, by a sort of sufferance, but the un courteous process called xenêlasy[2] was always available to re move them, nor could there arise in Sparta that class of resident metics or aliens who constituted a large part of the population of Athens, and seem to have been found in most other Grecian towns. It is in this universal schooling, training, and drilling, imposed alike upon boys and men, youths and virgins, rich and poor, that the distinctive attribute of Sparta is to be sought, — not in her laws or political constitution.

Lykurgus (or the individual to whom this system is owing, whoever he was) is the founder of a warlike brotherhood rather than the lawgiver of a political community; his brethren live together like bees in a hive (to borrow a simile from Plutarch),

[1] See the remarkable account in Xenophon, Hellen. iv. 16; Plutarch, Agesilaus, c. 29; one of the most striking incidents in Grecian history. Compare, also, the string of sayings ascribed to Lacedæmonian women, in Plutarch, Lac. Apophth. p. 241, *seq.*

[2] How offensive the Lacedæmonian xenêlasy or expulsion of strangers appeared in Greece, we may see from the speeches of Periklês in Thucydidês (i. 144; ii. 39). Compare Xenophon, Rep. Lac. xiv. 4; Plutarch, Agis, c. 10 Lykurgus, c. 27; Plato, Protagoras, p. 348.

No Spartan left the country without permission: Isokratês, Orat. xi (Busiris), p. 225; Xenoph. *ut sup.*

Both these regulations became much relaxed after the close of the Peloponnesian war.

with all their feelings implicated in the commonwealth, and divorced from house and home.[1] Far from contemplating the society as a whole, with its multifarious wants and liabilities, he interdicts beforehand, by one of the three primitive Rhetræ, all written laws, that is to say, all formal and premeditated enactments on any special subject. When disputes are to be settled or judicial interference is required, the magistrate is to decide from his own sense of equity; that the magistrate will not depart from the established customs and recognized purposes of the city, is presumed from the personal discipline which he and the select body to whom he belongs, have undergone. It is this select body, maintained by the labor of others, over whom Lykurgus exclusively watches, with the provident eye of a trainer, for the purpose of disciplining them into a state of regimental preparation,[2] single-minded obedience, and bodily efficiency and endurance, so that they may be always fit and ready for defence, for conquest and for dominion. The parallel of the Lykurgean institutions is to be found in the Republic of Plato, who approves the Spartan principle of select guardians carefully trained and administering the community at discretion; with this momentous difference, indeed, that the Spartan character[3] formed by Lykurgus is of a low type, rendered savage and fierce by exclusive and overdone bodily discipline, — destitute even of the elements of letters, — immersed in their own narrow specialities, and taught to despise all that lay beyond, — possessing all the qualities requisite to procure dominion, but none of those calculated to render dominion popular or salutary to the subject; while the habits and attributes of the guardians, as shadowed forth by Plato, are enlarged as well as philanthropic, qualifying them not simply to govern, but to govern for purposes protective, conciliatory, and exalted. Both Plato and Aristotle conceive as the perfection of society something of the Spartan type, — a select body of equally privileged citizens, disengaged from industrious pursuits, and subjected to public and uniform training. Both admit (with Lykurgus) that the citizen belongs neither to himself nor to his family, but to his city; both at the same time note with regret, that the Spartan training was turned only to one portion of human virtue, — that which is called forth in a state of war;[1] the citizens being converted into a sort of garrison, always under drill, and always ready to be called forth either against Helots at home or against enemies abroad. Such exclusive tendency will appear less astonishing if we consider the very early and insecure period at which the Lykurgean institutions arose, when none of those guarantees which afterwards maintained the peace of the Hellenic world had as yet become effective, — no constant habits of intercourse, no custom of meeting in Amphiktyony from the distant parts of Greece, no common or largely frequented festivals, no multiplication of proxenies (or standing tickets of hospitality) between the important cities, no pacific or industrious habits anywhere. When we contemplate the general insecurity of Grecian life in the ninth or eighth century before the Christian era, and especially the precarious condition of a small band of Dorian conquerors in Sparta and its district, with subdued Helots on their own lands and Achæans unsubdued all around them, — we shall not be surprised that the language

[1] Plutarch, Lykurg. c. 25.

[2] Plutarch observes justly about Sparta, under the discipline of Lykurgus, that it was "not the polity of a city, but the life of a trained and skilful man," — *οὐ πόλεως ἡ Σπάρτη πολιτείαν, ἀλλ' ἀνδρὸς ἀσκητοῦ καὶ σοφοῦ βίον ἔχουσα* (Plutarch, Lyk. c. 30).

About the perfect habit of obedience at Sparta, see Xenophon, Memorab. iii. 5, 9, 15–iv. 4, 15, the grand attributes of Sparta in the eyes of its admirers (Isokratês, Panathen. Or. xii. pp. 256–278), *πειθαρχία — σωφροσύνη — τὰ γυμνάσια τάκει καθεστῶτα καὶ πρὸς τὴν ἄσκησιν τῆς ἀνδρίας καὶ πρὸς τὴν ὁμόνοιαν καὶ συνόλως τὴν περὶ τὸν πόλεμον ἐμπειρίαν.*

[3] Aristot. Polit. viii 3, 3. *Οἱ Λάκωνες.....θηριώδεις ἀπεργάζονται τοὺς τρόπους.*

That the Spartans were absolutely ignorant of letters, and could not read, is expressly stated by Isokratês (Panathen. Or. xii. p. 277). *οὗτοι δὲ τοσοῦτον ἀπολελειμμένοι τῆς κοινῆς παιδείας καὶ φιλοσοφίας εἰσὶν, ὥστ' οὐδὲ γράμματα μανθάνουσιν*, etc.

The preference of rhetoric to accuracy, is so manifest in Isokratês, that we ought to understand his expressions with some reserve; but in this case it is evident that he means literally what he says, for in another part of the same discourse, there is an expression dropped, almost unconsciously, which confirms it. "The most rational Spartans (he says) will appreciate this discourse, if they *find any one to read it to them*," — *ἢν λάβωσι τὸν ἀναγνωσόμενον* (p. 285).

[1] Aristot. Polit. ii. 6, 22; vii. 13, 11; viii. 1, 3; viii. 3, 3. Plato, Legg. i pp. 626–629. Plutarch, Solôn. c. 22.

which Brasidas in the Peloponnesian war addresses to his army in reference to the original Spartan settlement, was still more powerfully present to the mind of Lykurgus four centuries earlier — "We are a few in the midst of many enemies; we can only maintain ourselves by fighting and conquering."[1]

Under such circumstances, the exclusive aim which Lykurgus proposed to himself is easily understood; but what is truly surprising, is the violence of his means and the success of the result. He realized his project of creating, in the eight thousand or nine thousand Spartan citizens, unrivalled habits of obedience, hardihood, self-denial, and military aptitude, — complete subjection on the part of each individual to the local public opinion, and preference of death to the abandonment of Spartan maxims, intense ambition on the part of every one to distinguish himself within the prescribed sphere of duties, with little ambition for anything else. In what manner so rigorous a system of individual training can have been first brought to bear upon any community, mastering the course of the thoughts and actions from boyhood to old age, — a work far more difficult than any political revolution, — we are not permitted to discover. Nor does the influence of an earnest and energetic Herakleidman, — seconded by the still more powerful working of the Delphian god behind, upon the strong pious susceptibilities of the Spartan mind, — sufficiently explain a phenomenon so remarkable in the history of mankind, unless we suppose them aided by some combination of coöperating circumstances which history has not transmitted to us,[2] and preceded by disorders so exaggerated as to render the citizens glad to escape from them at any price.

Respecting the ante-Lykurgean Sparta we possess no positive information whatever. But although this unfortunate gap cannot be filled up, we may yet master the negative probabilities of the

[1] Thucyd. iv. 126. Οἱ γε μηδὲ ἀπὸ πολιτειῶν τοιούτων ἥκετε, ἐν αἷς οὐ πολλοὶ ὀλίγων ἄρχουσι, ἀλλὰ πλειόνων μᾶλλον ἐλάσσους· οὐκ ἄλλῳ τιν κτησάμενοι τὴν δυναστείαν ἢ τῷ μαχόμενοι κρατεῖν.

The most remarkable circumstance is, that these words are addressed by Brasidas to an army composed, in large proportion, of manumitted Helots (Thucyd. iv. 81).

[2] Plato treats of the system of Lykurgus, as emanating from the Delphian Apollo and Lykurgus as his missionary (Legg. i. p. 632)

case sufficiently to see that, in what Plutarch has told us (and from Plutarch the modern views have, until lately, been derived), there is indeed a basis of reality, but there is also a large superstructure of romance, — in not a few particulars essentially misleading. For example, Plutarch treats Lykurgus as introducing his reforms at a time when Sparta was mistress of Laconia, and distributing the whole of that territory among the Periœki. Now we know that Laconia was not then in possession of Sparta, and that the partition of Lykurgus (assuming it to be real) could only have been applied to the land in the immediate vicinity of the latter. For even Amyklæ, Pharis, and Geronthræ, were not conquered until the reign of Têleklus, posterior to any period which we can reasonably assign to Lykurgus: nor can any such distribution of Laconia have really occurred. Farther, we are told that Lykurgus banished from Sparta coined gold and silver, useless professions and frivolities, eager pursuit of gain, and ostentatious display. Without dwelling upon the improbability that any one of these anti-Spartan characteristics should have existed at so early a period as the ninth century before the Christian era, we may at least be certain that coined silver was not then to be found, since it was first introduced into Greece by Pheidon of Argos in the succeeding century, as has been stated in the preceding section.

But amongst all the points stated by Plutarch, the most suspicious by far, and the most misleading, because endless calculations have been built upon it, is the alleged redivision of landed property. He tells us that Lykurgus found fearful inequality in the landed possessions of the Spartans; nearly all the land in the hands of a few, and a great multitude without any land; that he rectified this evil by a redivision of the Spartan district into nine thousand equal lots, and the rest of Laconia into thirty thousand, giving to each citizen as much as would produce a given quota of barley, etc.; and that he wished, moreover, to have divided the movable property upon similar principles of equality, but was deterred by the difficulties of carrying his design into execution.

Now we shall find on consideration that this new and equal partition of lands by Lykurgus is still more at variance with

fact and probability than the two former alleged proceedings. All the historical evidences exhibit decided inequalities of property among the Spartans, — inequalities which tended constantly to increase; moreover, the earlier authors do not conceive this evil as having grown up by way of abuse out of a primeval system of perfect equality, nor do they know anything of the original equal redivision by Lykurgus. Even as early as the poet Alkæus (B. C. 600–580) we find bitter complaints of the oppressive ascendency of wealth, and the degradation of the poor man, cited as having been pronounced by Aristodêmus at Sparta: "Wealth (said he) makes the man, — no poor person is either accounted good or honored."[1] Next, the historian Hellanikus certainly knew nothing of the Lykurgean redivision,— for he ascribed the whole Spartan polity to Eurysthenês and Prokles, the original founders, and hardly noticed Lykurgus at all. Again, in the brief, but impressive description of the Spartan lawgiver by Herodotus, several other institutions are alluded to, but nothing is said about a redivision of the lands; and this latter point is in itself of such transcendent moment, and was so recognized among all Grecian thinkers, that the omission is almost a demonstration of ignorance. Thucydidês certainly could not have believed that equality of property was an original feature in the Lykurgean system; for he says that, at Lacedæmon, "the rich men assimilated themselves greatly in respect of clothing and general habits of life to the simplicity of the poor, and thus set an example which was partially followed in the rest of Greece:" a remark which both implies the existence of unequal property, and gives a just appreciation of the real working of Lykurgic institutions.[2] The like is the sentiment of Xenophon:[3] he observes that the rich at Sparta gained little by

Alcæi Fragment. 41, p. 279, ed. Schneidewin: —

Ὡς γὰρ δήποτ' Ἀριστόδαμον φαισ' οὐκ ἀπάλαμνον ἐν Σπάρτᾳ λόγον
Εἰπῆν — Χρήματ' ἀνηρ· πενιχρὸς δ' οὐδεὶς πέλετ' ἐσθλὸς οὐδὲ τίμιος.

[1] Thucydid. i. 6. μετρίᾳ δ' αὐ ἐσθῆτι καὶ ἐς τὸν νῦν τρόπον πρῶτοι Λακεδαιμόνιοι ἐχρήσαντο, καὶ ἐς τὰ ἄλλα πρὸς τοὺς πολλοὺς οἱ τὰ μείζω κεκτημένοι ἰσοδίαιτοι μάλιστα κατέστησαν. See, also, Plutarch, Apophthegm. Lacon. p. 210, A. — F.

[2] Xenoph. Republ. Laced. c. 7.

their wealth in point of superior comfort; but he never glances at any original measure carried into effect by Lykurgus for equalizing possessions. Plato too,[1] while he touches upon the great advantage possessed by the Dorians, immediately after their conquest of Peloponnesus, in being able to apportion land suitably to all, — never hints that this original distribution had degenerated into an abuse, and that an entire subsequent redivision had been resorted to by Lykurgus: moreover, he is himself deeply sensible of the hazards of that formidable proceeding. Lastly, Aristotle clearly did not believe that Lykurgus had redivided the soil. For he informs us first, that, "both in Lacedæmon and in Krete,[2] the legislator had rendered the enjoyment of property common through the establishment of the Syssitia, or public mess." Now this remark (if read in the chapter of which it forms a part, a refutation of the scheme of Communism for the select guardians in the Platonic Republic) will be seen to tell little for its point, if we assume that Lykurgus at the same time equalized all individual possessions. Had Aristotle known that fact, he could not have failed to notice it: nor could he have assimilated the legislators in Lacedæmon and Krete, seeing that in the latter no one pretends that any such equalization was ever brought about. Next, not only does Aristotle dwell upon the actual inequality of property at Sparta as a serious public evil, but he nowhere treats this as having grown out of a system of absolute equality once enacted by the lawgiver as a part of the primitive constitution: he expressly notices inequality of property so far back as the second Messenian war. Moreover, in that valuable chapter of his Politics, where the scheme of equality of possessions is discussed, Phaleas of Chalkedôn is expressly mentioned as the first author of it, thus indirectly excluding Lykurgus.[3] The mere silence of Aristotle is in

[1] Plato, Legg. iii. p. 684.

[2] Aristotel. Politic. ii. 2, 10. ὥσπερ τὰ περὶ τὰς κτήσεις ἐν Λακεδαίμονι καὶ Κρήτῃ τοῖς συσσιτίοις ὁ νομοθέτης ἐκοίνωσε.

[3] Aristot. Politic. ii. 4, 1, about Phaleas; and about Sparta and Krete, generally, the whole sixth and seventh chapters of the second book; also, v. 6, 2–7.

Theophrastus (apud Plutarch, Lycurg. c. 10) makes a similar observation, that the public mess, and the general simplicity of habits, tended to render

this discussion a negative argument of the greatest weight. Isokratês,[1] too, speaks much about Sparta for good and for evil, — mentions Lykurgus as having established a political constitution much like that of the earliest days of Athens, — praises the gymnasia and the discipline, and compliments the Spartans upon the many centuries which they have gone through with t violent sedition, extinction of debts, and redivision of the land, — those "monstrous evils," as he terms them. Had he conceived Lykurgus as being himself the author of a complete redivision of land, he could hardly have avoided some allusion to it.

It appears, then, that none of the authors down to Aristotle ascribe to Lykurgus a redivision of the lands, either of Sparta or of Laconia. The statement to this effect in Plutarch, given in great detail and with precise specification of number and produce, must have been borrowed from some author later than Aristotle; and I think we may trace the source of it, when we study Plutarch's biography of Lykurgus in conjunction with that of Agis and Kleomenês. The statement is taken from authors of the century after Aristotle, either in, or shortly before, the age when both those kings tried extreme measures to renovate the sinking state: the former by a thorough change of system and property, yet proposed and accepted according to constitutional forms; the latter by projects substantially similar, with violence to enforce them. The accumulation of landed property in few hands, the multiplication of poor, and the decline in the number of citizens, which are depicted as grave mischiefs by Aristotle, had become

wealth of little service to the possessor: *τὸν πλοῦτον ἁπλοῦτον ἀπεργάσασθαι τῇ κοινότητι τῶν δείπνων, καὶ τῇ περὶ τὴν δίαιταν εὐτελείᾳ.* Compare Plutarch. Apophthegm. Lacon. p. 226 E. The wealth, therefore, was not formally done away with in the opinion of Theophrastus: there was no positive equality of possessions.

Both the Spartan kings dined at the public mess at the same pheidition (Plutarch, Agesilaus, c. 30).

Herakleidês Ponticus mentions nothing, either about equality of Spartan lots or fresh partition of lands, by Lykurgus (ad calcem Cragii, De Spartanorum Repub. p. 504), though he speaks about the Spartan lots and law of succession as well as about Lykurgus.

[1] Isokratês, Panathen. Or. xii. pp. 266, 270, 278: *οὐδὲ χρεῶν ἀποκοπὰς οὐδὲ γῆς ἀναδασμὸν οὐδ' ἀλλ' οὐδὲν τῶν ἀνηκέστων κακῶν*

greatly aggravated during the century between him and Agis. The number of citizens, reckoned by Herodotus in the time of the Persian invasion at eight thousand, had dwindled down in the time of Aristotle to one thousand, and in that of Agis to seven hundred, out of which latter number one hundred alone possessed most of the landed property of the state.[1] Now, by the ancient rule of Lykurgus, the qualification for citizenship was the ability to furnish the prescribed quota, incumbent on each individual, at the public mess: so soon as a citizen became too poor to answer to this requisition, he lost his franchise and his eligibility to offices.[2] The smaller lots of land, though it was held discreditable either to buy or sell them,[3] and though some have asserted

[1] Plutarch, Agis, c. iv.

[2] Aristot. Polit. ii. 6, 21. *Παρὰ δὲ τοῖς Λακῶσιν ἕκαστον δεῖ φέρειν, καὶ σφόδρα πενήτων ἐνίων ὄντων, καὶ τοῦτο τὸ ἀνάλωμα οὐ δυναμένων δαπανᾶν.* ..... *Ὅρος δὲ τῆς πολιτείας οὗτός ἐστιν ὁ πάτριος, τὸν μὴ δυνάμενον τοῦτο τὸ τέλος φέρειν, μὴ μετέχειν αὐτῆς.* So also Xenophon, Rep. Lac. c. vii. *Ἴσα μὲν φέρειν εἰς τὰ ἐπιτήδεια, ὁμοίως δὲ διαιτᾶσθαι τάξας.*

The existence of this rate-paying qualification, is the capital fact in the history of the Spartan constitution; especially when we couple it with the other fact, that no Spartan acquired anything by any kind of industry.

[3] Herakleidês Ponticus, ad calcem Cragii De Repub. Laced. p. 504. Compare Cragius, iii. 2, p. 196.

Aristotle (ii. 6, 10) states that it was discreditable to buy or sell a lot of land, but that the lot might be either given or bequeathed at pleasure. He mentions nothing about the prohibition to divide, and even states what contradicts it, — that it was the practice to give a large dowry when a rich man's daughter married (ii. 6, 11). The sister of Agesilaus, Kyniska, was a person of large property, which apparently implies the division of his father's estate (Plutarch, Agesilaus, 30).

Whether there was ever any law prohibiting a father from dividing his lot among his children, may well be doubted. The Rhetra of the ephor Epitadeus (Plutarch, Agis, 5), granted unlimited power of testamentary disposition to the possessor, so that he might give away or bequeathe his land to a stranger if he chose. To this law great effects are ascribed: but it is evident that the tendency to accumulate property in few hands, and the tendency to diminution in the number of qualified citizens, were powerfully manifested before the time of Epitadeus, who came after Lysander. Plutarch, in another place, notices Hesiod, Xenokrates, and Lykurgus, as having concurred with Plato, in thinking that it was proper to leave only one single heir (*ἕνα μόνον κληρόνομον καταλιπεῖν*) (*Ὑπομνήματα εἰς Ἡσίοδον*, Fragm. vol. v. p. 777, Wyttenb.). But Hesiod does not lay down this as a necessity

(without ground, I think), that it was forbidden to divide them, — became insufficient for numerous families, and seem to have been alienated in some indirect manner to the rich; while every industrious occupation being both interdicted to a Spartan citizen and really inconsistent with his rigorous personal discipline, no other means of furnishing his quota, except the lot of land, was open to him. The difficulty felt with regard to these smaller lots of land may be judged of from the fact stated by Polybius,[1] that three or four Spartan brothers had often one and the same wife, the paternal land being just sufficient to furnish contributions for all to the public mess, and thus to keep alive the citizen-rights of all the sons. The tendency to diminution in the number of Spartan citizens seems to have gone on uninterruptedly from the time of the Persian war, and must have been aggravated by the foundation of Messênê, with its independent territory around, after the battle of Leuktra, an event which robbed the Spartans of a large portion of their property. Apart from these special causes, moreover, it has been observed often as a statistical fact, that a close corporation of citizens, or any small number of families, inter-

or as a universal rule; he only says, that a man is better off who has only one son (Opp. Di. 374). And if Plato had been able to cite Lykurgus as an authority for that system of an invariable number of separate *κλῆροι*, or lots, which he sets forth in his treatise De Legibus (p. 740), it is highly probable that he would have done so. Still less can Aristotle have supposed that Lykurgus or the Spartan system either insured, or intended to insure, the maintenance of an unalterable number of distinct proprietary lots; for he expressly notices that scheme as a peculiarity of Philolaus the Corinthian, in his laws for the Thebans (Polit. ii. 9, 7).

[1] Polybius, Fragm. ap. Maii. Collect. Vett. Scrip. vol. ii. p. 384.

Perhaps, as O. Müller remarks, this may mean only, that none except the eldest brother could afford to marry; but the feelings of the Spartans in respect to marriage were, in many other points, so different from ours, that we are hardly authorized to reject the literal statement (History of the Dorians, iii. 10, 2), — which, indeed, is both illustrated and rendered credible by the permission granted in the laws of Solôn to an *ἐπίκληρος* who had been claimed in marriage by a relative in his old age, — *ἂν ὁ κρατῶν καὶ κύριος γεγονὼς κατὰ τὸν νόμον αὐτὸς μὴ δυνατὸς ᾖ πλησιάζειν ὑπὸ τῶν ἐγγιστα τοῦ ἀνδρὸς ὀφείλεσθαι* (Plutarch, Sôlon, c. 20).

I may observe that of O. Müller's statements, respecting the lots of land at Sparta, several are unsupported and some incorrect.

marrying habitually among one another, and not reinforced from without, have usually a tendency to diminish.

The present is not the occasion to enter at length into that combination of causes which partly sapped, partly overthrew, both the institutions of Lykurgus and the power of Sparta. But taking the condition of that city as it stood in the time of Agis the Third (say about 250 B. C.), we know that its citizens had become few in number, the bulk of them miserably poor, and all the land in a small number of hands. The old discipline and the public mess (as far as the rich were concerned) had degenerated into mere forms, — a numerous body of strangers or non-citizens (the old xenêlasy, or prohibition of resident strangers, being long discontinued) were domiciled in the town, forming a powerful moneyed interest; and lastly, the dignity and ascendency of the state amongst its neighbors were altogether ruined. It was insupportable to a young enthusiast like king Agis, as well as to many ardent spirits among his contemporaries, to contrast this degradation with the previous glories of their country: nor did they see any other way of reconstructing the old Sparta except by again admitting the disfranchised poor citizens, redividing the lands, cancelling all debts, and restoring the public mess and military training in all their strictness. Agis endeavored to carry through these subversive measures, (such as no demagogue in the extreme democracy of Athens would ever have ventured to glance at,) with the consent of the senate and public assembly, and the acquiescence of the rich. His sincerity is attested by the fact, that his own property, and that of his female relatives, among the largest in the state, was cast as the first sacrifice into the common stock. But he became the dupe of unprincipled coadjutors, and perished in the unavailing attempt to realize his scheme by persuasion. His successor, Kleomenês, afterwards accomplished by violence a change substantially similar, though the intervention of foreign arms speedily overthrew both himself and his institutions.

Now it was under the state of public feeling which gave birth to these projects of Agis and Kleomênes at Sparta, that the historic fancy, unknown to Aristotle and his predecessors, first gained ground, of the absolute equality of property as a primitive institution of Lykurgus. How much such a belief would favor

the schemes of innovation is too obvious to require notice; and without supposing any deliberate imposture, we cannot be astonished that the predispositions of enthusiastic patriots interpreted, according to their own partialities, an old unrecorded legislation from which they were separated by more than five centuries. The Lykurgean discipline tended forcibly to suggest to men's minds the *idea* of equality among the citizens, — that is, the negation of all inequality not founded on some personal attribute, — inasmuch as it assimilated the habits, enjoyments, and capacities of the rich to those of the poor; and the equality thus existing in idea and tendency, which seemed to proclaim the wish of the founder, was strained by the later reformers into a positive institution which he had at first realized, but from which his degenerate followers had receded. It was thus that the fancies, longings, and indirect suggestions of the present assumed the character of recollections out of the early, obscure, and extinct historical past. Perhaps the philosopher Sphærus of Borysthenês (friend and companion of Kleomenês,[1] disciple of Zeno the Stoic, and author of works now lost, both on Lykurgus and Socrates, and on the constitution of Sparta) may have been one of those who gave currency to such an hypothesis. And we shall readily believe that, if advanced, it would find easy and sincere credence, when we recollect how many similar delusions have obtained vogue in

[1] Plutarch, Kleomenês, cap. 2–11, with the note of Schömann, p. 175; also, Lycurg. cap. 8; Athenæ. iv. p. 141.

Phylarchus, also, described the proceedings of Kleomenês, seemingly with favor (Athenæ. ib.); compare Plutarch, Agis, c. 9.

Polybius believed, that Lykurgus had introduced equality of landed possession, both in the district of Sparta, and throughout Laconia: his opinion is, probably, borrowed from these same authors, of the third century before the Christian era. For he expresses his great surprise, how the best-informed ancient authors (*οἱ λογιώτατοι τῶν ἀρχαίων συγγραφέων*), Plato, Xenophon, Ephorus, Kallisthenês, can compare the Kretan polity to the old Lacedæmonian, the main features of the two being (as he says) so different, — equality of property at Sparta, great inequality of property in Krete, among other differences (Polyb. vi. 45–48).

This remark of Polybius, exhibits the difference of opinion of the earlier writers, as compared with those during the third century before the Christian era. The former compared Spartan and Kretan institutions, because they did *not* conceive equality of landed property as a feature in old Sparta.

modern times, far more favorable to historical accuracy, — how much false coloring has been attached by the political feeling of recent days to matters of ancient history, such as the Saxon Witenagemote, the Great Charter, the rise and growth of the English House of Commons, or even the Poor Law of Elizabeth.

When we read the division of lands really proposed by king Agis, it is found to be a very close copy of the original division ascribed to Lykurgus. He parcels the lands bounded by the four limits of Pellênê, Sellasia, Malea, and Taygetus, into four thousand five hundred lots, one to every Spartan; and the lands beyond these limits into fifteen thousand lots, one to each Periœkus; and he proposes to constitute in Sparta fifteen pheiditia, or public mess-tables, some including four hundred individuals, others two hundred, — thus providing a place for each of his four thousand five hundred Spartans. With respect to the division originally ascribed to Lykurgus, different accounts were given. Some considered it to have set out nine thousand lots for the district of Sparta, and thirty thousand for the rest of Laconia;[1] others affirmed that six thousand lots had been given by Lykurgus, and three thousand added afterwards by king Polydorus; a third tale was, that Lykurgus had assigned four thousand five hundred lots, and king Polydorus as many more. This last scheme is much the same as what was really proposed by Agis.

In the preceding argument respecting the redivision of land ascribed to Lykurgus, I have taken that measure as it is described by Plutarch. But there has been a tendency, in some able modern writers, while admitting the general fact of such redivision, to reject the account given by Plutarch in some of its main circumstances. That, for instance, which is the capital feature in Plutarch's narrative, and which gives soul and meaning to his picture of the lawgiver — the equality of partition — is now rejected by many as incorrect, and it is supposed that Lykurgus made some new agrarian regulations tending towards a general equality of landed property, but not an entirely new partition; that he may have resumed from the wealthy men lands which they had unjustly taken from the conquered Achæans, and thus

Respecting Sphærus, see Plutarch, Lycurg. c. 8; Kleomen. c. 2; Athenæ v. p. 141; Diogen. Laërt. vii. sect. 137

provided allotments both for the poorer citizens and for the subject Laconians. Such is the opinion of Dr. Thirlwall, who at the same time admits that the exact proportion of the Lykurgean distribution can hardly be ascertained.[1]

I cannot but take a different view of the statement made by Plutarch. The moment that we depart from that rule of equality, which stands so prominently marked in his biography of Lykur-

[1] Hist. of Greece, ch. viii. vol. i. pp. 344–347.

C. F. Hermann, on the contrary, considers the equal partition of Laconia into lots indivisible and inalienable, as "an essential condition" (eine wesentliche Bedingung) of the whole Lykurgean system (Lehrbuch der Griechischen Staatsalterthümer, sect. 28).

Tittmann (Griechische Staatsverfassungen, pp. 588–596) states and seems to admit the equal partition as a fact, without any commentary.

Wachsmuth (Hellenisch. Alterthumskunde, v. 4, 42, p. 217) supposes "that the best land was already parcelled, before the time of Lykurgus, into lots of equal magnitude, corresponding to the number of Spartans, which number afterwards increased to nine thousand." For this assertion, I know no evidence: it departs from Plutarch, without substituting anything better authenticated or more plausible. Wachsmuth notices the partition of Laconia among the Perioeki in thirty thousand equal lots, without any comment, and seemingly as if there were no doubt of it (p. 218).

Manso, also, supposes that there had once been an equal division of land prior to Lykurgus, — that it had degenerated into abuse, — and that Lykurgus corrected it, restoring, not absolute equality, but something near to equality (Manso, Sparta, vol. i. pp. 110–121). This is the same gratuitous supposition as that of Wachsmuth.

O. Müller admits the division as stated by Plutarch, though he says that the whole number of nine thousand lots cannot have been set out before the Messenian war; and he adheres to the idea of equality as contained in Plutarch; but he says that the equality consisted in "equal estimate of average produce," — not in equal acreable dimensions. He goes so far as to tell us that "the lots of the Spartans, which supported twice as many men as the lots of the Perioeki, must, upon the whole, have been twice as extensive (*i. e.* in the aggregate): each lot must, therefore, have been seven times greater," (compare History of the Dorians, iii. 3, 6; iii. 10, 2.) He also supposes, that "similar partitions of land had been made from the time of the first occupation of Laconia by the Dorians." Whoever compares his various positions with the evidence brought to support them, will find a painful disproportion between the basis and the superstructure.

The views of Schömann, as far as I collect from expressions somewhat vague, seem to coincide with those of Dr. Thirlwall. He admits, however that the alleged Lykurgean equalization is at variance with the representations of Plato (Schömann, Antiq. Jur. Pub. iv 1, 7, note 4 p 116)

gus, we step into a boundless field of possibility, in which there is nothing to determine us to one point more than to another. The surmise started by Dr. Thirlwall, of lands unjustly taken from the conquered Achæans by wealthy Spartan proprietors, is altogether gratuitous; and granting it to be correct, we have still to explain how it happened that this correction of a partial injustice came to be transformed into the comprehensive and systematic measure which Plutarch describes; and to explain, farther, from whence it arose that none of the authors earlier than Plutarch take any notice of Lykurgus as an agrarian equalizer. These two difficulties will still remain, even if we overlook the gratuitous nature of Dr. Thirlwall's supposition, or of any other supposition which can be proposed respecting the real Lykurgean measure which Plutarch is affirmed to have misrepresented.

It appears to me that these difficulties are best obviated by adopting a different canon of historical interpretation. We cannot accept as real the Lykurgean land division described in the life of the lawgiver; but treating this account as a fiction, two modes of proceeding are open to us. We may either consider the fiction, as it now stands, to be the exaggeration and distortion of some small fact, and then try to guess, without any assistance, what the small fact was. Or we may regard it as fiction from first to last, the expression of some large idea and sentiment so powerful in its action on men's minds at a given time, as to induce them to make a place for it among the realities of the past. Now the latter supposition, applied to the times of Agis the Third, best meets the case before us. The eighth chapter of the life of Lykurgus by Plutarch, in recounting the partition of land, describes the dream of king Agis, whose mind is full of two sentiments, — grief and shame for the actual condition of his country, — together with reverence for its past glories, as well as for the lawgiver from whose institutions those glories had emanated. Absorbed with this double feeling, the reveries of Agis go back to the old ante-Lykurgean Sparta, as it stood more than five centuries before. He sees, in the spirit, the same mischiefs and disorders as those which afflict his waking eye, — gross inequalities of property, with a few insolent and luxurious rich, a crowd of mutinous and suffering poor, and nothing but fierce antipathy reigning between the two. Into the midst of this fro-

ward, lawless, and distempered community, steps the venerable missionary from Delphi, — breathes into men's minds new impulses, and an impatience to shake off the old social and political Adam, — and persuades the rich, voluntarily abnegating their temporal advantages, to welcome with satisfaction a new system, wherein no distinction shall be recognized, except that of good or evil desert.[1] Having thus regenerated the national mind, he parcels out the territory of Laconia into equal lots, leaving no superiority to any one. Fraternal harmony becomes the reigning sentiment, while the coming harvests present the gratifying spectacle of a paternal inheritance recently distributed, with the brotherhood contented, modest, and docile. Such is the picture with which "mischievous Oneirus" cheats the fancy of the patriotic Agis, whispering the treacherous message that the gods have promised *him* success in a similar attempt, and thus seducing him into that fatal revolutionary course, which is destined to bring himself, his wife, and his aged mother, to the dungeon and the hangman's rope.[2]

That the golden dream just described was dreamed by some Spartan patriots is certain, because it stands recorded in Plutarch; that it was not dreamed by the authors of centuries preceding Agis, I have already endeavored to show; that the earnest feelings, of sickness of the present and yearning for a better future under the colors of a restored past, which filled the soul of this king and his brother-reformers, — combined with the levelling tendency between rich and poor which really was inherent in the Lykurgean discipline, — were amply sufficient to beget such a dream, and to procure for it a place among the great deeds of the old lawgiver, so much venerated and so little known, — this too I hold to be unquestionable. Had there been any evidence that Lykurgus had interfered with private property, to the limited extent which Dr. Thirlwall and other able critics imagine, — that he had resumed certain lands unjustly taken by the

[1] Plutarch, Lykurg. c. 8. *συνέπεισε τὴν χώραν ἅπασαν εἰς μέσον θέντας, ἐξ ἀρχῆς ἀναδάσασθαι, καὶ ζῆν μετ' ἀλλήλων ἁπάντας, ὁμαλεῖς καὶ ἰσοκλήρους τοῖς βίοις γενομένους, τὸ δὲ πρωτεῖον ἀρετῇ μετιόντας· ὡς ἄλλης ἑτέρῳ πρὸς ἕτερον οὐκ οὔσης διαφορᾶς, οὐδ' ἀνισότητος, πλὴν ὅσην αἰσχρῶν ψόγος ἀφίζει καὶ καλῶν ἔπαινος. Ἐπάγων δὲ τῷ λόγῳ τὸ ἔργον, διένειμε*, etc

[2] Plutarch, Agis, c. 19–20.

rich from the Achæans, — I should have been glad to record it; but, finding no such evidence, I cannot think it necessary to presume the fact, simply in order to account for the story in Plutarch.[1]

The various items in that story all hang together, and must be understood as forming parts of the same comprehensive fact, or comprehensive fancy. The fixed total of nine thousand Spartan, and thirty thousand Laconian lots,[2] the equality between them,

[1] I read with much satisfaction, in M. Kopstadt's Dissertation, that the general conclusion which I have endeavored to establish respecting the alleged Lykurgean redivision of property, appears to him successfully proved. (Dissert. De Rerum Laconic. Const. sect. 18, p. 188.)

He supposes, with perfect truth, that, at the time when the first edition of these volumes was published, I was ignorant of the fact, that Lachmann and Kortüm had both called in question the reality of the Lykurgean redivision. In regard to Professor Kortüm, the fact was first brought to my knowledge, by his notice of these two volumes, in the Heidelberger Jahrbücher, 1846, No. 41, p. 649.

Since the first edition, I have read the treatise of Lachmann (Die Spartanische Staats Verfassung in ihrer Entwicklung und ihrem Verfalle, sect. 10, p. 170) wherein the redivision ascribed to Lykurgus is canvassed. He, too, attributes the origin of the tale, as a portion of history, to the social and political feelings current in the days of Agis the Third, and Kleomenês the Third. He notices, also, that it is in contradiction with Plato and Isokratês. But a large proportion of the arguments which he brings to disprove it, are connected with ideas of his own respecting the social and political constitution of Sparta, which I think either untrue or uncertified. Moreover, he believes in the inalienability as well as the indivisibility of the separate lots of land, — which I believe to be just as little correct as their supposed equality.

Kopstadt (p. 139) thinks that I have gone too far in rejecting every middle opinion. He thinks that Lykurgus must have done something, though much less than what is affirmed, tending to realise equality of individual property.

I shall not say that this is impossible. If we had ampler evidence, perhaps such facts might appear. But as the evidence stands now, there is nothing whatever to show it. Nor are we entitled (in my judgment) to presume that it was so, in the absence of evidence, simply in order to make out that the Lykurgean mythe is only an exaggeration, and not entire fiction.

[2] Aristotle (Polit. ii. 6, 11) remarks that the territory of the Spartans would maintain fifteen hundred horsemen and thirty thousand hoplites, while the number of citizens was, in point of fact, less than one thousand. Dr. Thirlwall seems to prefer the reading of Göttling, — three thousand instead

and the rent accruing from each, represented by a given quantity of moist and dry produce, — all these particulars are alike true or alike uncertified. Upon the various numbers here given, many authors have raised calculations as to the population and produce of Laconia, which appear to me destitute of any trustworthy foundation. Those who accept the history, that Lykurgus constituted the above-mentioned numbers both of citizens and of lots of land, and that he contemplated the maintenance of both numbers in unchangeable proportion, — are perplexed to assign the means whereby this adjustment was kept undisturbed. Nor are they much assisted in the solution of this embarrassing problem by the statement of Plutarch, who tells us that the number remained fixed of itself, and that the succession ran on from father to son, without either consolidation or multiplication of parcels, down to the period when foreign wealth flowed into Sparta, as a consequence of the successful conclusion of the Peloponnesian war. Shortly after that period (he tells us) a citizen named Epitadeus became ephor, — a vindictive and malignant man, who, having had a quarrel with his son, and wishing to oust him from the succession, introduced and obtained sanction to a new Rhetra, whereby power was granted to every father of a family either to make over during life, or to bequeathe after death, his house and his estate to any one whom he chose.[1] But it is plain that this story (whatever be the truth about the family quarrel of Epitadeus) does not help us out of the difficulty. From the time of Lykurgus to that of this disinheriting ephor, more than four centuries must be reckoned: now, had there been real causes at work sufficient to maintain inviolate the identical number of lots and families during this long period, we see no reason why his new law, simply permissive and nothing more, should have overthrown it. We are not told by Plutarch what was the law of succession prior to Epitadeus. If the whole estate went by law to one son in the family, what became of the other sons, to whom industrious acquisition in any shape was repulsive as well as interdicted? If, on the other hand, the estate was divided between the sons equally (as it was by the law of succession at Athens), how can we defend the maintenance of an unchanged aggregate number of parcels?

of thirty thousand; but the latter seems better supported by MSS, and most suitable.

[1] Plutarch, Agis, c. 5.

Dr. Thirlwall, after having admitted a modified interference with private property by Lykurgus, so as to exact from the wealthy a certain sacrifice in order to create lots for the poor, and to bring about something approaching to equi-producing lots for all, observes: "The average amount of the rent, paid by the cultivating Helots from each lot, seems to have been no more than was required for the frugal maintenance of a family with six persons. The right of transfer was as strictly confined as that of enjoyment; the patrimony was indivisible, inalienable, and descended to the eldest son; in default of a male heir, to the eldest daughter. The object seems to have been, after the number of the allotments became fixed, that each should be constantly represented by one head of a household. But the nature of the means employed for this end is one of the most obscure points of the Spartan system.... In the better times of the commonwealth, this seems to have been principally effected by adoptions and marriages with heiresses, which provided for the marriages of younger sons in families too numerous to be supported on their own hereditary property. It was then probably seldom necessary for the state to interfere, in order to direct the childless owner of an estate, or the father of a rich heiress, to a proper choice. But as all adoption required the sanction of the kings, and they had also the disposal of the hand of orphan heiresses, there can be little doubt that the magistrate had the power of interposing on such occasions, even in opposition to the wishes of individuals, to relieve poverty and check the accumulation of wealth." (Hist Gr. ch. 8, vol. i. p. 367).

I cannot concur in the view which Dr. Thirlwall here takes of the state of property, or the arrangements respecting its transmission, in ancient Sparta. Neither the equal modesty of possession which he supposes, nor the precautions for perpetuating it, can be shown to have ever existed among the pupils of Lykurgus. Our earliest information intimates the existence of rich men at Sparta: the story of king Aristo and Agêtus, in Herodotus, exhibits to us the latter as a man who cannot be supposed to have had only just "enough to maintain six persons frugally," —

while his beautiful wife, whom Aristo coveted and entrapped from him, is expressly described as the daughter of opulent parents. Sperthiês and Bulis, the Talthybiads, are designated as belonging to a distinguished race, and among the wealthiest men in Sparta.[1] Demaratus was the only king of Sparta, in the days of Herodotus, who had ever gained a chariot-victory in the Olympic games; but we know by the case of Lichas, during the Peloponnesian war, Evagoras, and others, that private Spartans were equally successful;[2] and for one Spartan who won the prize, there must of course have been many who bred their horses and started their chariots unsuccessfully. It need hardly be remarked, that chariot-competition at Olympia was one of the most significant evidences of a wealthy house: nor were there wanting Spartans who kept horses and dogs without any exclusive view to the games. We know from Xenophon that, at the time of the battle of Leuktra, "the very rich Spartans" provided the horses to be mounted for the state-cavalry.[3] These and other proofs, of the existence of rich men at Sparta, are inconsistent with the idea of a body of citizens each possessing what was about enough for the frugal maintenance of six persons, and no more.

As we do not find that such was in practice the state of property in the Spartan community, so neither can we discover that the lawgiver ever tried either to make or to keep it so. What he did was to impose a rigorous public discipline, with simple clothing and fare, incumbent alike upon the rich and the poor (this was his special present to Greece, according to Thucydidês,[4] and his great point of contact with democracy, according to Aristotle); but he took no pains either to restrain the enrichment of the former, or to prevent the impoverishment of the latter. He meddled little with the distribution of property, and such neglect is one of the capital deficiences for which Aristotle censures him That philosopher tells us, indeed, that the Spartan law had made it dishonorable (he does not say, peremptorily forbidden) to buy or sell landed property, but that there was the fullest liberty both

[2] Herod. vi. 70–103; Thucyd. v. 50.

[3] Xenoph. Hellen. vi. 4, 11; Xenoph. de Rep. Lac. v. 3; Molpis ap. Athen. iv. p. 141; Aristot. Polit. ii. 2, 5.

[4] Thucyd. i. 6; Aristot. Polit. iv. 7, 4, 5; viii. 1, 3.

of donation and bequest: and the same results, he justly observes, ensued from the practice tolerated as would have ensued from the practice discountenanced, — since it was easy to disguise a real sale under an ostensible donation. He notices pointedly the tendency of property at Sparta to concentrate itself in fewer hands, unopposed by any legal hindrances: the fathers married their daughters to whomsoever they chose, and gave dowries according to their own discretion, generally very large: the rich families, moreover, intermarried among one another habitually, and without restriction. Now all these are indicated by Aristotle as cases in which the law might have interfered, and ought to have interfered, but did not, — for the great purpose of disseminating the benefits of landed property as much as possible among the mass of the citizens. Again, he tells us that the law encouraged the multiplication of progeny, and granted exemptions to such citizens as had three or four children, — but took no thought how the numerous families of poorer citizens were to live, or to maintain their qualification at the public tables, most of the lands of the state being in the hands of the rich.[1] His notice, and condemnation, of that law, which made the franchise of the Spartan citizen dependent upon his continuing to furnish his quota to the public table, — has been already adverted to; as well as the potent love of money[2] which he notes in the Spartan character, and which must have tended continually to keep together the richer families among themselves: while amongst a community where industry was unknown, no poor citizen could ever become rich.

If we duly weigh these evidences, we shall see that equality of possessions neither existed in fact, nor ever entered into the scheme and tendencies of the lawgiver at Sparta. And the picture which Dr. Thirlwall[3] has drawn of a body of citizens each

[1] Aristot. Polit. ii. 6, 10–15; v. 6, 7.

[2] The panegyrist Xenophon acknowledges much the same respecting the Sparta which he witnessed; but he maintains that it had been better in former times (Repub. Lac. c. 14).

[3] The view of Dr. Thirlwall agrees, in the main, with that of Manso and O. Müller (Manso, Sparta, vol. i. pp. 118–128; and vol. ii. Beilage, 9, p. 129; and Müller, History of the Dorians, vol. ii. b. iii. c. 10, sect. 2, 3).

Both these authors maintain the proposition stated by Plutarch (Agis c

possessing a lot of land about adequate to the frugal maintenance of six persons, — of adoptions and marriages of heiresses arranged

5, in his reference to the ephor Epitadeus, and the new law carried by t ephor), that the number of Spartan lots, nearly equal and rigorously indivisible, remained with little or no change from the time of the original division, down to the return of Lysander, after his victorious close of the Peloponnesian war. Both acknowledge that they cannot understand by what regulations this long unalterability, so improbable in itself, was maintained: but both affirm the fact positively. The period will be more than four hundred years if the original division be referred to Lykurgus: more than three hundred years, if the nine thousand lots are understood to date from the Messenian war.

If this alleged fact be really a fact, it is something almost without a parallel in the history of mankind: and before we consent to believe it, we ought at least to be satisfied that there is considerable show of positive evidence in its favor, and not much against it. But on examining Manso and Müller, it will be seen that not only is there very slender evidence in its favor, — there is a decided balance of evidence against it.

The evidence produced to prove the indivisibility of the Spartan lot, is a passage of Herakleidês Ponticus, c. 2 (ad. calc. Cragii, p. 504), *πωλεῖν δὲ γῆν Λακεδαιμονίοις αἰσχρὸν νενόμισται, — τῆς ἀρχαίας μοίρας ἀνανεμεσθαι* (or *νενεμῆσθαι*) *οὐδὲν ἔξεστι*. The first portion of this assertion is confirmed by, and probably borrowed from, Aristotle, who says the same thing, nearly in the same words: the second portion of the sentence ought, according to all reasonable rules of construction, to be understood with reference to the first part; that is, to the *sale* of the original lot. "To sell land, is held disgraceful among the Lacedæmonians, nor is it permitted to sever off any portion of the original lot," i. e. *for sale*. Herakleidês is not here speaking of the law of *succession* to property at Lacedæmon, nor can we infer from his words that the whole lot was transmitted entire to one son. No evidence except this very irrelevant sentence is produced by Müller and Manso to justify their positive assertion, that the Spartan lot of land was indivisible in respect to inheritance.

Having thus determined the indivisible transmission of lots to one son of a family, Manso and Müller presume, without any proof, that that son must be the eldest: and Müller proceeds to state something equally unsupported by proof: "The extent of his rights, however, was perhaps no farther than that he was considered master of the house and property; while the other members of the family had an equal right to the enjoyment of it. . . . . The master of the family was, therefore, obliged to contribute for all these to the syssitia, without which contribution no one was admitted." — pp. 199, 200.

All this is completely gratuitous, and will be found to produce as many difficulties in one way as it removes in another.

The next law as to the transmission of property, which Manso states to have prevailed, is, that all daughters were to marry without receiving any

with a deliberate view of providing for the younger children of numerous families, — of interference on the part of the kings to

dowry, — the case of a sole daughter is here excepted. For this proposition he cites Plutarch, Apophtheg. Laconic. p. 227; Justin, iii. 3; Ælian. V. H. vi. 6. These authors do certainly affirm, that there was such a regulation, and both Plutarch and Justin assign reasons for it, real or supposed. "Lykurgus, being asked why he directed that maidens should be married without dowry, answered, — In order that maidens of poor families might not remain unmarried, and that character and virtue might be exclusively attended to in the choice of a wife." The same general reason is given by Justin. Now the *reason* here given for the prohibition of dowry, goes, indirectly, to prove that there existed no such law of general succession, as that which had been before stated, namely, the sacred indivisibility of the primitive lot. For had this latter been recognized, the reason would have been obvious why daughters could receive no dowry; the father's whole landed property (and a Spartan could have little of any other property, since he never acquired anything by industry) was under the strictest entail to his eldest son. Plutarch and Justin, therefore, while in their statement as to the matter of fact, they warrant Manso in affirming the prohibition of dowry (about this matter of fact, more presently), do, by the reason which they give, discountenance his former supposition as to the indivisibility of the primitive family lots.

Thirdly, Manso understands Aristotle (Polit. ii. 6, 11), by the use of the adverb *νῦν*, to affirm something respecting his own time specially, and to imply at the same time that the ancient custom had been the reverse. I cannot think that the adverb, as Aristotle uses it in that passage, bears out such a construction: *νῦν δὲ*, there, does not signify present time as opposed to past, but the antithesis between the actual custom and that which Aristotle pronounces to be expedient. Aristotle gives no indication of being aware that any material change had taken place in the laws of succession at Sparta: this is one circumstance, for which both Manso and Müller, who both believe in the extraordinary revolution caused by the permissive law of the ephor Epitadeus, censure him.

Three other positions are laid down by Manso about the laws of property at Sparta. 1. A man might give away or bequeathe his land to whomsoever he pleased. 2. But none except childless persons could do this. 3. They could only give or bequeathe it to citizens who had no land of their own. Of these three regulations, the first is distinctly affirmed by Aristotle, and may be relied upon: the second is a restriction not noticed by Aristotle, and supported by no proof except that which arises out of the story of the ephor Epitadeus, who is said to have been unable to disinherit his son without causing a new law to be passed: the third is a pure fancy.

So much for the positive evidence, on the faith of which Manso and Müller affirm the startling fact, that the lots of land in Sparta remained distinct, indivisible, and unchanged in number, down to the close of the Peloponnesian war. I venture to say that such positive evidence is far too weak

insure this object, — of a fixed number of lots of land, each represented by one head of a household, — this picture is one, of which

to sustain an affirmation in itself so improbable, even if there were no evidence on the other side for contradiction. But in this case there is powerful contradictory evidence.

First, the assertions of these authors are distinctly in the teeth of Aristotle, whose authority they try to invalidate, by saying that he spoke altogether with reference to his own time at Sparta, and that he misconceived the primitive Lykurgean constitution. Now this might form a reasonable ground of presumption against the competency of Aristotle, if the witnesses produced on the other side were older than he. But it so happens, that *every one* of the witnesses produced by Manso and Müller, are *younger* than Aristotle: Herakleidês Ponticus, Plutarch, Justin, Ælian, etc. Nor is it shown that these authors copied from any source earlier than Aristotle, — for his testimony cannot be contradicted by any inferences drawn from Herodotus, Thucydidês, Xenophon, Plato, Isokratês, or Ephorus. None of these writers, anterior to, or contemporary with, Aristotle, countenance the fancy of equal, indivisible, perpetual lots, or prohibition of dowry.

The fact is, that Aristotle is not only our best witness, but also our oldest witness, respecting the laws of property in the Spartan commonwealth. I could have wished, indeed, that earlier testimonies had existed, and I admit that even the most sagacious observer of 340–330 B. C. is liable to mistake when he speaks of one or two centuries before. But if Aristotle is to be discredited on the ground of late date, what are we to say to Plutarch? To insist on the intellectual eminence of Aristotle would be superfluous: and on this subject he is a witness the more valuable, as he had made careful, laborious, and personal inquiries into the Grecian governments generally, and that of Sparta among them, — the great *point de mire* for ancient speculative politicians.

Now the statements of Aristotle, distinctly exclude the idea of equal, indivisible, inalienable, perpetual lots, — and prohibition of dowry. He particularly notices the habit of giving very large dowries, and the constant tendency of the lots of land to become consolidated in fewer and fewer hands. He tells us nothing upon the subject which is not perfectly consistent, intelligible, and uncontradicted by any known statements belonging to his own, or to earlier times. But the reason why men refuse to believe him, and either set aside or explain away his evidence, is, that they sit down to the study with their minds full of the division of landed property ascribed to Lykurgus by Plutarch. I willingly concede that, on this occasion, we have to choose between Plutarch and Aristotle. We cannot reconcile them except by arbitrary suppositions, every one of which breaks up the simplicity, beauty, and symmetry of Plutarch's agrarian idea, — and every one of which still leaves the perpetuity of the original lots unexplained. And I have no hesitation in preferring the authority of Aristotle (which is in perfect consonance with what we indirectly gather from other authors, his contemporaries

the reality must not be sought on the banks of the Eurotas. The "better times of the commonwealth," to which he refers,

and predecessors) as a better witness on every ground; rejecting the statement of Plutarch, and rejecting it altogether, with all its consequences.

But the authority of Aristotle is not the only argument which may be urged to refute this supposition that the distinct Spartan lots remained unaltered in number down to the time of Lysander. For if the number of distinct lots remained undiminished, the number of citizens cannot have greatly diminished. Now the conspiracy of Kinadôn falls during the life of Lysander, within the first ten years after the close of the Peloponnesian war: and in the account which Xenophon gives of that conspiracy, the paucity of the number of citizens is brought out in the clearest and most emphatic manner. And this must be before the time when the new law of Epitadeus is said to have passed, at least before that law can have had room to produce any sensible effects. If, then, the ancient nine thousand lots still remained all separate, without either consolidation or subdivision, how are we to account for the small number of citizens at the time of the conspiracy of Kinadôn?

This examination of the evidence, for the purpose of which I have been compelled to prolong the present note, shows — 1. That the hypothesis of indivisible, inalienable lots, maintained for a long period in undiminished number at Sparta, is not only sustained by the very minimum of affirmative evidence, but is contradicted by very good negative evidence. 2. That the hypothesis which represents dowries to daughters as being prohibited by law, is, indeed, affirmed by Plutarch, Ælian, and Justin, but is contradicted by the better authority of Aristotle.

The recent edition of Herakleidês Ponticus, published by Schneidewin, in 1847, since my first edition, presents an amended text, which completely bears out my interpretation. His text, derived from a fuller comparison of existing MSS., as well as from better critical judgment (see his Prolegg. c. iii. p. liv.), stands — Πωλεῖν δὲ γῆν Λακεδαιμονίοις αἰσχρὸν νενόμισται· τῆς δὲ ἀρχαίας μοίρας οὐδὲ ἔξεστιν (p. 7). It is plain that all this passage relates to sale of land, and not to testation, or succession, or division. Thus much *negatively* is certain, and Schneidewin remarks in his note (p. 53) that it contradicts Müller, Hermann, and Schömann, — adding, that the distinction drawn is, between land inherited from the original family lots, and land otherwise acquired, by donation, bequest, etc. Sale of the former was absolutely illegal: sale of the latter was discreditable, yet not absolutely illegal. Aristotle in the Politics (ii. 6, 10) takes no notice of any such distinction, between land inherited from the primitive lots, and land otherwise acquired. Nor was there, perhaps, any well-defined line of distinction, in a country of unwritten customs, like Sparta, between what was simply disgraceful and what was positively illegal. Schneidewin, in his note, however, assumes the original equality of the lots as certain in itself, and as being the cause of the prohibition: neither of which appears to me true.

may have existed in the glowing retrospect of Agis, but are not acknowledged in the sober appreciation of Aristotle. That the citizens were far more numerous in early times, the philosopher tells us, and that the community had in his day greatly declined in power, we also know: in this sense, the times of Sparta had doubtless once been better. We may even concede that during the three centuries succeeding Lykurgus, when they were continually acquiring new territory, and when Aristotle had been told that they had occasionally admitted new citizens, so that the aggregate number of citizens had once been ten thousand, — we may concede that in these previous centuries the distribution of land had been less unequal, so that the disproportion between the great size of the territory and the small number of citizens was not so marked as it had become at the period which the philosopher personally witnessed; for the causes tending to augmented inequality were constant and uninterrupted in their working. But this admission will still leave us far removed from the sketch drawn by Dr. Thirlwall, which depicts the Lykurgean Sparta as starting from a new agrarian scheme not far removed from equality of landed property, — the citizens as spontaneously disposed to uphold this equality, by giving to unprovided men the benefit of adoptions and heiress-marriages, — and the magistrate as interfering to enforce this latter purpose, even in cases where the citizens were themselves unwilling. All our evidence exhibits to us both decided inequality of possessions and inclinations on the part of rich men, the reverse of those which Dr. Thirlwall indicates; nor will the powers of interference which he

I speak of this confused compilation still under the name of Herakleidês Ponticus, by which it is commonly known: though Schneidewin, in the second chapter of his Prolegomena, has shown sufficient reason for believing that there is no authority for connecting it with the name of Herakleidês. He tries to establish the work as consisting of Excerpta from the lost treatise of Aristotle's *περὶ Πολιτειῶν*: which is well made out with regard to some parts, but not enough to justify his inference as to the whole. The article wherein Welcker vindicates the ascribing of the work to an Excerptor of Herakleidês, is unsatisfactory (Kleine Schriften, p. 451).

Beyond this irrelevant passage of Herakleidês Ponticus, no farther evidence is produced by Müller and Manso to justify their positive assertion, that the Spartan lot of land was indivisible in respect to inheritance.

ascribes to the magistrate be found sustained by the chapter of Herodotus on which he seems to rest them.[1]

[1] Herod. vi. 57, in enumerating the privileges and perquisites of the kings — *δικάζειν δὲ μούνους τοὺς βασιλῆας τόσαδε μοῦνα· πατρούχου τε παρθένου πέρι, ἐς τὸν ἱκνέεται ἔχειν, ἢν μήπερ ὁ πατὴρ αὐτὴν ἐγγυήσῃ· καὶ ὁδῶν δημοσιέων πέρι· καὶ ἢν τις θετὸν παῖδα ποιέεσθαι ἐθέλῃ, βασιλέων ἐνάντιον ποιέεσθαι.*

It seems curious that *πατροῦχος πάρθενος* should mean a damsel who has no *father* (literally, *lucus a non lucendo*): but I suppose that we must accept this upon the authority of Julius Pollux and Timæus. Proceeding on this interpretation, Valckenaer gives the meaning of the passage very justly: "Orbæ nuptias, necdum a patre desponsatæ, si plures sibi vindicarent, fieretque *ἡ πλήρος*, ut Athenis loquebantur, *ἐπίδικος*, Spartæ lis ista dirimebatur a regibus solis."

Now the judicial function here described, is something very different from the language of Dr. Thirlwall, that "the kings had the disposal of the hand of orphan heiresses in cases where the father had not signified his will." Such disposal would approach somewhat to that omnipotence which Aristophanès (Vesp. 585) makes old Philokleon claim for the Athenian dikasts (an exaggeration well calculated to serve the poet's purpose of making the dikasts appear monsters of caprice and injustice), and would be analogous to the power which English kings enjoyed three centuries ago as feudal guardians over wards. But the language of Herodotus is inconsistent with the idea that the kings *chose* a husband for the orphan heiress. She was claimed, as of right, by persons in certain degrees of relationship to her. Whether the law about *ἀγχίστεια*, affinity carrying legal rights, was the same as at Athens, we cannot tell; but the question submitted for adjudication at Sparta, to the kings, and at Athens to the dikasteries, was certainly the same, agreeably to the above note of Valckenaer, — namely, to whom, among the various claimants for the marriage, the best legal title really belonged. It is, indeed, probable enough, that the two royal descendants of Hêraklês might abuse their judicial function, as there are various instances known in which they take bribes; but they were not likely to abuse it in favor of an unprovided youth.

Next, as to adoption: Herodotus tells us that the ceremony of adoption was performed before the kings: probably enough, there was some fee paid with it. But this affords no ground for presuming that they had any hand in determining *whom* the childless father was to adopt. According to the Attic law about adoption, there were conditions to be fulfilled, consents to be obtained, the absence of disqualifying circumstances verified, etc; and some authority before which this was to be done was indispensable (see Meier und Schömann, Attisch. Prozess, b. iii. ch. ii. p. 436). At Sparta, such authority was vested by ancient custom in the king: but we are not told, nor is it probable, "that he could interpose, in opposition to the wishes of individuals, to relieve poverty," as Dr. Thirlwall supposes

To conceive correctly, then, the Lykurgean system, as far as obscurity and want of evidence will permit, it seems to me that there are two current misconceptions which it is essential to discard. One of these is, that the system included a repartition of landed property, upon principles of exact or approximative equality (distinct from that appropriation which belonged to the Dorian conquest and settlement), and provisions for perpetuating the number of distinct and equal lots. The other is, that it was first brought to bear when the Spartans were masters of all Laconia. The illusions created by the old legend, — which depicts Laconia as all one country, and all conquered at one stroke, — yet survive after the legend itself has been set aside as bad evidence: we cannot conceive Sparta as subsisting by itself without dominion over Laconia; nor Amyklæ, Pharis, and Geronthræ, as really and truly independent of Sparta. Yet, if these towns were independent in the time of Lykurgus, much more confidently may the same independence be affirmed of the portions of Laconia which lie lower than Amyklæ down the valley of the Eurotas, as well as of the eastern coast, which Herodotus expressly states to have been originally connected with Argos.

Discarding, then, these two suppositions, we have to consider the Lykurgean system as brought to bear upon Sparta and its immediate circumjacent district, apart from the rest of Laconia, and as not meddling systematically with the partition of property, whatever that may have been, which the Dorian conquerors established at their original settlement. Lykurgus does not try to make the poor rich, nor the rich poor; but he imposes upon both the same subjugating drill,[1] — the same habits of life, gentlemanlike idleness, and unlettered strength, — the same fare, clothing, labors, privations, endurance, punishments, and subordination. It is a lesson instructive at least, however unsatisfactory, to political students, — that, with all this equality of dealing, he ends in creating a community in whom not merely the love of preëminence, but even the love of money, stands powerfully and specially developed.[2]

[1] Σπάρτα δαμασίμβροτος, Simonidès, apud Plutarch. Agesilaus, c. 1

[2] Aristotel. Polit. ii. 6, 9, 19, 23. τὸ φιλότιμον — τὸ φιλοχρήματον

How far the peculiar of the primitive Sparta extended we have no means of determining; but its limits down the valley of the Eurotas were certainly narrow, inasmuch as it did not reach so far as Amyklæ. Nor can we tell what principles the Dorian conquerors may have followed in the original allotment of lands within the limits of that peculiar. Equal apportionment is not probable, because all the individuals of a conquering band are seldom regarded as possessing equal claims; but whatever the original apportionment may have been, it remained without any general or avowed disturbance until the days of Agis the Third, and Kleomenês the Third. Here, then, we have the primitive Sparta, including Dorian warriors with their Helot subjects, but no Periœki. And it is upon these Spartans separately, perhaps after the period of aggravated disorder and lawlessness noticed by Herodotus and Thucydidês, that the painful but invigorating discipline, above sketched, must have been originally brought to bear.

The gradual conquest of Laconia, with the acquisition of additional lands and new Helots, and the formation of the order of Periœki, both of which were a consequence of it, — is to be considered as posterior to the introduction of the Lykurgean system at Sparta, and as resulting partly from the increased force which that system imparted. The career of conquest went on, beginning from Têleklus, for nearly three centuries, — with some interruptions, indeed, and in the case of the Messenian war, with a desperate and even precarious struggle, — so that in the time of Thucydidês, and for some time previously, the Spartans possessed two-fifths of Peloponnesus. And this series of new acquisitions and victories disguised the really weak point of the Spartan system, by rendering it possible either to plant the poorer citizens as Periœki in a conquered township, or to supply them with lots of land, of which they could receive the produce without leaving the city, — so that their numbers and their military strength were prevented from declining. It is even affirmed by Aristotle,[1] that during these early times they augmented the numbers of their citizens by fresh admissions, which of course implies the acquisition of additional lots of

[1] Aristot. Polit. ii. 6, 12.

land. But successful war, to use an expression substantially borrowed from the same philosopher, was necessary to their salvation: the establishment of their ascendency, and of their maximum of territory, was followed, after no very long interval, by symptoms of decline.[1] It will hereafter be seen that, at the period of the conspiracy of Kinadôn (395 B. C.), the full citizens (called Homoioi, or Peers) were considerably inferior in number to the Hypomeiônes, or Spartans, who could no longer furnish their qualification, and had become disfranchised. And the loss thus sustained was very imperfectly repaired by the admitted practice, sometimes resorted to by rich men, of associating with their own children the children of poorer citizens, and paying the contribution for these latter to the public tables, so as to enable them to go through the prescribed course of education and discipline, — whereby they became (under the title or sobriquet of Mothâkes[2]) citizens, with a certain taint of inferiority, yet were sometimes appointed to honorable commands.

Laconia, the state and territory of the Lacedæmonians, was affirmed, at the time of its greatest extension, to have comprehended a hundred cities,[3] — this after the conquest of Messenia;

[1] Aristot. Polit. ii. 6, 22. Τοιγαροῦν ἐσώζοντο πολεμοῦντες, ἀπώλοντο δὲ ἄρξαντες, etc. Compare also vii. 13, 15.

[2] Plutarch, Kleomen. c. 8; Phylarch. ap. Athenæ. vi. p. 271.

The strangers called Τρόφιμοι, and the illegitimate sons of Spartans, whom Xenophon mentions with eulogy, as "having partaken in the honorable training of the city," must probably have been introduced in this same way, by private support from the rich (Xenoph. Hellen. v. 3, 9). The xenêlasy must have then become practically much relaxed, if not extinct.

[3] Strabo, viii. p. 362; Steph. Byz. Λίθεια.

Construing the word πόλεις extensively, so as to include townships small as well as considerable, this estimate is probably inferior to the truth; since, even during the depressed times of modern Greece, a fraction of the ancient Laconia (including in that term Messenia) exhibited much more than one hundred *bourgs*.

In reference merely to the territory called La Magne, between Calamata in the Messenian gulf and Capo di Magna, the lower part of the peninsula of Tænarus, see a curious letter, addressed to the Duc de Nevers, in 1618, (on occasion of a projected movement to liberate the Morea from the Turks, and to insure to him the sovereignty of it, as descendant of the Palæologi,) by a confidential agent whom he despatched thither — M. Chateaurenaud, —

so that it would include all the southern portion of Peloponnesus, from Thyrea, on the Argolic gulf, to the southern bank of the river Nedon, in its course into the Ionian sea. But Laconia, more strictly so called, was distinguished from Messenia, and was understood to designate the portion of the above-mentioned territory which lay to the east of Mount Taygetus. The conquest of Messenia by the Spartans we shall presently touch upon; but that of Laconia proper is very imperfectly narrated to us. Down to the reign of Têleklus, as has been before remarked, Amyklæ, Pharis, and Geronthræ, were still Achæan: in the reign of that prince they were first conquered, and the Achæans either expelled or subjugated. It cannot be doubted that Amyklæ had been previously a place of consequence: in point of heroic antiquity and memorials, this city, as well as Therapnæ, seems to have surpassed Sparta. And the war of the Spartans against it is represented as a struggle of some moment, — indeed, in those times, the capture of any walled city was tedious and difficult. Timomachus, an Ægeid from Thebes,[1]

who sends to him "une sorte de tableau statistique du Magne, ou sont énumerés 125 bourgs ou villages renfermans 4,913 feux, et pouvans fournir 10,000 combattans, dont 4,000 armés, et 6,000 sans armes (between Calamata and Capo di Magna)." (Mémoires de l'Académie des Inscriptions, tom. xv. 1842, p. 329. Mémoire de M. Berger Xivrey.)

This estimate is not far removed from that of Colonel Leake, towards the beginning of the present century, who considers that there were then in Mani (the same territory) one hundred and thirty towns and villages; and this too in a state of society exceedingly disturbed and insecure, — where private feuds and private towers, or pyrghi, for defence, were universal, and in parts of which, Colonel Leake says, "I see men preparing the ground for cotton, with a dagger and pistols at their girdles. This, it seems, is the ordinary armor of the cultivator when there is no particular suspicion of danger: the shepherd is almost always armed with a musket."....." The Maniotes reckon their population at thirty thousand, and their muskets at ten thousand." (Leake, Travels in Morea, vol. i. ch. vii. pp. 243, 263–266.)

Now, under the dominion of Sparta, all Laconia doubtless enjoyed complete internal security, so that the idea of the cultivator tilling his land in arms would be unheard of. Reasoning upon the basis of what has just been stated about the Maniote population and number of townships, one hundred πόλεις, for all Laconia, is a very moderate computation.

[1] Aristot. Λακων. Πολιτεία, ap. Schol. Pindar. Isthm. vii. 18.

I agree with M. Boeckh, that Pindar himself identifies this march of the

at the head of a body of his countrymen, is said to have rendered essential service to the Spartans in the conquest of the Achæans of Amyklæ; and the brave resistance of the latter was commemorated by a monument erected to Zeus Tropæus, at Sparta, which was still to be seen in the time of Pausanias.[1] The Achæans of Pharis and Geronthræ, alarmed by the fate of Amyklæ, are said to have surrendered their towns with little or no resistance: after which the inhabitants of all the three cities, either wholly or in part, went into exile beyond sea, giving place to colonists from Sparta.[2] From this time forward, according to Pausanias, Amyklæ continued as a village.[3] But as the Amyklæan hoplites constituted a valuable portion of the Spartan army, it must have been numbered among the cities of the Periœki, as one of the hundred;[4] the distinction between a dependent city and a village not being very strictly drawn. The festival of the Hyacinthia, celebrated at the great temple of the Amyklæan Apollo, was among the most solemn and venerated in the Spartan calendar.

It was in the time of Alkamenês, the son of Têleklus, that the Spartans conquered Helus, a maritime town on the left bank of the Eurotas, and reduced its inhabitants to bondage, — from whose name,[5] according to various authors, the general title *Helots*, belonging to all the serfs of Laconia, was derived. But of the conquest of the other towns of Laconia, — Gytheium, Akriæ, Therapnæ, etc., — or of the eastern land on the coast of the Argolic gulf, including Brasiæ and Epidaurus Limèra, or the island of Kythêra, all which at one time belonged to the Argeian confederacy, we have no accounts.

Scanty as our information is, it just enables us to make out a progressive increase of force and dominion on the part of the Spartans, resulting from the organization of Lykurgus. Of this

Ægeids to Amyklæ with the original Herakleid conquest of Peloponnesus (Notæ Criticæ ad Pindar. Pyth. v. 74, p. 479.)

If it be true, as Pausanias states, that the Argeians aided Helus to resist, their assistance must probably have been given by sea; perhaps from Epidaurus Limêra, or Prasiæ, when they formed part of the Argeian federation

progress, a farther manifestation is found, besides the conquest of the Achæans in the south by Têleklus and Alkamenês, in their successful opposition to the great power of Pheidôn the Argeian, related in a previous chapter. We now approach the long and arduous efforts by which they accomplished the subjugation of their brethren the Messenian Dorians.

CHAPTER VII.

FIRST AND SECOND MESSENIAN WARS.

THAT there were two long contests between the Lacedæmonians and Messenians, and that in both the former were completely victorious, is a fact sufficiently attested. And if we could trust the statements in Pausanias, — our chief and almost only authority on the subject, — we should be in a situation to recount the history of both these wars in considerable detail. But unfortunately, the incidents narrated in that writer have been gathered from sources which are, even by his own admission, undeserving of credit, — from Rhianus, the poet of Bênê in Krete, who had composed an epic poem on Aristomenês and the second Messenian war, about B. C. 220, — and from Myrôn of Priênê, a prose author whose date is not exactly known, but belonging to the Alexandrine age, and not earlier than the third century before the Christian era. From Rhianus, we have no right to expect trustworthy information, while the accuracy of Myrôn is much depreciated by Pausanias himself, — on some points even too much, as will presently be shown. But apart from the mental habits either of the prose writer or the poet, it does not seem that any good means of knowledge were open to either of them, except the poems of Tyrtæus, which we are by no means sure that they ever consulted. The account of the two wars, extracted from these two authors by Pausanias, is a string of *tableaux*, several of them, indeed, highly poetical, but destitute of historical coher-

ence or sufficiency: and O. Müller has justly observed, that "absolutely no reason is given in them for the subjection of Messenia."[1] They are accounts unworthy of being transcribed in detail into the pages of genuine history, nor can we pretend to do anything more than verify a few leading facts of the war.

The poet Tyrtæus was himself engaged on the side of the Spartans in the second war, and it is from him that we learn the few indisputable facts respecting both the first and the second. If the Messenians had never been reëstablished in Peloponnesus, we should probably never have heard any farther details respecting these early contests. That reëstablishment, together with the first foundation of the city called Messênê on Mount Ithomê, was among the capital wounds inflicted on Sparta by Epameinondas, in the year B. C. 369, — between three hundred and two hundred and fifty years after the conclusion of the second Messenian war. The descendants of the old Messenians, who had remained for so long a period without any fixed position in Greece, were incorporated in the new city, together with various Helots and miscellaneous settlers who had no claim to a similar genealogy. The gods and heroes of the Messenian race were reverentially invoked at this great ceremony, especially the great Hero Aristomenês;[2] and the site of Mount Ithomê, the ardor of the newly established citizens, the hatred and apprehension of Sparta, operating as a powerful stimulus to the creation and multiplication of what are called *traditions*, sufficed to expand the few facts known respecting the struggles of the old Messenians into a variety of details. In almost all these stories we discover a coloring unfavorable to Sparta, contrasting forcibly with the account given by Isokratês, in his Discourse called Archidamus, wherein we

[1] History of the Dorians, i. 7, 10 (note). It seems that Diodorus had given a history of the Messenian wars in considerable detail, if we may judge from a fragment of the last seventh book, containing the debate between Kleonnis and Aristomenês. Very probably it was taken from Ephorus, — though this we do not know.

For the statements of Pausanias respecting Myrôn and Rhianus, see iv. 6. Besides Myrôn and Rhianus, however, he seems to have received oral statements from contemporary Messenians and Lacedæmonians; at least on some occasions he states and contrasts the two contradictory stories (iv. 4, 4; iv 5, 1).

[2] Pausan. iv. 27, 2–3; Diodor. xv. 77.

read the view which a Spartan might take of the ancient conquests of his forefathers. But a clear proof that these Messenian stories had no real basis of tradition, is shown in the contradictory statements respecting the principal Hero Aristomenês; for some place him in the first, others in the second, of the two wars. Diodôrus and Myrôn both placed him in the first; Rhianus, in the second. Though Pausanias gives it as his opinion that the account of the latter is preferable, and that Aristomenês really belongs to the second Messenian war, it appears to me that the one statement is as much worthy of belief as the other, and that there is no sufficient evidence for deciding between them, — a conclusion which is substantially the same with that of Wesseling, who thinks that there were two persons named Aristomenês, one in the first and one in the second war.[1] This inextricable confusion respecting the greatest name in Messenian antiquity, shows how little any genuine stream of tradition can here be recognized.

Pausanias states the first Messenian war as beginning in B. C. 743 and lasting till B. C. 724, — the second, as beginning in B. C. 685 and lasting till B. C. 668. Neither of these dates rest upon

[1] See Diodor. Fragm. lib. viii. vol. iv. p. 30: in his brief summary of Messenian events (xv. 66), he represents it as a matter on which authors differed, whether Aristomenes belonged to the first or second war. Clemens Alexand. (Prot. p. 36) places him in the *first*, the same as Myrôn, by mentioning him as having killed Theopompus.

Wesseling observes (ad Diod. l. c.), "Duo fuerunt Aristomenes, uterque in Messeniorum contra Spartanos bello illustrissimus, alter posteriore, priore alter bello."

Unless this duplication of homonymous persons can be shown to be probable, by some collateral evidence, I consider it only as tantamount to a confession, that the difficulty is insoluble.

Pausanias is reserved in his manner of giving judgment, — *ὁ μέντοι Ἀριστομένης δόξῃ γε ἐμοὶ γέγονεν ἐπὶ τοῦ πολέμου τοῦ ὑστέρου* (iv. 6). Müller (Dorians, i. 7, 9) goes much too far when he affirms that the statement of Myrôn was "in the teeth of all tradition." Müller states incorrectly the citation from Plutarch, Agis, c. 21 (see his Note *h*). Plutarch there says nothing about *Tyrtæus:* he says that the Messenians affirmed that their hero Aristomenês had *killed* the Spartan king Theopompus, whereas the Lacedæmonians said, that he had only *wounded* the king. According to *both* accounts, then, it would appear that Aristomenês belonged to the *first* Messenian war, *not to the second.*

any assignable positive authority; but the time assigned to the first war seems probable, while that of the second is apparently too early. Tyrtæus authenticates both the duration of the first war, twenty years, and the eminent services rendered in it by the Spartan king Theopompus.[1] He says, moreover, speaking during the second war, "the fathers of our fathers conquered Messênê;" thus loosely indicating the relative dates of the two.

The Spartans (as we learn from Isokratês, whose words date from a time when the city of Messênê was only a recent foundation) professed to have seized the territory, partly in revenge for the impiety of the Messenians in killing their own king, the Herakleid Kresphontês, whose relative had appealed to Sparta for aid, — partly by sentence of the Delphian oracle. Such were the causes which had induced them first to invade the country, and they had conquered it after a struggle of twenty years.[2] The Lacedæmonian explanations, as given in Pausanias, seem for the most part to be counter-statements arranged after the time when the Messenian version, evidently the interesting and popular account, had become circulated.

It has already been stated that the Lacedæmonians and Messenians had a joint border temple and sacrifice in honor of Artemis Limnatis, dating from the earliest times of their establishment in Peloponnesus. The site of this temple, near the upper course of the river Nedon, in the mountainous territory north-east of Kalamata, but west of the highest ridge of Taygetus, has recently been exactly verified, — and it seems in these early days

[1] Tyrtæus, Fragm. 6, Gaisford. But Tyrtæus ought not to be understood to affirm distinctly (as Pausanias, Mr. Clinton, and Müller, all think) that Theopompus survived and put a close to the war: his language might consist with the supposition that Theopompus had been slain in the war — Θν δία (Theopompus). Μεσσήνην εἴλομεν εὐρύχορον.

For we surely might be authorized in saying — "It was through Epameinondas that the Spartans were conquered and humbled; or it was through Lord Nelson that the French fleet was destroyed in the last war," though both of them perished in the accomplishment.

Tyrtæus, therefore, does not contradict the assertion, that Theopompus was slain by Aristomenês, nor can he be cited as a witness to prove that Aristomenês did not live during the *first* Messenian war; which is the purpose for which Pausanias quotes him (iv. 6).

[2] Isokratês (Archidamus), Or. vi. pp. 121–122.

to have belonged to Sparta. That the quarrel began at one of these border sacrifices was the statement of both parties, Lacedæmonians and Messenians. According to the latter, the Lacedæmonian king Têleklus laid a snare for the Messenians, by dressing up some youthful Spartans as virgins, and giving them daggers; whereupon a contest ensued, in which the Spartans were worsted and Têleklus slain. That Têleklus was slain at the temple by the Messenians, was also the account of the Spartans, — but they affirmed that he was slain in attempting to defend some young Lacedæmonian maidens, who were sacrificing at the temple, against outrageous violence from the Messenian youth.[1] In spite of the death of this king, however, the war did not actually break out

[1] Strabo (vi. p. 257) gives a similar account of the sacrilege and murderous conduct of the Messenian youth at the temple of Artemis Limnatis. His version, substantially agreeing with that of the Lacedæmonians, seems to be borrowed from Antiochus, the contemporary of Thucydidês, and is therefore earlier than the foundation of Messênê by Epameinondas, from which event the philo-Messenian statements take their rise. Antiochus, writing during the plenitude of Lacedæmonian power, would naturally look upon the Messenians as irretrievably prostrate, and the impiety here narrated would in his mind be the natural cause why the divine judgments overtook them. Ephorus gives a similar account (ap. Strabo. vi. p. 280).

Compare Herakleidês Ponticus (ad calcem Cragii De Rep. Laced. p. 528) and Justin, iii. 4.

The possession of this temple of Artemis Limnatis, — and of the Ager Dentheliates, the district in which it was situated, — was a subject of constant dispute between the Lacedæmonians and Messenians after the foundation of the city of Messênê, even down to the time of the Roman emperor Tiberius (Tacit. Annal. iv. 43). See Stephan. Byz. v. *Δελθάνιοι*; Pausan. iii. 2, 6; iv. 4, 2; iv. 31, 3. Strabo, viii. p. 362.

From the situation of the temple of Artemis Limnatis, and the description of the Ager Dentheliates, see Professor Ross, Reisen im Peloponnes. i. pp. 5–11. He discovered two boundary-stones with inscriptions, dating from the time of the early Roman emperors, marking the confines of Lacedæmon and Messênê; both on the line of the highest ridge of Taygetus, where the waters separate east and west, and considerably to the eastward of the temple of Artemis Limnatis, so that at that time the Ager Dentheliates was considered a part of Messenia.

I now find that Colonel Leake (Peloponnesiaca, p. 181) regards these Inscriptions, discovered by Professor Ross, as not proving that the temple of Artemis Limnatis was situated near the spot where they were found. His authority weighs much with me on such a point though the arguments which he here employs do not seem to me conclusive

until some little time after, when Alkamenês and Theopompus were kings at Sparta, and Antiochus and Androklês, sons of Phintas, kings of Messenia. The immediate cause of it was a private altercation between the Messenian Polycharês (victor at the fourth Olympiad, B. C. 764) and the Spartan Euæphnus. Polycharês, having been grossly injured by Euæphnus, and his claim for redress having been rejected at Sparta, took revenge by aggressions upon other Lacedæmonians; the Messenians refused to give him up, though one of the two kings, Androklês, strongly insisted upon doing so, and maintained his opinion so earnestly against the opposite sense of the majority and of his brother Antiochus, that a tumult arose, and he was slain. The Lacedæmonians, now resolving upon war, struck the first blow without any formal declaration, by surprising the border town of Ampheia, and putting its defenders to the sword. They farther overran the Messenian territory, and attacked some other towns, but without success. Euphaês, who had now succeeded his father Antiochus as king of Messenia, summoned the forces of the country and carried on the war against them with energy and boldness. For the first four years of the war, the Lacedæmonians made no progress, and even incurred the ridicule of the old men of their nation as faint-hearted warriors: in the fifth year, however, they undertook a more vigorous invasion, under their two kings, Theopompus and Polydôrus, who were met by Euphaês with the full force of the Messenians. A desperate battle ensued, in which it does not seem that either side gained much advantage: nevertheless, the Messenians found themselves so much enfeebled by it, that they were forced to take refuge on the fortified mountain of Ithômê, abandoning the rest of the country. In their distress, they sent to solicit counsel and protection from Delphi, but their messenger brought back the appalling answer that a virgin, of the royal race of Æpytus, must be sacrificed for their salvation: in the tragic scene which ensues, Aristodêmus puts to death his own daughter, yet without satisfying the exigencies of the oracle. The war still continued, and in the thirteenth year of it another hard-fought battle took place, in which the brave Euphaês was slain, but the result was again indecisive. Aristodêmus, being elected king in his place, prosecuted the war strenuously: the fifth year of his reign is signalized by a third general battle, wherein the

Corinthians assist the Spartans, and the Arcadians and Sikyonians are on the side of Messenia; the victory is here decisive on the side of Aristodêmus, and the Lacedæmonians are driven back into their own territory.[1] It was now their turn to send envoys and ask advice from the Delphian oracle; while the remaining events of the war exhibit a series, partly of stratagems to fulfil the injunctions of the priestess, — partly of prodigies in which the divine wrath is manifested against the Messenians. The king Aristodêmus, agonized with the thought that he has slain his own daughter without saving his country, puts an end to his own life.[2] In the twentieth year of the war, the Messenians abandoned Ithômê, which the Lacedæmonians razed to the ground: the rest of the country being speedily conquered, such of the inhabitants as did not flee either to Arcadia or to Eleusis, were reduced to complete submission.

Such is the abridgment of what Pausanias[3] gives as the narrative of the first Messenian war. Most of his details bear the evident stamp of mere late romance; and it will easily be seen that the sequence of events presents no plausible explanation of that which is really indubitable, — the result. The twenty years' war, and the final abandonment of Ithômê, is attested by Tyrtæus beyond all doubt, as well as the harsh treatment of the conquered. "Like asses, worn down by heavy burdens,"[4] says the

---

[1] It is, perhaps, to this occasion that the story of the Epeunakti, in Theopompus, referred (ap. Athenæ. vi. p. 271), — Helots adopted into the sleeping-place of their masters, who had been slain in the war, and who were subsequently enfranchised.

The story of the Partheniæ, obscure and unintelligible as it is, belongs to the foundation of the colony of Taras, or Tarentum (Strabo, vi. p 279).

[2] See Plutarch, De Superstitione, p. 168.

[3] See Pausan. iv. 6–14.

An elaborate discussion is to be seen in Manso's Sparta, on the authorities whom Pausanias has followed in his History of the Messenian Wars, 18te Beilage, tom. ii. p. 264.

"It would evidently be folly (he observes, p. 270), to suppose that in the history of the Messenian wars, as Pausanias lays them before us, we possess the *true* history of these events."

[4] Tyrtæus, Fragm. 5, 6 (Schneidewin).

C. F. Hermann conceives the treatment of the Messenians after the first war, as mild, in comparison with what it became after the second (Lehrbuch

Spartan poet, "they were compelled to make over to their masters an entire half of the produce of their fields, and to come in the garb of woe to Sparta, themselves and their wives, as mourners at the decease of the kings and principal persons." The revolt of their descendants, against a yoke so oppressive, goes by the name of the second Messenian war.

Had we possessed the account of the first Messenian war as given by Myrôn and Diodorus, it would evidently have been very different from the above, because they included Aristomenês in it, and to him the leading parts would be assigned. As the narrative now stands in Pausanias, we are not introduced to that great Messenian hero, — the Achilles of the epic of Rhianus,[1] — until the second war, in which his gigantic proportions stand prominently forward. He is the great champion of his country in the three battles which are represented as taking place during this war: the first, with indecisive result, at Derææ; the second, a signal victory on the part of the Messenians, at the Boar's Grave; the third, an equally signal defeat, in consequence of the traitorous flight of Aristokratês, king of the Arcadian Orchomenus, who, ostensibly embracing the alliance of the Messenians, had received bribes from Sparta. Thrice did Aristomenês sacrifice to Zeus Ithomatês the sacrifice called Hekatomphonia,[2] reserved for those who had slain with their own hands a hundred enemies in battle. At the head of a chosen band, he carried his incursions more than once into the heart of the Lacedæmonian territory, surprised Amyklæ and Pharis, and even penetrated by night into the unfortified precinct of Sparta itself, where he suspended his shield, as a token of defiance, in the temple of Athênê Chalkiœkus. Thrice was he taken prisoner, but on two occasions marvellously escaped before he could be conveyed to Sparta: the third occasion was more fatal, and he was cast by order of the Spartans into the Keadas, a deep, rocky cavity in Mount Taygetus, into which it was their habit to precipitate criminals. But even in this emergency the divine

der Griech. Staatsalterthümer, sect. 31), a supposition which the emphatic words of Tyrtæus render inadmissible.

[1] This is the express comparison introduced by Pausanias, iv. 5. 2. Plutarch. Sept. Sapient. Convivium. p. 159.

aid[1] was not withheld from him. While the fifty Messenians who shared his punishment, were all killed by the shock, he alone was both supported by the gods so as to reach the bottom unhurt, and enabled to find an unexpected means of escape. For when, abandoning all hope, he had wrapped himself up in his cloak to die, he perceived a fox creeping about among the dead bodies: waiting until the animal approached him, he grasped its tail, defending himself from its bites as well as he could by means of his cloak; and being thus enabled to find the aperture by which the fox had entered, enlarged it sufficiently for crawling out himself. To the surprise both of friends and enemies, he again appeared, alive and vigorous, at Eira. That fortified mountain on the banks of the river Nedon, and near the Ionian sea, had been occupied by the Messenians, after the battle in which they had been betrayed by Aristokratês, the Arcadian; it was there that they had concentrated their whole force, as in the former war at Ithômê, abandoning the rest of the country. Under the conduct of Aristomenês, assisted by the prophet Theoklus, they maintained this strong position for eleven years. At length, they were compelled to abandon it; but, as in the case of Ithômê, the final determining circumstances are represented to have been, not any superiority of bravery or organization on the part of the Lacedæmonians, but treacherous betrayal and stratagem, seconding the fatal decree of the gods. Unable to maintain Eira longer, Aristomenês, with his sons, and a body of his countrymen, forced his way through the assailants, and quitted the country, — some of them retiring to Arcadia and Elis, and finally migrating to Rhegium. He himself passed the remainder of his days in Rhodes, where he dwelt along with his son-in-law, Damagêtus, the ancestor of the noble Rhodian family, called the Diagorids, celebrated for its numerous Olympic victories.

[1] Pausan. iv. 18, 4. Ἀριστομένην δὲ ἐς τε τὰ ἄλλα θεῶν τις, καὶ δὴ καὶ τότε ἐφύλασσεν.

Plutarch (De Herodot. Malignitate, p. 856) states that Herodotus had mentioned Aristomenês as having been made prisoner by the Lacedæmonians, but Plutarch must here have been deceived by his memory, for Herodotus does not mention Aristomenês.

Such are the main features of what Pausanias calls[1] the second Messenian war, or of what ought rather to be called the Aristomeneïs of the poet Rhianus. That after the foundation of Messênê, and the recall of the exiles by Epameinondas, favor and credence was found for many tales respecting the prowess of the ancient hero whom they invoked[2] in their libations, — tales well calculated to interest the fancy, to vivify the patriotism, and to inflame the anti-Spartan antipathies, of the new inhabitants, — there can be little doubt. And the Messenian maidens of that day may well have sung, in their public processional sacrifices,[3] how "Aristomenês pursued the flying Lacedæmonians down to the mid-plain of Stenyklêrus, and up to the very summit of the mountain." From such stories, *traditions* they ought not to be denominated, Rhianus may doubtless have borrowed; but if proof were wanting to show how completely he looked at his materials from the point of view of the poet, and not from that of the historian, we should find it in the remarkable fact noticed by Pausanias. Rhianus represented Leotychides as having been king of Sparta during the second Messenian war; now Leotychides, as Pausanias observes, did not reign until near a century and a half afterwards, during the Persian invasion.[4]

[1] The narrative in Pausanias, iv. 15–24.

According to an incidental notice in Herodotus, the Samians affirmed that they had aided Lacedæmon in war against Messênê, — at what period we do not know (Herodot. iii. 56).

[2] Τοὺς δὲ Μεσσηνίους οἶδα αὐτὸς ἐπὶ ταῖς σπονδαῖς Ἀριστομένην Νικομήδους καλοῦντας (Pausan. ii. 14, 5). The practice still continued in his time. Compare, also, Pausan. iv. 27, 3; iv. 32, 3–4.

[3] Pausanias heard the song himself (iv. 16, 4) — Ἐπέλεγον ᾄσμα τὸ καὶ ἐς ἡμᾶς ἔτι ᾀδόμενον: —

Ἐς τε μέσον πέδιον Στενυκλήριον ἐς τ' ὄρος ἄκρον
Εἵπετ' Ἀριστομένης τοῖς Λακεδαιμονίοις.

According to one story, the Lacedæmonians were said to have got possession of the person of Aristomenês, and killed him: they found in him a hairy heart (Steph. Byz. v. Ἀνδανία).

[4] Pausan. iv. 15, 1.

Perhaps Leotychides was king during the last revolt of the Helots, or Messenians, in 464 B. C., which is called the third Messenian war. He seems to have been then in exile, in consequence of his venality during the Thessalian expedition, — but not yet dead (Herodot. vi. 72). Of the reality of what Mr. Clinton calls the *third* Messenian war, in 490 B. C., I see no adequate proof (see Fast. Hell. vol. i. p. 257).

To the great champion of Messenia, during this war, we may oppose, on the side of Sparta, another remarkable person, less striking as a character of romance but more interesting, in many ways, to the historian, — I mean, the poet Tyrtæus, a native of Aphidnæ in Attica, an inestimable ally of the Lacedæmonians during most part of this second struggle. According to a story, — which, however, has the air partly of a boast of the later Attic orators, — the Spartans, disheartened at the first successes of the Messenians, consulted the Delphian oracle, and were directed to ask for a leader from Athens. The Athenians complied by sending Tyrtæus, whom Pausanias and Justin represent as a lame man and a schoolmaster, despatched with a view of nominally obeying the oracle, and yet rendering no real assistance.[1] This seems to be a coloring put upon the story by later writers, but the intervention of the Athenians in the matter, in any way, deserves little credit.[2] It seems more probable that the legendary connection of the Dioskuri with Aphidnæ, celebrated at or near that time by the poet Alkman, brought about, through the Delphian oracle, the presence of the Aphidnæan poet at Sparta. Respecting the lameness of Tyrtæus, we can say nothing: but that he was a schoolmaster (if we are constrained to employ an unsuitable term) is highly probable, — for in that day, minstrels, who composed and sung poems, were the only persons from whom the youth received any men-

The poem of Rhianus was entitled Μεσσηνιακά. He also composed Θεσσαλικὰ, Ἠλιακὰ, Ἀχαϊκά. See the Fragments, — they are very few, — in Düntzer's Collection, pp. 67–77.

He seems to have mentioned Nikoteleia, the mother of Aristomenês (Fr. ii. p. 73): compare Pausan. iv. 14, 5.

I may remark, that Pausanias, throughout his account of the second Messenian war, names king Anaxander as leading the Lacedæmonian troops; but he has no authority for so doing, as we see by iv. 15, 1. It is a pure calculation of his own, from the πατέρων πατέρες of Tyrtæus.

[1] Pausan. iv. 15, 3; Justin, iii. 5, 4. Compare Plato, Legg. ii. p. 630, Diodor. xv. 66; Lycurg. cont. Leokrat. p. 162. Philochorus and Kallisthenês also represented him as a native of Aphidnæ in Attica, which Strabo controverts upon slender grounds (viii. p. 362); Philochor. Fr. 56 (Didot).

[2] Plutarch, Theseus, c. 33; Pausan i. 41, 5; Welcker, Alkman. Fragm. p. 20.

tal training. Moreover, his sway over the youthful mind is particularly noted in the compliment paid to him, in after-days, by king Leonidas: "Tyrtæus was an adept in tickling the souls of youth."[1] We see enough to satisfy us that he was by birth a stranger, though he became a Spartan by the subsequent recompense of citizenship conferred upon him, — that he was sent through the Delphian oracle, — that he was an impressive and efficacious minstrel, and that he had, moreover, sagacity enough to employ his talents for present purposes and diverse needs; being able, not merely to reanimate the languishing courage of the baffled warrior, but also to soothe the discontents of the mutinous. That his strains, which long maintained undiminished popularity among the Spartans,[2] contributed much to determine the ultimate issue of this war, there is no reason to doubt; nor is his name the only one to attest the susceptibility of the Spartan mind in that day towards music and poetry. The first establishment of the Karneian festival, with its musical competition, at Sparta, falls during the period assigned by Pausanias to the second Messenian war: the Lesbian harper, Terpander, who gained the first recorded prize at this solemnity, is affirmed to have been sent for by the Spartans pursuant to a mandate from the Delphian oracle, and to have been the means of appeasing a sedition. In like manner, the Kretan Thalêtas was invited thither during a pestilence, which his art, as it is pretended, contributed to heal (about 620 B. C.); and Alkman, Xenokritus, Polymnastus, and Sakadas, all foreigners by birth, found favorable reception, and acquired popularity, by their music and poetry. With the exception of Sakadas, who is a little later, all these names fall in the same century as Tyrtæus, between 660 B. C.–610 B. C. The fashion which the Spartan music continued for a long time to maintain, is ascribed chiefly to the genius of Terpander.[3]

The training in which a Spartan passed his life consisted of exercises warlike, social, and religious, blended together. While the individual, strengthened by gymnastics, went through his

[3] See Plutarch, De Mus. 1134, 1142, 1146.

painful lessons of fatigue, endurance, and aggression, — the citizens collectively were kept in the constant habit of simultaneous and regulated movement in the warlike march, in the religious dance, and in the social procession. Music and song, being constantly employed to direct the measure and keep alive the spirit of these multitudinous movements, became associated with the most powerful feelings which the habitual self-suppression of a Spartan permitted to arise, and especially with those sympathies which are communicated at once to an assembled crowd; indeed, the musician and the minstrel were the only persons who ever addressed themselves to the feelings of a Lacedæmonian assembly. Moreover, the simple music of that early day, though destitute of artistical merit, and superseded afterwards by more complicated combinations, had, nevertheless, a pronounced ethical character; it wrought much more powerfully on the impulses and resolutions of the hearers, though it tickled the ear less gratefully, than the scientific compositions of after-days. Farther, each particular style of music had its own appropriate mental effect, — the Phrygian mode imparted a wild and maddening stimulus; the Dorian mode created a settled and deliberate resolution, exempt alike from the desponding and from the impetuous sentiments.[2] What is called the Dorian mode, seems to be in reality the old native Greek mode, as contradistinguished from the Phrygian and Lydian, — these being the three primitive modes, subdivided and combined only in later times, with which the first Grecian musicians became conversant. It probably acquired its title of Dorian from the musical celebrity of Sparta and Argos, during the seventh and sixth centuries before the Christian era; but it belonged as much to the Arcadians and Achæans as to the Spartans and Argeians. And the marked ethical effects, produced both by the Dorian and the Phrygian modes in ancient times, are facts perfectly well-attested, however difficult they may be to explain upon any general theory of music.

[1] Thucyd. v. 69; Xenoph. Rep. Laced. c. 13.

[2] See the treatise of Plutarch, De Musicâ, passim, especially c. 17, p. 1136, etc; 33, p. 1143. Plato, Republ. iii. p. 399; Aristot. Polit. viii. 6, 5–8.

The excellent treatise De Metris Pindari, prefixed by M. Boeckh to his edition of Pindar, is full of instruction upon this as well as upon all other points connected with the Grecian music (see lib. iii. c. 8, p. 238).

That the impression produced by Tyrtæus at Sparta, therefore, with his martial music, and emphatic exhortations to bravery in the field, as well as union at home, should have been very considerable, is perfectly consistent with the character both of the age and of the people; especially, as he is represented to have appeared pursuant to the injunction of the Delphian oracle. From the scanty fragments remaining to us of his elegies and anapæsts, however, we can satisfy ourselves only of two facts: first, that the war was long, obstinately contested, and dangerous to Sparta as well as to the Messenians; next, that other parties in Peloponnesus took part on both sides, especially on the side of the Messenians. So frequent and harassing were the aggressions of the latter upon the Spartan territory, that a large portion of the border land was left uncultivated: scarcity ensued, and the proprietors of the deserted farms, driven to despair, pressed for a redivision of the landed property in the state. It was in appeasing these discontents that the poem of Tyrtæus, called Eunomia, "Legal order," was found signally beneficial.[1] It seems certain that a considerable portion of the Arcadians, together with the Pisatæ and the Triphylians, took part with the Messenians; there are also some statements numbering the Eleians among their allies, but this appears not probable. The state of the case rather seems to have been, that the old quarrel between the Eleians and the Pisatæ, respecting the right to preside at the Olympic games, which had already burst forth during the preceding century, in the reign of the Argeian Pheidôn, still continued. Unwilling dependents of Elis, the Pisatæ and Triphylians took part with the subject Messenians, while the masters at Elis and Sparta made common cause, as they had before done against Pheidôn.[2] Pantaleôn, king of Pisa, revolting from Elis, acted as commander of his countrymen in coöperation with the Messenians; and he is farther noted for having, at the period of the 34th Olympiad (644 B. C.), marched a body of troops to Olympia, and thus dispossessed the Eleians, on that occasion, of the presidency: that particular festival, — as well as the 8th

[1] Aristot. Polit. v. 7, 1; Pausan. iv. 18, 2.

[2] Pausan. vi. 12, 2; Strabo viii. p. 355, where the Νέστορος ἀπογονοι mean the Pylians of Tryphylia

Olympiad, in which Pheidôn interfered, — and the 104th Olympiad, in which the Arcadians marched in, — were always marked on the Eleian register as non-Olympiads, or informal celebrations. We may reasonably connect this temporary triumph of the Pisatans with the Messenian war, inasmuch as they were no match for the Eleians single-handed, while the fraternity of Sparta with Elis is in perfect harmony with the scheme of Peloponnesian politics which we have observed as prevalent even before and during the days of Pheidôn.[1] The second

[1] Respecting the position of the Eleians and Pisatæ during the second Messenian war, there is confusion in the different statements: as they cannot all be reconciled, we are compelled to make a choice.

That the Eleians were allies of Sparta, and the Pisatans of Messenia, and that the contests of Sparta and Messenia were mixed up with those of Elis and Pisa about the agonothesia of the Olympic games, is conformable to one distinct statement of Strabo (viii. pp. 355, 358), and to the passage in Phavorinus v. Αὐγειας, and is, moreover, indirectly sustained by the view given in Pausanias respecting the relations between Elis and Pisa (vi. 22, 2), whereby it clearly appears that the agonothesia was a matter of standing dispute between the two, until the Pisatans were finally crushed by the Eleians in the time of Pyrrhus, son of Pantaleôn. Farther, this same view is really conformable to another passage in Strabo, which, as now printed, appears to contradict it, but which is recognized by Müller and others as needing correction, though the correction which they propose seems to me not the best. The passage (viii. p. 362) stands thus: Πλεονάκις δ' ἐπολέμησαν (Messenians and Lacedæmonians) διὰ τὰς ἀποστάσεις τῶν Μεσσηνίων. Τὴν μὲν οὖν πρώτην κατάκτησιν αὐτῶν φησὶ Τυρταῖος ἐν τοῖς ποιήμασι κατὰ τοὺς τῶν πατέρων πατέρας γενέσθαι· τὴν δὲ δευτέραν, καθ' ἣν ἑλόμενοι συμμάχους Ἠλείους καὶ Ἀργείους καὶ Πισατὰς ἀπέστησαν, Ἀρκάδων μὲν Ἀριστοκράτην τὸν Ὀρχομένου βασιλέα παρεχομένων στρατηγὸν, Πισατῶν δὲ Παντολεόντα τὸν Ὀμφαλίωνος· ἡνίκα φησὶν αὐτὸς στρατηγῆσαι τὸν πόλεμον τοῖς Λακεδαιμονίοις, etc. Here it is obvious that, in the enumeration of allies, the Arcadians ought to have been included; accordingly, both O. Müller and Mr. Clinton (ad annum 672 B. C.) agree in altering the passage thus: they insert the words καὶ Ἀρκαδας after the word Ἠλείους, so that *both Eleians and Pisatans* appear as allies of Messenia at once. I submit that this is improbable in itself, and inconsistent with the passage of Strabo previously noticed: the proper way of altering the passage is, in my judgment, to substitute the word Ἀρκαδας in *place* of the word Ἠλείους, which makes the two passages of Strabo consistent with each other, and hardly does greater violence to the text.

As opposed to the view here adopted, there is, undoubtedly, the passage of Pausanias (iv. 15, 4) which numbers the Eleians among the allies of Mes

Messenian war will thus stand as beginning somewhere about the 33d Olympiad, or 648 B. C., between seventy and eighty years after the close of the first, and lasting, according to Pausanias, seventeen years; according to Plutarch, more than twenty years.[1]

---

senia, and takes no notice of the Pisatæ. The affirmation of Julius Africanus (ap. Eusebium Chronic. i. p. 145, that the Pisatæ revolted from Elis in the 50th Olympiad, and celebrated the Olympic games themselves until Ol. 52. for twenty-two successive ceremonies) is in contradiction, — first, with Pausanias (vi. 22, 2), which appears to me a clear and valuable statement, from its particular reference to the *three* non-Olympiads, — secondly, with Pausanias (v. 9, 4), when the Eleians in the 50th Olympiad determine the number of Hellanodikæ. I agree with Corsini (Fasti Attici, t. iii. p. 47) in setting aside the passage of Julius Africanus: Mr. Clinton (F. H. p. 253) is displeased with Corsini for this suspicion, but he himself virtually does the same thing; for, in order to reconcile Jul. Africanus with Pausanias, he introduces a supposition quite different from what is asserted by either of them; *i. e.* a joint agonothesia by Eleians and Pisatans together. This hypothesis of Mr. Clinton appears to me gratuitous and inadmissible: Africanus himself meant to state something quite different, and I imagine him to have been misled by an erroneous authority. See Mr. Clinton, F. H. ad. ann. 660 B. C. to 580 B. C.

[1] Plutarch, De Serâ Num. Vind. p. 548; Pausan. iv. 15, 1; iv. 17, 3; iv. 23, 2.

The date of the second Messenian war, and the interval between the second and the first, are points respecting which also there is irreconcilable discrepancy of statement; we can only choose the most probable: see the passages collected and canvassed in O. Müller (Dorians, i. 7, 11, and in Mr. Clinton, Fast. Hellen. vol. i. Appendix 2, p. 257).

According to Pausanias, the second war lasted from B. C. 685–668, and there was an interval between the first and the second war of thirty-nine years. Justin (iii. 5) reckons an interval of eighty years; Eusebius, an interval of ninety years. The main evidence is the passage of Tyrtæus, wherein that poet, speaking during the second war, says, "The fathers of our fathers conquered Messênê."

Mr. Clinton adheres very nearly to the view of Pausanias; he supposes that the real date is only six years lower (679–662). But I agree with Clavier (Histoire des Premiers Temps de la Grèce, t. ii. p. 233) and O. Müller (l. c.) in thinking that an interval of thirty-nine years is too short to suit the phrase of *fathers' fathers*. Speaking in the present year (1846), it would not be held proper to say, "The fathers of our fathers carried on the war between 1793 and the peace of Amiens:" we should rather say, "The fathers of our fathers carried on the American war and the Seven Years' war." An age is *marked* by its mature and even elderly members, — by those between thirty-five and fifty-five years of age

Many of the Messenians who abandoned their country after this second conquest are said to have found shelter and sympathy among the Arcadians, who admitted them to a new home and gave them their daughters in marriage; and who, moreover, punished severely the treason of Aristokratês, king of Orchomenus, in abandoning the Messenians at the battle of the Trench. That perfidious leader was put to death, and his race dethroned, while the crime as well as the punishment was farther commemorated by an inscription, which was to be seen near the altar of Zeus Lykæus, in Arcadia. The inscription doubtless existed in the days of Kallisthenês, in the generation after the restoration of Messênê. But whether it had any existence prior to that event, or what degree of truth there may be in the story of Aristokratês, we are unable to determine:[1] the son of Aristokratês, named Aristodêmus, is alleged in another authority to have reigned afterwards at Orchomenus.[2] That which stands strongly marked is, the sympathy of Arcadians and Messenians against Sparta, — a sentiment which was in its full vigor at the time of the restoration of Messênê.

The second Messenian war was thus terminated by the complete subjugation of the Messenians. Such of them as remained in the country were reduced to a servitude probably not less hard than that which Tyrtæus described them as having endured between the first war and the second. In after-times, the whole

---

Agreeing as I do here with O. Müller, against Mr. Clinton, I also agree with him in thinking that the best mark which we possess of the date of the second Messenian war is the statement respecting Pantaleôn: the 34th Olympiad, which Pantaleôn celebrated, probably fell within the time of the war; which would thus be brought down much later than the time assigned by Pausanias, yet not so far down as that named by Eusebius and Justin: the exact year of its commencement, however, we have no means of fixing.

Krebs, in his discussions on the Fragments of the lost Books of Diodorus, thinks that that historian placed the beginning of the second Messenian war in the 35th Olympiad (B. C. 640) (Krebs, Lectiones Diodoreæ, pp. 254–260).

[1] Diodor. xv 66; Polyb. iv. 33, who quotes Kallisthenês; Paus. viii. 5, 8. Neither the Inscription, as cited by Polybius, nor the allusion in Plutarch (De Serâ Numin. Vindictâ, p. 548), appear to fit the narrative of Pausanias, for both of them imply secret and long-concealed treason, tardily brought to light by the interposition of the gods; whereas, Pausanias describes the treason of Aristokratês, at the battle of the Trench, as palpable and flagrant.

[2] Herakleid. Pontic. ap. Diog. Laërt. i. 94.

territory which figures on the map as Messenia, — south of the river Nedon, and westward of the summit of Taygetus, — appears as subject to Sparta, and as forming the western portion of Laconia; distributed, in what proportion we know not, between Periœkic towns and Helot villages. By what steps, or after what degree of farther resistance, the Spartans conquered this country, we have no information; but we are told that they made over Asinê to the expelled Dryopes from the Argolic peninsula and Mothônê to the fugitives from Nauplia.[1] Nor do we hear of any serious revolt from Sparta in this territory until one hundred and fifty years afterwards,[2] subsequent to the Persian invasion, — a revolt which Sparta, after serious efforts, succeeded in crushing. So that the territory remained in her power until her defeat at Leuktra, which led to the foundation of Messênê by Epameinondas. The fertility of the plains, — especially of the central portion near the river Pamisus, so much extolled by observers, modern as well as ancient, — rendered it an acquisition highly valuable. At some time or other, it must of course have been formally partitioned among the Spartans, but it is probable that different and successive allotments were made, according as the various portions of territory, both to the east and to the west of Taygetus, were conquered. Of all this we have no information.[3]

Imperfectly as these two Messenian wars are known to us, we may see enough to warrant us in making two remarks. Both were tedious, protracted, and painful, showing how slowly the results of war were then gathered, and adding one additional illustration to prove how much the rapid and instantaneous conquest of Laconia and Messenia by the Dorians, which the Herakleid legend sets forth, is contradicted by historical analogy. Both were characterized by a similar defensive proceeding on

[1] Pausan. iv. 24, 2; iv. 34, 6; iv. 35, 2.

[2] Thucyd. i. 101.

[3] Pausanias says, *τὴν μὲν ἄλλην Μεσσηνίαν, πλὴν τῆς Ἀσιναίων, αὐτοὶ διελάγχανον*, etc. (iv. 24, 2.)

In an apophthegm ascribed to king Polydorus, leader of the Spartans during the first Messenian war, he is asked, whether he is really taking arms against his brethren, to which he replies, "No; I am only marching to the unallotted portion of the territory." (Plutarch, Apophthegm Lakonic p 231.) — *ἐπὶ τὴν ἀκλήρωτον χώραν.*

the part of the Messenians, — the occupation of a mountain difficult of access, and the fortification of it for the special purpose and resistance, — Ithômê (which is said to have had already a small town upon it) in the first war, Eira in the second. It is reasonable to infer from hence, that neither their principal town Stenyklêrus, nor any other town in their country, was strongly fortified, so as to be calculated to stand a siege; that there were no walled towns among them analogous to Mykenæ and Tiryns on the eastern portion of Peloponnesus; and that, perhaps, what were called towns were, like Sparta itself, clusters of unfortified villages. The subsequent state of Helotism into which they were reduced is in consistency with this dispersed village residence during their period of freedom.

The relations of Pisa and Elis form a suitable counterpart and sequel to those of Messenia and Sparta. Unwilling subjects themselves, the Pisatans had lent their aid to the Messenians, — and their king, Pantaleôn, one of the leaders of this combined force, had gained so great a temporary success, as to dispossess the Eleians of the agonothesia or administration of the games for one Olympic ceremony, in the 34th Olympiad. Though again reduced to their condition of subjects, they manifested dispositions to renew their revolt at the 48th Olympiad, under Damophôn, the son of Pantaleôn, and the Eleians marched into their country to put them down, but were persuaded to retire by protestations of submission. At length, shortly afterwards, under Pyrrhus, the brother of Damophôn, a serious revolt broke out. The inhabitants of Dyspontium, and the other villages in the Pisatid, assisted by those of Makistus, Skillus, and the other towns in Triphylia, took up arms to throw off the yoke of Elis; but their strength was inadequate to the undertaking. They were completely conquered; Dyspontium was dismantled, and the inhabitants of it obliged to flee the country, from whence most of them emigrated to the colonies of Epidamnus and Apollonia, in Epirus. The inhabitants of Makistus and Skillus were also chased from their abodes, while the territory became more thoroughly subject to Elis than it had been before. These incidents seem to have occurred about the 50th Olympiad, or B. C. 580; and the dominion of Elis over her Periœkic territory was thus as well assured as that

of Sparta.[1] The separate denominations both of Pisa and Triphylia became more and more merged in the sovereign name of Elis: the town of Lepreum alone, in Triphylia, seems to have maintained a separate name and a sort of half-autonomy down to the time of the Peloponnesian war, not without perpetual struggles against the Eleians.[2] But towards the period of the Peloponnesian war, the political interests of Lacedæmon had become considerably changed, and it was to her advantage to maintain the independence of the subordinate states against the superior: accordingly, we find her at that time upholding the autonomy of Lepreum. From what cause the devastation of the Triphylian towns by Elis, which Herodotus mentions as having happened in his time, arose, we do not know; the fact seems to indicate a continual yearning for their original independence, which was still commemorated, down to a much later period, by the ancient Amphiktyony, at Samikum, in Triphylia, in honor of Poseidôn, — a common religious festival frequented by all the Triphylian towns and celebrated by the inhabitants of Makistus, who sent round proclamation of a formal truce for the holy period.[3] The Lacedæmonians, after the close of the Peloponnesian war, had left them undisputed heads of Greece, formally upheld the independence of the Triphylian towns against Elis, and seem to have countenanced their endeavors to attach themselves to the Arcadian aggregate, which, however, was never fully accomplished. Their dependence on Elis became loose and uncertain, but was never wholly shaken off.[4]

[1] Pausan. vi. 22, 2; v. 6, 3; v. 10, 2; Strabo, viii. pp. 355–357.

The temple in honor of Zeus at Olympia, was first erected by the Eleians, out of the spoils of this expedition (Pausan. v. 10, 2).

[2] Thucyd. v. 31. Even Lepreum is characterized as Eleian, however (Aristoph. Aves, 149): compare also Steph. Byz. v. *Τριουλία, ἡ Ἦλις.*

Even in the 6th Olympiad, an inhabitant of Dyspontium is proclaimed as victor at the stadium, under the denomination of "*an Eleian from Dyspontium;*" proclaimed by the Eleians of course, — the like in the 27th Olympiad: see Stephan. Byz. v. *Δυσπόντιον*, which shows that the inhabitants of the Pisatid cannot have rendered themselves independent of Elis in the 26th Olympiad, as Strabo alleges (viii. p. 355).

[3] Herodot. iv. 149; Strabo, viii. p. 343.

[4] Diodor. xiv. 17; xv. 77; Xenoph. Hellen. iii. 2, 23, 26.

It was about this period, probably, that the idea of the local eponymus Triphylus, son of Arkas, was first introduced (Polyb. iv. 77).

CHAPTER VIII.

CONQUESTS OF SPARTA TOWARDS ARCADIA AND ARGOLIS.

I HAVE described in the last two chapters, as far as our imperfect evidence permits, how Sparta came into possession both of the southern portion of Laconia along the coast of the Eurotas down to its mouth, and of the Messenian territory westward. Her progress towards Arcadia and Argolis is now to be sketched, so as to conduct her to that position which she occupied during the reign of Peisistratus at Athens, or about 560–540 B. C., — a time when she had reached the maximum of her territorial possessions, and when she was confessedly the commanding state in Hellas.

The central region of Peloponnesus, called Arcadia, had never received any emigrants from without. Its indigenous inhabitants, — a strong and hardy race of mountaineers, the most numerous Hellenic tribe in the peninsula, and the constant hive for mercenary troops,[1] — were among the rudest and poorest of Greeks, retaining for the longest period their original subdivision into a number of petty hill-villages, each independent of the other; while the union of all who bore the Arcadian name, — though they had some common sacrifices, such as the festival of the Lykæan Zeus, of Despoina, daughter of Poseidôn and Dêmêtêr, and of Artemis Hymnia,[2] — was more loose and ineffective than that of Greeks generally, either in or out of Peloponnesus. The Arcadian villagers were usually denominated by the names

[1] Hermippus ap. Athenæ i. p. 27. *Ἀνδράποδ' ἐκ Φρυγίας, ἀπὸ δ' Ἀρκαδίας ἐπικούρους.* Also, Xenoph. Hellen. vii. 1, 23. *πλεῖστον δὲ φῦλον τῶν Ἑλληνικῶν τὸ Ἀρκαδικὸν εἶη*, etc.

[2] Pausan. viii. 6, 7; viii. 37, 6; viii. 38, 2. Xenias, one of the generals of Greek mercenaries in the service of Cyrus the younger, a native of the Parrhasian district in Arcadia, celebrates with great solemnity, during the march upward, the festival and games of the Lykæa (Xenoph. Anabas. i. 2 10; compare Pindar, Olymp. ix. 142).

Many of the forests in Arcadia contained not only wild boars, but bears, in the days of Pausanias (viii. 23, 4).

of regions, coincident with certain ethnical subdivisions, — the Azānes, the Parrhasii, the Mænalii (adjoining Mount Mænalus), the Eutrêsii, the Ægytæ, the Skiritæ, etc.[1] Some considerable towns, however, there were, — aggregations of villages or demes which had been once autonomous. Of these, the principal were Tegea and Mantineia, bordering on Laconia and Argolis, — Orchomenus, Pheneus, and Stymphalus, towards the north-east, bordering on Achaia and Phlius, — Kleitôr and Heræa, westward, where the country is divided from Elis and Triphylia by the woody mountains of Pholoê and Erymanthus, — and Phigaleia, on the south-western border near to Messenia. The most powerful of all were Tegea and Mantineia,[2] — conterminous towns, nearly equal in force, dividing between them the cold and high plain of Tripolitza, and separated by one of those capricious torrents which only escapes through katabothra. To regulate the efflux of this water was a difficult task, requiring friendly coöperation of both the towns: and when their frequent jealousies brought on a quarrel, the more aggressive of the two inundated the territory of its neighbor as one means of annoyance. The power of Tegea, which had grown up out of nine constituent townships, originally separate,[3] appears to have been more ancient than that of its rival; as we may judge from its splendid heroic pretensions connected with the name of Echemus, and from the post conceded to its hoplites in joint Peloponnesian

[1] Pausan. viii. 26, 5; Strabo, viii. p. 388.

Some geographers distributed the Arcadians into three subdivisions, Azanes, Parrhasii, and Trapezuntii. Azan passed for the son of Arcas, and his lot in the division of the paternal inheritance was said to have contained seventeen towns (*ὰς ἔλαχεν Ἀζῆν*). Stephan. Byz. v. *Ἀζανία — Παρράσια*. Kleitôr seems the chief place in Azania, as far as we can infer from genealogy (Pausan. viii. 4, 2, 3). Pæus, or Pãos, from whence the Azanian suitor of the daughter of Kleisthenês presented himself, was between Kleitôr and Psôphis (Herod. vi. 127; Paus. viii. 23, 6). A Delphian oracle, however, reckons the inhabitants of Phigaleia, in the south-western corner of Arcadia, among the Azanes (Paus. viii. 42, 3).

The burial-place of Arcas was supposed to be on Mount Mænalus (Paus. viii. 9, 2).

[2] Thucyd. v. 65. Compare the description of the ground in Professor Ross (Reisen im Peloponnes. iv. 7).

[3] Strabo, viii. p. 337.

armaments, which was second in distinction only to that of the Lacedæmonians.[1] If it be correct, as Strabo asserts,[2] that the incorporation of the town of Mantineia, out of its five separate demes, was brought about by the Argeians, we may conjecture that the latter adopted this proceeding as a means of providing some check upon their powerful neighbors of Tegea. The plain common to Tegea and Mantineia was bounded to the west by the wintry heights of Mænalus,[3] beyond which, as far as the boundaries of Laconia, Messenia, and Triphylia, there was nothing in Arcadia but small and unimportant townships, or villages, — without any considerable town, before the important step taken by Epameinondas in founding Megalopolis, a short time after the battle of Leuktra. The mountaineers of these regions, who joined Epameinondas before the battle of Mantineia, at a time when Mantineia and most of the towns of Arcadia were opposed to him, were so inferior to the other Greeks in equipment, that they still carried as their chief weapon, in place of the spear, nothing better than the ancient club.[4]

[1] Herodot. ix. 27.

[2] Strabo, l. c. Mantineia is reckoned among the oldest cities of Arcadia (Polyb. ii. 54). Both Mantineia and Orchomenus had originally occupied very lofty hill-sites, and had been rebuilt on a larger scale, lower down, nearer to the plain (Pausan. viii. 8, 3; 12, 4; 13, 2).

In regard to the relations, during the early historical period, between Sparta, Argos, and Arcadia, there is a new fragment of Diodorus (among those recently published by Didot out of the Excerpta in the Escurial library, agment. Historic. Græcor. vol. ii. p. viii.). The Argeians had espoused the cause of the Arcadians against Sparta; and at the expense of considerable loss and suffering, had regained such portions of Arcadia as she had conquered. The king of Argos restored this recovered territory to the Arcadians: but the Argeians generally were angry that he did not retain it and distribute it among them as a reward for their losses in the contest. They rose in insurrection against the king, who was forced to flee, and take refuge at Tegea.

We have nothing to illustrate this fragment, nor do we know to what king, date, or events, it relates.

[3] *Μαινάλιη δυσχείμερος* (Delphian Oracle, ap. Paus. viii. 9, 2).

[4] Xenophon, in describing the ardor with which Epameinondas inspired his soldiers before this final battle, says (vii. 5, 20), *προθύμως μὲν ἐλευκοῦντι οἱ ἱππεῖς τὰ κράνη, κελεύοντος ἐκείνου· ἐπεγράφοντο δὲ καὶ τῶν Ἀρκάδων ὁπλῖται, ῥόπαλα ἔχοντες, ὡς Θηβαῖοι ὄντες· πάντες δὲ ἐκονῶντο καὶ λόγχας καὶ μαχαίρας, καὶ ἐλαμπρύνοντο τὰς ἀσπίδας.*

Both Tegea and Mantineia held several of these smaller Arcadian townships near them in a sort of dependence, and were anxious to extend this empire over others: during the Peloponnesian war, we find the Mantineians establishing and garrisoning a fortress at Kypsela among the Parrhasii, near the site in which Megalopolis was afterwards built.[1] But at this period, Sparta, as the political chief of Hellas, — having a strong interest in keeping all the Grecian towns, small and great, as much isolated from each other as possible, and in checking all schemes for the formation of local confederacies, — stood forward as the protectress of the autonomy of these smaller Arcadians, and drove back the Mantineians within their own limits.[2] At a somewhat later period, during the acmé of her power, a few years before the battle of Leuktra, she even proceeded to the extreme length of breaking up the unity of Mantineia itself, causing the walls to be razed, and the inhabitants to be again parcelled into their five original demes, — a violent arrangement, which the turn of political events very soon reversed.[3] It was not until after the battle of Leuktra and the depression of Sparta that any measures were taken for the formation of an Arcadian political confederacy;[4] and even then, the jealousies of the separate cites rendered it incomplete and short-lived. The great permanent change, the establishment of Megalopolis, was accomplished

It is hardly conceivable that these Arcadian clubmen should have possessed a shield and a full panoply. The language of Xenophon in calling them hoplites, and the term *ἐπεγράφοντο*, properly referring to the inscription on the shield, appear to be conceived in a spirit of contemptuous sneering, proceeding from Xenophon's miso-Theban tendencies: "The Arcadian hoplites, with their clubs, put themselves forward to be as good as the Thebans." That these tendencies of Xenophon show themselves in expressions very unbecoming to the dignity of history (though curious as evidences of the time), may be seen by vii. 5, 12, where he says of the Thebans, — *ἐντᾶυθα δὴ οἱ πῦρ πνέοντες, οἱ νενικηκότες τοὺς Λακεδαιμονίους, οἱ τῷ παντὶ πλέονες*, etc.

[4] Xenooh. Hellen. vi. 5, 10–11; vii. 1, 23–25.

by the ascendency of Epameinondas. Forty petty Arcadian townships, among those situated to the west of Mount Mænalus, were aggregated into the new city: the jealousies of Tegea, Mantineia, and Kleitôr, were for a while suspended; and œkists came from all of them, as well as from the districts of the Mænalii and Parrhasii, in order to impart to the new establishment a genuine Pan-Arcadian character.[1] It was thus there arose for the first time a powerful city on the borders of Laconia and Messenia, rescuing the Arcadian townships from their dependence on Sparta, and imparting to them political interests of their own, which rendered them, both a check upon their former chief and a support to the reëstablished Messenians.

It has been necessary thus to bring the attention of the reader for one moment to events long posterior in the order of time (Megalopolis was founded in 370 B. C.), in order that he may understand, by contrast, the general course of those incidents of the earlier time, where direct accounts are wanting. The northern boundary of the Spartan territory was formed by some of the many small Arcadian townships or districts, several of which were successively conquered by the Spartans and incorporated with their dominion, though at what precise time we are unable to say. We are told that Charilaus, the reputed nephew and ward of Lykurgus, took Ægys, and that he also invaded the territory of Tegea, but with singular ill-success, for he was defeated and taken prisoner:[2] we also hear that the Spartans took Phigaleia by surprise in the 30th Olympiad, but were driven out again by the neighboring Arcadian Oresthasians.[3] During the second Messenian war, the Arcadians are represented as cordially seconding the Messenians: and it may seem perhaps singular that, while neither Mantineia nor Tegea are mentioned

[1] Pausan. viii. 27, 5. No œkist is mentioned from Orchomenus, though three of the petty townships *contributing* (*συντελοῦντα*) to Orchomenus were embodied in the new city. The feud between the neighboring cities of Orchomenus and Mantineia was bitter (Xen. Hellen. vi. 5, 11–22). Orchomenus and Hêræa both opposed the political confederation of Arcadia.

The oration of Demosthenês, *ὑπὲρ Μεγαλοπολιτῶν*, strongly attests the importance of this city, especially c. 10, — *ἐὰν μὲν ἀναιρεθῶσι καὶ διοικισθῶσιν, ἰσχυροῖς Λακεδαιμονίοις εὐθὺς ἐστιν εἶναι*, etc.

[2] Pausan. iii. 2, 6; iii. 7, 3; viii. 48, 3.

[3] Pausan. viii. 39, 2

in this war, the more distant town of Orchomenus, with its king Aristokratês, takes the lead. But the facts of the contest come before us with so poetical a coloring, that we cannot venture to draw any positive inference as to the times to which they are referred.

Œnus[1] and Karystus seem to have belonged to the Spartans in the days of Alkman: moreover, the district called Skirîtis, bordering on the territory of Tegea, — as well as Belemina and Maleatis to the westward, and Karyæ to the eastward and south-eastward, of Skirîtis, — forming altogether the entire northern frontier of Sparta, and all occupied by Arcadian inhabitants, — had been conquered and made part of the Spartan territory[2] before 600 B. C. And Herodotus tells us, that at this period the Spartan kings Leon and Hegesiklês contemplated nothing less than the conquest of entire Arcadia, and sent to ask from the Delphian oracle a blessing on their enterprise.[3] The priestess dismissed their wishes as extravagant, in reference to the whole of Arcadia, but encouraged them, though with the usual equivocations of language, to try their fortune against Tegea. Flushed with their course of previous success, not less than by the favorable construction which they put upon the words of the oracle, the Lacedæmonians marched against Tegea with such entire confidence of success, as to carry with them chains for the purpose

[1] Alkman, Fr. 15, Welcker; Strabo, x. p. 446.

[2] That the Skiritæ were Arcadians is well known (Thuc. v. 47; Steph. Byz. v. Σκίρος); the possession of Belemina was disputed with Sparta, in the days of her comparative humiliation, by the Arcadians: see Plutarch, Kleomenês, 4; Pausan. viii. 35, 4.

Respecting Karyæ (the border town of Sparta, where the *διαβατήρια* were sacrificed, Thuc. v. 55), see *Photius* Καρυάτεια — ἑορτὴ Ἀρτέμιδος· τὰς δὲ Καρύας Ἀρκάδων οὔσας ἀπετέμοντο Λακεδαιμόνιοι.

The readiness with which Karyæ and the Maleates revolted against Sparta after the battle of Leuktra, even before the invasion of Laconia by the Thebans, exhibits them apparently as conquered foreign dependencies of Sparta without any kindred of race (Xenoph. Hellen. vi. 5, 24–26; vii. 1, 28) Leuktron, in the Maleatis, seems to have formed a part of the territory of Megalopolis in the days of Kleomenês the Third (Plutarch, Kleomenês, 6); in the Peloponnesian war it was the frontier town of Sparta towards Mount Lykæum (Thuc. v. 53).

[3] Herod. i. 66. *καταφρονήσαντες Ἀρκάδων κρέσσονες εἶναι, ἐχρηστηριάζοντο ἦν Δέλφοισι ἐπὶ πάσῃ τῇ Ἀρκάδων χώρῃ.*

of binding their expected prisoners. But the result was disappointment and defeat. They were repulsed with loss, and the prisoners whom they left behind, bound in the very chains which their own army had brought, were constrained to servile labor on the plain of Tegea, — the words of the oracle being thus literally fulfilled, though in a sense different from that in which the Lacedemonians had first understood them.[1]

For one whole generation, we are told, they were constantly unsuccessful in their campaigns against the Tegeans, and this strenuous resistance probably prevented them from extending their conquests farther among the petty states of Arcadia.

At length, in the reign of Anaxandridês and Aristô, the successors of Leon and Hegesiklês (about 560 B. C.), the Delphian oracle, in reply to a question from the Spartans, — which of the gods they ought to propitiate in order to become victorious, — enjoined them to find and carry to Sparta the bones of Orestês, son of Agamemnôn. After a vain search, since they did not know where the body of Orestês was to be found, they applied to the oracle for more specific directions, and were told that the son of Agamemnôn was buried at Tegea itself, in a place "where two blasts were blowing under powerful constraint, — where there was stroke and counter-stroke, and destruction upon destruction." These mysterious words were elucidated by a lucky accident. During a truce with Tegea, Lichas, one of the chiefs of the three hundred Spartan chosen youth, who acted as the movable police of the country under the ephors, visited the place, and entered the forge of a blacksmith, — who mentioned to him, in the course of conversation, that, in sinking a well in his outer court, he had recently discovered a coffin containing a body seven cubits long; astounded at the sight, he had left it there undisturbed. It struck Lichas that the gigantic relic of aforetime could be nothing else but the corpse of Orestês, and he felt assured of this, when he reflected how accurately the indications of the oracle were verified; for there were the "two blasts blowing by constraint," in the two bellows of the blacksmith: there

[1] Herod. i. 67; Pausan. iii. 3, 5; viii. 45, 2.

Herodotus saw the identical chains suspended in the temple of Athênê Alea at Tegea.

was the "stroke and counter-stroke," in his hammer and anvil, as well as the "destruction upon destruction," in the murderous weapons which he was forging. Lichas said nothing, but returned to Sparta with his discovery, which he communicated to the authorities, who, by a concerted scheme, banished him under a pretended criminal accusation. He then returned again to Tegea, under the guise of an exile, prevailed upon the blacksmith to let to him the premises, and when he found himself in possession, dug up and carried off to Sparta the bones of the venerated hero.[1]

From and after this fortunate acquisition, the character of the contest was changed; the Spartans found themselves constantly victorious over the Tegeans. But it does not seem that these victories led to any positive result, though they might perhaps serve to enforce the practical conviction of Spartan superiority; for the territory of Tegea remained unimpaired, and its autonomy noway restrained. During the Persian invasion, Tegea appears as the willing ally of Lacedæmon, and as the second military power in the Peloponnesus;[2] and we may fairly presume that it was chiefly the strenuous resistance of the Tegeans which prevented the Lacedæmonians from extending their empire over the larger portion of the Arcadian communities. These latter always maintained their independence, though acknowledging Sparta as the presiding power in Peloponnesus, and obeying her orders implicitly as to the disposal of their military force. And the influence which Sparta thus possessed over all Arcadia was one main item in her power, never seriously shaken until the battle of Leuktra; which took away her previous means of insuring success and plunder to her minor followers.[3]

Having thus related the extension of the power of Sparta on her northern or Arcadian frontier, it remains to mention her acquisitions on the eastern and north-eastern side, towards Argos. Originally, as has been before stated, not merely the province of Kynuria and the Thyreātis, but also the whole coast down to the

[3] Xenoph. Hellen. v. 2, 19. Ὥσπερ Ἀρκάδες, ὅταν μεθ' ὑμῶν ἴωσι, τά τε αὐτῶν σώζουσι καὶ τὰ ἀλλότρια ἁρπάζουσι, etc.

This was said to the Lacedæmonians about ten years before the battle of Leuktra.

promontory of Malea, had either been part of the territory of Argos or belonged to the Argeian confederacy. We learn from Herodotus,[1] that before the time when the embassy from Crœsus, king of Lydia, came to solicit aid in Greece (about 547 B. C.), the whole of this territory had fallen into the power of Sparta; but how long before, or at what precise epoch, we have no information. A considerable victory is said to have been gained by the Argeians over the Spartans in the 27th Olympiad or 668 B. C., at Hysiæ, on the road between Argos and Tegea.[2] At that time it does not seem probable that Kynuria could have been in the possession of the Spartans, — so that we must refer the acquisition to some period in the following century; though Pausanias places it much earlier, during the reign of Theopompus,[3] — and Eusebius connects it with the first establishment of the festival called Gymnopædia, at Sparta, in 678 B. C.

About the year 547 B. C., the Argeians made an effort to reconquer Thyrea from Sparta, which led to a combat long memorable in the annals of Grecian heroism. It was agreed between the two powers that the possession of this territory should be determined by a combat of three hundred select champions on each side; the armies of both retiring, in order to leave the field clear. So undaunted and so equal was the valor of these two chosen companies, that the battle terminated by leaving only three of them alive, — Alkênôr and Chromius among the Argeians, Othryadês among the Spartans. The two Argeians warriors hastened home to report their victory, but Othryadês remained on the field, carried off the arms of the enemy's dead into the Spartan camp, and kept his position until he was joined by his countrymen the next morning. Both Argos and Sparta claimed the victory for their respective champions, and the dispute after all was decided by a general conflict, in which the Spartans were the conquerors, though not without much slaughter on both sides. The brave Othryadês, ashamed to return home as the single survivor of the three hundred, fell upon his own sword on the field of battle.[4]

This defeat decided the possession of Thyrea, which did not

again pass, until a very late period of Grecian history, under the power of Argos. The preliminary duel of three hundred, with its uncertain issue, though well established as to the general fact, was represented by the Argeians in a manner totally different from the above story, which seems to have been current among the Lacedæmonians.[1] But the most remarkable circumstance is, that more than a century afterwards, — when the two powers were negotiating for a renewal of the then expiring truce, the Argeians, still hankering after this their ancient territory, desired the Lacedæmonians to submit the question to arbitration; which being refused, they next stipulated for the privilege of trying the point in dispute by a duel similar to the former, at any time except during the prevalence of war or of epidemic disease. The historian tells us that the Lacedæmonians acquiesced in this proposition, though they thought it absurd,[2] in consequence of their anxiety to keep their relations with Argos at that time smooth and pacific. But there is no reason to imagine that the real duel, in which Othryadês contended, was considered as absurd at the time when it took place, or during the age immediately succeeding. It fell in with a sort of chival-

[1] The Argeians showed at Argos a statue of Perilaus, son of Alkênôr, killing Othryadês (Pausan. ii. 20, 6; ii. 38, 5: compare x. 9, 6, and the references in Larcher ad Herodot. i. 82). The narrative of Chrysermus, *ἐν τρίτῳ Πελοποννησιακῶν* (as given in Plutarch, Parallel. Hellenic. p. 306), is different in many respects.

Pausanias found the Thyreatis in possession of the Argeians (ii. 38, 5). They told him that they had recovered it by adjudication; when or by whom we do not know: it seems to have passed back to Argos before the close of the reign of Kleomenês the Third, at Sparta (220 B. C.), Polyb. iv. 36.

Strabo even reckons Prasiæ as Argeian, to the south of Kynuria (viii. p. 368), though in his other passage (p. 374) seemingly cited from Ephorus, it is treated as Lacedæmonian. Compare Manso, Sparta, vol. ii. Beilage i. p. 48.

Eusebius, placing this duel at a much earlier period (Ol. 27, 3, 678 B. C.), ascribes the first foundation of the Gymnopædia at Sparta to the desire of commemorating the event. Pausanias (iii. 7, 3) places it still farther back in the reign of Theopompus.

[2] Thucyd. v. 41. *Τοῖς δὲ Λακεδαιμονίοις τὸ μὲν πρῶτον ἐδόκει μωρία εἶναι τοῦτο, ἔπειτα (ἐπεθύμουν γὰρ πάντως τὸ Ἄργος φίλιον ἔχειν) ξυνεχώρησαν ᾧ οἷς δέοι εἶναι, καὶ ξυνεγράψαντο.*

rous pugnacity which is noticed among the attributes of the early Greeks,[1] and also with various legendary exploits, such as the single combat of Echemus and Hyllus, of Melanthus and Xanthus, of Menelaus and Paris, etc. Moreover, the heroism of Othryadês and his countrymen was a popular theme for poets, not only at the Spartan gymnopædia,[2] but also elsewhere, and appears to have been frequently celebrated. The absurdity attached to this proposition, then, during the Peloponnesian war, — in the minds even of the Spartans, the most old-fashioned and unchanging people in Greece, — is to be ascribed to a change in the Grecian political mind, at and after the Persian war. The habit of political calculation had made such decided progress among them, that the leading states especially had become familiarized with something like a statesmanlike view of their resources, their dangers, and their obligations. How lamentably deficient this sort of sagacity was during the Persian invasion, will appear when we come to describe that imminent crisis of Grecian independence: but the events of those days were well calculated to sharpen it for the future, and the Greeks of the Peloponnesian war had become far more refined political schemers than their forefathers. And thus it happened that the proposition to settle a territorial dispute by a duel of chosen champions, admissible and even becoming a century before, came afterwards to be derided as childish.

The inhabitants of Kynuria are stated by Herodotus to have been Ionians, but completely Dorized through their long subjection to Argos, by whom they were governed as Periœki. Pausanias gives a different account of their race, which he traces to the eponymous hero Kynūrus, son of Perseus: but he does not connect them with the Kynurians whom he mentions in another place as a portion of the inhabitants of Arcadia.[3] It is evident that, even in the time of Herodotus, the traces of their primitive descent were nearly effaced. He says they were "Orneates and Periœki" to Argos; and it appears that the

[3] Herod. viii. 73; Pausan. iii. 2, 2; viii. 27, 3

inhabitants of Orneæ also, whom Argos had reduced to the same dependent condition, traced their eponymous hero to an Ionic stock, — Orneus was the son of the Attic Erechtheus.[1] Strabo seems to have conceived the Kynurians as occupying originally, not only the frontier district of Argolis and Laconia, wherein Thyrea is situated, but also the northwestern portion of Argolis, under the ridge called Lyrkeium, which separates the latter from the Arcadian territory of Stimphalus.[2] This ridge was near the town of Orneæ, which lay on the border of Argolis near the confines of Phlius; so that Strabo thus helps to confirm the statement of Herodotus, that the Orneates were a portion of Kynurians, held by Argos along with the other Kynurians in the condition of dependent allies and Periœki, and very probably also of Ionian origin.

The conquest of Thyrea (a district valuable to the Lacedæmonians, as we may presume from the large booty which the Argeians got from it during the Peloponnesian war)[3] was the last territorial acquisition made by Sparta. She was now possessed of a continuous dominion, comprising the whole southern portion of the Peloponnesus, from the southern bank of the river Nedon on the western coast, to the northern boundary of Thyreatis on the eastern coast. The area of her territory, including as it did both Laconia and Messenia, was equal to two-fifths of the entire peninsula, all governed from the single city, and for the exclusive purpose and benefit of the citizens of Sparta. Within all this wide area there was not a single community pretending to independent agency. The townships of the Periœki, and the villages of the Helots, were each individually unimportant; nor do we hear of any one of them presuming to treat with a foreign

[1] Pausan. ii. 25, 5. Mannert (Geographie der Griechen und Römer Griechenland, book ii. ch. xix. p. 618) connects the Kynurians of Arcadia and Argolis, though Herodotus tells us that the latter were Ionians: he gives to this name much greater importance and extension than the evidence bears out.

[2] Strabo, viii. p. 370 — *ὁ Ἴναχος ἔχων τὰς πηγὰς ἐκ Λυρκειου τοῦ κατὰ Κυνουρίαν ὄρους τῆς Ἀρκαδίας.* Coray and Grosskurd gain nothing here by the conjectural reading of *Ἀργείας* in place of *Ἀρκαδίας*, for the ridge of Lyrkeium ran between the two, and might, therefore, be connected with either without impropriety

[3] Thucyd. vi 95.

tate: both consider themselves as nothing else but subjects of the Spartan ephors and their subordinate officers. They are indeed discontented subjects, hating as well as fearing their masters, and not to be trusted if a favorable opportunity for secure revolt presents itself. But no individual township or district is strong enough to stand up for itself, while combinations among them are prevented by the habitual watchfulness and unscrupulous precautions of the ephors, especially by that jealous secret police called the Krypteia, to which allusion has already been made.

Not only, therefore, was the Spartan territory larger and its population more numerous than that of any other state in Hellas, but its government was also more completely centralized and more strictly obeyed. Its source of weakness was the discontent of its Periœki and Helots, the latter of whom were not — like the slaves of other states — imported barbarians from different countries, and speaking a broken Greek, but genuine Hellens, — of one dialect and lineage, sympathizing with each other, and as much entitled to the protection of Zeus Hellanius as their masters, — from whom, indeed, they stood distinguished by no other line except the perfect training, individual and collective, which was peculiar to the Spartans. During the period on which we are at present dwelling, it does not seem that this discontent comes sensibly into operation; but we shall observe its manifestations very unequivocally after the Persian and during the Peloponnesian war.

To such auxiliary causes of Spartan predominance we must add another, — the excellent military position of Sparta, and the unassailable character of Laconia generally. On three sides that territory is washed by the sea,[1] with a coast remarkably dangerous and destitute of harbors; hence Sparta had nothing to apprehend from this quarter until the Persian invasion and its consequences, — one of the most remarkable of which was, the astonishing development of the Athenian naval force. The city of Sparta, far removed from the sea, was admirably defended by an almost impassable northern frontier, composed of those districts which we have observed above to have been conquered from

[1] Xenophon, Hellen iv. 8, 7: *φοβούμενος τὴν ἀλιμενότητα τῆς χώρας*

Arcadia, — Karyātis, Skirītis, Maleātis, and Beleminātis. The difficulty as well as danger of marching into Laconia by these mountain passes, noticed by Euripidès, was keenly felt by every enemy of the Lacedæmonians, and has been powerfully stated by a first-rate modern observer, Colonel Leake.[1] No site could be better chosen for holding the key of all the penetrable passes than that of Sparta. This well-protected frontier was a substitute more than sufficient for fortifications to Sparta itself, which always maintained, down to the times of the despot Nabis, its

[1] Xenoph. Hellen. v. 5, 10; Eurip. ap. Strabo, viii. p. 366; Leake, Travels in Morea, vol. iii. c. xxii. p. 25.

"It is to the strength of the frontiers, and the comparatively large extent of country inclosed within them, that we must trace the primary cause of the Lacedæmonian power. These enabled the people, when strengthened by a rigid military discipline, and put in motion by an ambitious spirit, first to triumph over their weaker neighbors of Messenia, by this additional strength to overawe the disunited republics of Arcadia, and at length for centuries to hold an acknowledged military superiority over every other state in Greece.

"It is remarkable that all the principal passes into Laconia lead to one point: this point is Sparta; a fact which shows at once how well the position of that city was chosen for the defence of the province, and how well it was adapted, especially as long as it continued to be unwalled, to maintain a perpetual vigilance and readiness for defence, which are the surest means of offensive success.

"The natural openings into the plain of Sparta are only two; one by the upper Eurotas, as the course of that river above Sparta may be termed; the other by its only large branch Œnus, now the Kelefina, which, as I have already stated, joins the Eurotas opposite to the north-eastern extremity of Sparta. All the natural approaches to Sparta from the northward lead to one or the other of these two valleys. On the side of Messenia, the northerly prolongation of Mount Taygetum, which joins Mount Lyceum at the pass of Andania, now the pass of Makryplái, furnishes a continued barrier of the loftiest kind, admitting only of routes easily defensible; and which, — whether from the Cromitis of Arcadia to the south-westward of the modern Londári, from the Stenykleric plain, from the plain of the Pamisus, or from Pheræ, now Kalamáta, — all descend into the valley of the upper Eurotas, and conduct to Sparta by Pellana. There was, indeed, a branch of the last-mentioned route, which descended into the Spartan plain at the modern Mistra, and which must have been a very frequent communication between Sparta and the lower part of Messenia; but, like the other direct passes over Taygetum, it was much more difficult and defensible than those which I have called the natural entrances of the province."

primitive aspect of a group of adjacent hill-villages rather than a regular city.

When, along with such territorial advantages, we contemplate the personal training peculiar to the Spartan citizens, as yet undiminished in their numbers, — combined with the effect of that training upon Grecian sentiment, in inspiring awe and admiration, — we shall not be surprised to find that, during the half-century which elapsed between the year 600 B. C. and the final conquest of Thyreātis from Argos, Sparta had acquired and begun to exercise a recognized ascendency over all the Grecian states. Her military force was at that time superior to that of any of the rest, in a degree much greater than it afterwards came to be; for other states had not yet attained their maximum, and Athens in particular was far short of the height which she afterwards reached. In respect to discipline as well as number, the Spartan military force had even at this early period reached a point which it did not subsequently surpass; while in Athens, Thebes, Argos, Arcadia, and even Elis (as will be hereafter shown), the military training in later days received greater attention, and improved considerably. The Spartans (observes Aristotle)[1] brought to perfection their gymnastic training and their military discipline, at a time when other Greeks neglected both the one and the other: their early superiority was that of the trained men over the untrained, and ceased in after-days, when other states came to subject their citizens to systematic exercises of analogous character or tendency. This fact, — the early period at which Sparta attained her maximum of discipline, power, and territory, — is important to bear in mind, when we are explaining the general acquiescence which her ascendency met with in Greece, and which her subsequent acts would certainly not have enabled her to earn. That acquiescence first began, and became a habit of the Grecian mind, at a time when Sparta had no rival to come near her, — when she had complete-

[1] Aristot. Polit. viii. 3, 4. Ἔτι δὲ αὐτοὺς τοὺς Λάκωνας ἴσμεν, ἕως μὲν αὐτοὶ προσήδρευον ταῖς φιλοπονίαις, ὑπερέχοντας τῶν ἄλλων· νῦν δὲ, καὶ τοῖς γυμνασίοις καὶ τοῖς πολεμικοῖς ἀγῶσι, λειπομένους ἑτέρων· οὐ γὰρ τῷ τοὺς νέους γυμνάζειν τὸν τρόπον τούτον διέφερον, ἀλλὰ· ᾧ μόνον μὴ πρὸς ἀσκουντας ἀσκεῖν..... Ἀνταγωνισταὶ γὰρ τῆς παιδείας νῦν ἔχουσι· πρότερον δὲ οὐκ εἶχον.

ly shot ahead of Argos, — and when the vigor of the Lykurgean discipline had been manifested in a long series of conquests, made during the stationary period of other states, and ending only, to use the somewhat exaggerated phrase of Herodotus, when she had subdued the greater part of Peloponnesus.[1]

Our accounts of the memorable military organization of Sparta are scanty, and insufficient to place the details of it clearly before us. The arms of the Spartans, as to all material points, were not different from those of other Greek hoplites. But one grand peculiarity is observable from the beginning, as an item in the Lykurgean institutions. That lawgiver established military divisions quite distinct from the civil divisions, whereas in the other states of Greece, until a period much later than that which we have now reached, the two were confounded, — the hoplites or horsemen of the same tribe or ward being marshalled together on the field of battle. Every Lacedæmonian was bound to military service from the age of twenty to sixty, and the ephors, when they sent forth an expedition, called to arms all the men within some given limit of age. Herodotus tells us that Lykurgus established both the syssitia, or public mess, and the enômoties and triākads, or the military subdivisions peculiar to Sparta.[2] The triākads are not mentioned elsewhere, nor can we distinctly make out what they were; but the enômoty was the special characteristic of the system, and the pivot upon which all its arrangements turned. It was a small company of men, the number of whom was variable, being given differently at twenty-five, thirty-two, or thirty-six men, — drilled and practised together in military evolutions, and bound to each other by a common oath.[3]

[1] Herodot. i. 68. *ἤδη δέ σφι καὶ ἡ πολλὴ τῆς* Πελοποννήσου *ἦν κατεστραμμένη.*

[2] Herodot. i. 67: compare Larcher's note.

Concerning the obscure and difficult subject of the military arrangements of Sparta, see Cragius, Repub. Laced. iv. 4; Manso, Sparta, ii. Beilage 18, p. 224; O. Müller, Hist. Dorians, iii. 12, Dr. Arnold's note on Thucydidês, v 68; and Dr. Thirlwall, History of Greece, vol. i. Appendix 3, p. 520.

[3] Pollux, i. 10, 129. *Ἰδίως μέντοι τῶν Λακεδαιμονίων, ἐνωμοτία, καὶ μόρα*: compare Suidas and Hesych. v. *Ἐνωμοτία*; Xenoph. Rep. Lacon. c. 11; Thucyd. v. 67–68; Xenoph. Hellen. vi. 4, 12.

Suidas states the enômoty at twenty-five men: in the Lacedæmonian army which fought at the first battle of Mantineia (418 B. C.), it seems to have consisted of about thirty-two men (Thuc. *l. c.*): at the battle of Leuktra of thirty-six men (Xen. Hellen. *l. c.*). But the language of Xenophon and Thucydidês does not imply that the number of each enômoty was equal.

Each enômoty had a separate captain, or enomotarch, the strongest and ablest soldier of the company, who always occupied the front rank, and led the enômoty when it marched in single file, giving the order of march, as well as setting the example. If the enômoty was drawn up in three, or four, or six files, the enomotarch usually occupied the front post on the left, and care was taken that both the front-rank men and the rear-rank men, of each file, should be soldiers of particular merit.[1]

It was upon these small companies that the constant and severe Lacedæmonian drilling was brought to act. They were taught to march in concert, to change rapidly from line to file, to wheel right or left in such manner as that the enomotarch and the other protostates, or front-rank men, should always be the persons immediately opposed to the enemy.[2] Their step was

[1] O. Müller states that the enomotarch, after a *παραγωγή*, or deployment into phalanx, stood on the *right* hand, which is contrary to Xenoph. Rep. Lac. 11, 9. — *Ὅτε δὲ ὁ ἄρχων εὐώνυμος γίγνεται, οὐδ' ἐν τούτῳ μειονεκτεῖν ἡγοῦνται ἀλλ' ἔστιν ὅτε καὶ πλεονεκτεῖν*, — the *ἄρχων* was the first enomotarch of the lochus, the *πρωτοστάτης* (as appears from 11, 5), when the enômoty marched in single file. To put the *ἡγεμὼν* on the right flank, was done *occasionally* for special reason, — *ἦν δέ ποτε ἕνεκά τινος δοκῇ ξυμφέρειν, τὸν ἡγεμόνα δέξιον κέρας ἔχειν*, etc. I understand Xenophon's description of the *παραγωγή*, or deployment, differently from Müller, — it rather seems that the enômoties which stood first made a side-movement to the left, so that the first enomotarch still maintained his place on the left, at the same time that the opportunity was created for the enômoties in the rear to come up and form equal front, *τῷ ἐνωμοτάρχῃ παρεγγυᾶται εἰς μέτωπον παρ' ἀσπίδα καθίστασθαι*, — the words *παρ' ἀσπίδα* have reference, as I imagine, to the proceeding of the first enomotarch, who set the example of side-movement to the left-hand, as it is shown by the words which follow, — *καὶ διὰ παντὸς οὗτος ἐστ' ἂν ἡ φάλαγξ ἐναντία καταστῇ*. The phalanx was constituted when all the *lochi* formed an equal and continuous front, whether the sixteen enômoties, of which each lochus was composed, might be each in one file, in three files, or in six files.

[2] See Xenoph. Anab. iv. 8, 10, upon the advantage of attacking the enemy with *ὀρθιοι λόχοι*, in which case the strongest and best soldiers all came first into conflict. It is to be recollected, however, that the practice of the Cyrean troops cannot be safely quoted as authority for the practice at Sparta. Xenophon and his colleagues established lochi, pentekosties, and enômotics

regulated by the fife, which played in martial measures peculiar to Sparta, and was employed in actual battle as well as in military practice; and so perfectly were they habituated to the movements of the enômoty, that, if their order was deranged by any adverse accident, scattered soldiers could spontaneously form themselves into the same order, each man knowing perfectly the duties belonging to the place into which chance had thrown him.[1] Above the enômoty were several larger divisions, — the pentekostys, the lochus, and the mora,[2] of which latter there seem to

in the Cyreian army: the lochus consisted of one hundred men, but the numbers of the other two divisions are not stated (Anab. iii. 4, 21; iv. 3, 26: compare Arrian, Tactic. cap. 6).

[1] The words of Thucydidês indicate the peculiar marshalling of the Lacedæmonians, as distinguished both from their enemies and from their allies at the battle of Mantineia, — *καὶ εὐθὺς ὑπὸ σπουδῆς καθίσταντο ἐς κόσμον τὸν ἑαυτῶν, Ἀγίδος τοῦ βασιλέως ἕκαστα ἐξηγουμένου κατὰ νόμον*: again, c. 68.

About the music of the flute or fife, Thucyd. v. 69; Xen Rep Lac 13, 9, Plutarch, Lycurg. c. 22.

[2] Meursius, Dr. Arnold, and Rachetti (Della Milizia dei Grechi Antichi, Milan, 1807, p. 166) all think that lochus and mora were different names for the same division; but if this is to be reconciled with the statement of Xenophon in Repub. Lac. c. 11, we must suppose an actual change of nomenclature after the Peloponnesian war, which appears to be Dr. Arnold's opinion, — yet it is not easy to account for.

There is one point in Dr. Thirlwall's Appendix which is of some importance, and in which I cannot but dissent from his opinion. He says, after stating the nomenclature and classification of the Spartan military force as given by Xenophon, "Xenophon speaks only of Spartans, as appears by the epithet *πολιτικῶν*," p. 521: the words of Xenophon are, *Ἑκάστη δὲ τῶν πολιτικῶν μορῶν ἔχει πολέμαρχον ἕνα*, etc. (Rep. Lac. 11.)

It appears to me that Xenophon is here speaking of the aggregate Lacedæmonian heavy-armed force, including both Spartans and Periœki, — not of Spartans alone. The word *πολιτικῶν* does not mean Spartans as distinguished from Periœki, but Lacedæmonians as distinguished from allies. Thus, when Agesilaus returns home from the blockade of Phlius, Xenophon tells us that *ταῦτα ποιήσας τοὺς μὲν συμμάχους ἀφῆκε, τὸ δὲ πολιτικὸν οἴκαδε ἀπήγαγε* (Hellen. v. 3, 25).

O. Müller, also, thinks that the whole number of five thousand seven hundred and forty men, who fought at the first battle of Mantineia, in the thirteenth year of the Peloponnesian war, were furnished by the city of Sparta itself (Hist. of Dorians, iii. 12, 2): and to prove this, he refers to the very passage just cited from the Hellenica of Xenophon, which, as far as it proves

have been *six* in all. Respecting the number of each division, and the proportion of the larger to the smaller, we find statements altogether different, yet each resting upon good authority, — so that we are driven to suppose that there was no peremptory standard, and that the enômoty comprised twenty-five, thirty-two, or thirty-six men; the pentekostys, two or four enômoties; the lochus, two or four pentekosties, and the mora, four hundred, five hundred, six hundred, or nine hundred men, — at different times, or according to the limits of age which the ephors might prescribe for the men whom they called into the field.[1]

What remains fixed in the system is, first, the small number, though varying within certain limits, of the elementary company called enômoty, trained to act together, and composed of men nearly of the same age,[2] in which every man knew his place; secondly, the scale of divisions and the hierarchy of officers, each rising above the other, — the enômotarch, the pentekontêr, the lochage, and the polemarch, or commander of the mora, — each having the charge of their respective divisions. Orders were

anything, proves the contrary of his position. He gives no other evidence to support it, and I think it in the highest degree improbable. I have already remarked that he understands the expression *πολιτικὴ χώρα* (in Polybius, vi. 45) to mean the district of Sparta itself as contradistinguished from Laconia, — a construction which seems to me not warranted by the passage in Polybius.

[1] Aristotle, *Λακώνων Πολιτεία*, Fragm. 5–6, ed. Neumann: Photius v. *Λόχος*. Harpokration, *Μόρα*. Etymologic. Mag. *Μόρα*. The statement of Aristotle is transmitted so imperfectly that we cannot make out clearly what it was. Xenophon says that there were six moræ in all, comprehending all the citizens of military age (Rep. Lac. 11, 3). But Ephorus stated the mora at five hundred men, Kallisthenes at seven hundred, and Polybius at nine hundred (Plutarch, Pelopid. 17; Diodor. xv. 32). If all the citizens competent to bear arms were comprised in six moræ, the numbers of each mora must of course have varied. At the battle of Mantineia, there were seven Lacedæmonian lochi, each lochus containing four pentekosties, and each pentekosty containing four enômoties: Thucydidês seems, as I before remarked, to make each enômoty thirty-two men. But Xenophon tells us that each mora had four lochi, each lochus two pentekosties, and each pentekosty two enômoties (Rep. Lac. 11, 4). The names of these divisions remained the same, but the numbers varied.

[2] This is implied in the fact, that the men under thirty or under thirty-five years of age, were often detached in a battle to pursue the light troops of the enemy (Xen. Hellen. iv. 5, 15–16).

transmitted from the king, as commander-in-chief, through the polemarchs to the lochages, — from the lochages to the pente konters, and then from the latter to the enômotarchs, each of whom caused them to be executed by his enômoty. As all these men had been previously trained to the duties of their respective stations, the Spartan infantry possessed the arrangements and aptitudes of a standing army. Originally, they seem to have had no cavalry at all,[1] and when cavalry was at length introduced into their system, it was of a very inferior character, no provision having been made for it in the Lykurgean training. But the military force of the other cities of Greece, even down to the close of the Peloponnesian war, enjoyed little or no special training, having neither any small company like the enômoty, consisting of particular men drilled to act together, — no fixed and disciplined officers, — nor triple scale of subordination and subdivision. Gymnastics, and the use of arms, made a part of education everywhere, and it is to be presumed that no Grecian hoplite was entirely without some practice of marching in line and military evolutions, inasmuch as the obligation to serve was universal and often enforced. But such practice was casual and unequal, nor had any individual of Argos or Athens a fixed military place and duty. The citizen took arms among his tribe, under a taxiarch, chosen from it for the occasion, and was placed in a rank or line wherein neither his place nor his immediate neighbors were predetermined. The tribe appears to have been the only military classification known to Athens,[2] and the taxi-

[1] Xenoph. Hellen. vi. 4, 12.

[2] Herodot. vi. 111; Thucyd. vi. 98; Xenoph. Hellen. iv. 2, 19.

The same marshalling of hoplites, according to the civil tribes to which they belonged, is seen in the inhabitants of Messênê in Sicily as well as of Syrakuse (Thucyd. iii. 90; vi. 100).

At Argos, there was a body of one thousand hoplites, who, during the Peloponnesian war, received training in military manœuvres at the cost of the city (Thucyd. v. 67), but there is reason to believe that this arrangement was not introduced until about the period of the peace of Nikias in the tenth or eleventh year of the Peloponnesian war, when the truce between Argos and Sparta was just expiring, and when the former began to entertain schemes of ambition. The Epariti in Arcadia began at a much later time, after the battle of Leuktra (Xenoph. Hellen. vii. 4, 33).

About the Athenian taxiarchs, one to each tribe, see Æschines de Fals

archs the only tribe officer for infantry, as the phylarch was for cavalry, under the general-in-chief. Moreover, orders from the general were proclaimed to the line collectively by a herald of loud voice, not communicated to the taxiarch so as to make him responsible for the proper execution of them by his division. With an arrangement thus perfunctory and unsystematized, we shall be surprised to find how well the military duties were often performed: but every Greek who contrasted it with the symmetrical structure of the Lacedæmonian armed force, and with the laborious preparation of every Spartan for his appropriate duty, felt an internal sentiment of inferiority, which made him willingly accept the headship of "these professional artists in the business of war,"[1] as they are often denominated.

It was through the concurrence of these various circumstances that the willing acknowledgment of Sparta as the leading state of Hellas became a part of Grecian habitual sentiment, during the interval between about 600 B. C. and 547 B. C. During this period too, chiefly, Greece and her colonies were ripening into a sort of recognized and active partnership. The common religious assemblies, which bound the parts together, not only acquired greater formality and more extended development, but also became more numerous and frequent, — while the Pythian, Isthmian, and Nemean games were exalted into a national importance, approaching to that of the Olympic. The recognized superiority of Sparta thus formed part and parcel of the first historical aggregation of the Grecian states. It was about the year 547 B. C., that Crœsus of Lydia, when pressed by Cyrus and the Persians, solicited aid from Greece, addressing himself

Leg. c. 53, p. 300 R.; Lysias, pro Mantitheo, Or. xvi. p. 147; Demosth. adv. Bœotum pro nomine, p. 999 R. Philippic. i. p. 47.

See the advice given by Xenophon (in his Treatise De Officio Magistri Equitum) for the remodelling of the Athenian cavalry, and for the introduction of small divisions, each with its special commander. The division into tribes is all that he finds recognized (Off. M. E. C. ii. 2–iv. 9); he strongly recommends giving orders, — *διὰ παραγγέλσεως*, and not *ἀπὸ κήρυκος*.

[1] Plutarch, Pelopid. c. 23. *Πάντων ἄκροι τεχνῖται καὶ σοφισταὶ τῶν πολεμικῶν ὄντες οἱ Σπαρτιᾶται*, etc. (Xenoph. Rep. Lac. c. 14) *ἡγησαῖο ἂν, τοὺς μὲν ἄλλους αὐτοσχεδιαστὰς εἶναι τῶν στρατιωτικῶν, Λακεδαιμονίους δὲ μόνους τῷ ὄντι τεχνίτας τῶν πολεμικῶν..... Ὥστε τῶν δεομένων γίγνεσθαι οὐδὲν ἀπορεῖται· οὐδὲν γὰρ ἀπρόσκεπτόν ἐστιν.*

to the Spartans as confessed presidents of the whole Hellenic body.[1] And the tendencies then at work, towards a certain degree of increased intercourse and coöperation among the dispersed members of the Hellenic name, were doubtless assisted by the existence of a state recognized by all as the first, — a state whose superiority was the more readily acquiesced in, because it was earned by a painful and laborious discipline, which all admired, but none chose to copy.[2]

Whether it be true, as O. Müller and other learned men conceive, that the Homeric mode of fighting was the general practice in Peloponnesus and the rest of Greece anterior to the invasion of the Dorians, and that the latter first introduced the habit of fighting with close ranks and protended spears, is a point which cannot be determined. Throughout all our historical knowledge of Greece, a close rank among the hoplites, charging with spears always in hand, is the prevailing practice; though there are cases of exception, in which the spear is hurled, when troops seem afraid of coming to close quarters.[3] Nor is it by any means certain, that the Homeric manner of fighting ever really prevailed in Peloponnesus, which is a country eminently inconvenient for the use of war-chariots. The descriptions of the bard may perhaps have been founded chiefly upon what he and his auditors witnessed on the coast of Asia Minor, where chariots

[1] Ὑμέας γὰρ πυνθάνομαι προέσταναι τῆς Ἑλλάδος (Herodot. i. 69): compare i. 152; v. 49; vi. 84, about Spartan hegemony.

[2] Xenoph. Repub. Lac. 10, 8. ἐπαινοῦσι μὲν πάντες τὰ τοιαῦτα ἐπιτηδεύματα, μιμεῖσθαι δὲ αὐτὰ οὐδεμία πόλις ἐθέλει.

The magnificent funeral discourse, pronounced by Periklês in the early part of the Peloponnesian war over the deceased Athenian warriors, includes a remarkable contrast of the unconstrained patriotism and bravery of the Athenians, with the austere, repulsive, and ostentatious drilling to which the Spartans were subject from their earliest youth; at the same time, it attests the powerful effect which that drilling produced upon the mind of Greece (Thucyd. ii. 37–39). πιστεύοντες; οὐ ταῖς παρασκευαῖς τὸ πλέον καὶ ἀπάταις, ἢ τῷ ἀφ' ἡμῶν αὐτῶν ἐς τὰ ἔργα εὐψύχῳ· καὶ ἐν ταῖς παιδείαις οἱ μὲν (the Spartans) ἐπιπόνῳ ἀσκήσει εὐθὺς νέοι ὄντες τὸ ἀνδρεῖον μετέρχονται, etc.

The impression of the light troops, when they first began to attack the Lacedæmonian hoplites in the island of Sphakteria, is strongly expressed by Thucydidês (iv. 34), — τῇ γνώμῃ δεδουλωμένοι ὡς ἐπὶ Λακεδαιμονίους, etc.

[3] Xenoph. Hellen. v. 4, 52: compare iii. 5, 20.

were more employed, and where the country was much more favorable to them.[1] We have no historical knowledge of any military practice in Peloponnesus anterior to the hoplites with close ranks and protended spears.

One Peloponnesian state there was, and one alone, which disdained to acknowledge the superiority or headship of Lacedæmon. Argos never forgot that she had once been the chief power in the peninsula, and her feeling towards Sparta was that of a jealous, but impotent, competitor. By what steps the decline of her power had taken place, we are unable to make out, nor can we trace the succession of her kings subsequent to Pheidôn. It has been already stated that, about 669 B. C., the Argeians gained a victory over the Spartans at Hysiæ, and that they expelled from the port of Nauplia its preëxisting inhabitants, who found shelter, by favor of the Lacedæmonians, at the port of Mothônê, in Messenia.[2] Damokratidas was then king of Argos. Pausanias tells us that Meltas, the son of Lakidês, was the last descendant of Temenus who succeeded to this dignity; he being condemned and deposed by the people. Plutarch, however, states that the family of the Herakleids died out, and that another king, named Ægôn, was chosen by the people at the indication of the Delphian oracle.[3] Of this story, Pausanias appears to have known nothing. His language implies that the kingly dignity ceased with Meltas, — wherein he is undoubtedly mistaken, since the title existed, though probably with very limited functions, at the time of the Persian war. Moreover, there is some ground for presuming that the king of Argos was even at that time a Herakleid, — since the Spartans offered to him a third part of the command of the Hellenic force, conjointly with

[1] Xenoph. Hellen. iii. 4, 19.

[2] Pausan. iv. 24, 2; iv. 35, 2.

[3] Pausan. ii. 19, 2; Plutarch (Cur Pythia nunc non reddat oracula, etc. c. 3, p. 396; De Fortunâ Alexandri, c. 8, p. 340). Lakidês, king of Argos, is also named by Plutarch as luxurious and effeminate (De capiendâ ab hostibus utilitate, c. 6, p. 89).

O. Müller (Hist. of Dorians, iii. 6, 10) identifies Lakidês, son of Meltas, named by Pausanias, with Leôkêdês son of Pheidôn, named by Herodotus as one of the suitors for the daughter of Kleisthenês the Sikyonian (vi. 127); and he thus infers that Meltas must have been deposed and succeeded by Ægon, about 560 B. C. This conjecture seems to me not much to be trusted.

their own two kings.[1] The conquest of Thyreātis by the Spartans deprived the Argeians of a valuable portion of their Periœkis, or dependent territory; but Orneæ, and the remaining portion of Kynuria,[2] still continued to belong to them; the plain round their city was very productive; and except Sparta, there was no other power in Peloponnesus superior to them. Mykenæ and Tiryns, nevertheless, seem both to have been independent states at the time of the Persian war, since both sent contingents to the battle of Platæa, at a time when Argos held aloof and rather favored the Persians. At what time Kleônæ became the ally, or dependent, of Argos, we cannot distinctly make out. During the Peloponnesian war, it is numbered in that character along with Orneæ;[3] but it seems not to have lost its autonomy about the year 470 B. C., at which period Pindar represents the Kleonæans as presiding and distributing prizes at the Nemean games.[4] The grove of Nemea was less than two miles from their town, and they were the original presidents of this great festival, — a function of which they were subsequently robbed by the Argeians, in the same manner as the Pisatans had been treated by the Eleians with reference to the Olympic Agôn. The extinction of the autonomy of Kleônæ and the acquisition of the presidency of the Nemean festival by Argos, were doubtless simultaneous, but we are unable to mark the exact time; for the statement of Eusebius, that the Argeians celebrated the Nemean festival as early as the 53d Olympiad, or 568 B. C., is contradicted by the more valuable evidence of Pindar.[5]

[1] Herodot. vii. 149.

[2] Herodot. viii. 73.

Strabo distinguishes two places called Orneæ; one a village in the Argeian territory, the other a town between Corinth and Sikyôn: but I doubt whether there ever were two places so called: the town or village dependent on Argos seems the only place (Strabo, viii. p. 376).

[3] Thucyd. v. 67–vi. 95.

The Kleônæans are also said to have aided the Argeians in the destruction of Mykenæ, conjointly with the Tegeatans: from hence, however, we cannot infer anything as to their dependence at that time (Strabo, viii. p. 377).

[4] Pindar, Nem. x. 42. Κλεωνα ὢν πρὸς ἀνδρῶν τετράκις (compare Nem. iv. 17). Κλεωναίου τ' ἀπ' ἀγῶνος, etc.

[5] See Corsini Dissertation. Agonisticæ, iii. 2.

The tenth Nemean Ode of Pindar is on this point peculiarly good evidence, inasmuch as it is composed for, and supposed to be sung by Theiæus, a native of Argos. Had there been any jealousy then subsisting between Argos and Kleônæ on the subject of the presidency of this festival, Pindar would never, on such an occasion, have mentioned expressly the Kleônæans as presidents.

The statements of the Scholia on Pindar, that the Corinthians at one time celebrated the Nemean games, or that they were of old celebrated at Sikyôn, seem unfounded (Schol. Pind. Arg. Nem., and Nem. x. 49).

Of Corinth and Sikyôn it will be more convenient to speak when we survey what is called the Age of the Tyrants, or Despots; and of the inhabitants of Achaia (who occupied the southern coast of the Corinthian gulf, westward of Sikyôn, as far as Cape Araxus, the north-western point of Peloponnesus), a few words exhaust our whole knowledge, down to the time at which we are arrived. These Achæans are given to us as representing the ante-Dorian inhabitants of Laconia, whom the legend affirms to have retired under Tisamenus to the northern parts of Peloponnesus, from whence they expelled the preëxisting Ionians and occupied the country. The race of their kings is said to have lasted from Tisamenus down to Ogygus,[1] — how long, we do not know. After the death of the latter, the Achæan towns formed each a separate republic, but with periodical festivals and sacrifice at the temple of Zeus Homarius, affording opportunity of settling differences and arranging their common concerns. Of these towns, twelve are known from Herodotus and Strabo, — Pellênê, Ægira, Ægæ, Bura, Helikê, Ægium, Rhypes, Patræ, Pharæ, Olenus, Dymê, Tritæa.[2] But there must originally have been some other autonomous towns besides these twelve for in the 23d Olympiad, Ikarus of Hyperêsia was proclaimed as victor, and there seems good reason to believe that Hyperêsia, an old town of the Homeric Catalogue, was in Achaia.[3] It is affirmed that, before the Achæan occupation of the country, the Ionians had dwelt in independent villages, several of which were

[1] Polyb. ii. 41. [2] Herodot. i. 145; Strabo, viii. p. 385.

[3] Pausan. iv. 15, 1; Strabo, viii. p. 385: Homer, Iliad, ii 573. Pausanias seems to have forgotten this statement, when he tells us that the name of Hyperêsia was exchanged for that of Ægeira, during the time of the Ionian occupation of the country (vii. 26, 1; Steph. Byz. copies. hirt. v. Αἰγειρα). It is doubtful whether the two names designate the same place, nor does Strabo conceive that they did.

subsequently aggregated into towns thus Patræ was formed by a coalescence of seven villages, Dymê from eight (one of which was named Teuthea), and Ægium also from seven or eight. But all these towns were small, and some of them underwent a farther junction one with the other; thus Ægæ was joined with Ægeira, and Olenus with Dymê.[1] All the authors seem disposed to recognize twelve cities, and no more, in Achaia; for Polybius, still adhering to that number, substitutes Leontium and Keryneia in place of Ægæ and Rhypes; Pausanias gives Keryneia in place of Patræ.[2] We hear of no facts respecting these Achæan towns until a short time before the Peloponnesian war, and even then their part was inconsiderable.

The greater portion of the territory comprised under the name of Achaia was mountain, forming the northern descent of those high ranges, passable only through very difficult gorges, which separate the country from Arcadia to the south, and which throw out various spurs approaching closely to the gulf of Corinth. A strip of flat land, with white clayey soil, often very fertile, between these mountains and the sea, formed *the plain* of each of the Achæan towns, which were situated for the most part upon steep outlying eminences overhanging it. From the mountains between Achaia and Arcadia, numerous streams flow into the Corinthian gulf, but few of them are perennial, and the whole length of coast is represented as harborless.[3]

CONTINUATION OF HISTORICAL GREECE.

CHAPTER IX.

CORINTH, SIKYON, AND MEGARA. — AGE OF THE GRECIAN DESPOTS.

Early commerce and enterprise of the Corinthians. — Oligarchy of the Bacchiadæ. — Early condition of Megara. — Early condition of Sikyôn. — Rise of the despots. — Earliest changes of government in Greece. — Peculiarity of Sparta. — Discontinuance of kingship in Greece generally. — Comparison with the Middle Ages of Europe. — Anti-monarchical sentiment of Greece — Mr. Mitford. — Causes which led to the growth of that sentiment. — Change to oligarchical government. — Such change indicates an advance in the Greek mind. — Dissatisfaction with the oligarchies — modes by which the despots acquired power. — Examples. — Tendency towards a better organized citizenship. — Character and working of the despots. — The demagogue-despot of the earlier times compared with the demagogue of later times. — Contrast between the despot and the early heroic king. — Position of the despot. — Good government impossible to him. — Conflict between oligarchy and despotism preceded that between oligarchy and democracy. — Early oligarchies included a multiplicity of different sections and associations. — Government of the Geomori — a close order of present or past proprietors. — Classes of the people. — Military force of the early oligarchies consisted of cavalry. — Rise of the heavy-armed infantry and of the free military marine — both unfavorable to oligarchy. — Dorian states — Dorian and non-Dorian inhabitants. — Dynasty of despots at Sikyôn — the Orthagoridæ. — Violent proceedings of Kleisthenês. — Classes of the Sikyonian population. — Fall of the Orthagoridæ — state of Sikyôn after it. — The Sikyonian despots not put down by Sparta. — Despots at Corinth — Kypselus. — Periander. — Great power of Corinth under Periander. — Fall of the Kypselid dynasty. — Megara — Theagenês the despot. — Disturbed government at Megara — The poet Theognis. — Analogy of Corinth, Sikyôn, and Megara. ..... *pages* 1–47

CHAPTER X

IONIC PORTION OF HELLAS. — ATHENS BEFORE SOLON.

History of Athens before Drako — only a list of names. — No king after Kodrus. — Life archons. — Decennial archons. — Annual archons, nine in number. — Archonship of Kreôn, B. C. 683 — commencement of Attic chronology. — Obscurity of the civil condition of Attica before Solon. — Alleged duodecimal division of Attica in early times. — Four Ionic tribes — Geleontes, Hoplêtes, Ægikoreis, Argadeis. — These names are not names of castes or professions. — Component portions of the four tribes. — The Trittys and the Naukrary. — The Phratry and the Gens. — What constituted the gens or gentile communion. — Artificial enlargement of the primitive family association. Ideas of worship and ancestry coalesce. — Belief in a common divine ancestor. — This ancestry fabulous, yet still accredited. — Analogies from other nations. — Roman and Grecian gentes. — Rights and obligations of the gentile and phratric brethren. — The gens and phratry after the revolution of Kleisthenês became extra-political. — Many distinct political communities originally in Athens. — Theseus. — Long continuance of the cantonal feeling. — What demes were originally independent of Athens. — Eleusis. — Eupatridæ, Geômori, and Demiurgi. — Eupatridæ originally held all political power. — Senate of Areopagus. — The nine archons — their functions. — Drako and his laws. — Different tribunals for homicide at Athens. — Regulations of Drako about the Ephetæ. — Local superstitions at Athens about trial of homicide. — Attempted usurpation by Kylôn. — His failure, and massacre of his partisans by order of the Alkmæônids. — Trial and condemnation of the Alkmæônids. — Pestilence and suffering at Athens. — Mystic sects and brotherhoods in the sixth century B. C. — Epimenidês of Krete. — Epimenidês visits and purifies Athens. — His life and character. — Contrast of his age with that of Plato 48–88

CHAPTER XI.

SOLONIAN LAWS AND CONSTITUTION.

Life, character, and poems of Solon. — War between Athens and Megara about Salamis. — Acquisition of Salamis by Athens. — Settlement of the dispute by Spartan arbitration in favor of Athens. — State of Athens immediately before the legislation of Solon. — Internal dissension — misery of the poorer population. — Slavery of the debtors — law of debtor and creditor. — Injustice and rapacity of the rich. — General mutiny, and necessity for a large reform. — Solon made archon, and invested with full powers of legislation. — He refuses to make himself despot. — His seisachtheia, or relief-law for the poorer debtors. — Debasing of the money standard. — General popularity of the measure after partial dissatisfaction. — Different statements afterwards as to the nature and extent of the seisachtheia. — Necessity of the measure — mischievous contracts to which the previous law had given rise. — Solon's law finally settled the question — no subsequent complaint as to private debts — respect for

contracts unbroken under the democracy. — Distinction made in an early society between the principal and the interest of a loan — interest disapproved of *in toto*. — This opinion was retained by the philosophers after it had ceased to prevail in the community generally. — Solonian seisachtheia never imitated at Athens — money-standard honestly maintained afterwards. — Solon is empowered to modify the political constitution. — His census — four scales of property. — Graduated liability to income-tax, of the three richest classes, one compared with the other. — Admeasurement of political rights and franchises according to this scale — a Timocracy. — Fourth or poorest class — exercised powers only in assembly — chose magistrates and held them to accountability. — Pro-boulcutic or pre-considering Senate of Four Hundred. — Senate of Areopagus — its powers enlarged. — Confusion frequently seen between Solonian and post-Solonian institutions. — Loose language of the Athenian orators on this point. — Solon never contemplated the future change or revision of his own laws. — Solon laid the foundation of the Athenian democracy, but his institutions are not democratical. — The real Athenian democracy begins with Kleisthenês. — Athenian government after Solon still oligarchical, but mitigated. — The archons still continue to be judges until after the time of Kleisthenês. — After-changes in the Athenian constitution overlooked by the orators, but understood by Aristotle, and strongly felt at Athens during the time of Periklês. — Gentes and Phratries under the Solonian constitution — status of persons not included in them. — Laws of Solon. — The Drakonian laws about homicide retained; the rest abrogated. — Multifarious character of the laws of Solon: no appearance of classification. — He prohibits the export of landed produce from Attica except oil. — The prohibition of little or no effect. — Encouragement to artisans and industry. — Power of testamentary bequest — first sanctioned by Solon. — Laws relating to women. — Regulations about funerals. — About evil-speaking and abusive language. — Rewards to the victors at the sacred games. — Theft. — Censure pronounced by Solon upon citizens neutral in a sedition. — Necessity, under the Grecian city-governments, of some positive sentiment on the part of the citizens. — Contrast in this respect between the age of Solon and the subsequent democracy. — The same idea followed out in the subsequent Ostracism. — Sentiment of Solon towards the Homeric poems and the drama. — Difficulties of Solon after the enactment of the laws. — He retires from Attica. — Visits Egypt and Cyprus. — Alleged interview and conversation of Solon with Crœsus at Sardis. — Moral lesson arising out of the narrative. — State of Attica after the Solonian legislation. — Return of Solon to Athens. — Rise of Peisistratus. — His memorable stratagem to procure a guard from the people. — Peisistratus seizes the Akropolis and becomes despot — courageous resistance of Solon. — Death of Solon — his character. — Appendix, on the procedure of the Roman law respecting principal and interest in a loan of money 88–162

CHAPTER XII

EUBŒA. — CYCLADES.

The islands called Cyclades. — Eubœa. — Its six or seven towns — Chalkis Eretria, etc. — How peopled. — Early power of Chalkis, Eretria, Naxos

etc. — Early Ionic festival at Dêlos; crowded and wealthy. — Its decline about 560 B. C. — causes thereof. — Homeric Hymn to the Delian Apollo — evidence as to early Ionic life. — War between Chalkis and Eretria in early times — extensive alliances of each. — Commerce and colonies of Chalkis and Eretria — Euboic scale of money and weight. — Three different Grecian scales — Æginean, Euboic, and Attic — their ratio to each other..... 163–172

CHAPTER XIII.

ASIATIC IONIANS.

Twelve Ionic cities in Asia. — Legendary event called the Ionic migration. — Emigrants to these cities — diverse Greeks. — Great differences of dialect among the twelve cities. — Ionic cities really founded by different migrations. — Consequences of the mixture of inhabitants in these colonies — more activity — more instability. — Mobility ascribed to the Ionic race as compared with the Doric — arises from this cause. — Ionic cities in Asia — mixed with indigenous inhabitants. — Worship of Apollo and Artemis — existed on the Asiatic coast prior to the Greek emigrants — adopted by them. — Pan-Ionic festival and Amphiktyony on the promontory of Mykalê. — Situation of Milêtus — of the other Ionic cities. — Territories interspersed with Asiatic villages. — Magnêsia on the Mæander — Magnêsia on Mount Sipylus. — Ephesus — Androklus the Œkist — first settlement and distribution. — Increase and acquisitions of Ephesus. — Kolophôn, its origin and history. — Temple of Apollo at Klarus, near Kolophôn — its legends. — Lebedus, Teôs, Klazomenæ, etc. — Internal distribution of the inhabitants of Teôs. — Erythræ and Chios. — Klazomenæ — Phôkæa. — Smyrna..... 172–189

CHAPTER XIV.

ÆOLIC GREEKS IN ASIA.

Twelve cities of Æolic Greeks. — Their situation — eleven near together on the Elæitic gulf. — Legendary Æolic migration. — Kymê — the earliest as well as the most powerful of the twelve. — Magnêsia ad Sypilum. — Lesbos. — Early inhabitants of Lesbos before the Æolians. — Æolic establishments in the region of Mount Ida. — Continental settlements of Lesbos and Tenedos. — Ante-Hellenic inhabitants in the region of Mount Ida — Mysians and Teukrians. — Teukrians of Gergis. — Mitylênê — its political dissensions — its poets. — Power and merit of Pittakus. — Alkæus the poet — his flight from battle. — Bitter opposition of Pittakus and Alkæus in internal politics. — Pittakus is created Æsymnete, or Dictator of Mitylênê..... 190–201

CHAPTER XV

ASIATIC DORIANS.

Asiatic Dorians — their Hexapolis. — Other Dorians, not included in the Hexapolis. — Exclusion of Halikarnassus from the Hexapolis. 201–208

CHAPTER XVI.

NATIVES OF ASIA MINOR WITH WHOM THE GREEKS BECAME CONNECTED.

Indigenous nations of Asia Minor — Homeric geography. — Features of the country. — Names and situations of the different people. — Not originally aggregated into large kingdoms or cities. — River Halys — the ethnographical boundary — Syro-Arabians eastward of that river. — Thracian race — in the north of Asia Minor. — Ethnical affinities and migrations. — Partial identity of legends. — Phrygians. — Their influence upon the early Greek colonists. — Greek musical scale — partly borrowed from the Phrygians. — Phrygian music and worship among the Greeks in Asia Minor. — Character of Phrygians, Lydians, and Mysians. — Primitive Phrygian king or hero Gordius — Midas..... 203–218

CHAPTER XVII.

LYDIANS. — MEDES. — CIMMERIANS. — SCYTHIANS.

Lydians — their music and instruments. — They and their capital Sardis unknown to Homer. — Early Lydian kings. — Kandaulês and Gygês. — The Mermnad dynasty succeeds to the Herakleid. — Legend of Gygês in Plato. — Feminine influence running through the legends of Asia Minor. — Distribution of Lydia into two parts — Lydia and Torrhêbia. — Proceedings of Gygês. — His son and successor Ardys. — Assyrians and Medes. — First Median king — Dêiokês. — His history composed of Grecian materials, not Oriental. — Phraortês — Kyaxarês. — Siege of Nineveh — invasion of the Scythians and Cimmerians. — The Cimmerians. — The Scythians. — Grecian settlements on the coast of the Euxine. — Scythia as described by Herodotus. — Tribes of Scythians. — Manners and worship. — Scythians formidable from numbers and courage. — Sarmatians. — Tribes east and north of the Palus Mæotis. — Tauri in the Crimea — Massagetæ. — Invasion of Asia by Scythians and Cimmerians. — Cimmerians driven out of their country by the Scythians. — Difficulties in the narrative of Herodotus. — Cimmerians in Asia Minor. — Scythians in Upper Asia. — Expulsion of these Nomads, after a temporary occupation. — Lydian kings Sadyattês and Alyattês — war against Milêtus. — Sacrilege committed by Alyattês — oracle — he makes peace with Milêtus. — Long reign — death — and sepulchre, of Alyattês. — Crœsus. — He attacks and conquers the Asiatic Greeks. — Want of coöperation among

the Ionic cities. — Unavailing suggestion of Thalês — to merge the twelve Ionic cities into one Pan-Ionic city at Teôs. — Capture of Ephesus. — Crœsus becomes king of all Asia westward of the Halys. — New and important era for the Hellenic world — commencing with the conquests of Crœsus. — Action of the Lydian empire continued on a still larger scale by the Persians... 219–263

CHAPTER XVIII.

PHENICIANS.

Phenicians and Assyrians — members of the Semitic family of the human race. — Early presence of Phenician ships in the Grecian seas — in the Homeric times. — Situation and cities of Phenicia. — Phenician commerce flourished more in the earlier than in the later times of Greece. — Phenician colonies — Utica, Carthage, Gadês, etc. — Commerce of the Phenicians of Gadês — towards Africa on one side and Britain on the other. — Productive region round Gadês, called Tartêssus. — Phenicians and Carthaginians — the establishments of the latter combined views of empire with views of commerce. — Phenicians and Greeks in Sicily and Cyprus — the latter partially supplant the former. — Iberia and Tartêssus — unvisited by the Greeks before about 630 B. C. — Memorable voyage of the Samian Kôlæus to Tartêssus. — Exploring voyages of the Phôkæans, between 630–570 B. C. — Important addition to Grecian geographical knowledge, and stimulus to Grecian fancy, thus communicated. — Circumnavigation of Africa by the Phenicians. — This circumnavigation was really accomplished — doubts of critics, ancient and modern, examined. — Caravan-trade by land carried on by the Phenicians..... 264–289

CHAPTER XIX.

ASSYRIANS. — BABYLON.

Assyrians — their name rests chiefly on Nineveh and Babylon. — Chaldæans at Babylon — order of priests. — Their astronomical observations. — Babylonia — its laborious cultivation and fertility. — City of Babylon — its dimensions and walls. — Babylon — only known during the time of its degradation — yet even then the first city in Western Asia. — Immense command of human labor possessed by the Babylonian kings. — Collective civilization in Asia, without individual freedom or development. — Gradu ated contrast between Egyptians, Assyrians, Phenicians, and Greeks. — Deserts and predatory tribes surrounding the Babylonians. — Appendix, "Nineveh and its Remains," by Mr. Layard..... 290–307

CHAPTER XX.

EGYPTIANS.

Phenicians — the link of commerce between Egypt and Assyria. — Herodotus — earliest Grecian informant about Egypt. — The Nile in the time of Herodotus. — Thebes and Upper Egypt — of more importance in early times than Lower Egypt, but not so in the days of Herodotus. — Egyptian castes or hereditary professions. — Priests. — The military order. — Different statements about the castes. — Large town population of Egypt. — Profound submission of the people. — Destructive toil imposed by the great monuments. — Worship of animals. — Egyptian kings — taken from different parts of the country. — Relations of Egypt with Assyria. — Egyptian history not known before Psammetichus — First introduction of Greeks into Egypt under Psammetichus — stories connected with it. — Importance of Grecian mercenaries to the Egyptian kings — caste of interpreters. — Opening of the Kanôpic branch of the Nile to Greek commerce — Greek establishment at Naukratis. — Discontents and mutiny of the Egyptian military order. — Nekôs son of Psammetichus — his active operations. — Defeated by Nebuchadnezzar at Carchemisch. — Psammis, the son of Nekôs. — Apriês. — Amasis — dethrones Apriês by means of the native soldiers. — He encourages Grecian commerce. — Important factory and religious establishment for the Greeks at Naukratis. — Prosperity of Egypt under Amasis. — Appendix, on the Egyptian chronology given by Manetho, as explained by M. Boeckh..... 308–342

CHAPTER XXI.

DECLINE OF THE PHENICIANS. — GROWTH OF CARTHAGE.

Decline of the Phenicians — growth of Grecian marine and commerce. — Effect of Phenicians, Assyrians, and Egyptians on the Greek mind. — The alphabet. — The scale of money and weight. — The gnomon — and the division of the day. — Carthage. — Era of Carthage. — Dominion of Carthage. — Dido. — First known collision of Greeks and Carthaginians - Massalia. — Amicable relations between Tyre and Carthage.. 342–348

CHAPTER XXII.

WESTERN COLONIES OF GREECE — IN EPIRUS, ITALY, SICILY, AND GAUL.

Early unauthenticated emigration from Greece. — Ante-Hellenic population of Sicily — Sikels — Sikans — Elymi — Phenicians. — Œnotria — Italia. — Pelasgi in Italy. — Latins — Œnotrians — Epirots — ethnically cognate. — Analogy of languages — Greek, Latin, and Oscan. — Grecian colonization of ascertained date in Sicily — commences in 735 B. C. — Cumæ in Campania — earlier — date unknown. — Prosperity of Cumæ between 700–500 B. C. — Decline of Cumæ from 500 B. C. — Revolution — despotism of Aristodêmus. — Invasion of Cumæ by Tuscans and Samnites from the interior. — Rapid multiplication of Grecian colonies in Sicily and Italy, beginning with 735 B. C. — Foundation of Naxos in Sicily by Theoklês. — Spot where the Greeks first landed in Sicily — memorable afterwards. — Ante-Hellenic distribution of Sicily — Foundation of Syracuse. — Leontini and Katana. — Megara in Sicily. — Gela. — Zanklê, afterwards Messênê (Messina). — Sub-colonies — Akræ, Kasmenæ, Kamarina, etc. — Agrigentum, Selinus, Himera, etc. — Prosperity of the Sicilian Greeks. — Mixed character of the population. — Peculiarity of the monetary and statical system, among the Sicilian and Italie-

Greeks. -- Sikels and Sikans gradually Hellenized. — Difference between the Greeks in Sicily and those in Greece proper. — Native population in Sicily not numerous enough to become formidable to the Greek settlers. — Sikel prince Duketius. — Grecian colonies in southern Italy. — Native population and territory. — Sybaris and Krotôn. — Territory and colonies of Sybaris and Krotôn. — Epizephyrian Lokri. — Original settlers of Lokri — their character and circumstances. — Treachery towards the indigenous Sikels. — Mixture of Sikels in their territory — Sikel customs adopted. — Lokrian lawgiver Zaleukus. — Rigor of his laws — government of Lokri. — Rhêgium. — Chalkidic settlements in Italy and Sicily — Rhêgium, Zanklê, Naxos, Katana, Leontini. — Kaulônia and Skyllêtium. — Siris or Hêrakleia. — Metapontium. — Tarentum — circumstances of its foundation. — The Partheniæ — Phalanthus the œkist. — Situation and territory of Tarentum. — Iapygians. — Messapians. — Prosperity of the Italian Greeks between 700–500 B. C. — Ascendency over the Œnotrian population. — Krotôn and Sybaris — at their maximum from 560–510 B. C. — The Sybarites — their luxury — their organization, industry, and power. — Grecian world about 560 B. C. — Ionic and Italic Greeks are then the most prominent among Greeks. — Consequences of the fall of Sybaris. — Krotoniates — their salubrity, strength, success in the Olympic games, etc. — Massalia 349–402

CHAPTER XXIII.

GRECIAN COLONIES IN AND NEAR EPIRUS.

Korkyra. — Early foundation of Korkyra from Corinth. — Relations of Korkyra with Corinth. — Relations with Epirus. — Ambrakia founded by Corinth. — Joint settlements by Corinth and Korkyra. — Leukas and Anaktorium. — Apollonia and Epidamnus. — Relations between these colonies — Commerce 402–410

CHAPTER XXIV.

AKARNANIANS. — EPIROTS.

Akarnanians. — Their social and political condition. — Epirots — comprising different tribes, with little or no ethnical kindred. — Some of these tribes ethnically connected with those of southern Italy; — others, with the Macedonians — impossible to mark the boundaries. — Territory distributed into villages — no considerable cities. — Coast of Epirus discouraging to Grecian colonization. — Some Epirotic tribes governed by kings, others not..... 411–419

HISTORY OF GREECE.

PART II.

CONTINUATION OF HISTORICAL GREECE

CHAPTER IX.

CORINTH, SIKYON, AND MEGARA.—AGE OF THE GRECIAN DESPOTS.

THE preceding volume brought down the history of Sparta to the period marked by the reign of Peisistratus at Athens; at which time she had attained her maximum of territory, was confessedly the most powerful state in Greece, and enjoyed a proportionate degree of deference from the rest. I now proceed to touch upon the three Dorian cities on and near to the Isthmus,—Corinth, Sikyôn, and Megara, as they existed at this same period.

Even amidst the scanty information which has reached us, we trace the marks of considerable maritime energy and commerce among the Corinthians, as far back as the eighth century B. C. The foundation of Korkyra and Syracuse, in the 11th Olympiad, or 734 B. C. (of which I shall speak farther in connection with Grecian colonization generally), by expeditions from Corinth, affords a good proof that they knew how to turn to account the excellent situation which connected them with the sea on both sides of Peloponnesus: and Thucydides,[1] while he notices them as the chief liberators of the sea, in early times, from pirates, also

[1] Thucyd. i, 13.

tells us that the first great improvement in ship-building, — the construction of the trireme, or ship of war, with a full deck and triple banks for the rowers, — was the fruit of Corinthian ingenuity. It was in the year 703 B. C., that the Corinthian Ameinoklês built four triremes for the Samians, the first which those islanders had ever possessed: the notice of this fact attests as well the importance attached to the new invention, as the humble scale on which the naval force in those early days was equipped. And it is a fact of not less moment, in proof of the maritime vigor of Corinth in the seventh century B. C., that the earliest naval battle known to Thucydides was one which took place between the Corinthians and the Korkyræans, B. C. 664.[1]

It has already been stated, in the preceding volume, that the line of Herakleid kings in Corinth subsides gradually, through a series of empty names, into the oligarchy denominated Bacchiadæ, or Bacchiads, under whom our first historical knowledge of the city begins. The persons so named were all accounted descendants of Hêraklês, and formed the governing caste in the city; intermarrying usually among themselves, and choosing from their own number an annual prytanis, or president, for the administration of affairs. Of their internal government we have no accounts, except the tale respecting Archias the founder of Syracuse,[2] one of their number, who had made himself so detested by an act of brutal violence terminating in the death of the beautiful youth Aktæôn, as to be forced to expatriate. That such a man should have been placed in the distinguished post of œkist of the colony of Syracuse, gives us no favorable idea of the Bacchiad oligarchy: we do not, however, know upon what original authority the story depends, nor can we be sure that it is accurately recounted. But Corinth, under their government, was already a powerful commercial and maritime city, as has already been stated.

Megara, the last Dorian state in this direction eastward, and

[1] Thucyd. i, 13.

[2] Plutarch, Amator. Narrat. c. 2, p. 772; Diodor. Fragm. lib. viii, p. 26. Alexander, Ætolus (Fragm. i, 5, ed. Schneidewin), and the Scholiast ad Apollon. Rhod. iv, 1212, seem to connect this act of outrage with the expulsion of the Bacchiadæ from Corinth, which did not take place until long afterwards.

conterminous with Attica at the point where the mountains called Kerāta descend to Eleusis and the Thracian plain, is affirmed to have been originally settled by the Dorians of Corinth, and to have remained for some time a dependency of that city It is farther said to have been at first merely one of five separate villages, — Megara, Heræa, Peiræa, Kynosura, Tripodiskus, — inhabited by a kindred population, and generally on friendly terms, yet sometimes distracted by quarrels, and on those occasions carrying on war with a degree of lenity and chivalrous confidence which reverses the proverbial affirmation respecting the sanguinary character of enmities between kindred. Both these two statements are transmitted to us (we know not from what primitive source) as explanatory of certain current phrases:[1] the author of the latter cannot have agreed with the author of the former in considering the Corinthians as masters of the Megarid, because he represents them as fomenting wars among these five villages for the purpose of acquiring that territory. Whatever may be the truth respecting this alleged early subjection of Megara, we know it[2] in the historical age, and that too as early as the 14th Olympiad, only as an independent Dorian city,

[1] The first account seems referred to Dêmôn (an author of about 280 B. C., and a collector of Attic archæology, or what is called Ἀτθιδόγραφος. See Phanodêmi, Dêmônis, Clitodêmi, atque Istri, Ἀτθίδων, Fragmenta, ed. Siebelis, Præfatio, pp. viii–xi), and is given as the explanation of the locution — ὁ Διὸς Κόρινθος. See Schol. ad Pindar. Nem. vii, ad finem; Schol. Aristophan. Ran. 440: the Corinthians seem to have represented their eponymous hero as son of Zeus, though other Greeks did not believe them (Pausan. ii, 1, 1). That the Megarians were compelled to come to Corinth for demonstration of mourning on occasion of the decease of any of the members of the Bacchiad oligarchy, is, perhaps, a story copied from the regulation at Sparta regarding the Periœki and Helots (Herod. vi, 57; Pausan. iv, 14, 3; Tyrtæus, Fragm.). Pausanias conceives the victory of the Megarians over the Corinthians, which he saw commemorated in the Megarian θησαυρὸς at Olympia, as having taken place before the 1st Olympiad, when Phorbas was life-archon at Athens: Phorbas is placed by chronologers fifth in the series from Medon, son of Codrus (Pausan. i, 39, 4; vi, 19, 9). The early enmity between Corinth and Megara is alluded to in Plutarch, De Malignitate Herodoti, p. 868, c. 35.

The second story noticed in the text is given by Plutarch, Quæstion. Græc. c. 17, p. 295, in illustration of the meaning of the word Δορύξενος.

[2] Pausanias, i, 44, 1, and the epigram upon Orsippus in Boeckh, Corpus Inscript. Gr. No. 1050, with Boeckh's commentary.

maintaining the integrity of its territory under its leader Orsippus, the famous Olympic runner, against some powerful enemies, probably the Corinthians. It was of no mean consideration, possessing a territory which extended across Mount Geraneia to the Corinthian gulf, on which the fortified town and port of Pêgæ, belonging to the Megarians, was situated; it was mother of early and distant colonies, — and competent, during the time of Solon, to carry on a protracted contest with the Athenians, for the possession of Salamis, wherein, although the latter were at last victorious, it was not without an intermediate period of ill-success and despair.

Of the early history of Sikyôn, from the period when it became Dorian down to the seventh century B. C., we know nothing. Our first information respecting it, concerns the establishment of the despotism of Orthagoras, about 680–670 B. C. And it is a point deserving of notice, that all the three above-mentioned towns, — Corinth, Sikyôn, and Megara, — underwent during the course of this same century a similar change of government. In each of them a despot established himself; Orthagoras in Sikyôn; Kypselus in Corinth; Theagenês in Megara.

Unfortunately, we have too little evidence as to the state of things by which this change of government was preceded and brought about, to be able to appreciate fully its bearing. But what draws our attention to it more particularly is, that the like phenomenon seems to have occurred contemporaneously throughout a large number of cities, continental, insular, and colonial, in many different parts of the Grecian world. The period between 650 and 500 B. C., witnessed the rise and downfall of many despots and despotic dynasties, each in its own separate city. During the succeeding interval between 500 and 350 B. C., new despots, though occasionally springing up, become more rare; political dispute takes another turn, and the question is raised directly and ostensibly between the many and the few, — the people and the oligarchy. But in the still later times which follow the battle of Chæroneia, in proportion as Greece, declining in civic not less than in military spirit, is driven to the constant employment of mercenary troops, and humbled by the overruling interference of foreigners, — the despot with his standing foreign body-guard becomes again a characteristic of the time; a tendency

partially counteracted, but never wholly subdued, by Aratus, and the Achæan league of the third century B. C.

It would have been instructive if we had possessed a faithful record of these changes of government in some of the more considerable of the Grecian towns; but in the absence of such evidence we can do little more than collect the brief sentences of Aristotle and others respecting the causes which produced them. For as the like change of government was common, near about the same time, to cities very different in locality, in race of inhabitants, in tastes and habits, and in wealth, it must partly have depended upon certain general causes which admit of being assigned and explained.

In the preceding volume, I tried to elucidate the heroic government of Greece, so far as it could be known from the epic poems, — a government founded (if we may employ modern phraseology) upon divine right as opposed to the sovereignty of the people, but requiring, as an essential condition, that the king shall possess force, both of body and mind, not unworthy of the exalted breed to which he belongs.[1] In this government, the authority which pervades the whole society, all resides in the king; but on important occasions it is exercised through the forms of publicity; he consults, and even discusses, with the council of chiefs or elders, — he communicates after such consultation with the assembled agora, — who hear and approve, perhaps hear and murmur, but are not understood to exercise an option or to reject. In giving an account of the Lykurgean system, I remarked that the old primitive Rhetræ, or charters of compact, indicated the existence of these same elements; a king of superhuman lineage (in this particular case two coördinate kings), — a senate of twenty-eight old men, besides the kings who sat in it, — and an ekklesia, or public assembly of citizens, convened for the purpose of approving or rejecting propositions submitted to them, with little or no liberty of discussion. The elements of the heroic government of Greece are thus found to be substantially the same as those existing in the primitive Lykurgean constitution: in both cases the predominant force residing in the kings, — and the func-

[1] See a striking passage in Plutarch, Præcept. Reipubl. Gerend. c. 8 p. 801.

tions of the senate, still more those of the public assembly, being comparatively narrow and restricted; in both cases the regal authority being upheld by a certain religious sentiment, which tended to exclude rivalry and to insure submission in the people up to a certain point, in spite of misconduct or deficiency in the reigning individual. Among the principal Epirotic tribes, this government subsisted down to the third century B. C.[1], though some of them had passed out of it, and were in the habit of electing annually a president out of the gens to which the king belonged.

Starting from these points, common to the Grecian heroic government, and to the original Lykurgean system, we find that in the Grecian cities generally, the king is replaced by an oligarchy, consisting of a limited number of families, — while at Sparta, the kingly authority, though greatly curtailed, is never abolished. And the different turn of events at Sparta admits of being partially explained. It so happened that, for five centuries, neither of the two coördinate lines of Spartan kings was ever without some male representatives, so that the sentiment of divine right, upon which their preëminence was founded, always proceeded in an undeviating channel. That sentiment never wholly died out in the tenacious mind of Sparta, but it became sufficiently enfeebled to occasion a demand for guarantees against abuse. If the senate had been a more numerous body, composed of a few principal families, and comprising men of all ages, it might, perhaps, have extended its powers so much as to absorb those of the king: but a council of twenty-eight very old men, chosen indiscriminately from all Spartan families, was essentially an adjunct and secondary force. It was insufficient even as a restraint upon the king, — still less was it competent to become his rival; and it served indirectly even as a support to him, by preventing the formation of any other privileged order powerful enough to be an overmatch for his authority. This insufficiency on the part of the senate was one of the causes which occasioned the formation of the annually-renewed Council of Five, called the Ephors; originally a defensive board, like the Roman Tribunes, intended as a restraint upon abuse of power in the kings, but afterwards expanding into a paramount and

[1] Plutarch, Pyrrh. c. 5. Aristot. Polit. v, 9, 1

unresponsible Executive Directory. Assisted by endless dissensions between the two coördinate kings, the ephors encroached upon their power on every side, limited them to certain special functions, and even rendered them accountable and liable to punishment, but never aspired to abolish the dignity. That which the regal authority lost in extent (to borrow the just remark of king Theopompus)[1] it gained in durability: the descendants of the twins Eurysthenês and Proklês continued in possession of their double sceptre from the earliest historical times down to the revolutions of Agis the Third, and Kleomenês the Third, — generals of the military force, growing richer and richer, and reverenced as well as influential in the state, though the directory of ephors were their superiors. And the ephors became, in time, quite as despotic, in reference to internal affairs, as the kings could ever have been before them; for the Spartan mind, deeply possessed with the feelings of command and obedience, remained comparatively insensible to the ideas of control and responsibility, and even averse to that open discussion and censure of public measures, or officers, which such ideas imply. We must recollect that the Spartan political constitution was both simplified in its character, and aided in its working, by the comprehensive range of the Lykurgean discipline, with its rigorous equal pressure upon rich and poor, which averted many of the causes elsewhere productive of sedition, — habituating the proudest and most refractory citizen to a life of undeviating obedience, — satisfying such demand as existed for system and regularity, — rendering Spartan personal habits of life much more equal than even democratical Athens could parallel; but contributing, at the same time, to engender a contempt for talkers, and a dislike of methodical and prolonged speech, which of itself sufficed to exclude all regular interference of the collective citizens, either in political or judicial affairs.

Such were the facts at Sparta; but in the rest of Greece the primitive heroic government was modified in a very different manner: the people outgrew, much more decidedly, that feeling of divine right and personal reverence which originally gave authority to the king. Willing submission ceased on the part

[1] Aristot. Polit. v, 9, 1

of the people, and still more on the part of the inferior chiefs, and with it ceased the heroic royalty. Something like a system or constitution came to be demanded.

Of this discontinuance of kingship, so universal in the political march of Hellas, the prime cause is, doubtless, to be sought in the smallness and concentrated residence of each distinct Hellenic society. A single chief, perpetual and unresponsible, was noway essential for the maintenance of union. In modern Europe, for the most part, the different political societies which grew up out of the extinction of the Roman empire embraced each a considerable population and a wide extent of territory and the monarchical form presented itself as the only known means of union between the parts: the only visible and imposing symbol of a national identity. Both the military character of the Teutonic invaders, as well as the traditions of the Roman empire which they dismembered, tended towards the establishment of a monarchical chief, the abolition of whose dignity would have been looked upon as equivalent, and would really have been equivalent, to the breaking up of the nation, since the maintenance of a collective union by means of general assemblies was so burdensome, that the kings themselves vainly tried to exact it by force, and representative government was then unknown.

The history of the Middle Ages, though exhibiting constant resistance on the part of powerful subjects, frequent deposition of individual kings, and occasional changes of dynasty, contains few instances of any attempt to maintain a large political aggregate united without a king, either hereditary or elective. Even towards the close of the last century, at the period when the federal constitution of the United States of America was first formed, many reasoners regarded[1] as an impossibility the application of any other system than the monarchical to a territory of large size and population, so as to combine union of the whole

[1] See this subject discussed in the admirable collection of letters, called the Federalist, written in 1787, during the time when the federal constitution of the United States of America was under discussion. — Letters 9, 10, 14, by Mr. Madison.

"Il est de la nature d'une république (says Montesquieu, Esprit des Loix, viii, 16) de n'avoir qu'un petit territoire: sans cela, elle ne peut guère subsister."

with equal privileges and securities to each of the parts: and it might, perhaps, be a real impossibility among any rude people, with strong local peculiarities, difficult means of communication, and habits of representative government not yet acquired. Hence, throughout all the larger nations of mediæval and modern Europe, with few exceptions, the prevailing sentiment has been favorable to monarchy; but wherever any single city, or district, or cluster of villages, whether in the plains of Lombardy, or in the mountains of Switzerland, has acquired independence, — wherever any small fraction has severed itself from the aggregate, — the opposite sentiment has been found, and the natural tendency has been towards some modification of republican government;[1] out of which, indeed, as in Greece, a despot has often been engendered, but always through some unnatural mixture of force and fraud. The feudal system, evolved out of the disordered state of Europe between the eleventh and thirteenth centuries, always presumed a permanent suzerain, vested with large rights of a mixed personal and proprietary character over his

[1] David Hume, in his Essay xii (vol. i, p. 159, ed. 1760), after remarking "that all kinds of government, free and despotic, seem to have undergone in modern times (*i. e.* as compared with ancient) a great change for the better, with regard both to foreign and domestic management," proceeds to say: —

"But though all kinds of government be improved in modern times, yet monarchical government seems to have made the greatest advances towards perfection. It may now be affirmed of civilized monarchies, what was formerly said in praise of republics alone, that they are a government of laws, not of men. They are found susceptible of order, method, and constancy to a surprising degree. Property is there secure; industry encouraged; the arts flourish; and the prince lives secure among his subjects, like a father among his children. There are, perhaps, and have been for two centuries, near two hundred absolute princes, great and small, in Europe; and allowing twenty years to each reign, we may suppose that there have been whole two thousand monarchs, or tyrants, as the Greeks would hav them; yet of these there has not been one, not even Philip the Seco Spain, so bad as Tiberius, Caligula, Nero, Domitian, who were four in twelve amongst the Roman emperors. It must, however, be confessed, that though monarchical governments have approached nearer to popular ones in gentleness and stability, they are still much inferior. Our modern education and customs instil more humanity and moderation than the ancient, but have not as yet been able to overcome entirely the disadvantages of that form of government."

vassals, though subject, also, to certain obligations towards them the immediate vassals of the king had subordinate vassals of their own, to whom they stood in the same relation: and in this hierarchy[1] of power, property, and territory blended together, the rights of the chief, whether king, duke, or baron, were always conceived as constituting a status apart, and neither conferred originally by the grant, nor revocable at the pleasure, of those over whom they were exercised. This view of the essential nature of political authority was a point in which the three great elements of modern European society, — the Teutonic, the Roman, and the Christian, — all concurred, though each in a different way and with different modifications; and the result was, a variety of attempts on the part of subjects to compromise with their chief, without any idea of substituting a delegated executive in his place. On particular points of these feudal monarchies there grew up, gradually, towns with a concentrated population, among whom was seen the remarkable combination of a republican feeling, demanding collective and responsible management in their own local affairs, with a necessity of union and subordination towards the great monarchical whole; and hence again arose a new force tending both to maintain the form, and to predetermine the march, of kingly government.[2] And it has been found in

[1] See the Lectures of M. Guizot, Cours d'Histoire Moderne, Leçon 30, vol. iii, p. 187, edit. 1829.

[2] M. Augustin Thierry observes, Lettres sur l'Histoire de France, Lettre xvi, p. 235: —

"Sans aucun souvenir de l'histoire Grecque ou Romaine, les bourgeois des onzième et douzième siècles, soit que leur ville fut sous la seigneurie d'un roi, d'un comte, d'un duc, d'une évêque ou d'une abbaye, allaient droit à la république: mais la réaction du pouvoir établi les rejetait souvent en arrière. Du balancement de ces deux forces opposées résultait pour la ville une sort de gouvernement mixte, et c'est ce qui arriva, en général, dans le nord de la France, comme le prouvent les chartes de commune."

Even among the Italian cities, which became practically self-governing, and produced despots as many in number and as unprincipled in character as the Grecian (I shall touch upon this comparison more largely hereafter) Mr. Hallam observes, that "the sovereignty of the emperors, though not very effective, was in theory always admitted: their name was used in public acts and appeared upon the coin." — View of the Middle Ages, part i, ch. 3, p. 346, sixth edit.

See also M. Raynouard, Histoire du Droit Municipal en France, book iii, ch. 12, vol. ii, p. 156: "Cette séparation essentielle et fondamentale entre les actes, les agens, du gouvernement — et les actes, les agens de l'administration locale pour les affaires locales — cette démarcation politique, dont l'empire Romain avoit donné l'exemple, et qui concilioit le gouvernement monarchique avec une administration populaire — continua plus ou moins expressément sous les trois dynasties."

M. Raynouard presses too far his theory of the continuous preservation of the municipal powers in towns from the Roman empire down to the third French dynasty; but into this question it is not necessary for my purpose to enter.

practice possible to attain this latter object, — to combine regal government with fixity of administration, equal law impartially executed, security to person and property, and freedom of discussion under representative forms, — in a degree which the wisest ancient Greek would have deemed hopeless.[1] Such an improvement in the practical working of this species of government, speaking always comparatively with the kings of ancient times in Syria, Egypt, Judæa, the Grecian cities, and Rome, — coupled with the increased force of all established routine, and the greater durability of all institutions and creeds which have once obtained footing throughout any wide extent of territory and people, has caused the monarchical sentiment to remain predominant in the European mind, though not without vigorous occasional dissent, throughout the increased knowledge and the enlarged political experience of the last two centuries.

It is important to show that the monarchical institutions and monarchical tendencies prevalent throughout mediæval and modern Europe have been both generated and perpetuated by causes peculiar to those societies, whilst in Hellenic societies such causes had no place, — in order that we may approach Hellenic phenomena in the proper spirit, and with an impartial estimate of the feeling universal among Greeks towards the idea of a king. The primitive sentiment entertained towards the heroic king died

[1] In reference to the Italian republics of the Middle Ages, M. Sismondi observes, speaking of Philip della Torre, denominated *signor* by the people of Como, Vercelli, and Bergamo, "Dans ces villes, non plus que dans celles que son frère s'était auparavant assujetties, le peuple ne croyoit point renoncer à sa liberté: il n'avoit point voulu choisir un maître, mais seulement un protecteur contre les nobles, un capitaine des gens de guerre, et un chef de la justice. L'expérience lui apprit trop tard, que ces prérogatives réunies constituoient un souverain." — Républiques Italiennes, vol. iii, ch. 20, p. 273.

out, passing first into indifference, next, — after experience of the despots, — into determined antipathy.

To an historian like Mr. Mitford, full of English ideas respecting government, this anti-monarchical feeling appears of the nature of insanity, and the Grecian communities like madmen without a keeper: while the greatest of all benefactors is the hereditary king, who conquers them from without, — the second-best is the home-despot, who seizes the acropolis and puts his fellow-citizens under coercion. There cannot be a more certain way of misinterpreting and distorting Grecian phenomena than to read them in this spirit, which reverses the maxims both of prudence and morality current in the ancient world. The hatred of kings as it stood among the Greeks, whatever may be thought about a similar feeling now, was a preëminent virtue, flowing directly from the noblest and wisest part of their nature: it was a consequence of their deep conviction of the necessity of universal legal restraint — it was a direct expression of that regulated sociality which required the control of individual passion from every one without exception, and most of all from him to whom power was confided. The conception which the Greeks formed of an unresponsible One, or of a king who could do no wrong, may be expressed in the pregnant words of Herodotus:[1] "He subverts the customs of the country: he violates women: he puts men to death without trial." No other conception of the probable tendencies of kingship was justified either by a general knowledge of human nature, or by political experience as it stood from Solon downward: no other feeling than abhorrence could be entertained for the character so conceived: no other than a man of unprincipled ambition would ever seek to invest himself with it.

Our larger political experience has taught us to modify this opinion by showing that, under the conditions of monarchy in the best governments of modern Europe, the enormities described by Herodotus do not take place, — and that it is possible, by means of representative constitutions acting under a certain force of manners, customs, and historical recollection, to obviate many of

[1] Herod. iii, 80. *Νομαιά τε κινεῖ πάτρια, καὶ βιᾶται γυναῖκας, κτείνει τε ἀκρίτους.*

the mischiefs likely to flow from proclaiming the duty of peremptory obedience to an hereditary and unresponsible king, who cannot be changed without extra-constitutional force. But such larger observation was not open to Aristotle, the wisest as well as the most cautious of ancient theorists; nor if it had been open, could he have applied with assurance its lessons to the governments of the single cities of Greece. The theory of a constitutional king, especially as it exists in England, would have appeared to him impracticable: to establish a king who will reign without governing, — in whose name all government is carried on, yet whose personal will is in practice of little or no effect, — exempt from all responsibility, without making use of the exemption, — receiving from every one unmeasured demonstrations of homage, which are never translated into act except within the bounds of a known law, — surrounded with all the paraphernalia of power, yet acting as a passive instrument in the hands of ministers marked out for his choice by indications which he is not at liberty to resist. This remarkable combination of the fiction of superhuman grandeur and license with the reality of an invisible strait-waistcoat, is what an Englishman has in his mind when he speaks of a constitutional king: the events of our history have brought it to pass in England, amidst an aristocracy the most powerful that the world has yet seen, — but we have still to learn whether it can be made to exist elsewhere, or whether the occurrence of a single king, at once able, aggressive, and resolute, may not suffice to break it up. To Aristotle, certainly, it could not have appeared otherwise than unintelligible and impracticable: not likely even in a single case, — but altogether inconceivable as a permanent system and with all the diversities of temper inherent in the successive members of an hereditary dynasty. When the Greeks thought of a man exempt from legal responsibility, they conceived him as really and truly such, in deed as well as in name, with a defenceless community exposed to his oppressions;[1] and their fear and hatred of him was measured by

[1] Euripides (Supplices, 429) states plainly the idea of a τύραννος, as received in Greece the antithesis to laws: —

Οὐδὲν τυράννου δυσμενέστερον πόλει·
Ὅπου, τὸ μὲν πρώτιστον, οὐκ εἰσιν νόμοι
Κοινοί, κρατεῖ δ' εἷς, τὸν νόμον κεκτημένος
Αὑτὸς παρ' αὑτῷ. Compare Soph. Antigon. 737.

their reverence for a government of equal law and free speech, with the ascendency of which their whole hopes of security were associated, — in the democracy of Athens more perhaps than in any other portion of Greece. And this feeling, as it was one of the best in the Greek mind, so it was also one of the most widely spread, — a point of unanimity highly valuable amidst so many points of dissension. We cannot construe or criticize it by reference to the feelings of modern Europe, still less to the very peculiar feelings of England, respecting kingship: and it is the application, sometimes explicit and sometimes tacit, of this unsuitable standard, which renders Mr. Mitford's appreciation of Greek politics so often incorrect and unfair.

When we try to explain the course of Grecian affairs, not from the circumstances of other societies, but from those of the Greeks themselves, we shall see good reason for the discontinuance as well as for the dislike of kingship. Had the Greek mind been as stationary and unimproving as that of the Orientals, the discontent with individual kings might have led to no other change than the deposition of a bad king in favor of one who promised to be better, without ever extending the views of the people to any higher conception than that of a personal government. But the Greek mind was of a progressive character, capable of conceiving and gradually of realizing amended social combinations. Moreover, it is in the nature of things that any government, — regal, oligarchical, or democratical, — which comprises only a single city, is far less stable than if it embraced a wider surface and a larger population: and when that semi-religious and mechanical submission, which made up for the personal deficiencies of the heroic king, became too feeble to serve as a working

See, also, the discussion in Aristot. Polit. iii, sect. 10 and 11, in which the rule of the king is discussed in comparison with the government of laws; compare also iv, 8, 2-3. The person called "a king according to law" is, in his judgment, no king at all: Ὁ μὲν γὰρ κατὰ νόμον λεγόμενος βασιλεὺς οὐκ ἐστιν εἶδος καθάπερ εἴπομεν βασιλείας (iii, 11, 1).

Respecting ἰσονομίη, ἰσηγορίη, παρρησία, — equal laws and equal speech, — as opposed to monarchy, see Herodot. iii, 142, v. 78-92; Thucyd. iii, 62; Demosthen. ad Leptin. c. 6, p. 461; Eurip. Ion. 671.

Of Timoleon it was stated, as a part of the grateful vote passed after his death by the Syracusan assembly, — ὅτι τοὺς τυράννους καταλύσας, — ἀπέδωκε τοὺς νόμους τοῖς Σικελιώταις (Plutarch. Timoleon. c. 39).

See Karl Fried. Hermann, Griech. Staats Alterthümer, sect 61-65.

principle, the petty prince was in too close contact with his people, and too humbly furnished out in every way, to get up a prestige or delusion of any other kind: he had no means of overawing their imaginations by that combination of pomp, seclusion, and mystery, which Herodotus and Xenophon so well appreciate among the artifices of kingcraft.[1] As there was no new feeling upon which a perpetual chief could rest his power, so there was nothing in the circumstances of the community which rendered the maintenance of such a dignity necessary for visible and effective union:[2] in a single city, and a small circumjacent community, collective deliberation and general rules, with temporary and responsible magistrates, were practicable without difficulty.

To maintain an unresponsible king, and then to contrive accompaniments which shall extract from him the benefits of responsible government, is in reality a highly complicated system, though, as has been remarked, we have become familiar with it in modern Europe: the more simple and obvious change is, to substitute one or more temporary and responsible magistrates in place of the king himself. Such was the course which affairs took in Greece. The inferior chiefs, who had originally served as council to the king, found it possible to supersede him, and to alternate the functions of administration among themselves; retaining probably the occasional convocation of the general assembly, as it had existed before, and with as little practical efficacy. Such was in substance the character of that mutation which occurred generally throughout the Grecian states, with the exception of Sparta: kingship was abolished, and an oligarchy took its place, — a council deliberating collectively, deciding general matters by the majority of voices, and selecting some individuals of their own body as temporary and accountable adminis-

[1] See the account of Deiokês, the first Median king, in Herodotus, . . —, evidently an outline drawn by Grecian imagination: also, the Cyropædia of Xenophon, viii, 1, 40; viii, 3, 1-14; vii, 5, 37..... οὐ τούτῳ μόνῳ ἐνόμιζε (Κῦρος) χρῆναι τοὺς ἄρχοντας τῶν ἀρχομένων διαφέρειν τῷ βελτίονας αὐτῶν εἶναι, ἀλλὰ καὶ καταγοητεύειν ᾤετο χρῆναι αὐτούς, etc.

[2] David Hume, Essay xvii, On the Rise and Progress of the Arts and Sciences, p. 198, ed. 1760. The effects of the greater or less extent of territory, upon the nature of the government, are also well discussed in Destutt Tracy Commentaire sur l'Esprit des Loix de Montesquieu, ch. viii.

trators. It was always an oligarchy which arose on the defeasance of the heroic kingdom: the age of democratical movement was yet far distant, and the condition of the people — the general body of freemen — was not immediately altered, either for better or worse, by the revolution; the small number of privileged persons, among whom the kingly attributes were distributed and put in rotation, being those nearest in rank to the king himself, perhaps members of the same large gens with him, and pretending to a common divine or heroic descent. As far as we can make out, this change seems to have taken place in the natural course of events and without violence. Sometimes the kingly lineage died out and was not replaced; sometimes, on the death of a king, his son and successor was acknowledged[1] only as archon, or perhaps set aside altogether to make room for a prytanis, or president, out of the men of rank around.

At Athens, we are told that Kodrus was the last king, and that his descendants were recognized only as archons for life; after some years, the archons for life were replaced by archons for ten years, taken from the body of Eupatridæ, or nobles; subsequently, the duration of the archonship was farther shortened to one year. At Corinth, the ancient kings are said to have passed in like manner into the oligarchy of the Bacchiadæ, out of whom an annual prytanis was chosen. We are only able to make out the general fact of such a change, without knowing how it was brought about, — our first historical acquaintance with the Grecian cities beginning with these oligarchies.

[1] Aristot. Polit. iii. 9, 7; iii. 10, 7–8.

M. Augustin Thierry remarks, in a similar spirit, that the great political change, common to so large a portion of mediæval Europe in the twelfth and thirteenth centuries, whereby the many different *communes* or city constitutions were formed, was accomplished under great varieties of manner and circumstance; sometimes by violence, sometimes by harmonious accord.

"C'est une controverse qui doit finir, que celle des franchises municipales obtenues par l'insurrection et des franchises municipales accordées. Quelque face du problême qu'on envisage, il reste bien entendu que les constitutions urbaines du xii et du xiii siècle, comme toute espèce d'institutions politiques dans tous les temps, ont pu s'établir à force ouverte, s'octroyer de guerre lasse ou de plein gre, être arrachées ou sollicitées, vendues ou données gratuitement: les grandes révolutions sociales s'accomplissent par tous ces moyens à la fois. — (Aug. Thierry, Récits des Temps Mérovingiens, Préface, p. 19 2de édit.)

Such oligarchical governments, varying in their details but analogous in general features, were common throughout the cities of Greece proper as well as of the colonies, throughout the seventh century B. C. Though they had little immediate tendency to benefit the mass of the freemen, yet when we compare them with the antecedent heroic government, they indicate an important advance, — the first adoption of a deliberate and preconceived system in the management of public affairs.[1] They exhibit the first evidences of new and important political ideas in the Greek mind, — the separation of legislative and executive powers; the former vested in a collective body, not merely deliberating but also finally deciding, — while the latter is confided to temporary individual magistrates, responsible to that body at the end of their period of office. We are first introduced to a community of citizens, according to the definition of Aristotle, — men qualified, and thinking themselves qualified, to take turns in command and obedience: the collective sovereign, called The City, is thus constituted. It is true that this first community of citizens comprised only a small proportion of the men personally free, but the ideas upon which it was founded began gradually to dawn upon the minds of all. Political power had lost its heaven-appointed character, and had become an attribute legally communicable as well as determined to certain definite ends; and the ground was thus laid for those thousand questions which agitated so many of the Grecian cities during the ensuing three centuries, partly respecting its apportionment, partly respecting its employment, — questions sometimes raised among the members of the privileged oligarchy itself, sometimes between that order as a whole and the non-privileged Many. The seeds of those popular movements, which called forth so much profound emotion, so much bitter antipathy, so much energy and talent, throughout the Grecian world, with different modifications in each particular city, may thus be traced

[1] Aristot. Polit. iii, 10, 7. Ἐπεὶ δὲ (*i. e.* after the early kings had had their day) *συνέβαινε γίγνεσθαι πολλοὺς ὁμοίους πρὸς ἀρετὴν, οὔκετι ὑπέμενον (τὴν βασίλειαν), ἀλλ' ἐζήτουν κοινόν τι, καὶ πολίτειαν καθίστασαν.*

Κοινόν τι, *a commune*, the great object for which the European towns in the Middle Ages, in the twelfth century, struggled with so much energy, and ultimately obtained: a charter of incorporation, and a qualified privilege of internal self-government.

back to that early revolution which erected the primitive oligarchy upon the ruins of the heroic kingdom.

How these first oligarchies were administered we have no direct information; but the narrow and anti-popular interests naturally belonging to a privileged few, together with the general violence of private manners and passions, leave us no ground for presuming favorably respecting either their prudence or their good feeling; and the facts which we learn respecting the condition of Attica prior to the Solonian legislation (to be recounted in the next chapter) raise inferences all of an unfavorable character.

The first shock which they received, and by which so many of them were subverted, arose from the usurpers called Despots, who employed the prevalent discontents both as pretexts and as aids for their own personal ambition, while their very frequent success seems to imply that such discontents were wide-spread as well as serious. These despots arose out of the bosom of the oligarchies, but not all in the same manner.[1] Sometimes the executive magistrate, upon whom the oligarchy themselves had devolved important administrative powers for a certain temporary period, became unfaithful to his choosers, and acquired sufficient ascendency to retain his dignity permanently in spite of them, — perhaps even to transmit it to his son. In other places, and seemingly more often, there arose that noted character called the Demagogue, of whom historians both ancient and modern commonly draw so repulsive a picture:[2] a man of energy and ambition, sometimes even a member of the oligarchy itself, who stood forward as champion of the grievances and sufferings of the non-privileged Many, acquired their favor, and employed their

[1] The definition of a despot is given in Cornelius Nepos, Vit. Miltiadis, c. 8: "Omnes habentur et dicuntur tyranni, qui potestate sunt perpetuâ in eâ civitate, quæ libertate usa est:" compare Cicero de Republicâ, ii, 26, 27; iii, 14.

The word *τύραννος* was said by Hippias the sophist to have first found its way into the Greek language about the time of Archilochus (B. C. 660): Boeckh thinks that it came from the Lydians or Phyrgians (Comment. ad Corp. Inscrip. No. 3439).

[2] Aristot. Polit. v, 8, 2, 3, 4. *Τύραννος — ἐκ προστατίκης ῥίζης καὶ οὐκ ἀλλοθεν ἐκβλαστάνει* (Plato, Repub. viii, c. 17, p. 565). *Οὐδενὶ γὰρ δὴ ἀδηλον, ὅτι πᾶς τύραννος ἐκ δημοκόλακος φύεται* (Dionys. Halic. vi, 60): a proposition decidedly too general.

strength so effectively as to put down the oligarchy by force, and constitute himself despot. A third form of despot, some presumptuous wealthy man, like Kylôn at Athens, without even the pretence of popularity, was occasionally emboldened by the success of similar adventures in other places to hire a troop of retainers and seize the acropolis; and there were examples, though rare, of a fourth variety, — the lineal descendant of the ancient kings, — who, instead of suffering himself to be restricted or placed under control by the oligarchy, found means to subjugate them, and to extort by force an ascendency as great as that which his forefathers had enjoyed by consent. To these must be added, in several Grecian states, the Æsymnête, or Dictator, a citizen formally invested with supreme and unresponsible power, placed in command of the military force, and armed with a standing body-guard, but only for a time named, and in order to deal with some urgent peril or ruinous internal dissension.[1] The person thus exalted, always enjoying a large measure of confidence, and generally a man of ability, was sometimes so successful, or made himself so essential to the community, that the term of his office was prolonged, and he became practically despot for life; or, even if the community were not disposed to concede to him this permanent ascendency, he was often strong enough to keep it against their will.

Such were the different modes in which the numerous Greek despots of the seventh and sixth centuries B. C. acquired their power. Though we know thus much in general terms from the brief statements of Aristotle, yet, unhappily, we have no contemporary picture of any one of these communities, so as to give us the means of appreciating the change in detail. Of those persons who, possessing inherited kingly dignity, stretched their paternal power so far as to become despots, Aristotle gives us Pheidôn of Argos as an example, whose reign has been already narrated in the preceding volume: of those who made themselves

[1] Aristot. iii, 9, 5; iii, 10, 1–10; iv, 8, 2. *Αἰσυμνῆται — αὐτοκράτορες ὑπάρχοι ἐν τοῖς ἀρχαίοις Ἕλλησι — αἱρετὴ τυραννίς*: compare Theophrastus, Fragment. *περὶ Βασιλείας*, and Dionys. Hal. A. R. v, 73–74; Strabo, xiii, p. 617; and Aristot. Fragment. Rerum Publicarum, ed. Neumann, p. 128, *Κωϊων Πολιτεία*.

despots by means of official power previously held under an oligarchy, he names Phalaris, at Agrigentum, and the despots at Miletus and other cities of the Ionic Greeks: of those who raised themselves by becoming demagogues, he specifies Panætius in the Sicilian town of Leontini, Kypselus at Corinth, and Peisistratus at Athens;[1] of Æsymnêtes, or chosen despots, Pittakus of Mitylênê is the prominent instance. The military and aggressive demagogue, subverting an oligarchy which had degraded and ill-used him, governing as a cruel despot for several years, and at last dethroned and slain, is farther depicted by Dionysius of Halikarnassus, in the history of Aristodêmus of the Italian Cumæ.[2]

From the general statement of Thucydides as well as of Aristotle, we learn that the seventh and sixth centuries B. C. were centuries of progress for the Greek cities generally, in wealth, in power, and in population; and the numerous colonies founded during this period, of which I shall speak in a future chapter, will furnish farther illustration of such progressive tendencies. Now the changes just mentioned in the Grecian governments, imperfectly as we know them, are on the whole decided evidences of advancing citizenship. For the heroic government, with which Grecian communities begin, is the rudest and most infantine of all governments; destitute even of the pretence of system or security, incapable of being in any way foreknown, and depending only upon the accidental variations in the character of the reigning individual, who, in most cases, far from serving as a protection to the poor against the rich and great, was likely to indulge his passions in the same unrestrained way as the latter, and with still greater impunity.

The despots, who in so many towns succeeded and supplanted this oligarchical government, though they governed on principles usually narrow and selfish, and often oppressively cruel, "taking no thought — to use the emphatic words of Thucydides — except for their own body and their own family," — yet since they were

[1] Aristot. Polit. v, 8, 2, 3, 4; v, 4, 5. Aristotle refers to one of the songs of Alkæus as his evidence respecting the elevation of Pittakus: a very sufficient proof doubtless, — but we may see that he had no other informants, except the poets, about these early times.

[2] Dionys. Hal. A. R. vii, 2, 12. The reign of Aristodæmus falls about 510 B. C.

not strong enough to crush the Greek mind, imprinted upon it a painful but improving political lesson, and contributed much to enlarge the range of experience as well as to determine the subsequent cast of feeling.[1] They partly broke down the wall of distinction between the people — properly so called, the general mass of freemen — and the oligarchy; indeed, the demagogue-despots are interesting, as the first evidence of the growing importance of the people in political affairs. The demagogue stood forward as representing the feelings and interests of the people against the governing few, probably availing himself of some special cases of ill-usage, and taking pains to be conciliatory and generous in his own personal behavior; and when the people, by their armed aid, had enabled him to overthrow the existing rulers, they had thus the satisfaction of seeing their own chief in possession of the supreme power, but they acquired no political rights and no increased securities for themselves. What measure of positive advantage they may have reaped, beyond that of seeing their previous oppressors humiliated, we know too little to determine;[2] but even the worst of despots was more formidable to the rich than to the poor, and the latter may perhaps have gained by the change, in comparative importance, notwithstanding their share in the rigors and exactions of a government which had no other permanent foundation than naked fear.

A remark made by Aristotle deserves especial notice here, as illustrating the political advance and education of the Grecian communities. He draws a marked distinction between the early demagogue of the seventh and sixth centuries, and the later demagogue, such as he himself and the generations immediately preceding had witnessed: the former was a military chief, daring and full of resource, who took arms at the head of a body of pop-

[1] Thucyd. i, 17. *Τύραννοι δὲ ὅσοι ἦσαν ἐν ταῖς Ἑλληνικαῖς πόλεσι, τὸ ἐφ' ἑαυτῶν μόνον προορώμενοι ἔς τε τὸ σῶμα καὶ ἐς τὸ τὸν ἴδιον οἶκον αὔξειν δι' ἀσφαλείας ὅσον ἐδύναντο μάλιστα, τὰς πόλεις ᾤκουν.*

[2] Wachsmuth (Hellenische Alterthumskunde, sect. 49–51) and Tittmann (Griechisch. Staatsverfassungen, pp. 527–533) both make too much of the supposed friendly connection and mutual good-will between the despot and the poorer freemen. Community of antipathy against the old oligarchy was a bond essentially temporary, dissolved as soon as that oligarchy was put down.

ular insurgents, put down the government by force, and made himself the master both of those whom he deposed and of those by whose aid he deposed them; while the latter was a speaker, possessed of all the talents necessary for moving an audience, but neither inclined to, nor qualified for, armed attack, — accomplishing all his purposes by pacific and constitutional methods. This valuable change, — substituting discussion and the vote of an assembly in place of an appeal to arms, and procuring for the pronounced decision of the assembly such an influence over men's minds as to render it final and respected even by dissentients, — arose from the continued practical working of democratical institutions. I shall have occasion, at a later period of this history, to estimate the value of that unmeasured obloquy which has been heaped on the Athenian demagogues of the Peloponnesian war, — Kleôn and Hyperbolus; but, assuming the whole to be well-founded, it will not be the less true that these men were a material improvement on the earlier demagogues, such as Kypselus and Peisistratus, who employed the armed agency of the people for the purpose of subverting the established government and acquiring despotic authority for themselves. The demagogue was essentially a leader of opposition, who gained his influence by denouncing the men in real ascendency, and in actual executive functions. Now, under the early oligarchies, his opposition could be shown only by armed insurrection, and it conducted him either to personal sovereignty or to destruction; but the growth of democratical institutions insured both to him and to his political opponents full liberty of speech, and a paramount assembly to determine between them; whilst it both limited the range of his ambition, and set aside the appeal to armed force. The railing demagogue of Athens, at the time of the Peloponnesian war (even if we accept literally the representations of his worst enemies), was thus a far less mischievous and dangerous person than the fighting demagogue of the earlier centuries; and the "growth of habits of public speaking,"[1] to use Aristotle's expression, was

[1] Aristot. Polit. v, 4, 4; 7, 3. Ἐπὶ δὲ τῶν ἀρχαίων, ὅτε γένοιτο ὁ αὐτὸς δημαγωγὸς καὶ στρατηγὸς, εἰς τυραννίδα μετέβαλλον· σχεδὸν γὰρ οἱ πλεῖστοι τῶν ἀρχαίων τυράννων ἐκ δημαγωγῶν γεγόνασι. Αἴτιον δὲ τοῦ τότε μὲν γενέσθαι, νῦν δὲ μὴ, ὅτι τότε μὲν, οἱ δημαγωγοὶ ἦσαν ἐκ τῶν στρατηγούντων· οὐ γάρ πω δεινοὶ ἦσάν λέγειν· νῦν δὲ, τῆς ῥητορικῆς ηὐξημένης, οἱ δυνάμενοι λέγειν δημαγωγοῦσι μὲν, δι' ἀπειρίαν δὲ τῶν πολεμικῶν οὐκ ἐπιτίθενται, πλὴν εἴ που βραχύ τι γέγονε τοιοῦτον.

the cause of the difference: the opposition of the tongue was a beneficial substitute for the opposition of the sword.

The rise of these despots on the ruins of the previous oligarchies was, in appearance, a return to the principles of the heroic age, — the restoration of a government of personal will in place of that systematic arrangement known as the City. But the Greek mind had so far outgrown those early principles, that no new government founded thereupon could meet with willing acquiescence, except under some temporary excitement. At first, doubtless, the popularity of the usurper, — combined with the fervor of his partizans and the expulsion or intimidation of opponents, and farther enhanced by the punishment of rich oppressors, — was sufficient to procure for him obedience; and prudence on his part might prolong this undisputed rule for a considerable period, perhaps even throughout his whole life. But Aristotle intimates that these governments, even when they began well, had a constant tendency to become worse and worse: discontent manifested itself, and was aggravated rather than repressed by the violence employed against it, until at length the despot became a prey to mistrustful and malevolent anxiety, losing any measure of equity or benevolent sympathy which might once have animated him. If he was fortunate enough to bequeathe his authority to his son, the latter, educated in a corrupt atmosphere and surrounded by parasites, contracted dispositions yet more noxious and unsocial: his youthful appetites were more ungovernable, while he was deficient in the prudence and vigor which had been indispensable to the self-accomplished rise of his father.[1] For such a position, mercenary guards and a fortified acropolis were the only stay, — guards fed at the expense of the citizens, and thus requiring constant exactions on behalf of that which was nothing better than a hostile garrison. It was essential to the security of the despot that he should keep down the spirit

[1] Aristot. Polit. v, 8, 20. The whole tenor of this eighth chapter (of the fifth book) shows how unrestrained were the personal passions, — the lust as well as the anger, — of a Grecian τύραννος.

Τόν τοι τύραννον εὐσεβεῖν οὐ ῥᾴδιον (Sophokles ap. Schol. Aristides, vol iii, p. 291, ed. Dindorf).

of the free people whom he governed; that he should isolate them from each other, and prevent those meetings and mutual communications which Grecian cities habitually presented in the school, the leschê, or the palæstra; that he should strike off the overtopping ears of corn in the field (to use the Greek locution) or crush the exalted and enterprising minds.[1] Nay, he had even to a certain extent an interest in degrading and impoverishing them, or at least in debarring them from the acquisition either of wealth or leisure: and the extensive constructions undertaken by Polykratês at Samos, as well as the rich donations of Periander to the temple at Olympia, are considered by Aristotle to have been extorted by these despots with the express view of engrossing the time and exhausting the means of their subjects.

It is not to be imagined that all were alike cruel or unprincipled; but the perpetual supremacy of one man and one family had become so offensive to the jealousy of those who felt themselves to be his equals, and to the general feeling of the people, that repression and severity were inevitable, whether originally intended or not. And even if an usurper, having once entered upon this career of violence, grew sick and averse to its continuance, abdication only left him in imminent peril, exposed to the

[1] Aristot. Polit. iii, 8, 3; v, 8, 7. Herodot. v, 92. Herodotus gives the story as if Thrasybulus had been the person to suggest this hint by conducting the messenger of Periander into a cornfield and there striking off the tallest ears with his stick: Aristotle reverses the two, and makes Periander the adviser: Livy (i, 54) transfers the scene to Gabii and Rome, with Sextus Tarquinius as the person sending for counsel to his father at Rome. Compare Plato, Republ. viii, c. 17, p. 565; Eurip. Supplic. 444-455.

The discussion which Herodotus ascribes to the Persian conspirators, after the assassination of the Magian king, whether they should constitute the Persian government as a monarchy, an oligarchy, or a democracy, exhibits a vein of ideas purely Grecian, and altogether foreign to the Oriental conception of government: but it sets forth, — briefly, yet with great perspicuity and penetration, — the advantages and disadvantages of all the three. The case made out against monarchy is by far the strongest, while the counsel on behalf of monarchy assumes as a part of his case that the individual monarch is to be the best man in the state. The anti-monarchical champion Otanes concludes a long string of criminations against the despot, with these words above-noticed: "He subverts the customs of the country: he violates women: he puts men to death untried." (Herod. iii, 80-82.)

vengeance[1] of those whom he had injured, — unless, indeed, he could clothe himself with the mantle of religion, and stipulate with the people to become priest of some temple and deity; in which case his new function protected him, just as the tonsure and the monastery sheltered a dethroned prince in the Middle Ages.[2] Several of the despots were patrons of music and poetry, and courted the good-will of contemporary intellectual men by invitation as well as by reward; and there were some cases, such as that of Peisistratus and his sons at Athens, in which an attempt was made (analogous to that of Augustus at Rome) to reconcile the reality of personal omnipotence with a certain respect for preëxisting forms.[3] In such instances the administration, though

[1] Thucyd. ii, 63. Compare again the speech of Kleon, iii, 37-40, — ὡς τυραννίδα γὰρ ἔχετε αὐτὴν, ἣν λαβεῖν μὲν ἄδικον δοκεῖ εἶναι, ἀφεῖναι δὲ ἐπικίνδυνον.

The bitter sentiment against despots seems to be as old as Alkæus, and we find traces of it in Solon and Theognis (Theognis, 38-50; Solon, Fragm. vii, p. 32, ed. Schneidewin). Phanias of Eresus had collected in a book the "Assassinations of Despots from revenge." (Τυράννων ἀναιρέσεις ἐκ τιμωρίας, — Athenæus, iii, p. 90; x, p. 438.)

[2] See the story of Mæandrius, minister and successor of Polykratês of Samos, in Herodotus, iii, 142, 143.

[3] Thucyd. vi, 54. The epitaph of Archedikê, the daughter of Hippias (which was inscribed at Lampsakus, where she died), though written by a great friend of Hippias, conveys the sharpest implied invective against the usual proceedings of the despots: —

Ἡ πατρός τε καὶ ἀνδρὸς ἀδελφῶν τ' οὖσα τυράννων
Παιδῶν τ', οὐχ ἥρθη νοῦν ἐς ἀτασθαλίην (Thuc. vi, 59).

The position of Augustus at Rome, and of Peisistratus at Athens, may be illustrated by a passage in Sismondi, Républiques Italiennes, vol. iv, ch. 26, p. 208: —

"Les petits monarques de chaque ville s'opposaient eux-mêmes à ce que leur pouvoir fût attribué, à un droit héréditaire, parceque l'hérédité aurait presque toujours été retorqué contre eux. Ceux qui avaient succédé à une république, avaient abaissé des nobles plus anciens et plus illustres qu'eux: ceux qui avaient succédé à d'autres seigneurs n'avaient tenu aucun compte du droit de leurs prédécesseurs, et se sentaient intéressés à le nier. Ils se disaient dont mandataires du peuple: ils ne prenaient jamais le commandement d'une ville, lors même qu'ils l'avaient soumise par les armes, sans se faire attribuer par les anciens ou par l'assemblée du peuple, selon que les uns ou les autres se montraient plus dociles, le titre et les pouvoirs de seigneur général, pour un an, pour cinq ans, ou pour toute leur vie, avec un paie fixé, qui devoit être prise sur les déniers de la communauté."

not unstained by guilt, never otherwise than unpopular, and carried on by means of foreign mercenaries, was doubtless practically milder. But cases of this character were rare, and the maxims usual with Grecian despots were personified in Periander, the Kypselid of Corinth, — a harsh and brutal person, but not destitute either of vigor or intelligence.

The position of a Grecian despot, as depicted by Plato, by Xenophon and by Aristotle,[1] and farther sustained by the indications in Herodotus, Thucydides, and Isokrates, though always coveted by ambitious men, reveals clearly enough "those wounds

[1] Consult, especially, the treatise of Xenophon, called Hiero, or Τυραννικὸς, in which the interior life and feelings of the Grecian despot are strikingly set forth, in a supposed dialogue with the poet Simonides. The tenor of Plato's remarks in the eighth and ninth books of the Republic, and those of Aristotle in the fifth book (ch. 8 and 9) of the Politics, display the same picture, though not with such fulness of detail. The speech of one of the assassins of Euphrôn (despot of Sikyon) is remarkable, as a specimen of Grecian feeling (Xenoph. Hellen. vii, 3, 7–12). The expressions both of Plato and Tacitus, in regard to the mental wretchedness of the despot, are the strongest which the language affords: Καὶ πένης τῇ ἀληθείᾳ φαίνεται, ἐάν τις ὅλην ψυχὴν ἐπίστηται θεάσασθαι, καὶ φόβου γέμων διὰ παντὸς τοῦ βίου, σφαδασμῶν τε καὶ ὀδυνῶν πλήρης..... Ἀνάγκη καὶ εἶναι, καὶ ἔτι μᾶλλον γίγνεσθαι αὐτῷ ἢ πρότερον διὰ τὴν ἀρχὴν, φθονερῷ, ἀπίστῳ, ἀδικῳ, ἀφίλῳ, ἀνοσίῳ, καὶ πάσης κακίας πανδοκεῖ τε καὶ τροφεῖ, καὶ ἐξ ἁπάντων τούτων μάλιστα μὲν αὐτῷ δυστυχεῖ εἶναι, ἔπειτα δὲ καὶ τοὺς πλήσιον αὐτοῦ τοιούτους ἀπεργάζεσθαι (Republic. ix, p. 580).

And Tacitus, in the well-known passage (Annal. vi, 6): "Neque frustra præstantissimus sapientiæ firmare solitus est, si recludantur tyrannorum mentes, posse aspici laniatus et ictus: quando ut corpora verberibus, ita sævitiâ, libidine, malis consultis, animus dilaceretur. Quippe Tiberium non fortuna, non solitudines, protegebant, quin tormenta pectoris suasque ipse pœnas fateretur."

It is not easy to imagine power more completely surrounded with all circumstances calculated to render it repulsive to a man of ordinary benevolence: the Grecian despot had large means of doing harm, — scarcely any means of doing good. Yet the acquisition of power over others, under any conditions, is a motive so all-absorbing, that even this precarious and anti-social sceptre was always intensely coveted, — Τυραννὶς, χρῆμα σφαλερὸν· πολλοὶ δὲ αὐτῆς ἱμέρται εἰσὶ (Herod. iii, 53). See the striking lines of Solon (Fragment. vii, ed. Schneidewin), and the saying of Jason of Pheræ, who used to declare that he felt incessant hunger until he became despot, — πεινῆν, ὅτε μὴ τυραννοῖ· ὡς οὐκ ἐπιστάμενος ἰδιώτης εἶναι (Aristot Polit. iii, 9 6).

and lacerations of mind," whereby the internal Erinnys avenged the community upon the usurper who trampled them down. Far from considering success in usurpation as a justification of the attempt (according to the theories now prevalent respecting Cromwell and Bonaparte, who are often blamed because they kept out a legitimate king, but never because they seized an unauthorized power over the people), these philosophers regard the despot as among the greatest of criminals: the man who assassinated him was an object of public honor and reward, and a virtuous Greek would seldom have scrupled to carry his sword concealed in myrtle branches, like Harmodius and Aristogeiton, for the execution of the deed.[1] A station which overtopped the restraints and obligations involved in citizenship, was understood at the same time to forfeit all title to the common sympathy and protection,[2] so that it was unsafe for the despot to visit in person those great Pan-Hellenic games in which his own chariot might perhaps have gained the prize, and in which the theors, or sacred envoys, whom he sent as representatives of his Hellenic city, appeared with ostentatious pomp. A government carried on under these unpropitious circumstances could never

[1] See the beautiful Skolion of Kallistratus, so popular at Athens, xxvii, p. 456, apud Schneidewin, Poet. Græc. — Ἐν μύρτου κλαδὶ τὸ ξίφος φορήσω, etc.

Xenophon, Hiero, ii, 8. Οἱ τύραννοι πάντες πανταχῇ ὡς διὰ πολεμίας πορεύονται. Compare Isokrates, Or. viii (De Pace), p. 182; Polyb. ii, 59; Cicero, Orat. pro Milone, c. 29

Aristot. Polit. ii, 4, 8. Ἐπεὶ ἀδικοῦσί γε τὰ μέγιστα διὰ τὰς ὑπερβολὰς, ἀλλ' οὐ διὰ τἀναγκαῖα· οἷον τυραννοῦσιν, οὐχ ἵνα μὴ ῥιγῶσι· διὸ καὶ αἱ τιμαὶ μέγαλαι, ἂν ἀποκτείνῃ τις, οὐ κλέπτην, ἀλλὰ τύραννον.

There cannot be a more striking manifestation of the sentiment entertained towards a despot in the ancient world, than the remarks of Plutarch on Timoleon, for his conduct in assisting to put to death his brother, the despot Timophanês (Plutarch, Timoleon, c. 4–7, and Comp. of Timoleon with Paulus Æmilius, c. 2). See also Plutarch, Comparison of Dion and Brutus, c. 3, and Plutarch, Præcepta Reipublicæ Gerendæ, c. 11, p. 805; c. 17, p. 813; c. 32, p. 824, — he speaks of the putting down of a despot (τυραννίδων κατάλυσις) as among the most splendid of human exploits, — and the account given by Xenophon of the assassination of Jason of Pheræ, Hellenic. vi, 4, 32.

[2] Livy, xxxviii, 50. "Qui jus æquum pati non possit, in eum vim haud injustam esse."

be otherwise than short-lived. Though the individual daring enough to seize it, often found means to preserve it for the term of his own life, yet the sight of a despot living to old age was rare, and the transmission of his power to his son still more so.[1]

Amidst the numerous points of contention in Grecian political morality, this rooted antipathy to a permanent hereditary ruler stood apart as a sentiment almost unanimous, in which the thirst for preëminence felt by the wealthy few, and the love of equal freedom in the bosoms of the many, alike concurred. It first began among the oligarchies of the seventh and sixth centuries B. C., a complete reversal of that pronounced monarchical sentiment which we now read in the Iliad; and it was transmitted by them to the democracies, which did not arise until a later period. The conflict between oligarchy and despotism preceded that between oligarchy and democracy, the Lacedæmonians standing forward actively on both occasions to uphold the oligarchical principle: a mingled sentiment of fear and repugnance led them to put down despotism in several cities of Greece during the sixth century B. C., just as, during their contest with Athens in

[1] Plutarch, Sept. Sapient. Conviv. c. 2, p. 147, — *ὡς ἐρωτηθεὶς ὑπὸ Μολ παγόρου τοῦ Ἴωνος, τί παραδοξότατον εἰης ἑωρακὼς, ἀποκρίναιο, τύραννον γέροντα.* — Compare the answer of Thales, in the same treatise, c. 7, p. 152.

The orator Lysias, present at the Olympic games, and seeing the theors of the Syracusan despot Dionysius also present, in tents with gilding and purple, addressed an harangue, inciting the assembled Greeks to demolish the tents (Lysiæ *Λόγος Ὀλυμπιακὸς*, Fragm. p. 911, ed. Reisk.; Dionys. Halicar. De Lysiâ Judicium, c. 29–30). Theophrastus ascribed to Themistokles a similar recommendation, in reference to the theôrs and the prize-chariots of the Syracusan despot Hiero (Plutarch, Themistokles, c. 25).

The common-places of the rhetors afford the best proof how unanimous was the sentiment in the Greek mind to rank the despot among the most odious criminals, and the man who put him to death among the benefactors of humanity. The rhetor Theon, treating upon *common-places*, says: *Τόπος ἐστὶ λόγος αὐξητικὸς ὁμολογουμένου πράγματος, ἤτοι ἁμαρτήματος, ἢ ἀνδραγαθήματος. Ἐστὶ γὰρ διττὸς ὁ τόπος· ὁ μέν τις, κατὰ τῶν πεπονηρευμένων, οἷον κατὰ τυράννου, προδότου, ἀνδροφόνου, ἀσώτου· ὁ δέ τις, ὑπὲρ τῶν χρηστόν τι διαπεπραγμένων· οἷον ὑπὲρ τυραννοκτόνου, ἀριστέως, νομοθέτου.* (Theon, Progymnasmata, c. vii, ap. Walz. Coll. Rhett. vol. i, p. 222. Compare Aphthonius, Progymn. c. vii, p. 82 of the same volume, and Dionysius Halikarn. Ars Rhetorica, x, 15, p. 390, ed. Reisk.)

the following century, they assisted the oligarchical party, wherever they could, to overthrow democracy. And it was thus that the demagogue-despot of these earlier times, bringing out the name of the people as a pretext, and the arms of the people as a means of accomplishment, for his own ambitious designs, served as a preface to the reality of democracy, which manifested itself at Athens a short time before the Persian war, as a development of the seed planted by Solon.

As far as our imperfect information enables us to trace, the early oligarchies of the Grecian states, against which the first usurping despots contended, contained in themselves far more repulsive elements of inequality, and more mischievous barriers between the component parts of the population, than the oligarchies of later days. What was true of Hellas as an aggregate, was true, though in a less degree, of each separate community which went to compose that aggregate: each included a variety of clans, orders, religious brotherhoods, and local or professional sections, which were very imperfectly cemented together: and the oligarchy was not, like the government so denominated in subsequent times, the government of a rich few over the less rich and the poor, but that of a peculiar order, sometimes a patrician order, over all the remaining society. In such a case, the subject Many might number opulent and substantial proprietors as well as the governing Few; but these subject Many would themselves be broken into different heterogeneous fractions, not heartily sympathizing with each other, perhaps not intermarrying together, nor partaking of the same religious rites. The country-population, or villagers, who tilled the land, seem in these early times to have been held to a painful dependence on the proprietors who lived in the fortified town, and to have been distinguished by a dress and habits of their own, which often drew upon them an unfriendly nickname. These town proprietors seem to have often composed the governing class in early Grecian states, while their subjects consisted, — 1. Of the dependent cultivators living in the district around, by whom their lands were tilled. 2. Of a certain number of small self-working proprietors (*αὐτουργοὶ*) whose possessions were too scanty to maintain more than themselves by the labor of their own hands on their own plot of ground — residing either in the country or the town, as the case

might be. 3. Of those who lived in the town, having no land but exercising handicraft, arts, or commerce.

The governing proprietors went by the name of the Gamori, or Geomori, according as the Doric or Ionic dialect might be used in describing them, since they were found in states belonging to one race as well as to the other. They appear to have constituted a close order, transmitting their privileges to their children, but admitting no new members to a participation, — for the principle called by Greek thinkers a timocracy, the appointment of political rights and privileges according to comparative property, appears to have been little, if at all, applied in the earlier times, and we know no example of it earlier than Solon. So that, by the natural multiplication of families and mutation of property, there would come to be many individual gamori possessing no land at all, and perhaps worse off than those small freeholders who did not belong to the order; while some of these latter freeholders, and some of the artisans and traders in the towns, might at the same time be rising in wealth and importance. Under a political classification such as this, of which the repulsive inequality was aggravated by a rude state of manners, and which had no flexibility to meet the changes in relative position amongst individual inhabitants, discontent and outbreaks were unavoidable, and the earliest despot, usually a wealthy man of the disfranchised class, became champion and leader of the malcontents.[1] However oppressive his rule might be, at least it was an oppression which bore with indiscriminate severity upon all the fractions of the population; and when the hour of reaction against him or against his successor arrived, so that the common enemy was expelled by the united efforts of all, it was hardly possible to revive the preëxisting system of exclusion and inequality without some considerable abatements.

As a general rule, every Greek city-community included in its population, independent of bought slaves, the three elements above noticed, — considerable land proprietors with rustic dependents, small self-working proprietors, and town-artisans,— the three elements being found everywhere in different proportions. But the progress of events in Greece, from the seventh century

[1] Thucyd. i, 13.

B. C. downwards, tended continually to elevate the comparative importance of the two latter, while in those early days the ascendency of the former was at its maximum, and altered only to decline. The military force of most of the cities was at first in the hands of the great proprietors, and formed by them; it consisted of cavalry, themselves and their retainers, with horses fed upon their lands. Such was the primitive oligarchical militia, as it was constituted in the seventh and sixth centuries B. C., at Chalkis and Eretria in Eubœa, as well as at Kolophôn and other cities in Ionia, and as it continued in Thessaly down to the fourth century B. C.; but the gradual rise of the small proprietors and town-artisans was marked by the substitution of heavy-armed infantry in place of cavalry; and a farther change not less important took place when the resistance to Persia led to the great multiplication of Grecian ships of war, manned by a host of seamen who dwelt congregated in the maritime towns. All the changes which we are able to trace in the Grecian communities tended to break up the close and exclusive oligarchies with which our first historical knowledge commences, and to conduct them either to oligarchies rather more open, embracing all men of a certain amount of property, or else to democracies. But the transition in both cases was usually attained through the interlude of the despot.

In enumerating the distinct and unharmonious elements of which the population of these early Grecian communities was made up, we must not forget one farther element which was to be found in the Dorian states generally, — men of Dorian, as contrasted with men of non-Dorian race. The Dorians were in all cases emigrants and conquerors, establishing themselves along with and at the expense of the prior inhabitants. Upon what terms the cohabitation was established, and in what proportions invaders and invaded came together, we are without information; and important as this circumstance is in the history of these Dorian communities, we know it only as a general fact, and are unable to follow its results in detail. But we see enough to satisfy ourselves that in those revolutions which overthrew the

[1] Aristot. Polit. iv, 3, 2; 11, 10 Aristot. Rerum Public. Fragm. ed. Neumann. Fragm. v, *Εὐβοέων πολιτειαί*, p. 112; Strabo, x, p. 447

oligarchies both at Corinth and Sikyon, — perhaps also at Megara, — the Dorian and non-Dorian elements of the community came into conflict more or less direct.

The despots of Sikyon are the earliest of whom we have any distinct mention: their dynasty lasted one hundred years, a longer period than any other Grecian despots known to Aristotle; they are said,[1] moreover, to have governed with mildness and with much practical respect to the preëxisting laws. Orthagoras,[2] the beginner of the dynasty, raised himself to the position of despot about 676 B. C., subverting the preëxisting Dorian oligarchy; but the cause and circumstances of this revolution are not preserved. He is said to have been originally a cook. In his line of successors we find mention of Andreas, Myrôn, Aristônymus, and Kleisthenês; but we know nothing of any of them until the last, except that Myrôn gained a chariot victory at Olympia in the 33d Olympiad (648 B. C.), and built, at the same holy place, a thesaurus containing two ornamented alcoves of copper for the reception of commemorative offerings from himself and his family.[3] Respecting Kleisthenês (whose

[1] Aristot. Polit. v. 9, 21. An oracle is said to have predicted to the Sikyonians that they would be subjected for the period of a century to the hand of the scourger (Diodor. Fragm. lib. vii–x; Fragm. xiv, ed. Maii).

[2] Herodot. vi, 126; Pausan. ii, 8, 1. There is some confusion about the names of Orthagoras and Andreas; the latter is called a *cook* in Diodorus (Fragment. Excerpt. Vatic. lib. vii–x, Fragm. xiv). Compare Libanius in Sever. vol. iii, p. 251, Reisk. It has been supposed, with some probability, that the same person is designated under both names: the two names do not seem to occur in the same author. See Plutarch, Ser. Numin. Vind. c 7, p. 553.

Aristotle (Polit. v. 10, 3) seems to have conceived the dominion as having passed direct from Myrôn to Kleisthenês, omitting Aristônymus.

[3] Pausan. vi, 19, 2. The Eleians informed Pausanias that the brass in these alcoves came from Tartessus (the south-western coast of Spain from the Strait of Gibraltar to the territory beyond Cadiz): he declines to guarantee the statement. But O. Müller treats it as a certainty: "Two apartments inlaid with Tartessian brass, and adorned with Doric and Ionic columns. Both the architectural orders employed in this building, and the Tartessian brass, which the Phocæans had then brought to Greece in large quantities from the hospitable king Arganthonius, attest the intercourse of Myrôn with the Asiatics." (Dorians, i, 8, 2.) So also Dr. Thirlwall states the fact: "Copper of Tartessus, which had not long been introduced into

age must be placed between 600–560 B. C., but can hardly be determined accurately,) some facts are reported to us highly curious, but of a nature not altogether easy to follow or verify.

We learn from the narrative of Herodotus that the tribe to which Kleisthenês[1] himself (and of course his progenitors Orthagoras and the other Orthagoridæ also) belonged, was distinct from the three Dorian tribes, who have been already named in my previous chapter respecting the Lykurgean constitution at Sparta, — the Hylleis, Pamphyli, and Dymanes. We also learn that these tribes were common to the Sikyonians and the Argeians; and Kleisthenês, being in a state of bitter hostility with Argos, tried in several ways to abolish the points of community between the two. Sikyôn originally Dorized by settlers from Argos, was included in the "lot of Temenus," or among the towns of the Argeian confederacy: the coherence of this confederacy had become weaker and weaker, partly without doubt through the influence of the predecessors of Kleisthenês; but the Argeians may perhaps have tried to revive it, thus placing themselves in a state of war with the latter, and inducing him to disconnect, palpably and violently, Sikyôn from Argos. There were two anchors by which the connection held, — first, legendary and religious sympathy; next, the civil rites and denominations current among the Sikyonian Dorians: both of them were torn up by Kleisthenês. He changed the names both of the three Dorian tribes, and of that non-Dorian tribe to which he himself belonged: the last he called by the complimentary title of archelai (commanders of the people); the first three he styled by the insulting names of hyatæ, oneatæ, and chœreatæ, from the three Greek words signifying a boar, an ass, and a little pig. The extreme bitterness of this insult can only be appreciated when we fancy to ourselves the reverence with which the tribes

Greece." (Hist. Gr. ch. x, p. 483, 2d ed.) Yet, if we examine the chronology of the case, we shall see that the 33d Olympiad (648 B. C.) must have been earlier even than the first discovery of Tartessus by the Greeks, — before the accidental voyage of the Samian merchant Kôlaeus first made the region known to them, and more than half a century (at least) earlier than the commerce of the Phocæans with Arganthonius. Compare Herod. iv 152; i, 163, 167.

[1] Herodot. v, 67.

in a Grecian city regarded the hero from whom their name was borrowed. That these new denominations, given by Kleisthenês, involved an intentional degradation of the Dorian tribes as well as an assumption of superiority for his own, is affirmed by Herodotus, and seems well-deserving of credit.

But the violence of which Kleisthenês was capable in his anti Argeian antipathy, is manifested still more plainly in his proceedings with respect to the hero Adrastus and to the legendary sentiment of the people. Something has already been said, in my former volume,[1] about this remarkable incident, which must, however, be here again briefly noticed. The hero Adrastus, whose chapel Herodotus himself saw in the Sikyonian agora, was common both to Argos and to Sikyôn, and was the object of special reverence at both: he figures in the legend as king of Argos, and as the grandson and heir of Polybus, king of Sikyôn. He was the unhappy leader of the two sieges of Thebes, so famous in the ancient epic, — and the Sikyonians listened with delight both to the exploits of the Argeians against Thebes, as celebrated in the recitations of the epical rhapsodes, and to the mournful tale of Adrastus and his family misfortunes, as sung in the tragic chorus. Kleisthenês not only forbade the rhapsodes to come to Sikyôn, but farther resolved to expel Adrastus himself from the country, — such is the literal Greek expression,[2] the hero himself being believed to be actually present and domiciled among the people. He first applied to the Delphian oracle for permission to carry this banishment into direct effect, but the Pythian priestess returned an answer of indignant refusal, — "Adrastus is king of the Sikyonians, but thou art a ruffian." Thus baffled, he put in practice a stratagem calculated to induce Adrastus to depart of his own accord.[3] He sent to Thebes to beg that he might be allowed to introduce into Sikyôn the hero Melanippus, and the permission was granted. Now Melanippus was celebrated in the legend as the puissant champion of Thebes against Adrastus and the Argeian besiegers, and as having slain

[1] See above, vol. ii, p. 129, part i, ch. 21.

[2] Herod. v, 67. Τοῦτον ἐπεθύμησε ὁ Κλεισθένης, ἐόντα Ἀργεῖον, ἐκβαλεῖν ἐκ τῆς χώρης.

[3] Herod. v, 67. Ἐφρόντιζε μηχανὴν τῇ αὐτὸς ὁ Ἄδρηστος ἐπαλλάξεται.

both Mêkisteus the brother, and Tydeus the son-in-law, of Adrastus; and he was therefore preëminently odious to the latter. Kleisthenês brought this anti-national hero into Sikyôn, assigning to him consecrated ground in the prytaneium, or government-house, and even in that part which was most strongly fortified[1] (for it seems that Adrastus was conceived as likely to assail and do battle with the intruder); — moreover, he took away both the tragic choruses and the sacrifice from Adrastus, assigning the former to the god Dionysus, and the latter to Melanippus.

The religious manifestations of Sikyôn being thus transferred from Adrastus to his mortal foe, and from the cause of the Argeians in the siege of Thebes to that of the Thebans, Adrastus was presumed to have voluntarily retired from the place, and the purpose which Kleisthenês contemplated, of breaking the community of feeling between Sikyôn and Argos, was in part accomplished.

A ruler who could do such violence to the religious and legendary sentiment of his community may well be supposed capable of inflicting that deliberate insult upon the Dorian tribes which is implied in their new appellations. As we are uninformed, however, of the state of things which preceded, we know not how far it might have been a retaliation for previous insult in the opposite direction. It is plain that the Dorians of Sikyôn maintained themselves and their ancient tribes quite apart from the remaining community, though what the other constituent portions of the population were, or in what relation they stood to these Dorians, we are not enabled to make out. We hear, indeed, of a dependent rural population in the territory of Sikyôn, as well as in that of Argos and Epidaurus, analogous to the Helots in Laconia. In Sikyôn, this class was termed the Korynêphori (club men), or the Katônakophori, from the thick woollen mantle which they wore, with a sheepskin sewn on to the skirt: in Argos, they were called Gymnêsii, from their not possessing the military panoply or the use of regular arms: in Epidaurus, Konipodes, or the dusty-footed.[2] We may conclude that a similar class existed in Cor-

[1] Ἐπαγαγόμενος δὲ ὁ Κλεισθένης τὸν Μελάνιππον, τέμενος οἱ ἀπέδεξε ἐν αὐτῷ τῷ πρυτανηίῳ, καί μιν ἐνθαῦτα ἵδρυσε ἐν τῷ ἰσχυροτάτῳ. (Herod. *ib.*)

inth, in Megara, and in each of the Dorian towns of the Argolic Aktê. But besides the Dorian tribes and these rustics, there must probably have existed non-Dorian proprietors and town residents, and upon them we may suppose that the power of the Orthagoridæ and of Kleisthenês was founded, perhaps more friendly and indulgent to the rustic serfs than that of the Dorians had been previously. The moderation, which Aristotle ascribes to the Orthagoridæ generally, is belied by the proceedings of Kleisthenês: but we may probably believe that his predecessors, content with maintaining the real predominance of the non-Dorian over the Dorian population, meddled very little with the separate position and civil habits of the latter, — while Kleisthenês, provoked or alarmed by some attempt on their part to strengthen alliance with the Argeians, resorted both to repressive measures and to that offensive nomenclature which has been above cited. The preservation of the power of Kleisthenês was due to his military energy (according to Aristotle) even more than to his moderation and popular conduct; it was aided, probably, by his magnificent displays at the public games, for he was victor in the chariot-race at the Pythian games 582 B. C., as well as at the Olympic games besides. Moreover, he was in fact the last of the race, nor did he transmit his power to any successor.[1]

The reigns of the early Orthagoridæ, then, may be considered as marking a predominance, newly acquired but quietly exercised of the non-Dorians over the Dorians in Sikyôn: the reign of Kleisthênês, as displaying a strong explosion of antipathy from the former towards the latter; and though this antipathy, and the application of those opprobrious tribe-names in which it was conveyed, stand ascribed to Kleisthenês personally, we may see that the non-Dorians in Sikyôn shared it generally, because these same tribe-names continued to be applied not only during the reign of that despot, but also for sixty years longer, after his death. Of course, it is needless to remark that such denomina-

ap. Athenæum, vi, p. 271; Welcker, Prolegomen. ad Theognid. c. 19, p xxxiv.

As an analogy to this name of Konipodes, we may notice the ancient courts of justice called Courts of *Pie-powder* in England, *Pieds Poudrés*.

[1] Aristot. Polit. v, 9, 21; Pausan. x, 7, 3.

tions could never have been acknowledged or employed among the Dorians themselves. After the lapse of sixty years from the death of Kleisthenês, the Sikyonians came to an amicable adjustment of the feud, and placed the tribe-names on a footing satisfactory to all parties; the old Dorian denominations (Hylleis, Pamphyli, and Dymanes) were reëstablished, and the name of the fourth tribe, or non-Dorians, was changed from Archelai to Ægialeis, — Ægialeus son of Adrastus being constituted their eponymus.[1] This choice of the son of Adrastus for an eponymus, seems to show that the worship of Adrastus himself was then revived in Sikyôn, since it existed in the time of Herodotus.

Of the war which Kleisthenês helped to conduct against Kirrha, for the protection of the Delphian temple, I shall speak in another place. His death and the cessation of his dynasty seem to have occurred about 650 B. C., as far as the chronology can be made out.[2] That he was put down by the Spartans, as K. F.

[1] Herod. v, 68. *Τούτοισι τοῖσι οὐνόμασι τῶν φυλέων ἐχρέωντο οἱ Σικυώνιοι, καὶ ἐπὶ Κλεισθένεος ἄρχοντος, καὶ ἐκείνου τεθνεῶτος ἔτι ἐπ' ἔτεα ἑξήκοντα· μετέπειτα μέντοι λόγον σφισι δόντες, μετέβαλον ἐς τοὺς Ὑλλέας καὶ Παμφύλους καὶ Δυμανάτας· τετάρτους δὲ αὐτοῖσι προσέθεντο ἐπὶ τοῦ Ἀδρήστου παιδὸς Αἰγιαλέος τὴν ἐπωνυμίην ποιεύμενοι κεκλῆσθαι Αἰγιαλέας.*

[2] The chronology of Orthagoras and his dynasty is perplexing. The commemorative offering of Myron at Olympia is marked for 648 B. C., and this must throw back the beginning of Orthagoras to a period between 680–670. Then we are told by Aristotle that the entire dynasty lasted one hundred years; but it must have lasted, probably, somewhat longer, for the death of Kleisthenês can hardly be placed earlier than 560 B. C. The war against Kirrha (595 B. C.) and the Pythian victory (582 B. C.) fall within his reign: but the marriage of his daughter Agaristê with Megakles can hardly be put earlier than 570 B. C., if so high; for Kleisthenês the Athenian, the son of that marriage, effected the democratical revolution at Athens in 509 or 508 B. C.: whether the daughter, whom Megaklês gave in marriage to Peisistratus about 554 B. C., was also the offspring of that marriage, as Larcher contends, we do not know.

Megaklês was the son of that Alkmæon who had assisted the deputies sent by Crœsus of Lydia into Greece to consult the different oracles, and whom Crœsus rewarded so liberally as to make his fortune (compare Herod. i, 46; vi, 125): and the marriage of Megaklês was in the next generation after this enrichment of Alkmæon, — *μετὰ δὲ, γενεῇ δευτέρῃ ὕστερον* (Herod. vi, 126). Now the reign of Crœsus extended from 560–546 B. C., and his deputation to the oracles in Greece appears to have taken place about 556 B. C.; and if this chronology be admitted, the marriage of Megaklês with

Hermann, O. Müller, and Dr. Thirlwall suppose,· can be hardly admitted consistently with the narrative of Herodotus, who mentions the continuance of the insulting names imposed by him upon the Dorian tribes for many years after his death. Now, had the Spartans forcibly interfered for the suppression of his dynasty, we may reasonably presume that, even if they did not restore the decided preponderance of the Dorians in Sikyôn, they would at least have rescued the Dorian tribes from this obvious ignominy. But it seems doubtful whether Kleisthenês had any son: and the extraordinary importance attached to the marriage of his daughter, Agaristê, whom he bestowed upon the Athenian Megaklês of the great family of Alkmæônidæ, seems rather to evince that she was an heiress, — not to his power, but to his wealth. There can be no doubt as to the fact of that marriage, from which was born the Athenian leader Kleisthenês, afterwards the author of the great democratical revolution at Athens after the expulsion of the Peisistratidæ; but the lively and amusing details with which Herodotus has surrounded it, bear much more the stamp of romance than of reality. Dressed up, apparently, by some ingenious Athenian, as a compliment to the Alkmæonid lineage of his city, which comprised both Kleisthenês and Periklês, the narrative commemorates a marriage-rivalry between that lineage and another noble Athenian house, and at the same

the daughter of the Sikyonian Kleisthenês cannot have taken place until considerably after 556 B. C. See the long, but not very satisfactory, note of Larcher, ad Herodot. v, 66.

But I shall show grounds for believing, when I recount the interview between Solon and Crœsus, that Herodotus in his conception of events misdates very considerably the reign and proceedings of Crœsus as well as of Peisistratus: this is a conjecture of Niebuhr which I think very just, and which is rendered still more probable by what we find here stated about the succession of the Alkmæonidæ. For it is evident that Herodotus here conceives the adventure between Alkmæon and Crœsus as having occurred one generation (about twenty-five or thirty years) anterior to the marriage between Megaklês and the daughter of Kleisthenês. That adventure will thus stand about 590–585 B. C., which would be about the time of the supposed interview (if real) between Solon and Crœsus, describing the maximum of the power and prosperity of the latter.

[1] Müller, Dorians, book i, 8, 2; Thirlwall, Hist. of Greece, vol. i, ch. x, p 486, 2d ed

time gives a mythical explanation of a phrase seemingly proverbial at Athens — "*Hippokleides don't care.*"[1]

Plutarch numbers Æschinês of Sikyôn[2] among the despots put down by Sparta: at what period this took place, or how it is to be connected with the history of Kleisthenês as given in Herodotus, we are unable to say.

Contemporaneous with the Orthagoridæ at Sikyôn, — but beginning a little later and closing somewhat earlier, — we find the despots Kypselus and Periander at Corinth. The former appears as the subverter of the oligarchy called the Bacchiadæ. Of the manner in which he accomplished his object we find no information: and this historical blank is inadequately filled up by

[1] Herod. vi, 127–131. The locution explained is, — Οὐ φρονὶς Ἱπποκλείδῃ: compare the allusions to it in the Paræmiographi, Zenob. v, 31; Diogenian. vii, 21; Suidas, xi, 45, ed. Schott.

The convocation of the suitors at the invitation of Kleisthenês from all parts of Greece, and the distinctive mark and character of each, is prettily told, as well as the drunken freak whereby Hippokleidês forfeits both the favor of Kleisthenês, and the hand of Agaristê, which he was on the point of obtaining. It seems to be a story framed upon the model of various incidents in the old epic, especially the suitors of Helen.

On one point, however, the author of the story seems to have overlooked both the exigencies of chronology and the historical position and feelings of his hero Kleisthenês. For among the suitors who present themselves at Sikyôn in conformity with the invitation of the latter, one is Leôkêdês, son of Pheidôn the despot of Argos. Now the hostility and vehement antipathy towards Argos, which Herodotus ascribes in another place to the Sikyonian Kleisthenês, renders it all but impossible that the son of any king of Argos could have become a candidate for the hand of Agaristê. I have already recounted the violence which Kleisthenês did to the legendary sentiment of his native town, and the insulting names which he put upon the Sikyonian Dorians, — all under the influence of a strong anti-Argeian feeling. Next, as to chronology: Pheidôn king of Argos lived some time between 760–730; and his son can never have been a candidate for the daughter of Kleisthenês, whose reign falls 600–560 B. C. Chronologers resort here to the usual resource in cases of difficulty: they recognize a second and later Pheidôn, whom they affirm that Herodotus has confounded with the first; or they alter the text of Herodotus, and in place of "son of Pheidôn," read "descendant of Pheidôn." But neither of these conjectures rests upon any basis: the text of Herodotus is smooth and clear, and the second Pheidôn is nowhere else authenticated. See Larcher and Wesseling, *ad loc.*; compare also vol. ii, p. 419, part ii, ch. 4, of this History.

[2] Plutarch, De Herod. Malign. c. 21, p. 859.

various religious prognostics and oracles, foreshadowing the rise, the harsh rule, and the dethronement, after two generations, of these powerful despots.

According to an idea deeply seated in the Greek mind, the destruction of a great prince or of a great power is usually signified to him by the gods beforehand, though either through hardness of heart or inadvertence, no heed is taken of the warning. In reference to Kypselus and the Bacchiadæ, we are informed that Melas, the ancestor of the former, was one of the original settlers at Corinth who accompanied the first Dorian chief Alêtês, and that Alêtês was in vain warned by an oracle not to admit him;[1] again, too, immediately before Kypselus was born, the Bacchiadæ received notice that his mother was about to give birth to one who would prove their ruin: the dangerous infant escaped destruction only by a hair's breadth, being preserved from the intent of his destroyers by lucky concealment in a chest. Labba, the mother of Kypselus, was daughter of Amphion, who belonged to the gens, or sept, of the Bacchiadæ; but she was lame, and none of the gens would consent to marry her with that deformity. Eetion, son of Echekratês, who became her husband, belonged to a different, yet hardly less distinguished heroic genealogy: he was of the Lapithæ, descended from Kæneus, and dwelling in the Corinthian deme called Petra. We see thus that Kypselus was not only a high-born man in the city, but a Bacchiad by half-birth; both of these circumstances were likely to make exclusion from the government intolerable to him. He rendered himself highly popular with the people, and by their aid overthrew and expelled the Bacchiadæ, continuing as despot at Corinth for thirty years until his death (B. C. 655–625). According to Aristotle, he maintained throughout life the same conciliatory behavior by which his power had first been acquired; and his popularity was so effectually sustained that he had never any occasion for a body-guard. But the Corinthian oligarchy of the century of Herodotus, — whose tale that historian has embodied in the oration of the Corinthian envoy Sosiklês[2] to the Spartans,

[1] Pausan. ii, 4, 9.

[2] Aristot. Polit. v, 9, 22; Herodot. v, 92. The tale respecting Kypselus, and his wholesale exaction from the people, contained in the spurious second book of the Œconomica of Aristotle, coincides with the general view of Herodotus (Aristot. Œconom. ii, 2); but I do not trust the statements of this treatise for facts of the sixth or seventh centuries B. C.

— gave a very different description, and depicted Kypselus as a cruel ruler, who banished, robbed, and murdered by wholesale.

His son and successor Periander, though energetic as a warrior, distinguished as an encourager of poetry and music, and even numbered by some among the seven wise men of Greece, — is, nevertheless, uniformly represented as oppressive and inhuman in his treatment of subjects. The revolting stories which are told respecting his private life, and his relations with his mother and his wife, may for the most part be regarded as calumnies suggested by odious associations with his memory; but there seems good reason for imputing to him tyranny of the worst character, and the sanguinary maxims of precaution so often acted upon by Grecian despots were traced back in ordinary belief to Periander,[1] and his contemporary Thrasybulus, despot of Milêtus. He maintained a powerful body-guard, shed much blood, and was exorbitant in his exactions, a part of which was employed in votive offerings at Olympia: and this munificence to the gods was considered by Aristotle and others as part of a deliberate system, with the view of keeping his subjects both hard at work and poor. On one occasion, we are told that he invited the women of Corinth to assemble for the celebration of a religious festival, and then stripped them of their rich attire and ornaments. By some later writers, he is painted as the stern foe of everything like luxury and dissolute habits, — enforcing industry, compelling every man to render account of his means of livelihood, and causing the procuresses of Corinth to be thrown into the sea.[2] Though the general features of his character, his cruel tyranny no less than his vigor and ability, may be sufficiently relied on, yet the particular incidents connected with his name are all extremely dubious: the most credible of all seems to be the tale of his inexpiable quarrel with his son, and his brutal treatment of many noble Korkyræan youths, as related in Herodotus. Peri-

[1] Aristot. Polit. v, 9, 2–22; iii, 8, 3; Herodot. v, 92.

[2] Ephorus, Frag. 106, ed. Marx.; Herakleidês Ponticus, Frag. v, ed. Köhler; Nicolaus Damasc. p. 50, ed. Orell.; Diogen. Laërt. i, 96–98; Suidas, v. Κυψελίδων ἀνάθημα.

ander is said to have put to death his wife, Melissa, daughter of Proklês, despot of Epidaurus; and his son Lykophrôn, informed of this deed, contracted an incurable antipathy against him. After vainly trying, both by rigor and by conciliation, to conquer this feeling on the part of his son, Periander sent him to reside at Korkyra, then dependent upon his rule; but when he found himself growing old and disabled, he recalled him to Corinth, in order to insure the continuance of the dynasty. Lykophrôn still obstinately declined all personal communication with his father, upon which the latter desired him to come to Corinth, and engaged himself to go over to Korkyra. So terrified were the Korkyræans at the idea of a visit from this formidable old man, that they put Lykophrôn to death, — a deed which Periander avenged by seizing three hundred youths of their noblest families, and sending them over to the Lydian king, Alyattês at Sardis, in order that they might be castrated and made to serve as eunuchs. The Corinthian vessels in which the youths were dispatched fortunately touched at Samos in the way; where the Samians and Knidians, shocked at a proceeding which outraged all Hellenic sentiment, contrived to rescue the youths from the miserable fate intended for them, and, after the death of Periander, sent them back to their native island.[1]

While we turn with displeasure from the political life of this man, we are at the same time made acquainted with the great extent of his power, — greater than that which was ever possessed by Corinth after the extinction of his dynasty. Korkyra, Ambrakia, Leukas, and Anaktorium, all Corinthian colonies, but in the next century independent states, appear in his time dependencies of Corinth. Ambrakia is said to have been under the rule of another despot named Periander, probably also a Kypselid by birth. It seems, indeed, that the towns of Anaktorium, Leukas, and Apollonia in the Ionian gulf, were either founded by the Kypselids, or received reinforcements of Corinthian colonists, during their dynasty, though Korkyra was established considerably earlier.[2]

[1] Herodot. iii, 47–54. He details at some length this tragical story. Compare Plutarch, De Herodoti Malignitat. c. 22, p. 86C.

[2] Aristot. Polit. v, 3, 6; 8, 9. Plutarch, Amatorius, c. 23, p. 766, and De Serâ Numinis Vindictâ, c. 7, p. 553. Strabo, vii, p. 325; x, p. 452. Scymnus Chius, v, 454, and Antoninus Liberalis, c. iv, who quotes the lost work called 'Αμβρακικὰ of Athanadas.

The reign of Periander lasted for forty years (B. C. 625–585): Psammetichus son of Gordius, who succeeded him, reigned three years, and the Kypselid dynasty is then said to have closed, after having continued for seventy-three years.[1] In respect of power, magnificent display, and wide-spread connections both in Asia and in Italy, they evidently stood high among the Greeks of their time. Their offerings consecrated at Olympia excited great admiration, especially the gilt colossal statue of Zeus, and the large chest of cedar-wood dedicated in the temple of Hêrê, overlaid with various figures in gold and ivory: the figures were borrowed from mythical and legendary story, and the chest was a commemoration both of the name of Kypselus and of the tale of his marvellous preservation in infancy.[2] If Plutarch is correct, this powerful dynasty is to be numbered among the despots put down by Sparta;[3] yet such intervention of the Spartans, granting it to have been matter of fact, can hardly have been known to Herodotus.

Coincident in point of time with the commencement of Perian-

[1] See Mr. Clinton, Fasti Hellenici, ad ann. 625–585 B. C.

[2] Pausan. v, 2, 4; 17, 2. Strabo, viii, p. 353. Compare Schneider, Epimetrum ad Xenophon. Anabas. p. 570. The chest was seen at Olympia, both by Pausanias and by Dio Chrysostom (Or. xi, p. 325, Reiske).

[3] Plutarch, De Herodot. Malign. c. 21, p. 859. If Herodotus had known or believed that the dynasty of the Kypselids at Corinth was put down by Sparta, he could not have failed to make allusion to the fact, in the long harangue which he ascribes to the Corinthian Sosiklês (v, 92). Whoever reads that speech, will perceive that the inference from silence to ignorance is in this case almost irresistible.

O. Müller ascribes to Periander a policy intentionally anti-Dorian, — "prompted by the wish of utterly eradicating the peculiarities of the Doric race. For this reason he abolished the public tables, and prohibited the ancient education." (O. Müller, Dorians, iii, 8, 3.)

But it cannot be shown that any *public tables* (συσσίτια), or any peculiar education, analogous to those of Sparta, ever existed at Corinth. If nothing more be meant by these συσσίτια than public banquets on particular festive occasions (see Welcker, Prolegom. ad Theognid. c. 20, p. xxxvii), these are noway peculiar to Dorian cities. Nor does Theognis, v, 270, bear out Welcker in affirming "syssitiorum vetus institutum" at Megara.

der's reign at Corinth, we find Theagenês despot at Megara, who is also said to have acquired his power by demagogic arts, as well as by violent aggressions against the rich proprietors, whose cattle he destroyed in their pastures by the side of the river. We are not told by what previous conduct on the part of the rich this hatred of the people had been earned, but Theagenês carried the popular feeling completely along with him, obtained by public vote a body of guards ostensibly for his personal safety, and employed them to overthrow the oligarchy.[1] But he did not maintain his power, even for his own life: a second revolution dethroned and expelled him; on which occasion, after a short interval of temperate government, the people are said to have renewed in a still more marked way their antipathies against the rich; banishing some of them with confiscation of property, intruding into the houses of others with demands for forced hospitality, and even passing a formal palintokia, or decree, to require from the rich who had lent money on interest, the refunding of all past interest paid to them by their debtors.[2] To appreciate correctly such a demand, we must recollect that the practice of taking interest for money lent was regarded by a large proportion of early ancient society with feelings of unqualified reprobation; and it will be seen, when we come to the legislation of Solon, how much such violent reactionary feeling against the creditor was provoked by the antecedent working of the harsh law determining his rights.

We hear in general terms of more than one revolution in the government of Megara, — a disorderly democracy, subverted by returning oligarchical exiles, and these again unable long to maintain themselves;[3] but we are alike uninformed as to dates and details. And in respect to one of these struggles, we are admitted to the outpourings of a contemporary and a sufferer, — the Megarian poet Theognis. Unfortunately, his elegiac verses, as we possess them, are in a state so broken, incoherent, and interpolated, that we make out no distinct conception of the events which call them forth,— still less, can we discover in the verses of Theognis

[1] Aristot. Polit. v, 4, 5; Rhetor. i, 2, 7.
[2] Plutarch, Quæst. Græc. c. 18, p. 295.
[3] Aristot. Polit. iv, 12, 10; v, 2, 6; 4, 3.

that strength and peculiarity of pure Dorian feeling, which, since the publication of O. Muller's History of the Dorians, it has been the fashion to look for so extensively. But we see that the poet was connected with an oligarchy, of birth and not of wealth, which had recently been subverted by the breaking in of the rustic population previously subject and degraded, — that these subjects were contented to submit to a single-headed despot, in order to escape from their former rulers,— and that Theognis had himself been betrayed by his own friends and companions, stripped of his property, and exiled, through the wrong doing "of enemies whose blood he hopes one day to be permitted to drink."[1] The condition of the subject cultivators previous to this revolution he depicts in sad colors; — they "dwelt without the city, clad in goatskins, and ignorant of judicial sanctions or laws:"[2] after it, they had become citizens, and their importance had been immensely enhanced. And thus, according to his impression, the vile breed has trodden down the noble,— the bad have become masters, and the good are no longer of any account. The bitterness and humiliation which attend upon poverty, and the undue ascendency which wealth confers even upon the most worthless of mankind,[3] are among the prominent subjects of his complaint, and his keen personal feeling on this point would be alone sufficient to show that the recent revolution had no way overthrown the influence of property; in contradiction to the opinion of Welcker, who infers without ground, from a passage of uncertain meaning, that the land of the state had been formally redivided.[4]

Theognis, vv, 682, 715, 720, 750, 816, 914, Welcker's edition: —

Τῶν εἰη μέλαν αἷμα πιεῖν, etc.

[2] Theognis, v, 20. —

Κύρνε, πόλις μὲν ἔθ' ἥδε πόλις, λαοὶ δὲ δὴ ἄλλοι,
Οἳ πρόσθ' οὔτε δίκας ἤδεσαν οὔτε νόμους,
Ἀλλ' ἀμφὶ πλευρῇσι δορὰς αἰγῶν κατέτριβον,
Ἔξω δ' ὥστ' ἔλαφοι τῆσδ' ἐνέμοντο πόλεος.

[3] See, especially, the lines from 500–560, 816–830, in Welcker's edition.
[4] Consult the Prolegomena to Welcker's edition of Theognis; also, those of Schneidewin (Delectus Elegiac. Poetar. pp. 46–55).

The Prolegomena of Welcker are particularly valuable and full of instruction. He illustrates at great length the tendency common to Theognis, with other early Greek poets, to apply the words *good* and *bad*, not with reference

The Megarian revolution, so far as we apprehend it from Theognis, appears to have improved materially the condition of the cultivators around the town, and to have strengthened a certain class whom he considers "the bad rich,"— while it extinguished the privileges of that governing order, to which he himself belonged, denominated in his language "the good and the virtuous," with ruinous effect upon his own individual fortunes. How far this governing order was exclusively Dorian, we have no means of determining. The political change by which Theog-

to any ethical standard, but to wealth as contrasted with poverty, — nobility with low birth, — strength with weakness, — conservative and oligarchical politics as opposed to innovation (sect. 10–18). The ethical meaning of these words is not absolutely unknown, yet rare, in Theognis: it gradually grew up at Athens, and became popularized by the Socratic school of philosophers as well as by the orators. But the early or political meaning always remained, and the fluctuation between the two has been productive of frequent misunderstanding. Constant attention is necessary when we read the expressions *οἱ ἀγαθοὶ, ἐσθλοὶ, βέλτιστοι, καλοκἀγαθοὶ, χρηστοὶ*, etc., or on the other hand, *οἱ κακοὶ, δειλοὶ*, etc., to examine whether the context is such as to give to them the ethical or the political meaning. Welcker seems to go a step too far, when he says that the latter sense "fell into desuetude, through the influence of the Socratic philosophy." (Proleg. sect. 11, p. xxv.) The two meanings both remained extant at the same time, as we see by Aristotle (Polit. iv, 8, 2), — *σχεδὸν γὰρ παρὰ τοῖς πλείστοις οἱ εὔποροι, τῶν καλῶν κἀγαθῶν δοκοῦσι κατέχειν χώραν.* A careful distinction is sometimes found in Plato and Thucydides, who talk of the oligarchs as "the persons *called* super-excellent," — *τοὺς καλοὺς κἀγαθοὺς ὀνομαζομένους* (Thucyd. viii, 48), — *ὑπὸ τῶν πλουσίων τε καὶ καλῶν κἀγαθῶν λεγομένων ἐν τῇ πόλει* (Plato, Rep. viii, p. 569).

The same double sense is to be found equally prevalent in the Latin language: "*Bonique* et *mali* cives appellati, non ob merita in rempublicam, omnibus pariter corruptis: sed uti quisque locupletissimus, et injuriâ validior, quia præsentia defendebat, pro bono habebatur." (Sallust, Hist. Fragment. lib. i, p. 935, Cort.) And again, Cicero (De Republ. i, 34): "Hoc errore vulgi cum rempublicam opes paucorum, non virtutes, tenere cœperunt, nomen illi principes *optimatium* mordicus tenent, re autem carent eo nomine." In Cicero's Oration pro Sextio (c. 45) the two meanings are intentionally confounded together, when he gives his definition of *optimus quisque*. Welcker (Proleg. s. 12) produces several other examples of the like equivocal meaning. Nor are there wanting instances of the same use of language in the laws and customs of the early Germans, — boni homines, probi homines, Rachinburgi, Gudemänner. See Savigny, Geschichte des Römisch. Rechts im Mittelalter, vol. i, p. 184; vol. ii, p. xxii

nis suffered, and the new despot whom he indicates as either actually installed or nearly impending, must have come considerably after the despotism of Theagenês; for the life of the poet seems to fall between 570–490 B. C., while Theagenês must have ruled about 630–600 B. C. From the unfavorable picture, therefore, which the poet gives as his own early experience of the condition of the rural cultivators, it is evident that the despot Theagenês had neither conferred upon them any permanent benefit, nor given them access to the judicial protection of the city.

It is thus that the despots of Corinth, Sikyôn, and Megara serve as samples of those revolutionary influences, which towards the beginning of the sixth century B. C., seem to have shaken or overturned the oligarchical governments in very many cities throughout the Grecian world. There existed a certain sympathy and alliance between the despots of Corinth and Sikyôn:[1] how far such feeling was farther extended to Megara, we do not know. The latter city seems evidently to have been more populous and powerful during the seventh and sixth centuries B. C., than we shall afterwards find her throughout the two brilliant centuries of Grecian history: her colonies, found as far distant as Bithynia and the Thracian Bosphorus on one side, and as Sicily on the other, argue an extent of trade as well as naval force once not inferior to Athens: so that we shall be the less surprised when we approach the life of Solon, to find her in possession of the island of Salamis, and long maintaining it, at one time with every promise of triumph, against the entire force of the Athenians.

CHAPTER X.

IONIC PORTION OF HELLAS.—ATHENS BEFORE SOLON

HAVING traced in the preceding chapters the scanty stream of Peloponnesian history, from the first commencement of an authentic chronology in 776 B. C. to the maximum of Spartan territorial acquisition, and the general acknowledgment of Spartan primacy, prior to 547 B. C., I proceed to state as much as can be made out respecting the Ionic portion of Hellas during the same period. This portion comprehends Athens and Eubœa, — the Cyclades Islands, — and the Ionic cities on the coast of Asia Minor, with their different colonies.

In the case of Peloponnesus, we have been enabled to discern something like an order of real facts in the period alluded to, — Sparta makes great strides, while Argos falls. In the case of Athens, unfortunately, our materials are less instructive. The number of historical facts, anterior to the Solonian legislation, is very few indeed; — the interval between 776 B. C. and 624 B. C., the epoch of Drako's legislation a short time prior to Kylôn's attempted usurpation, gives us merely a list of archons, denuded of all incident.

In compliment to the heroism of Kodrus, who had sacrificed his life for the safety of his country, we are told that no person after him was permitted to bear the title of king:[1] his son Medôn, and twelve successors, — Akastus, Archippus, Thersippus, Phorbas, Megaklês, Diognêtus, Phereklês, Ariphrôn, Thespieus, Agamestôr, Æschylus, and Alkmæôn,— were all archons for life. In the second year of Alkmæôn (752 B. C.), the dignity of archon was restricted to a duration of ten years: and seven of these decennial archons are numbered, — Charops, Æsimidês, Kleidikus, Hippomenês, Leokratês, Apsandrus, Eryxias. With Kreôn who succeeded Eryxias, the archonship was not only made annual, but put into commission and distributed among nine persons and these nine archons, annually changed, continue throughout all the historical period, interrupted only by the few intervals of political disturbance and foreign compression. Down to Kleidikus and Hippomenês (714 B. C.), the dignity of archon had continued to belong exclusively to the Medontidæ or descendants of Medôn and Kodrus:[1] at that period it was thrown open to all the Eupatrids, or order of nobility in the state.

[1] Justin. ii. 7.

Such is the series of names by which we step down from the level of legend to that of history. All our historical knowledge of Athens is confined to the period of the annual archons; which series of eponymous archons, from Kreôn downwards, is perfectly trustworthy.[2] Above 683 B. C., the Attic antiquaries have provided us with a string of names, which we must take as we find them, without being able either to warrant the whole or to separate the false from the true. There is no reason to doubt the general fact, that Athens, like so many other communities of Greece, was in its primitive times governed by an hereditary line of kings, and that it passed from that form of government into a commonwealth, first oligarchical, afterwards democratical.

We are in no condition to determine the civil classification and political constitution of Attica, even at the period of the archonship of Kreôn, 683 B. C., when authentic Athenian chronology first commences, — much less can we pretend to any knowledge of the anterior centuries. Great political changes were introduced first by Solon (about 594 B. C.), next by Kleisthenês (509 B. C.), afterwards by Aristeidês, Periklês, and Ephialtês, between the Persian and Peloponnesian wars: so that the old ante-Solonian, — nay, even the real Solonian, — polity was thus put more and more out of date and out of knowledge. But all the information which we possess respecting that old polity, is derived from authors who lived after all or most of these great changes,— and

[2] See Boeckh on the Parian Marble, in Corp. Inscrip. Græc. part 12, sect. 6, pp. 307, 310, 332.

From the beginning of the reign of Medôn son of Kodrus, to the first annual archon Kreôn, the Parian Marble computes 407 years, Eusebius 367.

who, finding no records, nor anything better than current legends, explained the foretime as well as they could by guesses more or less ingenious, generally attached to the dominant legendary names. They were sometimes able to found their conclusions upon religious usages, periodical ceremonies, or common sacrifices, still subsisting in their own time; and these were doubtless the best evidences to be found respecting Athenian antiquity, since such practices often continued unaltered throughout all the political changes. It is in this way alone that we arrive at some partial knowledge of the ante-Solonian condition of Attica, though as a whole it still remains dark and unintelligible, even after the many illustrations of modern commentators.

Philochorus, writing in the third century before the Christian era, stated that Kekrops had originally distributed Attica into twelve districts,— Kekropia, Tetrapolis, Epakria, Dekeleia, Eleusis, Aphidnæ, Thorikus, Braurôn, Kythêrus, Sphêttus, Kêphisia, Phalêrus, — and that these twelve were consolidated into one political society by Theseus.[1] This partition does not comprise the Megarid, which, according to other statements, is represented as united with Attica, and as having formed part of the distribution made by king Pandiôn among his four sons, Nisus, Ægeus, Pallas, and Lykus, — a story as old as Sophoklês, at least.[2] In other accounts, again, a quadruple division is applied to the tribes, which are stated to have been four in number, beginning from Kekrops,— called in his time Kekrôpis, Autochthon, Aktæa, and Paralia. Under king Kranaus, these tribes, we are told, received the names of Kranaïs, Atthis, Mesogæa, and Diakria,[3] — under Erichthonius, those of Dias, Athenaïs, Poseidonias, Hephæstias: at last, shortly after Erechtheus, they were denominated after the four sons of Iôn (son of Kreusa, daughter of Erechtheus, by Apollo), Geleontes, Hoplêtes, Ægikoreis, Argadeis. The four Attic or Ionic tribes, under these last-mentioned names,

Philochorus ap. Strabo, ix, p. 396. See Schömann, Antiq. J. I Græc. c. v, sect. 2–5.

[2] Strabo, ix, p. 392. Philochorus and Andrôn extended the kingdom of Nisus from the isthmus of Corinth as far as the Pythium (near Œnoê) and Eleusis (Str. *ib.*); but there were many different tales.

[3] Pollux, viii, c 9, 109–111.

continued to form the classification of the citizens until the revolution of Kleisthenes in 509 B. C., by which the ten tribes were introduced, as we find them down to the period of Macedonian ascendency. It is affirmed, and with some etymological plausibility, that the denominations of these four tribes must originally have had reference to the occupations of those who bore them,— the Hoplêtes being the *warrior-class*, the Ægikoreis *goatherds*, the Argadeis *artisans*, and the Geleontes (Teleontes, or Gedeontes) *cultivators:* and hence some authors have ascribed to the ancient inhabitants of Attica[1] an actual primitive distribution into hereditary professions, or castes, similar to that which prevailed in India and Egypt. If we should even grant that such a division into castes might originally have prevailed, it must have grown obsolete long before the time of Solon: but there seem no sufficient grounds for believing that it ever did prevail. The names of the tribes may have been originally borrowed from certain professions, but it does not necessarily follow that the reality corresponded to this derivation, or that every individual who belonged to any tribe was a member of the profession from whence the name had originally been derived. From the etymology of the names, be it ever so clear, we cannot safely assume the historical reality of a classification according to professions. And this objection (which would be weighty, even if the etymology had been clear) becomes irresistible, when we add that even the etymology is not beyond dispute;[2] that the names themselves are written with a diversity which cannot be reconciled: and that the four professions named by Strabo omit the goatherds and

---

[1] Iôn, the father of the four heroes after whom these tribes were named, was affirmed by one story to be the primitive civilizing legislator of Attica, like Lykurgus, Numa, or Deukaliôn (Plutarch. adv. Kolôten, c. 31, p. 1125).

[2] Thus Euripides derives the Αἰγικορεῖς, not from αἴξ, a goat, but from Αἰγίς, the Ægis of Athênê (Ion. 1581): he also gives *Teleontes*, derived from an eponymous *Teleôn*, son of Iôn, while the inscriptions at Kyzikus concur with Herodotus and others in giving Geleontes. Plutarch (Solon, 25) gives Gedeontes. In an Athenian inscription recently published by Professor Ross (dating, seemingly, in the first century after the Christian era), the worship of Zeus Geleôn at Athens has been for the first time verified,— Διὸς Γελέοντος ἱεροκήρυξ (Ross, *Die Attischen Demen* pp. vii–ix. Halle 1846).

include the priests; while those specified by Plutarch leave out the latter and include the former.[1]

All that seems certain is, that these were the four ancient Ionic tribes — analogous to the Hylleis, Pamphyli, and Dymanes among the Dorians — which prevailed not only at Athens, but among several of the Ionic cities derived from Athens. The Geleontes are mentioned in inscriptions now remaining belonging to Teôs in Ionia, and all the four are named in those of Kyzikus in the Propontis, which was a foundation from the Ionic Miletus.[2] The four tribes, and the four names (allowing for some variations of reading), are therefore historically verified; but neither the time of their introduction nor their primitive import are ascertainable matters, nor can any faith be put in the various constructions of the legends of Iôn, Erechtheus, and Kekrops, by modern commentators.

These four tribes may be looked at either as religious and social aggregates, in which capacity each of them comprised three phratries and ninety gentes; or as political aggregates, in which point of view each included three trittyes and twelve naukraries. Each phratry contained thirty gentes; each trittys comprised four naukraries: the total numbers were thus three hundred and sixty gentes and forty-eight naukraries. Moreover, each gens is said to have contained thirty heads of families, of whom therefore there would be a total of ten thousand eight hundred.

Comparing these two distributions one with the other, we may remark that they are distinct in their nature and proceed in opposite directions. The trittys and the naukrary are essentially fractional subdivisions of the tribe, and resting upon the tribe as their higher unity; the naukrary is a local circumscription, com-

[1] Plutarch (Solon, c. 23); Strabo, viii, p. 383. Compare Plato, Kritias, p. 110.

[2] Boeckh, Corp. Inscr. Nos. 3078, 3079, 3665. The elaborate commentary on this last-mentioned inscription, in which Boeckh vindicates the early historical reality of the classification by professions, is noway satisfactory to my mind.

K. F. Hermann (Lehrbuch der Griechischen Staats Alterthümer, sect. 91-96) gives a summary of all that can be known respecting these old Athenian tribes. Compare Ilgen, De Tribubus Atticis, p. 9, *seq.*; Tittmann, Griechische Staats Verfassungen, pp. 570-582; Wachsmuth, Hellenische Alterthumskunde, sect. 43, 44.

posed of the naukrars, or principal householders (so the etymology seems to indicate), who levy in each respective district the quota of public contributions which belongs to it, and superintend the disbursement, — provide the military force incumbent upon the district, being for each naukrary two horsemen and one ship, — and furnish the chief district-officers, the prytanes of the naukrari.[1] A certain number of foot soldiers, varying according to the demand, must probably be understood as accompanying these horsemen, but the quota is not specified, as it was perhaps thought unnecessary to limit precisely the obligations of any except the wealthier men who served on horseback, — at a period when oligarchical ascendency was paramount, and when the bulk of the people was in a state of comparative subjection. The forty-eight naukraries are thus a systematic subdivision of the four tribes, embracing altogether the whole territory, population, contributions, and military force of Attica, — a subdivision framed exclusively for purposes connected with the entire state.

But the phratries and gentes are a distribution completely different from this. They seem aggregations of small primitive unities into larger; they are independent of, and do not presuppose, the tribe; they arise separately and spontaneously, without preconcerted uniformity, and without reference to a common political pur-

[1] About the naukraries, see Aristot. Fragment. Rerum Public. p. 89, ed Neumann; Harpokration, vv, *Δήμαρχος*, *Ναυκραρικὰ*; Photius, v, *Ναυκραρία*; Pollux, viii, 108; Schol. ad Aristoph. Nubes, 37.

Οἱ *πρυτάνεις τῶν Ναυκράρων*, Herodot. v, 71: they conducted the military proceedings in resistance to the usurpation of Kylôn.

The statement that each naukrary was obliged to furnish one ship can hardly be true of the time before Solon: as Pollux states it, we should be led to conceive that he only infers it from the name *ναύκραρος* (Pollux, viii, 108), though the real etymology seems rather to be from *ναίω* (Wachsmuth, Hellen. Alt. sect. 44, p. 240). There may be some ground for believing that the old meaning, also, of the word *ναύτης* connected it with *ναίω*; such a supposition would smooth the difficulty in regard to the functions of the *ναυτόδικαι* as judges in cases of illicit admission into the phratores. See Hesychius and Harpokration, v, *Ναυτόδικαι*; and Baumstark, De Curatoribus Emporii, Friburg, 1828, p. 67, *seq.*: compare, also, the fragment of the Solonian law, *ἢ ἱερῶν ὀργίων ἢ ναῦται*, which Niebuhr conjecturally corrects. Rom. Gesch. v, i, p. 323, 2d ed.; Hesychius, *Ναυστῆρες — οἱ οἰκέται*. See Pollux, *Ναῦλον*, and Lobeck, *Ῥηματικὸν*, sect. 3, p. 7; *Ἀειναῦται παρὰ Μιλησίοις*? Plutarch, Quæst. Græc. c. 32, p. 298.

pose; the legislator finds them preëxisting, and adapts or modifies them to answer some national scheme. We must distinguish the general fact of the classification, and the successive subordination in the scale, of the families to the gens, of the gentes to the phratry, and of the phratries to the tribe,— from the precise numerical symmetry with which this subordination is invested, as we read it, — thirty families to a gens, thirty gentes to a phratry, three phratries to each tribe. If such nice equality of numbers could ever have been procured, by legislative constraint[1] operating upon preëxistent natural elements, the proportions could not have been permanently maintained. But we may reasonably doubt whether it did ever so exist: it appears more like the fancy of an author who pleased himself by supposing an original systematic creation in times anterior to records, by multiplying together the number of days in the month and of months in the year. That every phratry contained an equal number of gentes, and every gens an equal number of families, is a supposition hardly admissible without better evidence than we possess. But apart from this questionable precision of numerical scale, the phratries and gentes themselves were real, ancient, and durable associations among the Athenian people, highly important to be understood.[2] The basis of the whole was the house, hearth, or family, — a number of which,

[1] Meier, De Gentilitate Atticâ, pp. 22–24, conceives that this numerical completeness was enacted by Solon; but of this there is no proof, nor is it in harmony with the general tendencies of Solon's legislation.

[2] So in reference to the Anglo-Saxon *Tythings* and *Hundreds*, and to the still more widely-spread division of the *Hundred*, which seems to pervade the whole of Teutonic and Scandinavian antiquity, much more extensively than the *tything*; — there is no ground for believing that these precise numerical proportions were in general practice realized: the systematic nomenclature served its purpose by marking the idea of graduation and the type to which a certain approach was actually made. Mr. Thorpe observes, respecting the Hundred, in his Glossary to the "Ancient Laws and Institutes of England," v, *Hundred, Tything, Frid-Borg*, etc. "In the Dialogus de Scaccario, it is said that a Hundred 'ex hydarum aliquot centenariis, sed non determinatis, constat: quidam enim ex pluribus, quidam ex paucioribus constat.' Some accounts make it consist of precisely a hundred hydes, others of a hundred tythings, others of a hundred free families. Certain it is, that whatever may have been its original organization, the Hundred, at the time when it becomes known to us, differed greatly in extent in various parts of England."

greater or less, composed the gens, or genos. This gens was therefore a clan, sept, or enlarged, and partly factitious, brotherhood, bound together by, — 1. Common religious ceremonies, and exclusive privilege of priesthood, in honor of the same god, supposed to be the primitive ancestor, and characterized by a special surname. 2. By a common burial-place. 3. By mutual rights of succession to property. 4. By reciprocal obligations of help, defence, and redress of injuries. 5. By mutual right and obligation to intermarry in certain determinate cases, especially where there was an orphan daughter or heiress. 6. By possession, in some cases at least, of common property, an archon and a treasurer of their own. Such were the rights and obligations characterizing the gentile union:[1] the phratric union, binding together several gentes, was less intimate, but still included some mutual rights and obligations of an analogous character, and especially a communion of particular sacred rites and mutual privileges of prosecution in the event of a phrator being slain. Each phratry was considered as belonging to one of the four tribes, and all the phratries of the same tribe enjoyed a certain periodical communion of sacred rites, under the presidency of a magistrate called the phylo-basileus, or tribe-king, selected from the Eupatrids; Zeus Geleôn was in this manner the patron-god of the tribe Geleontes. Lastly, all the four tribes were linked together by the common worship of Apollo Patrôus, as their divine father and guardian; for Apollo was the father of Iôn, and the eponyms of all the four tribes were reputed sons of Iôn.

Such was the primitive religious and social union of the population of Attica in its gradually ascending scale, — as distinguished from the political union, probably of later introduction, represented at first by the trittyes and naukraries, and in after times by the ten Kleisthenean tribes, subdivided into trittyes and demes. The religious and family bond of aggregation is the earlier of the two: but the political bond, though beginning later,

[1] See the instructive inscription in Professor Ross's work (Uber die Demen von Attika, p. 26) of the γένος Ἀμυνανδριδῶν, commemorating the archon of that gens, the priest of Kekrops, the Ταμίας, or treasurer, and the names of the members, with the deme and tribe of each individual. Compare Bossler, De Gent. Atticis, p. 53. About the peculiar religious rites of the gens called Gephyræi, see Herodot. v, 61.

will be found to acquire constantly increasing influence throughout the greater part of this history. In the former, personal relation is the essential and predominant characteristic,[1] — local relation being subordinate: in the latter, property and residence become the chief considerations, and the personal element counts only as measured by these accompaniments. All these phratric and gentile associations, the larger as well as the smaller, were founded upon the same principles and tendencies of the Grecian mind,[2] — a coalescence of the idea of worship with that of ancestry, or of communion in certain special religious rites with communion of blood, real or supposed. The god, or hero, to whom the assembled members offered their sacrifices, was conceived as the primitive ancestor, to whom they owed their origin; often through a long list of intermediate names, as in the case of the Milesian Hekatæus, so often before adverted to.[3] Each family

Plato, Euthydem. p. 302; Aristot. ap. Schol. in Platon. Axioch. p. 465, ed. Bek. *Ἀριστοτέλης φησὶ τοῦ ὅλου πλήθους διῃρημένου Ἀθήνησιν εἰς τε τοὺς γεωργοὺς καὶ τοὺς δημιουργοὺς, φυλὰς αὐτῶν εἶναι τέσσαρας, τῶν δὲ φυλῶν ἑκάστης μοίρας εἶναι τρεῖς, ἃς τριττύας τε καλοῦσι καὶ φρατρίας· ἑκάστης δὲ τούτων τριάκοντα εἶναι γένη, τὸ δὲ γένος ἐκ τριάκοντα ἀνδρῶν συνιστάναι· τούτους δὴ τοὺς εἰς τὰ γένη τεταγμένους γεννήτας καλοῦσι.* Pollux, viii, 3. *Οἱ μετέχοντες τοῦ γένους, γεννῆται καὶ ὁμογάλακτες· γένει μὲν οὖ πρυσήκοντες, ἐκ δὲ τῆς συνόδου οὕτω προσαγορευόμενοι*: compare also iii, 52; Mœris Atticist. p. 108.

Harpokrat. v, *Ἀπόλλων Πατρῷος, Θεοίνιον, Γεννῆται, Ὀργεῶνες*, etc Etymol. Magn. v, *Γεννῆται*; Suidas, v, *Ὀργεῶνες*; Pollux, viii, 85; Demosthen. cont. Eubulid. p. 1319, *εἶτα φράτορες, εἶτα Ἀπόλλωνος πατρῴου καὶ Διὸς ἑρκίου γεννῆται*; and cont. Neæram, p. 1365. Isæus uses *ὀργεῶνες* as synonymous with *γεννῆται* (see Orat. ii, pp. 19, 20–28, ed. Bek.). Schömann (Antiq. J. P. Græc. § xxvi) considers the two as essentially distinct. *Φρήτρη* and *σύλον* both occur in the Iliad, ii, 362. See the Dissertation of Buttmann Uber den Begriff von *φρατρία* (Mythologus, c. 24, p. 305); and that of Meier, De Gentilitate Atticâ, where the points of knowledge attainable respecting the gentes are well put together and discussed.

In the Theræan Inscription (No. 2448 ap. Boeckh. Corp. Inscr., see his comment, page 310) containing the testament of Epikêta, whereby a bequest is made to *οἱ συγγενεῖς* — *ὁ ἀνδρεὸς τῶν συγγενῶν*, — this latter word does not mean kindred or blood relations, but a variety of the gentile union — "thiasus," or "sodalitium." Boeckh.

[2] Herodot. i, 143. *Ἑκαταίῳ — γενηλογήσαντί τε ἑωυτὸν καὶ ἀναδήσαντι ἐς ἑκκαιδέκατον θεόν.* Again, *γενεηλογήσαντι ἑωυτὸν, καὶ ἀναδήσαντι ἐς ἑκκαιδέκατον θεόν.* The Attic expression, — *ἀγχίστεια ἱερῶν καὶ ὁσίων*, — illustrates the intimate association between family relationship and common religious privileges. — Isæus, Orat. vi, p. 89, ed. Bek.

had its own sacred rites and funereal commemoration of ancestors, celebrated by the master of the house, to which none but members of the family were admissible: the extinction of a family, carrying with it the suspension of these religious rites, was held by the Greeks to be a misfortune, not merely from the loss of the citizens composing it, but also because the family gods and the manes of deceased citizens were thus deprived of their honors,[1] and might visit the country with displeasure. The larger associations, called gens, phratry, tribe, were formed by an extension of the same principle, — of the family considered as a religious brotherhood, worshipping some common god or hero with an appropriate surname, and recognizing him as their joint ancestor; and the festivals Theoenia and Apaturia[2] — the first Attic, the

[1] Isæus, Or. vi, p. 61; ii, p. 38; Demosth. adv. Makartatum, pp. 1053-1075; adv. Leochar. p. 1093. Respecting this perpetuation of the family sacred rites, the feeling prevalent among the Athenians is much the same as what is now seen in China.

Mr. Davis observes: "Sons are considered in this country, where the power over them is so absolute through life, as a sure support, as well as a probable source of wealth and dignities, should they succeed in learning. But the grand object is, the perpetuation of the race, to sacrifice at the family tombs. Without sons, a man lives without honor or satisfaction, and dies unhappy; and as the only remedy, he is permitted to adopt the sons of his younger brothers.

"It is not during life only, that a man looks for the service of his sons. It is his consolation in declining years, to think that they will continue the performance of the prescribed rites in the hall of ancestors, and at the family tombs, when he is no more: and it is the absence of this prospect which makes the childless doubly miserable. The superstition derives influence from the importance attached by the government to this species of posthumous duty: a neglect of which is punishable, as we have seen, by the laws. Indeed, of all the subjects of their care, there are none which the Chinese so religiously attend to as the tombs of their ancestors, conceiving that any neglect is sure to be followed by worldly misfortune." — (The Chinese, by John Francis Davis, chap. ix, pp. 131–134, ed. Knight, 1840.)

Mr. Mill notices the same state of feeling among the Hindoos. — (History of British India, book ii, chap. vii, p. 381, ed. 8vo.)

[2] Xenoph. Hellen. i, 5, 8; Herodot i, 147· Suidas, *Ἀπαιτυρία — Ζεὺς*

second common to all the Ionic race, — annually brought together the members of these phratries and gentes for worship, festivity, and maintenance of special sympathies; thus strengthening the larger ties without effacing the smaller.

Such were the manifestations of Grecian sociality, as we read them in the early constitution, not merely of Attica, but of other Grecian states besides. To Aristotle and D.kæarchus, it was an interesting inquiry to trace back all political society into certain assumed elementary atoms, and to show by what motives and means the original families, each having its separate meal-bin and fireplace,[1] had been brought together into larger aggregates. But the historian must accept as an ultimate fact the earliest state of things which his witnesses make known to him; and in the case now before us, the gentile and phratric unions are matters into the beginning of which we cannot pretend to penetrate.

Pollux — probably from Aristotle's last work on the Constitutions of Greece — informs us, distinctly, that the members of the same gens at Athens were not commonly related by blood,— and even without any express testimony we might have concluded such to be fact: to what extent the gens, at the unknown epoch of its first formation, was based upon actual relationship, we have no means of determining, either with regard to the Athenian or the Roman gentes, which were in all main points analogous. Gentilism is a tie by itself; distinct from the family ties, but presupposing their existence and extending them by an artificial analogy, partly founded on religious belief and partly on positive compact, so as to comprehend strangers in blood. All the members of one gens, or even of one phratry, believed themselves to be sprung, not, indeed, from the same grandfather or great-

---

Φράτριος — *Ἀθηναία φρατρία*, the presiding god of the phratric union. — Plato, Euthydem. c. 28, p. 302; Demosth. adv. Makart. p. 1054. See Meier, De Gentilitate Atticâ, pp. 11–14.

The *πάτριαι* at Byzantium, which were different from *θίασοι*, and which possessed corporate property (*τά τε θιασωτικὰ καὶ τὰ πατριωτικὰ*, Aristot. Œconomic. ii, 4), are doubtless the parallel of the Athenian phratries.

Dikæarchus ap. Stephan. Byz. v. *Πατρὰ*; Aristot. Polit. i, 1, 6: *Ὁμοσιτεύους* and *ὁμοκαπνους* are the old words cited by the latter from Charondas and Epimenidês.

grandfather, but from the same divine or heroic ancestor: all the contemporary members of the phratry of Hekatæus had a common god for their ancestor in the sixteenth degree; and this fundamental belief, into which the Greek mind passed with so much facility, was adopted and converted by positive compact into the gentile and phratric principle of union. It is because such a transfusion, not recognized by Christianity, is at variance with modern habits of thought, and because we do not readily understand how such a legal and religious fiction can have sunk deep into the Greek feelings, that the phratries and gentes appear to us mysterious: but they are in harmony with all the legendary genealogies which have been set forth in the preceding volume. Doubtless Niebuhr, in his valuable discussion of the ancient Roman gentes, is right in supposing that they were not real families, procreated from any common historical ancestor: but it is not the less true, though he seems to suppose otherwise, that the idea of the gens involved *the belief* in a common first father, divine or heroic, — a genealogy which we may properly call fabulous, but which was consecrated and accredited among the members of the gens itself, and served as one important bond of union between them.[1] And though an analytical mind

---

[1] Niebuhr, Römische Geschichte, vol. i, pp. 317–337. Varro's language on that point is clear: "Ut in hominibus quædam sunt cognationes et gentilitates, sic in verbis. Ut enim ab Æmilio homines orti Æmilii et gentiles, sic ab Æmilii nomine declinatæ voces in gentilitate nominali." Paul. Diacon. p. 94. "Gentilis dicitur ex eodem genere ortus, et is qui simili nomine appellatur," etc. See Becker, Handbuch der Römischen Alterthumer, part 2, abth. 2, p. 36.

The last part of the definition ought to be struck out for the Grecian gentes. The passage of Varro does not prove the historical reality of the primitive father, or genarch, Æmilius, but it proves that the members of the gens believed in him.

Dr. Wilda, in his learned work, "Das Deutsche Strafrecht," (Halle, 1842,) dissents from Niebuhr in the opposite direction, and seems to maintain that the Grecian and Roman gentes were really distant blood relations (p. 123). How this can be proved, I do not know: and it is inconsistent with the opinion which he advances in the preceding page (p. 122), very justly, — that these *quasi* families are primordial facts in early human society, beyond which we cannot carry our researches. "The farther we go back in history, the more does the community exhibit the form of a family, though in reality it is *not* a mere family. This is the limit of historical research, which no man can transgress with impunity," (p. 122.)

like Aristotle might discern the difference between the gens and the family, so as to distinguish the former as the offspring of some special compact, still, this is no fair test of the feelings usual among early Greeks; nor is it certain that Aristotle himself, son of the physician Nikomachus, who belonged to the gens of the Asklepiads,[1] would have consented to disallow the procreative origin of *all* these religious families without any exception. The natural families of course changed from generation to generation, some extending themselves while others diminished or died out; but the gens received no alterations, except through the procreation, extinction, or subdivision of these component families; accordingly, the relations of the families with the gens were in perpetual course of fluctuation, and the gentile ancestorial genealogy, adapted as it doubtless was to the early condition of the gens, became in process of time partially obsolete and unsuitable. We hear of this genealogy but rarely, because it is only brought before the public in certain cases preëminent and venerable. But the humbler gentes had their common rites, and common superhuman ancestor and genealogy, as well as the more celebrated: the scheme and ideal basis was the same in all.

Analogies, borrowed from very different people and parts of the world, prove how readily these enlarged and factitious family unions assort with the ideas of an early stage of society. The Highland clan, the Irish sept,[2] the ancient legally constituted

[1] Diogen. Laërt. v, 1.

[2] See Colonel Leake's Travels in Northern Greece, ch. 2, p. 85 (the Greek word φράτριαι seems to be adopted in Albania); Boué, La Turquie en Europe, vol. ii. ch. 1, pp. 15–17; chap. 4, p. 530; Spenser's View of the State of Ireland (vol. vi, pp. 1542–1543, of Tonson's edition of Spenser's Works, 1715); Cyprien Robert, Die Slaven in Turkey, b. 1, chs. 1 and 2.

So, too, in the laws of king Alfred in England, on the subject of murder the guild-brethren, or members of the same guild, are made to rank in the position of distant relatives, if there happen to be no blood relatives:—

"If a man, kinless of paternal relatives, fight and slay a man, then, if he have maternal relatives, let them pay a third of the wēr: his guild-brethren a third part: for a third let him flee. If he have no maternal relatives, let his guild-brethren pay half: for half let him flee.... If a man kill a man thus circumstanced, if he have no relatives, let half be paid to the king, half to his guild-brethren." (Thorpe, Ancient Laws and Institutes of England, vol i, pp. 79–81.) Again, in the same work, Leges Henrici Primi, vol. i, p 596 the ideas of the kindred and the guild run together in the most intimate man-

families in Friesland and Dithmarsch, the phis, or phæra, among the Albanians, are examples of a similar practice:[1] and the

ner: "Si quis hominem occidat, — Si eum tunc *cognatio sua* deserat, et pro eo *gildare* nolit," etc. In the Salic law, the members of a *contubernium* were invested with the same rights and obligations one towards the other (Rogge, Gerichtswesen der Germanen, ch. iii, p. 62). Compare Wilda, Deutsches Strafrecht, p. 389, and the valuable special treatise of the same author (Das Gildenwesen im Mittelalter. Berlin, 1831), where the origin and progress of the guilds from the primitive times of German heathenism is unfolded. He shows that these associations have their basis in the earliest feelings and habits of the Teutonic race, — the family was, as it were, a natural guild, — the guild, a factitious family. Common religious sacrifices and festivals, — mutual defence and help, as well as mutual responsibility, — were the recognized bonds among the *congildones:* they were *sororitates* as well as *fraternitates*, comprehending both men and women (deren Genosser wie die Glieder einer Familie eng unter einander verbunden waren, p. 145). Wilda explains how this primitive social and religious *phratry* (sometimes this very expression *fratria* is used, see p. 109) passed into something like the more political tribe, or *phylê* (see pp. 43, 57, 60, 116, 126, 129, 344). The sworn *commune*, which spread so much throughout Europe in the beginning of the twelfth century, partakes both of the one and of the other, — *conjuratio*, — *amicitia jurata* (pp. 148, 169).

The members of an Albanian *phara* are all jointly bound to exact, and each severally exposed to suffer, the vengeance of blood, in the event of homicide committed upon, or by, any one of them (Boué, *ut supra*).

[1] See the valuable chapter of Niebuhr, Röm. Gesch. vol. i, pp. 317, 350, 2d edit.

The *Alberghi* of Genoa in the Middle Ages were enlarged families created by voluntary compact: "De tout temps (observes Sismondi) les familles puissantes avaient été dans l'usage, à Gênes, d'augmenter encore leur puissance en adoptant d'autres familles moins riches, moins illustres, ou moins nombreuses, — auxquelles elles communiquoient leur nom et leurs armes, qu'elles prenoient ainsi l'engagement de protéger, — et qui en retour s'associoient à toutes leurs quérelles. Les maisons dans lesquelles on entroit ainsi par adoption, étoient nommées des alberghi (auberges), et il y avoit peu de maisons illustres qui ne se fussent ainsi récrutées à l'aide de quelque famille étrangère." (Républiques Italiennes, t. xv, ch. 120, p. 366.)

Eichhorn (Deutsche Staats und Rechts-Geschichte, sect. 18, vol. i, p. 84, 5th edit.) remarks in regard to the ancient Germans, that the German "familiæ et propinquitates," mentioned by Tacitus (Germ. c. 7), and the "gentibus cognationibusque hominum" of Cæsar (B. G. vi, 22), bore more analogy to the Roman gens than to relationship of blood or wedlock. According to the idea of some of the German tribes, even blood-relationship might be formally renounced and broken off, with all its connected rights and obligations, at the pleasure of the individual: he might declare himself ἐκποιητὸς

adoption of prisoners by the North American Indians, as well as the universal prevalence and efficacy of the ceremony of adoption in the Grecian and Roman world, exhibit to us a solemn formality under certain circumstances, originating an union and affections similar to those of kindred. Of this same nature were the phratries and gentes at Athens, the curiæ and gentes at Rome, but they were peculiarly modified by the religious imagination of the ancient world, which always traced back the past time to gods and heroes: and religion thus supplied both the common genealogy as their basis, and the privileged communion of special sacred rites as means of commemoration and perpetuity. The gentes, both at Athens and in other parts of Greece, bore a patronymic name, the stamp of their believed common paternity: we find the Asklepiadæ in many parts of Greece, — the Aleuadæ in Thessaly, — the Midylidæ, Psalychidæ, Blepsiadæ, Euxenidæ, at Ægina, — the Branchidæ at Miletus, — the Nebridæ at Kôs, — the Iamidæ and Klytiadæ at Olympia, — the Akestoridæ at Argos, — the Kinyradæ in Cyprus, — the Penthilidæ at Mitylene,[1] — the Talthybiadæ at Sparta, — not less than the Kodridæ, Eumolpidæ, Phytalidæ, Lykomêdæ, Butadæ, Euneidæ, Hesychidæ, Brytiadæ, &c., in Attica.[2] To each of these corresponded a mythical ancestor more or less known, and passing for the first father as well as the eponymous hero of the gens, — Kodrus, Eumolpus, Butes, Phytalus, Hesychus, &c.

The revolution of Kleisthenês in 509 B. C. abolished the old tribes for civil purposes, and created ten new tribes, — leaving the phratries and gentes unaltered, but introducing the local distribution according to demes, or cantons, as the foundation of his new political tribes. A certain number of demes belonged to each of the ten Kleisthenean tribes (the demes in the same tribes were not usually contiguous, so that the tribe was not coincident with a definite circumscription), and the deme, in which every individual was then registered, continued to be that in which his descendants were also registered. But the gentes had no connection, as such, with these new tribes, and the members of the same gens might belong to demes.[1] It deserves to be remarked, however, that to a certain extent, in the old arrangement of Attica, the division into gentes coincided with the division into demes; that is, it happened not unfrequently that the gennêtes or members of the same gens lived in the same canton, so that the name of the gens and the name of the deme was the same: moreover, it seems that Kleisthenês recognized a certain number of new demes, to which he gave names derived from some important gens resident near the spot. It is thus that we are to explain the large number of the Kleisthenean demes which bear patronymic names.[2]

to use the Greek expression. See the Titul. 63 of the Salic law, as quoted by Eichhorn, *l. c.*

Professor Koutorga of St. Petersburg (in his Essai sur l'Organisation de la Tribu dans l'Antiquité, translated from Russian into French by M. Chopin, Paris, 1839) has traced out and illustrated the fundamental analogy between the social classification, in early times, of Greeks, Romans, Germans, and Russians (see especially, pp. 47, 213). Respecting the early history of Attica, however, many of his positions are advanced upon very untrustworthy evidence (see p. 123, *seq.*).

Pyth. ii. 27; Aristot. Pol. v, 8, 13; Ἀλευάδων τοὺς πρώτους, Plato, Menon. 1, which marks them as a numerous gens. See Buttmann, Dissert. on the Aleuadæ in the Mythologus, vol. ii, p. 246. Bacchiadæ at Corinth, ἐδίδοσαν καὶ ἦγοντο ἐξ ἀλλήλων (Herod. v, 92).

[2] Harpokration, v, Ἐτεοβουτάδαι, Βουτάδαι; Thucyd. viii, 53; Plutarch Theseus, 12; Themistoklês, 1; Demosth. cont. Neær. p. 1365; Polemo ap Schol. ad Soph. Œdip. Kol. 489; Plutarch, Vit. x, Orator. pp. 841–844 See the Dissertation of O. Müller De Minervâ Poliade, c. 2.

[1] Demosth. cont. Neær. p. 1365. Tittmann (Griechische Staatsverfass, p. 277) thinks that every citizen, after the Kleisthenean revolution, was of necessity a member of some phratry, as well as of some deme: but the evidence which he produces is, in my judgment, insufficient. The ideas of the phratry and the tribe are often confounded together; thus the Ægeidæ of Sparta, whom Herodotus (iv, 149) calls a tribe, are by Aristotle called a phratry of Thebans (ap. Schol. ad Pindar. Isthm. vii, 18). Compare Wachsmuth, Hellenische Alterthumskunde, sect. 83, p. 17.

A great many of the demes seem to have derived their names from the shrubs or plants which grew in their neighborhood (Schol. ad Aristophan. Plutus, 586, Μυρρινοῦς, Ῥαμνοῦς, etc.).

[2] For example, Æthalidæ, Butadæ, Kothôkidæ, Dædalidæ, Eiresidæ, Epicikidæ, Ercœadæ, Eupyridæ, Echelidæ, Keiriadæ, Kydantidæ, Lakiadæ, Pambôtadæ, Perithoidæ, Persidæ, Semachidæ, Skambônidæ, Sybridæ, Titakidæ, Thyrgonidæ, Hybadæ, Thymœtadæ, Pæonidæ, Philaidæ, Chollidæ: all these

There is one remarkable difference between the Roman and the Grecian gens, arising from the different practice in regard to naming. A Roman patrician bore habitually three names, — the gentile name, with one name following it to denote his family, and another preceding it peculiar to himself in that family. But in Athens, at least after the revolution of Kleisthenês, the gentile name was not employed: a man was described by his own single name, followed first by the name of his father, and next by that of the deme to which he belonged,— as *Æschinês, son of Atrom-*

names of demes, bearing the patronymic form, are found in Harpokration and Stephanus Byz. alone.

We do not know that the Κεραμεῖς ever constituted a γένος, but the name of the deme Κεραμεῖς is evidently given, upon the same principle, to a place chiefly occupied by potters. The gens Κοιρώνιδαι are said to have been called Φίλτειες (? Φλύειες) and Περιθοίδαι as well as Κοιρώνιδαι: the names of gentes and those of demes seem not always distinguishable.

The Butadæ, though a highly venerable gens, also ranked as a deme (see the Psephism about Lykurgus in Plutarch, Vit. x. Orator. p. 852): yet we do not know that there was any locality called Butadæ. Perhaps some of the names above noticed may be simply names of gentes, enrolled as demes, but without meaning to imply any community of abode among the members.

The members of the Roman gens occupied adjoining residences, on some occasions, — to what extent we do not know (Heiberg, De Familiari Patriciorum Nexu, ch. 24, 25. Sleswic, 1829).

We find the same patronymic names of demes and villages elsewhere: in Kôs and Rhodes (Ross, Inscr. Gr. ined., Nos. 15-26. Halle, 1846); *Lêstadæ* in Naxos (Aristotle ap. Athenæ. viii, p. 348); *Botachidæ* at Tegea (Steph. Byz. in v); *Branchidæ*, near Miletus, etc; and an interesting illustration is afforded, in other times and other places, by the frequency of the ending *ikon* in villages near Zurich in Switzerland, — Mezikon, Nennikon, Wezikon, etc. Blüntschli, in his history of Zurich, shows that these terminations are abridgments of *inghoven*, including an original patronymic element, — indicating the primary settlement of members of a family, or of a band bearing the name of its captain, on the same spot (Blüntschli, Staats und Rechts Geschichte der Stadt Zurich, vol i, p. 26).

In other Inscriptions from the island of Kôs, published by Professor Ross, we have a deme mentioned (without name), composed of three coalescing gentes, "In hoc et sequente titulo alium jam deprehendimus *demum Coum*, e tribus gentibus appellatione patronymicâ conflatum, Antimachidarum, Ægiliensium, Archidarum." (Ross, Inscript. Græc. Ined. Fascic. iii, No 307, p. 44. Berlin, 1845.) This is a specimen of the process systematically introduced by Kleisthenês in Attica.

êtus, a Aothókid. Such a difference in the habitual system of naming, tended to make the gentile tie more present to every one's mind at Rome than in the Greek cities.

Before the pecuniary classification of the Atticans introduced by Solon, the phratries and gentes, and the trittyes and naukraries, were the only recognized bonds among them, and the only basis of legal rights and obligations, over and above the natural family. The gens constituted a close incorporation, both as to property and as to persons. Until the time of Solon, no man had any power of testamentary disposition: if he died without children, his gennêtes succeeded to his property,[1] and so they continued to do even after Solon, if he died intestate. An orphan girl might be claimed in marriage of right by any member of the gens, the nearest agnates being preferred;[2] if she was poor, and he did not choose to marry her himself, the law of Solon compelled him to provide her with a dowry proportional to his enrolled scale of property, and to give her out in marriage to another; and the magnitude of the dowry required to be given, — large, even as fixed by Solon, and afterwards doubled, — seems a proof that the lawgiver intended indirectly to enforce actual marriage.[3] If a man was murdered, first his near relations, next his gennêtes and phrators, were both allowed and required to prosecute the crime at law;[4] his fellow demots, or

[1] Plutarch, Solon, 21. We find a common cemetery exclusively belonging to the gens, and tenaciously preserved (Demosth. cont. Eubulid. p. 1307; Cicero, Legg. ii, 26).

[2] Demosth. cont. Makartat. p. 1068. See the singular additional proviso in Plutarch, Solon, c. 20.

[3] See Meursius, Themis Attica, i, 13.

[4] That this was the primitive custom, and that the limitation μέχρις ἀνεψιαδῶν (Meier, De Bonis Damnat. p. 23, cites ἀνεψιαδῶν καὶ φρατόρων) was subsequently introduced (Demosth. cont. Euerg. et Mnesib. p. 1161), we may gather from the law as it stands in Demosth. cont. Makartat. p. 1069, which includes the phrators, and therefore, *à fortiori*, the gennêtes, or gentiles.

The same word γένος is used to designate both the circle of nameable relatives, brothers, first cousins (ἀγχιστεῖς, Demosth. cont. Makartat. c. 9, p. 1058), etc., going beyond the οἶκος, — and the quasi-family, or gens. As the gentile tie tended to become weaker, so the former sense of the word became more and more current, to the extinction of the latter. Οἱ ἐν γένει, or οἱ προσήκοντες, would have borne a wider sense in the days of Drako than in

inhabitants of the same deme, did not possess the like right of prosecuting. All that we hear of the most ancient Athenian laws is based upon the gentile and phratric divisions, which are treated throughout as extensions of the family. It is to be observed that this division is completely independent of any property qualification, — rich men as well as poor being comprehended in the same gens.[1] Moreover, the different gentes were very unequal in dignity, arising chiefly from the religious ceremonies of which each possessed the hereditary and exclusive administration, and which, being in some cases considered as of preeminent sanctity in reference to the whole city, were therefore nationalized. Thus the Eumolpidæ and Kêrykes, who supplied the Hierophant, and superintended the mysteries of the Eleusinian Dêmêtêr, — and the Butadæ, who furnished the priestess of Athênê Polias as well as the priest of Poseidôn Erechtheus in the acropolis, — seem to have been reverenced above all the other gentes.[2] When the name Butadæ was

those of Demosthenes: Συγγενὴς usually belongs to γένος in the narrower sense, γεννητης to γένος in the wider sense; but Isæus sometimes uses the former word as an exact equivalent of the latter (Orat. vii, pp. 95, 99, 102, 103, Bekker). Τριακὰς appears to be noted in Pollux as the equivalent of γένος, or gens (viii, 111), but the word does not occur in the Attic orators, and we cannot make out its meaning with certainty: the Inscription of the Deme of Peiræeus given in Boeckh (Corp. Insc. No. 101, p. 140,) rather adds to the confusion by revealing the existence of a τριακὰς constituting the fractional part of a deme, and not connected with a gens: compare Boeckh's Comment. *ad loc.* and his Addenda and Corrigenda, p. 900.

Dr. Thirlwall translates γένος, *house*; which I cannot but think inconvenient, because that word is the natural equivalent of οἶκος, — a very important word in reference to Attic feelings, and quite different from γένος (Hist. of Greece, vol. ii, p. 14, ch. 11). It will be found impossible to translate it by any known English word which does not at the same time suggest erroneous ideas: which I trust will be accepted as my excuse for adopting it untranslated into this History.

[1] Demosthen. cont. Makartat. *l. c.*

[2] See Æschines de Falsâ Legat. p. 292, c. 46; Lysias cont. Andokid. p. 108; Andokid. de Mysteriis, p. 63, Reiske; Deinarchus and Hellanikus ap. Harpokration. v, Ἱεροφάντης.

In case of crimes of impiety, particularly in offences against the sanctity of the Mysteries, the Eumolpidæ had a peculiar tribunal of their own number, before which offenders were brought by the king archon. Whether it was often used, seems doubtful; they had also certain unwritten customs of

adopted in the Kleisthenean arrangement as the name of a deme, the holy gens so called adopted the distinctive denomination of Eteobutadæ, or "The True Butadæ."[1]

A great many of the ancient gentes of Attica are known to us by name; but there is only one phratry (the Achniadæ) whose title has come down to us.[2] These phratries and gentes probably never at any time included the whole population of the country, — and the proportion not included in them tended to become larger and larger, in the times anterior to Kleisthenês,[3] as well as afterwards. They remained, under his constitution, and throughout the subsequent history, as religious quasi-families, or corporations, conferring rights and imposing liabilities which were enforced in the regular dikasteries, but not directly connected with the citizenship or with political functions: a man

great antiquity, according to which they pronounced (Demosthen. cont. Androtion. p. 601; Schol. ad Demosth. vol. ii, p. 137, Reiske: compare Meier and Schömann, Der Attische Prozess, p. 117). The Butadæ, also, had certain old unwritten maxims (Androtion ap. Athenæ. ix, p. 374).

Compare Bossler, De Gentibus et Familiis Atticæ, p. 20, and Ostermann, De Præconibus Græcor. sect. 2 and 3 (Marburg, 1845).

[1] Lykurgus the orator is described as τὸν δῆμον Βουτάδης, γένους τοῦ τῶν Ἐτεοβουταδῶν (Plutarch. Vit. x, Orator. p. 841).

[2] In an inscription (apud Boeckh. Corpus Inscrip. No. 465).

Four names of the phratries at the Greek city of Neapolis, and six names out of the thirty Roman curiæ, have been preserved (Becker, Handbuch der Römischen Alterthümer, p. 32; Boeckh, Corp. Inscript. ii, p. 650).

Each Attic phratry seems to have had its own separate laws and customs, distinct from the rest, τοῖς φράτορσι, κατὰ τοὺς ἐκείνων νόμους (Isæus, Or. viii, p. 115, ed. Bek.; vii, p. 99; iii, p. 49).

Bossler (De Gentibus et Familiis Atticæ, Darmstadt, 1833), and Meier (De Gentilitate Atticâ, pp. 41–54) have given the names of those Attic gentes that are known: the list of Meier comprises seventy-nine in number (see Koutorga, Organis. Trib. p. 122).

[3] Tittmann (Griech. Staats Alterthümer, p. 271) is of opinion that Kleisthenês augmented the number of phratries, but the passage of Aristotle brought to support this opinion is insufficient proof (Polit. vi, 2, 11). Still less can we agree with Platner (Beyträge zur Kenntniss des Attischen Rechts, pp. 74–77), that three new phratries were assigned to each of the new Kleisthenean tribes.

Allusion is made in Hesychius, Ἀτριάκαστοι, Ἔξω τριακάδος, to persons not included in any gens, but this can hardly be understood to refer to times anterior to Kleisthenês, as Wachsmuth would argue (p. 238).

might be a citizen without being enrolled in any gens. The forty-eight naukraries ceased to exist, for any important purposes, under his constitution: the deme, instead of the naukrary, became the elementary political division, for military and financial objects, and the demarch became the working local president, in place of the chief of the naukrars. The deme, however, was not coincident with a naukrary, nor the demarch with the previous chief of the naukrary, though they were analogous and constituted for the like purpose.[1] While the naukraries had been only forty-eight in number, the demes formed smaller subdivisions, and, in later times at least, amounted to a hundred and seventy-four.[2]

But though this early quadruple division into tribes is tolerably intelligible in itself, there is much difficulty in reconciling it with that severalty of government which we learn to have originally prevailed among the inhabitants of Attica. From Kekrops down to Theseus, says Thucydidès, there were many different cities in Attica, each of them autonomous and self-governing, with its own prytaneium and its own archons; and it was only on occasions of some common danger that these distinct communities took counsel together under the authority of the Athenian kings, whose city at that time comprised merely the holy rock of Athênê on the plain,[3]— afterwards so conspicuous as the acropolis of the enlarged Athens, — together with a narrow area under it

[1] The language of Photius on this matter (v, *Ναυκραρία μὲν ὁποῖόν τι ἡ συμμορία καὶ ὁ δῆμος· ναύκραρος δὲ ὁποῖόν τι ὁ δήμαρχος*) is more exact than that of Harpokration, who identifies the two completely, — v, *Δήμαρχος*. If it be true that the naukraries were continued under the Kleisthenean constitution, with the alteration that they were augmented to fifty in number, five to every Kleisthenean tribe, they must probably have been continued in name alone without any real efficiency or function. Kleidêmus makes this statement, and Boeckh follows it (Public Economy of Athens, l. ii, ch. 21, p. 256): yet I cannot but doubt its correctness. For the *τριττὺς* (one-third of a Kleisthenean tribe) was certainly retained and was a working and available division (see Dêmosthenês de Symmoriis, c. 7, p. 184), and it seems hardly probable that there should be two coexistent divisions, one representing the third part, the other the fifth part, of the same tribes.

[2] Strabo, ix, p. 396.

[3] Strabo, ix, p. 396, *πετρὰ ἐν πεδίῳ περιοικουμένη κύκλῳ* Euripid. Ion. 1578, *σκόπελον οἳ ναίουσ' ἐμόν* (Athênê)

on the southern side. It was Theseus, he states, who effected that great revolution whereby the whole of Attica was consolidated into one government, all the local magistracies and councils being made to centre in the prytaneium and senate of Athens: his combined sagacity and power enforced upon all the inhabitants of Attica the necessity of recognizing Athens as the one city in the country, and of occupying their own abodes simply as constituent portions of Athenian territory. This important move, which naturally produced a great extension of the central city, was commemorated throughout the historical times by the Athenians in the periodical festival called Synœkia, in honor of the goddess Athênê.[1]

Such is the account which Thucydidês gives of the original severalty and subsequent consolidation of the different portions of Attica. Of the general fact there is no reason to doubt, though the operative cause assigned by the historian,— the power and sagacity of Theseus, — belongs to legend and not to history. Nor can we pretend to determine either the real steps by which such a change was brought about, or its date, or the number of portions which went to constitute the full-grown Athens, — farther enlarged at some early period, though we do not know when, by voluntary junction of the Bœotian, or semi-Bœotian, town Eleutheræ, situated among the valleys of Kithærôn between Eleusis and Platæa. It was the standing habit of the population of Attica, even down to the Peloponnesian war,[2] to reside in their several cantons, where their ancient festivals and temples yet continued as relics of a state of previous autonomy: their visits to the city were made only at special times, for purposes

[1] Thucyd. ii, 15; Theophrast. Charact. 29, 4. Plutarch (Theseus, 24) gives the proceedings of Theseus in greater detail, and with a stronger tinge of democracy.

[2] Pausan. i, 2, 4; 38, 2; Diodor. Sicul. iv, 2; Schol. ad Aristophan. Acharn 242.

The Athenians transferred from Eleutheræ to Athens both a venerable statue of Dionysus and a religious ceremony in honor of that god. The junction of the town with Athens is stated by Pausanias to have taken place in consequence of the hatred of its citizens for Thebes, and must have occurred before 509 B. C., about which period we find Hysiæ to be the frontier deme of Attica (Herodot. v, 72; vi, 108).

religious or political, and they yet looked upon the country residence as their real home. How deep-seated this cantonal feeling was among them, we may see by the fact that it survived the temporary exile forced upon them by the Persian invasion, and was resumed when the expulsion of that destroying host enabled them to rebuild their ruined dwellings in Attica.[1]

How many of the demes recognized by Kleisthenês had originally separate governments, or in what local aggregates they stood combined, we cannot now make out; it will be recollected that the city of Athens itself contained several demes, and Peiræeus also formed a deme apart. Some of the twelve divisions, which Philochorus ascribes to Kekrops, present probable marks of an ancient substantive existence, — Kekropia, or the region surrounding and including the city and acropolis; the tetrapolis, composed of Œnoê, Trikorythus, Probalinthus, and Marathon;[2] Eleusis; Aphidnæ and Dekeleia,[3] both distinguished by their peculiar mythical connection with Sparta and the Dioskuri. But it is difficult to imagine that Phalêrum, which is one of the separate divisions named by Philochorus, can ever have enjoyed an autonomy apart from Athens. Moreover, we find among some of the demes which Philochorus does not notice, evidences of

[1] Thucyd. ii, 15, 16. *οὐδὲν ἄλλο ἢ πόλιν τὴν ἑαυτοῦ ἀπολείπων ἕκαστος*, — respecting the Athenians from the country who were driven into Athens at the first invasion during the Peloponnesian war.

[2] Etymologicon Magn. v, *Ἐπακρία χωρά*; Strabo, viii, p. 383; Stephan. Byz. v, *Τετράπολις*.

The *τετράκωμοι* comprised the four demes, *Πειραῖεις, Φαληρεῖς, Ξυπετεώνες, Θυμοίταδαι* (Pollux, iv, 105): whether this is an old division, however, has been doubted (see Ilgen, De Tribubus Atticis, p. 51).

The *Ἐπακρέων τριττύς* is mentioned in an inscription apud Ross (Die Demen von Attika, p. vi). Compare Boeckh ad Corp. Inscr. No. 69: among other demes, it comprised the deme Plôtheia. Mesogæa also (or rather the Mesogei, *οἱ Μεσόγειοι*) appears as a communion for sacrifice and religious purposes, and as containing the deme Batê. See Inscriptiones Atticæ nuper repertæ duodecim, by Ern. Curtius; Berlin, 1843; Inscript. i, p 3. The exact site of the deme Batê in Attica is unknown (Ross, Die Demen von Attica, p. 64); and respecting the question, what portion of Attica was called Mesogæa, very different conjectures have been started, which there appears to be no means of testing. Compare Schömann de Comitiis, p. 343, and Wordsworth, Athens and Attica, p. 229, 2d edit.

[3] Dikæarchus, Fragm. p. 109, ed. Fuhr; Plutarch, Theseus, c. 33.

standing antipathies, and prohibitions of intermarriage, which might seem to indicate that these had once been separate little states.[1] Though in most cases we can infer little from the legends and religious ceremonies which nearly every deme[2] had peculiar to itself, yet those of Eleusis are so remarkable, as to establish the probable autonomy of that township down to a comparatively late period. The Homeric Hymn to Dêmêtêr, recounting the visit of that goddess to Eleusis after the abduction of her daughter, and the first establishment of the Eleusinian ceremonies, specifies the eponymous prince Eleusis, and the various chiefs of the place, — Keleos, Triptolemus, Dioklês, and Eumolpus; it also notices the Rharian plain in the neighborhood of Eleusis, but not the least allusion is made to Athens or to any concern of the Athenians in the presence or worship of the goddess. There is reason to believe that at the time when this Hymn was composed, Eleusis was an independent town: what that time was we have no means of settling, though Voss puts it as low as the 30th Olympiad.[3] And the proof hence derived is so much the more valuable, because the Hymn to Dêmêtêr presents a coloring strictly special and local; moreover, the story told by Solon to Crœsus, respecting Tellus the Athenian, who perished in battle against the neighboring townsmen of Eleusis,[4] assumes, in like manner, the independence of the latter in earlier times. Nor is it unimportant to notice that, even so low as 300 B. C., the observant visitor Dikæarchus professes to detect a difference between the native

[1] Such as that between the Pallenæans and Agnusians (Plutarch, Theseus, 12).

Acharnæ was the largest and most populous deme in Attica (see Ross, Die Demen von Attika, p. 62; Thucyd. ii, 21); yet Philochorus does not mention it as having ever constituted a substantive *πόλις*.

Several of the demes seem to have stood in repute for peculiar qualities, good or bad: see Aristophan. Acharn. 177, with Elmsley's note.

[2] Strabo, ix, p. 396; Plutarch, Theseus, 14. Polemo had written a book expressly on the eponymous heroes of the Attic demes and tribes (Preller. Polemonis Fragm. p. 42). The Atthidographers were all rich on the same subject: see the Fragments of the Atthis of Hellanikus (p 24, ed. Preller), also those of Istrus, Philochorus, etc.

[3] J. H. Voss, Erlaüterungen, p. 1: see the Hymn, 96–106, 151–475 compare Hermesianax ap. Athen. xiii, p. 597.

[4] Herodot. i, 30.

Athenians and the Atticans, as well in physiognomy as in character and taste.[1]

In the history set forth to us of the proceedings of Theseus, no mention is made of these four Ionic tribes; but another and a totally different distribution of the people into eupatridæ, geômori, and demiurgi, which he is said to have first introduced, is brought to our notice; Dionysius of Halikarnassus gives only a double division, — eupatridæ and dependent cultivators; corresponding to his idea of the patricians and clients in early Rome.[2] As far as we can understand this triple distinction, it seems to be disparate and unconnected with the four tribes above mentioned. The eupatridæ are the wealthy and powerful men, belonging to the most distinguished families in all the various gentes, and principally living in the city of Athens, after the consolidation of Attica: from them are distinguished the middling and lower people, roughly classified into husbandmen and artisans. To the eupatridæ, is ascribed a religious as well as a political and social ascendency; they are represented as the source of all authority on matters both sacred and profane;[3] they doubtless comprised those gentes, such as the Butadæ, whose sacred ceremonies were looked upon with the greatest reverence by the people: and we may conceive Eumolpus, Keleos, Dioklês, etc., as they are described in the Homeric Hymn to Dêmêtêr, in the character of eupatridæ of Eleusis. The humbler gentes, and the humbler members of each gens, would appear in this classification confounded with that portion of the people who belonged to no gens at all.

From these eupatridæ exclusively, and doubtless by their selection, the nine annual archons — probably also the prytanes

[3] Etymologic. Magn. *Εὐπατρίδαι — οἱ αὐτὸ τὸ ἄστυ οἰκοῦντες, καὶ μετέχοντες τοῦ βασιλικοῦ γένους, καὶ τὴν τῶν ἱερῶν ἐπιμέλειαν ποιούμενοι.* The *βασιλικὸν γένος* includes not only the Kodrids, but also the Erechtheids, Pandionids, Pallantids, etc. See also Plutarch, Theseus, c. 24; Hesychius, *Ἀγροιῶται.*

Yet Isokratês seems to speak of the great family of the Alkmæonidæ as *not* included among the eupatridæ. (Orat. xvi, De Bigis, p. 351, p 506, Bek.)

of the naukrari — were taken. That the senate of areopagus was formed of members of the same order, we may naturally presume: the nine archons all passed into it at the expiration of their year of office, subject only to the condition of having duly passed the test of accountability; and they remained members for life. These are the only political authorities of whom we hear in the earliest imperfectly known period of the Athenian government, after the discontinuance of the king, and the adoption of the annual change of archons. The senate of areopagus seems to represent the Homeric council of old men;[1] and there were doubtless, on particular occasions, general assemblies of the people, with the same formal and passive character as the Homeric agora,— at least, we shall observe traces of such assemblies anterior to the Solonian legislation. Some of the writers of antiquity ascribed the first establishment of the senate of areopagus to Solon, just as there were also some who considered Lykurgus as having first brought together the Spartan gerusia. But there can be little doubt that this is a mistake, and that the senate of areopagus is a primordial institution, of immemorial antiquity, though its constitution as well as its functions underwent many changes. It stood at first alone as a permanent and collegiate authority, originally by the side of the kings and afterwards by the side of the archons: it would then of course be known by the title of *The* Boulê, — *The* Senate, or council; its distinctive title, "Senate of Areopagus," borrowed from the place where its sittings were held, would not be bestowed until the formation by Solon of the second senate, or council, from which there was need to discriminate it.

This seems to explain the reason why it was never mentioned in the ordinances of Drako, whose silence supplied one argument in favor of the opinion that it did not exist in his time, and that it was first constituted by Solon.[2] We hear of the senate of areopagus chiefly as a judicial tribunal, because it acted in this character constantly throughout Athenian history, and because

[1] Meier und Schömann, Der Attische Prozess. Einleitung, p. 10.

[2] Plutarch, Solon, c. 19; Aristotle, Polit. ii, 9, 2; Cicero, De Offic. i, 22. Pollux seems to follow the opinion that Solon first instituted the senate of areopagus (viii, 125).

the orators have most frequent occasion to allude to its decisions on matters of trial. But its functions were originally of the widest senatorial character, directive generally as well as judicial. And although the gradual increase of democracy at Athens, as will be hereafter explained, both abridged its powers and contributed still farther comparatively to lower it, by enlarging the direct working of the people in assembly and judicature, as well as that of the senate of Five Hundred, which was a permanent adjunct and adminicle of the public assembly, — yet it seems to have been, even down to the time of Periklês, the most important body in the state. And after it had been cast into the background by the political reforms of that great man, we still find it on particular occasions stepping forward to reassert its ancient powers, and to assume for the moment that undefined interference which it had enjoyed without dispute in antiquity. The attachment of the Athenians to their ancient institutions gave to the senate of areopagus a constant and powerful hold on their minds, and this feeling was rather strengthened than weakened when it ceased to be an object of popular jealousy, — when it could no longer be employed as an auxiliary of oligarchical pretensions.

Of the nine archons, whose number continued unaltered from 638 B. C. to the end of the free democracy, three bore special titles, — the archon eponymus, from whose name the designation of the year was derived, and who was spoken of as *The Archon;* the archon basileus (king), or more frequently, the basileus; and the polemarch. The remaining six passed by the general title of Thesmothetæ. Of the first three, each possessed exclusive judicial competence in regard to certain special matters: the thesmothetæ were in this respect all on a par, acting sometimes as a board, sometimes individually. The archon eponymus determined all disputes relative to the family, the gentile, and the phratric relations: he was the legal protector of orphans and widows.[1] The archon basileus, or king archon, enjoyed competence in complaints respecting offences against the religious sentiment and respecting homicide. The polemarch, speaking of times anterior to Kleisthenês, was the leader of the military

[1] Pollux, viii, 89–91.

force and judge in disputes between citizens and non-citizens. Moreover, each of these three archons had particular religious festivals assigned to him, which it was his duty to superintend and conduct. The six thesmothetæ seem to have been judges in disputes and complaints, generally, against citizens, saving the special matters reserved for the cognizance of the first two archons. According to the proper sense of the word thesmothetæ, all the nine archons were entitled to be so called,[1] though the first three had especial designations of their own: the word thesmoi, analogous to the themistes[2] of Homer, includes in its meaning both general laws and particular sentences, — the two ideas not being yet discriminated, and the general law being conceived only in its application to some particular case. Drako was the first thesmothet who was called upon to set down his thesmoi in writing, and thus to invest them essentially with a character of more or less generality.

In the later and better-known times of Athenian law, we find these archons deprived in great measure of their powers of

[1] We read the *θεσμοθέτων ἀνάκρισις* in Demosthen. cont. Eubulidem, c. 17, p. 1319, and Pollux, viii, 85; a series of questions which it was necessary for them to answer before they were admitted to occupy their office. Similar questions must have been put to the archon, the basileus, and the polemarch so that the words *θεσμοθέτων ἀνάκρισις* may reasonably be understood to apply to all the nine archons, as, indeed, we find the words *τοὺς ἐννέα ἄρχοντας ἀνακρίνετε* shortly afterwards, p. 1320.

[2] Respecting the word *θέμιστες* in the Homeric sense, see above, vol. ii, ch. xx.

Both Aristotle (Polit. ii, 9, 9) and Dêmosthenês (contr. Euerg. et Mnêsibul. c. 18, p. 1161) call the ordinances of Drako *νόμοι*, not *θεσμοί*. Andokidês distinguishes the *θεσμοὶ* of Drako and the *νόμοι* of Solon (De Mysteriis, p. 11). This is the adoption of a phrase comparatively modern; Solon called his own laws *θεσμοί*. The oath of the *περίπολοι ἔφηβοι* (the youth who formed the armed police of Attica during the first two years of their military age), as given in Pollux (viii, 106), seems to contain at least many ancient phrases: this phrase, — *καὶ τοῖς θεσμοῖς τοῖς ἱδρυμένοις πείσομαι*, — is remarkable, as it indicates the ancient association of religious sanction which adhered to the word *θεσμοί*; for *ἱδρύεσθαι* is the word employed in reference to the establishment and domiciliation of the gods who protected the country, — *θέσθαι νόμους* is the later expression for making laws. Compare Stobæus De Republic. xliii, 48, ed. Gaisford, and Dêmosthen cont Makartat. c. 13, p. 1069.

judging and deciding, and restricted to the task of first hearing the parties and collecting the evidence, next, of introducing the matter for trial into the appropriate dikastery, over which they presided. Originally, there was no separation of powers: the archons both judged and administered, sharing among themselves those privileges which had once been united in the hands of the king, and probably accountable at the end of their year of office to the senate of areopagus. It is probable also, that the functions of that senate, and those of the prytanes of the naukrars, were of the same double and confused nature. All of these functionaries belonged to the eupatrids, and all of them doubtless acted more or less in the narrow interest of their order: moreover, there was ample room for favoritism, in the way of connivance as well as antipathy, on the part of the archons. That such was decidedly the case, and that discontent began to be serious, we may infer from the duty imposed on the thesmothet Drako, B. C. 624, to put in writing the thesmoi, or ordinances, so that they might be "shown publicly," and known beforehand.[1] He did not meddle with the political constitution, and in his ordinances Aristotle finds little worthy of remark except the extreme severity[2] of the punishments awarded: petty thefts, or even proved idleness of life, being visited with death or disfranchisement.

But we are not to construe this remark as demonstrating any special inhumanity in the character of Drako, who was not invested with the large power which Solon afterwards enjoyed, and cannot be imagined to have imposed upon the community severe laws of his own invention. Himself of course an eupatrid, he set forth in writing such ordinances as the eupatrid archons had before been accustomed to enforce without writing, in the particular cases which came before them; and the general spirit of

[1] Ὅτε θεσμὸς ἐφάνη ὅδε, — such is the exact expression of Solon's law (Plutarch, Solon, c. 19); the word θεσμὸς is found in Solon's own poems, θεσμοὺς δ' ὁμοίους τῷ κακῷ τε κἀγαθῷ.

[2] Aristot. Polit. ii, 9, 9; Rhetoric. ii. 25, 1; Aulus Gell. N. A. xi, 18; Pausanias, ix, 36, 4; Plutarch, Solon, c. 19; though Pollux (viii, 41) does not agree with him. Taylor, Lectt. Lysiacæ, ch. 10.

Respecting the θεσμοὶ of Drako, see Kuhn. ad Ælian. V. H. viii, 10. The preliminary sentence which Porphyry (De Abstinentiâ, iv, 22) ascribes to Drako can hardly be genuine.

penal legislation had become so much milder, during the two centuries which followed, that these old ordinances appeared to Aristotle intolerably rigorous. Probably neither Drako, nor the Lokrian Zaleukus, who somewhat preceded him in date, were more rigorous than the sentiment of the age: indeed, the few fragments of the Drakonian tables which have reached us, far from exhibiting indiscriminate cruelty, introduce, for the first time, into the Athenian law, mitigating distinctions in respect to homicide;[1] founded on the variety of concomitant circumstances. He is said to have constituted the judges called Ephetæ, fifty-one elders belonging to some respected gens or possessing an exalted position, who held their sittings for trial of homicide in three different spots, according to the difference of the cases submitted to them. If the accused party, admitting the fact, denied any culpable intention and pleaded accident, the case was tried at the place called the palladium; when found guilty of accidental homicide, he was condemned to a temporary exile, unless he could appease the relatives of the deceased, but his property was left untouched. If, again, admitting the fact, he defended himself by some valid ground of justification, such as self-defence, or flagrant adultery with his wife on the part of the deceased, the trial took place on ground consecrated to Apollo and Artemis, called the Delphinium. A particular spot called the Phreattys close to the seashore, was also named for the trial of a person, who, while under sentence of exile for an unintentional homicide, might be charged with a second homicide, committed of course without the limits of the territory: being considered as impure from the effects of the former sentence, he was not permitted to set foot on the soil, but stood his trial on a boat hauled close in shore. At the prytaneium, or government-house itself, sittings were held by the four phylo-basileis, or tribe-kings, to try any inanimate object (a piece of wood or stone, etc.) which had caused death to any one, without the proved intervention of a human hand: the wood or stone, when the fact was verified, was

[1] Pausanias, ix, 36, 4. Δράκοντος Ἀθηναίοις θεσμοθετήσαντος ἐκ τῶν ἐκείνου κατέστη νόμων οὓς ἔγραφεν ἐπὶ τῆς ἀρχῆς, ἄλλων τε ὁπόσων ἄδειαν εἶναι χρή, καὶ δὴ καὶ τιμωρίας μοιχοῦ: compare Dêmosthen. cont. Aristocrat. p. 687; Lysias de Cæde Eratosthen. p. 31.

formally cast beyond the border.[1] All these distinctions of course imply the preliminary investigation of the case, called anakrisis, by the king-archon, in order that it might be known what was the issue, and where the sittings of the ephetæ were to be held.

So intimately was the mode of dealing with homicide connect-

[1] Harpokration, vv, Ἐφέται, Ἐπὶ Δελφινίῳ, Ἐπὶ Παλλαδίῳ, Ἐν Φρεαττοῖ; Pollux, viii, 119, 124, 125; Photius, v, Ἐφεται; Hesychius, ἐς Φρέατου; Dêmosthen. cont. Aristokrat. c. 15–18, pp. 642–645; cont. Makartat. c. 13, p. 1068. When Pollux speaks of the five courts in which the ephetæ judged, he probably includes the areopagus (see Dêmosth. cont. Aristokrat c. 14, p. 641).

About the judges ἐν Φρεαττοῖ, see Aristot. Polit. iv, 13, 2. On the general subject of this ancient and obscure criminal procedure, see Matthiæ, De Judiciis Atheniensium (in Miscellan. Philologie, vol. i, p. 143, *seq.*); also Schömann, Antiq. Jur. Pub. Att. sect. 61, p. 288; Platner, Prozess und Klagen bey den Attikern, b. i, ch. 1; and E. W. Weber, Comment. ad Dêmosthen. cont. Aristokrat. pp. 627, 641; Meier und Schömann, Attisch. Prozess, pp. 14–19.

I cannot consider the ephetæ as judges in appeal, and I agree with those (Schömann, Antiq. Jur. Pub. Gr. p. 171; Meier und Schömann, Attisch Prozess, p. 16; Platner, Prozess und Klagen, t. i, p. 18) who distrust the etymology which connects this word with ἐφέσιμος. The active sense of the word, akin to ἐφίεμαι (Æsch. Prom. 4) and ἐφετμή, meets the case better: see O. Müller, Prolegg. ad Mythol. p. 424 (though there is no reason for believing the ephetæ to be older than Drako): compare, however, K. F. Hermann, Lehrbuch der Griechischen Staats Alterthümer, sects. 103, 104, who thinks differently.

The trial, condemnation, and banishment of inanimate objects which had been the cause of death, was founded on feelings widely diffused throughout the Grecian world (see Pausan. vi, 11, 2; and Theokritus, Idyll. xxiii, 60) analogous in principle to the English law respecting deodand, and to the spirit pervading the ancient Germanic codes generally (see Dr. C. Trümmer, Die Lehre von der Zurechnung, c. 28–38. Hamburg, 1845).

The Germanic codes do not content themselves with imposing a general obligation to appease the relatives and gentiles of the slain party, but determine beforehand the sum which shall be sufficient to the purpose, which, in the case of involuntary homicide, is paid to the surviving relatives as a compensation; for the difference between culpable homicide, justifiable homicide, and accidental homicide, see the elaborate treatise of Wilda, Das Deutsche Strafrecht, ch. viii, pp. 544–559, whose doctrine, however, is disputed by Dr. Trümmer, in the treatise above noticed.

At Rome, according to the Twelve Tables, and earlier, involuntary homicide was to be expiated by the sacrifice of a ram (Walter, Geschichte des Römisch. Rechts, sect. 768).

ed with the religious feelings of the Athenians, that these old regulations were never formally abrogated throughout the historical times, and were read engraved on their column by the contemporaries of Dêmosthenês.[1] The areopagus continued in judicial operation, and the ephetæ are spoken of as if they were so, even through the age of Dêmosthenês; though their functions were tacitly usurped or narrowed, and their dignity impaired,[2] by the more popular dikasteries afterwards created. It is in this way that they have become known to us, while the other Drakonian institutions have perished: but there is much obscurity respecting them, particularly in regard to the relation between the ephetæ and the areopagites. Indeed, so little was known on the subject, even by the historical inquirers of Athens, that most of them supposed the council of areopagus to have received its first origin from Solon: and even Aristotle, though he contradicts this view, expresses himself in no very positive language.[3] That judges sat at the areopagus for the trial of homicide, previous to Drako, seems implied in the arrangements of that lawgiver respecting the ephetæ, inasmuch as he makes no new provision for trying the direct issue of intentional homicide, which, according to all accounts, fell within the cognizance of the areopagus: but whether the ephetæ and the areopagites were the same persons, wholly or partially, our information is not sufficient to discover. Before Drako, there existed no tribunal for trying homicide, except the senate, sitting at the areopagus, and we may conjecture that there was something connected with that spot, — legends,

[1] Dêmosthen. cont. Euerg. et Mnêsib. p. 1161.

[2] Dêmosthen. cont. Aristokrat. p. 647. τοσούτοις δικαστηρίοις, ἃ θεοὶ κατέδειξαν, καὶ μετὰ ταῦτα ἄνθρωποι χρῶνται πάντα τὸν χρόνον, p. 643. — οἱ ταῦτ' ἐξαρχῆς τὰ νόμιμα διαθέντες, οἵτινές ποθ' ἦσαν, εἴθ' ἥρωες, εἴτε θεοί. See also the Oration cont. Makartat. p. 1069; Æschin. cont. Ktesiphon. p. 630; Antiph. De Cæde Herodis, c. 14.

The popular dikastery, in the age of Isokratês and Dêmosthenês, held sittings ἐπὶ Παλλαδίῳ for the trial of charges of unintentional homicide, — a striking evidence of the special holiness of the place for that purpose (see Isokrat. cont. Kallimachum, Or. xviii, p. 381; Dêmosth. cont. Neær. p. 1348).

The statement of Pollux (viii, 125), that the ephetæ became despised, is not confirmed by the language of Dêmosthenês.

[3] Plutarch. Solon, c. 19; Aristot. Polit. ii, 9, 2.

ceremonies, or religious feelings, — which compelled judges there sitting to condemn every man proved guilty of homicide, and forbade them to take account of extenuating or justifying circumstances.[1] Drako appointed the ephetæ to sit at different places; and these places are so pointedly marked, and were so unalterably maintained, that we may see in how peculiar a manner those special issues, of homicide under particular circumstances, which he assigned to each, were adapted, in Athenian belief, to the new sacred localities chosen,[2] each having its own distinct ceremonial and procedure appointed by the gods themselves. That the religious feelings of the Greeks were associated in the most intimate manner with particular localities, has already been often remarked; and Drako proceeded agreeably to them in his arrangements for mitigating the indiscriminate condemnation of every man found guilty of homicide, which was unavoidable so long as the areopagus remained the only place of trial. The man who either confessed, or was proved to have shed the blood of another, could not be acquitted, or condemned to less than the full penalty (of death or perpetual exile, with confiscation of property) by the judges on the hill of Arês, whatever excuse he might have to offer: but the judges at the palladium and delphinium might hear him, and even admit his plea, without contracting the taint of irreligion. Drako did not directly meddle with, nor indeed ever mention, the judges sitting in areopagus.

In respect to homicide, then, the Drakonian ordinances were partly a reform of the narrowness, partly a mitigation of the rigor, of the old procedure; and these are all that have come down to us, having been preserved unchanged from the religious respect of the Athenians for antiquity on this peculiar matter. The rest of his ordinances are said to have been repealed by Solon, on account of their intolerable severity. So they doubtless appeared, to the Athenians of a later day, who had come to

---

[1] Read on this subject the maxims laid down by Plato (Legg. xii, p. 941). Nevertheless, Plato copies, to a great degree, the arrangements of the ephetic tribunals, in his provisions for homicide (Legg. ix, pp. 865–873).

[2] I know no place in which the special aptitude of particular localities consecrated each to its own purpose, is so powerfully set forth, as in the speech of Camillus against the transfer of Rome to Veii (Livy, v, 52).

measure offences by a different scale; and even to Solon, who had to calm the wrath of a suffering people in actual mutiny.

That under this eupatrid oligarchy and severe legislation the people of Attica were sufficiently miserable, we shall presently see, when I recount the proceedings of Solon: but the age of democracy had not yet begun, and the government received its first shock from the hands of an ambitious eupatrid who aspired to the despotism. Such was the phase, as has been remarked in the preceding chapter, through which, during the century now under consideration, a large proportion of the Grecian governments passed.

Kylôn, an Athenian patrician, who superadded to a great family position the personal celebrity of a victory at Olympia, as runner in the double stadium, conceived the design of seizing the acropolis and constituting himself despot. Whether any special event had occurred at home to stimulate this project, we do not know: but he obtained both encouragement and valuable aid from his father-in-law Theagenês of Megara, who, by means of his popularity with the people, had already subverted the Megarian oligarchy, and become despot of his native city. Previous to so hazardous an attempt, however, Kylôn consulted the Delphian oracle, and was advised by the god in reply, to take the opportunity of "the greatest festival of Zeus" for seizing the acropolis. Such expressions, in the natural interpretation put upon them by every Greek, designated the Olympic games in Peloponnesus, — to Kylôn, moreover himself an Olympic victor, that interpretation came recommended by an apparent peculiar propriety. But Thucydidês, not indifferent to the credit of the oracle, reminds his readers that no question was asked nor any express direction given, *where* the intended "greatest festival of Zeus" was to be sought, — whether in Attica or elsewhere, — and that the public festival of the Diasia, celebrated periodically and solemnly in the neighborhood of Athens, was also denominated the "greatest festival of Zeus Meilichius." Probably no such exegetical scruples presented themselves to any one, until after the miserable failure of the conspiracy; least of all to Kylôn himself, who, at the recurrence of the next ensuing Olympic games, put himself at the head of a force, partly furnished by Theagenês, partly

composed of his friends at home, and took sudden possession of the sacred rock of Athens. But the attempt excited general indignation among the Athenian people, who crowded in from the country to assist the archons and the prytanes of the naukrari in putting it down. Kylôn and his companions were blockaded in the acropolis, where they soon found themselves in straits for want of water and provisions; and though many of the Athenians went back to their homes, a sufficient besieging force was left to reduce the conspirators to the last extremity. After Kylôn himself had escaped by stealth, and several of his companions had died of hunger, the remainder, renouncing all hope of defence, sat down as suppliants at the altar. The archon Megaklês, on regaining the citadel, found these suppliants on the point of expiring with hunger on the sacred ground, and to prevent such a pollution, engaged them to quit the spot by a promise of sparing their lives. No sooner, however, had they been removed into profane ground, than the promise was violated and they were put to death: some even, who, seeing the fate with which they were menaced, contrived to throw themselves upon the altar of the venerable goddesses, or eumenides, near the areopagus, received their death-wounds in spite of that inviolable protection.[1]

Though the conspiracy was thus put down, and the government upheld, these deplorable incidents left behind them a long train of calamity,— profound religious remorse mingled with exasperated political antipathies. There still remained, if not a considerable Kylonian party, at least a large body of persons who resented the way in which the Kylonians had been put to death, and who became in consequence bitter enemies of Megaklês the archon, and of the great family of the Alkmæônidæ, to which he belonged. Not only Megaklês himself and his personal assistants were denounced as smitten with a curse, but the taint was supposed to be transmitted to his descendants, and we shall hereafter find the wound reopened, not only in the second and third generation, but also two centuries after the original event.[2] When we see that the impression left by the proceeding was so very serious,

[1] The narrative is given in Thucyd. i, 126; Herod. v, 71; Plutarch, Solon, 12.

[2] Aristophan. Equit. 445, and the Scholia; Herodot. v, 70.

even after the length of time which had elapsed, we may well believe that it was sufficient, immediately afterwards, to poison altogether the tranquillity of the state. The Alkmæônids and their partisans long defied their opponents, resisting any public trial,— and the dissensions continued without hope of termination, until Solon, then enjoying a lofty reputation for sagacity and patriotism, as well as for bravery, persuaded them to submit to judicial cognizance,— at a moment so far distant from the event, that several of the actors were dead. They were accordingly tried before a special judicature of three hundred eupatrids, Myrôn, of the deme Phlyeis, being their accuser. In defending themselves against the charge that they had sinned against the reverence due to the gods and the consecrated right of asylum, they alleged that the Kylonian suppliants, when persuaded to quit the holy ground, had tied a cord round the statue of the goddess and clung to it for protection in their march; but on approaching the altar of the eumenides, the cord accidentally broke,— and this critical event, so the accused persons argued, proved that the goddess had herself withdrawn from them her protecting hand and abandoned them to their fate.[1] Their argument, remarkable as an illustration of the feelings of the time, was not, however, accepted as an excuse: they were found guilty, and while such of them as were alive retired into banishment, those who had already died were disinterred and cast beyond the borders. Yet their exile, continuing as it did only for a time, was not held sufficient to expiate the impiety for which they had been condemned. The Alkmæônids, one of the most powerful families in Attica, long continued to be looked upon as a tainted race,[2] and in

[1] Plutarch, Solon, c. 12. If the story of the breaking of the cord had been true, Thucydidês could hardly have failed to notice it; but there is no reason to doubt that it was the real defence urged by the Alkmæônids.

When Ephesus was besieged by Crœsus, the inhabitants sought protection to their town by dedicating it to Artemis: they carried a cord from the walls of the town to the shrine of the goddess, which was situated without the walls (Herod. i, 26). The Samian despot Polykratês, when he consecrated to the Delian Apollo the neighboring island of Rhêneia, connected it with the island of Delos by means of a chain (Thucyd. iii, 104).

These analogies illustrate the powerful effect of visible or material continuity on the Grecian imagination.

[2] Herodot. i 61

cases of public calamity were liable to be singled out as having by their sacrilege drawn down the judgment of the gods upon their countrymen.[1]

Nor was the banishment of the guilty parties adequate in other respects to restore tranquillity. Not only did pestilential disorders prevail, but the religious susceptibilities and apprehensions of the Athenian community also remained deplorably excited: they were oppressed with sorrow and despondency, saw phantoms and heard supernatural menaces, and felt the curse of the gods upon them without abatement.[2] In particular, it appears that the minds of the women — whose religious impulses were recognized generally by the ancient legislators as requiring watchful control — were thus disturbed and frantic. The sacrifices offered at Athens did not succeed in dissipating the epidemic, nor could the prophets at home, though they recognized that special purifications were required, discover what were the new ceremonies capable of appeasing the divine wrath. The Delphian oracle directed them to invite a higher spiritual influence from abroad, and this produced the memorable visit of the Kretan prophet and sage Epimenidês to Athens.

The century between 620 and 500 B. C. appears to have been remarkable for the first diffusion and potent influence of distinct religious brotherhoods, mystic rites, and expiatory ceremonies, none of which, as I have remarked in a former chapter, find any recognition in the Homeric epic. To this age belong Thalêtas, Aristeas, Abaris, Pythagoras, Onomakritus, and the earliest provable agency of the Orphic sect.[3] Of the class of men here noticed, Epimenidês, a native of Phaestus or Knossus in Krete,[4] was one of the most celebrated,— and the old legendary connection between Athens and Krete, which shows itself in the tales of Theseus and Minos, is here again manifested in the recourse which the Athenians had to this island to supply their spiritual need. Epimenidês seems to have been connected with

[1] See Thucyd. v, 16, and his language respecting Pleistoanax of Sparta.

[4] The statements respecting Epimenidês are collected and discussed in the treatise of Heinrich, Epimenides aus Kreta. Leipsic, 1801

the worship of the Kretan Zeus, in whose favor he stood so high as to receive the denomination of the new Kurête[1] — the Kurêtes having been the primitive ministers and organizers of that worship. He was said to be the son of the nymph Baltê; to be supplied by the nymphs with constant food, since he was never seen to eat; to have fallen asleep in his youth in a cave, and to have continued in this state without interruption for fifty-seven years; though some asserted that he remained all this time a wanderer in the mountains, collecting and studying medicinal botany in the vocation of an Iatromantis, or leech and prophet combined. Such narratives mark the idea entertained by antiquity of Epimenidês, the Purifier,[2] who was now called in to heal both the epidemic and the mental affliction prevalent among the Athenian people, in the same manner as his countryman and contemporary Thalêtas had been, a few years before, invited to Sparta to appease a pestilence by the effect of his music and religious hymns.[3] The favor of Epimenidês with the gods, his knowledge of propitiatory ceremonies, and his power of working upon the religious feeling, was completely successful in restoring both health and mental tranquillity at Athens. He is said to have turned out some black and white sheep on the areopagus, directing attendants to follow and watch them, and to erect new altars to the appropriate local deities on the spots where the animals lay down.[4] He founded new chapels and established

Plutarch (Sept. Sapient. Conviv. p. 157) treats Epimenidês simply as having lived up to the precepts of the Orphic life, or vegetable diet: to this circumstance, I presume, Plato (Legg. iii, p. 677) must be understood to refer, though it is not very clear. See the Fragment of the lost *Krêtes* of Euripides, p. 98, ed. Dindorf.

Karmanor of Tarrha in Krete had purified Apollo himself for the slaughter of Pytho (Pausan. ii, 30, 3).

[3] Plutarch, De Musicâ, pp. 1134–1146; Pausanias, i, 14, 3.

[4] Cicero (Legg. ii 11) states that Epimenidês directed a temple to be

various lustral ceremonies; and more especially, he regulated the worship paid by the women, in such a manner as to calm the violent impulses which had before agitated them. We know hardly anything of the details of his proceeding, but the general fact of his visit, and the salutary effects produced in removing the religious despondency which oppressed the Athenians, are well attested: consoling assurances and new ritual precepts, from the lips of a person supposed to stand high in the favor of Zeus, were the remedy which this unhappy disorder required. Moreover, Epimenidês had the prudence to associate himself with Solon, and while he thus doubtless obtained much valuable advice, he assisted indirectly in exalting the reputation of Solon himself, whose career of constitutional reform was now fast approaching. He remained long enough at Athens to restore completely a more comfortable tone of religious feeling, and then departed, carrying with him universal gratitude and admiration, but refusing all other reward, except a branch from the sacred olive-tree in the acropolis.[1] His life is said to have been prolonged to the unusual period of one hundred and fifty-four years, according to a statement which was current during the time of his younger contemporary Xenophanês of Kolophon;[2] and the Kretans even ventured to affirm that he lived three hundred years. They extolled him not merely as a sage and a spiritual purifier, but also as a poet,—very long compositions on religious and myth-

erected at Athens to Ὕβρις and Ἀναίδεια (Violence and Impudence): Clemens said that he had erected *altars* to the same two goddesses (Protrepticon, p. 22): Theophrastus said that there were *altars* at Athens (without mentioning Epimenidês) to these same (ap. Zenobium, Proverb. Cent. iv, 36). Ister spoke of a ἱρὸν Ἀναιδείας at Athens (Istri Fragm. ed. Siebelis, p. 62). I question whether this story has any other foundation than the fact stated by Pausanias, that the stones which were placed before the tribunal of areopagus, for the accuser and the accused to stand upon, were called by these names, — Ὕβρεως, that of the accused; Ἀναιδείας, that of the accuser (i, 28, 5). The confusion between stones and altars is not difficult to be understood. The other story, told by Neanthês of Kyzikus, respecting Epimenidês, that he had offered two young men as human sacrifices, was distinctly pronounced to be untrue by Polemo: and it reads completely like a romance (Athenæus, xiii, p. 602).

[1] Plutarch. Præcept. Reipubl. Gerend. c. 27, p. 820.

[2] Diogen. Laërt. *l. c.*

ical subjects being ascribed to him; according to some accounts, they even worshipped him as a god. Both Plato and Cicero considered Epimenidês in the same light in which he was regarded by his contemporaries, as a prophet divinely inspired, and foretelling the future under fits of temporary ecstasy: but according to Aristotle, Epimenidês himself professed to have received from the gods no higher gift than that of divining the unknown phenomena of the past.[1]

The religious mission of Epimenidês to Athens, and its efficacious as well as healing influence on the public mind, deserve notice as characteristics of the age in which they occurred.[2] If we transport ourselves two centuries forward, to the Peloponnesian war, when rational influences and positive habits of thought had acquired a durable hold upon the superior minds, and when practical discussions on political and judicial matters were familiar to every Athenian citizen, no such uncontrollable religious misery could well have subdued the entire public; and if it had, no living man could have drawn to himself such universal veneration as to be capable of effecting a cure. Plato,[3] admitting the real healing influence of rites and ceremonies, fully believed in Epimenidês as an inspired prophet during the past; but towards those who preferred claims to supernatural power in his own day, he was not so easy of faith. He, as well as Euripides and Theophrastus, treated with indifference, and even with contempt, the orpheotelestæ of the later times, who advertised themselves as possessing the same patent knowledge of ceremonial rites, and the same means of guiding the will of the gods, as Epimenidês had wielded before them. These orpheotelestæ unquestionably numbered a considerable tribe of believers, and speculated with great effect, as well as with profit to themselves, upon the

[1] Plato, Legg. i, p. 642; Cicero, De Divinat. i, 18; Aristot. Rhet. iii, 17.

Plato places Epimenidês ten years before the Persian invasion of Greece whereas his real date is near upon 600 B. C.; a remarkable example of carelessness as to chronology.

[2] Respecting the characteristics of this age, see the second chapter of the treatise of Heinrich, above alluded to, Kreta und Griechenland in Hinsicht auf Wunderglauben.

[3] Plato, Kratylus, p. 405; Phædr. p. 244.

timorous consciences of rich men:[1] but they enjoyed no respect with the general public, or with those to whose authority the public habitually looked up. Degenerate as they were, however, they were the legitimate representatives of the prophet and purifier from Knossus, to whose presence the Athenians had been so much indebted two centuries before: and their altered position was owing less to any falling off in themselves, than to an improvement in the mass upon whom they sought to operate. Had Epimenidês himself come to Athens in those days, his visit would probably have been as much inoperative to all public purposes as a repetition of the stratagem of Phyê, clothed and equipped as the goddess Athênê, which had succeeded so completely in the days of Peisistratus, — a stratagem which even Herodotus treats as incredibly absurd, although, a century before his time, both the city of Athens and the demes of Attica had obeyed, as a divine mandate, the orders of this magnificent and stately woman, to restore Peisistratus.[2]

CHAPTER XI.

SOLONIAN LAWS AND CONSTITUTION.

We now approach a new era in Grecian history, — the first known example of a genuine and disinterested constitutional reform, and the first foundation-stone of that great fabric, which afterwards became the type of democracy in Greece. The archonship of the eupatrid Solon dates in 594 B. C., thirty years after that of Drako, and about eighteen years after the conspiracy of Kylôn, assuming the latter event to be correctly placed B. C. 612.

The life of Solon by Plutarch and by Diogenês, especially the

[1] Eurip. Hippolyt. 957; Plato, Republ. ii, p 364; Theophrast. Charact. c 16.

[2] Herodot. i 60.

former, are our principal sources of information respecting this remarkable man; and while we thank them for what they have told us, it is impossible to avoid expressing disappointment that they have not told us more. For Plutarch certainly had before him both the original poems, and the original laws, of Solon, and the few transcripts which he gives from one or the other form the principal charm of his biography: but such valuable materials ought to have been made available to a more instructive result than that which he has brought out. There is hardly anything more to be deplored, amidst the lost treasures of the Grecian mind, than the poems of Solon; for we see by the remaining fragments, that they contained notices of the public and social phenomena before him, which he was compelled attentively to study, — blended with the touching expression of his own personal feelings, in the post, alike honorable and difficult, to which the confidence of his countrymen had exalted him.

Solon, son of Exekestidês, was a eupatrid of middling fortune, but of the purest heroic blood, belonging to the gens or family of the Kodrids and Neleids, and tracing his origin to the god Poseidôn. His father is said to have diminished his substance by prodigality, which compelled Solon in his earlier years to have recourse to trade, and in this pursuit he visited many parts of Greece and Asia. He was thus enabled to enlarge the sphere of his observation, and to provide material for thought as well as for composition: and his poetical talents displayed themselves at a very early age, first on light, afterwards on serious subjects. It will be recollected that there was at that time no Greek prose writing, and that the acquisitions as well as the effusions of an intellectual man, even in their simplest form, adjusted themselves not to the limitations of the period and the semicolon, but to those of the hexameter and pentameter: nor in point of fact do the verses of Solon aspire to any higher effect than we are accustomed to associate with an earnest, touching, and admonitory prose composition. The advice and appeals which he frequently addressed to his countrymen[2] were delivered in this easy metre, doubtless far less difficult than the elaborate prose of subsequent

[1] Plutarch, Solon. i; Diogen. Laërt. iii, 1; Aristot Polit. iv. 9, 10.

[2] Plutarch, Solon, v.

writers or speakers, such as Thucydidês, Isokratês, or Demosthenês. His poetry and his reputation became known throughout many parts of Greece, and he was classed along with Thalês of Milêtus, Bias of Priênê, Pittakus of Mytilênê, Periander of Corinth, Kleobulus of Lindus, Cheilôn of Lacedæmon, — altogether forming the constellation afterwards renowned as the Seven wise men.

The first particular event in respect to which Solon appears as an active politician, is the possession of the island of Salamis, then disputed between Megara and Athens. Megara was at that time able to contest with Athens, and for sometime to contest with success, the occupation of this important island, — a remarkable fact, which perhaps may be explained by supposing that the inhabitants of Athens and its neighborhood carried on the struggle with only partial aid from the rest of Attica. However this may be, it appears that the Megarians had actually established themselves in Salamis, at the time when Solon began his political career, and that the Athenians had experienced so much loss in the struggle, as to have formally prohibited any citizen from ever submitting a proposition for its reconquest. Stung with this dishonorable abnegation, Solon counterfeited a state of ecstatic excitement, rushed into the agora, and there, on the stone usually occupied by the official herald, pronounced to the crowd around a short elegiac poem,[1] which he had previously composed on the subject of Salamis. He enforced upon them the disgrace of abandoning the island, and wrought so powerfully upon their feelings, that they rescinded the prohibitory law: "Rather (he exclaimed) would I forfeit my native city, and become a citizen of Pholegandrus, than be still named an Athenian, branded with the shame of surrendered Salamis!" The Athenians again entered into the war, and conferred upon him the command of it, — partly, as we are told, at the instigation of

[1] Plutarch, Solon, viii. It was a poem of one hundred lines, *χαριέντως πεποιημένων*.

Diogenês tells us, that "Solon read the verses to the people through the medium of the herald," — a statement not less deficient in taste than in accuracy, and which spoils the whole effect of the vigorous exordium, *Αὐτὸς κήρυξ ἦλθοι ἀφ' ἱμερτῆς Σαλαμῖνος*, etc

Peisistratus, though the latter must have been at this time (600-594 B. C.) a very young man, or rather a boy.[1]

The stories in Plutarch, as to the way in which Salamis was recovered, are contradictory as well as apocryphal, ascribing to Solon various stratagems to deceive the Megarian occupiers; unfortunately, no authority is given for any of them. According to that which seems the most plausible, he was directed by the Delphian god, first to propitiate the local heroes of the island; and he accordingly crossed over to it by night, for the purpose of sacrificing to the heroes Periphêmus and Kychreus, on the Salaminian shore. Five hundred Athenian volunteers were then levied for the attack of the island, under the stipulation that if they were victorious they should hold it in property and citizenship.[2] They were safely landed on an outlying promontory, while Solon, having been fortunate enough to seize a ship which the Megarians had sent to watch the proceedings, manned it with Athenians, and sailed straight towards the city of Salamis, to which the five hundred Athenians who had landed also directed their march. The Megarians marched out from the city to repel the latter, and during the heat of the engagement, Solon, with his Megarian ship, and Athenian crew, sailed directly to the city: the Megarians, interpreting this as the return of their own crew, permitted the ship to approach without resistance, and the city was thus taken by surprise. Permission having been given to the

[1] Plutarch, *l. c.*; Diogen. Laërt. i, 47. Both Herodotus (i, 59) and some authors read by Plutarch ascribed to Peisistratus an active part in the war against the Megarians, and even the capture of Nisæa, the port of Megara. Now the first usurpation of Peisistratus was in 560 B. C., and we can hardly believe that he can have been prominent and renowned in a war no less than forty years before.

It will be seen hereafter — see the note on the interview between Solon and Krœsus, towards the end of this chapter — that Herodotus, and perhaps other authors also, conceived the Solonian legislation to date at a period later than it really does; instead of 594 B. C., they placed it nearer to the usurpation of Peisistratus.

[2] Plutarch, Solon, *κυρίους εἶναι τοῦ πολιτεύματος*. The strict meaning of these words refers only to the *government* of the island; but it seems almost certainly implied that they would be established in it as klêruchs, or proprietors of land, not meaning necessarily that *all* the preëxisting proprietors would be expelled.

Megarians to quit the island, Solon took possession of it for the Athenians, erecting a temple to Enyalius, the god of war, on Cape Skiradium, near the city of Salamis.[1]

The citizens of Megara, however, made various efforts for the recovery of so valuable a possession, so that a war ensued long as well as disastrous to both parties. At last, it was agreed between them to refer the dispute to the arbitration of Sparta, and five Spartans were appointed to decide it, — Kritolaidas, Amompharetus, Hypsêchidas, Anaxilas, and Kleomenês. The verdict in favor of Athens was founded on evidence which it is somewhat curious to trace. Both parties attempted to show that the dead bodies buried in the island conformed to their own peculiar mode of interment, and both parties are said to have cited verses from the catalogue of the Iliad,[2] — each accusing the other of error or interpolation. But the Athenians had the advantage on two points; first, there were oracles from Delphi, wherein Salamis was mentioned with the epithet Ionian; next, Philæus and Eurysakês, sons of the Telamonian Ajax, the great hero of the island, had accepted the citizenship of Athens, made over Salamis to the Athenians, and transferred their own residences to Braurôn and Melitê in Attica, where the deme or gens Philaidæ still worshipped Philæus as its eponymous ancestor. Such a title was held sufficient, and Salamis was adjudged by the five Spartans to Attica,[3] with which it ever afterwards remained incorporated

[1] Plutarch, Solon, 8, 9. 10. Daïmachus of Platæa, however, denied to Solon any personal share in the Salaminian war (Plutarch, comp. Solon and Public. c. 4).

Polyænus (i, 20) ascribes a different stratagem to Solon: compare Ælian, V. H. vii, 19. It is hardly necessary to say that the account which the Megarians gave of the way in which they lost the island was totally different: they imputed it to the treachery of some exiles (Pausan. i, 40, 4): compare Justin, ii, 7.

[2] Aristot. Rhet. i, 16, 3.

[3] Plutarch, Solon, 10: compare Aristot. Rhet. i, 16. Alkibiadês traced up his γένος to Eurysakês (Plutarch, Alkibiad. c. 1); Miltiadês traced up his to Philæus (Herodot. vi, 35).

According to the statement of Hêreas the Megarian, both his countrymen and the Athenians had the same way of interment: both interred the dead with their faces towards the west. This statement, therefore, affords no proof of any peculiarity of Athenian custom in burial.

The Eurysakeium, or precinct sacred to the hero Eurysakês, stood in the deme of Melitê (Harpokrat. ad v), which formed a portion of the city of Athens.

[4] Æschin. Fals. Legat. p. 250, c. 14.

[5] Plutarch Solon, c. 13. The language of Plutarch, in which he talks of the pedieis as representing the oligarchical tendency, and the diakrii as representing the democratical, is not quite accurate when applied to the days of Solon. Democratical pretensions, as such, can hardly be said to have then existed.

until the days of Macedonian supremacy. Two centuries and a half later, when the orator Æschinês argued the Athenian right to Amphipolis against Philip of Macedon, the legendary elements of the title were indeed put forward, but more in the way of preface or introduction to the substantial political grounds.[4] But in the year 600 B. C., the authority of the legend was more deep-seated and operative, and adequate by itself to determine a favorable verdict.

In addition to the conquest of Salamis, Solon increased his reputation by espousing the cause of the Delphian temple against the extortionate proceedings of the inhabitants of Kirrha, of which more will be said in a coming chapter; and the favor of the oracle was probably not without its effect in procuring for him that encouraging prophecy with which his legislative career opened.

It is on the occasion of Solon's legislation, that we obtain our first glimpse — unfortunately, but a glimpse — of the actual state of Attica and its inhabitants. It is a sad and repulsive picture, presenting to us political discord and private suffering combined.

Violent dissensions prevailed among the inhabitants of Attica, who were separated into three factions, — the pedieis, or men of the plain, comprising Athens, Eleusis, and the neighboring territory, among whom the greatest number of rich families were included; the mountaineers in the east and north of Attica, called diakrii, who were on the whole the poorest party; and the paralii in the southern portion of Attica, from sea to sea, whose means and social position were intermediate between the two.[5] Upon what particular points these intestine disputes turned we are not distinctly informed; they were not, however, peculiar to the period immediately preceding the archontate of Solon; they had prevailed before, and they reappear afterwards prior to the

despotism of Peisistratus, the latter standing forward as the leader of the diakrii, and as champion, real or pretended, of the poorer population.

But in the time of Solon these intestine quarrels were aggravated by something much more difficult to deal with, — a general mutiny of the poorer population against the rich, resulting from misery combined with oppression. The thêtes, whose condition we have already contemplated in the poems of Homer and Hesiod, are now presented to us as forming the bulk of the population of Attica, — the cultivating tenants, metayers, and small proprietors of the country. They are exhibited as weighed down by debts and dependence, and driven in large numbers out of a state of freedom into slavery, — the whole mass of them, we are told, being in debt to the rich, who are proprietors of the greater part of the soil.[1] They had either borrowed money for their own necessities, or they tilled the lands of the rich as dependent tenants, paying a stipulated portion of the produce, and in this capacity they were largely in arrear.

All the calamitous effects were here seen of the old harsh law of debtor and creditor, — once prevalent in Greece, Italy, Asia, and a large portion of the world, — combined with the recognition of slavery as a legitimate status, and of the right of one

[1] Plutarch, Solon, 13. Ἅπας μὲν γὰρ ὁ δῆμος ἦν ὑπόχρεως τῶν πλουσίων· ἢ γὰρ ἐγεώργουν ἐκείνοις ἕκτα τῶν γινομένων τελοῦντες, ἑκτημόριοι προσαγορευόμενοι καὶ θῆτες· ἢ χρέα λαμβάνοντες ἐπὶ τοῖς σώμασιν, ἀγώγιμοι τοῖς δανείζουσιν ἦσαν· οἱ μὲν αὐτοῦ δουλεύοντες, οἱ δὲ ἐπὶ τῇ ξένῃ πιπρασκόμενοι. Πολλοὶ δὲ καὶ παῖδας ἰδίους ἠναγκάζοντο πωλεῖν, καὶ τὴν πόλιν φεύγειν διὰ τὴν χαλεπότητα τῶν δανειστῶν. Οἱ δὲ πλεῖστοι καὶ ῥωμαλεώτατοι συνίσταντο καὶ παρεκάλουν ἀλλήλους μὴ περιορᾶν, etc.

Respecting these hektêmori, "tenants paying one-sixth portion," we find little or no information: they are just noticed in Hesychius (v. Ἑκτήμοροι, Ἐπίμορτος) and in Pollux, vii, 151; from whom we learn that ἐπίμορτος γῆ was an expression which occurred in one of the Solonian laws. Whether they paid to the landlord one-sixth, or retained for themselves only one-sixth, has been doubted (see Photius, Πελάται).

Dionysius Hal. (A. R. ii, 9) compares the thêtes in Attica to the Roman clients: that both agreed in being relations of personal and proprietary dependence is certain; but we can hardly carry the comparison farther, nor is there any evidence in Attica of that sanctity of obligation which is said to have bound the Roman patron to his client.

man to sell himself as well as that of another man to buy him. Every debtor unable to fulfil his contract was liable to be adjudged as the slave of his creditor, until he could find means either of paying it or working it out; and not only he himself, but his minor sons and unmarried daughters and sisters also, whom the law gave him the power of selling.[1] The poor man thus borrowed upon the security of his body, to translate literally the Greek phrase, and upon that of the persons of his family; and so severely had these oppressive contracts been enforced, that many debtors had been reduced from freedom to slavery in Attica itself, — many others had been sold for exportation, — and some had only hitherto preserved their own freedom by selling their children. Moreover, a great number of the smaller properties in Attica were under mortgage, signified, — according to the formality usual in the Attic law, and continued down throughout the historical times, — by a stone pillar erected on the land, inscribed with the name of the lender and the amount of the loan. The proprietors of these mortgaged lands, in case of an unfavorable turn of events, had no other prospect except that of irremediable slavery for themselves and their families, either in their own native country, robbed of all its delights, or in some barbarian region where the Attic accent would never meet their ears. Some had fled the country to escape legal adjudication of their persons, and earned a miserable subsistence in foreign parts by degrading occupations: upon several, too, this deplorable lot had fallen by unjust condemnation and corrupt judges; the conduct of the rich, in regard to money sacred and profane, in regard to matters public as well as private, being thoroughly unprincipled and rapacious.

The manifold and long-continued suffering of the poor under this system, plunged into a state of debasement not more tolerable than that of the Gallic plebs, — and the injustices of the rich, in whom all political power was then vested, are facts well

[1] So the Frisii, when unable to pay the tribute imposed by the Roman empire, "primo boves ipsos, mox agros, postremo corpora conjugum et liberorum, servitio tradebant." (Tacit. Annal. iv, 72.) About the selling of children by parents, to pay the taxes, in the later times of the Roman empire, see Zosimus, ii, 38; Libanius, t. ii, p. 427, ed. Paris, 1627.

attested by the poems of Solon himself, even in the short fragments preserved to us:[1] and it appears that immediately preceding the time of his archonship, the evils had ripened to such a point, — and the determination of the mass of sufferers, to extort for themselves some mode of relief, had become so pronounced, — that the existing laws could no longer be enforced. According to the profound remark of Aristotle, — that seditions are generated by great causes but out of small incidents,[2] — we may conceive that some recent events had occurred as immediate stimulants to the outbreak of the debtors, — like those which lend so striking an interest to the early Roman annals, as the inflaming sparks of violent popular movements for which the train had long before been laid. Condemnations by the archons, of insolvent debtors, may have been unusually numerous, or the maltreatment of some particular debtor, once a respected freeman, in his condition of slavery, may have been brought to act vividly upon the public sympathies, — like the case of the old plebeian centurion at Rome,[3] — first impoverished by the plunder of the enemy, then reduced to borrow, and lastly adjudged to his credi-

[3] Livy, ii, 23; Dionys. Hal. A. R. vi, 26: compare Livy, vi, 34–36. "An placeret, fœnore circumventam plebem, potius quam sorte creditum solvat, corpus in nervum ac supplicia dare? et gregatim quotidie de foro addictos duci, et repleri vinctis nobiles domos? et ubicunque patricius habitet, ibi carcerem privatum esse?"

The exposition of Niebuhr, respecting the old Roman law of debtor and creditor (Röm. Gesch. i. p. 602, *seq.*; Arnold's Roman Hist., ch. viii, vol. i, p 135), and the explanation which he there gives of the nexi, as distinguished from the addicti, have been shown to be incorrect by M. von Savigny, in an excellent Dissertation Uber das Alt-Römische Schuldrecht (Abhandlungen Berlin Academ. 1833, pp. 70–73), an abstract of which will be found in an Appendix, at the close of this chapter

tor as an insolvent, — who claimed the protection of the people in the forum, rousing their feelings to the highest pitch by the marks of the slave-whip visible on his person. Some such incidents had probably happened, though we have no historians to recount them; moreover, it is not unreasonable to imagine, that that public mental affliction which the purifier Epimenidês had been invoked to appease, as it sprung in part from pestilence, so it had its cause partly in years of sterility, which must of course have aggravated the distress of the small cultivators. However this may be, such was the condition of things in 594 B. C., through mutiny of the poor freemen and thêtes, and uneasiness of the middling citizens, that the governing oligarchy, unable either to enforce their private debts or to maintain their political power, were obliged to invoke the well-known wisdom and integrity of Solon. Though his vigorous protest — which doubtless rendered him acceptable to the mass of the people — against the iniquity of the existing system had already been proclaimed in his poems, they still hoped that he would serve as an auxiliary, to help them over their difficulties, and they therefore chose him, nominally, as archon along with Philombrotus, but with power in substance dictatorial.

It had happened in several Grecian states, that the governing oligarchies, either by quarrels among their own members or by the general bad condition of the people under their government, were deprived of that hold upon the public mind which was essential to their power; and sometimes, as in the case of Pittakus of Mitylênê, anterior to the archonship of Solon, and often in the factions of the Italian republics in the Middle Ages, the collision of opposing forces had rendered society intolerable, and driven all parties to acquiesce in the choice of some reforming dictator. Usually, however, in the early Greek oligarchies, this ultimate crisis was anticipated by some ambitious individual, who availed himself of the public discontent, to overthrow the oligarchy, and usurp the powers of a despot; and so, probably, it might have happened in Athens, had not the recent failure of Kylôn, with all its miserable consequences, operated as a deterring motive It is curious to read, in the words of Solon himself, the temper in which his appointment was construed by a large portion of the community, but most especially by his own friends: and we are

to bear in mind that at this early day, so far as our knowledge goes, democratical government was a thing unknown in Greece, — all Grecian governments were either oligarchical or despotic, the mass of the freemen having not yet tasted of constitutional privilege. His own friends and supporters were the first to urge him, while redressing the prevalent discontents, to multiply partisans for himself personally, and seize the supreme power: they even "chid him as a madman, for declining to haul up the net when the fish were already enmeshed."[1] The mass of the people, in despair with their lot, would gladly have seconded him in such an attempt, and many even among the oligarchy might have acquiesced in his personal government, from the mere apprehension of something worse, if they resisted it. That Solon might easily have made himself despot, admits of little doubt; and though the position of a Greek despot was always perilous, he would have had greater facility for maintaining himself in it than Peisistratus possessed after him; so that nothing but the combination of prudence and virtue which marks his lofty character, restricted him within the trust specially confided to him. To the surprise of every one, — to the dissatisfaction of his own friends,—under the complaints alike, as he says, of various extreme and dissentient parties, who required him to adopt measures fatal to the peace of society,[2] — he set himself honestly to solve the very difficult and critical problem submitted to him.

Of all grievances, the most urgent was the condition of the poorer class of debtors; and to their relief Solon's first measure, the memorable seisachtheia, or shaking off of burdens, was

[1] See Plutarch, Solon, 14; and above all the Trochaic tetrameters of Solon himself, addressed to Phokus, Fr. 24–26, Schneidewin: —

Οὐκ ἐφν Σόλων βαθύφρων, οὐδὲ βουλήεις ἀνήρ,
Ἐσθλὰ γὰρ θεοῦ δίδοντος, αὐτὸς οὐκ ἐδέξατο.
Περιβαλὼν δ' ἄγραν, ἀγασθεὶς οὐκ ἀνέσπασεν μέγα
Δίκτυον, ὑμοῦ θ' ἁμαρτῇ καὶ φρενῶν ἀποσφαλείς

[2] **Aristides**, Περὶ τοῦ Παραφθέγματος, ii, p. 397; and **Fragm. 29, Schn., of the Iambics of Solon**: —

....εἰ γὰρ ἤθελον
Ἃ τοῖς ἐναντίοισιν ἡνδανεν τότε,
Αὐθις δ' ἃ τοῖσιν ἀτέροις δρᾶσαι.....
Πολλῶν ἂν ἀνδρῶν ἥδ' ἐχηρώθη πόλις.

directed. The relief which it afforded was complete and immediate. It cancelled at once all those contracts in which the debtor had borrowed on the security of either his person or of his land: it forbade all future loans or contracts in which the person of the debtor was pledged as security: it deprived the creditor in future of all power to imprison, or enslave, or extort work from his debtor, and confined him to an effective judgment at law, authorizing the seizure of the property of the latter. It swept off all the numerous mortgage pillars from the landed properties in Attica, and left the land free from all past claims. It liberated, and restored to their full rights, all those debtors who were actually in slavery under previous legal adjudication; and it even provided the means — we do not know how — of repurchasing in foreign lands, and bringing back to a renewed life of liberty in Attica, many insolvents who had been sold for exportation.[1] And while Solon forbade every Athenian to pledge or sell his own person into slavery, he took a step farther in the same direction, by forbidding him to pledge or sell his son, his daughter, or an unmarried sister under his tutelage, — excepting only the case in which either of the latter might be detected in unchastity.[2]

[1] See the valuable fragment of his Iambics, preserved by Plutarch and Aristidês, the expression of which is rendered more emphatic by the appeal to the *personal Earth*, as having passed by his measures from slavery into freedom (compare Plato, Legg. v, pp. 740–741): —

Συμμαρτυροίη ταῦτ' ἂν ἐν δίκῃ Κρόνου
Μήτηρ, μεγίστη δαιμόνων Ὀλυμπίων,
Ἄριστα, Γῆ μέλαινα, τῆς ἐγώ ποτε
Ὅρους ἀνεῖλον πολλαχῇ πεπηγότας,
Πρόσθεν δὲ δουλεύουσα, νῦν ἐλευθέρα.
Πολλοὺς δ' Ἀθήνας, πατρίδ' εἰς θεόκτιτον
Ἀνήγαγον πραθέντας, ἄλλον ἐκδίκως,
Ἄλλιν δικαίως· τοὺς δ' ἀναγκαίης ὑπο
Χρησμὸν λέγοντας, γλῶσσαν οὐκετ' Ἀττικὴν
Ἱέντας, ὡς ἂν πολλαχῇ πλανωμένους·
Τοὺς δ' ἐνθάδ' αὐτοῦ δουλίην ἀεικέα
Ἔχοντας, ἤδη δεσπότας τρομευμένους,
Ἐλευθέρους ἔθηκα.

also Plutarch, Solon, c. 15.

[2] **Plutarch**, Solon, c. 23: compare c. 13. The statement in Sextus Empiricus (Pyrrhon. Hypot. iii. 24, 211), that Solon enacted a law permitting fathers to kill (φονεύειν) their children, cannot be true, and must be copied

Whether this last ordinance was contemporaneous with the seisachtheia, or followed as one of his subsequent reforms, seems doubtful

By this extensive measure the poor debtors, — the thêtes, small tenants, and proprietors,— together with their families, were rescued from suffering and peril. But these were not the only debtors in the state: the creditors and landlords of the exonerated thêtes were doubtless in their turn debtors to others, and were less able to discharge their obligations in consequence of the loss inflicted upon them by the seisachtheia. It was to assist these wealthier debtors, whose bodies were in no danger,— yet without exonerating them entirely, — that Solon resorted to the additional expedient of debasing the money standard; he lowered the standard of the drachma in a proportion something more than twenty-five per cent., so that one hundred drachmas of the new standard contained no more silver than seventy-three of the old, or one hundred of the old were equivalent to one hundred and thirty-eight of the new. By this change, the creditors of these more substantial debtors were obliged to submit to a loss, while the debtors acquired an exemption, to the extent of about twenty-seven per cent.[1]

from some untrustworthy authority: compare Dionys. Hal. A. R. ii, 26, where he contrasts the prodigious extent of the *patria potestas* among the early Romans, with the restrictions which all the Greek legislators alike, — Solon, Pittakus, Charondas, — either found or introduced: he says, however, that the Athenian father was permitted to disinherit legitimate male children, which does not seem to be correct.

Meier (Der Attische Prozess, iii, 2, p. 427) rejects the above-mentioned statement of Sextus Empiricus, and farther contends that the exposure of new-born infants was not only rare, but discountenanced as well by law as by opinion; the evidence in the Latin comedies to the contrary, he considers as manifestations of Roman, and not of Athenian, manners. In this latter opinion I do not think that he is borne out, and I agree in the statement of Schömann (Ant. J. P. Græc. sect. 82), that the practice and feeling of Athens as well as of Greece generally, left it to the discretion of the father whether he would consent, or refuse, to bring up a new-born child.

[1] Plutarch, Solon, c. 15. See the full exposition given of this debasement of the coinage, in Boeckh's Metrologie, ch. ix, p. 115.

M. Boeckh thinks (ch. xv, s. 2) that Solon not only debased the coin, but also altered the weights and measures. I dissent from his opinion on this latter point, and have given my reasons for so doing, in a review of his valuable treatise in the Classical Museum, No. 1.

Lastly, Solon decreed that all those who had been condemned by the archons to atimy (civil disfranchisement) should be restored to their full privileges of citizens, — excepting, however, from this indulgence those who had been condemned by the ephetæ, or by the areopagus, or by the phylo-basileis (the four kings of the tribes), after trial in the prytaneium, on charges either of murder or treason.[1] So wholesale a measure of amnesty affords strong grounds for believing that the previous judgments of the archons had been intolerably harsh; and it is to be recollected that the Drakonian ordinances were then in force.

Such were the measures of relief with which Solon met the dangerous discontent then prevalent. That the wealthy men and leaders of the people, whose insolence and iniquity he has himself so sharply denounced in his poems, and whose views in nominating him he had greatly disappointed,[2] should have detested propositions which robbed them without compensation of so many of their legal rites, it is easy to imagine. But the statement of Plutarch, that the poor emancipated debtors were also dissatisfied, from having expected that Solon would not only remit their debts, but also redivide the soil of Attica, seems utterly incredible; nor is it confirmed by any passage now remaining of the Solonian poems.[3] Plutarch conceives the poor debtors as having in their minds the comparison with Lykurgus, and the equality of property at Sparta, which, as I have already endeavored to show,[4] is a fiction; and even had it been true, as matter of history long past and antiquated, would not have been likely to work upon the minds of the multitude of Attica in the forcible way that the biographer supposes. The seisachtheia must have exasperated the feelings and dimininished the fortunes of many persons; but it gave to the large body of thêtes and small proprietors all that they could possibly have hoped. And we are

[1] Plutarch, Solon, c. 19. In the general restoration of exiles throughout the Greek cities, proclaimed first by order of Alexander the Great, afterwards by Polysperchon, exception is made of men exiled for sacrilege or homicide (Diodor. xvii, 109; xviii, 8–46).

[2] Plutarch, Solon, c. 15. *οὐδὲ μαλακῶς, οὐδ' ὑπείκων τοῖς δυναμένοις οὐδὲ κρὸς ἡδονὴν τῶν ἐλομένων ἔθετο τοὺς νόμους*, etc.

[3] Plutarch, Solon, c. 16.

[4] See above vol. ii, part ii, ch. vi.

told that after a short interval it became eminently acceptable in the general public mind, and procured for Solon a great increase of popularity, — all ranks concurring in a common sacrifice of thanksgiving and harmony.[1] One incident there was which occasioned an outcry of indignation. Three rich friends of Solon, all men of great family in the state, and bearing names which will hereafter reappear in this history as borne by their descendants, — Konôn, Kleinias, and Hipponikus, — having obtained from Solon some previous hint of his designs, profited by it, first, to borrow money, and next, to make purchases of lands; and this selfish breach of confidence would have disgraced Solon himself, had it not been found that he was personally a great loser, having lent money to the extent of five talents. We should have been glad to learn what authority Plutarch had for this anecdote, which could hardly have been recorded in Solon's own poems.[2]

In regard to the whole measure of the seisachtheia, indeed, though the poems of Solon were open to every one, ancient authors gave different statements, both of its purport and of its extent. Most of them construed it as having cancelled indiscriminately all money contracts; while Androtion, and others, thought that it did nothing more than lower the rate of interest and depreciate the currency to the extent of twenty-seven per cent., leaving the letter of the contracts unchanged. How Androtion came to maintain such an opinion we cannot easily understand, for the fragments now remaining from Solon seem distinctly to refute it, though, on the other hand, they do not go so far as to substantiate the full extent of the opposite view entertained by many writers, — that all money contracts indiscriminately were rescinded:[3] against which there is also a

[1] Plutarch, *l. c. ἐθυσάν τε κοινῇ, Σεισάχθειαν τὴν θυσίαν ὀνομάζοντες*, etc

[2] The anecdote is again noticed, but without specification of the names of the friends, in Plutarch, Reipub. Gerend. Præcep. p. 807.

[3] Plutarch, Solon, c. 15. The statement of Dionysius of Hal., in regard to the bearing of the seisachtheia, is in the main accurate, — *χρεῶν ἄφεσιν ψηφισαμένην τοῖς ἀπόροις* (v, 65), — to the debtors who were liable on the security of their bodies and their lands, and who were chiefly poor, — not to *all* debtors.

Heraklcidès Pontic. (*Πολιτ.* c. 1) and Dio Chrysostom (Or. xxxi, p. 331) express themselves loosely.

farther reason, that, if the fact had been so, Solon could have had no motive to debase the money standard. Such debasement supposes that there must have been *some* debtors, at least, whose contracts remained valid, and whom, nevertheless, he desired partially to assist. His poems distinctly mention three things: 1. The removal of the mortgage pillars. 2. The enfranchisement of the land. 3. The protection, liberation, and restoration of the persons of endangered or enslaved debtors. All these expressions point distinctly to the thêtes and small proprietors, whose sufferings and peril were the most urgent, and whose case required a remedy immediate as well as complete: we find that his repudiation of debts was carried far enough to exonerate them, but no farther.

It seems to have been the respect entertained for the character of Solon which partly occasioned these various misconceptions of his ordinances for the relief of debtors: Androtion in ancient, and some eminent critics in modern times, are anxious to make out that he gave relief without loss or injustice to any one. But this opinion is altogether inadmissible: the loss to creditors, by the wholesale abrogation of numerous prëexisting contracts, and by the partial depreciation of the coin, is a fact not to be disguised. The seisachtheia of Solon, unjust so far as it rescinded previous agreements, but highly salutary in its consequences, is to be vindicated by showing that in no other way could the bonds

Both Wachsmuth (Hell. Alterth. v, i, p. 249) and K. F. Hermann (Gr. Staats Alter. c. s. 106) quote the heliastic oath, and its energetic protest against repudiation, as evidence of the bearing of the Solonian seisachtheia. But that oath is referable only to a later period; it cannot be produced in proof of any matter applicable to the time of Solon; the mere mention of the senate of Five Hundred in it, shows that it belongs to times subsequent to the Kleisthenean revolution. Nor does the passage from Plato (Legg. iii p. 684) apply to the case.

Both Wachsmuth and Hermann appear to me to narrow too much the extent of Solon's measure in reference to the clearing of debtors. But on the other hand, they enlarge the effect of his measures in another way, without any sufficient evidence, — they think that he raised *the villein tenants* into *free proprietors*. Of this I see no proof, and think it improbable. A large proportion of the small debtors whom Solon exonerated were probably free proprietors before; the existence of the *ὅροι*, or mortgage pillars, upon their land proves this.

of government have been held together, or the misery of the multitude alleviated. We are to consider, first, the great personal cruelty of these preëxisting contracts, which condemned the body of the free debtor and his family to slavery; next, the profound detestation created by such a system in the large mass of the poor, against both the judges and the creditors by whom it had been enforced, which rendered their feelings unmanageable, so soon as they came together under the sentiment of a common danger, and with the determination to insure to each other mutual protection. Moreover, the law which vests a creditor with power over the person of his debtor, so as to convert him into a slave, is likely to give rise to a class of loans, which inspire nothing but abhorrence, — money lent with the foreknowledge that the borrower will be unable to repay it, but also in the conviction that the value of his person as a slave will make good the loss; thus reducing him to a condition of extreme misery, for the purpose sometimes of aggrandizing, sometimes of enriching, the lender. Now the foundation on which the respect for contracts rests, under a good law of debtor and creditor, is the very reverse of this; it rests on the firm conviction that such contracts are advantageous to both parties as a class, and that to break up the confidence essential to their existence would produce extensive mischief throughout all society. The man whose reverence for the obligation of a contract is now the most profound, would have entertained a very different sentiment if he had witnessed the dealings of lender and borrower at Athens, under the old ante-Solonian law. The oligarchy had tried their best to enforce this law of debtor and creditor, with its disastrous series of contracts, and the only reason why they consented to invoke the aid of Solon, was because they had lost the power of enforcing it any longer, in consequence of the newly awakened courage and combination of the people. That which they could not do for themselves, Solon could not have done for them, even had he been willing; nor had he in his possession the means either of exempting or compensating those creditors, who, separately taken, were open to no reproach; indeed, in following his proceedings, we see plainly that he thought compensation due, not to the creditors, but to the past sufferings of the enslaved debtors, since he redeemed several of them from foreign cap-

tivity, and brought them back to their home. It is certain that no measure, simply and exclusively prospective, would have sufficed for the emergency: there was an absolute necessity for overruling all that class of preëxisting rights which had produced so violent a social fever. While therefore, to this extent, the seisachtheia cannot be acquitted of injustice, we may confidently affirm that the injustice inflicted was an indispensable price, paid for the maintenance of the peace of society, and for the final abrogation of a disastrous system as regarded insolvents.[1] And the feeling as well as the legislation universal in the modern European world, by interdicting beforehand all contracts for selling a man's person or that of his children into slavery, goes far to sanction practically the Solonian repudiation.

One thing is never to be forgotten in regard to this measure, combined with the concurrent amendments introduced by Solon in the law, — it settled finally the question to which it referred. Never again do we hear of the law of debtor and creditor as disturbing Athenian tranquillity. The general sentiment which grew up at Athens, under the Solonian money-law, and under the democratical government, was one of high respect for the sanctity of contracts. Not only was there never any demand in the Athenian democracy for new tables or a depreciation of the money standard, but a formal abnegation of any such projects was inserted in the solemn oath taken annually by the numerous diakasts, who formed the popular judicial body, called hêliæa, or the hêliastic jurors, — the same oath which pledged them to

[1] That which Solon did for the Athenian people in regard to debts, is less than what was *promised* to the Roman plebs (at the time of its secession to the Mons Sacer in 491 B. C.) by Menenius Agrippa, the envoy of the senate, to appease them, but which does not seem to have been ever *realized* (Dionys. Hal. vi, 83). He promised an abrogation of all the debts of debtors unable to pay, without exception, — if the language of Dionysius is to be trusted, which probably it cannot be.

Dr. Thirlwall justly observes respecting Solon, "He must be considered as an arbitrator, to whom all the parties interested submitted their claims, with the avowed intent that they should be decided by him, not upon the footing of legal right, but according to his own view of the public interest. It was in this light that he himself regarded his office, and he appears to have discharged it faithfully and discreetly." (History of Greece, ch. xi. vol. ii. p. 42.)

uphold the democratical constitution, also bound them to repudiate all proposals either for an abrogation of debts or for a redivision of the lands.[1] There can be little doubt that under the Solonian law, which enabled the creditor to seize the property of his debtor, but gave him no power over the person, the system of money-lending assumed a more beneficial character: the old noxious contracts, mere snares for the liberty of a poor freeman and his children, disappeared, and loans of money took their place, founded on the property and prospective earnings of the debtor, which were in the main useful to both parties, and therefore maintained their place in the moral sentiment of the public. And though Solon had found himself compelled to rescind all the mortgages on land subsisting in his time, we see money freely lent upon this same security, throughout the historical times of

[1] Dêmosthen. cont. Timokrat. p. 746. *οὐδὲ τῶν χρεῶν τῶν ἰδίων ἀποκοπὰς, οὐδὲ γῆς ἀναδασμὸν τῆς Ἀθηναίων, οὐδ' οἰκιῶν (ψηφιοῦμαι)*: compare Dio Chrysostom, Orat. xxxi, p. 332, who also dwells upon the anxiety of various Grecian cities to fix a curse upon all propositions for *χρεῶν ἀποκοπὴ* and *γῆς ἀναδασμός*. What is not less remarkable is, that Dio seems not to be aware of any one well-authenticated case in Grecian history, in which a redivision of lands had ever actually taken place — *ὃ μηδ' ὅλως ἴσμεν εἴ ποτε συνέβη* (*l. c.*)

For the law of debtor and creditor, as it stood during the times of the Orators at Athens, see Heraldus, Animadv. ad Salmasium, pp. 174–286; Meier und Schömann, Der Attische Prozess, b. iii, c. 2, p. 497, *seqq.* (though I doubt the distinction which they there draw between *χρέος* and *δανεῖον*); Platner, Prozess und Klagen, b. ii, absch. 11, pp. 349, 361.

There was one exceptional case, in which the Attic law always continued to the creditor that power over the person of the insolvent debtor which all creditors had possessed originally, — it was when the creditor had lent money for the express purpose of ransoming the debtor from captivity (Dêmosthen. cont. Nikostr. p. 1249), — analogous to the actio depensi in the old Roman law.

Any citizen who owed money to the public treasury, and whose debt became overdue, was deprived for the time of all civil rights until he had cleared it off.

Diodorus (i, 79) gives us an alleged law of the Egyptian king Bocchoris, releasing the persons of debtors and rendering their properties only liable, which is affirmed to have served as an example for Solon to copy. If we can trust this historian, lawgivers in other parts of Greece still retained the old severe law enslaving the debtor's person: compare a passage in Isokrates (Orat. xiv. Plataicus, p. 305; p. 414, Bek

Athens, and the evidentiary mortgage pillars remaining ever after undisturbed.

In the sentiment of an early society, as in the old Roman law, a distinction is commonly made between the principal and the interest of a loan, though the creditors have sought to blend them indissolubly together. If the borrower cannot fulfil his promise to repay the principal, the public will regard him as having committed a wrong which he must make good by his person; but there is not the same unanimity as to his promise to pay interest: on the contrary, the very exaction of interest will be regarded by many in the same light in which the English law considers usurious interest, as tainting the whole transaction. But in the modern mind, principal, and interest within a limited rate, have so grown together, that we hardly understand how it can ever have been pronounced unworthy of an honorable citizen to lend money on interest; yet such is the declared opinion of Aristotle, and other superior men of antiquity; while the Roman Cato, the censor, went so far as to denounce the practice as a heinous crime.[1] It was comprehended by them among the worst of the tricks of trade, — and they held that all trade, or profit derived from interchange, was unnatural, as being made by one man at the expense of another: such pursuits, therefore, could not be commended, though they might be tolerated to a certain extent as matter of necessity, but they belonged essentially to an inferior order of citizens.[2] What is remarkable in

[1] Aristot. Polit. i, 4, 23; Cato ap. Cicero. de Offic. ii, 25. Plato, in his Treatise de Legg. (v, p. 742) forbids all lending on interest: indeed, he forbids any private citizen to possess either gold or silver.

To illustrate the marked difference made in the early Roman law, between the claim for the principal and that for the interest, I insert in an Appendix, at the end of this chapter, the explanation given by M. von Savigny, of the treatment of the nexi and addicti, — connected as it is by analogy with the Solonian seisachtheia.

[2] Aristot. Polit. i, 4, 23. *Τῆς δὲ μεταβλητικῆς ψεγομένης δικαίως (οὐ γὰρ κατὰ φύσιν, ἀλλ' ἀπ' ἀλλήλων ἔστιν), εὐλογώτατα μισεῖται ἡ ὀβολοστατικὴ*, etc. Compare Ethic. Nikom. iv, 1.

Plutarch borrows from Aristotle the quibble derived from the word *τόκος* (the Greek expression for interest), which has given birth to the well-known dictum of Aristotle, — that money being naturally *barren*, to extract *offspring* from it must necessarily be *contrary to nature* (see Plutarch, De Vit. Ær. Al p. 829).

Greece is, that the antipathy of a very early state of society against traders and money-lenders lasted longer among the philosophers than among the mass of the people, — it harmonized more with the social *idéal* of the former, than with the practical instincts of the latter.

In a rude condition, such as that of the ancient Germans described by Tacitus, loans on interest are unknown: habitually careless of the future, the Germans were gratified both in giving and receiving presents, but without any idea that they thereby either imposed or contracted an obligation.[1] To a people in this state of feeling, a loan on interest presents the repulsive idea of making profit out of the distress of the borrower; moreover, it is worthy of remark, that the first borrowers must have been for the most part men driven to this necessity by the pressure of want, and contracting debt as a desperate resource, without any fair prospect of ability to repay: debt and famine run together, in the mind of the poet Hesiod.[2] The borrower is, in this unhappy state, rather a distressed man soliciting aid, than a solvent man capable of making and fulfilling a contract; and if he cannot find a friend to make him a free gift in the former character, he will not, under the latter character, obtain a loan from a stranger, except by the promise of exorbitant interest,[1] and by the fullest eventual power over his person which he is in a condition to grant. In process of time a new class of borrowers rise up,

[1] Tacit. Germ. 26. "Fœnus agitare et in usuras extendere, ignotum: ideoque magis servatur quam si vetitum esset," (c. 21.) "Gaudent muneribus: sed nec data imputant, nec acceptis obligantur."

[2] Hesiod, Opp. Di. 647, 404. Βουλῃαι χρέα τε προφυγεῖν, καὶ λιμὸν ἀτερπῆ. Some good observations on this subject are to be found in the excellent treatise of M. Turgot, written in 1763, "Mémoire sur les Prêts d'Argent:" —

"Les causes qui avoient autrefois rendu odieux le prêt à intérêt, ont cessé d'agir avec tant de force.... De toutes ces circonstances réunies, il est resulté que les emprunts faits par le pauvre pour subsister ne sont plus qu'un objet à peine sensible dans la somme totale d'emprunts: que la plus grande partie des prêts se font à l'homme riche, ou du moins à l'homme industrieux, qui espère se procurer de grands profits par l'emploi de l'argent qu'il emprunte. ...Les prêteurs sur gage à gros intérêt, les seuls qui prêtent véritablement au pauvre pour ses besoins journaliers et non pour le mettre en état de gagner, ne font point le même mal que les anciens usuriers qui conduisoient par degrés à la misère et à l'esclavage les pauvres citoyens auxquels ils avoient procuré des secours funestes....Le créancier qui pouvait réduire son débiteur en esclavage y trouvait un profit: c'étoit un esclave qu'il acquérait: mais aujourd'hui le créancier sait qu'en privant son débiteur de la liberté, il n'y gagnera autre chose que d'être obligé de le nourrir en prison: aussi ne s'avise-t-on pas de faire contracter à un homme qui n'a rien, et qui est réduit à emprunter pour vivre, des engagemens qui emportent la contrainte par corps. La seule sûreté vraiment solide contre l'homme pauvre est le gage: et l'homme pauvre s'estime heureux de trouver un secours pour le moment sans autre danger que de perdre ce gage. Aussi le peuple a-t-il plûtot de la reconnoissance pour ces petits usuriers qui le secourent dans son besoin, quoiqu'ils lui vendent assez cher ce secours." (Mémoire sur les Prêts d'Argent, in the collection of Œuvres de Turgot, by Dupont de Nemours, vol. v, sects. xxx, xxxi, pp. 326, 327, 329, written in 1763.)

[1] "In Bengal (observes Adam Smith, Wealth of Nations, b. i, ch. 9, p 143, ed. 1812) money is frequently lent to the farmers at 40, 50, and 60 per cent., and the succeeding crop is mortgaged for the payment."

Respecting this commerce at Florence in the Middle Ages, M. Depping observes: "Il semblait que l'esprit commercial fût inné chez les Florentins: déjà aux 12me et 13me siècles, on les voit tenir des banques et prêter de l'argent aux princes. Ils ouvrirent partout des maisons de prêt, marchèrent de pair avec les Lombards, et, il faut le dire, ils furent souvent maudits, comme ceux-ci, par leurs débiteurs, à cause de leur rapacité. Vingt pour cent par an était le taux ordinaire des prêteurs Florentins: et il n'était pas rare qu'ils en prissent trente et quarante." Depping, Histoire du Commerce entre le Levant et l'Europe, vol. i, p. 235.

Boeckh (Public Economy of Athens, book i, ch. 22) gives from 12 to 18 per cent. per annum as the common rate of interest at Athens in the time of the orators.

The valuable Inscription (No. 1845, in his Corpus Inscr. Pars viii, p. 23 sect. 3) proves, that at Korkyra a rate of 2 per cent. per month, or 24 per cent. per annum, might be obtained from perfectly solvent and responsible borrowers. For this is a decree of the Korkyræan government, prescribing what shall be done with a sum of money given to the state for the Dionysiac festivals, — placing that money under the care of certain men of property and character, and directing them to lend it out exactly at 2 per cent. per month, *neither more nor less*, until a given sum shall be accumulated. This Inscription dates about the third or second century B. C., according to Boeckh's conjecture.

The Orchomenian Inscription, No. 1569, to which Boeckh refers in the passage above alluded to, is unfortunately defective in the words determining the rate of interest payable to Eubulus: but there is another, the Theræan Inscription (No. 2446), containing the Testament of Epiktêta, wherein the annual sum payable in lieu of a principal sum bequeathed, is calculated a 7 per cent.; a rate which Boeckh justly regards as moderate considered in reference to ancient Greece.

who demand money for temporary convenience or profit, but with full prospect of repayment, — a relation of lender and borrower quite different from that of the earlier period, when it presented itself in the repulsive form of misery on the one side, set against the prospect of very large profit on the other. If the Germans of the time of Tacitus had looked to the condition of the poor debtors in Gaul, reduced to servitude under a rich creditor, and swelling by hundreds the crowd of his attendants, they would not have been disposed to regret their own ignorance of the practice of money-lending.[1] How much the interest of money was then regarded as an undue profit extorted from distress, is powerfully

[1] Cæsar, B. G. i, 4, respecting the Gallic chiefs and plebs: "Die constitutâ causæ dictionis, Orgetorix ad judicium omnem suam familiam, ad hominum millia decem, undique coegit: et omnes clientes, *obæratos*que suos, quorum magnum numerum habebat, eodem conduxit: per eos, ne caussam diceret, se eripuit." Ibid. vi, 13: "Plerique, cum aut *ære alieno*, aut magnitudine tributorum, aut injuriâ potentiorum, premuntur, sese in servitutem dicant nobilibus. In hos eadem omnia sunt jura, quæ dominis in servos." The wealthy Romans cultivated their large possessions partly by the hands of adjudged debtors, in the time of Columella (i, 3, 14): "More præpotentium, qui possident fines gentium, quos....aut occupatos nexu civium, aut ergastulis, tenent."

According to the Teutonic codes also, drawn up several centuries subsequently to Tacitus, it seems that the insolvent debtor falls under the power of his creditor and is subject to personal fetters and chastisement (Grimm, Deutsche Rechts Alterthümer, pp. 612–615): both he and Von Savigny assimilate it to the terrible process of personal execution and addiction in the old law of Rome, against the insolvent debtor on loan. King Alfred exhorts the creditor to lenity (Laws of King Alfred, Thorpe, Ancient Laws of England, vol. i, p. 53, law 35)

A striking evidence of the alteration of the character and circumstances of debtors, between the age of Solon and that of Plutarch, is afforded by the treatise of the latter, "De Vitando Ære Alieno," wherein he sets forth in the most vehement manner the miserable consequences of getting into debt. "*The poor*," he says, "*do not get into debt, for no one will lend them money* (*τοῖς γὰρ ἀπόροις οὐ δανείζουσιν. ἀλλὰ βουλομένοις εὐπορίαν τινα ἑαυτοῖς κτᾶσθαι καὶ μάρτυρα δίδωσι καὶ βεβαιώτην ἄξιον, ὅτι ἔχει πιστεύεσθαι*): the borrowers are men who have still some property and some security to offer but who wish to keep up a rate of expenditure beyond what they can afford and become utterly ruined by contracting debts." (Plut. pp. 827, 830.) This shows how intimately the multiplication of poor debtors was connected with the liability of their persons to enslavement Compare Plutarch, De Cupidine Divitiarum, c. 2, p. 523.

illustrated by the old Jewish law; the Jew being permitted to take interest from foreigners (whom the lawgiver did not think himself obliged to protect), but not from his own countrymen.[1]

[1] Levitic. 25: 35–36; Deuteron. 23: 20. This enactment seems sufficiently intelligible; yet M. Salvador (Histoire des Institutions de Moise, liv. iii, ch. 6) puzzles himself much to assign to it some far-sighted commercial purpose. "Unto thy brother thou shalt not lend upon *usury*, but unto a stranger thou mayst lend upon *usury:*" — it is of more importance to remark that the word here translated *usury* really means *any interest* for money, great or small; — see the opinion of the Sanhedrim of seventy Jewish doctors, assembled at Paris in 1807, cited in M. Salvador's work, *l. c.*

The Mosaic law, therefore, (as between Jew and Jew, or even as between Jew and the *μέτοικος*, or *resident stranger*, distinguished from the *foreigner*,) went as far as the Koran in prohibiting all taking of interest. That its enactments were not much observed, any more than those of the Koran, we have one proof at least in the proceeding of Nehemiah at the building of the second temple, — which presents so curious a parallel in many respects to the Solonian seisachtheia, that I transcribe the account of it from Prideaux, Connection of Sacred and Profane History, part i, b. 6, p. 290: —

"The burden which the people underwent in the carrying on of this work, and the incessant labor which they were enforced to undergo to bring it to so speedy a conclusion, being very great,....care was taken to relieve them from a much greater burden, the oppression of usurers: which they then in great misery lay under, and had much greater reason to complain of. For the rich, taking advantage of the necessities of the meaner sort, had exacted heavy usury of them, making them pay the centesima for all moneys lent them; that is, 1 per cent. for every month, which amounted to 12 per cent. for the whole year; so that they were forced to mortgage their lands, and sell their children into servitude, to have wherewith to buy bread for the support of themselves and their families; which being a manifest breach of the law of God, given them by Moses (for that forbids all the race of Israel to take usury of any of their brethren). Nehemiah, on his hearing hereof, resolved forthwith to remove so great an iniquity; in order whereto he called a general assembly of all the people, where having set forth unto them the nature of the offence, how great a breach it was of the divine law, and how heavy an oppression upon their brethren, and how much it might provoke the wrath of God against them, he caused it to be enacted by the general suffrage of that whole assembly, that all should return to their brethren whatsoever had been exacted of them upon usury, and also *release all the lands, vineyards, olive-yards, and houses*, which had been taken of them upon *mortgage* on the account hereof."

The measure of Nehemiah appears thus to have been not merely a seisachtheia such as that of Solon, but also a *παλιντοκία*, or refunding of interest paid by the debtor in past time, — analogous to the proceeding of

The Koran follows out this point of view consistently, and prohibits the taking of interest altogether. In most other nations, laws have been made to limit the rate of interest, and at Rome, especially, the legal rate was successively lowered,— though it seems, as might have been expected, that the restrictive ordinances were constantly eluded. All such restrictions have been intended for the protection of debtors; an effect which large experience proves them never to produce, unless it be called protection to render the obtaining of money on loan impracticable for the most distressed borrowers. But there was another effect which they *did* tend to produce, — they softened down the primitive antipathy against the practice generally, and confined the odious name of usury to loans lent above the fixed legal rate.

In this way alone could they operate beneficially, and their tendency to counterwork the previous feeling was at that time not unimportant, coinciding as it did with other tendencies arising out of the industrial progress of society, which gradually exhibited the relation of lender and borrower in a light more reciprocally beneficial, and less repugnant to the sympathies of the bystander.[1]

At Athens, the more favorable point of view prevailed throughout all the historical times, — the march of industry and commerce, under the mitigated law which prevailed subsequently to Solon, had been sufficient to bring it about at a very early period, and to suppress all public antipathy against lenders at interest.[2] We may remark, too, that this more equitable tone of opinion grew up spontaneously, without any legal restriction on

the Megarians on emancipating themselves from their oligarchy, as recounted above, chapter ix, p. 44.

[1] In every law to limit the rate of interest, it is of course implied that the law not only ought to fix, but can fix, the maximum rate at which money is to be lent. The tribunes at Rome followed out this proposition with perfect consistency: they passed successive laws for the reduction of the rate of interest, until at length they made it illegal to take any interest at all: "Gemecium, tribunum plebis, tulisse ad populum, ne fœnerari liceret." (Liv. vii, 42.) History shows that the law, though passed, was not carried into execution.

[2] Boeckh (Public Econ. of Athens, b. i, ch. 22, p. 128) thinks differently, — in my judgment, contrary to the evidence: the passages to which he refers, especially that of Theophrastus, are not sufficient to sustain his opinion, and there are other passages which go far to contradict it.

the rate of interest, — no such restriction having ever been imposed, and the rate being expressly declared free by a law ascribed to Solon himself.[1] The same may probably be said of the communities of Greece generally, — at least there is no information to make us suppose the contrary. But the feeling against lending money at interest remained in the bosoms of the philosophical men long after it had ceased to form a part of the practical morality of the citizens, and long after it had ceased to be justified by the appearances of the case as at first it really had been. Plato, Aristotle, Cicero,[2] and Plutarch, treat the practice as a branch of that commercial and money-getting spirit which they are anxious to discourage; and one consequence of this was, that they were less disposed to contend strenuously for the inviolability of existing money-contracts. The conservative feeling on this point was stronger among the mass than among the philosophers. Plato even complains of it as inconveniently preponderant,[3] and as arresting the legislator in all comprehensive projects of reform. For the most part, indeed, schemes of cancelling debts and redividing lands were never thought of except by men of desperate and selfish ambition, who made them stepping-stones to despotic power. Such men were denounced alike by the practical sense of the community and by the speculative thinkers; but when we turn to the case of the Spartan king Agis the Third, who proposed a complete extinction of debts and an equal redivision of

[1] Lysias cont. Theomnêst. A. c. 5, p. 360.

[2] Cicero, De Officiis, i, 42.

[3] Plato, Legg. iii, p. 684. *ὡς ἐπιχειροῦντι δὴ νομοθέτῃ κινεῖν τῶν τοιούτων τι πᾶς ἀπαντᾷ, λέγων, μὴ κινεῖν τὰ ἀκίνητα, καὶ ἐπαρᾶται γῆς τε ἀναδασμοὺς εἰσηγούμενον καὶ χρεῶν ἀποκοπὰς, ὥστ' εἰς ἀπορίαν καθίστασθαι πάντα ἀνδρα*, etc: compare also v, pp. 736–737, where similar feelings are intimated not less emphatically.

Cicero lays down very good principles about the mischief of destroying faith in contracts; but his admonitions to this effect seem to be accompanied with an impracticable condition: the lawgiver is to take care that debts shall not be contracted to an extent hurtful to the state: "Quamobrem ne sit æs alienum, quod reipublicæ noceat, providendum est (quod *multis rationibus* caveri potest): non, si fuerit, ut locupletes suum perdant, debitores lucrentur alienum," etc. What the *multæ rationes* were, which Cicero had in his mind, I do not know: compare his opinion about *fœneratores*, Offic. i, 42; ii, 25.

the landed property of the state, not with any selfish or personal views, but upon pure ideas of patriotism, well or ill understood, and for the purpose of renovating the lost ascendency of Sparta, — we find Plutarch[1] expressing the most unqualified admiration of this young king and his projects, and treating the opposition made to him as originating in no better feelings than meanness and cupidity. The philosophical thinkers on politics conceived — and to a great degree justly, as I shall show hereafter — that the conditions of security, in the ancient world, imposed upon the citizens generally the absolute necessity of keeping up a military spirit and willingness to brave at all times personal hardship and discomfort; so that increase of wealth, on account of the habits of self-indulgence which it commonly introduces, was regarded by them with more or less of disfavor. If in their estimation any Grecian community had become corrupt, they were willing to sanction great interference with preëxisting rights for the purpose of bringing it back nearer to their ideal standard: and the real security for the maintenance of these rights lay in the conservative feelings of the citizens generally, much more than in the opinions which superior minds imbibe from the philosophers.

Those conservative feelings were in the subsequent Athenian democracy peculiarly deep-rooted: the mass of the Athenian people identified inseparably the maintenance of property, in all its various shapes, with that of their laws and constitution. And it is a remarkable fact, that though the admiration entertained at Athens for Solon, was universal, the principle of his seisachtheia, and of his money-depreciation, was not only never imitated, but found the strongest tacit reprobation; whereas at Rome, as well as in most of the kingdoms of modern Europe, we know that one debasement of the coin succeeded another, — the temptation, of thus partially eluding the pressure of financial embarrassments, proved, after one successful trial, too strong to be resisted, and brought down the coin by successive depreciations from the full pound of twelve ounces to the standard of half an ounce. It is of some importance to take notice of this fact,

[1] See Plutarch's Life of Agis, especially ch. 13, about the bonfire in which the *κλάρια*, or mortgage-deeds, of the creditors were all burnt, in the agora of Sparta: compare also the comparison of Agis with Gracchus, c. 2.

when we reflect how much "Grecian faith" has been degraded by the Roman writers into a byword for duplicity in pecuniary dealings.[1] The democracy of Athens, — and, indeed, the cities of Greece generally, both oligarchies and democracies, — stands far above the senate of Rome, and far above the modern kingdoms of France and England, until comparatively recent times, in respect of honest dealing with the coinage:[2] moreover, while

[1] "Græcâ fide mercari." Polybius puts the Greeks greatly below the Romans in point of veracity and good faith (vi, 56); in another passage, he speaks not quite so confidently (xviii, 17). Even the testimony of the Roman writers is sometimes given in favor of Attic good faith, not against it — "ut semper et in omni re, quicquid sincerâ fide gereretur, id Romani, *Atticâ fieri*, prædicarent." (Velleius Paterc. ii, 23.)

The language of Heffter (Athenäische Gerichts Verfassung, p. 466), especially, degrades very undeservedly the state of good faith and credit at Athens.

The whole tone and argument of the Oration of Dêmosthenês against Leptinês is a remarkable proof of the respect of the Athenian dikastery for vested interests, even under less obvious forms than that of pecuniary possession. We may add a striking passage of Dêmosthenês cont. Timokrat. wherein he denounces the rescinding of past transactions (*τὰ πεπραγμένα λύσαι*, contrasted with prospective legislation) as an injustice peculiar to an oligarchy, and repugnant to the feelings of a democracy (cont. Timokrat. c. 20, p. 724; c. 36, 747).

[2] A similar credit, in respect to monetary probity, may be claimed for the republic of Florence. M. Sismondi says, "Au milieu des révolutions monétaires de tous les pays voisins et tandis que la mauvaise foi des gouvernemens altéroit le numéraire d'une extrémité à l'autre de l'Europe, le florin ou séquin de Florence est toujours resté le même: il est du même poids, du même titre: il porte la même empreinte que celui qui fut battu en 1252." (Républiques Italiennes, vol. iii, ch. 18, p. 176.)

M. Boeckh (Public Econ. of Athens, i, 6; iv, 19), while affirming, justly and decidedly, that the Athenian republic always set a high value on maintaining the integrity of their silver money, — yet thinks that the gold pieces which were coined in Olymp. 93, 2, (408 B. C.) under the archonship of Antigenês (out of the golden ornaments in the acropolis, and at a time of public embarrassments) were debased and made to pass for more than their value. The only evidence in support of this position appears to be the passage in Aristophanês (Ran. 719–737) with the Scholia; but this very passage seems to me rather to prove the contrary. "The Athenian people (says Aristophanês) deal with their public servants as they do with their coins: they prefer the new and bad to the old and good." If the people were so exceedingly, and even extravagantly, desirous of obtaining the new coins, this is a

there occurred at Rome several political changes which brought about new tables,[1] or at least a partial depreciation of contracts, no phenomenon of the same kind ever happened at Athens, during the three centuries between Solon and the end of the free working of the democracy. Doubtless there were fraudulent debtors at Athens, and the administration of private law, though it did not in any way connive at their proceedings, was far too imperfect to repress them as effectually as might have been wished. But the public sentiment on the point was just and decided, and it may be asserted with confidence, that a loan of money at Athens was quite as secure as it ever was at any time or place of the ancient world, — in spite of the great and important superiority of Rome with respect to the accumulation of a body of authoritative legal precedent, the source of what was ultimately shaped into the Roman jurisprudence. Among the various causes of sedition or mischief in the Grecian communities,[2] we hear little of the pressure of private debt.

By the measures of relief above described,[3] Solon had accomplished results surpassing his own best hopes. He had healed the prevailing discontents; and such was the confidence and gratitude which he had inspired, that he was now called upon to draw up a constitution and laws for the better working of the

strong proof that they were *not* depreciated, and that no loss was incurred by giving the old coins in exchange for them.

[1] "Sane vetus Urbi fœnebre malum (says Tacitus, Ann. vi, 16) et seditionum discordiarumque creberrima causa," etc: compare Appian, Bell. Civil. Præfat.; and Montesquieu, Esprit des Lois, l. xxii, c. 22.

The constant hopes and intrigues of debtors at Rome, to get rid of their debts by some political movement, are nowhere more forcibly brought out than in the second Catilinarian Oration of Cicero, c. 8–9: read also the striking harangue of Catiline to his fellow-conspirators (Sallust, B. Catilin. c. 20–21).

[2] The insolvent debtor, in some of the Bœotian towns, was condemned to sit publicly in the agora with a basket on his head, and then disfranchised (Nikolaus Damaskenus, Frag. p. 152, ed. Orelli).

According to Diodorus, the old severe law against the body of a debtor, long after it had been abrogated by Solon at Athens, still continued in other parts of Greece (i, 79).

[3] Solon, Frag. 27, ed. Schneid. —

Ἃ μὲν ἀελπτα σὺν θεοῖσιν ἦννο', ἄλλο δ' οὐ πάτην
Ἔρδον.

government in future. His constitutional changes were great and valuable: respecting his laws, what we hear is rather curious than important.

It has been already stated that, down to the time of Solon, the classification received in Attica was that of the four Ionic tribes, comprising in one scale the phratries and gentes, and in another scale the three trittyes and forty-eight naukraries, — while the eupatridæ, seemingly a few specially respected gentes, and perhaps a few distinguished families in all the gentes, had in their hands all the powers of government. Solon introduced a new principle of classification, called, in Greek, the timocratic principle. He distributed all the citizens of the tribes, without any reference to their gentes or phratries, into four classes, according to the amount of their property, which he caused to be assessed and entered in a public schedule. Those whose annual income was equal to five hundred medimni of corn (about seven hundred imperial bushels) and upwards, — one medimnus being considered equivalent to one drachma in money, — he placed in the highest class; those who received between three hundred and five hundred medimni, or drachms, formed the second class; and those between two hundred and three hundred, the third.[1] The fourth and most numerous class comprised all those who did not possess land yielding a produce equal to two hundred medimni. The first class, called pentakosiomedimni, were alone eligible to the archonship and to all commands: the second were called the knights or horsemen of the state, as possessing enough to enable them to keep a horse and perform military service in that capacity: the third class, called the zeugitæ, formed the heavy-armed infantry, and were bound to serve, each with his full panoply. Each of these three classes was entered in the public

[1] Plutarch, Solon, 18–23; Pollux, viii. 130; Aristot. Polit. ii, 9, 4; Aristot. Fragm. περὶ Πολιτείων, Fr. 51, ed. Neumann; Harpokration and Photius, v. Ἱππάς; Etymolog. Mag. Ζευγίσιον, Θητικόν; the Etym. Mag. Ζευγίσιον, and the Schol. Aristoph. Equit. 627, recognize only three classes.

He took a medimnus (of wheat or barley?) as equivalent to a drachm, and a sheep at the same value (*ib.* c. 23).

The medimnus seems equal to about 1·2-5 (1·4) English imperial bushel consequently 500 medimni = 700 English imperial bushels, or 87½ quarters

schedule as possessed of a taxable capital, calculated with a certain reference to his annual income, but in a proportion diminishing according to the scale of that income,—and a man paid taxes to the state according to the sum for which he stood rated in the schedule; so that this direct taxation acted really like a graduated income-tax. The ratable property of the citizens belonging to the richest class, the pentakosiomedimnus, was calculated and entered on the state-schedule at a sum of capital equal to twelve times his annual income: that of the hippeus, or knight, at a sum equal to ten times his annual income: that of the zeugite, at a sum equal to five times his annual income. Thus a pentakosiomedimnus, whose income was exactly five hundred drachms, the minimum qualification of his class, stood rated in the schedule for a taxable property of six thousand drachms, or one talent, being twelve times his income, — if his annual income were one thousand drachms, he would stand rated for twelve thousand drachms, or two talents, being the same proportion of income to ratable capital. But when we pass to the second class, or knights, the proportion of the two is changed, — the knight possessing an income of just three hundred drachms, or three hundred medimni, would stand rated for three thousand drachms, or ten times his real income, and so in the same proportion for any income above three hundred and below five hundred. Again, in the third class or below three hundred, the proportion is a second time altered, — the zeugite possessing exactly two hundred drachms of income, was rated upon a still lower calculation, at one thousand drachms, or a sum equal to five times his income; and all incomes of this class, between two hundred and three hundred drachms, would in like manner be multiplied by five in order to obtain the amount of ratable capital. Upon these respective sums of scheduled capital, all direct taxation was levied: if the state required one per cent. of direct tax, the poorest pentakosiomedimnus would pay (upon six thousand drachms) sixty drachms; the poorest hippeus would pay (upon three thousand drachms) thirty; the poorest zeugite would pay (upon one thousand drachms) ten drachms. And thus this mode of assessment would operate like a *graduated* income-tax, looking at it in reference to the three different classes, — but as an *equal* income-tax, looking at it in

reference to the different individuals comprised in one and the same class.[1]

All persons in the state whose annual income amounted to less

[1] The excellent explanation of the Solonian (*τίμημα*) property-schedule and graduated qualification, first given by Boeckh, in his Staatshaushaltung der Athener (b. iii, c. 5), has elucidated a subject which was, before him, nothing but darkness and mystery. The statement of Pollux (viii, 130), given in very loose language, had been, before Boeckh, erroneously apprehended; *ἀνήλισκον εἰς τὸ δημόσιον*, does not mean the sums which the pentakosiomedimnus, the hippeus, or the zeugite, *actually paid* to the state, but the sums for which each was rated, or which each was *liable* to pay, if called upon: of course, the state does not call for *the whole* of a man's rated property, but exacts an equal proportion of it from each.

On one point I cannot concur with Boeckh. He fixes the pecuniary qualification of the third class, or zeugites, at one hundred and fifty drachms, not at two hundred. All the positive testimonies (as he himself allows, p. 31) agree in fixing two hundred, and not one hundred and fifty; and the inference drawn from the old law, quoted in Dêmosthenês (cont. Makartat. p. 1067) is too uncertain to outweigh this concurrence of authorities.

Moreover, the whole Solonian schedule becomes clearer and more symmetrical if we adhere to the statement of two hundred drachms, and not one hundred and fifty, as the lowest scale of zeugite income; for the scheduled capital is then, in all the three scales, a definite and exact multiple of the income returned, — in the richest class it is twelve times, — in the middle class, ten times, — in the poorest, five times the income. But this correspondence ceases, if we adopt the supposition of Boeckh, that the lowest zeugite income was one hundred and fifty drachms; for the sum of one thousand drachms (at which the lowest zeugite was rated in the schedule) is no exact multiple of one hundred and fifty drachms. In order to evade this difficulty, Boeckh supposes that the adjustment of income to scheduled capital was effected in a way both roundabout and including nice fractions: he thinks that the income of each was converted into capital by multiplying by twelve, and that, in the case of the richest class, or pentakosiomedimni, the *whole* sum so obtained was entered in the schedule, — in the case of the second class, or hippeis, five-sixths of the sum, — and in the case of the third class, or zeugites, five-ninths of the sum. Now this process seems to me rather complicated, and the employment of a fraction such as five-ninths (both difficult and not much above the simple fraction of one-half) very improbable: moreover, Boeckh's own table, p. 41, gives fractional sums in the third class, when none appear in the first or second.

Such objections, of course, would not be admissible, if there were any positive evidence to prove the point. But in this case they are in harmony with all the positive evidence, and are amply sufficient, in my judgment, to countervail the presumption arising from the old law on which Boeckh relies.

than two hundred medimni, or drachms, were placed in the fourth class, and they must have constituted the large majority of the community. They were not liable to any direct taxation, and, perhaps, were not at first even entered upon the taxable schedule, more especially as we do not know that any taxes were actually levied upon this schedule during the Solonian times. It is said that they were all called thêtes, but this appellation is not well sustained, and cannot be admitted: the fourth compartment in the descending scale was indeed termed the thetic census, because it contained all the thêtes, and because most of its members were of that humble description; but it is not conceivable that a proprietor whose land yielded to him a clear annual return of one hundred, one hundred and twenty, one hundred and forty, or one hundred and eighty drachms, could ever have been designated by that name.[1]

Such were the divisions in the political scale established by Solon, called by Aristotle a timocracy, in which the rights, honors, functions, and liabilities of the citizens were measured out according to the assessed property of each. Though the scale is stated as if nothing but landed property were measured by it, yet we may rather presume that property of other kinds was intended to be included, since it served as the basis of every man's liability to taxation. The highest honors of the state, — that is, the places of the nine archons annually chosen, as well as those in the senate of areopagus, into which the past archons always entered, — perhaps also the posts of prytanes of the naukrari, — were reserved for the first class: the poor eupatrids became ineligible; while rich men, not eupatrids, were admitted. Other posts of inferior distinction were filled by the second and third classes, who were, moreover, bound to military service, the

[1] See Boeckh, Staatshaushaltung der Athener, *ut suprà*. Pollux gives an Inscription describing Anthemion son of Diphilus, — Θητικοῦ ἀντὶ τέλους ἱππάδ' ἀμειψάμενος. The word τελεῖν does not necessarily mean *actual* payment, but "the being included in a class with a certain aggregate of duties and liabilities," — equivalent to *censeri* (Boeckh, p. 36).

Plato, in his treatise De Legibus, admits a quadripartite census of citizens, according to more or less of property (Legg. v, p. 744; vi, p. 756). Compare Tittmann, Griechische Staats Verfassungen pp. 648,653; K. F. Hermann, Lehrbuch der Gr. Staats Alt. § 108

ore on horseback, the other as heavy-armed soldiers on foot. Moreover, the liturgies of the state, as they were called, — unpaid functions, such as the trierarchy, chorêgy, gymnasiarchy, etc., which entailed expense and trouble on the holder of them, — were distributed in some way or other between the members of the three classes, though we do not know how the distribution was made in these early times. On the other hand, the members of the fourth or lowest class were disqualified from holding any individual office of dignity, — performed no liturgies, served in case of war only as light-armed, or with a panoply provided by the state, and paid nothing to the direct property-tax, or eisphora. It would be incorrect to say that they paid *no* taxes; for indirect taxes, such as duties on imports, fell upon them in common with the rest; and we must recollect that these latter were, throughout a long period of Athenian history, in steady operation, while the direct taxes were only levied on rare occasions.

But though this fourth class, constituting the great numerical majority of the free people, were shut out from individual office, their collective importance was in another way greatly increased. They were invested with the right of choosing the annual archons, out of the class of pentakosiomedimni; and what was of more importance still, the archons and the magistrates generally, after their year of office, instead of being accountable to the senate of areopagus, were made formally accountable to the public assembly sitting in judgment upon their past conduct. They might be impeached and called upon to defend themselves, punished in case of misbehavior, and debarred from the usual honor of a seat in the senate of areopagus.

Had the public assembly been called upon to act alone, without aid or guidance, this accountability would have proved only nominal. But Solon converted it into a reality by another new institution, which will hereafter be found of great moment in the working out of the Athenian democracy. He created the probouleutic or preconsidering senate, with intimate and especial reference to the public assembly, — to prepare matters for its discussion, to convoke and superintend its meetings, and to insure the execution of its decrees. This senate, as first constituted by

Solon, comprised four hundred members, taken in equal proportions from the four tribes, — not chosen by lot, as they will be found to be in the more advanced stage of the democracy, but elected by the people, in the same way as the archons then were, — persons of the fourth or poorest class of the census, though contributing to elect, not being themselves eligible.

But while Solon thus created the new preconsidering senate, identified with and subsidiary to the popular assembly, he manifested no jealousy of the preëxisting areopagitic senate: on the contrary, he enlarged its powers, gave to it an ample supervision over the execution of the laws generally, and imposed upon it the censorial duty of inspecting the lives and occupations of the citizens, as well as of punishing men of idle and dissolute habits. He was himself, as past archon, a member of this ancient senate, and he is said to have contemplated that, by means of the two senates, the state would be held fast, as it were with a double anchor, against all shocks and storms.[1]

Such are the only new political institutions, apart from the laws to be noticed presently, which there are grounds for ascribing to Solon, when we take proper care to discriminate what really belongs to Solon and his age, from the Athenian constitution as afterwards remodelled. It has been a practice common with many able expositors of Grecian affairs, and followed partly, even by Dr. Thirlwall,[2] to connect the name of Solon with the whole political and judicial state of Athens as it stood between the age of Periklês and that of Dêmosthenês, — the regulations of the senate of five hundred, the numerous public dikasts or jurors taken by lot from the people, as well as the body annually selected for law-revision, and called nomothets, and the prosecution, called the graphê paranomôn, open to be instituted against the proposer of any measure illegal, unconstitutional, or dangerous. There is, indeed, some countenance for this confusion between Solonian and post-Solonian Athens, in the usage of the orators themselves; for Dêmosthenês and Æschinês employ the name of Solon in a very loose manner, and treat him as the author of institutions belonging evidently to a later age — for example, the striking and characteristic oath of the heliastic jurors, which Dêmosthenês[1] ascribes to Solon, proclaims itself in

[1] Plutarch, Solon, 18, 19, 23; Philochorus, Frag. 60, ed. Didot. Athenæus, iv, p. 168; Valer. Maxim. ii, 6.

[2] Meursius, Solon, *passim*; Sigonius, De Republ. Athen. i, p. 39 (though in some passages he makes a marked distinction between the time before and after Kleisthenês, p. 28). See Wachsmuth, Hellenische Alterthumskunde, vol. i, sects 46, 47; Tittmann, Griechische Staatsverfassungen, p. 146; Platner, Der Attische Prozess, book ii, ch. 5, pp 28–38; Dr. Thirlwall, History of Greece, vol. ii, ch. xi, pp. 46–57.

Niebuhr, in his brief allusions to the legislation of Solon, keeps duly in view the material difference between Athens as constituted by Solon, and Athens as it came to be after Kleisthenês; but he presumes a closer analogy between the Roman patricians and the Athenian eupatridæ than we are entitled to count upon.

[1] Dêmosthen. cont. Timokrat. p. 746. Æschinês ascribes this oath to ὁ νομοθέτης (c. Ktesiphon. p. 389).

Dr. Thirlwall notices the oath as prescribed by Solon (History of Greece, vol. ii, ch. xi, p. 47).

So again Dêmosthenês and Æschinês, in the orations against Leptinês (c. 21, p. 486) and against Timokrat. pp. 706–707, — compare Æschin. c. Ktesiph. p. 429, — in commenting upon the formalities enjoined for repealing an existing law and enacting a new one, while ascribing the whole to Solon, — say, among other things, that Solon directed the proposer "to post up his project of law before the eponymi," (ἐκθεῖναι πρόσθεν τῶν Ἐπωνύμων:) now the eponymi were (the statues of) the heroes from whom the ten Kleisthenean tribes drew their names, and the law making mention of these statues, proclaims itself as of a date subsequent to Kleisthenês. Even the law defining the treatment of the condemned murderer who returned from exile, which both Dêmosthenês and Doxopater (ap. Walz. Collect. Rhetor. vol. ii, p. 223) call a law of Drako, is really later than Solon, as may be seen by its mention of the ἄξων (Dêmosth. cont. Aristok. p. 629).

Andokidês is not less liberal in his employment of the name of Solon (see Orat. i, De Mysteriis, p. 13), where he cites as a law of Solon, an enactment which contains the mention of the tribe Æantis and the senate of five hundred (obviously, therefore, subsequent to the revolution of Kleisthenês), besides other matters which prove it to have been passed even subsequent to the oligarchical revolution of the four hundred, towards the close of the Peloponnesian war. The prytanes, the proëdri, and the division of the year into ten portions of time, each called by the name of *a prytany*, — so interwoven with all the public proceedings of Athens, — do not belong to the Solonian Athens, but to Athens as it stood after the ten tribes of Kleisthenes.

Schömann maintains emphatically, that the sworn nomothetæ, as they stood in the days of Dêmosthenês, were instituted by Solon; but he admits at the same time that all the allusions of the orators to this institution in

many ways as belonging to the age after Kleisthenês, especially by the mention of the senate of five hundred, and not of four hundred. Among the citizens who served as jurors or dikasts, Solon was venerated generally as the author of the Athenian laws; and the orator, therefore, might well employ his name for the purpose of emphasis, without provoking any critical inquiry whether the particular institution, which he happened to be then impressing upon his audience, belonged really to Solon himself or to the subsequent periods. Many of those institutions, which Dr. Thirlwall mentions in conjunction with the name of Solon, are among the last refinements and elaborations of the democratical mind of Athens, — gradually prepared, doubtless, during the interval between Kleisthenês and Perikles, but not brought into full operation until the period of the latter (460–429 B. C.); for it is hardly possible to conceive these numerous dikasteries and assemblies in regular, frequent, and long-standing operation, without an assured payment to the dikasts who composed them. Now such payment first began to be made about the time of Periklês, if not by his actual proposition;[1] and Dêmosthenês had good reason for contending that, if it were suspended, the judicial as well as the administrative system of Athens would at once

clude both words and matters essentially post-Solonian, so that modifications subsequent to Solon must have been introduced. This admission seems to me fatal to the cogency of his proof: see Schömann, De Comitiis, ch. vii, pp. 265–268; and the same author, Antiq. J. P. Att. sect. xxxii. His opinion is shared by K. F. Hermann, Lehrbuch der Griech. Staats Alterth. sect. 131; and Platner, Attischer Prozess, vol. ii, p. 38.

Meier, De Bonis Damnatorum, p. 2, remarks upon the laxity with which the orators use the name of Solon: "Oratores Solonis nomine sæpe utuntur, ubi omnino legislatorem quemquam significare volunt, etiamsi a Solone ipsa lex lata non est." Herman Schelling, in his Dissertation De Solonis Legibus ap. Oratt. Attic. (Berlin, 1842), has collected and discussed the references to Solon and to his laws in the orators. He controverts the opinion just cited from Meier, but upon arguments no way satisfactory to me (pp. 6–8); the more so, as he himself admits that the dialect in which the Solonian laws appear in the citation of the orators can never have been the original dialect of Solon himself (pp. 3–5), and makes also substantially the same admission as Schömann, in regard to the presence of post-Solonian matters in the supposed Solonian laws (pp. 23–27).

[1] See Boeckh, Public Economy of Athens, book ii, c. 15.

fall to pieces.[1] And it would be a marvel, such as nothing short of strong direct evidence would justify us in believing, that in an age when even partial democracy was yet untried, Solon should conceive the idea of such institutions: it would be a marvel still greater, that the half-emancipated thêtes and small proprietors, for whom he legislated, — yet trembling under the rod of the eupatrid archons, and utterly inexperienced in collective business, — should have been found suddenly competent to fulfil these ascendent functions, such as the citizens of conquering Athens in the days of Periklês, — full of the sentiment of force and actively identifying themselves with the dignity of their community, — became gradually competent, and not more than competent, to exercise with effect. To suppose that Solon contemplated and provided for the periodical revision of his laws by establishing a nomothetic jury, or dikastery, such as that which we find in operation during the time of Dêmosthenês, would be at variance, in my judgment, with any reasonable estimate either of the man or of the age. Herodotus says that Solon, having exacted from the Athenians solemn oaths that *they* would not rescind any of his laws for ten years, quitted Athens for that period, in order that he might not be compelled to rescind them himself: Plutarch informs us that he gave to his laws force for a century absolute.[2] Solon himself, and Drako before him, had been lawgivers, evoked and empowered by the special emergency of the times; the idea of a frequent revision of laws, by a body of lot-selected dikasts, belongs to a far more advanced age, and could not well have been present to the minds of either. The wooden rollers of Solon, like the tables of the Roman decemvirs,[3] were doubtless intended as a permanent "fons omnis publici privatique juris."

If we examine the facts of the case, we shall see that nothing more than the bare foundation of the democracy of Athens as it stood in the time of Periklês, can reasonably be ascribed to Solon. "I gave to the people," Solon says, in one of his short

[1] Dêmosthen. cont. Timokrat. c. 26, p. 731: compare Aristophanês Ekklesiazus. 302.

[2] Herodot. i, 29; Plutarch, Solon, c. 25. Aulus Gellius affirms that the Athenians swore, under strong religious penalties, to observe them forever (ii. 12).

[3] Livy iii, 34.

remaining fragments,[1] "as much strength as sufficed for their needs, without either enlarging or diminishing their dignity: for those too who possessed power and were noted for wealth, I took care that no unworthy treatment should be reserved. I stood with the strong shield cast over both parties, so as not to allow an unjust triumph to either." Again, Aristotle tells us that Solon bestowed upon the people no greater measure of power than was barely necessary,[2] — to elect their magistrates and to hold them to accountability: if the people had had less than this, they could not have been expected to remain tranquil, — they would have been in slavery and hostile to the constitution. Not less distinctly does Herodotus speak, when he describes the revolution subsequently operated by Kleisthenês — the latter, he tells us, found

[1] Solon, Fragm. ii, 3, ed. Schneidewin: —

Δήμῳ μὲν γὰρ ἔδωκα τόσον κράτος, ὅσσον ἐπαρκεῖ,
Τιμῆς οὔτ' ἀφελών, οὔτ' ἐπορεξάμενος·
Οἳ δ' εἶχον δύναμιν καὶ χρήμασιν ἦσαν ἀγητοί,
Καὶ τοῖς ἐφρασάμην μηδὲν ἀεικὲς ἔχειν.
Ἕστην δ' ἀμφιβαλὼν κρατερὸν σάκος ἀμφοτέροισι,
Νικᾶν δ' οὐκ εἴασ' οὐδετέρους ἀδίκως.

The reading ἐπαρκεῖ in the first line is not universally approved: Bruncк adopts ἐπαρκεῖν, which Niebuhr approves. The latter construes it to mean, "I gave to the people only so much power as could not be withheld from them." (Röm. Geschicht. t. ii, p. 346, 2d ed.) Taking the first two lines together, I think Niebuhr's meaning is substantially correct, though I give a more literal translation myself. Solon seems to be vindicating himself against the reproach of having been too democratical, which was, doubtless, addressed to him in every variety of language.

[2] Aristot. Polit. ii, 9. 4. Ἐπεὶ Σόλων γ' ἔοικε τὴν ἀναγκαιοτάτην ἀποδιδόναι τῷ δήμῳ δύναμιν, τὸ τὰς ἀρχὰς αἱρεῖσθαι καὶ εὐθύνειν· μηδὲ γὰρ τούτων κύριος ὢν ὁ δῆμος, δοῦλος ἂν εἴη καὶ πολέμιος.

In this passage respecting Solon (containing sections 2, 3, 4 of the edition of M. Barthélemy St. Hilaire), Aristotle first gives the opinion of certain critics who praised Solon, with the reasons upon which it is founded; next, the opinion of certain critics who blamed him, with *their* reasons; thirdly, his own judgment. The first of these three contains sect. 2 (from Σόλωνα δ' ἔνιοι, down to τὰ δικαστήρια ποιήσας ἐκ πάντων). The second contains the greater part of sect. 3 (from Διὸ καὶ μέμφονταί τινες αὐτῷ, down to τὴν νῦν δημοκρατίαν. The remainder is his own judgment. I notice this, because sections 2 and 3 are not to be taken as the opinion of Aristotle himself, but of those upon whom he was commenting, who considered Solon as the author of the dikasteries selected by lot.

"the Athenian people excluded from everything."[1] These passages seem positively to contradict the supposition, in itself sufficiently improbable, that Solon is the author of the peculiar democratical institutions of Athens, such as the constant and numerous dikasts for judicial trials and revision of laws. The genuine and forward democratical movement of Athens begins only with Kleisthenês, from the moment when that distinguished Alkmæônid, either spontaneously, or from finding himself worsted in his party strife with Isagoras, purchased by large popular concessions the hearty coöperation of the multitude under very dangerous circumstances. While Solon, in his own statement as well as in that of Aristotle, gave to the people as much power as was strictly needful, but no more, — Kleisthenês (to use the significant phrase of Herodotus), "being vanquished in the party contest with his rival, *took the people into partnership.*"[2] It was thus to the interests of the weaker section, in a strife of contending nobles, that the Athenian people owed their first admission to political ascendency, — in part, at least, to this cause, though the proceedings of Kleisthenês indicate a hearty and spontaneous popular sentiment. But such constitutional admission of the people would not have been so astonishingly fruitful in positive results, if the course of public events for the half-century after Kleisthenês had not been such as to stimulate most powerfully their energy, their self-reliance, their mutual sympathies, and their ambition. I shall recount in a future chapter those historical causes, which, acting upon the Athenian character, gave such efficiency and expansion to the great democratical impulse communicated by Kleisthenês: at present, it is enough to remark that that impulse commences properly with Kleisthenês, and not with Solon.

[1] Herodot. v, 69. τὸν Ἀθηναίων δῆμον, πρότερον ἀπωσμένον πάντων, etc.

[2] Herodot. v, 66–69. Οὗτοι οἱ ἄνδρε· (Kleisthenês and Isagoras) ἐστασίασαν περὶ δυνάμεως· ἐσσούμενος δὲ ὁ Κλεισθένης τὸν δῆμον προσεταιρίζεται.....

.....Ὡς γὰρ δὴ τὸν Ἀθηναίων δῆμον, πρότερον ἀπωσμένον πάντων, τότε πρὸς τὴν ἑωυτοῦ μοίρην προσεθήκατο, (Kleisthenês) τὰς φυλὰς μετωνόμασε .....ἦν δὲ, τὸν δῆμον προσθέμενος, πολλῷ κατύπερθε τῶν ἀντιστασιωτέων

As to the marked democratical tendency of the proceedings of Kleisthenês, see Aristot. Polit. vi, 2, 11; iii, 1, 10.

But the Solonian constitution, though only the foundation, was yet the indispensable foundation, of the subsequent democracy; and if the discontents of the miserable Athenian population, instead of experiencing his disinterested and healing management, had fallen at once into the hands of selfish power-seekers, like Kylôn or Peisistratus, the memorable expansion of the Athenian mind during the ensuing century would never have taken place, and the whole subsequent history of Greece would probably have taken a different course. Solon left the essential powers of the state still in the hands of the oligarchy, and the party combats — to be recounted hereafter — between Peisistratus, Lykurgus, and Megaklês, thirty years after his legislation, which ended in the despotism of Peisistratus, will appear to be of the same purely oligarchical character as they had been before he was appointed archon. But the oligarchy which he established was very different from the unmitigated oligarchy which he found, so teeming with oppression and so destitute of redress, as his own poems testify.

It was he who first gave both to the citizens of middling property and to the general mass, a *locus standi* against the eupatrids; he enabled the people partially to protect themselves, and familiarized them with the idea of protecting themselves, by the peaceful exercise of a constitutional franchise. The new force, through which this protection was carried into effect, was the public assembly called heliæa,[1] regularized and armed with

[1] Lysias cont. Theomnest. A. c. 5, p. 357, who gives *ἐὰν μὴ προστιμήσῃ ἡ Ἡλίαια* as a Solonian phrase; though we are led to doubt whether Solon can ever have employed it, when we find Pollux (vii, 5, 22) distinctly stating that Solon used the word *ἐπαίτια* to signify what the orators called *προστιμήματα*.

The original and proper meaning of the word *Ἡλίαια* is, the public assembly (see Tittmann, Griech. Staatsverfass. pp. 215–216); in subsequent times we find it signifying at Athens — 1. The aggregate of six thousand dikasts chosen by lot annually and sworn, or the assembled people considered as exercising judicial functions; 2. Each of the separate fractions into which this aggregate body was in practice subdivided for actual judicial business. *Ἐκκλησία* became the term for the public deliberative assembly properly so called, which could never be held on the same day that the dikasteries sat (Dêmosthen. cont. Timokrat c. 21, p. 726): every dikastery is in fact

enlarged prerogatives, and farther strengthened by its indispensable ally, — the pro-bouleutic or pre-considering senate. Under the Solonian constitution, this force was merely secondary and defensive, but after the renovation of Kleisthenês, it became paramount and sovereign; it branched out gradually into those numerous popular dikasteries which so powerfully modified both public and private Athenian life, drew to itself the undivided reverence and submission of the people, and by degrees rendered the single magistracies essentially subordinate functions. The popular assembly as constituted by Solon, appearing in modified efficiency, and trained to the office of reviewing and judging the general conduct of a past magistrate, — forms the intermediate stage between the passive Homeric agora, and those omnipotent assemblies and dikasteries which listened to Periklês or Dêmosthenês. Compared with these last, it has in it but a faint streak of democracy, — and so it naturally appeared to Aristotle, who wrote with a practical experience of Athens in the time of the orators; but compared with the first, or with the ante-Solonian constitution of Attica, it must doubtless have appeared a concession eminently democratical. To impose upon the eupatrid archon the necessity of being elected, or put upon his trial of after-accountability, by the *rabble* of freemen (such would be the phrase in eupatrid society), would be a bitter humiliation to those among whom it was first introduced; for we must recollect that this was the most extensive scheme of constitutional reform yet propounded in Greece, and that despots and oligarchies shared between them at that time the whole Grecian world. As it appears that Solon, while constituting the popular assembly with its pro-bouleutic senate, had no jealousy of the senate of areopa-

always addressed as if it were the assembled people engaged in a specific duty.

I imagine the term *Ἡλίαια* in the time of Solon to have been used in its original meaning, — the public assembly, perhaps with a connotation of employment in judicial proceeding. The fixed number of six thousand does not date before the time of Kleisthenês, because it is essentially connected with the ten tribes; while the subdivision of this body of six thousand into various bodies of jurors for different courts and purposes did not commence, probably, until after the first reforms of Kleisthenês. I shall revert to this point when I touch upon the latter, and his times.

gus, and indeed even enlarged its powers, — we may infer that his grand object was, not to weaken the oligarchy generally, but to improve the administration and to repress the misconduct and irregularities of the individual archons; and that too, not by diminishing their powers, but by making some degree of popularity the condition both of their entry into office, and of their safety or honor after it.

It is, in my judgment, a mistake to suppose that Solon transferred the judicial power of the archons to a popular dikastery; these magistrates still continued self-acting judges, deciding and condemning without appeal, — not mere presidents of an assembled jury, as they afterwards came to be during the next century.[1] For the general exercise of such power they were accountable after their year of office; and this accountability was the security against abuse, — a very insufficient security, yet not wholy inoperative. It will be seen, however, presently, that these archons, though strong to coerce, and perhaps to oppress, small and poor men, — had no means of keeping down rebellious

[1] The statement of Plutarch, that Solon gave an appeal from the decision of the archon to the judgment of the popular dikastery (Plutarch, Solon, 18), is distrusted by most of the expositors, though Dr. Thirlwall seems to admit it, justifying it by the analogy of the ephetæ, or judges of appeal, constituted by Drako (Hist. of Greece, vol. ii, ch. xi, p. 46).

To me it appears that the Drakonian ephetæ were not really judges in *appeal*: but be that as it may, the supposition of an appeal from the judgment of the archon is inconsistent with the known course of Attic procedure, and has apparently arisen in Plutarch's mind from confusion with the Roman *provocatio*, which really was an appeal from the judgment of the consul to that of the people. Plutarch's comparison of Solon with Publicola leads to this suspicion, — Καὶ τοῖς φεύγουσι δίκην, ἐπικαλεῖσθαι τὸν δῆμον, ὥσπερ ὁ Σόλων τοὺς δικαστὰς, ἔδωκε (Publicola). The Athenian archon was first a judge without appeal; and afterwards, ceasing to be a judge, he became president of a dikastery, performing only those preparatory steps which brought the case to an issue fit for decision: but he does not seem ever to have been a judge subject to appeal.

It is hardly just to Plutarch to make him responsible for the absurd remark that Solon rendered his laws intentionally obscure, in order that the dikasts might have more to do and greater power: he gives the remark, himself, only with the saving expression λέγεται, "it is said;" and we may well doubt whether it was ever seriously intended even by its author, who ever he may have been.

nobles of their own rank, such as Peisistratus, Lykurgus, and Megaklês, each with his armed followers. When we compare the drawn swords of these ambitious competitors, ending in the despotism of one of them, with the vehement parliamentary strife between Themistoklês and Aristeidês afterwards, peaceably decided by the vote of the sovereign people, and never disturbing the public tranquillity, — we shall see that the democracy of the ensuing century fulfilled the conditions of order, as well as of progress, better than the Solonian constitution.

To distinguish this Solonian constitution from the democracy which followed it, is essential to a due comprehension of the progress of the Greek mind, and especially of Athenian affairs. That democracy was achieved by gradual steps, which will be hereafter described: Dêmosthenês and Æschinês lived under it as a system consummated and in full activity, when the stages of its previous growth were no longer matter of exact memory; and the dikasts then assembled in judgment were pleased to hear the constitution to which they were attached identified with the names either of Solon, or of Theseus, to which they were no less partial. Their inquisitive contemporary Aristotle was not thus misled: but even the most common-place Athenians of the century preceding would have escaped the same delusion. For during the whole course of the democratical movement from the Persian invasion down to the Peloponnesian war, and especially during the changes proposed by Periklês and Ephialtês, there was always a strenuous party of resistance, who would not suffer the people to forget that they had already forsaken, and were on the point of forsaking still more, the orbit marked out by Solon. The illustrious Periklês underwent innumerable attacks both from the orators in the assembly and from the comic writers in the theatre; and among these sarcasms on the political tendencies of the day, we are probably to number the complaint breathed by the poet Kratinus, of the desuetude into which both Solon and Drako had fallen. "I swear,[1] said he, in a fragment

[1] Kratinus ap. Plutarch. Solon. 25. —

Πρὸς τοῦ Σόλωνος καὶ Δράκοντος, οἵσι νῦν
Φρύγουσιν ἤδη τὰς κάχρυς ταῖς κύρβεσιν.

Isokratês praises the moderate democracy in early Athens, as compared

of one of his comedies, by Solon and Drako, whose wooden tablets (of laws) are now employed by people to roast their barley." The laws of Solon respecting penal offences, respecting inheritance and adoption, respecting the private relations generally, etc., remained for the most part in force; his quadripartite census also continued, at least for financial purposes until the archonship of Nausinikus in 377 B. C.; so that Cicero and others might be warranted in affirming that his laws still prevailed at Athens: but his political and judicial arrangements had undergone a revolution[1] not less complete and memorable than the character and spirit of the Athenian people generally. The choice, by way of lot, of archons and other magistrates, and the distribution by lot of the general body of dikasts or jurors into pannels for judicial business, may be decidedly considered as not belonging to Solon, but adopted after the revolution of Kleisthenês;[2] probably, the choice of senators by lot also. The lot was a symptom of pronounced democratical spirit, such as we must not seek in the Solonian institutions.

It is not easy to make out distinctly what was the political position of the ancient gentes and phratries, as Solon left them. The four tribes consisted altogether of gentes and phratries, insomuch that no one could be included in any one of the tribes who was not also a member of some gens and phraty. Now the new pro-bouleutic or pre-considerate senate consisted of four hundred members, — one hundred from each of the tribes: persons not

---

with that under which he lived; but in the Orat. vii (Areopagitic.) he connects the former with the names of Solon and Kleisthenês, while in the Orat. xii (Panathenaic.), he considers the former to have lasted from the days of Theseus to those of Solon and Peisistratus. In this latter oration he describes pretty exactly the power which the people possessed under the Solonian constitution, — *τοῦ τὰς ἀρχὰς καταστῆσαι καὶ λαβεῖν δίκην παρὰ τῶν ἐξαμαρτανόντων*, which coincides with the phrase of Aristotle — *τὰς ἀρχὰς αἱρεῖσθαι καὶ εὐθύνειν*, — supposing *ἃ χόντων* to be understood as the substantive of *ἐξαμαρτανόντων*.

Compare Isokratês, Or. vii, p. 143 (p. 192 Bek.) and p. 150 (202 Bek.) and Orat. xii, pp. 260–264 (351–356 Bek.).

[1] Cicero, Orat. pro Sext. Roscio, c. 25; Ælian, V. H. viii, 10.

[2] This seems to be the opinion of Dr. Thirlwall, against Wachsmuth, though he speaks with doubt. (History of Greece, vol. ii, ch. 11, p. 48 2d ed.)

VENUS OF MILO

included in any gens or phratry could therefore have had no access to it. The conditions of eligibility were similar, according to ancient custom, for the nine archons, — of course, also, for the senate of areopagus. So that there remained only the public assembly, in which an Athenian not a member of these tribes could take part: yet he was a citizen, since he could give his vote for archons and senators, and could take part in the annual decision of their accountability, besides being entitled to claim redress for wrong from the archons in his own person, — while the alien could only do so through the intervention of an avouching citizen, or prostatês. It seems, therefore, that all persons not included in the four tribes, whatever their grade of fortune might be, were on the same level in respect to political privilege as the fourth and poorest class of the Solonian census. It has already been remarked that, even before the time of Solon, the number of Athenians not included in the gentes or phratries was probably considerable: it tended to become greater and greater, since these bodies were close and unexpansive, while the policy of the new lawgiver tended to invite industrious settlers from other parts of Greece to Athens. Such great and increasing inequality of political privilege helps to explain the weakness of the government in repelling the aggressions of Peisistratus, and exhibits the importance of the revolution afterwards wrought by Kleisthenês, when he abolished (for all political purposes) the four old tribes, and created ten new comprehensive tribes in place of them.

In regard to the regulations of the senate and the assembly of the people, as constituted by Solon, we are altogether without information: nor is it safe to transfer to the Solonian constitution the information, comparatively ample, which we possess respecting these bodies under the later democracy.

The laws of Solon were inscribed on wooden rollers and triangular tablets, in the species of writing called boustrophêdon (lines alternating first from left to right, and next from right to left, like the course of the ploughman), and preserved first in the acropolis, subsequently in the prytaneium. On the tablets, called kyrbeis, were chiefly commemorated the laws respecting sacred rites and sacrifices:[1] on the pillars, or rollers, of which there were

[1] Plutarch, Solon, 23–25. He particularly mentions the sixteenth ...

at least sixteen, were placed the regulations respecting matters profane. So small are the fragments which have come down to us, and so much has been ascribed to Solon by the orators, which belongs really to the subsequent times, that it is hardly possible to form any critical judgment respecting the legislation as a whole, or to discover by what general principles or purposes he was guided.

He left unchanged all the previous laws and practices respecting the crime of homicide, connected as they were intimately with the religious feelings of the people. The laws of Drako on this subject therefore remained, but on other subjects, according to Plutarch, they were altogether abrogated:[1] there is, however, room for supposing, that the repeal cannot have been so sweeping as this biographer represents.

The Solonian laws seem to have borne more or less upon all the great departments of human interest and duty. We find regulations political and religious, public and private, civil and criminal, commercial, agricultural, sumptuary, and disciplinarian. Solon provides punishment for crimes, restricts the profession and status of the citizen, prescribes detailed rules for marriage as well as for burial, for the common use of springs and wells, and for the mutual interest of conterminous farmers in planting or hedging their properties. As far as we can judge, from the im-

we learn, also, that the thirteenth ἀξων contained the eighth law (c. 19): the twenty-first law is alluded to in Harpokration, v, Ὅτι οἱ ποιητοί.

Some remnants of these wooden rollers existed in the days of Plutarch, in the Athenian prytaneium. See Harpokration and Photius, v, Κύρβεις; Aristot. περὶ Πολιτειῶν, Frag. 35, ed. Neumann; Euphorion ap. Harpokrat. Ὁ κάτωθεν νόμος. Bekker, Anecdota, p. 413.

What we read respecting the ἄξονες and the κύρβεις does not convey a clear idea of them. Besides Aristotle, both Seleukus and Didymus are named as having written commentaries expressly about them (Plutarch, Solon, i; Suidas, v, Ὀργεῶνες; compare also Meursius, Solon, c. 24; Vit. Aristotelis ap Westermann. Vitarum Scriptt. Græc. p. 404), and the collection in Stephan. Thesaur. p. 1095.

[1] Plutarch, Solon, c. 17; Cyrill. cont. Julian. v, p. 169, ed. Spanheim. The enumeration of the different admitted justifications for homicide, which we find in Dêmosth. cont. Aristokrat. p. 637, seems rather too copious and systematic for the age of Drako; it may have been amended by Solon, or perhaps, in an age subsequent to Solon.

perfect manner in which his laws come before us, there does not seem to have been any attempt at a systematic order or classification. Some of them are mere general and vague directions, while others again run into the extreme of speciality.

By far the most important of all was the amendment of the law of debtor and creditor which has already been adverted to, and the abolition of the power of fathers and brothers to sell their daughters and sisters into slavery. The prohibition of all contracts on the security of the body, was itself sufficient to produce a vast improvement in the character and condition of the poorer population, — a result which seems to have been so sensibly obtained from the legislation of Solon, that Boeckh and some other eminent authors suppose him to have abolished villenage and conferred upon the poor tenants a property in their lands, annulling the seignorial rights of the landlord. But this opinion rests upon no positive evidence, nor are we warranted in ascribing to him any stronger measure in reference to the land, than the annulment of the previous mortgages.[1]

The first pillar of his laws contained a regulation respecting exportable produce. He forbade the exportation of all produce of the Attic soil, except olive-oil alone, and the sanction employed to enforce observance of this law deserves notice, as an illustration of the ideas of the time; — the archon was bound, on pain of forfeiting one hundred drachms, to pronounce solemn curses against every offender.[2] We are probably to take this prohi-

[1] See Boeckh, Public Economy of the Athenians, book iii, sect. 5. Tittmann (Griechisch. Staatsverfass. p. 651) and others have supposed (from Aristot. Polit. ii, 4, 4) that Solon enacted a law to limit the quantity of land which any individual citizen might acquire. But the passage does not seem to me to bear out such an opinion.

[2] Plutarch, Solon, 24. The *first law*, however, is said to have related to the insuring of a maintenance to wives and orphans (Harpokration, v Σῖτος).

By a law of Athens (which marks itself out as belonging to the century after Solon, by the fulness of its provisions, and by the number of steps and official persons named in it), the rooting up of an olive-tree in Attica was forbidden, under a penalty of two hundred drachms for each tree so destroyed, — except for sacred purposes, or to the extent of two trees per annum for the convenience of the proprietor (Dêmosthen. cont. Makartat c 16, p. 1074).

bition in conjunction with other objects said to have been contemplated by Solon, especially the encouragement of artisans and manufacturers at Athens. Observing, we are told, that many new emigrants were just then flocking into Attica to seek an establishment, in consequence of its greater security, he was anxious to turn them rather to manufacturing industry than to the cultivation of a soil naturally poor.[1] He forbade the granting of citizenship to any emigrants, except such as had quitted irrevocably their former abodes, and come to Athens for the purpose of carrying on some industrious profession; and in order to prevent idleness, he directed the senate of areopagus to keep watch over the lives of the citizens generally, and punish every one who had no course of regular labor to support him. If a father had not taught his son some art or profession, Solon relieved the son from all obligation to maintain him in his old age. And it was to encourage the multiplication of these artisans, that he insured, or sought to insure, to the residents in Attica a monopoly of all its landed produce except olive-oil, which was raised in abundance more than sufficient for their wants. It was his wish that the trade with foreigners should be carried on by exporting the produce of artisan labor, instead of the produce of land.[2]

This commercial prohibition is founded on principles substantially similar to those which were acted upon in the early history of England, with reference both to corn and to wool, and in other European countries also. In so far as it was at all operative, it tended to lessen the total quantity of produce raised upon the soil of Attica, and thus to keep the price of it from rising, — a purpose less objectionable — if we assume that the legislator is

[1] Plutarch, Solon, 22. *ταῖς τέχναις ἀξίωμα περιέθηκε.*

[2] Plutarch, Solon, 22–24 According to Herodotus, Solon had enacted that the authorities should punish every man with death who could not show a regular mode of industrious life (Herod. ii, 177; Diodor. i, 77).

So severe a punishment is not credible; nor is it likely that Solon borrowed his idea from Egypt.

According to Pollux (viii, 6) idleness was punished by atimy (civil disfranchisement) under Drako: under Solon, this punishment only took effect against the person who had been convicted of it on three successive occasions. See Meursius, Solon, c. 17; and the "Areopagus" of the same author, c. 8 and 9; and Taylor, Lectt. Lysiac. cap. 10.

to interfere at all — than that of our late Corn Laws, which were destined to prevent the price of grain from falling. But the law of Solon must have been altogether inoperative, in reference to the great articles of human subsistence; for Attica imported, both largely and constantly, grain and salt provisions, — probably, also, wool and flax for the spinning and weaving of the women, and certainly timber for building. Whether the law was ever enforced with reference to figs and honey, may well be doubted; at least these productions of Attica were in after-times generally consumed and celebrated throughout Greece. Probably also, in the time of Solon, the silver-mines of Laureium had hardly begun to be worked: these afterwards became highly productive, and furnished to Athens a commodity for foreign payments not less convenient than lucrative.[1]

It is interesting to notice the anxiety, both of Solon and of Drako, to enforce among their fellow-citizens industrious and self-maintaining habits;[2] and we shall find the same sentiment proclaimed by Periklês, at the time when Athenian power was at its maximum. Nor ought we to pass over this early manifestation in Attica, of an opinion equitable and tolerant towards sedentary industry, which in most other parts of Greece was regarded as comparatively dishonorable. The general tone of Grecian sentiment recognized no occupations as perfectly worthy of a free citizen except arms, agriculture, and athletic and musical exercises; and the proceedings of the Spartans, who kept aloof even from agriculture, and left it to their Helots, were admired, though they could not be copied throughout most part of the Hellenic world. Even minds like Plato, Aristotle, and Xenophon concurred to a considerable extent in this feeling, which they justified on the ground that the sedentary life and unceasing house-work of the artisan was inconsistent with military aptitude: the town-occupations are usually described by a word which carries with it contemptuous ideas, and though recognized as indispensable to the existence of the city, are held suitable only for an inferior and semi-privileged order of citizens. This, the received sentiment

[1] Xenophon, De Vectigalibus, iii, 2.

[2] Thucyd. ii, 40 (the funeral oration delivered by Periklês), — *καὶ τὸ πένεσθαι οὐχ ὁμολογεῖν τινι αἰσχρὸν, ἀλλ' οὐ διαφεύγειν ἔργῳ αἰσχιον.*

among Greeks, as well as foreigners, found a strong and growing opposition at Athens, as I have already said, — corroborated also by a similar feeling at Corinth.[1] The trade of Corinth, as well as of Chalkis in Eubœa, was extensive, at a time when that of Athens had scarce any existence. But while the despotism of Periander can hardly have failed to operate as a discouragement to industry at Corinth, the contemporaneous legislation of Solon provided for traders and artisans a new home at Athens, giving the first encouragement to that numerous town-population both in the city and in the Peiræeus, which we find actually residing there in the succeeding century. The multiplication of such town-residents, both citizens and metics, or non-freemen, was a capital fact in the onward march of Athens, since it determined not merely the extension of her trade, but also the preëminence of her naval force, — and thus, as a farther consequence, lent extraordinary vigor to her democratical government. It seems, moreover, to have been a departure from the primitive temper of Atticism, which tended both to cantonal residence and rural occupation. We have, therefore, the greater interest in noting the first mention of it as a consequence of the Solonian legislation.

To Solon is first owing the admission of a power of testamentary bequest at Athens, in all cases in which a man had no legitimate children. According to the preëxisting custom, we may rather presume that if a deceased person left neither children nor blood relations, his property descended, as at Rome, to his gens and phratry.[2] Throughout most rude states of society, the power of willing is unknown, as among the ancient Germans, — among the Romans prior to the twelve tables, — in the old law of the Hindus,[3] etc. Society limits a man's interest or power of

[1] Herodot. ii, 167–177: compare Xenophon, Œconomic. iv, 3.

The unbounded derision, however, which Aristophanès heaps upon Kleôn as a tanner, and upon Hyperbolus as a lamp-maker, proves that, if any manufacturer engaged in politics, his party opponents found enough of the old sentiment remaining to turn it to good account against him.

[2] This seems the just meaning of the words, *ἐν τῷ γένει τοῖ τεθνηκότος ἔδει τὰ χρήματα καὶ τὸν οἶκον καταμένειν*, for that early day (Plutarch, Solon, 21): compare Meier, De Gentilitate Attica, p. 33.

[3] Tacitus, German. c. 20; Halhed, Preface to Gentoo Code, p. i, iii; Mill's History of British India, b. ii, ch. iv, p. 214.

enjoyment to his life, and considers his relatives as having joint reversionary claims to his property, which take effect, in certain determinate proportions, after his death; and this view was the more likely to prevail at Athens, inasmuch as the perpetuity of the family sacred rites, in which the children and near relatives partook of right, was considered by the Athenians as a matter of public as well as of private concern. Solon gave permission to every man dying without children to bequeathe his property by will as he should think fit, and the testament was maintained, unless it could be shown to have been procured by some compulsion or improper seduction. Speaking generally, this continued to be the law throughout the historical times of Athens. Sons, wherever there were sons, succeeded to the property of their father in equal shares, with the obligation of giving out their sisters in marriage along with a certain dowry. If there were no sons, then the daughters succeeded, though the father might by will, within certain limits, determine the person to whom they should be married, with their rights of succession attached to them; or might, with the consent of his daughters, make by will certain other arrangements about his property. A person who had no children, or direct lineal descendants, might bequeathe his property at pleasure: if he died without a will, first his father, then his brother or brother's children, next his sister or sister's children succeeded: if none such existed, then the cousins by the father's side, next the cousins by the mother's side, — the male line of descent having preference over the female. Such was the principle of the Solonian laws of succession, though the particulars are in several ways obscure and doubtful.[1] Solon, it appears, was the first who gave power of superseding by testament the rights of agnates and gentiles to succession, — a proceeding in consonance with his plan of encouraging both industrious occupa-

[1] See the Dissertation of Bunsen, De Jure Hereditario Atheniensium, pp. 28, 29; and Hermann Schelling, De Solonis Legibus ap. Oratt. Atticos, ch. xvii.

The adopted son was not allowed to bequeathe by will that property of which adoption had made him the possessor: if he left no legitimate children, the heirs at law of the adopter claimed it as of right (Dêmosthen. cont. Leochar p. 1100; cont. Stephan. B. p. 1133; Bunsen, *ut sup.* pp 53–58).

tion and the consequent multiplication of individual acquisitions.[1]

It has been already mentioned that Solon forbade the sale of daughters or sisters into slavery, by fathers or brothers,— a prohibition which shows how much females had before been looked upon as articles of property. And it would seem that before his time the violation of a free woman must have been punished at the discretion of the magistrates; for we are told that he was the first who enacted a penalty of one hundred drachms against the offender, and twenty drachms against the seducer of a free woman.[2] Moreover, it is said that he forbade a bride when given in marriage to carry with her any personal ornaments and appurtenances, except to the extent of three robes and certain matters of furniture not very valuable.[3] Solon farther imposed upon women several restraints in regard to proceedings at the obsequies of deceased relatives: he forbade profuse demonstrations of sorrow, singing of composed dirges, and costly sacrifices and contributions; he limited strictly the quantity of meat and drink admissible for the funeral banquet, and prohibited nocturnal exit, except in a car and with a light. It appears that both in Greece and Rome, the feelings of duty and affection on the part of surviving relatives prompted them to ruinous expense in a funeral, as well as to unmeasured effusions both of grief and conviviality; and the general necessity experienced for interference of the law is attested by the remark of Plutarch, that similar prohibitions to those enacted by Solon were likewise in force at his native town of Chæroneia.[4]

---

[1] Plutarch, Solon, 21. *τὰ χρήματα, κτήματα τῶν ἐχόντων ἐποίησεν.*

[2] According to Æschinês (cont Timarch. pp. 16–78), the punishment enacted by Solon against the *προαγωγὸς*, or procurer, in such cases of seduction, was death.

[3] Plutarch, Solon, 20. These *φερναὶ* were independent of the dowry of the bride, for which the husband, when he received it, commonly gave security, and repaid it in the event of his wife's death: see Bunsen, De Jure Hered. Ath. p. 43.

[4] Plutarch, *l. c.* The Solonian restrictions on the subject of funerals were to a great degree copied in the twelve tables at Rome: see Cicero, De Legg. ii, 23, 24. He esteems it a right thing to put the rich and the poor on a level in respect to funeral ceremonies. Plato follows an opposite idea, and

Other penal enactments of Solon are yet to be mentioned. He forbade absolutely evil-speaking with respect to the dead: he forbade it likewise with respect to the living, either in a temple or before judges or archons, or at any public festival, — on pain of a forfeit of three drachms to the person aggrieved, and two more to the public treasury. How mild the general character of his punishments was, may be judged by this law against foul language, not less than by the law before mentioned against rape: both the one and the other of these offences were much more severely dealt with under the subsequent law of democratical Athens. The peremptory edict against speaking ill of a deceased person, though doubtless springing in a great degree from disinterested repugnance, is traceable also in part to that fear of the wrath of the departed which strongly possessed the early Greek mind.

It seems generally that Solon determined by law the outlay for the public sacrifices, though we do not know what were his particular directions: we are told that he reckoned a sheep and a medimnus (of wheat or barley?) as equivalent, either of them, to a drachm, and that he also prescribed the prices to be paid for first-rate oxen intended for solemn occasions. But it astonishes us to see the large recompense which he awarded out of the public treasury to a victor at the Olympic or Isthmian games: to the former five hundred drachms, equal to one year's income of the highest of the four classes on the census; to the latter

---

limits the expense of funerals upon a graduated scale, according to the census of the deceased (Legg. xii, p. 959).

Dêmosthenês (cont. Makartat. p 1071) gives what he calls the Solonian law on funerals, different from Plutarch on several points.

Ungovernable excesses of grief among the female sex are sometimes mentioned in Grecian towns: see the *μανικὸν πένθος* among the Milesian women (Polyæn. viii, 63): the Milesian women, however, had a tinge of Karian feeling.

Compare an instructive inscription, recording a law of the Greek city of Gambreion in Æolic Asia Minor, wherein the dress, the proceedings, and the time of allowed mourning, for men, women, and children who had lost their relatives, are strictly prescribed under severe penalties (Franz, Fünf Inschriften und fünf Städte in Kleinasien, Berlin, 1840, p. 17). Expensive ceremonies in the celebration of marriage are forbidden by some of the old Scandinavian laws (Wilda, Das Gildewesen im Mittelalter, p. 18).

one hundred drachms. The magnitude of these rewards strikes us the more when we compare them with the fines on rape and evil speaking; and we cannot be surprised that the philosopher Xenophanês noticed, with some degree of severity, the extravagant estimate of this species of excellence, current among the Grecian cities.[1] At the same time, we must remember both that these Pan-Hellenic sacred games presented the chief visible evidence of peace and sympathy among the numerous communities of Greece, and that in the time of Solon, factitious reward was still needful to encourage them. In respect to land and agriculture, Solon proclaimed a public reward of five drachms for every wolf brought in, and one drachm for every wolf's cub: the extent of wild land has at all times been considerable in Attica. He also provided rules respecting the use of wells between neighbors, and respecting the planting in conterminous olive-grounds. Whether any of these regulations continued in operation during the better-known period of Athenian history cannot be safely affirmed.[2]

In respect to theft, we find it stated that Solon repealed the punishment of death which Drako had annexed to that crime, and enacted as a penalty, compensation to an amount double the value of the property stolen. The simplicity of this law perhaps affords ground for presuming that it really does belong to Solon, but the law which prevailed during the time of the orators respecting theft[3] must have been introduced at some later period, since it

[1] Plutarch, Solon, 23. Xenophanês, Frag. 2, ed. Schneidewin. If Diogenês is to be trusted, the rewards were even larger anterior to Solon: he reduced them (Diog. l. i, 55).

[2] Plutarch, Solon, c. 23. See Suidas, v, *Φεισόμεθα*.

[3] See the laws in Dêmosthen. cont. Timokrat. pp. 733–736. Notwithstanding the opinion both of Heraldus (Animadversion. in Salmas. iv, 8) and of Meier (Attischer Prozess, p. 356), I cannot imagine anything more than the basis of these laws to be Solonian, — they indicate a state of Attic procedure too much elaborated for that day (Lysias c. Theomn. p. 356). The word *ποδοκάκκη* belongs to Solon, and probably the penalty of five days' confinement in the stocks, for the thief who had not restored what he had stolen.

Aulus Gell. (xi, 18) mentions the simple *pœna dupli*: in the authors from whom he copied, it is evident that Solon was stated to have enacted this law generally for *all* thefts: we cannot tell from whom he copied, but in another part of his work, he copies a Solonian law from the wooden *ἄξονες* on the authority of Aristotle (ii, 12).

Plato, in his Laws, prescribes the *pœna dupli* in all cases of theft, without distinction of circumstances (Legg. ix, p. 857; xii, p. 941); it was also the primitive law of Rome: "Posnerunt furem duplo condemnari, fœneratorem quadruplo." (Cato, De Re Rusticâ, Proœmium), — that is to say, in cases of *furtum nec manifestum* (Walter, Geschichte des Römisch. Rechts. sect. 757).

enters into distinctions and mentions both places and forms of procedure, which we cannot reasonably refer to the 46th Olympiad. The public dinners at the prytaneium, of which the archons and a select few partook in common, were also either first established, or perhaps only more strictly regulated, by Solon: he ordered barley cakes for their ordinary meals, and wheaten loaves for festival days, prescribing how often each person should dine at the table.[1] The honor of dining at the table of the prytaneium was maintained throughout as a valuable reward at the disposal of the government.

Among the various laws of Solon, there are few which have attracted more notice than that which pronounces the man, who in a sedition stood aloof and took part with neither side, to be dishonored and disfranchised.[2] Strictly speaking, this seems more in the nature of an emphatic moral denunciation, or a religious curse, than a legal sanction capable of being formally applied in an individual case and after judicial trial, — though the sentence of atimy, under the more elaborated Attic procedure, was both definite in its penal consequences and also judicially delivered. We may, however, follow the course of ideas under which Solon was induced to write this sentence on his tables, and we may trace the influence of similar ideas in later Attic institutions. It is obvious that his denunciation is confined to that special case in which a sedition has already broken out: we must suppose that Kylon has seized the acropolis, or that Peisistratus, Megaklês, and Lykurgus are in arms at the head of their partisans. Assuming these leaders to be wealthy and powerful men, which

[1] Plutarch, Solon, 24; Athenæ. iv, p. 137; Diogen. Laërt. i, 58: *καὶ πρῶτος τὴν συναγωγὴν τῶν ἐννέα ἀρχόντων ἐποίησεν, εἰς τὸ συνειπεῖν*, — where perhaps, *συνδειπνεῖν* is the proper reading.

[2] Plutarch, Solon, 20, and De Serâ Numinis Vindictâ, p. 550; Aulus Gell. ii. 12.

would in all probability be the fact, the constituted authority — such as Solon saw before him in Attica, even after his own organic amendments — was not strong enough to maintain the peace; it became, in fact, itself one of the contending parties. Under such given circumstances, the sooner every citizen publicly declared his adherence to some one of them, the earlier this suspension of legal authority was likely to terminate. Nothing was so mischievous as the indifference of the mass, or their disposition to let the combatants fight out the matter among themselves, and then to submit to the victor:[1] nothing was so likely to encourage aggression on the part of an ambitious malcontent, as the conviction that, if he could once overpower the small amount of physical force which surrounded the archons and exhibit himself in armed possession of the prytaneium or the acropolis, he might immediately count upon passive submission on the part of all the freemen without. Under the state of feeling which Solon inculcates, the insurgent leader would have to calculate that every man who was not actively in his favor would be actively against him, and this would render his enterprise much more dangerous; indeed, he could then never hope to succeed except on the double supposition of extraordinary popularity in his own person, and universal detestation of the existing government. He would thus be placed under the influence of powerful deterring motives, and mere ambition would be far less likely to seduce him into a course which threatened nothing but ruin, unless under such encouragements from the preëxisting public opinion as to make his success a result desirable for the community. Among the small political societies of Greece, — and especially in the age of Solon, when the number of despots in other parts of Greece seems to have been at its maximum, — every government, whatever might be its form, was sufficiently weak to make its overthrow a matter of comparative facility. Unless upon the supposition of a band of foreign mercenaries, — which would render it a government of naked force, and which the Athenian lawgiver would of course never contemplate, — there was no other stay for it except a positive and pronounced feeling of attachment on the part of the mass of citizens:

[1] See a case of such indifference manifested by the people of Argos, in Plutarch's Life of Aratus, c. 27.

indifference on their part would render them a prey to every daring man of wealth who chose to become a conspirator. That they should be ready to come forward not only with voice but with arms, — and that they should be known beforehand to be so, — was essential to the maintenance of every good Grecian government. It was salutary in preventing mere personal attempts at revolution, and pacific in its tendency, even where the revolution had actually broken out, — because, in the greater number of cases, the proportion of partisans would probably be very unequal, and the inferior party would be compelled to renounce their hopes.

It will be observed that in this enactment of Solon, the existing government is ranked merely as one of the contending parties. The virtuous citizen is enjoined not to come forward in its support, but to come forward at all events, either for it or against it: positive and early action is all that is prescribed to him as matter of duty. In the age of Solon, there was no political idea or system yet current which could be assumed as an unquestionable datum, — no conspicuous standard to which the citizens could be pledged under all circumstances to attach themselves. The option lay only between a mitigated oligarchy in possession and a despot in possibility; a contest wherein the affections of the people could rarely be counted upon in favor of the established government. But this neutrality in respect to the constitution was at an end after the revolution of Kleisthenês, when the idea of the sovereign people and the democratical institutions became both familiar and precious to every individual citizen. We shall hereafter find the Athenians binding themselves by the most sincere and solemn oaths to uphold their democracy against all attempts to subvert it; we shall discover in them a sentiment not less positive and uncompromising in its direction, than energetic in its inspirations. But while we notice this very important change in their character, we shall at the same time perceive that the wise precautionary recommendation of Solon, to obviate sedition by an early declaration of the impartial public between two contending leaders, was not lost upon them. Such, in point of fact, was the purpose of that salutary and protective institution which is called Ostracism. When two party-leaders, in the early stages of the Athenian democracy, each powerful in adhe-

rents and influence, had become passionately embarked in bitter and prolonged opposition to each other, such opposition was likely to conduct one or other to violent measures. Over and above the hopes of party triumph, each might well fear that if he himself continued within the bounds of legality, he might fall a victim to aggressive proceedings on the part of his antagonists. To ward off this formidable danger, a public vote was called for to determine which of the two should go into temporary banishment, retaining his property and unvisited by any disgrace. A number of citizens, not less than six thousand, voting secretly and therefore independently, were required to take part, pronouncing upon one or other of these eminent rivals a sentence of exile for ten years: the one who remained became of course more powerful, yet less in a situation to be driven into anti-constitutional courses, than he was before. I shall in a future chapter speak again of this wise precaution, and vindicate it against some erroneous interpretations to which it has given rise; at present, I merely notice its analogy with the previous Solonian law, and its tendency to accomplish the same purpose of terminating a fierce party-feud by artificially calling in the votes of the mass of impartial citizens against one or other of the leaders, — with this important difference, that while Solon assumed the hostile parties to be actually in arms, the ostracism averted that grave public calamity by applying its remedy to the premonitory symptoms.

I have already considered, in a previous chapter, the directions given by Solon for the more orderly recital of the Homeric poems; and it is curious to contrast his reverence for the old epic with the unqualified repugnance which he manifested towards Thespis and the drama, — then just nascent, and holding out little promise of its subsequent excellence. Tragedy and comedy were now beginning to be grafted on the lyric and choric song. First, one actor was provided to relieve the chorus, — subsequently, two actors were introduced to sustain fictitious characters and carry on a dialogue, in such manner that the songs of the chorus and the interlocution of the actors formed a continuous piece. Solon, after having heard Thespis acting (as all the early composers did, both tragic and comic) in his own comedy, asked him afterwards if he was not ashamed to pronounce such falsehoods before so large an audience. And when Thespis answered

that there was no harm in saying and doing such things merely for amusement, Solon indignantly exclaimed, striking the ground with his stick,[1] "If once we come to praise and esteem such amusement as this, we shall quickly find the effects of it in our daily transactions." For the authenticity of this anecdote it would be rash to vouch, but we may at least treat it as the protest of some early philosopher against the deceptions of the drama; and it is interesting, as marking the incipient struggles of that literature in which Athens afterwards attained such unrivalled excellence.

It would appear that all the laws of Solon were proclaimed, inscribed, and accepted without either discussion or resistance. He is said to have described them, not as the best laws which he could himself have imagined, but as the best which he could have induced the people to accept; he gave them validity for the space of ten years, for which period[2] both the senate collectively and the archons individually swore to observe them with fidelity, under penalty, in case of non-observance, of a golden statue, as large as life, to be erected at Delphi. But though the acceptance of the laws was accomplished without difficulty, it was not found so easy either for the people to understand and obey, or for the framer to explain them. Every day, persons came to Solon either with praise, or criticism, or suggestions of various improvements, or questions as to the construction of particular enactments; until at last he became tired of this endless process of reply and vindication, which was seldom successful either in removing obscurity or in satisfying complainants. Foreseeing that, if he remained, he would be compelled to make changes, he obtained leave of absence from his countrymen for ten years, trusting that before the expiration of that period they would have become accustomed to his laws. He quitted his native city, in the full certainty that his laws would remain unrepealed until his return; for, says Herodotus, "the Athenians *could not* repeal them, since they were bound by solemn oaths to observe them for ten years." The unqualified manner in which the historian here speaks of an oath, as if it created a sort of physical necessity, and shut out all

[1] Plutarch, Solon, 29; Diogen. Laërt. i, 59.
[2] Plutarch, Solon, 15.

possibility of a contrary result, deserves notice as illustrating Grecian sentiment.[1]

On departing from Athens, Solon first visited Egypt, where he communicated largely with Psenôphis of Heliopolis and Sonchis of Saïs, Egyptian priests, who had much to tell respecting their ancient history, and from whom he learned matters, real or pretended, far transcending in alleged antiquity the oldest Grecian genealogies, — especially the history of the vast submerged island of Atlantis, and the war which the ancestors of the Athenians had successfully carried on against it, nine thousand years before. Solon is said to have commenced an epic poem upon this subject, but he did not live to finish it, and nothing of it now remains. From Egypt he went to Cyprus, where he visited the small town of Æreia, said to have been originally founded by Demophôn, son of Theseus; it was then under the dominion of the prince Philokyprus, — each town in Cyprus having its own petty prince. It was situated near the river Klarius, in a position precipitous and secure, but inconvenient and ill-supplied; and Solon persuaded Philokyprus to quit the old site, and establish a new town down in the fertile plain beneath. He himself stayed and became œkist of the new establishment, making all the regulations requisite for its safe and prosperous march, which was indeed so decisively manifested that many new settlers flocked into the new plantation, called by Philokyprus *Soli*, in honor of Solon. To our deep regret, we are not permitted to know what these regulations were; but the general fact is attested by the poems of Solon himself, and the lines, in which he bade farewell to Philokyprus on quitting the island, are yet before us. On the dispositions of this prince, his poem bestowed unqualified commendation.[2]

[1] Herodot. i, 29. Σόλων, ἀνὴρ Ἀθηναῖος, ὃς Ἀθηναίοισι νόμους κελεύσασι ποιήσας, ἀπεδήμησε ἔτεα δέκα, ἵνα δὴ μή τινα τῶν νόμων ἀναγκάσθῃ λῦσαι τῶν ἔθετο· αὐτοὶ γὰρ οὐκ οἷοι τε ἦσαν αὐτὸ ποιῆσαι Ἀθηναῖοι ὁρκίοισι γὰρ μεγάλοισι κατείχοντο, δέκα ἔτεα χρήσεσθαι νόμοισι τοὺς ἂν σφι Σόλων θῆται.

One hundred years is the term stated by Plutarch (Solon, 25).

[2] Plutarch, Solon, 26; Herodot. v, 113. The statements of Diogenês that Solon founded Soli in Kilikia, and that he died in Cyprus, are not worthy of credit (Diog. Laërt. i, 51–62).

Besides his visit to Egypt and Cyprus, a story was also current of his having conversed with the Lydian king Crœsus, at Sardis; and the communication said to have taken place between them, has been woven by Herodotus into a sort of moral tale, which forms one of the most beautiful episodes in his whole history. Though this tale has been told and retold as if it were genuine history, yet, as it now stands, it is irreconcilable with chronology, — although, very possibly, Solon may at some time or other have visited Sardis, and seen Crœsus as hereditary prince.[1]

[1] Plutarch tells us that several authors rejected the reality of this interview as being chronologically impossible. It is to be recollected that the question all turns upon the interview *as described by Herodotus* and its alleged sequel; for that there may have been an interview between Solon and Crœsus at Sardis, at some period between B. C. 594 and 560, is possible, though not shown.

It is evident that Solon made no mention of any interview with Crœsus in his poems; otherwise, the dispute would have been settled at once. Now this, in a man like Solon, amounts to negative evidence of some value for he noticed in his poems both Egypt and the prince Philokyprus in Cyprus, and had there been any conversation so impressive as that which Herodotus relates, between him and Crœsus, he could hardly have failed to mention it.

Wesseling, Larcher, Volney, and Mr. Clinton, all try to obviate the chronological difficulties, and to save the historical character of this interview, but in my judgment unsuccessfully. See Mr. Clinton's F. H. ad ann. 546 B. C., and Appendix, c. 17, p. 298. The chronological data are these, — Crœsus was born in 595 B. C., one year before the legislation of Solon: he succeeded to his father at the age of thirty-five, in 560 B. C.: he was overthrown, and Sardis captured, in 546 B. C., by Cyrus.

Mr. Clinton, after Wesseling and the others, supposes that Crœsus was king jointly with his father Halyattês, during the lifetime of the latter, and that Solon visited Lydia and conversed with Crœsus during this joint reign in 570 B. C. "We may suppose that Solon left Athens in B. C. 575, about twenty years after his archonship, and returned thither in B C. 565, about five years before the usurpation of Peisistratus." (p. 300.) Upon which hypothesis we may remark: —

1 The arguments whereby Wesseling and Mr. Clinton endeavor to show that Crœsus was king jointly with his father, do not sustain the conclusion The passage of Nikolaus Damaskenus, which is produced to show that it was Halyattês (and not Crœsus) who conquered Karia, only attests that Halyattês *marched* with an armed force into Karia (ἐπὶ Καρίαν στρατεύων): this same author states, that Crœsus was deputed by Halyattês to govern *Adramyttium and the plain of Thêbê* (ἄρχειν ἀποδεδειγμένος), but Mr. Clinton

But even if no chronological objections existed, the moral purpose of the tale is so prominent, and pervades it so systemat-

stretches this testimony to an inadmissible extent when he makes it tantamount to a conquest of *Æolis* by Halyattês, ("*so that Æolis is already conquered.*") Nothing at all is said about Æolis, or the cities of the Æolic Greeks, in this passage of Nikolaus, which represents Crœsus as governing a sort of satrapy under his father Halyattês, just as Cyrus the younger did in after-times under Artaxerxês. And the expression of Herodotus, *ἐπεί τε, δόντος τοῦ πατρὸς, ἐκράτησε τῆς ἀρχῆς ὁ Κροῖσος*, appears to me, when taken along with the context, to indicate a bequest or nomination of successor, and not a donation during life.

2. The hypothesis, therefore, that Crœsus was king 570 B. C., during the lifetime of his father, is one purely gratuitous, resorted to on account of the chronological difficulties connected with the account of Herodotus. But it is quite insufficient for such a purpose; it does not save us from the necessity of contradicting Herodotus in most of his particulars; there may, perhaps, have been *an interview* between Solon and Crœsus in B. C. 570, but it cannot be *the interview* described by Herodotus. That interview takes place within ten years after the promulgation of Solon's laws, — at the maximum of the power of Crœsus, and after numerous conquests effected by himself as king, — at a time when Crœsus had a son old enough to be married and to command armies (Herod. i, 35), — at a time, moreover, immediately preceding the turn of his fortunes from prosperity to adversity, first in the death of his son succeeded by two years of mourning, which were put an end to (*πένθεος ἀπέπαυσε*, Herod. i, 46) by the stimulus of war with the Persians. That war, if we read the events of it as described in Herodotus, cannot have lasted more than three or four years, — so that the interview between Solon and Crœsus, *as Herodotus conceived it*, may be fairly stated to have occurred within seven years before the capture of Sardis.

If we put together all these conditions, it will appear that the interview recounted by Herodotus is a chronological impossibility: and Niebuhr (Rom. Gesch. vol. i, p. 579) is right in saying that the historian has fallen into a mistake of ten olympiads, or forty years; his recital would consist with chronology, if we suppose that the Solonian legislation were referable to 554 B. C., and not 594.

In my judgment, this is an illustrative tale, in which certain real characters, — Crœsus and Solon; and certain real facts, — the great power and succeeding ruin of the former by the victorious arm of Cyrus, — together with certain facts probably altogether fictitious, such as the two sons of Crœsus, the Phyrgian Adrastus and his history, the hunting of the mischievous wild boar on Mount Olympus the ultimate preservation of Crœsus, etc., are put together so as to convey an impressive moral lesson. The whole adventure of Adrastus and the son of Crœsus is depicted in language eminently beautiful and poetical.

Plutarch treats the impressiveness and suitableness of this narrative as

ically, from beginning to end, that these internal grounds are of themselves sufficiently strong to impeach its credibility as a matter of fact, unless such doubts happen to be outweighed — which in this case they are not — by good contemporary testimony. The narrative of Solon and Crœsus can be taken for nothing else but an illustrative fiction, borrowed by Herodotus from some philosopher, and clothed in his own peculiar beauty of expression, which on this occasion is more decidedly poetical than is habitual with him. I cannot transcribe, and I hardly dare to abridge it. The vainglorious Crœsus, at the summit of his conquests and his riches, endeavors to win from his visitor Solon an opinion that he is the happiest of mankind. The latter, after having twice preferred to him modest and meritorious Grecian citizens, at length reminds him that his vast wealth and power are of a tenure too precarious to serve as an evidence of happiness, — that the gods are jealous and meddlesome, and often make the show of happiness a mere prelude to extreme disaster, — and that no man's life can be called happy until the whole of it has been played out, so that it may be seen to be out of the reach of reverses. Crœsus treats this opinion as absurd, but a great judgment from God fell upon him, after Solon was departed, — probably (observes Herodotus) because he fancied himself the happiest of all men." First, he lost his favorite son Atys, a brave and intelligent youth, — his only other son being dumb. For the Mysians of Olympus, being ruined by a destructive and

the best proof of its historical truth, and puts aside the chronological tables as unworthy of trust. Upon which reasoning Mr. Clinton has the following very just remarks: "Plutarch must have had a very imperfect idea of the nature of historical evidence, if he could imagine that the suitableness of a story to the character of Solon was a better argument for its authenticity than the number of witnesses by whom it is attested. Those who invented the scene (assuming it to be a fiction) would surely have had the skill to adapt the discourse to the character of the actors." (p. 300)

To make this remark quite complete, it would be necessary to add the words "*trustworthiness and means of knowledge*," in addition to the "*number*," of attesting witnesses. And it is a remark the more worthy of notice, inasmuch as Mr. Clinton here pointedly adverts to the existence of *plausible fiction*, as being completely distinct from attested matter of fact, — a distinction of which he took no account in his vindication of the historical credibility of the early Greek legends

formidable wild boar which they were unable to subdue, applied for aid to Crœsus, who sent to the spot a chosen hunting force, and permitted, though with great reluctance, in consequence of an alarming dream, — that his favorite son should accompany them. The young prince was unintentionally slain by the Phrygian exile Adrastus, whom Crœsus had sheltered and protected;[1] and he had hardly recovered from the anguish of this misfortune, when the rapid growth of Cyrus and the Persian power induced him to go to war with them, against the advice of his wisest counsellors. After a struggle of about three years he was completely defeated, his capital Sardis taken by storm, and himself made prisoner. Cyrus ordered a large pile to be prepared, and placed upon it Crœsus in fetters, together with fourteen young Lydians, in the intention of burning them alive, either as a religious offering, or in fulfilment of a vow, "or perhaps (says Herodotus) to see whether some of the gods would not interfere to rescue a man so preëminently pious as the king of Lydia."[2] In this sad extremity, Crœsus bethought him of the warning which he had before despised, and thrice pronounced, with a deep groan, the name of Solon. Cyrus desired the interpreters to inquire whom he was invoking, and learned in reply the anecdote of the Athenian lawgiver, together with the solemn memento which he had offered to Crœsus during more prosperous days, attesting the frail tenure of all human greatness. The remark sunk deep into the Persian monarch, as a token of what might happen to himself: he repented of his purpose, and directed that the pile, which had already been kindled, should be immediately extinguished. But the orders came too late; in spite of the most zealous efforts

[1] Herod. i, 32. Ὦ Κροῖσε, *ἐπιστάμενον με τὸ θεῖον, πᾶν ἐὸν φθονερόν τε καὶ ταραχώδες, ἐπειρωτᾷς με ἀνθρωπηίων πραγμάτων πέρι.* i, 34. *Μετὰ δὲ Σόλωνα οἰχόμενον, ἔλαβεν ἐκ θεοῦ νέμεσις μεγάλη Κροῖσον, ὡς εἰκάσαι ὅτι ἐνόμισε ἑωϋτὸν εἶναι ἀνθρώπων ἁπάντων ὀλβιώτατον.*

The hunting-match, and the terrible wild boar with whom the Mysians cannot cope, appear to be borrowed from the legend of Kalydôn. The whole scene of Adrastus, returning after the accident in a state of desperate remorse, praying for death with outstretched hands, spared by Crœsus, and then killing himself on the tomb of the young prince, is deeply tragic (Herod. i, 44–45).

[2] Herodot. i, 85.

of the bystanders, the flame was found unquenchable, and Crœsus would still have been burned, had he not implored with prayers and tears the succor of Apollo, to whose Delphian and Theban temples he had given such munificent presents. His prayers were heard, the fair sky was immediately overcast, and a profuse rain descended, sufficient to extinguish the flames.[1] The life of Crœsus was thus saved, and he became afterwards the confidential friend and adviser of his conqueror.

Such is the brief outline of a narrative which Herodotus has given with full development and with impressive effect. It would have served as a show-lecture to the youth of Athens, not less admirably than the well-known fable of the Choice of Hêraklês, which the philosopher Prodikus,[2] a junior contemporary of Herodotus, delivered with so much popularity. It illustrates forcibly the religious and ethical ideas of antiquity; the deep sense of the jealousy of the gods, who would not endure pride in any one except themselves;[3] the impossibility, for any man, of realizing to himself more than a very moderate share of happiness; the danger from reactionary nemesis, if at any time he had overpassed such limit; and the necessity of calculations taking in the whole of life, as a basis for rational comparison of different individuals; and as a practical consequence from these feelings, a constant protest on the part of the moralists against vehement impulses and unrestrained aspirations. The more valuable this narrative appears, in its illustrative character, the less can we presume to treat it as a history.

It is much to be regretted that we have no information respecting events in Attica immediately after the Solonian laws and constitution, which were promulgated in 594 B. C., so as to understand better the practical effect of these changes. What we next hear respecting Solon in Attica refers to a period immediately preceding the first usurpation of Peisistratus in 560 B. C., and

[1] Herodot. i, 86, 87: compare Plutarch, Solon, 27–28. See a similar story about Gygês king of Lydia (Valerius Maxim. vii, 1, 2).

[2] Xenoph. Memorab. ii, 1, 21. *Πρόδικος ὁ σοφὸς ἐν τῷ συγγράμματι τῷ περὶ Ἡρακλέους, ὅπερ δὴ καὶ πλείστοις ἐπιδείκνυται*, etc.

after the return of Solon from his long absence. We are here again introduced to the same oligarchical dissensions as are reported to have prevailed before the Solonian legislation: the pedieis, or opulent proprietors of the plain round Athens, under Lykurgus; the parali of the south of Attica, under Megaklês: and the diakrii, or mountaineers of the eastern cantons, the poorer of the three classes, under Peisistratus, are in a state of violent intestine dispute. The account of Plutarch represents Solon as returning to Athens during the height of this sedition. He was treated with respect by all parties, but his recommendations were no longer obeyed, and he was disqualified by age from acting with effect in public. He employed his best efforts to mitigate party animosities, and applied himself particularly to restrain the ambition of Peisistratus, whose ulterior projects he quickly detected.

The future greatness of Peisistratus is said to have been first portended by a miracle which happened, even before his birth, to his father Hippokratês at the Olympic games. It was realized, partly by his bravery and conduct, which had been displayed in the capture of Nisæa from the Megarians,[1] — partly by his popularity of speech and manners, his championship of the poor,[1] and his ostentatious disavowal of all selfish pretensions, — partly by an artful mixture of stratagem and force. Solon, after having addressed fruitless remonstrances to Peisistratus himself, publicly denounced his designs in verses addressed to the people. The deception, whereby Peisistratus finally accomplished his design, is memorable in Grecian tradition.[2] He appeared one day in the agora of Athens in his chariot with a pair of mules: he had intentionally wounded both his person and the mules, and in this condition he threw himself upon the compassion and defence of the people, pretending that his political enemies had violently attacked him. He implored the people to grant him a guard, and at the moment when their sympathies were freshly aroused both in his favor and against his supposed assassins, Aristo pro-

[1] Herodot. i, 59. I record this allusion to Nisæa and the Megarian war, because I find it distinctly stated in Herodotus; and because it *may* possibly refer to some other *later* war between Athens and Megara than that which is mentioned in Plutarch's Life of Solon as having taken place before the Solonian legislation (that is, before 594 B. C.), and therefore nearly forty years before this movement of Peisistratus to acquire the despotism. Peisistratus must then have been so young that he could not with any propriety be said to have "captured Nisæa" (*Νίσαιάν τε ἑλών*): moreover, the public reputation, which was found useful to the ambition of Peisistratus in 560 B. C., must have rested upon something more recent than his bravery displayed about 597 B. C.; just as the celebrity which enabled Napoleon to play the game of successful ambition on the 18th Brumaire (Nov. 1799) was obtained by victories gained within the preceding five years, and could not have been represented by any historian as resting upon victories gained in the Seven Years' war, between 1756–1763.

At the same time, my belief is that the words of Herodotus respecting Peisistratus do really refer to the Megarian war mentioned in Plutarch's Life of Solon, and that Herodotus supposed that Megarian war to have been much more near to the despotism of Peisistratus than it really was. In the conception of Herodotus, and by what (after Niebuhr) I venture to call a mistake in his chronology, the interval between 600–560 B. C. shrinks from forty years to little or nothing. Such mistake appears, not only on the present occasion, but also upon two others: first, in regard to the alleged dialogue between Solon and Crœsus, described and commented upon a few pages above; next, in regard to the poet Alkæus and his inglorious retreat before the Athenian troops at Sigeium and Achilleium, where he lost his shield, when the Mityleneans were defeated. The reality of this incident is indisputable, since it was mentioned by Alkæus himself in one of his songs; but Herodotus represents it to have occurred in an Athenian expedition *directed by Peisistratus*. Now the war in which Alkæus incurred this misfortune, and which was brought to a close by the mediation of Periander of Corinth, must have taken place earlier than 584 B. C., and probably took place before the legislation of Solon; long before the time when Peisistratus had the direction of Athenian affairs, — though the latter may have carried on, and probably did carry on, *another and a later war* against the Mityleneans in those regions, which led to the introduction of his illegitimate son, Hegesistratus, as despot of Sigeium (Herod. v. 94–95).

If we follow the representation given by Herodotus of these three different strings of events, we shall see that the same chronological mistake pervades all of them, — he jumps over nearly ten olympiads, or forty years. Alkæus is the contemporary of Pittakus and Solon.

I have already remarked, in the previous chapter respecting the despots of Sikyôn (ch. ix.), another instance of confused chronology in Herodotus respecting the events of this period, — respecting Crœsus, Megaklês, Alkmæôn and Kleisthenês of Sikyôn.

[1] Aristot. Politic. v, 4, 5; Plutarch, Solon, 29.

[2] Plato, Republic, viii, p. 565. *τὸ τυραννικὸν αἴτημα τὸ πολυθρυλλητὸν ..... αἰτεῖν τὸν δῆμον φύλακάς τινας τοῦ σώματος, ἵνα σῶς αὐτοῖς ᾖ ὁ τοῦ ἥμου βοηθός.*

posed formally to the ekklesia, — the pro-bouleutic senate, being composed of friends of Peisistratus, had previously authorized the proposition,[1] — that a company of fifty club-men should be assigned as a permanent body-guard for the defence of Peisistratus. To this motion Solon opposed a strenuous resistance,[2] but found himself overborne, and even treated as if he had lost his senses. The poor were earnest in favor of it, while the rich were afraid to express their dissent; and he could only comfort himself, after the fatal vote had been passed, by exclaiming that he was wiser than the former and more determined than the latter. Such was one of the first known instances in which this memorable stratagem was played off against the liberty of a Grecian community.

The unbounded popular favor which had procured the passing of this grant, was still farther manifested by the absence of all precautions to prevent the limits of the grant from being exceeded. The number of the body-guard was not long confined to fifty, and probably their clubs were soon exchanged for sharper weapons. Peisistratus thus found himself strong enough to throw off the mask and seize the acropolis. His leading opponents, Megaklês and the Alkmæônids, immediately fled the city, and it was left to the venerable age and undaunted patriotism of Solon to stand forward almost alone in a vain attempt to resist the usurpation. He publicly presented himself in the market-place, employing encouragement, remonstrance, and reproach, in order to rouse the spirit of the people. To prevent this despotism from coming, he told them would have been easy; to shake it off now was more difficult, yet at the same time more glorious.[3] But he spoke in vain; for all who were not actually favorable to Peisistratus listened only to their fears, and remained passive; nor did any one join Solon, when, as a last appeal, he put on his armor and planted himself in military posture before the door of his house. "I have done my duty, he exclaimed at length; I have sustained to the best of my power my country and the

[1] Diog. Laërt. i, 49. ἡ βουλὴ, Πεισιστρατίδαι ὄντες, etc.

[2] Plutarch, Solon, 29–30; Diog. Laërt. i, 50–51.

[3] Plutarch, Solon, 30; Diogen. Laërt. i, 49; Diodor. Excerpta, lib. vii–ix ed. Maii. Fr. xix–xxiv.

laws:" and he then renounced all farther hope of opposition, — though resisting the instances of his friends that he should flee, and returning for answer, when they asked him on what he relied for protection, "On my old age." Nor did he even think it necessary to repress the inspirations of his Muse: some verses yet remain, composed seemingly at a moment when the strong hand of the new despot had begun to make itself sorely felt, in which he tells his countrymen: "If ye have endured sorrow from your own baseness of soul, impute not the fault of this to the gods. Ye have yourselves put force and dominion into the hands of these men, and have thus drawn upon yourselves wretched slavery."

It is gratifying to learn that Peisistratus, whose conduct throughout his despotism was comparatively mild, left Solon untouched. How long this distinguished man survived the practical subversion of his own constitution, we cannot certainly determine; but according to the most probable statement he died the very next year, at the advanced age of eighty.

We have only to regret that we are deprived of the means of following more in detail his noble and exemplary character. He represents the best tendencies of his age, combined with much that is personally excellent; the improved ethical sensibility; the thirst for enlarged knowledge and observation, not less potent in old age than in youth; the conception of regularized popular institutions, departing sensibly from the type and spirit of the governments around him, and calculated to found a new character in the Athenian people; a genuine and reflecting sympathy with the mass of the poor, anxious not merely to rescue them from the oppressions of the rich, but also to create in them habits of self-relying industry; lastly, during his temporary possession of a power altogether arbitrary, not merely an absence of all selfish ambition, but a rare discretion in seizing the mean between conflicting exigencies. In reading his poems we must always recollect that what now appears common-place was once new, so that to his comparatively unlettered age, the social pictures which he draws were still fresh, and his exhortations calculated to live in the memory. The poems composed on moral subjects, generally inculcate a spirit of gentleness towards others and moderation in personal objects; they represent the gods as irresistible, retribu-

tive, favoring the good and punishing the bad, though sometimes very tardily. But his compositions on special and present occasions are usually conceived in a more vigorous spirit; denouncing the oppressions of the rich at one time, and the timid submission to Peisistratus at another, — and expressing, in emphatic language, his own proud consciousness of having stood forward as champion of the mass of the people. Of his early poems hardly anything is preserved; the few lines which remain seem to manifest a jovial temperament, which we may well conceive to have been overlaid by the political difficulties against which he had to contend, — difficulties arising successively out of the Megarian war, the Kylonian sacrilege, the public despondency healed by Epimenidês, and the task of arbiter between a rapacious oligarchy and a suffering people. In one of his elegies, addressed to Mimnermus, he marked out the sixtieth year as the longest desirable period of life, in preference to the eightieth year, which that poet had expressed a wish to attain;[1] but his own life, as far as we can judge, seems to have reached the longer of the two periods, and not the least honorable part of it — the resistance to Peisistratus — occurs immediately before his death.

There prevailed a story, that his ashes were collected and scattered around the island of Salamis, which Plutarch treats as absurd, — though he tells us at the same time that it was believed both by Aristotle, and by many other considerable men: it is at least as ancient as the poet Kratinus, who alluded to it in one of his comedies, and I do not feel inclined to reject it.[2] The inscription on the statue of Solon at Athens described him as a Salaminian: he had been the great means of acquiring the island for his country, — and it seems highly probable that among the new Athenian citizens who went to settle there, he may have received a lot of land and become enrolled among the Salaminian demots. The dispersion of his ashes in various parts of the island connects him with it as in some sort the œkist; and we may construe that

[1] Solon, Fragment 22, ed Bergk. Isokratês affirms that Solon was the first person to whom the appellation Sophist — in later times carrying with it so much obloquy — was applied, (Isokratês, Or. xv, De Permutatione, p 344; p. 496, Bek.)

[2] Plutarch, Solon, 32; Kratinus ap. Diogen. Laërt *i*, 62.

incident, if not as the expression of a public vote, at least as a piece of affectionate vanity on the part of his surviving friends.[1]

We have now reached the period of the usurpation of Peisistratus (B. C. 560), whose dynasty governed Athens — with two temporary interruptions during the life of Peisistratus himself — for fifty years. The history of this despotism, milder than Grecian despotism generally, and productive of important consequences to Athens, will be reserved for a succeeding chapter.

APPENDIX.

THE explanation which M. von Savigny gives of the Nexi and Addicti under the old Roman law of debtor and creditor (after he has refuted the elucidation of Niebuhr on the same subject), while it throws great light on the historical changes in Roman legislation on that important subject, sets forth at the same time the marked difference made in the procedure of Rome, between the demand of the creditor for repayment of *principal*, and the demand for payment of *interest*.

The primitive Roman law distinguished a debt arising from money lent (*pecunia certa credita*) from debts arising out of contract, delict, sale, etc., or any other source: the creditor on the former ground had a quick and easy process, by which he acquired the fullest power over the person and property of his debtor. After the debt on loan was either confessed or proved before the magistrate, thirty days were allowed to the debtor for payment: if payment was not made within that time, the creditor laid hold of him (*manûs injectio*) and carried him before the magistrate again. The debtor was now again required either to pay or to find a surety (*vindex*); if neither of these demands were complied with, the creditor took possession of him and carried him home, where he kept him in chains for two months; during which interval he brought him before the prætor publicly on three successive nundinæ. If the debt was not paid within these two months, the sentence of addiction was pronounced, and the creditor became empowered either to put his debtor to death, or to sell him for a slave (p. 81), or to keep him at forced work, without any restriction as to the degree of ill usage which might be inflicted upon him. The judgment of the magistrate authorized him, besides, to seize the property of his debtor wherever he could find any, within

[1] Aristidês, in noticing this story of the spreading of the ashes of Solon in Salamis, treats him as Ἀρχηγέτης of the island (Orat. xlvi, Ὑπὲρ τῶν τεττάρων, p. 172; p. 230, Dindorf). The inscription on his statue, which describes him as born in Salamis, can hardly have been literally true; for when he was born, Salamis was not incorporated in Attica; but it may have been true by a sort of adoption (see Diogen. Laërt. i, 62). The statue seems to have been erected by the Salaminians themselves, a long time after Solon see Menage ad Diogen. Laërt. *l. c.*

the limits sufficient for payment: this was one of the points which Niebuhr had denied.

Such was the old law of Rome, with respect to the consequences of an action for money had and received, for more than a century after the Twelve Tables. But the law did not apply this stringent personal execution to any debt except that arising from loan, — and even in that debt only to the principal money, not to the interest, — which latter had to be claimed by a process both more gentle and less efficient, applying to the property only and not to the person of the debtor. Accordingly, it was to the advantage of the creditor to devise some means for bringing his claim of interest under the same stringent process as his claim for the principal; it was also to his advantage, if his claim arose, not out of money lent, but out of sale, compensation for injury, or any other source, to give it *the form* of an action for money lent. Now the nexum, or nexi obligatio, was an artifice — a fictitious loan — whereby this purpose was accomplished. The severe process which legally belonged only to the recovery of the principal money, was extended by the nexum so as to comprehend the interest; and so as to comprehend, also, claims for money arising from all other sources (as well as from loan), wherein the law gave no direct recourse except against the property of a debtor. The debitor nexus was made liable by this legal artifice to pass into the condition of an addictus, either without having borrowed money at all, or for the interest as well as for the principal of that which he had borrowed.

The Lex Pœtelia, passed about n. c. 325, liberated all the nexi then under liability, and interdicted the nexi obligatio forever afterwards (Cicero, De Republ. ii, 34; Livy, viii, 28). Here, as in the seisachtheia of Solon, the existing contracts were cancelled, at the same time that the whole class of similar contracts were forbidden for the future.

But though the nexi obligatio was thus abolished, the old stringent remedy still continued against the debtor on loan, *as far as the principal sum borrowed*, apart from interest. Some mitigations were introduced: by a Lex Julia, the still more important provision was added, that the debtor by means of a cessio bonorum might save his person from seizure. But this cessio bonorum was coupled with conditions which could not always be fulfilled, nor was the debtor admitted to the benefit of it, if he had been guilty of carelessness or dishonesty. Accordingly, the old stringent process, and the addiction in which it ended, though it became less frequent, still continued throughout the course of Imperial Rome, and even down to the time of Justinian. The private prison, with adjudicated debtors working in it, was still the appendage to a Roman money-lender's house, even in the third and fourth centuries after the Christian era, though the practice seems to have become rarer and rarer. The status of the *addictus debitor*, with its peculiar rights and obligations, is discussed by Quintilian (vii, 3); and Aulus Gellius observes: "Addici namque *nunc* et vinciri multos *videmus*, quia vinculorum pœnam deterrimi homines contemnunt," (xx, 1.)

If the *addictus debitor* was adjudged to several creditors, they were allowed by the Twelve Tables to divide his body among them. No example

was known of this power having been ever carried into effect, but the law was understood to give the power distinctly.

It is useful to have before us the old Roman law of debtor and creditor, partly as a point of comparison with the ante-Solonian practice in Attica, partly to illustrate the difference drawn in an early state of society between the claim for the principal and the claim for the interest.

See the Abhandlung of Von Savigny in the Transactions of the Berlin Academy for 1833, pp. 70–103; the subject is also treated by the same admirable expositor, in his System des heutigen Römischen Rechts, vol. v, sect. 219, and in Beilage xiv, 10–11 of that volume.

The same peculiar stringent process, which was available in the case of an action for *pecunia certa credita*, was also specially extended to the surety, who had paid down money to liquidate another man's debt; the debtor, if solvent, became his addictus, — this was the *actio depensi*. I have already remarked in a former note, that in the Attic law, a case analogous to this was the only one in which the original remedy against the person of the debtor was always maintained. When a man had paid money to redeem a citizen from captivity, the latter, if he did not repay it, became the slave of the party who had advanced the money.

Walter (Geschichte des Römischen Rechts, sects. 583–715, 2d ed.) calls in question the above explanation of Von Savigny, on grounds which do not appear to me sufficient.

How long the feeling continued, that it was immoral and irreligious to receive any interest at all for money lent, may be seen from the following notice respecting the state of the law in France even down to 1789: —

"Avant la Révolution Française (de 1789) le prêt à intérêt n'était pas également admis dans les diverses parties du royaume. Dans les pays de droit écrit, il était permis de stipuler l'intérêt des déniers prêtés: mais la jurisprudence des parlemens resistait souvent à cet usage. Suivant le droit commun des pays coutumiers, on ne pouvait stipuler aucun intérêt pour le prêt appelé en droit *mutuum*. On tenait pour maxime que l'argent ne produisant rien par lui-même, un tel prêt devait être gratuit: que la perception d'intérêts était une usure: à cet égard, on admettait assez généralement les principes du droit canonique. Du reste, la législation et la jurisprudence variaient suivant les localités et suivant la nature des contrâts et des obligations." (Carette, Lois Annotées, ou Lois, Décrets, Ordonnances, Paris 1843; Note sur le Décret de l'Assemblée Nationale concernant le Prêt et Intérêt, Août 11, 1789.)

The National Assembly declared the legality of all loans on interest, "suivant le taux déterminé par la loi," but did not then fix any special rate. "Le décret du 11 Avril, 1793, défendit la vente et l'achat du numéraire." "La loi du 6 floréal, an III, déclara que l'or et l'argent sont marchandises; mais elle fut rapportée par le décret du 2 prairial suivant. Les articles 1905 et 1907 du Code Civil permettent le prêt à intérêt, mais au taux fixé ou autorisé par la loi. La loi du 3 Sept. 1807 a fixé le taux d'intérêt à 5 per cent. en matière civile et à 6 per cent en matière commerciale."

The article on Lending-houses, in Beckmann's History of Inventions (vol. iii, pp. 9–50), is highly interesting and instructive on the same subject. It traces the gradual calling in question, mitigation, and disappearance, of the ancient antipathy against taking interest for money, an antipathy long sanctioned by the ecclesiastics as well as by the jurists. Lending-houses, or Monts de Piété, were first commenced in Italy about the middle of the fifteenth century, by some Franciscan monks, for the purpose of rescuing poor borrowers from the exorbitant exactions of the Jews: Pope Pius the Second (Æneas Silvius, one of the ablest of the popes, about 1458–1464), was the first who approved of one of them at Perugia, but even the papal sanction was long combated by a large proportion of ecclesiastics. At first, it was to be purely charitable; not only neither giving interest to those who contributed money, nor taking interest from the borrowers, — but not even providing fixed pay to the administrators: interest was tacitly taken, but the popes were a long time before they would formally approve of such a practice. "At Vicenza, in order to avoid the reproach of usury, the artifice was employed of not demanding any interest, but admonishing the borrowers that they should give a remuneration according to their piety and ability," (p. 31.) The Dominicans, partisans of the old doctrine, called these establishments Montes *Impietatis*. A Franciscan monk Bernardinus, one of the most active promoters of the Monts de Piété, did not venture to defend, but only to excuse as an unavoidable evil, the payment of wages to the clerks and administrators: "Speciosius et religiosius fatebatur Bernardinus fore, si absque ullo penitus obolo et pretio mutuum daretur et commodaretur libere pecunia, sed pium opus et pauperum subsidium exiguo sic duraturum tempore. Non enim (inquit) tantus est ardor hominum, ut gubernatores et officiales, Montium ministerio necessarii, velint laborem hunc omnem gratis subire: quod si remunerandi sint ex sorte principali, vel ipso deposito, seu exili Montium ærario, brevi exhaurietur, et commodum opportunumque istud pauperum refugium ubique peribit," (p. 33.)

The Council of Trent, during the following century, pronounced in favor of the legality and usefulness of these lending-houses, and this has since been understood to be the sentiment of the Catholic church generally.

To trace this gradual change of moral feeling is highly instructive, — the more so, as that general basis of sentiment, of which the antipathy against lending money on interest is only a particular case, still prevails largely in society and directs the current of moral approbation and disapprobation. In some nations, as among the ancient Persians before Cyrus, this sentiment has been carried so far as to repudiate and despise all buying and selling (Herodot. i, 153). With many, the principle of reciprocity in human dealings appears, when conceived in theory, odious and contemptible, and goes by some bad name, such as egoism, selfishness, calculation, political economy, etc: the only sentiment which they will admit in theory, is, that the man who has, ought to be ready at all times to give away what he has to him who has not; while the latter is encouraged to expect and require such gratuitous donation

CHAPTER XII.

EUBŒA. — CYCLADES.

Among the Ionic portion of Hellas are to be reckoned (besides Athens) Eubœa, and the numerous group of islands included between the southernmost Eubœan promontory, the eastern coast of Peloponnesus, and the north-western coast of Krête. Of these islands some are to be considered as outlying prolongations, in a south-easterly direction, of the mountain-system of Attica; others, of that of Eubœa; while a certain number of them lie apart from either system, and seem referable to a volcanic origin.[1] To the first class belong Keôs, Kythnus, Serîphus, Pholegandrus, Sikinus, Gyarus, Syra, Paros, and Antiparos; to the second class, Andros, Tênos, Mykonos, Dêlos, Naxos, Amorgos; to the third class, Kimôlus, Mêlos, Thêra. These islands passed amongst the ancients by the general name of the Cyclades and the Sporades; the former denomination being commonly understood to comprise those which immediately surrounded the sacred island of Dêlos, — the latter being given to those which lay more scattered and apart. But the names are not applied with uniformity or steadiness even in ancient times: at present, the whole group are usually known by the title of Cyclades.

The population of these islands was called Ionic, — with the exception of Styra and Karystus in the southern part of Eubœa, and the island of Kythnus, which were peopled by dryopes,[2] the same tribe as those who have been already remarked in the Argolic peninsula; and with the exception also of Mêlos and Thêra, which were colonies from Sparta.

The island of Eubœa, long and narrow like Krête, and exhibiting a continuous backbone of lofty mountains from north-west to south-east, is separated from Bœotia at one point by a strait so narrow (celebrated in antiquity under the name of the Euripus),

[1] See Fiedler, Reisen durch Griechenland, vol. ii, p. 87.

[2] Herodot. viii, 46; Thucyd. vii, 57.

that the two were connected by a bridge for a large portion of the historical period of Greece, erected during the later times of the Peloponnesian war by the inhabitants of Chalkis.[1] Its general want of breadth leaves little room for plains: the area of the island consists principally of mountain, rock, dell, and ravine, suited in many parts for pasture, but rarely convenient for grain-culture or town habitations. Some plains there were, however, of great fertility, especially that of Lelantum,[2] bordering on the sea near Chalkis, and continuing from that city in a southerly direction towards Eretria. Chalkis and Eretria, both situated on the western coast, and both occupying parts of this fertile plain, were the two principal places in the island: the domain of each seems to have extended across the island from sea to sea.[3] Towards the northern end of the island were situated Histiæa, afterwards called Oreus, — as well as Kêrinthus and Dium, Athênæ Diades, Ædêpsus, Ægæ, and Orobiæ, are also mentioned on the north-western coast, over against Lokris. Dystus, Styra, and Karystus are made known to us in the portion of the island south of Eretria, — the two latter opposite to the Attic demes Halæ, Araphênides, and Prasiæ.[4] The large extent of the island of Eubœa was thus distributed between six or seven cities, the larger and central portion belonging to Chalkis and Eretria. But the extensive mountain lands, applicable only for pastures in the summer, — for the most part public lands, let out for pasture to such proprietors as had the means of providing winter sustenance elsewhere for their cattle, — were never visited by any one except the shepherds; and were hardly better known to the citizens

[1] Diodor. xiii, 47.

[2] Kallimachus, Hymn. ad Delum, 289, with Spanheim's note; Theognis, v. 888; Theophrast. Hist. Plant. 8, 5.

See Leake, Travels in Northern Greece, vol. ii, ch. 14, p. 254, *seq.* The passage of Theognis leads to the belief that Kêrinthus formed a part of the territory of Chalkis.

[3] Skylax (c. 59) treats the island of Skyrus as opposite to Eretria, the territory of which must, therefore, have included a portion of the eastern coast of Eubœa, as well as the western. He recognizes only four cities in the island, — Karystus, Eretria, Chalkis and Hestiæa.

[4] Mannert, Geograph. Gr. Röm. part viii, book i, c. 16, p. 248; Strabo, x, pp. 445–449.

resident in Chalkis and Eretria than if they had been situated on the other side of the Ægean.[1]

The towns above enumerated in Eubœa, excepting Athenæ Diades, all find a place in the Iliad. Of their history we know no particulars until considerably after 776 B. C., and they are first introduced to us as Ionic, though in Homer the population are called Abantes. The Greek authors are never at a loss to give us the etymology of a name. While Aristotle tells us that the Abantes were Thracians who had passed over into the island from Abæ in Phokis, Hesiod deduces the name of Eubœa from the cow Iô.[2] Hellopia, a district near Histæa, was said to have been founded by Hellops, son of Ion: according to others, Æklus and Kothus, two Athenians,[3] were the founders, the former of Eretria, the latter of Chalkis and Kêrinthus: and we are told, that among the demes of Attica, there were two named Histiæa and Eretria, from whence some contended that the appellations of the two Eubœan towns were derived. Though Herodotus represents the population of Styra as Dryopian, there were others

[1] The seventh Oration of Dio Chrysostom, which describes his shipwreck near Cape Kaphareus, on the island of Eubœa, and the shelter and kindness which he experienced from a poor mountain huntsman, presents one of the most interesting pictures remaining, of this purely rustic portion of the Greek population (Or. vii, p. 221, *seq.*), — men who never entered the city, and were strangers to the habits, manners, and dress there prevailing, — men who drank milk and were clothed in skins (*γαλακτοπότας ἀνῆρ, οὐρεσιβάτας*, Eurip. Elektr. 169), yet nevertheless (as it seems) possessing right of citizenship (p. 238) which they never exercised. The industry of the poor men visited by Dion had brought into cultivation a little garden and field in a desert spot near Kaphāreus.

Two-thirds of the territory of this Euboic city consisted of barren mountain (p. 232); it must probably have been Karystus.

The high lands of Eubœa were both uninhabited and difficult of approach, even at the time of the battle of Marathon, when Chalkis and Eretria had not greatly declined from the maximum of their power: the inhabitants of Eretria looked to *τὰ ἄκρα τῆς Εὐβοίης* as a refuge against the Persian force under Datis (Herod. vi, 100).

[2] Strabo, x, p. 445.

[3] Plutarch, Quæst. Græc. p. 296; Strab. x, p. 446 (whose statements are very perplexed); Velleius Patercul. i, 4.

According to Skymnus the Chian (v. 572), Chalkis was founded by Pandôrus son of Erechtheus, and Kêrinthus by Kothôn, from Athens

who contended that it had originally been peopled from Marathon and the tetrapolis of Attica, partly from the deme called steireïs. The principal writers whom Strabo consulted seem to trace the population of Eubœa, by one means or other, to an Attic origin, though there were peculiarities in the Eretrian dialect which gave rise to the supposition that they had been joined by settlers from Elis, or from the Triphylian Makistus.

Our earliest historical intimations represent Chalkis and Eretria as the wealthiest, most powerful, and most enterprising Ionic cities in European Greece, — apparently surpassing Athens, and not inferior to Samos or Miletus. Besides the fertility of the plain Lelantum, Chalkis possessed the advantage of copper and iron ore, obtained in immediate proximity both to the city and to the sea, — which her citizens smelted and converted into arms and other implements, with a very profitable result: the Chalkidic sword acquired a distinctive renown.[1] In this mineral source of wealth several of the other islands shared: iron ore is found in Keôs, Kythnus, and Seriphus, and traces are still evident in the latter island of extensive smelting formerly practised.[2] Moreover, in Siphnus, there were in early times veins of silver and gold, by which the inhabitants were greatly enriched; though their large acquisitions, attested by the magnitude of the tithe[3] which they offered at the Delphian temple, were only of temporary duration, and belong particularly to the seventh and sixth centuries before the Christian era. The island of Naxos too, was at an early day wealthy and populous. Andros, Tênos, Keôs, and several other islands, were at one time reduced to

[1] Strabo, x, p. 446, — Πὰρ δὲ Χαλκιδικαὶ σπάθαι (Alkæus, Fragm. 7. Schneidewin), — Χαλκιδικὸν ποτήριον (Aristophan. Equit 237), — certainly belongs to the Euboïc Chalkis, not to the Thrakian Chalkidikê. Boeckh, Staatshaushalt. der Athener, vol. ii, p. 284, App. xi, cites Χαλκιδικὰ ποτηρία in an inscription: compare Steph. Byz. Χαλκὶς Ναυσικλείτης Εὐβοίης Homer, Hymn. Apoll. 219.

[2] See the mineralogical account of the islands in Fiedler (Reisen, vol. ii, pp. 88, 118, 562).

The copper and iron ore near Chalkis had ceased to be worked even in the time of Strabo: Fiedler indicates the probable site (vol. i, p. 443).

[3] Herodot. iii, 57. The Siphnians, however, in an evil hour, committed the wrong of withholding this tithe: the sea soon rushed in and rendered the mines ever afterwards unworkable (Pausan. x, 11, 2).

dependence upon Eretria:[1] other islands seem to have been in like manner dependent upon Naxos, which at the time immediately preceding the Ionic revolt possessed a considerable maritime force, and could muster eight thousand heavy-armed citizens,[2] — a very large force for any single Grecian city. Nor was the military force of Eretria much inferior; for in the temple of the Amarynthian Artemis, nearly a mile from the city, to which the Eretrians were in the habit of marching in solemn procession to celebrate the festival of the goddess, there stood an ancient column setting forth that the procession had been performed by no less than three thousand hoplites, six hundred horsemen, and sixty chariots.[3] The date of this inscription cannot be known, but it can hardly be earlier than the 45th Olympiad, or 600 B. C., — near about the time of the Solonian legislation. Chalkis was still more powerful than Eretria; both were in early times governed by an oligarchy, which among the Chalkidians was called hippobotæ, or horse-feeders, — proprietors probably of most part of the plain called Lelantum, and employing the adjoining mountains as summer pasture for their herds. The extent of their property is attested by the large number of four thousand klerucha, or out-freemen, whom Athens quartered upon their lands, after the victory gained over them when they assisted the expelled Hippias in his efforts to regain the Athenian sceptre.[4]

Confining our attention, as we now do, to the first two centuries of Grecian history, or the interval between 776 B. C. and 560 B. C., there are scarce any facts which we can produce to ascertain the condition of these Ionic islands. Two or three circum-

[1] Strabo, x, p. 448.

[2] Herodot. v, 31. Compare the accounts of these various islands in the recent voyages of Professor Ross, Reisen auf den Griechischen Inseln, vol i, letter 2; vol. ii, letter 15.

The population of Naxos is now about eleven thousand souls; that of Andros fifteen thousand (Ross, vol. i, p. 28; vol. ii, p. 22).

But the extent and fertility of the Naxian plain perfectly suffice for that aggregate population of one hundred thousand souls, which seems implied in the account of Herodotus.

[3] Strabo, *l. c.*

[4] Herodot. v, 77; Aristoteles, Fragment. περὶ Πολιτειῶν, ed. Neumann, pp 111–112: compare Aristot. Polit. iv, 3, 2.

stances, however, may be named, which go to confirm our idea of their early wealth and importance.

1. The Homeric Hymn to Apollo presents to us the island of Dêlos as the centre of a great periodical festival in honor of Apollo, celebrated by all the cities, insular and continental, of the Ionic name. What the date of this hymn is, we have no means of determining: Thucydidês quotes it, without hesitation, as the production of Homer, and, doubtless, it was in his time universally accepted as such,— though modern critics concur in regarding both that and the other hymns as much later than the Iliad and Odyssey: it cannot probably be later than 600 B. C. The description of the Ionic visitors presented to us in this hymn is splendid and imposing: the number of their ships, the display of their finery, the beauty of their women, the athletic exhibitions as well as the matches of song and dance,—all these are represented as making an ineffaceable impression on the spectator:[1] "the assembled Ionians look as if they were beyond the reach of old age or death." Such was the magnificence of which Dêlos was the periodical theatre, and which called forth the voices and poetical genius not merely of itinerant bards, but also of the Delian maidens in the temple of Apollo, during the century preceding 560 B. C. At that time it was the great central festival of the Ionians in Asia and Europe; frequented by the twelve Ionic cities, in and near Asia Minor, as well as by Athens and Chalkis in Europe: it had not yet been superseded by the Ephesia as the exclusive festival of the former, nor had the Panathenæa of Athens reached the importance which afterwards came to belong to them during the plenitude of the Athenian power.

We find both Polykratês of Samos, and Peisistratus of Athens, taking a warm interest in the sanctity of Dêlos and the celebrity of this festival.[2] But it was partly the rise of these two great

[1] Hom. Hymn. Apoll. Del. 146–176; Thucyd. iii, 104:—

Φαίη κ' ἀθανάτους καὶ ἀγήρως ἔμμεναι αἰεὶ,
Ὅς τότ' ἐπαντιάσειε' ὅτ' Ἰαόνες ἀθροοι εἶεν·
Πάντων γάρ κεν ἴδοιτο χάριν, τέρψαιτο δὲ θυμὸν,
Ἄνδρας τ' εἰσορόων, καλλιζώνους τε γυναῖκας,
Νῆάς τ' ὠκείας, ἦδ' αὐτῶν χρήματα πολλά.

[2] Thucyd. iii, 104.

Ionian despots, partly the conquests of the Persians in Asia Minor, which broke up the independence of the numerous petty Ionian cities, during the last half of the sixth century before the Christian era; hence the great festival at Dêlos gradually declined in importance. Though never wholly intermitted, it was shorn of much of its previous ornaments, and especially of that which constituted the first of all ornaments, — the crowds of joyous visitors. And Thucydidês, when he notices the attempt made by the Athenians during the Peloponnesian war, in the height of their naval supremacy, to revive the Delian festival, quotes the Homeric Hymn to Apollo, as a certificate of its foregone and long-forgotten splendor. We perceive that even *he* could find no better evidence than this hymn, for Grecian transactions of a century anterior to Peisistratus, — and we may, therefore, judge how imperfectly the history of this period was known to the men who took part in the Peloponnesian war. The hymn is exceedingly precious as an historical document, because it attests to us a transitory glory and extensive association of the Ionic Greeks on both sides of the Ægean sea, which the conquests of the Lydians first, and of the Persians afterwards, overthrew, — a time when the hair of the wealthy Athenian was decorated with golden ornaments, and his tunic made of linen,[1] like that of the Milesians and Ephesians, instead of the more sober costume and woollen clothing which he subsequently copied from Sparta and Peloponnesus, — a time too when the Ionic name had not yet contracted that stain of effeminacy and cowardice, which stood imprinted upon it in the time of Herodotus and Thucydidês, and which grew partly out of the subjugation of the Asiatic Ionians by Persia, partly out of the antipathy of the Peloponnesian Dorians to Athens. The author of the Homeric Hymn, in describing the proud Ionians who thronged, in his day, to the Delian festival, could hardly have anticipated a time to come, when the name *Ionian* would become a reproach, such as the European Greeks, to whom it really belonged, were desirous of disclaiming.[2]

[1] Thucyd. i, 6. *διὰ τὸ ἁβροδίαιτον*, etc.

[2] Herodot. i, 143. *Οἱ μέν νυν ἄλλοι Ἴωνες καὶ οἱ Ἀθηναῖοι ἔφυγον τὸ οὔνομα, οὐ βουλόμενοι Ἴωνες κεκλῆσθαι*, — an assertion quite unquestionable with reference to the times immediately preceding Herodotus, but not equally

2. Another illustrative fact, in reference both to the Ionians generally, and to Chalkis and Eretria in particular, during the century anterior to Peisistratus, is to be found in the war between these two cities respecting the fertile plain Lelantum, which lay between them. In general, it appears, these two important towns maintained harmonious relations; but there were some occasions of dispute, and one in particular, wherein a formidable war ensued between them. Several allies joined with each, and it is remarkable that this was the only war known to Thucydidês, anterior to the Persian conquest, which had risen above the dignity of a mere quarrel between neighbors; and in which so many different states manifested a disposition to interfere, as to impart to it a semi-Hellenic character.[1] Of the allies of each party on this occasion we know only that the Milesians lent assistance to Eretria, and the Samians, as well as the Thessalians and the Chalkidic colonies in Thrace, to Chalkis. A column, still visible during the time of Strabo, in the temple of the Amarynthian Artemis near Eretria, recorded the covenant entered into mutually by the two belligerents, to abstain from missiles, and to employ nothing but hand-weapons. The Eretrians are said to have been superior in horse, but they were vanquished in the battle; the tomb of Kleomachus of Pharsalus, a distinguished warrior who had perished in the cause of the Chalkidians, was erected in the agora of Chalkis. We know nothing of the date, the duration, or the particulars of this war;[2] but it seems that

admissible in regard to the earlier times. Compare Thucyd. i, 124 (with the Scholium), and also v, 9; viii, 25.

[1] Thucyd. i, 15. The second Messenian war cannot have appeared to Thucydidês as having enlisted so many allies on each side as Pausanias represents.

[2] Strabo, viii, p. 448; Herodot. v, 99; Plutarch, Amator, p. 760, — valuable by the reference to Aristotle.

Hesiod passed over from Askra to Chalkis, on the occasion of the funeral games celebrated by the sons of Amphidamas in honor of their deceased father, and gained a tripod as prize by his song or recital (Opp. Di. 656) According to the Scholia, Amphidamas was king of Chalkis, who perished in the war against Eretria respecting Lelantum. But it appears that Plutarch threw out the lines as spurious, though he acknowledges Amphidamas as a vigorous champion of Chalkis in this war. See Septem Sapient Conviv. c. 10, p. 153.

This visit of Hesiod to Chalkis was represented as the scene of his poetical competition with and victory over Homer. (See the Certamen Hom. et Hes. p. 315, ed. Gottl.)

[1] See the striking description of Chalkis given by Dikæarchus in the Βίος Ἑλλάδος (Fragment. p. 146, ed. Fuhr).

[2] Herodot. i, 94.

the Eretrians were worsted, though their city always maintained its dignity as the second state in the island. Chalkis was decidedly the first, and continued to be flourishing, populous, and commercial, long after it had lost its political importance, throughout all the period of Grecian independent history.[1]

3. Of the importance of Chalkis and Eretria, during the seventh and part of the eighth century before the Christian era, we gather other evidences, — partly in the numerous colonies founded by them, which I shall advert to in a subsequent chapter, — partly in the prevalence throughout a large portion of Greece, of the Euboic scale of weight and money. What the quantities and proportions of this scale were, has been first shown by M. Boeckh in his "Metrologie." It was of Eastern origin, and the gold collected by Dareius in tribute throughout the vast Persian empire, was ordered to be delivered in Euboic talents. Its divisions, — the talent equal to sixty minæ, the mina equal to one hundred drachms, the drachm equal to six obols, — were the same as those of the scale called Æginæan, introduced by Pheidôn of Argos; but the six obols of the Euboic drachm contained a weight of silver equal only to five Æginæan obols, so that the Euboic denominations, — drachm, mina, and talent, — were equal only to five-sixths of the same denominations in the Æginæan scale. It was the Euboic scale which prevailed at Athens before the debasement introduced by Solon; which debasement, — amounting to about twenty-seven per cent., as has been mentioned in a previous chapter, — created a third scale, called the Attic, distinct both from the Æginæan and Euboic, — standing to the former in the ratio of 3 : 5, and to the latter, in the ratio of 18 : 25. It seems plain that the Euboic scale was adopted by the Ionians through their intercourse with the Lydians,[2] and other Asiatics, and that it became naturalized among their cities under the name of the Euboic, because Chalkis and Eretria were the most actively commercial states in the Ægean, — just as the superior commerce of Ægina among the Dorian states, had given

[1] See the striking description of Chalkis given by Dikæarchus in the Βίος Ἑλλάδος (Fragment. p. 146, ed. Fuhr).

[2] Herodot. i, 94.

to the scale introduced by Pheidôn of Argos, the name of Æginæan. The fact of its being so called indicates a time when these two Eubœan cities surpassed Athens in maritime power and extended commercial relations, and when they stood among the foremost of the Ionic cities throughout Greece. The Euboic scale, after having been debased by Solon, in reference to coinage and money, still continued in use at Athens for merchandise: the Attic mercantile mina retained its primitive Euboic weight.[1]

CHAPTER XIII.

ASIATIC IONIANS.

There existed at the commencement of historical Greece, in 776 B. C., besides the Ionians in Attica and the Cyclades, twelve Ionian cities of note on or near the coast of Asia Minor, besides a few others less important. Enumerated from south to north, they stand,— Milêtus, Myûs, Priênê, Samos, Ephesus, Kolophôn, Lebedus, Teôs, Erythræ, Chios, Klazomenæ, Phôkæa.

That these cities, the great ornament of the Ionic name, were founded by emigrants from European Greece, there is no reason to doubt. How, or when, they were founded, we have no history to tell us; the legend, which has already been set forth in a preceding chapter, gives us a great event called the Ionic migration, referred by chronologists to one special year, one hundred and forty years after the Trojan war. This massive grouping belongs to the character of legend, — the Æolic and Ionic emigrations, as well as the Dorian conquest of Peloponnesus, are each invested with unity, and imprinted upon the imagination as the results of a single great impulse. But such is not the character of the historical colonies: when we come to relate the Italian and Sicilian emigrations, it will appear that each colony has its own separate nativity and causes of existence. In the case of the Ionic

[1] See Boeckh's Metrologie, c. 8 and 9.

emigration, this large scale of legendary conception is more than usually conspicuous, since to that event is ascribed the foundation or repeopling both of the Cyclades and of the Asiatic Ionian cities.

Euripidês treats Ion,[1] the son of Kreusa by Apollo, as the planter of these latter cities: but the more current form of the legend assigns that honor to the sons of Kodrus, two of whom are especially named, corresponding to the two greatest of the ten continental Ionic cities: Androklus, as founder of Ephesus, Neileus of Milêtus. These two towns are both described as founded directly from Athens. The others seem rather to be separate settlements, neither consisting of Athenians, nor emanating from Athens, but adopting the characteristic Ionic festival of the Apaturia, and, in part at least, the Ionic tribes, — and receiving princes from the Kodrid families at Ephesus or Milêtus, as a condition of being admitted into the Pan-Ionic confederate festival. The poet Mimnermus ascribed the foundation of his native city Kolophôn to emigrants from Pylus, in Peloponnesus, under Andræmôn: Teôs was settled by Minyæ of Orchomenus, under Athamas: Klazomenæ by settlers from Kleônæ and Phlius, Phôkæa, by Phocians, Priênê in large portion by Kadmeians from Thebes. And with regard to the powerful islands of Chios and Samos, it does not appear that their native authors, — the Chian poet Ion, or the Samaian poet Asius, — ascribed to them a population emanating from Athens: Pausanias could not make out from the poems of Ion how it happened that Chios came to form a part of the Ionic federation.[2] Herodotus, especially, dwells upon the number of Grecian tribes and races, who contributed to supply the population of the twelve Ionic cities, — Minyæ, from Orchomenus, Kadmeians, Dryopians, Phocians, Molossians, Arkadian Pelasgians, Dorians from Epidaurus, and "several other sections" of Greeks. Moreover, he particularly

[1] Euripid. Ion, 1546. *κτίστορ' Ασιάδος χθονός.*

[2] Pausan. vii, 4, 6. *Τοσαῦτα εἰρηκότα ἐς Χίους Ἴωνα εὑρίσκω· οὐ μέντοι ἐκεῖνός γε εἰρηκε, καθ' ἥντινα αἰτίαν Χῖοι τελοῦσιν ἐς Ἴωνας.*

Respecting Samos, and its primitive Karian inhabitants, displaced by Proklês and Tembriôn at the head of Grecian emigrants, see Etymol. Mag. v. *Ασυπάλαια.*

singles out the Milesians, as claiming for themselves the truest Ionic blood, and as having started from the prytaneium, at Athens; thus plainly implying his belief that the majority, at least, of the remaining settlers did not take their departure from the same hearth.[1]

But the most striking information which Herodotus conveys to us is, the difference of language, or dialect, which marked these twelve cities. Milêtus, Myûs, and Priênê, all situated on the soil of the Karians, had one dialect: Ephesus, Kolophôn, Lebedus, Teôs, Klazomenæ, and Phôkæa, had a dialect common to all, but distinct from that of the three preceding: Chios and Erythræ exhibited a third dialect, and Samos, by itself, a fourth. Nor does the historian content himself with simply noting such quadruple variety of speech; he employs very strong terms to express the degree of dissimilarity.[2] The testimony of Herodotus as to these dialects is, of course, indisputable.

Instead of one great Ionic emigration, then, the statements

[1] Herod. i, 146. *ἐπεὶ, ὡς γε ἔτι μᾶλλον οὗτοι* (*i. e.* the inhabitants of the Pan-Ionic Dodekapolis) *Ἴωνές εἰσι τῶν ἄλλων Ἰώνων, ἢ κάλλιόν τι γεγόνασι, ὡρίη πολλὴ λέγειν· τῶν Ἀβαντες ἐξ Εὐβοίης εἰσὶν οὐκ ἐλαχίστη μοῖρα, τοῖσι Ἰωνίης μέτα οὐδὲ τοῦ ὀνόματος οὐδέν· Μίνυαι δὲ Ὀρχομένιοι ἀναμεμίχαται, καὶ Καδμεῖοι, καὶ Δρύοπες, καὶ Φωκέες ἀποδάσμιοι, καὶ Μολοσσοὶ, καὶ Ἀρκάδες Πελασγοὶ, καὶ Δωριέες Ἐπιδαύριοι, ἄλλα τε ἔθνεα πολλὰ ἀναμεμίχαται. Οἱ δὲ αὐτέων, ἀπὸ τοῦ Πρυτανηίου τοῦ Ἀθηναίων ὁρμηθέντες, καὶ νομίζοντες γενναιότατοι εἶναι Ἰώνων, οὗτοι δὲ οὐ γυναῖκας ἤγαγον εἰς ἀποικίην, ἀλλὰ Καείρας ἔσχον, τῶν ἐφόνευσαν τοὺς γονέας.... Ταῦτα δὲ ἦν γινόμενα ἐν Μιλήτῳ.*

The polemical tone in which this remark of Herodotus is delivered is explained by Dahlmann on the supposition that it was destined to confute certain boastful pretensions of the Milesian Hekatæus (see Bähr, *ad loc.*, and Klausen ad Hekatæi Frag. 225).

The test of *Ionism*, according to the statement of Herodotus, is, that a city should derive its origin from Athens, and that it should celebrate the solemnity of the Apaturia (i. 147). But we must construe both these tests with indulgence. Ephesus and Kolophôn were Ionic, though neither of them celebrated the Apaturia. And the colony might be formed under the auspices of Athens, though the settlers were neither natives, nor even of kindred race with the natives, of Attica.

[2] Herod. i, 142. Ephesus, Kolophôn, Lebedus, Teôs, Klazomenæ, Phokæa — *αὗται αἱ πόλεις τῇσι πρότερον λεχθείσῃσι ὁμολογέουσι κατὰ γλῶσσαν οὐδὲν σφι δὲ ὁμοφωνέουσι.*

above cited conduct us rather to the supposition of many separate and successive settlements, formed by the Greeks of different sections, mingling with and modified by preëxisting Lydians and Karians, and subsequently allying themselves with Milêtus and Ephesus into the so-called Ionic amphiktyony. As a condition of this union, they are induced to adopt among their chiefs princes of the Kodrid gens or family; who are called sons of Kodrus, but who are not for that reason to be supposed necessarily contemporary with Androklus or Neileus.

The chiefs selected by some of the cities are said to have been Lykians,[1] of the heroic family of Glaukus and Bellerophon: in some causes, the Kodrids and the Glaukids were chiefs conjointly. Respecting the dates of these separate settlements, we cannot give any account, for they lie beyond the commencement of authentic history: there is ground for believing that most of them existed for some time previous to 776 B. C., but at what date the federative solemnity uniting the twelve cities was commenced, we do not know.

The account of Herodotus shows us that these colonies were composed of mixed sections of Greeks, — an important circumstance in estimating their character. Such was usually the case more or less in respect to all emigrations, and hence the establishments thus planted contracted at once, generally speaking, both more activity and more instability than was seen among those Greeks who remained at home, and among whom the old habitual routine had not been counterworked by any marked change of place or of social relations. For in a new colony it became necessary to adopt fresh classifications of the citizens, to range them together in fresh military and civil divisions, and to adopt new characteristic sacrifices and religious ceremonies as bonds of union among all the citizens conjointly. At the first outset of a colony, moreover, there were inevitable difficulties to be surmounted, which imposed upon its leading men the necessity of energy and forethought, — more especially in regard to maritime affairs, on which not only their connection with the countrymen whom they had left behind, but also their means of establishing advantageous relations with the population of the interior,

[1] Herodot. i, 146.

depended. At the same time, the new arrangements indispensable among the colonists were far from working always harmoniously: dissension and partial secessions were not unfrequent occurrences. And what has been called the mobility of the Ionic race, as compared with the Doric, is to be ascribed in a great measure to this mixture of races and external stimulus arising out of expatriation: for there is no trace of it in Attica anterior to Solon; and on the other hand, the Doric colonies of Korkyra and Syracuse exhibit a population not less excitable than the Ionic towns generally,[1] and much more so than the Ionic colony of Massalia. The remarkable commercial enterprise, which will be seen to characterize Milêtus, Samos, and Phokæa, belongs but little to anything connected with the Ionic temperament.

All the Ionic towns, except Klazomenæ and Phokæa, are represented to have been founded on some preëxisting settlements of Karians, Lelegians, Kretans, Lydians, or Pelasgians.[2] In some cases these previous inhabitants were overcome, slain, or expelled; in others they were accepted as fellow-residents, and the Grecian cities thus established acquired a considerable tinge of Asiatic customs and feelings. What is related by Herodotus respecting the first establishment of Neileus and his emigrants at Milêtus is in this point of view remarkable. They took out with them no women from Athens (the historian says), but found wives in the Karian women of the place, whose husbands and fathers they overcame and put to death; and the women, thus violently seized, manifested their repugnance by taking a solemn oath among themselves that they would never eat with their new husbands, nor ever call them by their personal names. This same pledge they imposed upon their daughters; but how long the practice lasted, we are not informed: it rather seems from the language of the historian that traces of it were visible even in his day in the family customs of the Milesians. The population of this greatest of the Ionic towns must thus have been half of Karian breed. It is to be presumed that what is true

[1] Thucyd. vi, 17, about the Sicilian Greeks — *ὄχλοις τε γὰρ ξυμμικτοῖς πολυνδροῦσαι αἱ πόλεις, καὶ ῥᾳδίας ἔχουσι τῶν πολιτειῶν τὰς μεταβολὰς καὶ μεταστάσεις.*

[2] See Raoul Rochette, Histoire des Colonies Grecques, b. iv, c. 10, p. 93

of Neileus and his companions would be found true, also, respecting most of the maritime colonies of Greece, and that the vessels which took them out would be scantily provided with women. But on this point, unfortunately, we are left without information.

The worship of Apollo Didymæus, at Branchidæ, near Milêtus, — that of Artemis, near Ephesus, — and that of the Apollo Klarius, near Kolophôn, — seems to have existed among the native Asiatic population before the establishment of either of these three cities. To maintain these preëxisting local rites was not less congenial to the feelings, than beneficial to the interests, of the Greeks: all the three establishments acquired increased celebrity under Ionic administration, and contributed in their turn to the prosperity of the towns to which they were attached. Milêtus, Myûs, and Priênê were situated on or near the productive plain of the river Mæander; while Ephesus was, in like manner, planted near the mouth of the Kaïster, thus immediately communicating with the productive breadth of land separating Mount Tmôlus on the north from Mount Messôgis on the south, through which that river runs: Kolophôn is only a very few miles north of the same river. Possessing the best means of communication with the interior, these three towns seem to have thriven with greater rapidity than the rest; and they, together with the neighboring island of Samos, constituted in early times the strength of the Pan-Ionic amphiktyony. The situation of the sacred precinct of Poseidôn (where this festival was celebrated), on the north side of the promontory of Mykalê, near Priênê, and between Ephesus and Milêtus, seems to show that these towns formed the primitive centre to which the other Ionian settlements became gradually aggregated. For it was by no means a centrical site with reference to all the twelve; so that Thalês of Milêtus, — who at a subsequent period recommended a more intimate political union between the twelve Ionic towns, and the establishment of a common government to manage their collective affairs, — indicated Teôs,[1] and not Priênê, as the suitable place for it. Moreover, it seems that the Pan Ionic festival,[2] though still formally continued, had lost its

[1] Herodot. i, 170.

[2] Both Diodorus (xv, 49) and Dionysius of Halikarnassus (A. R. iv, 25)

importance before the time of Thucydidês, and had become practically superseded by the more splendid festival of the Ephesia, near Ephesus, where the cities of Ionia found a more attractive place of meeting.

An island close adjoining to the coast, or an outlying tongue of land connected with the continent by a narrow isthmus, and presenting some hill sufficient for an acropolis, seems to have been considered as the most favorable situation for Grecian colonial settlement. To one or other of these descriptions most of the Ionic cities, conform.[1] The city of Milêtus at the height of its power had four separate harbors, formed probably by the aid of the island of Ladè and one or two islets which lay close off against it: the Karian or Kretan establishment, which the Ionic colonists found on their arrival and conquered, was situated on an eminence overhanging the sea, and became afterwards known by the name of Old Milêtus, at a time when the new Ionic town had been extended down to the water-side and rendered maritime.[2] The territory of this important city seems to have comprehended both the southern promontory called Poseidium and the greater part of the northern promontory of Mykalè,[3] reaching on both sides of the river Mæander: the inconsiderable town of Myus[4] on the southern bank of the Mæander, an offset seemingly formed by the secession of some Milesian malcontents under a member of the Neleid gens named Kydrêlus, maintained for a long time its autonomy, but was

speak as if the convocation or festival had been formally transferred to Ephesus, in consequence of the insecurity of the meetings near Mykalè: Strabo on the contrary speaks of the Pan-Ionia as if they still in his time celebrated in the original spot (xiv, pp. 636–638), under the care of the Priêneans. The formal transfer is not probable: Thucydidês (iii. 104) proves that in his time the festival of Ephesia was practically the Pan-Ionic rendezvous, though Herodotus does not seem to have conceived it as such. See Guhl, Ephesiaca, part iii, p. 117, and K. F. Hermann, Gottesdienstliche Alterthümer der Griechen, c. 66, p. 343.

[1] The site of Milêtus is best indicated by Arrian, i, 19–20; see that of Phôkæa, Erythræ, Myonnêsus, Klazomenæ, Kolophôn, Teôs (Strabo, xiv, pp 644–645; Pausan. vii, 3, 2; Livy, xxxvii, 27–31; Thucyd. viii, 31).

[2] Strabo, xiv, p. 635.

[3] Strabo, xiv, p. 633; Herod. ix, 97–99. Τὸ Ποσείδιον τῶν Μιλησίων Strabo, xiv, p. 651.

[4] Strabo, xiv, p. 636; Vitruvius, iv, 1; Polyæn. viii, 35.

at length absorbed into the larger unity of Milêtus; its swampy territory having been rendered uninhabitable by a plague of gnats. Priênê acquired an importance greater than naturally belonged to it, by its immediate vicinity to the holy Pan-Ionic temple and its function of administering the sacred rites,[1] — a dignity which it probably was only permitted to enjoy in consequence of the jealousies of its greater neighbors Milêtus, Ephesus, and Samos.[2] The territories of these Grecian cities seem to have been interspersed with Karian villages, probably in the condition of subjects

It is rare to find a genuine Greek colony established at any distance from the sea; but the two Asiatic towns called Magnêsia form exceptions to this position, — one situated on the south side of the Mæander, or rather on the river Lethæus, which runs into the Mæander; the other more northerly, adjoining to the Æolic Greeks, on the northern declivity of Mount Sipylus, and near to the plain of the river Harmus. The settlement of both these towns dates before the period of history: the tale[3] which we read affirms them to be settlements from the Magnêtes in Thessaly, formed by emigrants who had first passed into Krête, under the orders of the Delphian oracle, and next into Asia, where they are said to have extricated the Ionic and Æolic colonists, then recently arrived, from a position of danger and calamity. By the side of this story, which can neither be verified nor contradicted, it is proper to mention the opinion of Niebuhr, that both these towns of Magnêsia are remnants of a primitive Pelasgic population, akin to, but not emigrants from, the Magnêtes of Thessaly, — Pelasgians whom he supposes to have occupied both the valley of the Hermus and that of the Kaïster, anterior to the Æolic and Ionic migrations. In support of this opinion, it may be stated that there were towns bearing the Pelasgic name of Larissa, both near the Hermus and near the Mæander: Menekratês of Elæa considered the Pelasgians as having once occupied most part of that coast;

[1] Strabo, xiv, pp. 636–638.

[2] Thucyd. i, 116.

[3] Conon, Narrat. 29; Strabo, xiv, pp. 636–647.

The story in Parthenius about Leukippus, leader τῶν δεκατευθέντων ἐκ Φέρης ὑπ' Ἀδμήτου, who came to the Ephesian territory and acquired possession of the place called Kretinæon, by the treachery of Leukophryê, daughter of Mandrolytos, whether truth or romance, is one of the notices of Thessalian migration into those parts (Parthen. Narrat. 6).

and O. Muller even conceives the Tyrrhenians to have been Pelasgians from Tyrrha, a town in the interior of Lydia south of Tmòlus. The point is one upon which we have not sufficient evidence to advance beyond conjecture.[1]

Of the Ionic towns, with which our real knowledge of Asia Minor begins, Milêtus[2] was the most powerful; and its celebrity was derived not merely from its own wealth and population, but also from the extraordinary number of its colonies, established principally in the Propontis and Euxine, and amounting, as we are told by some authors, to not less than seventy-five or eighty. Respecting these colonies I shall speak presently, in treating of the general colonial expansion of Greece during the eighth and seventh centuries B. C.: at present, it is sufficient to notice that the islands of Ikarus and Lerus,[3] not far from Samos and the Ionic coast generally, were among the places planted with Milesian settlers.

The colonization of Ephesus by Androklus appears to be connected with the Ionic occupation of Samos, so far as the confused statements which we find enable us to discern. Androklus is said

[1] Strabo, xiii, p. 621. See Niebuhr, Kleine Historische Schriften, p. 371, O. Müller, Etrusker, Einleitung ii, 5, p. 80. The evidence on which Müller's conjecture is built seems, however, unusually slender, and the identity of Tyrrhênos and Torrhêbos, or the supposed confusion of the one with the other, is in no way made out. Pelasgians are spoken of in Trallês and Aphrodisias as well as in Ninoê (Steph. Byz. v, *Νινόη*), but this name seems destined to present nothing but problems and delusions.

Respecting Magnêsia on the Mæander, consult Aristot. ap. Athen. iv, p. 173, who calls the town a colony from Delphi. But the intermediate settlement of these colonists in Krête, or even the reality of any town called Magnêsia in Krête, appears very questionable: Plato's statement (Legg. iv, 702; xi, 919) can hardly be taken as any evidence. Compare O. Müller, History of the Dorians, book ii, ch. 3; Hoeckh, Kreta, book iii, vol. ii, p. 413. Müller gives these "*Sagen*" too much in the style of real facts: the worship of Apollo at Magnêsia on the Mæander (Paus. x, 32, 4) cannot be thought to prove much, considering how extensively that god was worshipped along the Asiatic coast, from Lykia to Troas.

The great antiquity of this Grecian establishment was recognized in the time of the Roman emperors; see Inscript. No. 2910 in Boeckh, Corp. Ins.

[2] *Ἰωνίης πρόσχημα* (Herodot. v, 28).

[3] Strabo, xiv, p. 635. Ikarus, or Ikaria, however, appears in later times as belonging to Samos, and used only for pasture (Strabo, p. 639; x, p. 488).

to have lingered upon that island for a long time, until the oracle vouchsafed to indicate to him what particular spot to occupy on the continent; at length the indication was given, and he planted his colonists at the fountain of Hypelæon and on a portion of the hill of Korêssus, within a short distance of the temple and sanctuary of Artemis; whose immediate inhabitants he respected and received as brethren, while he drove away for the most part the surrounding Lelegians and Lydians. The population of the new town of Ephesus was divided into three tribes, — the pre-existing inhabitants, or Ephesians proper, the Bennians, and the Euônymeis, so named (we are told) from the deme Euonymus in Attica.[1] So much did the power of Androklus increase, that he was enabled to conquer Samos, and to expel from it the prince Leôgorus: of the retiring Samians, a part are said to have gone to Samothrace and there established themselves, while another portion acquired possession of Marathêsium near Ephesus, on the adjoining continent of Asia Minor, from whence, after a short time, they recovered their island, compelling Androklus to return to Ephesus. It seems, however, that in the compromise and treaty which ensued, they yielded possession of Marathêsium to Androklus,[2] and confined themselves to Anæa, a more southerly district farther removed from the Ephesian settlement, and immediately opposite to the island of Samos. Androklus is said to have perished in a battle fought for the defence of Priênê, which town he had come to aid against an attack of the Karians. His dead body was brought from the field and buried near the gates of Ephesus, where the tomb was yet shown during the days of Pausanias; but a sedition broke out against his sons after him, and the malcontents strengthened their party by inviting reinforcements from Teôs and Karina. The struggle which ensued terminated in the discontinuance of the kingly race and the establishment of a republican government, — the descendants of Androklus being allowed to retain both considerable honorary privileges and the hereditary priesthood of the Eleusinian Dêmêtêr. The newly-received inhabitants were enrolled in two new tribes, making in

[1] Kreophylus ap. Athen. viii, p. 361; Ephor. Fragm. 32, ed Marx; Steph. Byz. v. *Βέννα*: see Guhl, Ephesiaca, p 29

[2] Pausan. vii, 4, 3.

all five tribes, which appear to have existed throughout the historical times at Ephesus.[1] It appears too that a certain number of fugitive proprietors from Samos found admission among the Ephesians and received the freedom of the city; and the part of the city in which they resided acquired the name of Samorna, or Smyrna, by which name it was still known in the time of the satirical poet Hippônax, about 530 B. C.[2]

Such are the stories which we find respecting the infancy of the Ionic Ephesus. The fact of its increase and of its considerable acquisitions of territory, at the expense of the neighboring Lydians,[3] is at least indisputable. It does not appear to have been ever very powerful or enterprising at sea, and few maritime colonies owed their origin to its citizens; but its situation near the mouth and the fertile plain of the Kaïster was favorable both to the multiplication of its inland dependencies and to its trade with the interior. A despot named Pythagoras is said to have subverted by stratagem the previous government of the town, at some period before Cyrus, and to have exercised power for a certain time with great cruelty.[4] It is worthy of remark, that we find no trace of the existence of the four Ionic tribes at Ephesus; and this, when coupled with the fact that neither Ephesus nor Kolophôn solemnized the peculiar Ionic festival of the Apaturia, is one among other indications that the Ephesian population had little

[1] The account of Ephorus ap. Steph. Byz. v. *Βέννα*, attests at least the existence of the five tribes at Ephesus, whether his account of their origin and primitive history be well founded or not. See also Strabo, xiv, p. 633; Steph. Byz. v, *Εὐωνυμία*. Karênê or Karinê is in Æolis, near Pitana and Gryneium (Herod. vii, 42; Steph. Byz. *Καρήνη*).

[2] Stephan. Byz. v, *Σμύρνα*; Heysch. *Σαμωνία*; Athenæus, vi, p. 267. Hippônax, Fragm. 32, Schneid.; Strabo, xiv, p. 633. Some, however, said that the *vicus* of Ephesus, called Smyrna, derived its name from an Amazon.

[3] Strabo, xiv, p. 620.

[4] Bato ap. Suidas, v, *Πυθαγόρας*. In this article of Suidas, however, it is stated that "the Ephesian Pythagoras put down, by means of a crafty plot, the government of those who were called the *Basilidæ*." Now Aristotle talks (Polit. v, 5, 4) of the oligarchy of the Basilidæ at Erythræ. It is hardly likely that there should have been an oligarchy called by that same name both at Erythræ and Ephesus; there is here some confusion between Erythræ and Ephesus which we are unable to clear up. Bato of Sinôpê wrote a book *περὶ τῶν ἐν Ἐφέσῳ τυράννων* (Athenæus, vii, p. 289).

community of race with Athens, though the œkist may have been of heroic Athenian family. Guhl attempts to show, on mistaken grounds, that the Greek settlers at Ephesus were mostly of Arkadian origin.[1]

Kolophôn, about fifteen miles north of Ephesus, and divided from the territory of the latter by the precipitous mountain range called Gallêsium, though a member of the Pan-Ionic amphiktyony, seems to have had no Ionic origin: it recognized neither an Athenian œkist nor Athenian inhabitants. The Kolophonian poet Mimnermus tells us that the œkist of the place was the Pylian Andræmôn, and that the settlers were Pylians from Peloponnesus. "We quitted (he says) Pylus, the city of Neleus, and passed in our vessels to the much-desired Asia. There with the insolence of superior force, and employing from the beginning cruel violence, we planted ourselves in the tempting Kolophôn."[2] This description of the primitive Kolophonian settlers, given with Homeric simplicity, forcibly illustrates the account given by Herodotus of the proceedings of Neileus at Milêtus. The establishment of Andræmôn must have been effected by force, and by the dispossession of previous inhabitants, leaving probably their wives and daughters as a prey to the victors. The city of Kolophôn seems to have been situated about two miles inland, but it had a fortified port called Notium, not joined to it by long walls as the Peiræeus was to Athens, but completely distinct. There were

[1] Guhl, Ephesiaca, cap. ii, s. 2, p. 28. The passage which he cites in Aristeidês (Or. xlii, p. 523) refers, not to Ephesus, but to Pergamus, and to the mythe of Augê and Têlephus: compare *ibid.* p. 251.

[2] Mimnerm. Fragm. 9, Schneid. ap. Strab. xiv, p. 634:—

Ἡμεῖς δ' αἰπὺ Πύλον Νηλήϊον ἄστυ λιπόντες
Ἱμερτὴν Ἀσίην νηυσὶν ἀφικόμεθα·
Ἐς δ' ἐρατὴν Κολοφῶνα, βίην ὑπέροπλον ἔχοντες,
Ἐζόμεθ' ἀργαλέης ὕβριος ἡγεμόνες.

Mimnermus, in his poem called *Νανπο*, named Andræmôn as founder (Strabo, p. 633). Compare this behavior with the narrative of Odysseus in Homer (Odyss. ix, 40):—

Ἰλιοθέν με φέρων ἄνεμος Κικόνεσσι πέλασσεν
Ἰσμάρῳ· ἔνθα δ' ἐγὼ πόλιν ἔπραθον, ὤλεσα δ' αὐτούς·
Ἐκ πόλιος δ' ἀλόχους καὶ κτήματα πολλὰ λαβόντες
Δάσσαμεθ', etc.

Mimnermus comes in point of time a little before Solon, B. C. 620–600.

times in which this port served the Kolophonians as a refuge, when their upper town was assailed by Persians from the interior; but the inhabitants of Notium occasionally manifested inclinations to act as a separate community, and dissensions thus occurred between them and the people in Kolophôn,[1] — so difficult was it in the Greek mind to keep up a permanent feeling of political amalgamation beyond the circle of the town walls.

It is much to be regretted that nothing beyond a few lines of Mimnermus, and nothing at all of the long poem of Xenophanês (composed seemingly near a century after Mimnermus) on the foundation of Kolophôn, has reached us. The short statements of Pausanias omit all notice of that violence which the native Kolophonian poet so emphatically signalizes in his ancestors: they are derived more from the temple legends of the adjoining Klarian Apollo and from morsels of epic poetry referring to that holy place, which connected itself with the worship of Apollo in Krête, at Delphi, and at Thebes. The old Homeric poem, called Thebaïs, reported that Mantô, daughter of the Theban prophet Teiresias, had been presented to Apollo at Delphi as a votive offering by the victorious epigoni: the god directed her to migrate to Asia, and she thus arrived at Klarus, where she married the Kretan Rhakius. The offspring of this marriage was the celebrated prophet Mopsus, whom the Hesiodic epic described as having gained a victory in prophetic skill over Kalchas; the latter having come to Klarus after the Trojan war in company with Amphilochus son of Amphiaraus.[2] Such tales evince the early importance of the temple and oracle of Apollo at Klarus, which appears to have been in some sort an emanation from the great sanctuary of Branchidæ near Milêtus; for we are told that the high priest of Klarus was named by the Milesians.[3] Pausanias states that Mopsus expelled the indigenous Karians, and established the city of Kolophôn; and that the Ionic settlers under Promêthus and Damasichthôn, sons of Kodrus, were admitted amicably as additional inhabitants:[4] a story probably emanating from the temple,

[1] Aristot. Polit. v, 2, 12; Thucyd iii, 34.

[2] Hesiod. ap. Strab. xiv, p. 643; Conon, Narrat. 6; Argument of the poem called Νόστοι (apud Düntzer), Epicc. Græc. Frag. p. 23; Pausan. ix, 33, 4.

[3] Tacit. Annal. ii, 54. [4] Pausan. vii, 3, 1.

and very different from that of the Kolophonian townsmen in the time of Mimnermus. It seems evident that not only the Apollinic sanctuary at Klarus, but also the analogous establishments on the south of Asia Minor at Phasêlis, Mallus, etc., had their own foundation legends (apart from those of the various bands of emigrant settlers), in which they connected themselves by the best thread which they could devise with the epic glories of Greece.[1]

Passing along the Ionian coast in a north-westerly direction from Kolophôn, we come first to the small but independent Ionic settlement of Lebedus — next, to Teôs, which occupies the southern face of a narrow isthmus, Klazomenæ being placed on the northern: this isthmus, a low narrow valley of about six miles across, forms the eastern boundary of a very considerable peninsula, containing the mountainous and woody regions called Mimas and Kôrykus. Teôs is said to have been first founded by Orchomenian Minyæ under Athamas, and to have received afterwards by consent various swarms of settlers, Orchomenians and others, under the Kodrid leaders Apœkus, Nauklus, and Damasus.[2] The valuable Teian inscriptions published in the large collection of Boeckh, while they mention certain names and titles of honor which connect themselves with this Orchomenian origin, reveal to us at the same time some particulars respecting the internal distribution of the Teian citizens. The territory of the town was distributed amongst a certain number of towers, to each of which corresponded a symmory or section of the citizens, having its common altar and sacred rites, and often its heroic eponymus. How many in number the tribes of Teôs were, we do not know: the name of the Geleontes, one of the four old Ionic tribes, is preserved in an inscription; but the rest, both as to names and number, are unknown. The symmories or tower-fellowships of Teôs seem to be analogous to the phratries of ancient Athens, — forming each a factitious kindred, recognizing a common mythical ancestor, and bound together by a communion at once religious and political. The individual name attached to each tower is in some cases Asiatic rather than Hellenic, indicating in Teôs the mixture not

[1] See Welcker, Epischer Kyklus, p. 285.

[2] Steph. Byz. v, Τέως; Pausan. vii, 3, 3; Strabo, xiv, p. 633. Anakreon called the town Ἀθαμαντίδα Τέω. (Strab. l. c.)

merely of Ionic and Æolic, but also of Karian or Lydian inhabitants, of which Pausanias speaks.[1] Gerrhæidæ, or Cherræidæ,

[1] Pausan. vii, 3, 3. See the Inscrip. No. 3064 in Boeckh's Corp. Ins., which enumerates twenty-eight separate *πύργοι*: it is a list of archons, with the name and civil designation of each: I do not observe that the name of the same *πύργος* ever occurs twice. — *Ἀρτέμων, τοῦ Φιλαίου πύργου, Φιλαίδης*, etc: there are two *πύργοι*, the names of which are effaced on the inscription. In two other inscriptions (Nos. 3065, 3066) there occur *Ἐχίνου συμμορία* — *Ἐχίναδαι* — as the title of a civil division without any specification of an *Ἐχίνου πύργος*; but it is reasonable to presume that the *πύργος* and the *συμμορία* are coincident divisions. The *Φιλαίου πύργος* occurs also in another Insc. No. 3081. Philæus is the Athenian hero, son of Ajax, and eponym of the deme or gens Philaidæ in Attica, who existed, as we here see, in Têos also. In Inscription, No. 3082, a citizen is complimented as *νέον Ἀθάμαντα*, after the name of the old Minyan hero. In No. 3078, the Ionic tribe of the *Γελέοντες* is named as existing at Têos.

Among the titles of the towers we find the following, — *τοῦ Κίδνος πύργου, τοῦ Κιναβάλου πύργου, τοῦ Ἱέρνυς πύργου, τοῦ Δάδδου πύργου, τοῦ Σίντνος πύργου*: these names seem to be rather foreign than Hellenic *Κίδνς, Ἱέρνς, Σίντνς, Δάδδος*, are Asiatic, perhaps Karian or Lydian: respecting the name *Δαίδος*, compare Steph. Byz. v, *Τρέμισσος* where *Δάδας* appears as a Karian name: Boeckh (p. 651) expresses his opinion that *Δάδδος* is Karian or Lydian. Then *Κινάβαλος* seems plainly not Hellenic: it is rather Phœnician (Annibal, Asdrubal, etc.), though Boeckh (in his Introductory Comment to the Sarmatian Inscriptions, part xi. p. 109) tells us that *βαλος* is also Thracian or Getic, — "*βαλος* haud dubie Thracica aut Getica est radix finalis, quam tenes in Dacico nomine Decebalus, et in nomine populi Triballorum." The name *τοῦ Κόθου πύργου, Κοθίδης*, is Ionic: Æklus and Kothus are represented as Ionic œkists in Eubœa. Another name — *Πάρμις, τοῦ Σθενέλου πύργου, Χαλκιδεῖος* — affords an instance in which the local or gentile epithet is not derived from the tower; for *Χαλκιδεῖς* or *Χαλκιδεύς* was the denomination of a village in the Teian territory. In regard to some persons, the gentile epithet is derived from the tower, — *τοῦ Φιλαίου πύργου, Φιλαίδης* — *τοῦ Γαλαίσου πύργου, Γαλαισίδης* — *τοῦ Δάδδου πύργου, Δαδδεῖος* — *τοῦ πύργου τοῦ Κιζῶνος, Κίζων*: in other cases not: *τοῦ Ἐκαδίου πύργου, Σκηβηίδης* — *τοῦ Μηράδους πύργου, Βρυσκίδης* — *τοῦ Ἰσθμίου πύργου, Λεωτίδης*, etc. In the Inscrip. 3065, 3066, there is a formal vote of the *Ἐχίνου συμμορία* or *Ἐχίναδαι* (both names occur): mention is also made of the *βῶμος τῆς συμμορίας*; also the annual solemnity called Leukathea, seemingly a gentile solemnity of the Echinadæ, which connects itself with the mythical family of Athamas. As an analogy to these Teian towers, we may compare the *πύργοι* in the Greek settlement of Olbia in the Euxine (Boeckh, Inscr. 2058), *πύργος Πόσιος, πύργος Ἐπιδαύρου*,— they were portions of the fortifications See also Dio Chrysostom, Orat. xxxvi, pp

the port on the west side of the town of Teôs, had for its eponymous hero Gerês the Bœotian, who was said to have accompanied the Kodrids in their settlement.

The worship of Athênê Polias at Erythræ may probably be traceable to Athens, and that of the Tyrian Hêraklês (of which Pausanias recounts a singular legend) would seem to indicate an intermixture of Phœnician inhabitants. But the close neighborhood of Erythræ to the island of Chios, and the marked analogy of dialect which Herodotus[1] attests between them, show that the elements of the population must have been much the same in both. The Chian poet Iôn mentioned the establishment of Abantes from Eubœa in his native island, under Amphiklus, intermixed with the preëxisting Karians: Hektor, the fourth descendant from Amphiklus, was said to have incorporated this island in the Pan-Ionic amphiktyony. It is to Pherekydês that we owe the mention of the name of Egertius, as having conducted a miscellaneous colony into Chios; and it is through Egertius (though Iôn, the native poet, does not appear to have noticed him) that this logographer made out the connection between the Chians and the other group of Kodrid settlements.[2] In Erythræ, Knôpus or Kleopus is noted as the Kodrid œkist, and as having procured for himself, partly by force, partly by consent, the sovereignty of the preëxisting settlement of mixed inhabitants. The Erythræan historian Hippias recounted how Knôpus had been treacherously put to death on ship-board, by Ortygês and some other false adherents; who, obtaining some auxiliaries from the Chian king Amphiklus, made themselves masters of Erythræ and established in it an oppressive oligarchy. They maintained the government, with a temper at once licentious and cruel, for some time, admitting none but a chosen few of the population within the walls of the town; until at length Hippotês the brother of Knôpus, arriving from without at the head of some troops, found sufficient support from the discontents of the Erythræans to enable him to overthrow the tyranny. Overpowered in the midst of a public festival,

76–77 A large tower, belonging to a private individual named Aglomachus is mentioned in Kyrênê (Herod. iv, 164).

[1] Herod. i, 142: compare Thucyd. viii, 5.

[2] Strabo, xiv, p. 633.

Ortygês and his companions were put to death with cruel tortures and the same tortures were inflicted upon their innocent wives and children,[1] — a degree of cruelty which would at no time have found place amidst a community of European Greeks: even in the murderous party dissensions of Korkyra during the Peloponnesian war, death was not aggravated by preliminary tortures. Aristotle[2] mentions the oligarchy of the Basilids as having existed in Erythræ, and as having been overthrown by a democratical revolution, although prudently managed: to what period this is to be referred we do not know.

Klazomenæ is said to have been founded by a wandering party, either of Ionians or of inhabitants from Kleonæ and Phlius, under Parphorus or Paralus: and Phôkæa by a band of Phokians under Philogenês and Damon. This last-mentioned town was built at the end of a peninsula which formed part of the territory of the Æolic Kymê: the Kymæans were induced to cede it amicably, and to permit the building of the new town. The Phôkæans asked and obtained permission to enrol themserves in the Pan-Ionic amphiktyony; but the permission is said to have been granted only on condition that they should adopt members of the Kodrid family as their œkists; and they accordingly invited from Erythræ and Teôs three chiefs belonging to that family or gens, — Decœtês, Periklus, and Abartus.[3]

Smyrna, originally an Æolic colony, established from Kymê fell subsequently into the hands of the Ionians of Kolophôn. A party of exiles from the latter city, expelled during an intestine dispute, were admitted by the Smyrnæans into their city, — a favor which they repaid by shutting the gates and seizing the

[1] Hippias ap. Athen. vi, p. 259; Polyæn. viii, 44, gives another story about Knôpus. Erythræ, called Κνωπούπολις. (Steph. Byz. v.)

The story told by Polyænus about the dictum of the oracle, and the consequent stratagem, whereby Knôpus made himself master of Erythræ, represents that town as powerful anterior to the Ionic occupation (Polyæn. viii, 43).

[2] Aristot. Polit. v, 5, 4.

[3] Pausan. vii, 3, 3. In Pausanias the name stands *Abartus*; but it probably ought to be *Abarnus*, the eponymus of Caye Abarnis in the Phôkæan territory: see Stephan. Byz. v. Ἀβαρνίς. Raoul Rochette puts Abarnus without making any remark (Histoire des Colonies Grecques, b. iv, c 13, p. 95).

place for themselves, at a moment when the Smyrnæans had gone forth in a body to celebrate a religious festival. The other Æolic towns sent auxiliaries for the purpose of reëstablishing their dispossessed brethren; but they were compelled to submit to an accommodation, whereby the Ionians retained possession of the town, restoring to the prior inhabitants all their movables. These exiles were distributed as citizens among the other Æolic cities.[1]

Smyrna after this became wholly Ionian; and the inhabitants in later times, if we may judge by Aristeidês the rhetor, appear to have forgotten the Æolic origin of their town, though the fact is attested both by Herodotus and by Mimnermus.[2] At what time the change took place, we do not know; but Smyrna appears to have become Ionian before the celebration of the 23d Olympiad, when Onomastus the Smyrnæan gained the prize.[3] Nor have we information as to the period at which the city was received as a member into the Pan-Ionic amphiktyony, for the assertion of Vitruvius is obviously inadmissible, that it was admitted at the instance of Attalus, king of Pergamus, in place of a previous town called Melitê, excluded by the rest for misbehavior.[4] As little can we credit the statement of Strabo, that the city of Smyrna was destroyed by the Lydian kings, and that the inhabitants were compelled to live in dispersed villages until its restoration by Antigonus. A fragment of Pindar, which speaks of "the elegant city of the Smyrnæans," indicates that it must have existed in his time.[5] The town of Eræ, near Lebedus, though seemingly autonomous,[6] was not among the contributors to the Pan-Ionian: Myonnêsus seems to have been a dependency of Teôs, as Pygela and Marathêsium were of Ephesus. Notium, after its recolonization by the Athenians during the Peloponnesian war, seems to have remained separate from and independent of Kolophôn: at least the two are noticed by Skylax as distinct towns.[7]

CHAPTER XIV.

ÆOLIC GREEKS IN ASIA.

On the coast of Asia Minor to the north of the twelve Ionic confederated cities, were situated the twelve Æolic cities, apparently united in a similar manner. Besides Smyrna, the fate of which has already been described, the eleven others were, — Têmnos, Larissa, Neon-Teichos, Kymê, Ægæ, Myrina, Gryneium, Killa, Notium, Ægiroëssa, Pitanê. These twelve are especially noted by Herodotus as the twelve ancient continental Æolic cities, and distinguished on the one hand from the insular Æolic Greeks, in Lesbos, Tenedos, and Hekatonnesoi, — and on the other hand from the Æolic establishments in and about Mount Ida, which seem to have been subsequently formed and derived from Lesbos and Kymê.[1]

Of these twelve Æolic towns, eleven were situated very near together, clustered round the Elæitic gulf: their territories, all of moderate extent, seem also to have been conterminous with each other. Smyrna, the twelfth, was situated to the south of Mount Sipylus, and at a greater distance from the remainder, — one reason why it was so soon lost to its primitive inhabitants. These towns occupied chiefly a narrow but fertile strip of territory lying between the base of the woody mountain-range called Sardênê and the sea.[2] Gryneium, like Kolophôn and Milêtus, possessed a venerated sanctuary of Apollo, of older date than the Æolic emigration. Larissa, Têmnos, and Ægæ were at some little distance from the sea: the first at a short distance north of the Hermus, by which its territory was watered and occasionally inundated, so as to render embankments necessary;[3] the last two

[1] Herodot. i. 149. Herodotus does not name Elæa, at the mouth of the Kaïkus: on the other hand, no other author mentions Ægiroëssa (see Mannert, Geogr. der Gr. und Römer, b. viii, p 396).

[2] Herod. *ut sup.*; Pseudo-Herodot Vit. Homeri c. 9. Σαρδήνης πόλις, μείζων ἐπωκόμισε.

[3] Strabo, xiii, p. 621.

upon rocky mountain-sites, so inaccessible to attack that the inhabitants were enabled, even during the height of the Persian power, to maintain constantly a substantial independence.[1] Elæa, situated at the mouth of the river Kaïkus, became in later times the port of the strong and flourishing city of Pergamus; while Pitana, the northernmost of the twelve, was placed between the mouth of the Kaïkus and the lofty promontory of Kanê, which closes in the Elæitic gulf to the northward. A small town Kanæ, close to that promontory is said to have once existed.[2]

It has already been stated that the legend ascribes the origin of these colonies to a certain special event called the Æolic emigration, of which chronologers profess to know the precise date, telling us how many years it happened after the Trojan war, considerably before the Ionic emigration.[3] That the Æolic as well as Ionic inhabitants of Asia were emigrants from Greece, we may reasonably believe, but as to the time or circumstances of their emigration we can pretend to no certain knowledge. The name of the town Larissa, and perhaps that of Magnêsia on Mount

[1] Xenoph. Hellen iv, 8, 5. The rhetor Aristeidês (Orat. Sacr. xxvii, p. 347, p. 535 D.) describes in detail his journey from Smyrna to Pergamus, crossing the Hermus, and passing through Larissa, Kymê, Myrina, Gryneium, Elæa. He seems not to have passed through Têmnos, at least he does not name it: moreover, we know from Pausanias (v, 13, 3) that Têmnos was on the north bank of the Hermus. In the best maps of this district it is placed, erroneously, both on the south bank, and as if it were on the high road from Smyrna to Kymê. We may infer from another passage of Aristeidês (Or. xlviii, p. 351, p. 468 D.) that Larissa was nearer to the mouth of the Hermus than the maps appear to place it. According to Strabo (xiii, p. 622), it would seem that Larissa was on the south bank of the Hermus; but the better testimony of Aristeidês proves the contrary; Skylax (c. 94) does not name Têmnos, which seems to indicate that its territory was at some distance from the sea.

The investigations of modern travellers have, as yet, thrown little light upon the situation of Têmnos or of the other Æolic towns: see Arundell's Discoveries in Asia Minor, vol. ii, pp. 292–298.

[2] Pliny, H. N. v, 30.

[3] Strabo, xiii, pp. 582–621, compared with Pseudo-Herodotus, Vit. Homeri c. 1–38, who says that Lesbos was occupied by the Æolians one hundred and thirty years after the Trojan war: Kymê, twenty years after Lesbos; Smyrna, eighteen years after Kymê.

The chronological statements of different writers are collected in Mr Clinton's Fast. Hellen. c. 5, pp. 104. 105.

Sipylus (according to what has been observed in the preceding passage), has given rise to the supposition that the anterior inhabitants were Pelasgians, who, having once occupied the fertile banks of the Hermus, as well as those of the Kaïster near Ephesus, employed their industry in the work of embankment.[1] Kymê was the earliest as well as the most powerful of the twelve Æolic towns, Neon-Teichos having been originally established by the Kymæans as a fortress for the purpose of capturing the Pelasgic Larissa. Both Kymê and Larissa were designated by the epithet of Phrikônis: by some this was traced to the mountain Phrikium in Lokris, from whence it was alleged that the Æolic emigrants had started to cross the Ægean; by others it seems to have been connected with an eponymous hero Phrikôn.[2]

It was probably from Kymê and its sister cities on the Elæitic gulf that Hellenic inhabitants penetrated into the smaller towns in the inland plain of the Kaïkus, — Pergamus, Halisarna, Gambreion, etc.[3] In the more southerly plain of the Hermus, on the northern declivity of Mount Sipylus, was situated the city of Magnêsia, called Magnêsia ad Sipylum, in order to distinguish it from Magnêsia on the river Mæander. Both these towns called Magnêsia were inland, — the one bordering upon the Ionic Greeks, the other upon the Æolic, but seemingly not included in any amphiktyony either with the one or the other. Each is referred to a separate and early emigration either from the Magnêtes in Thessaly or from Krête. Like many other of the early towns, Magnêsia ad Sipylum appears to have been originally established higher up on the mountain, — in a situation nearer to Smyrna, from which it was separated by the Sipylene range, — and to have been subsequently brought down nearer to the plain on the north side as well as to the river Hermus. The original site, Palæ-Magnêsia,[4] was still occupied as a dependent township, even

[1] Strabo, xiii, p. 621.

[2] Strabo, xiii, 621; Pseudo-Herodot. c. 14. *Λαιὴ Φρίκωνος*, compared with c. 38.

Φρίκων appears, in later times, as an Ætolian proper name; *Φρίκος* as a Lokrian. See Anecdota Delphica, by E Curtius, Inscript. 40, p. 75 (Berlin 1843).

[3] Xenoph. Hellen. iii, 1, 6; Anabas. vii, 8, 24.

[4] There is a valuable inscription in Boeckh's collection, No. 3137, containing the convention between the inhabitants of Smyrna and Magnêsia. Palæ-Magnêsia seems to have been a strong and important post.

"Magnêtes a Sipylo," Tacit. Annal. ii, 47; Pliny, H. N. v, 29; Pausan. iii 24, 2. *πρὸς βόρραν τοῦ Σιπύλου.*

Stephan. Byzantinus notices only Magnêsia ad Mæandrum, not Magnêsia ad Sipylum.

during the times of the Attalid and Seleukid kings. A like transfer of situation, from a height difficult of access to some lower and more convenient position, took place with other towns in and near this region; such as Gambreion and Skêpsis, which had their Palæ-Gambreion and Palæ-Skêpsis not far distant.

Of these twelve Æolic towns, it appears that all except Kymê were small and unimportant. Thucydidês, in recapitulating the dependent allies of Athens at the commencement of the Peloponnesian war, does not account them worthy of being enumerated.[1] Nor are we authorized to conclude, because they bear the general name of Æolians, that the inhabitants were all of kindred race, though a large proportion of them are said to have been Bœotians, and the feeling of fraternity between Bœotians and Lesbians was maintained throughout the historical times; one etymology of the name is, indeed, founded upon the supposition that they were of miscellaneous origin.[2] We do not hear, moreover, of any considerable poets produced by the Æolic continental towns; in this respect Lesbos stood alone, — an island said to have been the earliest of all the Æolic settlements, anterior even to Kymê. Six towns were originally established in Lesbos, — Mitylênê, Mêthymna, Eresus, Pyrrha, Antissa, and Arisbê: the last-mentioned town was subsequently enslaved and destroyed by the Methymnæans, so that there remained only five towns in all.[3] According to the political subdivision usual in Greece, the island had thus, first six, afterwards five, independent governments, of which, however, Mitylênê, situated in the south eastern quarter and facing the promontory of Kanê, was by far the first, while Mêthymna, on the north of the island over against

[1] Thucyd. ii, 9.

[2] Strabo, ix, p. 402; Thucyd. viii, 100; Pseudo-Herodot. Vit. Homer, i. *Ἐπεὶ γὰρ ἡ πάλαι Αἰολιῶτις Κύμη ἐκτίζετο, συνῆλθσι ἐν ταύτῳ παντοδαπὰ ἔθνεα Ἑλληνικὰ, καὶ δή καὶ ἐκ Μαγνησίας*, etc. Etymolog. Magn. v *Αἰολεῖς.*

[3] Herodot. i, 151; Strabo, xiii, p. 590.

Cape Lekton, was the second. Like so many other Grecian colonies, the original city of Mitylênê was founded upon an islet divided from Lesbos by a narrow strait; it was subsequently extended on to Lesbos itself, so that the harbor presented two distinct entrances.[1]

It appears that the native poets and fabulists who professed to deliver the archæology of Lesbos, dwelt less upon the Æolic settlers than upon the various heroes and tribes who were alleged to have had possession of the island anterior to that settlement, from the deluge of Deukalion downwards, — just as the Chian and Samian poets seem to have dwelt principally upon the ante-Ionic antiquities of their respective islands. After the Pelasgian Xanthus son of Triopas, comes Makar son of Krinakus, the great native hero of the island, supposed by Plehn to be the eponym of an occupying race called the Makares: the Homeric Hymn to Apollo brings Makar into connection with the Æolic inhabitants by calling him son of Æolus, and the native historian Myrsilus also seems to have treated him as an Æolian.[2] To dwell upon such narratives suited the disposition of the Greeks; but when we come to inquire for the history of Lesbos, we find ourselves destitute of any genuine materials, not only for the period prior to the Æolic occupation, but also for a long time after it: nor can we pretend to determine at what date that occupation took place. We may reasonably believe it to have occurred before 776 B. C., and it therefore becomes a part of the earliest manifestations of real Grecian history: both Kymê, with its eleven sister towns on the continent, and the islands Lesbos and Tenedos, were then Æolic; and I have already remarked that the migration of the father of Hesiod the poet, from the Æolic Kymê to Askra in Bœotia, is the earliest authentic fact known to us on contemporary testimony, — seemingly between 776 and 700 B. C.

Plehn (Lesbiaca, c. 2, pp. 25–37) has collected all the principal fables respecting this Lesbian archæology: compare also Raoul Rochette (Histoire des Colonies Grecques, t. i, c. 5, p. 182 etc.)

But besides these islands, and the strip of the continent between Kymê and Pitanê (which constituted the territory properly called Æolis), there were many other Æolic establishments in the region near Mount Ida, the Troad, and the Hellespont, and even in European Thrace. All these establishments seem to have emanated from Lesbos, Kymê, and Tenedos, but at what time they were formed we have no information. Thirty different towns are said to have been established by these cities,[1] and nearly all the region of Mount Ida (meaning by that term the territory west of a line drawn from the town of Adramyttion northward to Priapos on the Propontis) came to be Æolized. A new Æolis[2] was thus formed, quite distinct from the Æolis near the Elæitic gulf, and severed from it partly by the territory of Atarneus, partly by the portion of Mysia and Lydia, between Atarneus and Adramyttium, including the fertile plain of Thêbê: a portion of the lands on this coast seem indeed to have been occupied by Lesbos, but the far larger part of it was never Æolic. Nor was Ephorus accurate when he talked of the whole territory between Kymê and Abydos as known under the name of Æolis.[3]

The inhabitants of Tenedos possessed themselves of the strip of the Troad opposite to their island, northward of Cape Lekton, — those of Lesbos founded Assus, Gargara, Lampônia, Antandrus,[4] etc., between Lekton and the north-eastern corner of the Adramyttian gulf, — while the Kymæans seem to have established themselves at Kebrên and other places in the inland Idæan dis-

[1] Strabo, xiii, pp. 621, 622. Μέγιστον δέ ἐστι τῶν Αἰολικῶν καὶ ἀρίστη Κύμη, καὶ σχεδὸν μητρόπολις αὐτή τε καὶ ἡ Λέσβος τῶν ἄλλων πόλεων τριάκοντά που τὸν ἀριθμὸν, etc.

[2] Xenophon, Hellen. iii, 1, 10. μέχρι τῆς Φαρναβάζου Αἰολίδος — ἡ Αἰολὶς αὐτὴ ἣν μὲν Φαρναβάζου.

Xenophon includes the whole of the Troad under the denomination of Æolis. Skylax distinguishes the Troad from Æolis: he designates as the Troad the coast towns from Dardanus seemingly down to Lekton: under Æolis he includes Kebrên, Skêpsis, Neandreia, and Pityeia, though how these four towns are to be called ἐπὶ θαλάσσῃ it is not easy to see (Skylax, 94–95). Nor does Skylax notice either the Peræa of Tenedos, or Assos and Gargara.

trict.[1] As far as we can make out, this north-western corner (west of a line drawn from Smyrna to the eastern corner of the Propontis) seems to have been occupied, anterior to the Hellenic settlements, by Mysians and Teukrians, — who are mentioned together, in such manner as to show that there was no great ethnical difference between them.[2] The elegiac poet Kallinus, in the middle of the seventh century B. C., was the first who mentioned the Teukrians: he treated them as emigrants from Krête, though other authors represented them as indigenous, or as having come from Attica: however the fact may stand as to their origin, we may gather that, in the time of Kallinus, they were still the great occupants of the Troad.[3] Gradually, the south and west coasts, as well as the interior of this region, became penetrated by successive colonies of Æolic Greeks, to whom the iron and ship timber of Mount Ida were valuable acquisitions; and thus the small Teukrian townships (for there were no considerable cities) became Æolized; while on the coast northward of Ida, along the Hellespont and Propontis, Ionic establishments were formed from Milêtus and Phôkæa, and Milesian colonists were received into the inland town of Skêpsis.[4] In the time of Kallinus, the Teukrians seem to have been in possession of Hamaxitus and Kolônæ, with the worship of the Sminthian Apollo, in the south-western region of the Troad: a century and a half afterwards, at the time of the Ionic revolt, Herodotus notices the inhabitants of Gergis, occupying a portion of the northern region of Ida in the line eastward from Dardanus and Ophrynion, as "the remnant of the ancient Teukrians."[5] We also find the Mityleneans and Athenians con-

[3] Kallinus ap. Strabo, xiii, p. 604: compare p. 613, *οὓς πρῶτος παρέδωκε Καλλῖνος*, etc

[4] Strabo, xiii, pp. 607–635.

[5] Herodot. v, 122, *εἶλε μεν Αἰολέας πάντας, ὅσοι την Ἰλιάδα νέμονται, εἶλε δὲ Τέργιθας, τοὺς ὑπολειφθέντας τῶν ἀρχαίων Τευκρῶν*, etc.

tending by arms about 600–580 B. C., for the possession of Sigeium at the entrance of the Hellespont:[1] probably the Lesbian settlements on the southern coast of the Troad, lying as they do so much nearer to the island, as well as the Tenedian settlements on the western coast opposite Tenedos, had been formed at some time prior to this epoch. We farther read of Æolic inhabitants as possessing Sestos on the European side of the Hellespont.[2] The name Teukrians gradually vanished out of present use, and came to belong only to the legends of the past; preserved either in connection with the worship of the Sminthian Apollo, or by writers such as Hellanikus and Kephalôn of Gergis, from whence it passed to the later poets and to the Latin epic. It appears that the native place of Kephalôn was a town called Gergis or Gergithes near Kymê: there was also another place called Gergêtha on the river Kaïkus, near its sources, and therefore higher up in Mysia. It was from Gergithes near Kymê (according to Strabo), that the place called Gergis in Mount Ida was settled:[3] probably the non-Hellenic inhabitants, both near Kymê and in the region of Ida, were of kindred race, but the settlers who went from Kymê to Gergis in Ida were doubtless Greeks, and contributed in this manner to the conversion of that place from a Teukrian to an Hellenic settlement. In one of those violent dislocations of inhabitants, which were so frequent afterwards among the successors of Alexander in Asia Minor, the Teukro-Hellenic population of the Idæan Gergis is said to have been carried away by Attalus of Pergamus, in order to people the village of Gergêtha near the river Kaikus.

We are to regard the Æolic Greeks as occupying not only their twelve cities on the continent round the Elæitic gulf, and the neighboring islands, of which the chief were Lesbos and Tenedos, — but also as gradually penetrating and Hellenizing the Idæan region and the Troad. This last process belongs probably to a period subsequent to 776 B. C., but Kymê and Lesbos doubtless count as Æolic from an earlier period.

The Teukrians, in the conception of Herodotus, were the Trojans described in the Iliad, — the *Τευκρὶς γῆ* seems the same as *Ἰλιὰς γῆ* (ii, 118).

[2] Herodot. ix, 115.

[3] Strabo, xiii, 589–616.

Of Mitylênê, the chief city of Lesbos, we hear some facts between the 40th and 50th Olympiad (620–580 B. C.), which unfortunately reach us only in a faint echo. That city then numbered as its own the distinguished names of Pittakus, Sappho, and Alkæus: like many other Grecian communities of that time, it suffered much from intestine commotion, and experienced more than one violent revolution. The old oligarchy called the Penthilidæ (seemingly a gens with heroic origin), rendered themselves intolerably obnoxious by misrule of the most reckless character; their brutal use of the bludgeon in the public streets was avenged by Megaklês and his friends, who slew them and put down their government.[1] About the 42d Olympiad (612 B. C.) we hear of Melanchrus, as despot of Mitylênê, who was slain by the conspiracy of Pittakus, Kikis, and Antimenidês, — the last two being brothers of Alkæus the poet. Other despots, Myrsilus, Megalagyrus, and the Kleanaktidæ, whom we know only by name, and who appear to have been immortalized chiefly by the bitter stanzas of Alkæus, acquired afterwards the sovereignty of Mitylênê. Among all the citizens of the town, however, the most fortunate, and the most deserving, was Pittakus the son of Hyrrhadus, — a champion trusted by his countrymen alike in foreign war and in intestine broils.[2]

The foreign war in which the Mityleneans were engaged, and in which Pittakus commanded them, was against the Athenians on the continental coast opposite to Lesbos, in the Troad, near Sigeium. The Mityleneans had already established various settlements along the Troad, the northernmost of which was Achilleium: they laid claim to the possession of this line of coast, and when Athens (about the 43d Olympiad, as it is said[3]) attempted to plant

[1] Aristot. Polit. v, 8. 13.

[2] Diogen. Laërt. i, 74; Suidas, v, Κίκις, Πίττακος; Strabo, xiii, p. 617. Two lines of Alkæus are preserved, exulting in the death of Myrsilus (Alkæus, Fragm. 12, ed. Schneidewin). Melanchrus also is named (Fragm. 13), and Pittakus, in a third fragment (73, ed. Schneid.), is brought into connection with Myrsilus.

As regard to the chronology of this war, see a note near the end of my previous chapter on the Solonian legislation. I have there noticed what I believe to be a chronological mistake of Herodotus in regard to the period between 600–560 B. C. Herodotus considers this war between the Mityleneans and Athenians, in which Pittakus and Alkæus were concerned, to have been directed by Peisistratus, whose government did not commence until 560 B. C. (Herod. v, 94, 95).

My suspicion is, that there were two Athenian expeditions to these regions — one in the time of Alkæus and Pittakus; a second, much afterwards, undertaken by order of Peisistratus, whose illegitimate son Hegesistratus became, in consequence, despot of Sigeium. Herodotus appears to me to have merged the two into one.

[3] See the difficult fragment of Alkæus (Fr. 24, ed. Schneidewin), preserved in Strabo, xiii, p. 600; Herodot. v, 94, 95; Archilochus, Eleg. Fr. i, 5, ed. Schneidewin; Horat. Carm. ii, 7, 9; perhaps also Anakreon, but not certainly (see Fr. 81, ed. Schneidewin), is to be regarded as having thrown away his shield.

[4] Aristot. Rhetoric. i, 16, 2, where ἐναγχος marks the date.

a settlement at Sigeium, they resisted the establishment by force. At the head of the Mitylenean troops, Pittakus engaged in single combat with the Athenian commander Phrynôn, and had the good fortune to kill him. The general struggle was, however, carried on with no very decisive result. On one memorable occasion the Mityleneans fled, and Alkæus the poet, serving as an hoplite in their ranks, commemorated in one of his odes both his flight and the humiliating loss of his shield, which the victorious Athenians suspended as a trophy in the temple of Athênê at Sigeium. His predecessor Archilochus, and his imitator Horace, have both been frank enough to confess a similar misfortune, which Tyrtæus perhaps would not have endured to survive.[1] It was at length agreed by Mitylênê and Athens to refer the dispute to Periander of Corinth. While the Mityleneans laid claim to the whole line of coast, the Athenians alleged that inasmuch as a contingent from Athens had served in the host of Agamemnôn against Troy, their descendants had as good a right as any other Greeks to share in the conquered ground. It appears that Periander felt unwilling to decide this delicate question of legendary law. He directed that each party should retain what they possessed, and his verdict[2] was still remembered and appealed to even in the time of Aristotle, by the inhabitants of Tenedos against those of Sigeium.

Though Pittakus and Alkæus were both found in the same line of hoplites against the Athenians at Sigeium, yet in the domestic politics of their native city, their bearing was that of bitter enemies. Alkæus and Antimenidas his brother were worsted in this party-feud, and banished: but even as exiles they were strong

enough seriously to alarm and afflict their fellow-citizens, while their party at home, and the general dissension within the walls, reduced Mitylênê to despair. In this calamitous condition, the Mityleneans had recourse to Pittakus, who with his great rank in the state (his wife belonged to the old gens of the Penthilids), courage in the field, and reputation for wisdom, inspired greater confidence than any other citizen of his time. He was by universal consent named Æsymnete or dictator for ten years, with unlimited powers:[1] and the appointment proved eminently successful. How effectually he repelled the exiles, and maintained domestic tranquillity, is best shown by the angry effusions of Alkæus, whose songs (unfortunately lost) gave vent to the political hostility of the time, in the same manner as the speeches of the Athenian orators two centuries afterwards, and who in his vigorous invectives against Pittakus did not spare even the coarsest nicknames, founded on alleged personal deformities.[2] Respecting the proceedings of this eminent dictator, the contemporary and reported friend of Solon, we know only in a general way, that he succeeded in reëstablishing security and peace, and that at the end of his term he voluntarily laid down his authority,[3] — an evidence not only of probity superior to the lures of ambition, but also of that conscious moderation during the period of his dictatorship which left him without fear as a private citizen afterwards He enacted various laws for Mitylênê, one of which was sufficiently curious to cause it to be preserved and commented on, — for it prescribed double penalties against offences committed by men in a state of intoxication.[4] But he did not (like Solon at Athens)

[2] Diogen. Laërt. i, 81.

[3] Strabo, xiii, p. 617; Diogen. Laërt. i, 75; Valer. Maxim. vi, 5. 1

[4] Aristot. Polit. ii, 9, 9; Rhetoric ii, 27, 2.

A ditty is said to have been sung by the female grinding-slaves in Lesbos, when the mill went heavily: Ἄλει, μῦλα, ἄλει· καὶ γὰρ Πιττακὸς ἀλεῖ, Τᾶς μεγάλας Μιτυλάνας βασιλεύων, — "Grind, mill, grind; for Pittakus also grinds, the master of great Mitylênê." This has the air of a genuine composition of the time, set forth by the enemies of Pittakus, and imputing to him (through a very intelligible metaphor) tyrannical conduct; though both Plutarch (Sept Sap. Conv. c. 14, p. 157) and Diogenes Laërt. (i, 81) con-

strue it literally, as if Pittakus had been accustomed to take bodily exercise at the hand-mill.

introduce any constitutional changes, nor provide any new formal securities for public liberty and good government:[1] which illustrates the remark previously made, that Solon in doing this was beyond his age, and struck out new lights for his successors, — since on the score of personal disinterestedness Pittakus and he are equally unimpeachable. What was the condition of Mitylênê afterwards, we have no authorities to tell us. Pittakus is said, if the chronological computers of a later age can be trusted, to have died in the 52d Olympiad (B. C. 572–568). Both he and Solon are numbered among the Seven Wise Men of Greece, respecting whom something will be said in a future chapter. The various anecdotes current about him are little better than uncertified exemplifications of a spirit of equal and generous civism: but his songs and his elegiac compositions were familiar to literary Greeks in the age of Plato.

CHAPTER XV.

ASIATIC DORIANS.

The islands of Rhodes, Kôs, Symê, Nisyros, Kasus, and Karpathus, are represented in the Homeric Catalogue as furnishing troops to the Grecian armament before Troy. Historical Rhodes, and historical Kôs, are occupied by Dorians, the former with its three separate cities of Lindus, Jalysus, and Kameirus. Two other Dorian cities, both on the adjacent continent, are joined with these four so as to constitute an amphiktyony on the Triopian promontory or south-western corner of Asia Minor, — thus constituting an hexapolis, including Halikarnassus, Knidus, Kôs, Lindus, Jalysus, and Kameirus. Knidus was situated on the

Triopian promontory itself; Halikarnassus more to the northward on the northern coast of the Keramic gulf: neither of the two are named in Homer.

The legendary account of the origin of these Asiatic Dorians has already been given, and we are compelled to accept their hexapolis as a portion of the earliest Grecian history, of which no previous account can be rendered. The circumstance of Rhodes and Kôs being included in the Catalogue of the Iliad leads us to suppose that they were Greek at an earlier period than the Ionic or Æolic settlements. It may be remarked that both the brothers Antiphus and Pheidippus from Kôs, and Tlêpolemus from Rhodes, are Herakleids, — the only Herakleids who figure in the Iliad: and the deadly combat between Tlêpolemus and Sarpêdôn may perhaps be an heroic copy drawn from real contests, which doubtless often took place between the Rhodians and their neighbors the Lykians. That Rhodes and Kôs were already Dorian at the period of the Homeric Catalogue, I see no reason for doubting. They are not called Dorian in that Catalogue, but we may well suppose that the name Dorian had not at that early period come to be employed as a great distinctive class-name, as it was afterwards used in contrast with Ionian and Æolian. In relating the history of Pheidôn of Argos, I have mentioned various reasons for suspecting that the trade of the Dorians on the eastern coast of the Peloponnesus was considerable at an early period, and there may well have been Doric migrations by sea to Krête and Rhodes, anterior to the time of the Iliad.

Herodotus tells us that the six Dorian towns, which had established their amphiktyony on the Triopian promontory, were careful to admit none of the neighboring Dorians to partake of it. Of these neighboring Dorians, we make out the islands of Astypalæ, and Kalymnæ,[1] Nisyrus, Karpathus, Symê, Têlus, Kasus, and Chalkia, — on the continental coast, Myndus, situated on the same peninsula with Halikarnassus, — Phasêlis, on the eastern coast of Lykia towards Pamphylia. The strong coast-rock of Iasus, midway between Milêtus and Halikarnassus, is said to have been

[1] See the Inscriptions in Boeckh's collection, 2483–2671: the latter is an Iasian Inscription, reciting a Doric decree by the inhabitants of Kalymna: also Ahrens, De Dialecto Dorică, pp. 15, 553; Diodor. v, 53–54.

originally founded by Argeians, but was compelled in consequence of destructive wars with the Karians to admit fresh settlers and a Neleid œkist from Milêtus.[1] Bargylia and Karyanda seem to have been Karian settlements more or less Hellenized. There probably were other Dorian towns, not specially known to us, upon whom this exclusion from the Triopian solemnities was brought to operate. The six amphiktyonized cities were in course of time reduced to five, by the exclusion of Halikarnassus: the reason for which (as we are told) was, that a citizen of Halikarnassus, who had gained a tripod as prize, violated the regulation which required that the tripod should always be consecrated as an offering in the Triopian temple, in order that he might carry it off to decorate his own house.[2] The Dorian amphiktyony was thus contracted into a pentapolis: at what time this incident took place, we do not know, nor is it perhaps unreasonable to conjecture that the increasing predominance of the Karian element at Halikarnassus had some effect in producing the exclusion, as well as the individual misbehavior of the victor Agasiklês.

CHAPTER XVI.

NATIVES OF ASIA MINOR WITH WHOM THE GREEKS BECAME CONNECTED.

From the Grecian settlements on the coast of Asia Minor, and on the adjacent islands, our attention must now be turned to those non-Hellenic kingdoms and people with whom they there came in contact.

Our information with respect to all of them is unhappily very scanty. Nor shall we improve our narrative by taking the catalogue, presented in the Iliad, of allies of Troy, and construing it as if it were a chapter of geography: if any proof were wanting

[1] Polyb. xvi, 5.

[2] Herodot. i, 144.

of the unpromising results of such a proceeding, we may find it in the confusion which darkens so much of the work of Strabo, — who perpetually turns aside from the actual and ascertainable condition of the countries which he is describing, to conjectures on Homeric antiquity, often announced as if they were unquestionable facts. Where the Homeric geography is confirmed by other evidence, we note the fact with satisfaction; where it stands unsupported or difficult to reconcile with other statements, we cannot venture to reason upon it as in itself a substantial testimony. The author of the Iliad, as he has congregated together a vast body of the different sections of Greeks for the attack of the consecrated hill of Ilium, so he has also summoned all the various inhabitants of Asia Minor to coöperate in its defence, and he has planted portions of the Kilikians and Lykians, whose historical existence is on the southern coast, in the immediate vicinity of the Troad. Those only will complain of this who have accustomed themselves to regard him as an historian or geographer: if we are content to read him only as the first of poets, we shall no more quarrel with him for a geographical misplacement, than with his successor Arktinus for bringing on the battle-field of Ilium the Amazons or the Æthiopians.

The geography of Asia Minor is even now very imperfectly known,[1] and the matters ascertained respecting its ancient divisions and boundaries relate almost entirely either to the later periods of the Persian empire, or to times after the Macedonian and even after the Roman conquest. To state them as they stood in the time of Crœsus king of Lydia, before the arrival of the conquering Cyrus, is a task in which we find little evidence to sustain us. The great mountain chain of Taurus, which begins from the Chelidonian promontory on the southern coast of Lykia, and strikes

[1] For the general geography of Asia Minor, see Albert Forbiger, Handbuch der Alt. Geogr. part ii, sect. 61, and an instructive little treatise, Fünf Inschriften und fünf Städte in Klein Asien, by Franz and Kiepert, Berlin, 1840. with a map of Phrygia annexed. The latter is particularly valuable as showing us how much yet remains to be made out: it is too often the practice with the compilers of geographical manuals to make a show of full knowledge, and to disguise the imperfection of their data. Nor do they always keep in view the necessity of distinguishing between the territorial names and divisions of one age and those of another.

north-eastward as far as Armenia, formed the most noted boundary-line during the Roman times, — but Herodotus does not once mention it; the river Halys is in his view the most important geographical limit. Northward of Taurus, on the upper portions of the rivers Halys and Sangarius, was situated the spacious and lofty central plain of Asia Minor. To the north, west, and south of this central plain, the region is chiefly mountainous, as it approaches all the three seas, the Euxine, the Ægean, and the Pamphylian, — most mountainous in the case of the latter, permitting no rivers of long course. The mountains Kadmus, Messôgis, Tmôlus, stretch westward towards the Ægean sea, but leaving extensive spaces of plain and long valleys, so that the course of the Mæander, the Kaïster, and the Hermus is of considerable length. The north-western part includes the mountainous regions of Ida, Têmnus, and the Mysian Olympus, yet with much admixture of fertile and productive ground. The elevated tracts near the Euxine appear to have been the most wooded, — especially Kytôrus: the Parthenius, the Sangarius, the Halys, and the Iris, are all considerable streams flowing northward towards that sea. Nevertheless, the plain land interspersed through these numerous elevations was often of the greatest fertility; and as a whole, the peninsula of Asia Minor was considered as highly productive by the ancients, in grain, wine, fruit, cattle, and in many parts, oil; though the cold central plain did not carry the olive.[1]

Along the western shores of this peninsula, where the various bands of Greek emigrants settled, we hear of Pelasgians, Teukrians, Mysians, Bithynians, Phrygians, Lydians or Mæonians, Karians, Lelegians. Farther eastward are Lykians, Pisidians, Kilikians, Phrygians, Kapadokians, Paphlagonians, Mariandynians, etc. Speaking generally, we may say that the Phrygians, Teukrians, and Mysians appear in the north-western portion, between the river Hermus and the Propontis, — the Karians and Lelegians south of the river Mæander, — and the Lydians in the central region between the two. Pelasgians are found here and

[1] Cicero, Pro Lege Manilià, c. 6; Strabo, xii, p. 572; Herodot. v, 32. See the instructive account of the spread and cultivation of the olive-tree, in Ritter, Erdkunde, West-Asien, b iii, Abtheilung iii: Abschn. i, s. 50. pp 522–537

there, seemingly both in the valley of the Hermus and in that of the Kaïster: even in the time of Herodotus, there were Pelasgian settlements at Plakia and Skylakê on the Propontis, westward of Kyzikus: and O. Muller would even trace the Tyrrhenian Pelasgians to Tyrrha, an inland town of Lydia, from whence he imagines, though without much probability, the name Tyrrhenian to be derived.

One important fact to remark, in respect to the native population of Asia Minor at the first opening of this history, is, that they were not aggregated into great kingdoms or confederations, nor even into any large or populous cities, — but distributed into many inconsiderable tribes, so as to present no overwhelming resistance, and threaten no formidable danger, to the successive bodies of Greek emigrants. The only exception to this is, the Lydian monarchy of Sardis, the real strength of which begins with Gygês and the dynasty of the Mermnadæ, about 700 B. C. Though the increasing force of this kingdom ultimately extinguished the independence of the Greeks in Asia, it seems to have noway impeded their development, as it stood when they first arrived, and for a long time afterwards. Nor were either Karians or Mysians united under any one king, so as to possess facilities for aggression or conquest.

As far as can be made out from our scanty data, it appears that all the nations of Asia Minor west of the river Halys, were, in a large sense, of kindred race with each other, as well as with the Thracians on the European side of the Bosphorus and Hellespont. East of the Halys dwelt the people of Syro-Arabian or Semitic race, — Assyrians, Syrians, and Kappadokians, — as well as Kilikians, Pamphylians, and Solymi, along its upper course and farther southward to the Pamphylian sea. Westward of the Halys, the languages were not Semitic, but belonging to a totally different family,[1] — cognate, yet distinct one from another, perhaps not mutually intelligible. The Karians, Lydians, and Mysians recognized a certain degree of brotherhood with each other, attested by common religious sacrifices in the temple of Zeus Karios, at Mylasa.[1] But it is by no means certain that each of these nations mutually comprehended each other's speech; and Herodotus, from whom we derive the knowledge of these common sacrifices, acquaints us at the same time that the Kaunians in the south-western corner of the peninsula had no share in them, though speaking the same language as the Karians; he does not, however, seem to consider identity or difference of language as a test of national affinity.

[1] Herodot. i, 72: Heeren, Ideen über den Verkehr der Alten Welt, part i, abth. i, pp. 142–145. It may be remarked, however, that the Armenians, eastward of the Halys, are treated by Herodotus as colonists from the Phrygians (vii, 73): Stephanus Byz. says the same, v, Ἀρμενία, adding also, καὶ τῇ φωνῇ πολλὰ φρυγίζουσι. The more careful researches of modern linguists after much groundless assertion on the part of those who preceded them have shown that the Armenian language belongs in its structure to the Indo Germanic family, and is essentially distinct from the Semitic: see Ritter, Erdkunde, West-Asien, b. iii, abth. iii; Abschn. i, 5, 36, pp. 577–582. Herodotus rarely takes notice of the language spoken, nor does he on this occasion, when speaking of the river Halys as a boundary.

Along the coast of the Euxine, from the Thracian Bosphorus eastward to the river Halys, dwelt Bithynians or Thynians, Mariandynians and Paphlagonians, — all recognized branches of the widely-extended Thracian race. The Bithynians especially, in the north-western portion of this territory, and reaching from the Euxine to the Propontis, are often spoken of as Asiatic Thracians, — while on the other hand various tribes among the Thracians of Europe, are denominated Thyni, or Thynians,[2] — so little difference was there in the population on the two sides of the Bosphorus, alike brave, predatory, and sanguinary. The Bithynians of Asia are also sometimes called Bebrykians, under which denomination they extend as far southward as the gulf of Kios in the Propontis.[3] They here come in contact with Myg-

[1] Herodot. i, 170–171.

[3] Dionys. Periegêt. 805; Apollodôrus, i, 9, 20. Theokritus puts the Bebrykians on the coast of the Euxine — Id. xxii, 29; Syncell. p. 340, Bonn. The story in Appian, Bell. Mithridat. init. is a singular specimen of Grecian fancy, and anxiety to connect the antiquities of a nation with the Trojan war: the Greeks whom he followed assigned the origin of the Bithynians to Thracian followers of Rhêsus, who fled from Troy after the latter had been killed by Diomêdes: Dolonkus, eponym of the Thracians in the Chersonesus, is called brother of Bithynus (Steph. Byz. Δόλογκος — Βιθυνία).

The name Μαριαν-δυνοὶ, like Βι-θυνοὶ, may probably be an extension of

donians, Mysians, and Phrygians. Along the southern coast of the Propontis, between the rivers Rhyndakus and Æsêpus, in immediate neighborhood with the powerful Greek colony of Kyzikus, appear the Doliones; next, Pelasgians at Plakia and Skylakê; then again, along the coast of the Hellespont near Abydus and Lampsakus, and occupying a portion of the Troad, we find mention made of other Bebrykians.[1] In the interior of the Troad, or the region of Ida, are Teukrians and Mysians: the latter seem to extend southward down to Pergamus and the region of Mount Sipylus, and eastward to the mountainous region called the Mysian Olympus, south of the lake Askanius, near which they join with the Phrygians.[2]

As far as any positive opinion can be formed respecting nations of whom we know so little, it would appear that the Mysians and Phrygians are a sort of connecting link between Lydians and Karians on one side, and Thracians (European as well as Asiatic) on the other, — a remote ethnical affinity pervading the whole. Ancient migrations are spoken of in both directions across the Hellespont and the Thracian Bosphorus. It was the opinion of some that Phrygians, Mysians, and Thracians had emigrated into Asia from Europe, and the Lydian historian Xanthus referred the arrival of the Phrygians to an epoch subsequent to the Trojan war.[3] On the other hand, Herodotus speaks of a vast body of Teukrians and Mysians, who, before the Trojan war, had crossed the strait from Asia into Europe, expelled many of the European Thracians from their seats, crossed the Strymôn and the Macedonian rivers, and penetrated as far southward as the river Peneus in Thessaly, — as far westward as the Ionic

compound of the primitive Θυνοί; perhaps, also, Βέβρυκες stands in the same relation to Βριγὲς, or Φρυγές. Hellanikus wrote Θύμβριον Δύμβριον (Steph. Byz. in v).

Kios is Mysian in Herodotus, v, 122: according to Skylax, the coast from the gulf of Astakus to that of Kios is Mysia (c. 93).

[1] Charon of Lampsakus, Fr. 7, ed. Didot. Χάρων δὲ φησὶ καὶ τὴν Λαμψακηνῶν χώραν πρότερον Βεβρυκίαν καλεῖσθαι ἀπὸ τῶν κατοικησάντων αὐτὴν Βεβρύκων· τὸ δὲ γένος αὐτῶν ἠφάνισται διὰ τοὺς γενομένους πολέμους. Strabo, xiii, p. 586; Conon, Narr. 12; Dionys. Hal. i, 54.

gulf. This Teukro-Mysian migration, he tells us, brought about two consequences: first, the establishment near the river Strymôn of the Pæonians, who called themselves Teukrian colonists;[1] next, the crossing into Asia of many of the dispossessed Thracian tribes from the neighborhood of the Strymôn, into the north-western region of Asia Minor, by which the Bithynian or Asiatic Thracian people was formed. The Phrygians also are supposed by some to have originally occupied an European soil on the borders of Macedonia, near the snow-clad Mount Bermion, at which time they were called Briges, — an appellative name in the Lydian language equivalent to freemen, or Franks:[2] while the Mysians are said to have come from the north-eastern portions of European Thrace south of the Danube, known under the Roman empire by the name of Mœsia.[3] But with respect to the Mysians there was also another story, according to which they were described as colonists emanating from the Lydians; put forth according to that system of devoting by solemn vow a tenth of the inhabitants, chosen by lot, to seek settlements elsewhere, which recurs not unfrequently among the stories of early emigrations, as the consequence of distress and famine. And this last opinion was supported by the character of the Mysian language, half Lydian and half Phrygian, of which both the Lydian historian Xanthus, and Menekratês of Elæa,[4] — by whom the opinion was announced, — must have been very competent judges.

From such tales of early migration both ways across the Hellespont and the Bosphorus, all that we can with any certainty infer is, a certain measure of affinity among the population of Thrace and Asia Minor, — especially visible in the case of the Phrygians and Mysians. The name and legends of the Phrygian hero Midas are connected with different towns throughout the

[3] Strabo, vii, p. 295; xii, pp. 542, 564, 571, where he cites the geographer Artemidôrus. In the passage of the Iliad (xiii, 5), the Μυσοὶ ἀγχέμαχοι appear to be conceived by the poet in European Thrace; but Apollodôrus does not seem to have so construed the passage. Niebuhr (Kleine Schriften p. 370) expresses himself more confidently than the evidence warrants

[4] Strabo, xii, p. 572; Herodot. vii, 74.

extensive region of Asiatic Phrygia, — Kelænæ, Pessinûs, Ankyra,[1] Gordium, — as well as with the neighborhood of Mount Bermion in Macedonia: the adventure whereby Midas got possession of Silenus, mixing wine with the spring of which he drank, was localized at the latter place as well as at the town of Thymbrion, nearly at the eastern extremity of Asiatic Phrygia.[2] The name Mygdonia, and the eponymous hero Mygdôn, belong not less to the European territory near the river Axius, — afterwards a part of Macedonia, — than to the Asiatic coast of the eastern Propontis, between Kios and the river Rhyndakus.[3] Otreus and Mygdôn are the commanders of the Phrygians in the Iliad; and the river Odrysês, which flowed through the territory of the Asiatic Mygdonians, into the Rhyndakus, affords another example of homonymy with the Odrysian Thracians[4] in Europe. And as these coincidences of names and legends conduct us to the idea of analogy and affinity between Thracians and Phrygians, so we find Archilochus, the earliest poet remaining to us who mentions them as contemporaries, coupling the two in the same simile.[5] To this early Parian Iambist, the population on

[1] Diodor. iii, 59; Arrian, ii, 3, 1; Quint. Curt. iii, 1, 12; Athenæ. x, p. 415. We may also notice the town of Κοτυάειον near Μιδάειον in Phrygia, as connected with the name of the Thracian goddess *Kotys* (Strabo, x, p. 470; xii, p. 576).

[2] Herodot. viii, 138; Theopompus, Frag. 74, 75, 76, Didot (he introduced a long dialogue between Midas and Silenus, — Dionys. Halik. Vett. Script. Censur, p. 70: Theon. Progymnas. c. 2); Strabo, xiv, p. 680; Xenophon, Anabas. i, 2, 13.

[3] Strabo, xii. pp. 575–576; Steph. Byz. Μυγδονία; Thucyd. ii, 99. The territory Mygdonia and the Mygdonians, in the distant region of Mesopotamia, eastward of the river Chaboras (Plutarch, Lucullus, 32; Polyb. v, 51; Xenophon, Anab. iv, 3, 4) is difficult to understand, since it is surprising to find a branch of these more westerly Asiatics in the midst of the Syro-Arabian population. Strabo (xv, p. 747) supposes it to date only from the times of the Macedonian conquest of Asia, which is disproved by the mention of the name in Xenophon; though this reading in the text of Xenophon is by some called in question. See Forbiger, Handbuch der Alten Geographie, part ii, sect. 98, p. 628.

[4] Iliad, iii, 188; Strabo, xii, p. 551. The town of Otrœa, of which Otreus seems to be the eponymus, was situated in Phrygia, just on the borders of Bithynia (Strabo, xii, p. 566).

[5] Archiloch. Fragm. 28 Schneid., 26 Gaisf. —

> .....ὥσπερ αὐλῷ βρῦτον ἢ Θρῆιξ ἀνὴρ
> Ἢ Φοὺξ ἐβρυζε, etc.

the two sides of the Hellespont appears to have presented similarity of feature and customs.

To settle with any accuracy the extent and condition of these Asiatic nations during the early days of Grecian settlement among them is impracticable; the problem was not to be solved even by the ancient geographers, with their superior means of knowledge. The early indigenous distribution of the Phrygian population is unknown to us, and the division into the Greater and Lesser Phrygia belongs to a period at least subsequent to the Persian conquest, like most of the recognized divisions of Asia Minor; it cannot, therefore, be applied with reference to the period earlier than Crœsus. It appears that the name Phrygians, like that of Thracians, was a generic designation, and comprehended tribes or separate communities who had also specific names of their own. We trace Phrygians at wide distances: on the western bank of the river Halys, — at Kelænæ, in the interior of Asia Minor, towards the rise of the river Mæander, — and on the coast of the Propontis near Kios; — in both of these latter localities there is a salt lake called Askanius, which is the name both of the leader of the Phrygian allies of Troy, and of the country from whence they are said to come, in the Iliad.[1] They thus occupy a territory bounded on the south by the Pisidian mountains, on the west by the Lydians (indicated by a terminal pillar set up by Crœsus at Kydrara),[2] — on the east by the river Halys, on the other side of which were Kappadokians or Syrians, on the north by Paphlagonians and Mariandynians. But it seems, besides this, that they must have extended farther to the west, so as to occupy a great portion of the region of Mount Ida and the Troad. For Apollodôrus considered that

The passage is too corrupt to support any inference, except the near approximation in the poet's mind of Thracians and Phrygians.

[1] Iliad, ii, 873; xiii, 792; Arrian, i, 29; Herodot. vii, 30. The boundary of the Phrygians southward towards the Pisidians, and westward as well as north-westward towards the Lydians and Mysians, could never be distinctly traced (Strabo. xii, pp. 564, 576, 628): the volcanic region called Katakekaumenê is referred in Xenophon's time to Mysia (Anabas. i, 2, 10): compare the remarks of Kiepert in the treatise above referred to, Fünf Inschriften und fünf Städte, p. 27.

[2] Herodot. i, 72; vii, 30.

both the Doliones and the Bebrykians were included in the great Phrygian name;[1] and even in the ancient poem called "Phorônis," which can hardly be placed later than 600 B. C., the Daktyls of Mount Ida, the great discoverers of metallurgy, are expressly named Phrygian.[2] The custom of the Attic tragic poets to call the inhabitants of the Troad Phrygians, does not necessarily imply any translation of inhabitants, but an employment of the general name, as better known to the audience whom they addressed, in preference to the less notorious specific name, — just as the inhabitants of Bithynia might be described either as Bithynians or as Asiatic Thracians.

If, as the language of Herodotus and Ephorus[3] would seem to imply, we suppose the Phrygians to be at a considerable distance from the coast and dwelling only in the interior, it will be difficult to explain to ourselves how or where the early Greek colonists came to be so much influenced by them; whereas the supposition that the tribes occupying the Troad and the region of Ida were Phrygians elucidates this point. And the fact is incontestable, that both Phrygians and Lydians did not only modify the religious manifestations of the Asiatic Greeks, and through them of the Grecian world generally, — but also rendered important aid towards the first creation of the Grecian musical scale. Of this the denominations of the scale afford a proof.

Three primitive musical modes were employed by the Greek poets, in the earliest times of which later authors could find any account, — the Lydian, which was the most acute, — the Dorian, which was the most grave, — and the Phrygian, intermediate between the two; the highest note of the Lydian being one tone higher, that of the Dorian one tone lower, than the highest note of the Phrygian scale.[4] Such were the three modes or scales,

[1] Strabo, xiv, p. 678: compare xiii, p. 586. The legend makes Dolion son of Silênus, who is so much connected with the Phrygian Midas (Alexand. Ætolus ap. Strabo, xiv, p. 681).

[2] Phorônis, Fragm. 5, ed. Düntzer, p. 57.

.....ἔνθα γόητες
Ἰδαῖοι Φρυγὲς ἀνδρες, ὀρέστεροι, οἰκαδ' ἔναιον, etc.

[3] Ephorus ap. Strabo, xiv, 678; Herodot. v, 49.

[4] See the learned and valuable Dissertation of Boeckh, De Metris Pindari iii, 8, pp. 235–239

each including only a tetrachord, upon which the earliest Greek masters worked: many other scales, both higher and lower, were subsequently added. It thus appears that the earliest Greek music was, in large proportion, borrowed from Phrygia and Lydia: and when we consider that, in the eighth and seventh centuries before the Christian era, music and poetry conjoined — often also with dancing or rhythmical gesticulation — was the only intellectual manifestation known among the Greeks, — and moreover that, in the belief of all the ancient writers, every musical mode had its own peculiar emotional influences, powerfully modified the temper of hearers, and was intimately connected with the national worship, — we shall see that this transmission of the musical modes implies much both of communication and interchange between the Asiatic Greeks and the indigenous population of the continent. Now the fact of communication between the Ionic and Æolic Greeks, and their eastern neighbors, the Lydians, is easy to comprehend generally, though we have no details as to the way in which it took place; but we do not distinctly see where it was that the Greeks came so much into contact with the Phrygians except in the region of Ida, the Troad, and the southern coast of the Propontis. To this region belonged those early Phrygian musicians (under the heroic names of Olympus, Hyagnis, Marsyas), from whom the Greeks borrowed.[1] And we may remark that the analogy between Thracians and Phrygians seems partially to hold in respect both to music and religion, since the old mythe in the Iliad,

[1] Plutarch, De Musicâ, c. 5, 7, p. 1132; Aristoxenus ap. Athenæ. xiv. p. 624; Alkman, Frag. 104, ed. Bergk.

Aristoxenus seems to have considered the Phrygian Olympus as the great inventive genius who gave the start to Grecian music (Plutarch, *ib.* pp. 1135–1141): his music was employed almost entirely for hymns to the gods, religious worship, the Mêtrôa, or ceremonies, in honor of the Great Mother (p. 1140). Compare Clemen. Alexand. Strom. i, p. 306.

Μαρσύας may perhaps have its etymology in the Karian or Lydian language. Σούας was in Karian equivalent to τάφος (see Steph. Byz. v, Σιναγέλα): Mâ was one of the various names of Rhea (Steph. Byz. v, Μάσταυρα) The word would have been written Μαρσούας by an Æolic Greek.

Marsyas is represented by Telestès the dithyrambist as a satyr, son of a nymph, — νυμφαγενεῖ χειροκτύπῳ φηρὶ Μαρσύᾳ κλέος (Telestês ap. Athenæ xiv. p 617).

wherein the Thracian bard Thamyris, rashly contending in song with the Muses, is conquered, blinded, and stripped of his art, seems to be the prototype of the very similar story respecting the contention of Apollo with the Phrygian Marsyas,[1] — the cithara against the flute; while the Phrygian Midas is farther characterized as the religious disciple of Thracian Orpheus.

In my previous chapter relating to the legend of Troy,[2] mention has been already made of the early fusion of the Æolic Greeks with the indigenous population of the Troad; and it is from hence probably that the Phrygian music with the flute as its instrument, — employed in the orgiastic rites and worship of the Great Mother in Mount Ida, in the Mysian Olympus, and other mountain regions of the country, and even in the Greek city of Lampsakus,[3] — passed to the Greek composers. Its introduction is coeval with the earliest facts respecting Grecian music, and must have taken place during the first century of the recorded Olympiads. In the Homeric poems we find no allusion to it, but it may probably have contributed to stimulate that development of lyric and elegiac composition which grew up among the post-Homeric Æolians and Ionians, to the gradual displacement of the old epic. Another instance of the fusion of Phrygians with Greeks is to be found in the religious ceremonies of Kyzikus, Kius, and Prusa, on the southern and south-eastern coasts of the Propontis; at the first of the three places, the worship of the Great Mother of the gods was celebrated with much solemnity on the hill of Dindymon, bearing the same name as that mountain in the interior, near Pessinus, from whence Cybelê derived her

[1] Xenoph. Anab. i, 2, 8; Homer, Iliad. ii. 595; Strabo, xii, p. 578: the latter connects Olympus with Kelænæ as well as Marsyas. Justin, xi, 7: "Mida, qui ab Orpheo sacrorum solemnibus initiatus, Phrygiam religionibus implevit."

The coins of Midaeion, Kadi, and Prymnêssus, in the more northerly portion of Phrygia, bear the impress of the Phrygian hero Midas (Eckhel, Doctrina Nummorum Vet. iii, pp. 143–168).

[2] Part i, ch. xv, p. 453.

[3] The fragment of Hippônax mentioning an eunuch of Lampsakus, rich and well-fed, reveals to us the Asiatic worship in that place (Fragm. 26. ed Bergk):—

Θύνναν τε καὶ μυττωτὸν ἡμέρας πάσας
Δαινύμενος, ὥσπερ Λαμψακηνὸς εὐνοῦχος, etc.

principal surname of Dindymênê.[1] The analogy between the Kretan and Phrygian religious practices has been often noticed, and confusion occurs not unfrequently between Mount Ida in Krête and the mountain of the same name in the Troad; while the Teukrians of Gergis in the Troad, — who were not yet Hellenized even at the time of the Persian invasion, and who were affirmed by the elegiac poet Kallinus to have emigrated from Krêtê, — if they were not really Phrygians, — differed so little from them as to be called such by the poets.

The Phrygians are celebrated by Herodotus for the abundance both of their flocks and their agricultural produce:[2] the excellent wool for which Milêtus was always renowned came in part from the upper valley of the river Mæander, which they inhabited. He contrasts them in this respect with the Lydians, among whom the attributes and capacities of persons dwelling in cities are chiefly brought to our view: much gold and silver, retail trade, indigenous games, unchastity of young women, yet combined with thrift and industry.[3] Phrygian cheese and salt-provisions, Lydian unguents,[4] carpets and colored shoes, acquired notoriety. Both Phrygians and Lydians are noticed by Greek authors subsequent to the establishment of the Persian empire as a people timid, submissive, industrious, and useful as slaves, — an attribute not ascribed to the Mysians,[5] who are usually described as brave and hardy mountaineers, difficult to hold in subjection: nor even true respecting the Lydians, during the earlier times anterior to the complete overthrow of Crœsus by Cyrus; for they were then esteemed for their warlike prowess. Nor was the different char-

acter of these two Asiatic people yet effaced even in the second century after the Christian era. For the same Mysians, who in the time of Herodotus and Xenophon gave so much trouble to the Persian satraps, are described by the rhetor Aristeidês as seizing and plundering his property at Laneion near Hadriani, — while on the contrary he mentions the Phrygians as habitually coming from the interior towards the coast-regions to do the work of the olive-gathering.[1] During the times of Grecian autonomy and ascendency, in the fifth century B. C., the conception of a Phrygian or a Lydian was associated in the Greek mind with ideas of contempt and servitude,[2] to which unquestionably these Asiatics became fashioned, since it was habitual with them under the Roman empire to sell their own children into slavery,[3] — a practice certainly very rare among the Greeks, even when they too had become confounded among the mass of subjects of imperial Rome. But we may fairly assume that this association of contempt with the name of a Phrygian or a Lydian did not prevail during the early period of Grecian Asiatic settlement, or even in the time of Alkman, Mimnermus, or Sappho, down to 600 B. C. We first trace evidence of it in a fragment of Hippônax, and it began with the subjection of Asia Minor generally,

[1] Aristeid. Orat. xxvi, p. 346. The λόφος Ἄτυος was very near to this place Laneion, which shows the identity of the religious names throughout Lydia and Mysia (Or. xxv, p. 318). About the Phrygians, Aristeidês, Orat. xlvi, p. 308, Τῶν δὲ πλουσίων ἕνεκα εἰς τὴν ὑπερορίαν ἀπαίρουσιν, ὥσπερ οἱ Φρυγὲς τῶν ἐλαῶν ἕνεκα τῆς συλλογῆς.

The declamatory prolixities of Aristeidês offer little reward to the reader, except these occasional valuable evidences of existing custom.

[2] Hermippus ap. Athenæ. i, p. 27. Ἀνδράποδ' ἐκ Φρυγίας, etc., the saying ascribed to Sokratês in Ælian, V. H. x, 14; Euripid. Alcest. 691; Strabo, vii, p. 304; Polyb. iv, 38. The Thracians sold their children into slavery, — (Herod. v, 6) as the Circassians do at present (Clarke's Travels, vol. i, p. 378).

Δειλότερος λάγω Φρυγὸς was a Greek proverb (Strabo, i, p. 36: compare Cicero pro Flacco, c. 27).

[3] Philostrat. Vit. Apollon. viii, 7, 12, p. 346. The slave-merchants seem to have visited Thessaly, and to have bought slaves at Pagasæ; these were either Penests sold by their masters out of the country, or perhaps non-Greeks procured from the borderers in the interior (Aristoph. Plutus, 521; Hermippus ap. Athenæ. i, p. 27. Αἱ Παγασαὶ δούλους καὶ στιγματίας παρέχουσι).

first under Crœsus[1] and then under Cyrus, and with the sentiment of comparative pride which grew up afterwards in the minds of European Greeks. The native Phrygian tribes along the Propontis, with whom the Greek colonists came in contact, — Bebrykians, Doliones, Mygdonians, etc, — seem to have been agricultural, cattle-breeding and horse-breeding, yet more vehement and warlike than the Phrygians of the interior, as far at least as can be made out by their legends. The brutal but gigantic Amykus son of Poseidôn, chief of the Bebrykians, with whom Pollux contends in boxing, and his brother Mygdôn to whom Hêraklês is opposed, are samples of a people whom the Greek poets considered ferocious, and not submissive;[2] while the celebrity of the horses of Erichthonius, Laomedôn, and Asius of Arisbê, in the Iliad, shows that horse-breeding was a distinguishing attribute of the region of Ida, not less in the mind of Homer than in that of Virgil.[3]

According to the legend of the Phrygian town of Gordium on the river Sangarius, the primitive Phrygian king Gordius was originally a poor husbandman, upon the yoke of whose team, as he one day tilled his field, an eagle perched and posted himself. Astonished at this portent, he consulted the Telmissean augurs to know what it meant, and a maiden of the prophetic breed acquainted him that the kingdom was destined to his family. He espoused her, and the offspring of the marriage was Midas. Seditions afterwards breaking out among the Phrygians, they were directed by an oracle, as the only means of tranquillity, to choose for themselves as king the man whom they should first

[1] Phrygian slaves seem to have been numerous at Milêtus in the time of Hippônax, Frag. 36, ed. Bergk: —

Καὶ τοὺς σολοίκους, ἢν λάβωτι, περνᾶσιν,
Φρυγὰς μὲν ἐς Μίλητον ἀλφιτεύσοντας.

[2] Theocrit. Idyll. xxii, 47–133; Apollon. Rhod. i, 937–954; ii, 5–140 Valer. Flacc. iv, 100; Apollodôr. ii, 5. 9.

[3] Iliad, ii, 138; xii, 97; xx, 219: Virgil, Georgic, iii, 270: —

"Illas ducit amor (equas) trans Gargara, transque sonantem
Ascanium," etc.

Klausen (Æneas und die Penaten, vol. i, pp. 52–56, 102–107) has put together with great erudition all the legendary indications respecting these regions.

see approaching in a wagon. Gordius and Midas happened to be then coming into the town in their wagon, and the crown was conferred upon them: their wagon was consecrated in the citadel of Gordium to Zeus Basileus, and became celebrated from the insoluble knot whereby the yoke was attached, and the severance of it afterwards by the sword of Alexander the Great. Whosoever could untie the knot, to him the kingdom of Asia was portended, and Alexander was the first whose sword both fulfilled the condition and realized the prophecy.[1]

Of these legendary Phrygian names and anecdotes we can make no use for historical purposes. We know nothing of any Phrygian kings, during the historical times, — but Herodotus tells us of a certain Midas son of Gordius, king of Phrygia, who was the first foreign sovereign that ever sent offerings to the Delphian temple, anterior to Gygês of Lydia. This Midas dedicated to the Delphian god the throne on which he was in the habit of sitting to administer justice. Chronologers have referred the incident to a Phrygian king Midas placed by Eusebius in the 10th Olympiad, — a supposition which there are no means of verifying.[2] There may have been a real Midas king of Gordium; but that there was ever any great united Phrygian monarchy, we have not the least ground for supposing. The name Gordius son of Midas again appears in the legend of Crœsus and Solon told by Herodotus, as part of the genealogy of the ill-fated prince Adrastus: here too it seems to represent a legendary rather than a real person.[3]

Of the Lydians, I shall speak in the following chapter.

[1] Arrian, ii. 3; Justin, xi, 7.

According to another tale, Midas was son of the Great Mother herself (Plutarch, Cæsar, 9; Hygin. fab. 191).

[2] Herodot. i, 14, with Wesseling's note.

[3] Herodot. i, 34.

CHAPTER XVII.

LYDIANS. — MEDES. — CIMMERIANS. — SCYTHIANS.

The early relations between the Lydians and the Asiatic Greeks, anterior to the reign of Gygês, are not better known to us than those of the Phrygians. Their native music became partly incorporated with the Greek, as the Phrygian music was; to which it was very analogous, both in instruments and in character, though the Lydian mode was considered by the ancients as more effeminate and enervating. The flute was used alike by Phrygians and Lydians, passing from both of them to the Greeks; but the magadis or pectis (a harp with sometimes as many as twenty strings, sounded two together in octave) is said to have been borrowed by the Lesbian Terpander from the Lydian banquets.[1] The flute-players who acquired esteem among the early Asiatic Greeks were often Phrygian or Lydian slaves; and even the poet Alkman, who gained for himself permanent renown among the Greek lyric poets, though not a slave born at Sardis, as is sometimes said, was probably of Lydian extraction.

It has been already mentioned that Homer knows nothing of Lydia or Lydians. He names Mæonians in juxtaposition with Karians, and we are told by Herodotus that the people once called Mæonian received the new appellation of Lydian from Lydus son of Atys. Sardis, whose almost inexpugnable citadel was situated on a precipitous rock on the northern side of the ridge of Tmôlus, overhanging the plain of the river Hermus, was the capital of the Lydian kings: it is not named by Homer, though he mentions both Tmôlus and the neighboring Gygæan lake: the fortification of it was ascribed to an old Lydian king named Mêlês, and strange legends were told concerning it.[2] Its possessors were enriched by the neighborhood of the river Paktôlus,

[1] Pindar. ap. Athenæ. xiv, p. 635: compare Telestês ap. Athenæ. xiv. p. 626; Pausan. ix, 5, 4.

[2] Herodot. i, 84.

which flowed down from Mount Tmôlus towards the Hermus, and brought with it considerable quantities of gold in its sands. To this cause historians often ascribe the abundant treasure belonging to Crœsus and his predecessors; but Crœsus possessed, besides, other mines near Pergamus;[1] and another cause of wealth is also to be found in the general industry of the Lydian people, which the circumstances mentioned respecting them seem to attest. They were the first people, according to Herodotus, who ever carried on retail trade; and the first to coin money of gold and silver.[2]

The archæologists of Sardis in the time of Herodotus, a century after the Persian conquest, carried very far back the antiquity of the Lydian monarchy, by means of a series of names which are in great part, if not altogether, divine and heroic. Herodotus gives us first, Manês, Atys, and Lydus, — next, a line of kings beginning with Hêraklês, twenty-two in number, succeeding each other from father to son and lasting for 505 years. The first of this line of Herakleid kings was Agrôn, descended from Hêraklês in the fourth generation, — Hêraklês, Alkæus, Ninus, Bêlus, and Agrôn. The twenty-second prince of this Herakleid family, after an uninterrupted succession of father and son during 505 years, was Kandaulês, called by the Greeks Myrsilus the son of Myrsus: with him the dynasty ended, and ended by one of those curious incidents which Herodotus has narrated with his usual dramatic, yet unaffected, emphasis. It was the divine will that Kandaulês should be destroyed, and he lost his rational judgment: having a wife the most beautiful woman in Lydia, his vanity could not be satisfied without exhibiting her naked person to Gygês son of Daskylus, his principal confidant and the commander of his guards. In spite of the vehement repugnance of Gygês, this resolution was executed; but the wife became aware of the inexpiable affront, and took her measures to avenge it. Surrounded by her most faithful domestics, she sent for Gygês, and addressed him: "Two ways are now open to thee, Gygês: take which thou wilt. Either kill Kandaulês, wed me, and acquire the kingdom of Lydia, — or else thou must at once perish. For thou hast seen forbidden things, and either thou, or the man who contrived it for thee must

[1] Aristot. Mirabil. Auscultat. 52.

[2] Herodot. i, 94.

die." Gygês in vain entreated to be spared so terrible an alternative: he was driven to the option, and he chose that which promised safety to himself.[1] The queen planted him in ambush behind the bed-chamber door, in the very spot where Kandaulês had placed him as a spectator, and armed him with a dagger, which he plunged into the heart of the sleeping king.

Thus ended the dynasty of the Herakleids; but there was a large party in Lydia who indignantly resented the death of Kandaulês, and took arms against Gygês. A civil war ensued, which both parties at length consented to terminate by reference to the Delphian oracle. The decision of that holy referee was given in favor of Gygês, and the kingdom of Lydia thus passed to his dynasty, called the Mermnadæ. But the oracle accompanied its verdict with an intimation, that in the person of the fifth descendant of Gygês, the murder of Kandaulês would be avenged, — a warning of which, Herodotus innocently remarks, no one took any notice, until it was actually fulfilled in the person of Crœsus.[2]

In this curious legend, which marks the commencement of the dynasty called Mermnadæ, the historical kings of Lydia, — we cannot determine how much, or whether any part, is historical. Gygês was probably a real man, contemporary with the youth of the poet Archilochus; but the name Gygês is also an heroic name in Lydian archæology. He is the eponymus of the Gygæan lake near Sardis; and of the many legends told respecting him, Plato has preserved one, according to which Gygês is a mere herdsman of the king of Lydia: after a terrible storm and earthquake, he sees near him a chasm in the earth, into which he descends and finds a vast horse of brass, hollow and partly open, wherein there lies a gigantic corpse with a golden ring. This ring he carries away, and discovers unexpectedly that it possesses the miraculous property of rendering him invisible at pleasure. Being sent on a message to the king, he makes the magic ring available to his ambition: he first possesses himself of the person

[1] Herodot. i, 11. *αἱρέεται αὐτὸς περιεῖναι*, — a phrase to which Gibbon has ascribed an intended irony, which it is difficult to discover in Herodotus.

[2] Herodot. i, 13. *τούτου τοῦ ἔπεος.....λόγον οὐδένα ἐποιεῦντο, πρὶν δὴ ἐπετελέσθη.*

of the queen, then with her aid assassinates the king, and finally seizes the sceptre.[1]

The legend thus recounted by Plato, different in almost all points from the Herodotean, has this one circumstance in common, that the adventurer Gygês, through the favor and help of the queen, destroys the king and becomes his successor. Feminine preference and patronage is the cause of his prosperity. Klausen has shown[2] that this "aphrodisiac influence" runs in a peculiar manner through many of the Asiatic legends, both divine and heroic. The Phrygian Midas, or Gordius, as before recounted, acquires the throne by marriage with a divinely privileged maiden: the favor shown by Aphroditê to Anchisês, confers upon the Æneadæ sovereignty in the Troad: moreover, the great Phrygian and Lydian goddess Rhea or Cybelê has always her favored and self-devoting youth Atys, who is worshipped along with her, and who serves as a sort of mediator between her and mankind. The feminine element appears predominant in Asiatic mythes: Midas, Sardanapalus, Sandôn, and even Hêraklês,[3] are described as clothed in women's attire and working at the loom; while on the other hand the Amazons and Semiramis achieve great conquests.

Admitting therefore the historical character of the Lydian kings called Mermnadæ, beginning with Gygês about 715–690 B. C., and ending with Crœsus, we find nothing but legend to explain to us the circumstances which led to their accession. Still less can we make out anything respecting the preceding kings, or determine whether Lydia was ever in former times connected with or dependent upon the kingdom of Assyria, as Ktêsias affirmed.[4] Nor can we certify the reality or dates of the old Lydian kings named by the native historian Xanthus, — Alkïmus, Kamblês, Adramytês.[5] One piece of valuable information,

[1] Plato, Republ. ii, p. 360; Cicero, Offic. iii, 9. Plato (x, p. 612) compares very suitably the ring of Gygês to the helmet of Hadês.

[4] Diodor. ii, 2. Niebuhr also conceives that Lydia was in early days a portion of the Assyrian empire (Kleine Schriften, p. 371).

[5] Xanthi Fragment. 10, 12, 19, ed. Didot; Athenæ. x, p. 415; Nikolaus Damasc. p. 36, Orelli.

however, we acquire from Xanthus, — the distribution of Lydia into two parts, Lydia proper and Torrhêbia, which he traces to the two sons of Atys, — Lydus and Torrhêbus; he states that the dialect of the Lydians and Torrhebians differed much in the same degree as that of Doric and Ionic Greeks.[1] Torrhêbia appears to have included the valley of the Kaïster, south of Tmôlus, and near to the frontiers of Karia.

With Gygês, the Mermnad king, commences the series of aggressions from Sardis upon the Asiatic Greeks, which ultimately ended in their subjection. Gygês invaded the territories of Milêtus and Smyrna, and even took the city, probably not the citadel, of Kolophôn. Though he thus, however, made war upon the Asiatic Greeks, he was munificent in his donations to the Grecian god of Delphi, and his numerous as well as costly offerings were seen in the temple by Herodotus. Elegiac compositions of the poet Mimnermus celebrated the valor of the Smyrnæans in their battle with Gygês.[2] We hear also, in a story which bears the impress of Lydian more than of Grecian fancy, of a beautiful youth of Smyrna named Magnês, to whom Gygês was attached, and who incurred the displeasure of his countrymen for having composed verses in celebration of the victories of the Lydians over the Amazons. To avenge the ill-treatment received by this youth, Gygês attacked the territory of Magnêsia (probably Magnêsia on Sipylus) and after a considerable struggle took the city.[3]

How far the Lydian kingdom of Sardis extended during the reign of Gygês, we have no means of ascertaining. Strabo alleges that the whole Troad[4] belonged to him, and that the Greek settlement of Abydus on the Hellespont was established by the Milesians only under his auspices. On what authority this statement is made, we are not told, and it appears doubtful, especially as so many legendary anecdotes are connected with the name of Gygês. This prince reigned (according to Herodotus) thirty-eight years, and was succeeded by his son Ardys, who reigned forty-nine years (about B. C. 678–629). We learn that he

[4] Strabo. xiii p. 590.

attacked the Milesians, and took the Ionic city of Priênê, but this possession cannot have been maintained, for the city appears afterwards as autonomous.[1] His long reign, however, was signalized by two events, both of considerable moment to the Asiatic Greeks; the invasion of the Cimmerians, — and the first approach to collision, at least the first of which we have any historical knowledge, between the inhabitants of Lydia and those of Upper Asia under the Median kings.

It is affirmed by all authors that the Medes were originally numbered among the subjects of the great Assyrian empire, of which Nineveh — or Ninos, as the Greeks call it — was the chief town, and Babylon one of the principal portions. That the population and power of these two great cities, as well as of several others which the Ten Thousand Greeks in their march found ruined and deserted in those same regions, is of high antiquity,[2] there is no room for doubting; but it is noway incumbent upon a historian of Greece to entangle himself in the mazes of Assyrian chronology, or to weigh the degree of credit to which the conflicting statements of Herodotus, Ktêsias, Berosus, Abydênus, etc. are entitled. With the Assyrian empire,[3] — which lasted, according to Herodotus, five hundred and twenty years, according to Ktêsias, thirteen hundred and sixty years, — the Greeks have no ascertainable connection: the city of Nineveh appears to have been taken by the Medes a little before the year 600 B. C. (in so far as the chronology can be made out), and exercised no influence

[1] Herodot. i, 15. [2] Xenophon, Anabas. iii, 4, 7; 10, 11.

[3] Herodot. i, 95; Ktêsias, Fragm. Assyr. xiii, p. 419, ed. Bahr; Diodor. ii, 21. Ktêsias gives thirty generations of Assyrian kings from Ninyas to Sardanapalus: Velleius, 33; Eusebius, 35; Syncellus, 40; Castor, 27; Cephalion, 23. See Bahr ad Ctesiam, p. 428. The Babylonian chronology of Berosus (a priest of Belus, about 280 B. C.) gave 86 kings and 34,000 years from the Deluge to the Median occupation of Babylon; then 1,453 years down to the reign of Phul king of Assyria (Berosi Fragmenta, p. 8, ed. Richter).

Mr. Clinton sets forth the chief statements and discrepancies respecting Assyrian chronology in his Appendix, c. 4. But the suppositions to which he resorts, in order to bring them into harmony, appear to me uncertified and gratuitous.

Compare the different, but not more successful, track followed by Larcher (Chronologie, c. 3, pp. 145–157).

upon Grecian affairs. Those inhabitants of Upper Asia, with whom the early Greeks had relation, were the Medes, and the Assyrians or Chaldæans of Babylon, — both originally subject to the Assyrians of Nineveh, — both afterwards acquiring independence, — and both ultimately embodied in the Persian empire. At what time either of them became first independent, we do not know:[1] the astronomical canon which gives a list of kings of

[1] Here again both Larcher and Mr. Clinton represent the time, at which the Medes made themselves independent of Assyria, as perfectly ascertained, though Larcher places it in 748 B. C., and Mr. Clinton in 711 B. C. "L'époque ne me paroit pas douteuse," (Chronologie, c. iv, p. 157,) says Larcher. Mr. Clinton treats the epoch of 711 B. C. for the same event, as fixed upon '*the authority of Scripture*," and reasons upon it in more than one place as a fact altogether indisputable (Appendix, c. iii, p. 259): "We may collect from Scripture that the Medes did not become independent till after the death of Sennacherib; and accordingly Josephus (Ant. x, 2), having related the death of this king, and the miraculous recovery of Hezekiah from sickness, adds — ἐν τούτῳ τῷ χρόνῳ συνέβη τὴν τῶν Ἀσσυρίων ἀρχὴν ὑπὸ Μήδων καταλυθῆναι. But the death of Sennacherib, as will be shown hereafter, is determined to the beginning of 711 B. C. The Median revolt, then, did not occur before B. C. 711; which refutes Conringius, who raises it to B. C. 715, and Valckenaer, who raises it to B. C. 741. Herodotus, indeed, implies an interval of some space between the revolt of the Medes and the election of Dêiokês to be king. But these anni ἀβασίλευτοι could not have been prior to the fifty-three years of Dêiokês, since the revolt is *limited by Scripture* to B. C. 711." Again, p. 261, he says, respecting the four Median kings mentioned by Eusebius before Dêiokês: "If they existed at all, they governed Media during the empire of the Assyrians, as we *know from Scripture*." And again, p. 280: "The precise date of the termination (of the Assyrian empire) in B. C. 711 is *given by Scripture*, with which Herodotus agrees," etc.

Mr. Clinton here treats, more than once, the revolt of the Medes as fixed to the year 711 B. C. *by Scripture;* but he produces no passage of Scripture to justify his allegation: and the passage which he cites from Josephus alludes, not to the Median revolt, but to the destruction of the Assyrian empire by the Medes. Herodotus represents the Medes as revolting from the Assyrian empire, and maintaining their independence for some time (undefined in extent) before the election of Dêiokês as king; but he gives us no means of determining the date of the *Median revolt;* and when Mr. Clinton says (p. 280, Note O.): "I suppose Herodotus to place the revolt of the Medes in Olymp. 17, 2, since he places the accession of Dêiokês in Olymp. 17, 3," — this is a conjecture of his own: and the narrative of Herodotus seems plainly to imply that he conceived an interval far greater than one year between these two events. Diodorus gives the same interval as lasting "for many generations." (Diod. ii, 32.)

Babylon, beginning with what is called the era of Nabonassar, or 747 B. C., does not prove at what epoch these Babylonian

We know — both from Scripture and from the Phœnician annals, as cited by Josephus — that the Assyrians of Nineveh were powerful conquerors in Syria, Judæa, and Phœnicia, during the reigns of Salmaneser and Sennacherib: the statement of Josephus farther implies that Media was subject to Salmaneser, who took the Israelites from their country into Media and Persis, and brought the Cuthæans out of Media and Persis into the lands of the Israelites (Joseph. ix, 14, 1; x, 9, 7). We know farther, that after Sennacherib, the Assyrians of Nineveh are no more mentioned as invaders or disturbers of Syria or Judæa; the Chaldæans or Babylonians become then the enemies whom those countries have to dread. Josephus tells us, that at this epoch the Assyrian empire was destroyed by the Medes, — or, as he says in another place, by the Medes and Babylonians (x, 2, 2; x, 5, 1). This is good evidence for believing that the Assyrian empire of Nineveh sustained at this time a great shock and diminution of power; but as to the nature of this diminution, and the way in which it was brought about, it appears to me that there is a discrepancy of authorities which we have no means of reconciling, — Josephus follows the same view as Ktêsias, of the destruction of the empire of Nineveh by the Medes and Babylonians united, while Herodotus conceives successive revolts of the territories dependent upon Nineveh, beginning with that of the Medes, and still leaving Nineveh flourishing and powerful in its own territory: he farther conceives Nineveh as taken by Kyaxarês the Mede, about the year 600 B. C., without any mention of Babylonians, — on the contrary, in his representation, Nitokris the queen of Babylon is afraid of the Medes (i, 185), partly from the general increase of their power, but especially from their having taken Nineveh (though Mr. Clinton tells us, p. 275, that "Nineveh was destroyed B. C. 606, as we have seen from the united testimonies of the Scripture and Herodotus, *by the Medes and Babylonians.*")

Construing fairly the text of Herodotus, it will appear that he conceived the relations of these Oriental kingdoms between 800 and 560 B. C. differently on many material points from Ktêsias, or Berosus, or Josephus: and he himself expressly tells us, that he heard "four different tales" even respecting Cyrus (i, 95); much more, respecting events anterior to Cyrus by more than a century.

The chronology of the Medes, Babylonians, Lydians, and Greeks in Asia, when we come to the seventh century B. C., acquires some fixed points which give us assurance of correctness within certain limits; but above the year 700 B. C. no such fixed points can be detected. We cannot discriminate the historical from the mythical in our authorities, — we cannot reconcile them with each other, except by violent changes and conjectures, — nor can we determine which of them ought to be set aside in favor of the other. The names and dates of the Babylonian kings down from Nabonassar, in the Canon of Ptolemy, are doubtless authentic, but they are names and dates

chiefs became independent of Nineveh: and the catalogue of Median kings, which Herodotus begins with Dêïokês, about 709-711 B. C., is commenced by Ktêsias more than a century earlier, — moreover, the names in the two lists are different almost from first to last.

For the historian of Greece, the Medes first begin to acquire importance about 656 B. C., under a king whom Herodotus calls Phraortês, son of Dêïokês. Respecting Dêïokês himself, Herodotus recounts to us how he came to be first chosen king.[1] The seven tribes of Medes dwelt dispersed in separate villages, without any common authority, and the mischiefs of anarchy were painfully felt among them: Dêïokês having acquired great reputation in his own village as a just man, was invoked gradually by all the adjoining villages to settle their disputes. As soon as his efficiency in this vocation, and the improvement which he brought about, had become felt throughout all the tribes, he artfully threw up his post and retired again into privacy, — upon which the evils of anarchy revived in a manner more intolerable than before. The Medes had now no choice except to elect a king, — the friends of Dêïokês expatiated warmly upon his virtues, and he was the person chosen.[2] The first step of the

only: when we come to apply them to illustrate real or supposed matters of fact, drawn from other sources, they only create a new embarrassment, for even the *names* of the kings as reported by different authors do not agree, and Mr. Clinton informs us (p. 277): "In tracing the identity of Eastern kings, the times and the transactions are better guides than the names; for these, from many well-known causes (as the changes which they undergo in passing through the Greek language, and the substitution of a title or an epithet for the name), are variously reported, so that *the same king frequently appears under many different appellations.*" Here, then, is a new problem: we are to employ "the times and transactions" to identify the kings: but unfortunately the *times* are marked only by the succession of kings, and the *transactions* are known only by statements always scanty and often irreconcilable with each other. So that our means of identifying the kings are altogether insufficient, and whoever will examine the process of identification as it appears in Mr. Clinton's chapters, will see that it is in a high degree arbitrary; more arbitrary still are the processes which he employs for bringing about a forced harmony between discrepant authorities. Nor is Volney (Chronologie d'Hérodote, vol. i, pp. 383–429) more satisfactory in his chronological results

[1] Herodot. i, 96–100.

[2] Herodot. i, 97. ὡς δ' ἐγὼ δικέω, μάλιστα ἔλεγον οἱ τοῦ Δηϊόκεω φίλοι etc.

new king was to exact from the people a body of guards selected by himself; next, he commanded them to build the city of Ekbatana, upon a hill surrounded with seven concentric circles of walls, his own palace being at the top and in the innermost. He farther organized the scheme of Median despotism; the king, though his person was constantly secluded in his fortified palace, inviting written communications from all aggrieved persons, and administering to each the decision or the redress which it required, — informing himself, moreover, of passing events by means of ubiquitous spies and officials, who seized all wrong-doers and brought them to the palace for condign punishment. Dēïokēs farther constrained the Medes to abandon their separate abodes and concentrate themselves in Ekbatana, from whence all the powers of government branched out; and the seven distinct fortified circles in the town, coinciding as they do with the number of the Median tribes, were probably conceived by Herodotus as intended each for one distinct tribe, — the tribe of Dēïokēs occupying the innermost along with himself.[1]

Except the successive steps of this well-laid political plan, we hear of no other acts ascribed to Dēïokēs: he is said to have held the government for fifty-three years, and then dying, was succeeded by his son Phraortēs. Of the real history of Dēïokēs, we cannot be said to know anything. For the interesting narrative of Herodotus, of which the above is an abridgment, presents to us in all its points Grecian society and ideas, not Oriental: it is like the discussion which the historian ascribes to the seven Persian conspirators, previous to the accession of Darius, — whether they shall adopt an oligarchical, a democratical, or a monarchical form of government;[2] or it may be compared, perhaps more aptly still, to the Cyropædia of Xenophon, who beautifully and elaborately works out an ideal which Herodotus

[1] Herodot. i, 98, 99, 100. *Οἰκοδομηθέντων δὲ πάντων, κόσμον τόνδε Δηϊόκης πρῶτός ἐστιν ὁ καταστησάμενος· μήτε ἐσιέναι παρὰ βασιλέα μηδένα, δι' ἀγγέλων δὲ πάντα χρέεσθαι, ὁρᾶσθαι δὲ βασιλέα ὑπὸ μηδενός· πρὸς δὲ τούτοισι ἔτι γελᾶν τε καὶ πτύειν ἄντιον, καὶ ἄπασι εἶναι τοῦτό γε αἰσχρόν*, etc and . . . . *οἱ κατάσκοποί τε καὶ κατήκοοι ἦσαν ἀνὰ πᾶσαν τὴν χώρην τῆς ἦρχε.*

[2] Herodot. iii, 80–82. Herodotus, while he positively asserts the genuineness of these deliberations, lets drop the intimation that many of his contemporaries regarded them as of Grecian coinage.

VENUS OF MEDICI

exhibits in brief outline. The story of Dêïokês describes what may be called the despot's progress, first as candidate, and afterwards as fully established. Amidst the active political discussion carried on by intelligent Greeks in the days of Herodotus, there were doubtless many stories of the successful arts of ambitious despots, and much remark as to the probable means conducive to their success, of a nature similar to those in the Politics of Aristotle. one of these tales Herodotus has employed to decorate the birtL and infancy of the Median monarchy. His Dêïokês begins like a clever Greek among other Greeks, equal, free, and disorderly. He is athirst for despotism from the beginning, and is forward in manifesting his rectitude and justice, "as beseems a candidate for command;"[1] he passes into a despot by the public vote, and receives what to the Greeks was the great symbol and instrument of such transition, a personal body-guard; he ends by organizing both the machinery and the etiquette of a despotism in the Oriental fashion, like the Cyrus of Xenophon,[2] only that both these authors maintain the superiority of their Grecian ideal over Oriental reality by ascribing both to Γ/ιοκês and Cy-

[1] Herodot. i, 96. Ἐόντων δὲ αὐτονόμων πάντων ἀνὰ τὴν ἤπειρον, ὧδε αὖτις ἐς τυραννίδας περιῆλθον. Ἀνὴρ ἐν τοῖσι Μήδοισι ἐγένετο σοφός, τῷ οὔνομα ἦν Δηϊόκης.... Οὗτος ὁ Δηϊόκης, ἐρασθεὶς τυραννίδος, ἐποίεε τοιάδε, etc.... Ὁ δὲ δὴ, οἷα μνεώμενος ἀρχὴν, ἰθύς τε καὶ δίκαιος ἦν.

[2] Compare the chapters above referred to in Herodotus with the eighth book of the Cyropædia, wherein Xenophon describes the manner in which the Median despotism was put in effective order and turned to useful account by Cyrus, especially the arrangements for imposing on the imagination of his subjects (καταγοητεύειν, viii, 1, 40) — (it is a small thing, but marks the cognate plan of Herodotus and Xenophon). Dêïokês forbids his subjects to laugh or spit in his presence. Cyrus also directs that no one shall spit, or wipe his nose, or turn round to look at anything, when the king is present (Herodot. i, 99; Xen. Cyrop. viii, 1, 42). Again, viii, 3, 1, about the pompous procession of Cyrus when he rides out, — καὶ γὰρ αὐτῆς τῆς ἐξελάσεως ᾧ σεμνότης ἡμῖν δοκεῖ μία τῶν τεχνῶν εἶναι τῶν μεμηχανημένων, τὴν ἀρχὴν μὴ εὐκαταφρόνητον εἶναι — analogous to the Median Dêïokês in Herodotus — Ταῦτα δὲ περὶ ἑωυτὸν ἐσέμνυνε τῶνδε εἵνεκεν, etc. *Cyrus* — ἐμφανιζων δὲ καὶ τοῦτο ὅτι περὶ πολλοῦ ἐποιεῖτο, μηδένα μήτε φίλον ἀδικειν μήτε σύμμαχον, ἀλλὰ τὸ δίκαιον ἰσχύρως ὁρῶν (Cyrop. viii, 1, 26). *Dêïokes* — ἦν τὸ δίκαιον μαλάσσων χαλεπός (Herodot. i, 100). *Cyrus* provides numerous persons who serve to him as eyes and ears throughout the country (Cyrop. viii. 2, 12). *Dêïokês* has many κατάσκοποι and κατήκοοι. (Herodot. ib.)

rus a just, systematic, and laborious administration, such as their own experience did not present to them in Asia. Probably Herodotus had visited Ekbatana (which he describes and measures like an eye-witness, comparing its circuit to that of Athens), and there heard that Dêïokês was the builder of the city, the earliest known Median king, and the first author of those public customs which struck him as peculiar, after the revolt from Assyria: the interval might then be easily filled up, between Median autonomy and Median despotism, by intermediate incidents, such as would have accompanied that transition in the longitude of Greece. The features of these inhabitants of Upper Asia, for a thousand years forward from the time at which we are now arrived, — under the descendants of Dêïokês, of Cyrus, of Arsakês, and of Ardshir, — are so unvarying,[1] that we are much assisted in detecting those occasions in which Herodotus or others infuse into their history indigenous Grecian ideas.

Phraortês (658–636 B. C.), having extended the dominion of the Medes over a large portion of Upper Asia, and conquered both the Persians and several other nations, was ultimately defeated and slain in a war against the Assyrians of Nineveh: who, though deprived of their external dependencies, were yet brave and powerful by themselves. His son Kyaxarês (636–595 B. C.) followed up with still greater energy the same plans of conquest, and is said to have been the first who introduced any organization into the military force; — before his time, archers, spearmen, and cavalry had been confounded together indiscriminately, until this monarch established separate divisions for each. He extended the Median dominion to the eastern bank of the Halys, which river afterwards, by the conquests of the Lydian king Crœsus, became the boundary between the Lydian and Median empires; and he carried on war for six years with Alyattês king of Lydia, in consequence of the refusal of the latter to give up a

[1] When the Roman emperor Claudius sends the young Parthian prince Meherdatês, who had been an hostage at Rome, to occupy the kingdom which the Parthian envoys tendered to him, he gives him some good advice, conceived in the school of Greek and Roman politics: "Addidit præcepta, ut non dominationem ac servos, sed rectorem et cives, cogitaret: clementiamque ac justitiam quanto ignara barbaris, tanto toleratiora, capesseret. (Tacit Annal. xii, 11.)

band of Scythian nomads, who, having quitted the territory of Kyaxarês in order to escape severities with which they were menaced, had sought refuge as suppliants in Lydia.[1] The war, indecisive as respects success, was brought to its close by a remarkable incident: in the midst of a battle between the Median and Lydian armies, there happened a total eclipse of the sun, which occasioned equal alarm to both parties, and induced them immediately to cease hostilities.[2] The Kilikian prince Syennesis, and the Babylonian prince Labynêtus, interposed their mediation, and effected a reconciliation between Kyaxarês and Alyattês, one of the conditions of which was, that Alyattês gave his daughter Aryênis in marriage to Astyagês son of Kyaxarês. In this manner began the connection between the Lydian and Median kings which afterwards proved so ruinous to Crœsus. It is affirmed that the Greek philosopher Thalês foretold this eclipse; but we may reasonably consider the supposed prediction as not less apocryphal than some others ascribed to him, and doubt whether at that time any living Greek possessed either knowledge or scientific capacity sufficient for such a calculation.[3] The eclipse itself, and

[1] The passage of such nomadic hordes from one government in the East to another, has been always, and is even down to the present day, a frequent cause of dispute between the different governments: they are valuable both as tributaries and as soldiers. The Turcoman Ilats — so these nomadic tribes are now called — in the north-east of Persia frequently pass backwards and forwards, as their convenience suits, from the Persian territory to the Usbeks of Khiva and Bokhara: wars between Persia and Russia have been in like manner occasioned by the transit of the Ilats across the frontier from Persia into Georgia: so also the Kurd tribes near Mount Zagros have caused by their movements quarrels between the Persians and the Turks.

See Morier, Account of the Iliyats, or Wandering Tribes of Persia, in the Journal of the Geographical Society of London, 1837, vol. vii, p. 240, and Carl Ritter, Erdkunde von Asien, West-Asien, Band ii, Abtheilung ii. Abschnitt ii, sect. 8, p. 387.

[2] Herodot. i, 74–103.

[3] Compare the analogous case of the prediction of the coming olive crop ascribed to Thalês (Aristot. Polit. i, 4, 5; Cicero, De Divinat. i, 3). Anaxagoras is asserted to have predicted the fall of an aërolithe (Aristot. Meteorol i, 7; Pliny, H. N. ii, 58; Plutarch, Lysand. c. 5).

Thalês is said by Herodotus to have predicted that the eclipse would take place "in the year in which it actually did occur." — a statement so vague that it strengthens the grounds of doubt.

The fondness of the Ionians for exhibiting the wisdom of their eminent

its terrific working upon the minds of the combatants, are facts not to be called in question; though the diversity of opinion among chronologists, respecting the date of it, is astonishing.[1]

philosopher Thalês, in conjunction with the history of the Lydian kings, may be seen farther in the story of Thalês and Crœsus at the river Halys (Herod. i, 75), — a story which Herodotus himself disbelieves.

[1] Consult, for the chronological views of these events, Larcher ad Herodot. i, 74; Volney, Recherches sur l'Histoire Ancienne, vol. i, pp. 330–355; Mr. Fynes Clinton, Fasti Hellenici, vol. i, p. 418 (Note ad B. C. 617, 2); Des Vignoles, Chronologie de l'Histoire Sainte, vol. ii, p. 245; Ideler, Handbuch der Chronologie, vol. i, p. 209.

No less than eight different dates have been assigned by different chronologists for this eclipse, — the most ancient 625 B. C., the most recent 583 B. C. Volney is for 625 B. C.; Larcher for 597 B. C.; Des Vignoles for 585 B. C.; Mr. Clinton for 603 B. C. Volney observes, with justice, that the eclipse on this occasion "n'est pas l'accessoire, la broderie du fait, mais le *fait principal* lui-même," (p. 347:) the astronomical calculations concerning the eclipse are, therefore, by far the most important items in the chronological reckoning of this event. Now in regard to the eclipse of 625 B. C., Volney is obliged to admit that it does not suit the case; for it would be visible only at half-past five in the morning on February 3, and the sun would hardly be risen at that hour in the latitude of Media and Lydia (p. 343). He seeks to escape from this difficulty by saying that the data for the calculation, according to the astronomer Pingré, are not quite accurate for these early eclipses; but after all, if there be error, it may just as well be in one direction as in another, *i. e.* the true hour at which the eclipse would be visible for those latitudes is as likely to have been *earlier* than half-past five A. M. as to have been later, which would put this eclipse still more out of the question.

The chronology of that period presents difficulties which our means of knowledge hardly enable us to clear up. Volney remarks, and the language of Herodotus is with him, that not merely the war between Kyaxarês and Alyattês (which lasted five years, and was terminated by the eclipse), but also the conquest made by Kyaxarês of the territory up to the river Halys took place anterior (Herodot. i, 103: compare i, 16) to the *first siege* of Nineveh by Kyaxarês, — that siege which he was forced to raise by the inroad of the Scythians. This constitutes a strong presumption in favor of Volney's date for the eclipse (625 B. C.) if astronomical considerations would admit of it, which they will not. Mr. Clinton, on the other hand, puts the first siege of Nineveh in the very first year of the reign of Kyaxarês, which is not to be reconciled with the language of Herodotus. In placing the eclipse, therefore, in 603 B. C., we depart from the relative arrangement of events which Herodotus conceived, in deference to astronomical reasons: and Herodotus is our only authority in regard to the general chronology.

According to Ideler, however (and his authority upon such a point is conclusive, in my judgment), astronomical considerations decisively fix this

It was after this peace with Alyattês, as far as we can make out the series of events in Herodotus, that Kyaxarês collected all his forces and laid siege to Nineveh, but was obliged to desist by the unexpected inroad of the Scythians. Nearly at the same time that Upper Asia was desolated by these formidable nomads, Asia Minor too was overrun by other nomads, — the Cimmerians, — Ardys being then king of Lydia; and the two invasions, both spreading extreme disaster, are presented to us as indirectly connected together in the way of cause and effect.

The name Cimmerians appears in the Odyssey, — the fable describes them as dwelling beyond the ocean-stream, immersed in darkness and unblessed by the rays of Helios. Of this people as existent we can render no account, for they had passed away, or lost their identity and become subject, previous to the commencement of trustworthy authorities: but they seem to have been the chief occupants of the Tauric Chersonesus (Crimea) and of the territory between that peninsula and the river Tyras (Dniester), at the time when the Greeks first commenced their permanent settlements on those coasts in the seventh century B. C. The

eclipse for the 30th September 610 B. C., and exclude all those other eclipses which have been named. Recent and more trustworthy calculations made by Oltmanns, from the newest astronomical tables, have shown that the eclipse of 610 B. C. fulfils the conditions required, and that the other eclipses named do not. For a place situated in 40° N. lat. and 36° E. long. this eclipse was nearly total, only one-eightieth of the sun's disc remaining luminous: the darkness thus occasioned would be sufficient to cause great terror. (Ideler, Handbuch, *l.* c.)

Since the publication of my first edition, I have been apprized that the late Mr. Francis Baily had already settled the date of this eclipse to the 30th of September 610 B. C., in his first contribution to the Transactions of the Royal Society as long ago as 1811, — much before the date of the publication of Ideler's Handbuch der Chronologie. Sir John Herschel (in his Memoir of Mr. Francis Baily, in the Transactions of the Royal Astronomical Society, vol. xv, p. 311), after completely approving Mr. Baily's calculations, and stating that he had been the first to solve the disputed question, expresses his surprise that various French and German astronomers, writing on the same subject afterwards, have taken no notice of "that remarkable paper." Though a fellow-countryman of Mr. Baily, I am sorry that I have to plead guilty to a similar ignorance, until the point was specially brought to my notice by a friend. Had I been aware of the paper and the Memoir it would have been unnecessary to cite any other authority than that of Mr Baily and Sir John Herschel.

numerous localities which bore their name, even in the time of Herodotus,[1] after they had ceased to exist as a nation, — as well as the tombs of the Cimmerian kings then shown near the Tyras, — sufficiently attest this fact; and there is reason to believe that they were — like their conquerors and successors the Scythians — a nomadic people, mare-milkers, moving about with their tents and herds, suitably to the nature of those unbroken steppes which their territory presented, and which offered little except herbage in profusion. Strabo tells us[2] — on what authority we do not know — that they, as well as the Trêres and other Thracians, had desolated Asia Minor more than once before the time of Ardys, and even earlier than Homer.

The Cimmerians thus belong partly to legend partly to history; but the Scythians formed for several centuries an important section of the Grecian contemporary world. Their name, unnoticed by Homer, occurs for the first time in the Hesiodic poems. When the Homeric Zeus in the Iliad turns his eye away from Troy towards Thrace, he sees, besides the Thracians and Mysians, other tribes, whose names cannot be made out, but whom the poet knows as milk-eaters and mare-milkers;[3] and the same characteristic attributes, coupled with that of "having wagons for their dwelling-houses," appear in Hesiod connected with the name of the Scythians.[4] The navigation of the Greeks into the Euxine, gradually became more and more frequent, and during the last half of the seventh century B. C. their first settlements on its coasts were established. The foundation of Byzantium, as

[1] Herodot. iv, 11-12. Hekatæus also spoke of a town Κιμμερίς (Strabo vii, p. 294).

Respecting the Cimmerians, consult Ukert, Skythien, p. 360, *seqq.*

[2] Strabo, i, pp. 6, 59, 61.

[3] Homer, Iliad, xiii, 4. —

.....Αὐτὸς δὲ πάλιν τρέπεν ὄσσε φαεινὼ,
Νόσφιν ἐφ' ἱπποπόλων Θρηκῶν καθορώμενος αἶαν
Μυσῶν τ' ἀγχεμάχων, καὶ ἀγαυῶν Ἱππημολγῶν,
Γλακτοφάγων, Ἀβίων τε, δικαιοτάτων ἀνθρώπων

Compare Strabo, xii, p. 553.

[4] Hesiod, Fragm. 63-64, Marktscheffel: —

Γλακτοφάγων εἰς αἶαν, ἀπήναις οἶκι' ἐχόντων.....
Αἰθίοπας, Λίγυάς τε, ἰδὲ Σκύθας ἱππημολγούς.

Strabo, vii, pp. 300-302.

well as of the Pontic Herakleia, at a short distance to the east of the Thracian Bosphorus, by the Megarians, is assigned to the 30th Olympiad, or 658 B. C.;[1] and the succession of colonies founded by the enterprise of Milesian citizens on the western coast of the Euxine, seem to fall not very long after this date, — at least within the following century. Istria, Tyras, and Olbia, or Borysthenes, were planted respectively near the mouths of the three great rivers Danube, Dniester, and Bog: Kruni, Odêssus, Tomi, Kallatis, and Apollonia, were also planted on the south-western or Thracian coast, northward of the dangerous land of Salmydessus, so frequent in wrecks, but south of the Danube.[2] According to the turn of Grecian religious faith, the colonists took out with them the worship of the hero Achilles (from whom, perhaps, the œkist and some of the expatriating chiefs professed to be descended), which they established with great solemnity both in the various towns and on the small adjoining islands: and the earliest proof which we find of Scythia, as a territory familiar to Grecian ideas and feeling, is found in a fragment of the poet Alkæus (about B. C. 600), wherein he addresses Achilles[3] as "sovereign of Scythia." There were, besides, several other Milesian foundations on or near the Tauric Chersonese (Crimea) which brought the Greeks into conjunction with the Scythians,

[1] Raoul Rochette, Histoire des Colonies Grecques, tom. iii, ch. xiv, p. 297. The dates of these Grecian settlements near the Danube are very vague and untrustworthy.

[2] Skymnus Chius, v, 730, Fragm. 2-25.

[3] Alkæus, Fragm. 49, Bergk; Eustath. ad Dionys. Perieg. 306. —

Ἀχιλλεῦ, ὃν τᾶς (γᾶς, Schneid.) Σκυθικᾶς μέδεις.

Alkman, somewhat earlier, made mention of the Issêdones (Alkm. Frag. 129, Bergk; Steph. Byz. v, Ἰσσήδονες, — he called them Assêdones) and of the Rhipæan mountains (Fr. 80).

In the old epic of Arktinus, the deceased Achilles is transported to an elysium in the λευκὴ νῆσος (see the argument of the Æthiopis in Düntzer's Collection of Epicc. Poet. Græc. p. 15), but it may well be doubted whether λευκὴ νῆσος in his poem was anything but a fancy, — not yet localized upon the little island off the mouth of the Danube.

For the early allusions to the Pontus Euxinus and its neighboring inhabitants, found in the Greek poets, see Ukert, Skythien, pp. 15-18, 78; though he puts the Ionian colonies in the Pontus nearly a century too early, in my judgment.

— Herakleia, Chersonêsus, and Theodosia, on the southern coast and south-western corner of the peninsula, — Pantikapæum and the Teian colony of Phanagoria (these two on the European and Asiatic sides of the Cimmerian Bosphorus respectively), and Kêpi, Hermônassa, etc. not far from Phanagoria, on the Asiatic coast of the Euxine: last of all, there was, even at the extremity of the Palus Mæotis (Sea of Azof), the Grecian settlement of Tanais.[1] All or most of these seem to have been founded during the course of the sixth century B. C., though the precise dates of most of them cannot be named; probably several of them anterior to the time of the mystic poet Aristeas of Prokonnêsus, about 540 B. C. His long voyage from the Palus Mæotis (Sea of Azof) into the interior of Asia as far as the country of the Issêdones (described in a poem, now lost, called the Arimaspian verses), implies an habitual intercourse between Scythians and Greeks which could not well have existed without Grecian establishments on the Cimmerian Bosphorus.

Hekatæus of Milêtus,[2] appears to have given much geographical information respecting the Scythian tribes; but Herodotus, who personally visited the town of Olbia, together with the inland regions adjoining to it, and probably other Grecian settlements in the Euxine (at a time which we may presume to have been about 450–440 B. C.), — and who conversed with both Scythians and Greeks competent to give him information, — has left

[1] Compare Dr. Clarke's description of the present commerce between Taganrock — not far from the ancient Greek settlement of Tanais — and the Archipelago: besides exporting salt-fish, corn, leather, etc. in exchange for wines, fruit, etc. it is the great deposit of Siberian productions: from Orenburg it receives tallow, furs, iron, etc; this is, doubtless, as old as Herodotus (Clarke's Travels in Russia, ch. xv, p. 330).

[2] Hekatæi Fragment. Fr. 153, 168, ed. Klausen. Hekatæus mentioned the Issêdones (Fr. 168; Steph. Byz. v, Ἰσσήδονες); both he and Damastês seem to have been familiar with the poem of Aristeas: see Klausen, *ad loc.*; Steph. Byz. v, Ὑπερβόρειοι. Compare also Æschyl. Prometh. 409, 710, 805.

Hellanikus, also, seems to have spoken about Scythia in a manner generally conformable to Herodotus (Strabo, xii, p. 550). It does little credit to the discernment of Strabo that he treats with disdain the valuable Scythian chapter of Herodotus, — ἅπερ Ἑλλάνικος καὶ Ἡρόδοτος καὶ Εὔδοξος κατεψεύσαντο ἡμῶν (*ib*).

us far more valuable statements respecting the Scythian people, dominion, and manners, as they stood in his day. His conception of the Scythians, as well as that of Hippokratês, is precise and well-defined, — very different from that of the later authors, who use the word almost indiscriminately to denote all barbarous nomads. His territory, called Scythia, is a square area, twenty days' journey or four thousand stadia (somewhat less than five hundred English miles) in each direction, — bounded by the Danube (the course of which river he conceives in a direction from N. W. to S. E.), the Euxine, and the Palus Mæotis with the river Tanais, on three sides respectively, — and on the fourth or north side by the nations called Agathyrsi, Neuri, Androphagi, and Melanchlæni.[1] However imperfect his idea of the figure of this territory may be found, if we compare it with a good modern map, the limits which he gives us are beyond dispute: from the lower Danube and the mountains eastward of Transylvania to the lower Tanais, the whole area was either occupied by or subject to the Scythians. And this name comprised tribes differing materially in habits and civilization. The great mass of the people who bore it, strictly nomadic in their habits, — neither sowing nor planting, but living only on food derived from animals, especially mare's milk and cheese, — moved from place to place, carrying their families in wagons covered with wicker and leather, themselves always on horseback with their flocks and herds, between the Borysthenês and the Palus Mæotis; they hardly even reached so far westward as the Borysthenês, since a river (not

[1] Herodot. iv, 100–101. See, respecting the Scythia of Herodotus, the excellent dissertation of Niebuhr, contained in his Kleine Historische Schriften, "Ueber die Geschichte der Skythen, Geten, und Sarmaten," p. 360, alike instructive both as to the geography and the history. Also the two chapters in Völcker's Mythische Geographie, ch. vii–viii, sects. 23–26, respecting the geographical conceptions present to Herodotus in his description of Scythia.

Herodotus has much in his Scythian geography, however, which no comment can enable us to understand. Compared with his predecessors, his geographical conceptions evince very great improvement; but we shall have occasion, in the course of this history, to notice memorable examples of extreme misapprehension in regard to distance and bearings in these remote regions, common to him not only with his contemporaries, but also with his successors.

easily identified) which Herodotus calls Pantikapês, flowing into the Borysthenês from the eastward, formed their boundary. These nomads were the genuine Scythians, possessing the marked attributes of the race, and including among their number the regal Scythians,[1] — hordes so much more populous and more effective in war than the rest, as to maintain undisputed ascendency, and to account all other Scythians no better than their slaves. It was to these that the Scythian kings belonged, by whom the religious and political unity of the name was maintained, — each horde having its separate chief, and to a certain extent separate worship and customs. But besides these nomads, there were also agricultural Scythians, with fixed abodes, living more or less upon bread, and raising corn for exportation, along the banks of the Borysthenês and the Hypanis.[2] And such had

[1] Herodot. iv, 17–21, 46–56; Hippokratês, De Aëre, Locis et Aquis, c. vi Æschyl. Prometh. 709; Justin, ii, 2.

It is unnecessary to multiply citations respecting nomadic life, the same under such wide differences both of time and of latitude, — the same with the "armentarius Afer" of Virgil (Georgic, iii, 343) and the "campestres Scythæ" of Horace (Ode iii, 24, 12), and the Tartars of the present day; see Dr. Clarke's Travels in Russia, ch. xiv, p. 310.

The fourth book of Herodotus, the Tristia and Epistolæ ex Ponto of Ovid, the Toxaris of Lucian (see c. 36, vol. i, p. 544 Hemst.), and the Inscription of Olbia (No. 2058 in Boeckh's Collection), convey a genuine picture of Scythian manners as seen by the near observer and resident, very different from the pleasing fancies of the distant poet respecting the innocence of pastoral life. The poisoned arrows, which Ovid so much complains of in the Sarmatians and Getæ (Trist. iii, 10, 60, among other passages, and Lucan, iii, 270), are not noticed by Herodotus in the Scythians.

The dominant Golden Horde among the Tartars, in the time of Zinghis Khan, has been often spoken of; and among the different Arab tribes now in Algeria, some are noble, others enslaved; the latter habitually, and by inheritance, servants of the former, following wherever ordered (Tableau de la Situation des Etablissemens Français en Algérie, p. 393, Paris, Mar. 1846).

[2] Ephorus placed the Karpidæ immediately north of the Danube (Fragm. 78, Marx; Skymn. Chius, 102). I agree with Niebuhr that this is probably an inaccurate reproduction of the Kallippidæ of Herodotus, though Boeckh is of a different opinion (Introduct. ad Inscriptt. Sarmatic. Corpus Inscript. part xi, p. 81). The vague and dreamy statements of Ephorus, so far as we know them from the fragments, contrast unfavorably with the comparative precision of Herodotus. The latter expressly separates the Androphagi

been the influence of the Grecian settlement of Olbia at the mouth of the latter river in creating new tastes and habits, that two tribes on its western banks, the Kallippidæ and the Alazônes, had become completely accustomed both to tillage and to vegetable food, and had in other respects so much departed from their Scythian rudeness as to be called Hellenic-Scythians, many Greeks being seemingly domiciled among them. Northward of the Alazônes, lay those called the agricultural Scythians, who sowed corn, not for food but for sale.[1]

Such stationary cultivators were doubtless regarded by the predominant mass of the Scythians as degenerate brethren; and some historians maintain that they belonged to a foreign race, standing to the Scythians merely in the relation of subjects,[2]— an

from the Scythians, — ἔθνος ἐὸν ἴδιον καὶ οὐδαμῶς Σκυθικὸν (iv, 18), whereas when we compare Strabo vii. p. 302 and Skymn. Chi. 105–115, we see that Ephorus talked of the Androphagi as a variety of Scythians, — ἔθνος ἀνδροφάγων Σκυθῶν.

The valuable inscription from Olbia (No. 2058 Boeckh) recognizes Μιξέλληνες near that town.

[1] Herod. iv, 17. We may illustrate this statement of Herodotus by an extract from Heber's journal as cited in Dr. Clarke's Travels, ch. xv, p. 337: "The Nagay Tartars begin to the west of Marinopol: they cultivate a good deal of corn, yet they dislike bread as an article of food."

[2] Niebuhr (Dissertat. *ut sup.* p. 360), Boeckh (Introd. Inscrip. *ut sup.* p. 110), and Ritter (Vorhalle der Geschichte, p. 316) advance this opinion. But we ought not on this occasion to depart from the authority of Herodotus, whose information respecting the people of Scythia, collected by himself on the spot, is one of the most instructive and precious portions of his whole work. He is very careful to distinguish what is Scythian from what is not: and these tribes, which Niebuhr (contrary to the sentiment of Herodotus) imagines *not* to be Scythian, were the tribes nearest and best known to him; probably he had personally visited them, since we know that he went up the river Hypanis (Bog) as high as the Exampæus, four days' journey from the sea (iv, 52–81).

That some portions of the same ἔθνος should be ἀροτῆρες, and other portions νόμαδες, is far from being without parallel; such was the case with the Persians, for example (Herodot. i, 126), and with the Iberians between the Euxine and the Caspian (Strabo, xi, p. 500).

The Pontic Greeks confounded Agathyrsus, Gelônus, and Scythês in the same genealogy, as being three brethren, sons of Hêraklês by the μιξοπάρθενος Ἔχιδνα of the Hylæa (iv, 7–10). Herodotus is more precise: he distinguishes both the Agathyrsi and Gelôni from Scythians.

hypothesis contradicted implicitly, if not directly, by the words of Herodotus, and no way necessary in the present case. It is not from them, however, that Herodotus draws his vivid picture of the people, with their inhuman rites and repulsive personal features. It is the purely nomadic Scythians whom he depicts, the earliest specimens of the Mongolian race (so it seems probable)[1] known to history, and prototypes of the Huns and Bulgarians of later centuries. The sword, in the literal sense of the word, was their chief god,[1]— an iron scymetar solemnly elevated upon a wide and lofty platform, which was supported on masses of fagots piled underneath, — to whom sheep, horses, and a portion of their prisoners taken in war, were offered up in sacrifice: Herodotus treats this sword as the image of the god Arês, thus putting an Hellenic interpretation upon that which he describes literally as a barbaric rite. The scalps and the skins of slain enemies, and sometimes the skull formed into a drinking-cup, constituted the decoration of a Scythian warrior: whoever had not slain an enemy, was excluded from participation in the annual festival and bowl of wine prepared by the chief of each separate horde. The ceremonies which took place during the sickness and funeral obsequies of the Scythian kings (who were buried at Gerrhi, at the extreme point to which navigation extended up the Borysthenês), partook of the same sanguinary disposition. It was the Scythian practice to put out the eyes of all their slaves; and the awkwardness of the Scythian frame, often overloaded with fat, together with extreme dirt of body, and the absence of all discriminating feature between one man and another, complete the brutish portrait.[2] Mare's milk (with cheese made from it)

[1] Both Niebuhr and Boeckh account the ancient Scythians to be of Mongolian race (Niebuhr in the Dissertation above mentioned, Untersuchungen über die Geschichte der Skythen, Geten, und Sarmaten, among the Kleine Historische Schriften, p. 362; Boeckh, Corpus Inscriptt. Græcarum, Introductio ad Inscriptt. Sarmatic. part xi, p. 81). Paul Joseph Schafarik, in his elaborate examination of the ethnography of the ancient people described as inhabiting northern Europe and Asia, arrives at the same result (Slavische Alterthümer, Prag. 1843, vol. i, xiii, 6, p. 279).

A striking illustration of this analogy of race is noticed by Alexander von Humboldt, in speaking of the burial-place and the funeral obsequies of the Tartar Tchinghiz Khan: —

"Les cruautés lors de la pompe funèbre des grands-khans ressemblent entièrement à celles que nous trouvons décrites par Hérodote (iv, 71) environ 1700 ans avant la mort de Tchinghiz, et 65° de longitude plus à l'ouest, chez les Scythes du Gerrhus et du Borysthène." (Humboldt, Asie Centrale, vol. i, p. 244.)

Nevertheless, M. Humboldt dissents from the opinion of Niebuhr and Boeckh, and considers the Scythians of Herodotus to be of Indo-Germanic, not of Mongolian race: Klaproth seems to adopt the same view (see Humboldt, Asie Centrale, vol. i, p. 401, and his valuable work, Kosmos, p. 491 note 383). He assumes it as a certain fact, upon what evidence I do not distinctly see, that no tribe of Turk or Mongol race migrated westward out of Central Asia until considerably later than the time of Herodotus. To make out such a negative, seems to me impossible: and the marks of ethnographical analogy, so far as they go, decidedly favor the opinion of Niebuhr Ukert also (Skythien, pp. 266–280) controverts the opinion of Niebuhr.

At the same time it must be granted that these marks are not very conclusive, and that many nomadic hordes, whom no one would refer to the same race, may yet have exhibited an analogy of manners and characteristics equal to that between the Scythians and Mongols.

The principle upon which the Indo-European family of the human race is defined and parted off, appears to me inapplicable to any particular case wherein the *language* of the people is unknown to us. The nations constituting that family have no other point of affinity except in the roots and structure of their language; on every other point there is the widest difference. To enable us to affirm that the Massagetæ, or the Scythians, or the Alani, belonged to the Indo-European family, it would be requisite that we should know something of their language. But the Scythian language may be said to be wholly unknown; and the very few words which are brought to our knowledge do not tend to aid the Indo-European hypothesis.

[1] See the story of the accidental discovery of this Scythian sword when lost, by Attila, the chief of the Huns (Priscus ap. Jornandem de Rebus Geticis, c. 35, and in Eclog. Legation. p. 50).

Lucian in the Toxaris (c. 38, vol. ii, p. 546, Hemst.) notices the worship of the akinakes, or scymetar, by the Scythians in plain terms without interposing the idea of the god Arês: compare Clemen. Alexand. Protrept. p. 25, Syl. Ammianus Marcellinus, in speaking of the Alani (xxxi, 2), as well as Pomponius Mela (ii, 1) and Solinus (c. 20), copy Herodotus. Ammianus is more literal in his description of the Sarmatian sword-worship (xvii, 12), "Eductisque mucronibus, quos pro numinibus colunt," etc.

[2] Herodot. iv, 3–62, 71–75; Sophoklês, Œnomaus, — ap. Athenæ. ix, p. 410; Hippokratês, De Aëre, Locis et Aquis, ch. vi, s. 91–99, etc.

It is seldom that we obtain, in reference to the modes of life of an ancient population, two such excellent witnesses as Herodotus and Hippokratês about the Scythians.

Hippokratês was accustomed to see the naked figure in its highest per-

seems to have been their chief luxury, and probably served the same purpose of procuring the intoxicating drink called *kumiss*, as at present among the Bashkirs and the Kalmucks.[1]

If the habits of the Scythians were such as to create in the near observer no other feeling than repugnance, their force at least inspired terror. They appeared in the eyes of Thucydidês so numerous and so formidable, that he pronounces them irresistible, if they could but unite, by any other nation within his knowledge. Herodotus, too, conceived the same idea of a race among whom every man was a warrior and a practised horse-bowman, and who were placed by their mode of life out of all reach of an enemy's attack.[2] Moreover, Herodotus does not speak meanly of their intelligence, contrasting them in favorable terms with the general stupidity of the other nations bordering on the Euxine. In this respect Thucydidês seems to differ from him.

On the east, the Scythians of the time of Herodotus were separated only by the river Tanais from the Sarmatians, who occupied the territory for several days' journey north-east of the Palus Mæôtis: on the south, they were divided by the Danube from the section of Thracians called Getæ. Both these nations were nomadic, analogous to the Scythians in habits, military efficiency, and fierceness: indeed, Herodotus and Hippokratês distinctly intimate that the Sarmatians were nothing but a branch of Scythians,[3] speaking a Scythian dialect, and distinguished

---

fection at the Grecian games: hence, perhaps, he is led to dwell more emphatically on the corporeal defects of the Scythians.

[1] See Pallas, Reise durch Russland, and Dr. Clarke, Travels in Russia, ch. xii, p. 238.

[2] Thucyd. ii, 95; Herodot. ii, 46–47: his idea of the formidable power of the Scythians seems also to be implied in his expression (c. 81), *καὶ ὀλίγους, ὡς Σκύθας εἶναι*.

Herodotus holds the same language about the Thracians, however, as Thucydidês about the Scythians, — irresistible, if they could but act with union (v, 3).

[3] The testimony of Herodotus to this effect (iv, 110–117) seems clear and positive, especially as to the language. Hippokratês also calls the Sauromatæ *ἔθνος Σκυθικόν* (De Aëre, Locis et Aquis, c. vi, sect. 89, Petersen).

I cannot think that there is any sufficient ground for the marked ethnical distinction which several authors draw (contrary to Herodotus) between the Scythians and the Sarmatians. Boeckh considers the latter to be of Median

from their neighbors on the other side of the Tanais, chiefly by this peculiarity, — that the women among them were warriors hardly less daring and expert than the men. This attribute of Sarmatian women, as a matter of fact, is well attested, — though Herodotus has thrown over it an air of suspicion not properly belonging to it, by his explanatory genealogical mythe, deducing the Sarmatians from a mixed breed between the Scythians and the Amazons.

The wide extent of steppe eastward and north-eastward of the Tanais, between the Ural mountains and the Caspian, and beyond the possessions of the Sarmatians, was traversed by Grecian traders, even to a good distance in the direction of the Altai mountains, — the rich produce of gold, both in Altai and Ural, being the great temptation. First, according to Herodotus, came the indigenous nomadic nation called Budini, who dwelt to the northward of the Sarmatians,[1] and among whom were es-

---

or Persian origin, but to be, also, the progenitors of the modern Sclavonian family: "Sarmatæ, Slavorum haud dubie parentes," (Introduct. ad Inscr. Sarmatic. Corp. Inscr. part xi, p. 83.) Many other authors have shared this opinion, which identifies the Sarmatians with the Slavi; but Paul Joseph Schafarik (Slavische Alterthümer, vol. i, c. 16) has shown powerful reasons against it.

Nevertheless, Schafarik admits the Sarmatians to be of Median origin, and radically distinct from the Scythians. But the passages which are quoted to prove this point from Diodorus (ii, 43), from Mela (i, 19), and from Pliny (H. N. vi, 7), appear to me of much less authority than the assertion of Herodotus. In none of these authors is there any trace of inquiries made in or near the actual spot from neighbors and competent informants, such as we find in Herodotus. And the chapter in Diodorus, on which both Boeckh and Schafarik lay especial stress, appears to me one of the most untrustworthy in the whole book. To believe in the existence of Scythian kings who reigned over all Asia from the eastern ocean to the Caspian, and sent out large colonies of Medians and Assyrians, is surely impossible; and Wesseling speaks much within the truth when he says, "Verum hæc dubia admodum atque incerta." It is remarkable to see Boeckh treating this passage as conclusive against Herodotus and Hippokratês. M. Boeckh has also given a copious analysis of the names found in the Greek inscriptions from Scythian, Sarmatian, and Mæotic localities (*ut sup.* pp. 107–117), and he endeavors to establish an analogy between the two latter classes and Median names. But the analogy holds just as much with regard to the Scythian names.

[1] The locality which Herodotus assigns to the budini creates difficulty

tablished a colony of Pontic Greeks, intermixed with natives, and called Gelôni; these latter inhabited a spacious town built entirely of wood. Beyond the Budini eastward dwelt the Thys

According to his own statement, it would seem that they ought to be near to the Neuri (iv, 105), and so in fact Ptolemy places them (v, 9) near about Volhynia and the sources of the Dniester.

Mannert (Geographie der Griech. und Römer, Der Norden der Erde, v, iv, p. 138) conceives the budini to be a Teutonic tribe; but Paul Joseph Schafarik (Slavische Alterthümer, i, 10, pp. 185–195) has shown more plausible grounds for believing both them and the neuri to be of Slavic family. It seems that the names budini and neuri are traceable to Slavic roots; that the wooden town described by Herodotus in the midst of the budini is an exact parallel of the primitive Slavic towns, down even to the twelfth century; and that the description of the country around, with its woods and marshes containing beavers, otters, etc. harmonizes better with southern Poland and Russia than with the neighborhood of the Ural mountains. From the color ascribed to the budini, no certain inference can be drawn: *γλαυκόν τε πᾶν ἰσχυρῶς ἐστὶ καὶ πυῤῥόν* (iv, 108). Mannert construes it in favor of Teutonic family, Schafarik in favor of Slavic; and it is to be remarked, that Hippokratês talks of the Scythians generally as extremely *πυῤῥοί* (De Aëre, Locis et Aquis, c. vi: compare Aristot. Prob. xxxviii, 2).

These reasonings are plausible; yet we can hardly venture to alter the position of the budini as Herodotus describes it, eastward of the Tanais. For he states in the most explicit manner that the route as far as the Argippæi *is thoroughly known*, traversed both by Scythian and by Grecian traders, and all the nations in the way to it known (iv, 24): *μέχρι μὲν τούτων πολλὴ περιφάνεια τῆς χώρης ἐστὶ καὶ τῶν ἐμπροσθεν ἐθνέων· καὶ γὰρ Σκυθέων τινες ἀπικνέονται ἐς αὐτοὺς, τῶν οὐ χαλεπὸν ἐστὶ πυθέσθαι, καὶ Ἑλλήνων τῶν ἐκ Βορυσθένεός τε ἐμπορίου καὶ τῶν ἄλλων Ποντικῶν ἐμπορίων.* These Greek and Scythian traders, in their journey from the Pontic seaports into the interior, employed seven different languages and as many interpreters.

Völcker thinks that Herodotus or his informants confounded the Don with the Volga (Mythische Geographie, sect. 24, p. 190), supposing that the higher parts of the latter belonged to the former; a mistake not unnatural, since the two rivers approach pretty near to each other at one particular point, and since the lower parts of the Volga, together with the northern shore of the Caspian, where its embouchure is situated, appear to have been little visited and almost unknown in antiquity. There cannot be a more striking evidence how unknown these regions were, than the persuasion, so general in antiquity, that the Caspian sea was a gulf of the ocean, to which Herodotus, Aristotle, and Ptolemy are almost the only exceptions. Alexander von Humboldt has some valuable remarks on the tract laid down by Herodotus from the Tanais to the Argippæi (Asie Centrale, vol. i, pp 390–400).

sagetæ and the Jurkæ, tribes of hunters, and even a body of Scythians who had migrated from the territories of the regal Scythians. The Issêdones were the easternmost people respecting whom any definite information reached the Greeks; beyond them we find nothing but fable,[1] — the one-eyed Arimaspians, the gold-guarding Grypes, or Griffins, and the bald-headed Argippæi. It is impossible to fix with precision the geography of these different tribes, or to do more than comprehend approximatively their local bearings and relations to each other.

But the best known of all is the situation of the Tauri (perhaps a remnant of the expelled Cimmerians), who dwelt in the southern portion of the Tauric Chersonesus (or Crimea), and who immolated human sacrifices to their native virgin goddess, — identified by the Greeks with Artemis, and serving as a basis for the affecting legend of Iphigeneia. The Tauri are distinguished by Herodotus from Scythians,[2] but their manners and state of civilization seem to have been very analogous. It appears also that the powerful and numerous Massagetæ, who dwelt in Asia on the plains eastward of the Caspian and southward of the Issêdones, were so analogous to the Scythians as to be reckoned as members of the same race by many of the contemporaries of Herodotus.[3]

This short enumeration of the various tribes near the Euxine and the Caspian, as well as we can make them out, from the seventh to the fifth century B. C., is necessary for the comprehension of that double invasion of Scythians and Cimmerians which laid waste Asia between 630 and 610 B. C. We are not to expect from Herodotus, born a century and a half afterwards, any very clear explanations of this event, nor were all his informants unanimous respecting the causes which brought it about. But it is a fact perfectly within the range of historical analogy, that accidental aggregations of number, development of aggressive

[1] Herodot. iv, 80.

[2] Herodot. iv, 99–101. Dionysius Periêgêtês seems to identify Cimmerians and Tauri (v, 168: compare v, 680, where the Cimmerians are placed on the Asiatic side of the Cimmerian Bosphorus, adjacent to the Sindi).

[3] Herodot. i, 202. Strabo compares the inroads of the Sakæ, which was the name applied by the Persians to the Scythians, to those of the Cimmerians and the Trêres (xi, pp. 511–512).

spirit, or failure in the means of subsistence, among the nomadic tribes of the Asiatic plains, have brought on the civilized nations of southern Europe calamitous invasions, of which the prime moving cause was remote and unknown. Sometimes a weaker tribe, flying before a stronger, has been in this manner precipitated upon the territory of a richer and less military population, so that an impulse originating in the distant plains of Central Tartary has been propagated until it reached the southern extremity of Europe, through successive intermediate tribes, a phenomenon especially exhibited during the fourth and fifth centuries of the Christian era, in the declining years of the Roman empire. A pressure so transmitted onward is said to have brought down the Cimmerians and Scythians upon the more southerly regions of Asia. The most ancient story in explanation of this incident seems to have been contained in the epic poem (now lost) called *Arimaspia*, of the mystic Aristeas of Prokonnêsus, composed apparently about 540 B. C. This poet, under the inspiration of Apollo,[1] undertook a pilgrimage to visit the sacred Hyperboreans (especial votaries of that god) in their elysium beyond the Rhipæan mountains; but he did not reach farther than the Issêdones. According to him, the movement, whereby the Cimmerians had been expelled from their possessions on the Euxine sea, began with the Grypes or Griffins in the extreme north, — the sacred character of the Hyperboreans beyond was incompatible with aggression or bloodshed. The Grypes invaded the Arimaspians, who on their part assailed their neighbors the Issêdones;[2] these latter moved southward or westward and drove the Scythians across the Tanais, while the Scythians, carried forward by this onset, expelled the Cimmerians from their territories along the Palus Mæotis and the Euxine.

We see thus that Aristeas referred the attack of the Scythians upon the Cimmerians to a distant impulse proceeding in the first instance from the Grypes or Griffins; but Herodotus had heard it explained in another way, which he seems to think more correct, — the Scythians, originally occupants of Asia, or the regions east of the Caspian, had been driven across the Araxês, in

[1] Herodot. iv, 13. *φοιβολαμπτὸς γενομένης.*
[2] Herodot. iv, 13.

consequence of an unsuccessful war with the Massagetæ, and precipitated upon the Cimmerians in Europe.[1]

When the Scythian host approached, the Cimmerians were not agreed among themselves whether to resist or retire: the majority of the people were dismayed and wished to evacuate the territory, while the kings of the different tribes resolved to fight and perish at home. Those who were animated with this fierce despair, divided themselves along with the kings into two equal bodies and perished by each other's hands near the river Tyras, where the sepulchres of the kings were yet shown in the time of Herodotus.[2] The mass of the Cimmerians fled and abandoned their country to the Scythians; who, however, not content with possession of the country, followed the fugitives across the Cimmerian Bosphorus from west to east, under the command of their prince Madyês son of Protothyês. The Cimmerians, coasting along the east of the Euxine sea and passing to the west of Mount Caucasus, made their way first into Kolchis, and next into Asia Minor, where they established themselves on the peninsula on the northern coast, near the site of the subsequent Grecian city of Sinôpê. But the Scythian pursuers, mistaking the course taken by the fugitives, followed the more circuitous route east of Mount Caucasus near to the Caspian sea;[3] which brought them, not into Asia Minor, but into Media. Both Asia Minor and Media became thus exposed nearly at the same time to the ravages of northern nomades.

These two stories, representing the belief of Herodotus and Aristeas, involve the assumption that the Scythians were comparatively recent emigrants into the territory betwen the Ister and the Palus Mæotis. But the legends of the Scythians themselves, as well as those of the Pontic Greeks, imply the contrary of this assumption; and describe the Scythians as primitive and indigenous inhabitants of the country. Both legends are so framed as to explain a triple division, which probably may have prevailed, of the Scythian aggregate nationality, traced up to three heroic brothers: both also agree in awarding the predomi-

[1] Herodot. iv, 11. *Ἔστι δὲ καὶ ἄλλος λόγος, ἔχων ὧδε, τῷ μάλιστα λεγομένῳ αὐτὸς προσκεῖμαι.*
[2] Herodot. iv, 11.
[3] Herodot. iv, 1–12.

nance to the youngest brother of the three,[1] though in other respects, the names and incidents of the two are altogether different. The Scythians call themselves Skoloti.

Such material differences, in the various accounts given to Herodotus of the Scythian and Cimmerian invasions of Asia, are by no means wonderful, seeing that nearly two centuries had elapsed between that event and his visit to the Pontus. That the Cimmerians — perhaps the northernmost portion of the great Thracian name, and conterminous with the Getæ on the Danube — were the previous tenants of much of the territory between the Ister and the Palus Mæotis, and that they were expelled in the seventh century B. C., by the Scythians, we may follow Herodotus in believing; but Niebuhr has shown that there is great intrinsic improbability in his narrative of the march of the Cimmerians into Asia Minor, and in the pursuit of these fugitives by the Scythians. That the latter would pursue at all, when an extensive territory was abandoned to them without resistance, is hardly supposable: that they should pursue and mistake their way, is still more difficult to believe: nor can we overlook the great difficulties of the road and the Caucasian passes, in the route ascribed to the Cimmerians.[2] Niebuhr supposes the latter

[1] Herodot. iv, 5-9. At this day, the three great tribes of the nomadic Turcomans, on the north-eastern border of Persia near the Oxus, — the Yamud, the Gokla, and the Tuka, — assert for themselves a legendary genealogy deduced from three brothers (Frazer, Narrative of a Journey in Khorasan, p. 258).

[2] Read the description of the difficult escape of Mithridates Eupator, with a mere handful of men, from Pontus to Bosphorus by this route, between the western edge of Caucasus and the Euxine (Strabo, xi, pp. 495–496), — *ἡ τῶν Ἀχαιῶν καὶ Ζυγῶν καὶ Ἡνιόχων παραλία*, — all piratical and barbarous tribes. — *τῇ παραλίᾳ χαλεπῶς ἦει, τὰ πολλὰ ἐμβαίνων ἐπὶ τὴν θάλασσαν*: compare Plutarch, Pompeius, c. 34. Pompey thought the route unfit for his march.

To suppose the Cimmerian tribes with their wagons passing along such a track would require strong positive evidence. According to Ptolemy, however, there were two passes over the range of Caucasus, — the Caucasian or Albanian gates, near Derbend and the Caspian, and the Sarmatian gates, considerably more to the westward (Ptolemy, Geogr. v, 9; Forbiger, Handbuch der Alten Geographie, vol. ii, sect. 56, p. 55). It is not impossible that the Cimmerians may have followed the westernmost, and the Scythians the easternmost, of these two passes; but the whole story is certainly very improbable.

[3] See Niebuhr's Dissertation above referred to, pp. 366–367. A reason for supposing that the Cimmerians came into Asia Minor from the west and not from the east, is, that we find them so much confounded with the Thracian Treres, indicating seemingly a joint invasion.

[4] Herodot. i, 6–15; iv, 12. *φαίνονται δὲ οἱ Κιμμέριοι, φεύγοντες ἐς τὴν Ἀσίην τοὺς Σκύθας, καὶ τὴν Χερσόνησον κτίσαντες, ἐν τῇ νῦν Σινώπη πόλις Ἑλληνὶς οἰκίσται.*

[5] Kallinus, Fragment. 2, 3, ed. Bergk. *Νῦν δ' ἐπὶ Κιμμερίων στρατὸς ἔρχεται ὀβριμοέργων* (Strabo, xiii, p. 627; xiv, 633–647). O. Müller (History of the Literature of Ancient Greece, ch. x, s. 4) and Mr. Clinton (Fasti Hellenici, B. C. 716–635) may be consulted about the obscure chronology of these events. The Scythico-Cimmerian invasion of Asia, to

to have marched into Asia Minor by the western side of the Euxine, and across the Thracian Bosphorus, after having been defeated in a decisive battle by the Scythians near the river Tyras, where their last kings fell and were interred.[1] Though this is both an easier route, and more in accordance with the analogy of other occupants expelled from the same territory, we must, in the absence of positive evidence, treat the point as unauthenticated.

The inroad of the Cimmerians into Asia Minor was doubtless connected with their expulsion from the northern coast of the Euxine by the Scythians, but we may well doubt whether it was at all connected, as Herodotus had been told that it was, with the invasion of Media by the Scythians, except as happening near about the same time. The same great evolution of Scythian power, or propulsion by other tribes behind, may have occasioned both events, — brought about by different bodies of Scythians, but nearly contemporaneous.

Herodotus tells us two facts respecting the Cimmerian emigrants into Asia Minor. They committed destructive, though transient, ravages in many parts of Paphlagonia, Phrygia, Lydia, and Ionia, — and they occupied permanently the northern peninsula,[2] whereon the Greek city of Sinôpê was afterwards planted. Had the elegies of the contemporary Ephesian poet Kallinus been preserved, we should have known better how to appreciate these trying times: he strove to keep alive the energy of his countrymen against the formidable invaders.[3] From later au-

thors, who, probably, had these poems before them, we learn that the Cimmerian host, having occupied the Lydian chief town

which *Herodotus* alludes, appears fixed for some date in the reign of Ardys the Lydian, 640–629 B. C., and may stand for 635 B. C. as Mr. Clinton puts it; and I agree with O. Müller that the fragment of the poet Kallinus above cited alludes to *this* invasion; for the supposition of Mr. Clinton, that Kallinus here alludes to an invasion past and not present, appears to be excluded by the word *νῦν*. Mr. Clinton places both Kallinus and Archilochus (in my judgment) half a century too high; for I agree with O. Müller in disbelieving the story told by Pliny of the picture sold by Bularchus to Kandaulês. O. Müller follows Strabo (i, p. 61) in calling Madys a Cimmerian prince, who drove the Trêres out of Asia Minor; whereas Herodotus mentions him as the *Scythian* prince, who drove the Cimmerians *out* of their own territory *into* Asia Minor (i, 103).

The chronology of Herodotus is intelligible and consistent with itself: that of Strabo we cannot settle, when he speaks of many different invasions. Nor does his language give us the smallest reason to suppose that he was in possession of any means of determining dates for these early times, — nothing at all calculated to justify the positive chronology which Mr. Clinton deduces from him: compare his Fasti Hellenici, B. C. 635, 629, 617. Strabo says, after affirming that Homer knew both the name and the reality of the Cimmerians (i, p. 6; iii, p. 149), — *καὶ γὰρ καθ' Ὅμηρον, ἢ πρὸ αὐτοῦ μικρὸν λέγουσι τὴν τῶν Κιμμερίων ἔφοδον γενέσθαι τὴν μέχρι τῆς Αἰολίδος καὶ τῆς Ἰωνίας*, — "which places the first appearance of the Cimmerians in Asia Minor a century *at least* before the Olympiad of Coræbus," (says Mr. Clinton.) But what means could Strabo have had to chronologize events as happening *at or a little before* the time of Homer? No date in the Grecian world was so contested, or so indeterminable, as the time of Homer: nor will it do to reason, as Mr. Clinton does, *i. e.* to take the latest date fixed for Homer among many, and then to say that the invasion of the Cimmerians *must* be *at least* B. C. 876: thus assuming it as a certainty that, whether the date of Homer be a century earlier or later, the invasion of the Cimmerians must be made to fit it. When Strabo employs such untrustworthy chronological standards, he only shows us — what everything else confirms — that there existed no tests of any value for events of that early date in the Grecian world.

Mr. Clinton announces this ante-Homeric calculation as a chronological certainty: "The Cimmerians first appeared in Asia Minor about a century before B. C. 776. An irruption is *recorded* in B. C. 782. Their last inroad was in B. C. 635. The settlement of Ambrôn (the Milesian, at Sinôpê) may be placed at about B. C. 782, twenty-six years before the era assigned to (the Milesian or Sinôpic settlement of) Trapezus."

On what authority does Mr. Clinton assert that a Cimmerian irruption was *recorded* in B. C. 782? Simply on the following passage of Orosius,

Sardis (its inaccessible acropolis defied them), poured with their wagons into the fertile valley of the Kaïster, took and sacked Magnèsia on the Mæander, and even threatened the temple of Artemis at Ephesus. But the goddess so well protected her own town and sanctuary,[1] that Lygdamis the leader of the Cimme-

which he cites at B. C. 635: "Anno ante urbem conditam tricesimo, — Tunc etiam *Amazonum gentis et Cimmeriorum* in Asiam repentinus incursus plurimum diu lateque vastationem et stragem intulit." If the authority of Orosius is to be trusted, we ought to say that the invasion of the Amazons was a *recorded* fact. To treat a fact mentioned in Orosius, an author of the fourth century after Christ, and referred to B. C. 782, as a *recorded* fact, confounds the most important boundary-lines in regard to the appreciation of historical evidence.

In fixing the Cimmerian invasion of Asia at 782 B. C., Mr. Clinton has the statement of Orosius, whatever it may be worth, to rest upon; but in fixing the settlement of Ambrôn the Milesian (at Sinôpê) at 782 B. C., I know not that he had any authority at all. Eusebius does, indeed, place the foundation of Trapezus in 756 B. C., and Trapezus is said to have been a colony from Sinôpê; and Mr. Clinton, therefore, is anxious to find some date for the foundation of Sinôpê anterior to 756 B. C.; but there is nothing to warrant him in selecting 782 B. C., rather than any other year.

In my judgment, the establishment of *any* Milesian colony in the Euxine at so early a date as 756 B. C. is highly improbable: and when we find that the same Eusebius fixes the foundation of Sinôpê (the metropolis of Trapezus) as low down as 629 B. C., this is an argument with me for believing that the date which he assigns to Trapezus is by far too early. Mr. Clinton treats the date which Eusebius assigns to Trapezus as certain, and infers from it, that the date which the same author assigns to *Sinôpê* is one hundred and thirty years *later* than the reality: I reverse the inference, considering the date which he assigns to *Sinôpê* as the more trustworthy of the two, and deducing the conclusion, that the date which he gives for *Trapezus* is one hundred and thirty years at least *earlier* than the reality.

On all grounds, the authority of the chronologists is greater with regard to the later of the two periods than to the earlier, and there is, besides, the additional probability arising out of what is a suitable date for Milesian settlement. To which I will add, that Herodotus places the settlement of the Cimmerians near "that spot where Sinôpê is *now* settled," in the reign of Ardys, soon after 635 B. C. Sinôpê was, therefore, *not* founded at the time when the Cimmerians went there, in the belief of Herodotus.

[1] Strabo l. p. 61; Kallimachus, Hymn. ad Dianam, 251–260

.....ἠλαίνων ἀλαπάζεμεν ἠπείλησε (Ἔφεσον)
Αὐγδαμις ὑβριστὴς, ἐπὶ δὲ στρατὸν ἱππημόλγων
Ἤγαγε Κιμμερίων, ψαμάθῳ ἴσον, οἵ ῥα παρ' αὐτὸν
Κεκλίμενοι ναίουσι βοὸς πόρον Ἰναχιώνης.

rians, whose name marks him for a Greek, after a season of prosperous depredation in Lydia and Ionia, conducting his host into the mountainous regions of Kilikia, was there overwhelmed and slain. But though these marauders perished, the Cimmerian settlers in the territory near Sinôpê remained; and Ambrôn, the first Milesian œkist who tried to colonize that spot, was slain by them, if we may believe Skymnus. They are not mentioned afterwards, but it seems not unreasonable to believe that they appear under the name of the Chalybes, whom Herodotus mentions along that coast between the Mariandynians and Paphlagonians, and whom Mela notices as adjacent to Sinôpê and Amisus.[1] Other authors place the Chalybes on several different points, more to the east, though along the same parallel of latitude, — between the Mosynœki and Tibarêni, — near the river Thermôdôn, — and on the northern boundary of Armenia, near the sources of the Araxês; but it is only Herodotus and Mela who recognize Chalybes westward of the river Halys and the Paphlygonians, near to Sinôpê. These Chalybes were brave mountaineers, though savage in manners; distinguished as producers and workers of the iron which their mountains afforded. In the conceptions of the Greeks, as manifested in a variety of fabulous notices, they are plainly connected with Scythians or Cimmerians; whence it seems probable that this connection was present to the mind of Herodotus in regard to the inland population near Sinôpê.[2]

Ἀ δειλὸς βασιλέων ὅσον ἤλιτεν· οὐ γὰρ ἔμελλε
Οὔτ' αὐτὸς Σκυθίηνδε παλίμπετες, οὔτε τις ἄλλος
Ὅσσων ἐν λειμῶνι Καϋστρίῳ ἦσαν ἅμαξαι,
Ἀψ ἀπονοστήσειν.....

In the explanation of the proverb Σκυθῶν ἐρημία, allusion is made to a sudden panic and flight of *Scythians* from Ephesus (Hesychius, v, Σκυθῶν ἐρημία), — probably this must refer to some story of interference on the part of Artemis to protect the town against these Cimmerians. The confusion between Cimmerians and Scythians is very frequent.

[1] Herodot. i, 28; Mela, i, 19, 9; Skymn. Chi. Fragm. 207.

[2] The ten thousand Greeks in their homeward march passed through a people called Chalybes between Armenia and the town of Trapezus, and also again after eight days' march westerly from Trapezus, between the Tibarêni and Mosynœki: compare Xenophon, Anabas. iv, 7, 15; v, 5, 1; probably different sections of the same people The last-mentioned Chalybes seem to have been the best known, from their iron works, and their greater vicinity to the Greek ports: Ephorus recognized them (see Ephori Fragm. 80–82, ed. Marx); whether he knew of the more easterly Chalybes, north of Armenia, is less certain: so also Dionysius Periêgêtês, v, 768: compare Eustathius, *ad loc.*

The idea which prevailed among ancient writers, of a connection between the Chalybes in these regions and the Scythians or Cimmerians (Χάλυβος Σκυθῶν ἄποικος, Æschyl. Sept. ad Thebas, 729; and Hesiod. ap. Clemen. Alex. Str. i, p. 132), and of which the supposed residence of the Amazons on the river Thermôdôn seems to be one of the manifestations, is discussed in Hoeckh, Kreta, book i, pp. 294–305; and Mannert, Geographie der Griechen und Römer, vi, 2, pp. 408–416: compare Stephan. Byz. v, Χάλυβες. Mannert believes in an early Scythian emigration into these regions. The ten thousand Greeks passed through the territory of a people called Skythini, immediately bordering on the Chalybes to the north; which region some identify with the Sakasênê of Strabo (xi, 511) occupied, according to that geographer, by invaders from Eastern Scythia.

It seems that Sinôpê was one of the most considerable places for the export of the iron used in Greece: the Sinopic as well as the Chalybdic (or Chalybic) iron had a special reputation (Stephan. Byz. v, Λακεδαίμων).

About the Chalybes, compare Ukert, Skythien, pp. 521–523.

[1] Herodot. i, 15–16.

[2] Strabo, xi, p. 511; xii, p. 552; xiii, p. 627.

The poet Kallinus mentioned both Cimmerians and Trêres (Fr. 2, 3, ed Bergk Strabo, xiv, pp. 633–647).

Herodotus seems to have conceived only one invasion of Asia by the Cimmerians, during the reign of Ardys in Lydia. Ardys was succeeded by his son Sadyattês, who reigned twelve years; and it was Alyattês, son and successor of Sadyattês, according to Herodotus, who expelled the Cimmerians from Asia.[1] But Strabo seems to speak of several invasions, in which the Trêres, a Thracian tribe, were concerned, and which are not clearly discriminated; while Kallisthênes affirmed that Sardis had been taken by the Trêres and Lykians.[2] We see only that a large and fair portion of Asia Minor was for much of this seventh century B. C. in possession of these destroying nomads, who, while on the one hand they afflicted the Ionic Greeks, on the other hand indirectly befriended them by retarding the growth of the Lydian monarchy.

The invasion of Upper Asia by the Scythians appears to have been nearly simultaneous with that of Asia Minor by the Cimmerians, but more ruinous and longer protracted. The Median

king Kyaxarês, called away from the siege of Nineveh to oppose them, was totally defeated; and the Scythians became full masters of the country. They spread themselves over the whole of Upper Asia, as far as Palestine and the borders of Egypt, where Psammetichus the Egyptian king met them, and only redeemed his kingdom from invasion by prayers and costly presents. In their return, a detachment of them sacked the temple of Aphroditê at Askalon; an act of sacrilege which the goddess avenged both upon the plunderers and their descendants, to the third and fourth generation. Twenty-eight years did their dominion in Upper Asia continue,[1] with intolerable cruelty and oppression; until, at length, Kyaxarês and the Medes found means to entrap the chiefs into a banquet, and slew them in the hour of intoxication. The Scythian host once expelled, the Medes resumed their empire. Herodotus tells us that these Scythians returned to the Tauric Chersonese, where they found that, during their long absence, their wives had intermarried with the slaves, while the new offspring which had grown up refused to readmit them. A deep trench had been drawn across a line[2] over which their march lay, and the new-grown youth defended it with bravery, until at length,—so the story runs,—the returning masters took up their whips instead of arms, and scourged the rebellious slaves into submission.

Little as we know about the particulars of these Cimmerian and Scythian inroads, they deserve notice as the first — at least the first historically known — among the numerous invasions of cultivated Asia and Europe by the nomades of Tartary. Huns, Avars, Bulgarians, Magyars, Turks, Mongols, Tartars, etc., are

[1] Herodot. i, 105. The account given by Herodotus of the punishment inflicted by the offended Aphroditê on the Scythian plunderers, and on their children's children down to his time, becomes especially interesting when we combine it with the statement of Hippokratês respecting the peculiar incapacities which were so apt to affect the Scythians, and the religious interpretation put upon them by the sufferers (De Aëre, Locis, et Aquis, c. vi, s. 106–109).

[2] See, in reference to the direction of this ditch, Völcker, in the work above referred to on the Scythia of Herodotus (Mythische Geographie, ch. vii, p. 177).

That the ditch existed, there can be no reasonable doubt; though the tale given by Herodotus is highly improbable.

found in subsequent centuries repeating the same infliction, and establishing a dominion both more durable, and not less destructive, than the transient scourge of the Scythians during the reign of Kyaxarês.

After the expulsion of the Scythians from Asia, the full extent and power of the Median empire was reëstablished; and Kyaxarês was enabled again to besiege Nineveh. He took that great city, and reduced under his dominion all the Assyrians except those who formed the kingdom of Babylon. This conquest was achieved towards the close of his reign, and he bequeathed the Median empire, at the maximum of its grandeur, to his son Astyagês, in 595 B. C.[1]

As the dominion of the Scythians in Upper Asia lasted twenty eight years before they were expelled by Kyaxarês, so also the inroads of the Cimmerians through Asia Minor, which had begun during the reign of the Lydian king Ardys, continued through the twelve years of the reign of his son Sadyattês (629–617 B. C.), and were finally terminated by Alyattês, son of the latter.[2] Notwithstanding the Cimmerians, however, Sadyattês was in a condition to prosecute a war against the Grecian city of Milêtus, which continued during the last seven years of his reign, and which he bequeathed to his son and successor. Alyattês continued the war for five years longer. So feeble was the sentiment of union among the various Grecian towns on the Asiatic coast, that none of them would lend any aid to Milêtus except the Chians, who were under special obligations to Milêtus for previous aid in a contest against Erythræ: and the Milesians unassisted were no match for the Lydian army in the field, though their great naval strength placed them out of all danger of a blockade; and we must presume that the erection of those mounds of earth against the walls, whereby the Persian Harpagus vanquished the Ionian cities half a century afterwards, was

[1] Herodot. i, 106. Mr. Clinton fixes the date of the capture of Nineveh at 606 B. C. (F. H. vol. i, p. 269), upon grounds which do not appear to me conclusive: the utmost which can be made out is, that it was taken during the last ten years of the reign of Kyaxarês.

[2] From whom Polyænus borrowed his statement, that Alyattês employed with effect savage dogs against the Cimmerians, I do not know (Polyæn vii, 2, 1).

then unknown to the Lydians. For twelve successive years the Milesian territory was annually overrun and ravaged, previous to the gathering in of the crop. The inhabitants, after having been defeated in two ruinous battles, gave up all hope of resisting the devastation, so that the task of the invaders became easy, and the Lydian army pursued their destructive march to the sound of flutes and harps. They ruined the crops and the fruit-trees, but Alyattês would not allow the farm-buildings or country-houses to be burnt, in order that the means of production might still be preserved, to be again destroyed during the following season. By such unremitting devastation the Milesians were reduced to distress and famine, in spite of their command of the sea; and the fate which afterwards overtook them during the reign of Crœsus, of becoming tributary subjects to the throne of Sardis, would have begun half a century earlier, had not Alyattês unintentionally committed a profanation against the goddess Athênê. Her temple at Assêssus accidentally took fire, and was consumed, when his soldiers on a windy day were burning the Milesian standing corn. Though no one took notice of this incident at the time, yet Alyattês on his return to Sardis was smitten with pro longed sickness. Unable to obtain relief, he despatched envoys to seek humble advice from the god at Delphi; but the Pythian priestess refused to furnish any healing suggestions until he should have rebuilt the burnt temple of Athênê, — and Periander, at that time despot of Corinth, having learned the tenor of this reply, transmitted private information of it to Thrasybulus, despot of Milêtus, with whom he was intimately allied. Presently there arrived at Milêtus a herald on the part of Alyattês, proposing a truce for the special purpose of enabling him to rebuild the destroyed temple, — the Lydian monarch believing the Milesians to be so poorly furnished with subsistence that they would gladly embrace this temporary relief. But the herald on his arrival found abundance of corn heaped up in the agora, and the citizens engaged in feasting and enjoyment: for Thrasybulus had caused all the provision in the town, both public and private, to be brought out, in order that the herald might see the Milesians in a condition of apparent plenty, and carry the news of it to his master. The stratagem succeeded. Alyattês, under the persuasion that his repeated devastations inflicted upon the Milesians no

sensible privations, abandoned his hostile designs, and concluded with them a treaty of amity and alliance. It was his first proceeding to build two temples to Athênê, in place of the one which had been destroyed, and he then, forthwith, recovered from his protracted malady. His gratitude for the cure was testified by the transmission of a large silver bowl, with an iron footstand welded together by the Chian artist Glaukus, — the inventor of the art of thus joining together pieces of iron.[1]

Alyattês is said to have carried on other operations against some of the Ionic Greeks: he took Smyrna, but was defeated in an inroad on the territory of Klazomenæ.[2] But on the whole, his long reign of fifty-seven years was one of tranquillity to the Grecian cities on the coast, though we hear of an expedition which he undertook against Karia.[3] He is reported to have been during youth of overweening insolence, but to have acquired afterwards a just and improved character. By an Ionian wife he became father of Crœsus, whom, even during his lifetime, he appointed satrap of the town of Adramyttium, and the neighboring plain of Thêbê. But he had also other wives and other sons, and one of the latter, Adramytus, is reported as the founder of Adramyttium.[4] How far his dominion in the interior of Asia Minor extended, we do not know, but very probably his long and comparatively inactive reign may have favored the accumulation of those treasures which afterwards rendered the wealth of Crœsus so proverbial. His monument, an enormous pyramidal mound upon a stone base, erected near Sardis, by the joint efforts of the whole Sardian population, was the most memorable curiosity in Lydia during the time of Herodotus; it was inferior only to the gigantic edifices of Egypt and Babylon.[5]

---

[1] Herodot. i, 20–23.

[2] Herodot. i, 18. Polyænus (vii, 2, 2) mentions a proceeding of Alyattês against the Kolophonians.

[5] Herodot. i, 92–93.

Crœsus obtained the throne, at the death of his father, by appointment from the latter. But there was a party among the Lydians who had favored the pretensions of his brother Pantaleon; one of the richest chiefs of which party was put to death afterwards by the new king, under the cruel torture of a spiked carding-machine, — his property confiscated.[1] The aggressive reign of Crœsus, lasting fourteen years (559–545 B. C.), formed a marked contrast to the long quiescence of his father during a reign of fifty-seven years.

Pretences being easily found for war against the Asiatic Greeks, Crœsus attacked them one after the other. Unfortunately, we know neither the particulars of these successive aggressions, nor the previous history of the Ionic cities, so as to be able to explain how it was that the fifth of the Mermnad kings of Sardis met with such unqualified success, in an enterprise which his predecessors had attempted in vain. Milêtus alone, with the aid of Chios, had resisted Alyattês and Sadyattês for eleven years, — and Crœsus possessed no naval force, any more than his father and grandfather. But on this occasion, not one of the towns can have displayed the like individual energy. In regard to the Milesians, we may perhaps suspect that the period now under consideration was comprised in that long duration of intestine conflict which Herodotus represents (though without defining exactly when) to have crippled the forces of the city for two generations, and which was at length appeased by a memorable decision of some arbitrators invited from Paros. These latter, called in by mutual consent of the exhausted antagonist parties at Milêtus, found both the city and her territory in a state of general neglect and ruin. But on surveying the lands, they discovered some which still appeared to be tilled with undiminished diligence and skill; to the proprietors of these lands they consigned the government of the town, in the belief that they would manage the public affairs with as much success as their own.[2] Such a state

[1] Herodot. i, 92.

[2] Herodot. v, 28. *κατύπερθε δὲ τουτέων, ἐπὶ δύο γενέας ἀνδρῶν νοσήσασα τὰ μάλιστα στάσει.*

Alyattês reigned fifty-seven years, and the vigorous resistance which the Milesians offered to him took place in the first six years of his reign. The "two generations of intestine dissension" may well have succeeded after the reign of Thrasybulus. This, indeed, is a mere conjecture, yet it may be observed that Herodotus, speaking of the time of the Ionic revolt (500 B. C.), and intimating that Milêtus, though then peaceable, had been for two generations at an earlier period torn by intestine dissension, could hardly have meant these "two generations" to apply to a time earlier than 617 B. C.

of intestine weakness would partly explain the easy subjugation of the Milesians by Crœsus; while there was little in the habits of the Ionic cities to present the chance of united efforts against a common enemy. These cities, far from keeping up any effective political confederation, were in a state of habitual jealousy of each other, and not unfrequently in actual war.[1] The common religious festivals, — the Deliac festival as well as the Pan-Ionia, and afterwards the Ephesia in place of the Delia, — seem to have been regularly frequented by all the cities throughout the worst of times. But these assemblies had no direct political function, nor were they permitted to control that sentiment of separate city-autonomy which was paramount in the Greek mind, — though their influence was extremely precious in calling forth social sympathies. Apart from the periodical festival, meetings for special emergencies were held at the Pan-Ionic temple; but from such meetings any city, not directly implicated, kept aloof.[2] As in this case, so in others not less critical throughout the historical period, the incapacity of large political combination was the source of constant danger, and ultimately proved the cause of ruin, to the independence of all the Grecian states. Herodotus warmly commends the advice given by Thalês to his Ionic countrymen, — and given, to use his remarkable expression, "before the ruin of Ionia,"[3] — that a common senate, invested with authority over all the twelve cities, should be formed within the walls of Teôs, as the most central in position; and that all the other cities should account themselves mere demes of this aggre-

[1] Herodot. i, 17; v, 99; Athenæ. vi, p. 267. Compare K. F. Hermann, Lehrbuch der Griech. Staats Alterthümer, sect. 77, note 28.

[2] See the remarkable case of Milêtus sending no deputies to a Pan-Ionic meeting, being safe herself from danger (Herodot. i, 141).

[3] Herodot. i, 141–170. *χρηστὴ δὲ καὶ πρὶν ἢ διαφθαρῆναι Ἰωνίην, Θάλεω ἀνδρὸς Μιλησίου γνώμη ἐγένετο*, etc.

About the Pan-Ionia and the Ephesia, see Thucyd. iii, 104; Dionys. Halik. iv, 25; Herodot. i, 143–148. Compare also Wbitte, De Rebus Chiorum Publicis, sect. vii, pp. 22–26.

gate commonwealth, or polis. Nor can we doubt that such was the unavailing aspiration of many a patriot of Milêtus or Ephesus, even before the final operations of Crœsus were opened against them.

That prince attacked the Greek cities successively, finding or making different pretences for hostility against each. He began with Ephesus, which is said to have been then governed by a despot of harsh and oppressive character, named Pindarus, whose father Melas had married a daughter of Alyattês, and who was, therefore, himself nephew of Crœsus.[1] The latter, having in vain invited Pindarus and the Ephesians to surrender the town, brought up his forces and attacked the walls: one of the towers being overthrown, the Ephesians abandoned all hope of defending their town, and sought safety by placing it under the guardianship of Artemis, to whose temple they carried a rope from the walls, — a distance not less than seven furlongs. They at the same time sent a message of supplication to Crœsus, who is said to have granted them the preservation of their liberties, out of reverence to the protection of Artemis; exacting at the same time that Pindarus should quit the place. Such is the tale of which we find a confused mention in Ælian and Polyænus; but Herodotus, while he notices the fact of the long rope whereby the Ephesians sought to place themselves in contact with their divine protectress, does not indicate that Crœsus was induced to treat them more favorably. Ephesus, like all the other Grecian towns on the coast, was brought under subjection and tribute to him.[2] How he dealt with them, and what degree of coercive

[1] If we may believe the narrative of Nikolaus Damaskenus, Crœsus had been in relations with Ephesus and with the Ephesians during the time when he was hereditary prince, and in the lifetime of Alyattês. He had borrowed a large sum of money from a rich Ephesian named Pamphaês, which was essential to enable him to perform a military duty imposed upon him by his father. The story is given in some detail by Nikolaus, Fragm. p. 54, ed. Orell., — I know not upon what authority.

[2] Herodot. i. 26; Ælian, V. H. iii, 26; Polyæn. vi, 50. The story contained in Ælian and Polyænus seems to come from Batôn of Sinôpê; see Guhl, Ephesiaca, ii, 3, p. 26, and iv, 5, p. 150.

The article in Suidas, v, Ἀρίσταρχος, is far too vague to be interwoven as a positive fact into Ephesian history, as Guhl interweaves it, immediately consequent on the retirement of Pindarus.

precaution he employed either to insure subjection or collect tribute, the brevity of the historian does not acquaint us. But they were required partially at least, if not entirely, to raze their fortifications; for on occasion of the danger which supervened a few years afterwards from Cyrus, they are found practically unfortified.[1]

Thus completely successful in his aggressions on the continental Asiatic Greeks, Crœsus conceived the idea of assembling a fleet, for the purpose of attacking the islanders of Chios and Samos, but was convinced, — as some said, by the sarcastic remark of one of the seven Greek sages, Bias or Pittakus — of the impracticability of the project. He carried his arms, however, with full success, over other parts of the continent of Asia Minor, until he had subdued the whole territory within the river Halys, excepting only the Kilikians and the Lykians. The Lydian empire thus reached the maximum of its power, comprehending, besides the Æolic, Ionic, and Doric Greeks on the coast of Asia Minor, the Phrygians, Mysians, Mariandynians, Chalybes, Paphlagonians, Thynian and Bithynian Thracians, Karians, and Pamphylians. And the treasures amassed by Crœsus at Sardis, derived partly from this great number of tributaries, partly from mines in various places as well as the auriferous sands of the Paktôlus, exceeded anything which the Greeks had ever before known.

We learn, from the brief but valuable observations of Herodotus, to appreciate the great importance of these conquests of Crœsus, with reference not merely to the Grecian cities actually subjected, but also indirectly to the whole Grecian world.

"Before the reign of Crœsus, observes the historian, all the Greeks were free; it was by him first that Greeks were subdued into tribute." And he treats this event as the initial phenomenon of the series, out of which grew the hostile relations

In reference to the rope reaching from the city to the artemision, we may quote an analogous case of the Kylonian suppliants at Athens, who sought to maintain their contact with the altar by means of a continuous cord, — unfortunately, the cord broke (Plutarch, Solon, c. 12).

[1] Herodot. i, 141 Ἴωνες δὲ, ὡς ἤκουσαν — τείχεά τε περιεβάλλοντο ἕκαστοι etc: compare also the statement respecting Phôkæa, c. 168.

between the Greeks on one side, and Asia as represented by the Persians on the other, which were uppermost in the minds of himself and his contemporaries.

It was in the case of Crœsus that the Greeks were first called upon to deal with a tolerably large barbaric aggregate under a warlike and enterprising prince, and the result was such as to manifest the inherent weakness of their political system, from its incapacity of large combination. The separated autonomous cities could only maintain their independence either through similar disunion on the part of barbaric adversaries, or by superiority on their own side of military organization as well as of geographical position. The situation of Greece proper and of the islands was favorable to the maintenance of such a system, — not so the shores of Asia with a wide interior country behind. The Ionic Greeks were at this time different from what they became during the ensuing century, little inferior in energy to Athens or to the general body of European Greeks, and could doubtless have maintained their independence, had they cordially combined. But it will be seen hereafter that the Greek colonies, — planted as isolated settlements, and indisposed to political union, even when neighbors, — all of them fell into dependence so soon as attack from the interior came to be powerfully organized; especially if that organization was conducted by leaders partially improved through contact with the Greeks themselves. Small autonomous cities maintain themselves so long as they have only enemies of the like strength to deal with: but to resist larger aggregates requires such a concurrence of favorable circumstances as can hardly remain long without interruption. And the ultimate subjection of entire Greece, under the kings of Macedon, was only an exemplification on the widest scale of this same principle.

The Lydian monarchy under Crœsus, the largest with which the Greeks had come into contact down to that moment, was very soon absorbed into a still larger,— the Persian; of which the Ionic Greeks, after unavailing resistance, became the subjects. The partial sympathy and aid which they obtained from the independent or European Greeks, their western neighbors, followed by the fruitless attempt on the part of the Persian king to add these latter to his empire, gave an entirely new turn to Grecian history and proceedings. First, it necessitated a degree of central action against the Persians which was foreign to Greek political instinct; next it opened to the noblest and most enterprising section of the Hellenic name, — the Athenians, — an opportunity of placing themselves at the head of this centralizing tendency: while a concurrence of circumstances, foreign and domestic, imparted to them at the same time that extraordinary and many-sided impulse, combining action with organization, which gave such brilliancy to the period of Herodotus and Thucydidês. It is thus that most of the splendid phenomena of Grecian history grew, directly or indirectly, out of the reluctant dependence in which the Asiatic Greeks were held by the inland barbaric powers, beginning with Crœsus.

These few observations will suffice to intimate that a new phase of Grecian history is now on the point of opening. Down to the time of Crœsus, almost everything which is done or suffered by the Grecian cities bears only upon one or other of them separately: the instinct of the Greeks repudiates even the modified forms of political centralization, and there are no circumstances in operation to force it upon them. Relation of power and subjection exist, between a strong and a weak state, but no tendency to standing political coördination. From this time forward, we shall see partial causes at work, tending in this direction, and not without considerable influence; though always at war with the indestructible instinct of the nation, and frequently counteracted by selfishness and misconduct on the part of the leading cities.

CHAPTER XVIII.

PHENICIANS.

Of the Phenicians, Assyrians, and Egyptians, it is necessary for me to speak so far as they acted upon the condition, or occupied the thoughts, of the early Greeks, without undertaking to investigate thoroughly their previous history. Like the Lydians, all three became absorbed into the vast mass of the Persian empire, retaining, however, to a great degree, their social character and peculiarities after having been robbed of their political independence.

The Persians and Medes, — portions of the Arian race, and members of what has been classified, in respect of language, as the great Indo-European family, — occupied a part of the vast space comprehended between the Indus on the east, and the line of Mount Zagros (running eastward of the Tigris and nearly parallel with that river) on the west. The Phenicians as well as the Assyrians belonged to the Semitic, Aramæan, or Syro-Arabian family; comprising, besides, the Syrians, Jews, Arabians, and in part the Abyssinians. To what established family of the human race the swarthy and curly-haired Egyptians are to be assigned, has been much disputed; we cannot reckon them as members of either of the two preceding, and the most careful inquiries render it probable that their physical type was something purely African, approximating in many points to that of the negro.[1]

[1] See the discussion in Dr. Prichard, Natural History of Man, sect. xvii, p. 152.

Μελαγχρόες καὶ οὐλότριχες (Herodot. ii, 104: compare Ammian. Marcell. xxii, 16, "subfusculi, atrati." etc.) are certain attributes of the ancient Egyptians, depending upon the evidence of an eye-witness.

"In their complexion, and in many of their physical peculiarities (observes Dr. Prichard, p. 138), the Egyptians were an African race. In the eastern, and even in the central parts of Africa, we shall trace the existence of various tribes in physical characters nearly resembling the Egyptians; and it would not be difficult to observe among many nations of that continent a gradual deviation from the physical type of the Egyptian to the strongly-marked character of the negro, and that without any very decided break or interruption. The Egyptian language, also, in the great leading principles of its grammatical construction, bears much greater analogy to the idioms of Africa than to those prevalent among the people of other regions."

It has already been remarked that the Phenician merchant and trading vessel figures in the Homeric poems as a well-known visitor, and that the variegated robes and golden ornaments fabricated at Sidon are prized among the valuable ornaments belonging to the chiefs.[1] We have reason to conclude generally, that in these early times, the Phenicians traversed the Ægean sea habitually, and even formed settlements for trading and mining purposes upon some of its islands: on Thasos, especially, near the coast of Thrace, traces of their abandoned gold-mines were visible even in the days of Herodotus, indicating both persevering labor and considerable length of occupation. But at the time when the historical era opens, they seem to have been in course of gradual retirement from these regions,[2] and their commerce had taken a different direction. Of this change we can

[1] Homer, Iliad, vi, 290: xxiii, 740; Odyss. xv, 116:—

....πέπλοι παμποίκιλοι, ἔργα γυναικῶν
Σιδονίων.

Tyre is not named either in the Iliad or Odyssey, though a passage in Probus (ad Virg. Georg. ii, 115) seems to show that it was mentioned in one of the epics which passed under the name of Homer: "Tyrum Sarram appellatam esse. Homerus docet: quem etiam Ennius sequitur cum dicit, Pœnos Sarrâ oriundos."

The Hesiodic catalogue seems to have noticed both Byblus and Sidon: see Hesiodi Fragment. xxx, ed. Marktscheffel, and Etymolog. Magnum, v, Βύβλος.

[2] The name Adramyttion or Atramyttion — very like the Africo-Phenician name *Adrumêtum* — is said to be of Phenician origin (Olshausen, De Origine Alphabeti, p. 7, in Kieler Philologische Studien, 1841). There were valuable mines afterwards worked for the account of Crœsus near Pergamus, and these mines may have tempted Phenician settlers to those regions (Aristotel. Mirab. Auscult. c. 52).

The African Inscriptions, in the Monumenta Phœnic. of Gesenius, recognize Makar as a cognomen of Baal: and Mövers imagines that the hero Makar, who figures conspicuously in the mythology of Lesbos, Chios, Samos, Kôs, Rhodes, etc, is traceable to this Phenician god and Phenician early settlements in those islands (Mövers, Die Religion der Phöniker, p. 420)

furnish no particulars; but we may easily understand that the increase of the Grecian marine, both warlike and commercial, would render it inconvenient for the Phenicians to encounter such enterprising rivals, — piracy (or private war at sea) being then an habitual proceeding, especially with regard to foreigners.

The Phenician towns occupied a narrow strip of the coast of Syria and Palestine, about one hundred and twenty miles in length, never more, and generally much less, than twenty miles in breadth, — between Mount Libanus and the sea. Aradus — on an islet, with Antaradus and Marathus over against it on the main land — was the northernmost, and Tyre the southernmost (also upon a little island, with Palæ-Tyrus and a fertile adjacent plain over against it). Between the two were situated Sidon, Berytus, Tripolis, and Byblus, besides some smaller towns[1] at-

[1] Strabo, xiv, pp. 754–758; Skylax, Peripl. c. 104; Justin, xviii, 3; Arrian, Exp. Al. ii, 16–19; Xenophon, Anab. i, 4, 6.

Unfortunately, the text of Skylax is here extremely defective, and Strabo's account is in many points perplexed, from his not having travelled in person through Phenicia, Cœlo-Syria, or Judæa: see Groskurd's note on p. 755 and the Einleitung to his Translation of Strabo, sect. 6

Respecting the original relation between Palæ-Tyrus and Tyre, there is some difficulty in reconciling all the information, little as it is, which we possess. The name Palæ-Tyrus (it has been assumed as a matter of course: compare Justin, xi, 10) marks that town as the original foundation from which the Tyrians subsequently moved into the island: there was, also, on the main land a place named Palæ-Byblos (Plin. H. N. v, 20; Ptolem. v, 15) which was in like manner construed as the original seat from whence the town properly called Byblus was derived. Yet the account of Herodotus plainly represents the insular Tyrus, with its temple of Hêraklês, as the original foundation (ii, 44), and the Tyrians are described as living in an island even in the time of their king Hiram, the contemporary of Solomon (Joseph. Ant. Jud. viii, 2, 7). Arrian treats the temple of Hêraklês in the island-Tyre as the most ancient temple within the memory of man (Exp. Al. ii, 16). The Tyrians also lived on their island during the invasion of Salmaneser king of Nineveh, and their position enabled them to hold out against him, while Palæ-Tyrus on the terra firma was obliged to yield itself (Joseph. ib. ix, 14, 2). The town taken (or reduced to capitulate), after a long siege, by Nebuchadnezzar, was the insular Tyrus, not the continental or Palæ-Tyrus, which had surrendered without resistance to Salmaneser. It is not correct, therefore, to say — with Volney (Recherches sur l'Hist. Anc. ch. xiv, p. 249), Heeren (Ideen über den Verkehr der Alten Welt, part i, abth. 2, p. 11), and others — that the insular Tyre was called new Tyre, and that the

tached to one or other of these last mentioned, and several islands close to the coast occupied in like manner; while the colony of Myriandrus lay farther north, near the borders of Kilikia. Whether Sidon or Tyre was the most ancient, seems not determinable: if it be true as some authorities affirmed, that Tyre was originally planted from Sidon, the colony must have grown so

site of Tyre was changed from continental to insular, in consequence of the taking of the continental Tyre by Nebuchadnezzar: the site remained unaltered, and the insular Tyrians became subject to him and his successors until the destruction of the Chaldæan monarchy by Cyrus. Hengstenberg's Dissertation, De Rebus Tyriorum (Berlin, 1832), is instructive on many of these points: he shows sufficiently that Tyre was, from the earliest times traceable, an insular city; but he wishes at the same time to show, that it was also, from the beginning, joined on to the main land by an isthmus (pp. 10–25), — which is both inconsistent with the former position and unsupported by any solid proofs. It remained an island strictly so called, until the siege by Alexander: the mole, by which that conqueror had stormed it, continued after his day, perhaps enlarged, so as to form a permanent connection from that time forward between the island and the main land (Plin. H. N. v, 19; Strabo, xvi, p. 757), and to render the insular Tyrus capable of being included by Pliny in one computation of circumference jointly with Palæ-Tyrus, the mainland town.

It may be doubted whether we know the true meaning of the word which the Greeks called Παλαι-Τύρος. It is plain that the Tyrians themselves did not call it by that name: perhaps the Phenician name which this continental adjacent town bore, may have been something resembling Palæ-Tyrus in sound, but not coincident in meaning.

The strength of Tyre lay in its insular situation; for the adjacent mainland, whereon Palæ-Tyrus was placed, was a fertile plain, thus described by William of Tyre during the time of the Crusaders: —

"Erat prædicta civitas non solum munitissima, sed etiam fertilitate præcipuâ et amœnitate quasi singularis: nam licet in medio mari sita est, et in modum insulæ tota fluctibus cincta; habet tamen pro foribus latifundium per omnia commendabile, et planitiem sibi continuam divitis glebæ et optimi soli, multas civibus ministrans commoditates. Quæ licet modica videatur respectu aliarum regionum, exiguitatem suam multâ redimit ubertate, et infinita jugera multiplici fœcunditate compensat. Nec tamen tantis arctatur angustiis. Protenditur enim in Austrum versus Ptolemaidem usque ad eum locum, qui hodie vulgo dicitur districtum Scandarionis, milliaribus quatuor aut quinque: e regione in Septentrionem versus Sareptam et Sidonem iterum porrigitur totidem milliaribus. In latitudinem vero ubi minimum ad duo, ubi plurimum ad tria, habens milliaria." (Apud Hengstenberg, *ut sup.* p. 5.) Compare Maundrell, Journey from Aleppo to Jerusalem, p. 50. ed. 1749; and Volney, Travels in Egypt and Syria, vol. ii, pp. 210–226.

rapidly as to surpass its metropolis in power and consideration, for it became the chief of all the Phenician towns.[1] Aradus, the next in importance after these two, was founded by exiles from Sidon, and all the rest either by Tyrian or Sidonian settlers. Within this confined territory was concentrated a greater degree of commercial wealth and enterprise, and manufacturing ingenuity, than could be found in any other portion of the contemporary world. Each town was an independent community, having its own surrounding territory and political constitution and its own hereditary prince,[2] though the annals of Tyre display many instances of princes assassinated by men who succeeded them on the throne. Tyre appears to have enjoyed a certain presiding, perhaps a controlling authority, over all of them, which was not always willingly submitted to; and examples occur in which the inferior towns, when Tyre was pressed by a foreign enemy,[3] took the opportunity of revolting, or at least stood aloof. The same difficulty of managing satisfactorily the relations between a presiding town and its confederates, which Grecian history manifests, is found also to prevail in Phenicia, and will be hereafter remarked in regard to Carthage; while the same effects are also perceived, of the autonomous city polity, in keeping alive the individual energies and regulated aspirations of the inhabitants. The predominant sentiment of jealous town-isolation is forcibly illustrated by the circumstances of Tripolis, established jointly by Tyre, Sidon, and Aradus. It consisted of three distinct towns, each one furlong apart from the other two, and each with its own separate walls; though probably constituting to a certain extent one political community, and serving as a place of common meeting and deliberation for the entire Phenician name.[4] The outlying

[1] Justin (xviii, 3) states that Sidon was the metropolis of Tyre, but the series of events which he recounts is confused and unintelligible. Strabo also, in one place, calls Sidon the *μητρόπολις τῶν Φοινίκων* (i, p. 40); in another place he states it as a point disputed between the two cities, which of them was the *μητρόπολις τῶν Φοινίκων* (xvi, p. 756).

Quintus Curtius affirms both Tyre and Sidon to have been founded by Agênôr (iv. 4, 15).

[2] See the interesting citations of Josephus from Dius and Menander, who had access to the Tyrian *ἀναγραφαὶ*, or chronicles (Josephus cont. Apion. i. c. 17, 18, 21; Antiq. J. x. 11, 1.

[3] Joseph. Antiq. J. ix, 14, 2 [4] Diodor. xvi, 41; Skylax, c. 104.

promontories of Libanus and Anti-Libanus touched the sea along the Phenician coast, and those mountainous ranges, while they rendered a large portion of the very confined area unfit for cultivation of corn, furnished what was perhaps yet more indispensable, — abundant supplies of timber for ship-building: the entire want of all wood in Babylonia, except the date-palm, restricted the Assyrians of that territory from maritime traffic on the Persian gulf. It appears, however, that the mountains of Lebanon also afforded shelter to tribes of predatory Arabs, who continually infested both the Phenician territory and the rich neighboring plain of Cœlo-Syria.[1]

The splendid temple of that great Phenician god (Melkarth) whom the Greeks called Hêraklês,[2] was situated in Tyre, and the Tyrians affirmed that its establishment had been coeval with the first foundation of the city, two thousand three hundred years before the time of Herodotus. This god is the companion and protector of their colonial settlements, and the ancestor of the Phœnico-Libyan kings: we find him especially at Carthage, Gadês, and Thasos.[3] Some supposed that they had migrated to their site on the Mediterranean coast, from previous abodes near the mouth of the Euphrates,[4] or on islands (named Tylus and Aradus) of the

[1] Strabo, xvi, p. 756.

[2] A Maltese inscription identifies the Tyrian Melkarth with Ἡρακλῆς (Gesenius, Monument. Phœnic. tab. vi).

[3] Herodot. ii, 44; Sallust, Bell. Jug. c. 18; Pausan. x, 12, 2; Arrian, Exp. Al. ii, 16; Justin, xliv, 5: Appian, vi, 2.

[4] Herodot. i, 2; Ephorus, Fragm. 40, ed. Marx; Strabo, xvi, pp. 766–784; Justin, xviii, 3. In the animated discussion carried on among the Homeric critics and the great geographers of antiquity, to ascertain where it was that Menelaus actually went during his eight years' wandering (Odyss iv, 85) —

> ..... ἢ γὰρ πολλὰ παθὼν καὶ πολλ' ἐπαληθεὶς
> Ἠγαγόμην ἐν νηυσὶ, καὶ ὀγδοάτῳ ἔτει ἦλθον,
> Κύπρον, Φοινίκην τε, καὶ Αἰγυπτίους ἐπαληθεὶς,
> Αἰθίοπας τ' ἰκόμην, καὶ Σιδονίους, καὶ Ἐρεμβοὺς,
> Καὶ Λιβύην, etc.

one idea started was, that he had visited these Sidonians in the Persian gulf, or in the Erythræan sea (Strabo, i. p. 42). The various opinions which Strabo quotes, including those of Eratosthenês and Kratês, as well as his own comments, are very curious. Kratês supposed that Menelaus had passed the straits of Gibraltar and circumnavigated Libya to Æthiopia and

Persian gulf, while others treated the Mediterranean Phenicians as original, and the others as colonists. Whether such be the fact or not, history knows them in no other portion of Asia earlier than in Phenicia proper.

Though the invincible industry and enterprise of the Phenicians maintained them as a people of importance down to the period of the Roman empire, yet the period of their widest range and greatest efficiency is to be sought much earlier, — anterior to 700 B. C. In these remote times they and their colonists were the exclusive navigators of the Mediterranean: the rise of the Greek maritime settlements banished their commerce to a great degree from the Ægean sea, and embarrassed it even in the more westerly waters. Their colonial establishments were formed in Africa, Sicily, Sardinia, the Balearic Isles, and Spain: the greatness as well as the antiquity of Carthage, Utica, and Gadês, attest the long-sighted plans of Phenician traders, even in days anterior to the 1st Olympiad. We trace the wealth and industry

India, which voyage would suffice, he thought, to fill up the eight years Others supposed that Menelaus had sailed first up the Nile, and then into the Red sea, by means of the canal (διωρυξ) which existed in the time of the Alexandrine critics between the Nile and that sea; to which Strabo replies that this canal was not made until after the Trojan war. Eratosthenês started a still more remarkable idea: he thought that in the time of Homer the strait of Gibraltar had not yet been burst open, so that the Mediterranean was on that side a closed sea; but, on the other hand, its level was then so much higher that it covered the isthmus of Suez, and joined the Red sea. It was, he thought, the disruption of the strait of Gibraltar which first lowered the level of the water, and left the isthmus of Suez dry; though Menelaus, in *his* time, had sailed from the Mediterranean into the Red sea without difficulty. This opinion Eratosthenês had imbibed from Stratôn of Lampsakus, the successor of Theophrastus: Hipparchus controverted it, together with many other of the opinions of Eratosthenês (see Strabo, i, pp. 38, 49, 56; Seidel, Fragmenta Eratosthenis, p. 39).

In reference to the view of Kratês, — that Menelaus had sailed round Africa, — it is to be remarked that all the geographers of that day formed to themselves a very insufficient idea of the extent of that continent, believing that it did not even reach so far southward as the equator.

Strabo himself adopts neither of these three opinions, but construes the Homeric words describing the wanderings of Menelaus as applying only to the coasts of Egypt, Libya, Phenicia, etc; he suggests various reasons, more curious than convincing, to prove that Menelaus may easily have spent eight years in these visits of mixed friendship and piracy.

of Tyre, and the distant navigation of her vessels through the Red sea and along the coast of Arabia, back to the days of David and Solomon. And as neither Egyptians, Assyrians, Persians, nor Indians, addressed themselves to a seafaring life, so it seems that both the importation and the distribution of the products of India and Arabia into Western Asia and Europe, was performed by the Idumæan Arabs, between Petra and the Red sea, — by the Arabs of Gerrha on the Persian gulf, joined as they were in later times by a body of Chaldæan exiles from Babylonia, — and by the more enterprising Phenicians of Tyre and Sidon in these two seas as well as in the Mediterranean.[1]

The most ancient Phenician colonies were Utica, nearly on the northernmost point of the coast of Africa, and in the same gulf, (now known as the gulf of Tunis) as Carthage, over against cape Lilybæum in Sicily, — and Gadês, or Gadeira, on the south-western coast of Spain; a town which, founded perhaps near one thousand years before the Christian era,[2] has maintained a continuous prosperity, and a name (Cadiz) substantially unaltered, longer than any town in Europe. How well the site of Utica was suited to the circumstances of Phenician colonists may be inferred from the fact that Carthage was afterwards established in the same gulf and near to the same spot, and that both the two cities reached a high pitch of prosperity. The distance of Gadês from Tyre seems surprising, and if we calculate by time instead of by space, the Tyrians were separated from their Tartêssian colonists by an interval greater than that which now divides an Englishman from Bombay; for the ancient navigator always coasted along the land, and Skylax reckons seventy-five days[3] of voyage

[1] See Ritter, Erdkunde von Asien, West-Asien, Buch iii, Abtheilung iii, Abschnitt i, s. 29, p. 50.

[2] Strabo, speaks of the earliest settlements of the Phenicians in Africa and Iberia as μικρὸν τῶν Τρωϊκῶν ὕστερον (i, p. 48). Utica is affirmed to have been two hundred and eighty-seven years earlier than Carthage (Aristot Mirab. Auscult. c. 134): compare Velleius Paterc. i, 2.

Archaleus, son of Phœnix, was stated as the founder of Gadês in the Phenician history of Claudius Julius, now lost (Etymolog. Magn. v, Γαδείρα). Archaleus is a version of the name Hercules, in the opinion of Mövers.

[3] Skylax, Periplus, c. 110. "Carteia, ut quidam putant, aliquando Tartessus; et quam transvecti ex Africâ Phœnices habitant, atque unde nos sumus, Tingentera." (Mela, ii, 6, 75.) The expression, *transvecti ex Africa*

from the Kanôpic (westernmost) mouth of the Nile to the Pillars of Hêraklês (strait of Gibraltar); to which some more days must be added to represent the full distance between Tyre and Gadês. But the enterprise of these early mariners surmounted all difficulties consistent with the principle of never losing sight of the coast. Proceeding along the northern coast of Libya, at a time when the mouths of the Nile were still closed by Egyptian jealousy against all foreign ships, they appear to have found little temptation to colonize[1] on the dangerous coast near to the two gulfs called the great and little Syrtis, — in a territory for the most part destitute of water, and occupied by rude Libyan nomades, who were thinly spread over the wide space between the western Nile[2] and cape Hermæa, now called cape Bona. The subsequent Grecian towns of Kyrênê and Barca, whose well-chosen site formed an exception to the general character of the region, were not planted with any view to commerce,[3] and the Phenician town of Leptis, near the gulf called the great Syrtis, was founded by exiles from Sidon, and not by deliberate colonization. The site of Utica and Carthage, in the gulf im-

applies as much to the Phenicians as to the Carthaginians: "*uterque Pœnus*" Horat. Od. ii, 11) means the Carthaginians, and the Phenicians of Gadês.

[1] Strabo, xvii, p. 836.

[2] Cape Soloeis, considered by Herodotus as the westernmost headland of Libya, coincides in name with the Phenician town Soloeis in western Sicily, also, seemingly, with the Phenician settlement *Suel* (Mela, ii, 6, 65) in southern Iberia or Tartêssus. Cape Hermæa was the name of the north-eastern headland of the gulf of Tunis, and also the name of a cape in Libya, two days' sail westward of the Pillars of Hêraklês (Skylax, c. 111).

Probably, all the remarkable headlands in these seas received their names from the Phenicians. Both Mannert (Geogr. d. Gr. und Röm. x, 2, p. 495) and Förbiger (Alte Geogr. sect. 111, p. 867) identify cape Soloeis with what is now called cape Cantin; Heeren considers it to be the same as cape Blanco; Bougainville as cape Boyador.

[3] Sallust, Bell. Jug. c. 78. It was termed Leptis Magna, to distinguish it from another Leptis, more to the westward and nearer to Carthage, called Leptis Parva; but this latter seems to have been generally known by the name Leptis (Förbiger, Alte Geogr. sect. 109, p. 844). In Leptis Magna, the proportion of Phenician colonists was so inconsiderable that the Phenician language had been lost, and that of the natives, whom Sallust calls Numidians, spoken; but these people had embraced Sidonian institutions and civilization. (Sall. *ib.*)

mediately westward of cape Bona, was convenient for commerce with Sicily, Italy, and Sardinia; and the other Phenician colonies, Adrumêtum, Neapolis, Hippo (two towns so called), the lesser Leptis, etc., were settled on the coast not far distant from the eastern or western promontories which included the gulf of Tunis, common to Carthage and Utica.

These early Phenician settlements were planted thus in the territory now known as the kingdom of Tunis and the western portion of the French province of Constantine. From thence to the Pillars of Hêraklês (strait of Gibraltar), we do not hear of any others; but the colony of Gadês, outside of the strait, formed the centre of a flourishing and extensive commerce, which reached on one side far to the south, not less than thirty days' sail along the western coast of Africa,[1] — and on the other side to Britain and the Scilly Islands. There were numerous Phenician factories and small trading-towns along the western coast of what is now the empire of Morocco; and the island of Kernê, twelve days' sail along the coast from the strait of Gibraltar, formed an established dépôt for Phenician merchandise in trading with the interior. There were, moreover, towns not far distant from the coast, of Libyans or Ethiopians, to which the inhabitants of the central regions resorted, and where they brought their leopard skins and elephants' teeth, to be exchanged against the unguents of Tyre and the pottery of Athens.[2] So distant a trade,

[1] Strabo, xvii, pp. 825–826. He found it stated by some authors that there had once been three hundred trading establishments along this coast, reaching thirty days' voyage southward from Tingis or Lixus (Tangier); but that they had been chiefly ruined by the tribes of the interior, — the Pharusians and Nigritæ. He suspects the statement of being exaggerated, but there seems nothing at all incredible in it. From Strabo's language we gather that Eratosthenês set forth the statement as in his judgment a true one.

[2] Compare Skylax, c. 111, and the Periplus of Hanno, ap. Hudson, Geogr. Græc. Min. vol. i, pp. 1–6. I have already observed that the *τάριχος* (salt provisions) from Gadeira was currently sold in the markets of Athens from the Peloponnesian war downward. — Eupolis, Fragm. 23; *Μαρικᾶς*, p. 506, ed. Meincke, Comic. Græc.

Πότερ' ἦν τὸ τάριχος; Φρύγιον ἢ Γαδειρικόν;

Compare the citations from the other comic writers, Antiphanês and Nikos

with the limited navigation of that day, could not be made to embrace very bulky goods.

But this trade, though seemingly a valuable one, constituted only a small part of the sources of wealth open to the Phenicians of Gadês. The Turditanians and Turduli, who occupied the south-western portion of Spain, between the Anas river (Guadiana) and the Mediterranean, seem to have been the most civilized and improvable section of the Iberian tribes, well suited for commercial relations with the settlers who occupied the isle of Leon, and who established the temple, afterwards so rich and frequented, of the Tyrian Hêraklês. And the extreme productiveness of the southern region of Spain, in corn, fish, cattle, and wine, as well as in silver and iron, is a topic upon which we find but one language among ancient writers. The territory round Gadês, Carteia, and the other Phenician settlements in this district, was known to the Greeks in the sixth century B. C. by the name of Tartêssus, and regarded by them somewhat in the same light as Mexico and Peru appeared to the Spaniards of the sixteenth century. For three or four centuries the Phenicians had possessed the entire monopoly of this Tartêssian trade, without any rivalry on the part of the Greeks; probably, the metals there procured were in these days their most precious acquisition, and the tribes who occupied the mining regions of the interior found a new market and valuable demand, for produce then obtained with a degree of facility exaggerated into fable.[1] It was from Gadês as a centre that these enterprising traders, pushing their coasting voyage yet farther, established relations with the tin-mines of Cornwall, perhaps also with amber-gatherers from the coasts of the Baltic. It requires some effort to carry back our imaginations to the time when, along all this vast length of country, from Tyre and Sidon to the coast of Cornwall, there was no merchant-ship to buy or sell goods except these Phenicians. The rudest tribes find advantage in such visitors; and we cannot doubt, that the men, whose resolute love of gain braved so many hazards and difficulties, must have been rewarded with profits on the largest scale of monopoly.

tratus ap. Athenæ. iii, p. 118. The Phenician merchants bought in exchange Attic pottery for their African trade.

[1] About the productiveness of the Spanish mines, Polybius (xxxiv, 9, 8 ap. Strabo, iii, p. 147; Aristot. Mirab. Ausc. c 135.

The Phenician settlers on the coast of Spain became gradually more and more numerous, and appear to have been distributed, either in separate townships or intermingled with the native population, between the mouth of the Anas (Guadiana) and the town of Malaka (Malaga) on the Mediterranean. Unfortunately, we are very little informed about their precise localities and details, but we find no information of Phenician settlements on the Mediterranean coast of Spain northward of Malaka; for Carthagena, or New Carthage, was a Carthaginian settlement, founded only in the third century B. C., after the first Punic war.[1] The Greek word Phenicians being used to signify as well the inhabitants of Carthage as those of Tyre and Sidon, it is not easy to distinguish what belongs to each of them; nevertheless, we can discern a great and important difference in the character of their establishments, especially in Iberia. The Carthaginians combined with their commercial projects large schemes of conquest and empire: it is thus that the independent Phenician establishments in and near the gulf of Tunis, in Africa, were reduced to dependence upon them, — while many new small townships, direct from Carthage itself, were planted on the Mediterranean coast of Africa, and the whole of that coast from the great Syrtis westward to the Pillars of Hêraklês (strait of Gibraltar) is described as their territory in the Periplus of Skylax (B. C. 360). In Iberia, during the third century B. C., they maintained large armies,[2] constrained the inland tribes to subjection, and acquired a dominion which nothing but the superior force of Rome prevented from being durable: in Sicily, also, the resistance of the Greeks prevented a similar consummation. But the foreign settlements of Tyre and Sidon were formed with views purely commercial. In the region of Tartêssus as well as in the western coast of Africa outside of the strait of Gibraltar, we hear only of pacific interchange and metallurgy; and the number of Phenicians who acquired gradually settlements in the interior was so great, that Strabo describes these towns — not less than two hundred in number — as altogether

[1] Strabo, iii, pp. 156, 158, 161; Polybius, iii, 10, 3–10

[2] Polyb. i, 10; ii, 1

Phenicized.[1] In his time, the circumstances favorable to new Phenician emigrations had been long past and gone, and there can be little hesitation in ascribing the preponderance, which this foreign element had then acquired, to a period several centuries earlier, beginning at a time when Tyre and Sidon enjoyed both undisputed autonomy at home, and the entire monopoly of Iberian commerce, without interference from the Greeks.

The earliest Grecian colony founded in Sicily was that of Naxos, planted by the Chalkidians in 735 B. C.: Syracuse followed in the next year, and during the succeeding century many flourishing Greek cities took root on the island. These Greeks found the Phenicians already in possession of many outlying islets and promontories all around the island, which served them in their trade with the Sikels and Sikans who occupied the interior. The safety and facilities of this established trade were to so great a degree broken up by the new-comers, that the Phenicians, relinquishing their numerous petty settlements round the island, concentrated themselves in three considerable towns at the south-western angle near Lilybæum,[2] — Motyê, Soloeis, and Panormus, — and in the island of Malta, where they were least widely separated from Utica and Carthage. The Tyrians of that day were hard-pressed by the Assyrians under Salmaneser, and the power of Carthage had not yet reached its height; otherwise probably this retreat of the Sicilian Phenicians before the Greeks would not have taken place without a struggle. But the early Phenicians, superior to the Greeks in mercantile activity, and not disposed to contend, except under circumstances of very superior force, with warlike adventurers bent on permanent settlement, took the prudent course of circumscribing their sphere of operations. A similar change appears to have taken place in Cyprus, the other island in which Greeks and Phenicians came into close contact. If we may trust the Tyrian annals consulted by the historian Menander, Cyprus was subject to the Tyrians even in the time of Solomon.[3] We do not know the dates of the establish-

[1] Strabo, iii, pp. 141–150. *Οὗτοι γὰρ Φοίνιξιν οὕτως ἐγένοντο ὑποχείριοι, ὥστε τὰς πλείους τῶν ἐν τῃ Τουρδιτανίᾳ πολέων καὶ τῶν πλήσιον τόπων ὑπ' ἐκείνων νῦν οἰκεῖσθαι.*

ment of Paphos, Salamis, Kitium, and the other Grecian cities there planted, — but there can be no doubt that they were posterior to this period, and that a considerable portion of the soil and trade of Cyprus thus passed from Phenicians to Greeks; who on their part partially embraced and diffused the rites, sometimes cruel, sometimes voluptuous, embodied in the Phenician religion.[1] In Cilicia, too, especially at Tarsus, the intrusion of Greek settlers appears to have gradually Hellenized a town originally Phenician and Assyrian; contributing, along with the other Grecian settlements — Phasêlis, Aspendus, and Sidê — on the southern coast of Asia Minor, to narrow the Phenician range of adventure in that direction.[2]

Such was the manner in which the Phenicians found themselves affected by the spread of Greek settlements; and if the Ionians of Asia Minor, when first conquered by Harpagus and the Persians, had followed the advice of the Prienean Bias to emigrate in a body, and found one great Pan-Ionic colony in the island of Sardinia, these early merchants would have experienced the like hinderance[3] carried still farther westward, — perhaps, indeed, the whole subsequent history of Carthage might have been sensibly modified. But Iberia, and the golden region of Tartêssus, remained comparatively little visited, and still less colonized, by the Greeks; nor did it even become known to them until more than a century after their first settlements had been formed in Sicily. Easy as the voyage from Corinth to Cadiz may now appear to us, to a Greek of the seventh or sixth centuries B. C. it was a formidable undertaking. He was under the

Apion. i 18; an allusion is to be found in Virgil, Æneid, i, 642, in the mouth of Dido. —

"Genitor tum Belus opimam
Vastabat Cyprum, et late ditione tenebat." (t. v.)

[2] Tarsus is mentioned by Dio Chrysostom as a colony from the Phenician Aradus (Orat. Tarsens. ii, p. 20, ed. Reisk), and Herodotus makes Kilix brother of Phœnix and son of Agênôr (vii, 92).

Phenician coins of the city of Tarsus are found, of a date towards the end of the Persian empire: see Mövers, Die Phönizier, i, p. 13.

[3] Herodot. i. 170.

necessity of first coasting along Akarnania and Epirus, then crossing, first to the island of Korkyra, and next to the gulf of Tarentum; he then doubled the southernmost cape of Italy and followed the sinuosities of the Mediterranean coast, by Tyrrhenia, Liguria, southern Gaul, and eastern Iberia, to the Pillars of Hêraklês or strait of Gibraltar: or if he did not do this, he had the alternative of crossing the open sea from Krête or Peloponnesus to Libya, and then coasting westward along the perilous coast of the Syrtes until he arrived at the same point. Both voyages presented difficulties hard to be encountered; but the most serious hazard of all, was the direct transit across the open sea from Krête to Libya. It was about the year 630 B. C. that the inhabitants of the island of Thêra, starved out by a seven years' drought, were enjoined by the Delphian god to found a colony in Libya. Nothing short of the divine command would have induced them to obey so terrific a sentence of banishment; for not only was the region named quite unknown to them, but they could not discover, by the most careful inquiries among practised Greek navigators, a single man who had ever intentionally made the voyage to Libya.[1] One Kretan only could they find, — a fisherman named Korôbius, — who had been driven thither accidentally by violent gales, and he served them as guide.

At this juncture, Egypt had only been recently opened to Greek commerce, — Psammetichus having been the first king who partially relaxed the jealous exclusion of ships from the entrance of the Nile, enforced by all his predecessors; and the incitement of so profitable a traffic emboldened some Ionian traders to make the direct voyage from Krête to the mouth of that river. It was in the prosecution of one of these voyages, and in connection with the foundation of Kyrênê (to be recounted in a future chapter), that we are made acquainted with the memorable adventure of the Samian merchant Kôlæus. While bound for Egypt, he had been driven out of his course by contrary winds, and had found shelter on an uninhabited islet called Platea, off the coast of Libya, — the spot where the emigrants intended for Kyrênê first established themselves, not long afterwards. From hence he again started to proceed to Egypt, but again without

[1] Herodot. iv. 151

success; violent and continuous east winds drove him continually to the westward, until he at length passed the Pillars of Hêraklês, and found himself, under the providential guidance of the gods,[1] an unexpected visitor among the Phenicians and Iberians of Tartêssus. What the cargo was which he was transporting to Egypt, we are not told; but it sold in this yet virgin market for the most exorbitant prices: he and his crew (says Herodotus)[2] "realized a profit larger than ever fell to the lot of any known Greek except Sostratus the Æginetan, with whom no one else can compete." The magnitude of their profits may be gathered from the votive offering which they erected on their return, in the sacred precinct of Hêrê at Samos, in gratitude for the protection of that goddess during their voyage, — a large bronze vase, ornamented with projecting griffins' heads, and supported by three bronze kneeling figures of colossal stature: it cost six talents, and represented the tithe of their gains. The aggregate of sixty talents[3] (about sixteen thousand pounds, speaking roughly), corresponding to this tithe, was a sum which not many even of the rich men of Athens in her richest time, could boast of possessing.

To the lucky accident of this enormous vase and the inscription doubtless attached to it, which Herodotus saw in the Hêræon at Samos, and to the impression which such miraculous enrich-

[1] Herodot. iv, 152. Θειῇ πομπῇ χρεώμενος.

[2] Herodot. iv, 152. Τὸ δὲ ἐμπόριον τοῦτο (Tartêssus) ἦν ἀκήρατον τοῦτον τὸν χρόνον· ὥστε ἀπονοστήσαντες οὗτοι ὀπίσω μέγιστα δὴ Ἑλλήνων πάντων, τῶν ἡμεῖς ἀτρέκεως ἴδμεν, ἐκ φορτίων ἐκέρδησαν, μετά γε Σώστρατον τὸν Λαοδάμαντος, Αἰγινήτην· τούτῳ γὰρ οὐκ οἷά τε ἐρίσαι ἄλλον.

Allusions to the prodigious wealth of Tartêssus in Anakreon, Fragm. 8, ed. Bergk; Stephan. Byz. Ταρτησσός; Eustath. ad Dionys. Periêgêt. 332, Ταρτησσὸς, ἣν καὶ ὁ Ἀνακρέων φησὶ πανευδαίμονα; Himerius ap. Photium, Cod. 243, p. 599, — Ταρτησσοῦ βίον, Ἀμαλθείας κέρας, πᾶν ὅσον εὐδαιμονίας κεφαλαῖον.

[3] These talents cannot have been Attic talents; for the Attic talent first arose from the debasement of the Athenian money-standard by Solon, which did not occur until a generation after the voyage of Kôlæus. They may have been either Euboic or Æginæan talents; probably the former, seeing that the case belongs to the island of Samos. Sixty Euboic talents would be about equivalent to the sum stated in the text. For the proportion of the various Greek monetary scales, see above, vol. ii, part 2, ch. iv, p. 425 and ch. vii p. 227 in the present volume.

ment made upon his imagination, — we are indebted for our knowledge of the precise period at which the secret of Phenician commerce at Tartêssus first became known to the Greeks. The voyage of Kôlæus opened to the Greeks of that day a new world hardly less important — regard being had to their previous aggregate of knowledge — than the discovery of America to the Europeans of the last half of the fifteenth century. But Kôlæus did little more than make known the existence of this distant and lucrative region: he cannot be said to have shown the way to it: nor do we find, in spite of the foundation of Kyrênê and Barka, which made the Greeks so much more familiar with the coast of Libya than they had been before, that the route by which he had been carried against his own will was ever deliberately pursued by Greek traders.

Probably the Carthaginians, altogether unscrupulous in proceedings against commercial rivals,[1] would have aggravated its natural maritime difficulties by false information and hostile proceedings. The simple report of such gains, however, was well calculated to act as a stimulus to other enterprising navigators; and the Phôkæans, during the course of the next half-century, pushing their exploring voyages both along the Adriatic and along the Tyrrhenian coast, and founding Massalia in the year 600 B. C., at length reached the Pillars of Hêraklês and Tartêssus along the eastern coast of Spain. These men were the most adventurous mariners[2] that Greece had yet produced, creating a jealous uneasiness even among their Ionian neighbors:[3] their voyages were made, not with round and bulky merchant-ships, calculated only for the maximum of cargo, but with armed pentekonters, — and they were thus enabled to defy the privateers of the Tyrrhenian cities on the Mediterranean, which had long deterred the Greek trader from any habitual traffic near the strait

[1] Strabo, xvii, p. 802; Aristot. Mirab. Ausc. c. 84–132.

[2] Herodot. i, 163. *Οἱ δὲ Φωκαιέες οὗτοι ναυτιλίῃσι μακρῇσι πρῶτοι Ἑλλήνων ἐχρήσαντο, καὶ τὸν Ἀδρίην καὶ τὴν Τυρσηνίην καὶ τὴν Ἰβηρίην καὶ τὸν Ταρτησσὸν οὗτοί εἰσιν οἱ καταδείξαντες· ἐναντίλλοντο δὲ οὐ στρογγύλῃσι νηυσὶν, ἀλλὰ πεντηκοντέροισιν*, — the expressions are remarkable.

[3] Herodot. i, 164–165, gives an example of the jealousy of the Chians in respect to the islands called Œnussæ.

of Messina.[1] There can be little doubt that the progress of the Phôkæans was very slow, and the foundation of Massalia (Marseilles), one of the most remote of all Greek colonies, may for a time have absorbed their attention: moreover, they had to pick up information as they went on, and the voyage was one of discovery in the strict sense of the word. The time at which they reached Tartêssus may seemingly be placed between 570–560 B. C. They made themselves so acceptable to Arganthônius, — king of Tartêssus, or at least king of part of that region, — that he urged them to relinquish their city of Phôkæa and establish themselves in his territory, offering to them any site which they chose to occupy. Though they declined this tempting offer, yet he still continued anxious to aid them against dangers at home, and gave them a large donation of money, — whereby they were enabled at a critical moment to complete their fortifications. Arganthônius died shortly afterwards, having lived, we are told, to the extraordinary age of one hundred and twenty years, of which he had reigned eighty. The Phôkæans had probably reason to repent of their refusal, since in no very long time their town was taken by the Persians, half their citizens became exiles, and were obliged to seek a precarious abode in Corsica, in place of the advantageous settlement which old Arganthônius had offered to them in Tartêssus.[2]

By such steps did the Greeks gradually track out the lines of Phenician commerce in the Mediterranean, and accomplish that vast improvement in their geographical knowledge, — the circumnavigation of what Eratosthenês and Strabo termed "our sea," as distinguished from the external ocean.[3] Little practical advantage, however, was derived from the discovery, which was only made during the last years of Ionian independence. The Ionian cities became subjects of Persia, and Phôkæa especially, was crippled and half-depopulated in the struggle. Had the period of Ionian enterprise been prolonged, we should probably have heard of other Greek settlements in Iberia and Tartêssus, over and above Emporia and Rhodus, formed by the Massaliote

Ephorus, Fragm. 52, ed. Marx; Strabo, vi, p. 267.

between the Pyrenees and the Ebro, — as well as of increasing Grecian traffic with those regions. The misfortunes of Phôkæa and the other Ionic towns saved the Phenicians of Tartêssus from Grecian interference and competition, such as that which their fellow-countrymen in Sicily had been experiencing for a century and a half.

But though the Ephesian Artemis, the divine protectress of Phôkæan emigration, was thus prevented from becoming consecrated in Tartêssus along with the Tyrian Hêraklês, an impulse not the less powerful was given to the imaginations of philosophers like Thalês and poets like Stesichorus, — whose lives cover the interval between the supernatural transport of Kôlæus on the wings of the wind, and the persevering, well-planned exploration which emanated from Phôkæa. While, on the one hand, the Tyrian Hêraklês with his venerated temple at Gadês furnished a new locality and details for mythes respecting the Grecian Hêraklês,— on the other hand, intelligent Greeks learned for the first time that the waters surrounding their islands and the Peloponnesus formed part of a sea circumscribed by assignable boundaries; continuous navigation of the Phôkæans round the coasts, first of the Adriatic, next of the gulf of Lyons to the Pillars of Hêraklês and Tartêssus, first brought to light this important fact. The hearers of Archilochus, Simonidês of Amorgus, and Kallinus, living before or contemporary with the voyage of Kôlæus, had known no sea-limit either north of Korkyra or west of Sicily: those of Anakreon and Hippônax, a century afterwards, found the Euxine, the Palus Mæotis, the Adriatic, the western Mediterranean, and the Libyan Syrtes, all so far surveyed as to present to the mind a definite conception, and to admit of being visibly represented by Anaximander on a map. However familiar such knowledge has now become to us, at the time now under discussion it was a prodigious advance. The Pillars of Hêraklês, especially, remained deeply fixed in the Greek mind, as a terminus of human adventure and aspiration: of the ocean beyond, men were for the most part content to remain ignorant.

It has already been stated, that the Phenicians, as coast explorers, were even more enterprising than the Phôkæans; but their jealous commercial spirit induced them to conceal their

track, — to give information designedly false,[1] respecting dangers and difficulties, — and even to drown any commercial rivals when they could do so with safety.[2] One remarkable Phenician achievement, however, contemporary with the period of Phôkæan exploration, must not be passed over. It was somewhere about 600 B. C. that they circumnavigated Africa; starting from the Red sea, by direction of the Egyptian king Nekôs, son of Psammetichus, — going round the cape of Good Hope to Gadês, — and from thence returning to the Nile.

It appears that Nekos, anxious to procure a water communication between the Red sea and the Mediterranean, began digging a canal from the former to the Nile, but desisted from the undertaking after having made considerable progress. In prosecution of the same object, he despatched these Phenicians on an experimental voyage round Libya, which was successfully accomplished, though in a time not less than three years; for during each autumn, the mariners landed and remained on shore a sufficient time to sow their seed and raise a crop of corn. They reached Egypt again, through the strait of Gibraltar, in the course of the third year, and recounted a tale, — "which (says Herodotus) others may believe if they choose, but I cannot believe,"— that, in sailing round Libya, they had the sun on their right hand, *i. e.* to the north.[3]

The reality of this circumnavigation was confirmed to Herodotus by various Carthaginian informants,[4] and he himself fully

---

[1] The geographer Ptolemy, with genuine scientific zeal, complains bitterly of the reserve and frauds common with the old traders, respecting the countries which they visited (Ptolem. Geogr. i, 11).

[3] Herodot. iv, 42. Καὶ ἔλεγον, ἐμοὶ μὲν οὐ πιστὰ, ἄλλῳ δὲ δή τέῳ, ὡς περιπλώοντες τὴν Λιβύην, τὸν ἥλιον ἔσχον ἐς τὰ δεξιά.

[4] Herodot. Οὕτω μὲν αὐτὴ ἐγνώσθη τοπρῶτον· (*i. e.* ἡ Λιβύη ἐγνώσθη ἐοῦσα περίρρυτος·) μετὰ δὲ, Καρχηδόνιοί εἰσιν οἱ λέγοντες. These Carthaginians, to whom Herodotus here alludes, told him that Libya was circumnavigable; but it does not seem that they knew of any other actual circumnavigation except that of the Phenicians sent by Nekôs; otherwise, Herodotus would have made some allusion to it, instead of proceeding, as he does immediately, to tell the story of the Persian Sataspês, who tried and failed.

The testimony of the Carthaginians is so far valuable, as it declares their persuasion of the truth of the statement made by those Phenicians.

believes it. There seems good reason for sharing in his belief, though several able critics reject the tale as incredible. The Phenicians were expert and daring masters of coast navigation, and in going round Africa they had no occasion ever to lose sight of land: we may presume that their vessels were amply stored, so that they could take their own time, and lie by in bad weather; we may also take for granted that the reward consequent upon success was considerable. For any other mariners then existing, indeed, the undertaking might have been too hard, but it was not so for them, and that was the reason why Nekôs chose them. To such reasons, which show the story to present no intrinsic incredibility (that, indeed, is hardly alleged even by Mannert and others who disbelieve it), we may add one other, which goes far to prove it positively true. They stated that, in the course of their circuit, they had the sun on their right hand (*i. e.* to the northward); and this phenomenon, observable according to the season even when they were within the tropics, could not fail to force itself on their attention as constant, after they had reached the southern temperate zone. But Herodotus at once pronounces this part of the story to be incredible, and so it would probably appear to every Greek[1], Phenician, or Egyptian, not only of the age of Nekôs, but even of the time of Herodotus, who heard it; since none of them possessed either actual experience of the phenomenon of a southern latitude, or a sufficiently correct theory of the relation between sun and earth, to understand the varying direction of the shadows; and few men would consent to set aside the received ideas with reference to the solar motions, from pure confidence in the veracity of these Phenician narrators. Now that under such circumstances the latter should invent the tale, is highly improbable; and if they were not in-

Some critics have construed the words, in which Herodotus alludes to the Carthaginians as his informants, as if what they told him was the story of the fruitless attempt made by Sataspês. But this is evidently not the meaning of the historian: he brings forward the opinion of the Carthaginians as confirmatory of the statement made by the Phenicians employed by Nekôs.

[1] Diodorus (iii, 40) talks correct language about the direction of the shadows southward of the tropic of Cancer (compare Pliny, H. N. vi, 29), — one mark of the extension of geographical and astronomical observations during the four intervening centuries between him and Herodotus.

ventors, they must have experienced the phenomenon during the southern portion of their transit.

Some critics disbelieve this circumnavigation, from supposing that if so remarkable an achievement had really taken place once, it must have been repeated, and practical application must have been made of it. But though such a suspicion is not unnatural, with those who recollect how great a revolution was operated when the passage was rediscovered during the fifteenth century, — yet the reasoning will not be found applicable to the sixth century before the Christian era.

Pure scientific curiosity, in that age, counted for nothing: the motive of Nekôs for directing this enterprise was the same as that which had prompted him to dig his canal, — in order that he might procure the best communication between the Mediterranean and the Red sea. But, as it has been with the north-west passage in our time, so it was with the circumnavigation of Africa in his, — the proof of its practicability at the same time showed that it was not available for purposes of traffic or communication, looking to the resources then at the command of navigators, — a fact, however, which could not be known until the experiment was made. To pass from the Mediterranean to the Red sea by means of the Nile still continued to be the easiest way; either by aid of the land-journey, which in the times of the Ptolemies was usually made from Koptos on the Nile to Berenikê on the Red sea, — or by means of the canal of Nekôs, which Darius afterwards finished, though it seems to have been neglected during the Persian rule in Egypt, and was subsequently repaired and put to service under the Ptolemies. Without any doubt the successful Phenician mariners underwent both severe hardship and great real perils, besides those still greater supposed perils, the apprehension of which so constantly unnerved the minds even of experienced and resolute men in the unknown ocean. Such was the force of these terrors and difficulties, to which there was no known termination, upon the mind of the Achæmenid Sataspês (upon whom the circumnavigation of Africa was imposed as a penalty "worse than death" by Xerxes, in commutation of a capital sentence), that he returned without having finished the circuit, though by so doing he forfeited his life. He affirmed that he had sailed "until his vessel stuck fast, and could move

on no farther,"—a persuasion not uncommon in ancient times, and even down to Columbus, that there was a point, beyond which the ocean,—either from mud, sands, shallows, fogs, or accumulations of sea-weed,—was no longer navigable.[1]

[1] Skylax, after following the line of coast from the Mediterranean outside of the strait of Gibraltar, and then south-westward along Africa as far as the island of Kernê, goes on to say, that "beyond Kernê the sea is no longer navigable from shallows, and mud, and sea-weed:" *Τῆς δὲ Κέρνης νήσου τὰ ἐπέκεινα οὔκετί ἐστι πλωτὰ διὰ βραχύτητα θαλάττης καὶ πηλὸν καὶ φῦκος. Ἔστι δὲ τὸ φῦκος τῆς δοχμῆς τὸ πλάτος καὶ ἄνωθεν ὀξύ, ὥστε κεντεῖν* (Skylax, c. 109). Nearchus, on undertaking his voyage down the Indus, and from thence into the Persian gulf, is not certain whether the external sea will be found navigable—*εἰ δὴ πλωτός γέ ἐστιν ὁ ταύτῃ πόντος* (Nearchi Periplus, p. 2: compare p. 40, ap. Geogr. Minor. vol. i, ed. Hudson). Pytheas described the neighborhood of Thulê as a sort of chaos—a medley of earth, sea, and air, in which you could neither walk nor sail: *οὔτε γῇ καθ' αὑτὴν ὑπῆρχεν οὔτε θάλασσα οὔτε ἀήρ, ἀλλὰ σύγκριμά τι ἐκ τούτων πλεύμονι θαλασσίῳ ἐοικὸς, ἐν ᾧ φησὶ τὴν γῆν καὶ τὴν θάλασσαν αἰωρεῖσθαι καὶ τὰ σύμπαντα, καὶ τοῦτον ὡς ἂν δεσμὸν εἶναι τῶν ὅλων, μήτε πορευτὸν μήτε πλωτὸν ὑπάρχοντα· τὸ μὲν οὖν τῷ πλεύμονι ἐοικὸς αὐτὸς* (Pytheas) *ἑωρακέναι, τἄλλα δὲ λέγειν ἐξ ἀκοῆς* (Strabo, ii, p. 104). Again, the priests of Memphis told Herodotus that their conquering hero Sesostris had equipped a fleet in the Arabian gulf, and made a voyage into the Erythræan sea, subjugating people everywhere, "until he came to a sea no longer navigable from shallows,"—*οὐκετι πλωτὴν ὑπὸ βραχέων* (Herod. ii, 109). Plato represents the sea without the Pillars of Hêraklês as impenetrable and unfit for navigation, in consequence of the large admixture of earth, mud, or vegetable covering, which had arisen in it from the disruption of the great island or continent Atlantis (Timæus, p. 25; and Kritias, p. 108); which passages are well illustrated by the Scholiast, who seems to have read geographical descriptions of the character of this outer sea: *τοῦτο καὶ οἱ τοὺς ἐκείνῃ τόπους ἱστοροῦντες λέγουσιν, ὡς πάντα τεναγώδη τὸν ἐκεῖ εἶναι χῶρον· τέναγος δὲ ἐστὶν ἰλύς τις, ἐπιπολάζοντος ὕδατος οὐ πολλοῦ, καὶ βοτάνης ἐπιφαινομένης τούτῳ.* See also Plutarch's fancy of the dense, earthy, and viscous Kronian sea (some days to the westward of Britain), in which a ship could with difficulty advance, and only by means of severe pulling with the oars (Plutarch, De Facie in Orbe Lunæ, c. 26, p. 941). So again in the two geographical productions in verse by Rufus Festus Avienus (Hudson, Geogr. Minor. vol. iv, Descriptio Orbis Terræ, v, 57, and Ora Maritima, v, 406–415): in the first of these two, the density of the water of the western ocean is ascribed to its being saturated with salt,—in the second, we have shallows, large quantities of sea-weed, and wild beasts swimming about, which the Carthaginian Himilco affirmed himself to have seen:—

> "Plerumque porro tenue tenditur salum,
> Ut vix arenas subjacentes oculat;

Now we learn from hence that the enterprise, even by those who believed the narrative of Nekôs's captains, was regarded as

> Exsuperat autem gurgitem fucus frequens
> Atque impeditur æstus ex uligine:
> Vis vel ferarum pelagus omne internatat,
> Mutusque terror ex feris habitat freta.
> Hæc olim Himilco Pœnus Oceano super
> *Spectasse* semet et probasse rettulit:
> Hæc nos, ab imis Punicorum annalibus
> Prolata longo tempore, edidimus tibi."

Compare also v, 115–130 of the same poem, where the author again quotes from a voyage of Himilco, who had been four months in the ocean outside of the Pillars of Hercules:—

> "Sic nulla late flabra propellunt ratem,
> Sic segnis humor æquoris pigri stupet.
> Adjicit et illud, plurimum inter gurgites
> Extare fucum, et sæpe virgulti vice
> Retinere puppim," etc.

The dead calm, mud, and shallows of the external ocean are touched upon by Aristot. Meteorolog. ii, 1, 14, and seem to have been a favorite subject of declamation with the rhetors of the Augustan age. See Seneca, Suasoriar. i, 1.

Even the companions and contemporaries of Columbus, when navigation had made such comparative progress, still retained much of these fears respecting the dangers and difficulties of the unknown ocean: "Le tableau exagéré (observes A. von Humboldt, Examen Critique de l'Histoire de la Géographie, t. iii, p. 95) que la ruse des Phéniciens avait tracé des difficultés qu'opposaient à la navigation au delà des Colonnes d'Hercule, de Cerné, et de l'Ile Sacrée (Ierné), le fucus, le limon, le manque de fond, et le calme perpétuel de la mer, ressemble d'une manière frappante aux récits animés des premiers compagnons de Colomb."

Columbus was the first man who traversed the sea of Sargasso, or area of the Atlantic ocean south of the Azores, where it is covered by an immense mass of sea-weed for a space six or seven times as large as France: the sea-weed is sometimes so thickly accumulated, that it requires a considerable wind to impel the vessel through it. The alarm of his crew at this unexpected spectacle was considerable. The remarks and comparisons of M. von Humboldt, in reference to ancient and modern navigation, are highly interesting. (Examen, *ut sup.* pp. 69, 88, 91, etc.)

J. M. Gesner (Dissertat. de Navigationibus extra Columnas Herculis, sects. 6 and 7) has a good defence of the story told by Herodotus. Major Rennell also adopts the same view, and shows by many arguments how much easier the circumnavigation was from the East than from the West (Geograph. System of Herodotus, p. 680); compare Ukert, Geograph. der Griechen und

at once desperate and unprofitable; but doubtless many persons treated it as a mere "Phenician lie,"[1] (to use an expression pro-

Römer. vol. i, p. 61; Mannert, Geog. d. G. und Römer, vol. i, pp. 19–26. Gosselin (Recherches sur la Géogr. des Anc. i, p. 149) and Mannert both reject the story as not worthy of belief: Heeren defends it (Ideen über den Verkehr der Alten Welt, i, 2, pp. 86–95).

Agatharchides, in the second century B. C., pronounces the eastern coast of Africa, southward of the Red sea, to be as yet unexamined: he treats it as a matter of certainty, however, that the sea to the south-westward is continuous with the Western ocean (De Rubro Mari, Geog. Minores, ed. Huds. v, i, p. 11).

[1] Strabo, iii, p. 170. Sataspês (the unsuccessful Persian circumnavigator of Libya, mentioned just above) had violated the daughter of another Persian nobleman, Zopyrus son of Megabyzus, and Xerxês had given orders that he should be crucified for this act; his mother begged him off by suggesting that he should be condemned to something "*worse than death*,"—the circumnavigation of Libya (Herod. iv, 43). Two things are to be remarked in respect to his voyage: 1. He took with him a ship and seamen from Egypt; we are not told that they were Phenician: probably no other mariners than Phenicians were competent to such a voyage,—and even if the crew of Sataspês had been Phenicians, he could not offer rewards for success equal to those at the disposal of Nekôs. 2. He began his enterprise from the strait of Gibraltar instead of from the Red sea; now it seems that the current between Madagascar and the eastern coast of Africa sets very strongly towards the cape of Good Hope, so that while it greatly assists the southerly voyage, on the other hand, it makes return by the same way very difficult. (See Humboldt, Examen Critique de l'Histoire de la Géographie, t i, p. 343.) Strabo, however, affirms that all those who had tried to circumnavigate Africa, both from the Red sea and from the strait of Gibraltar, had been forced to return without success (i, p. 32), so that most people believed that there was a continuous isthmus which rendered it impracticable to go by sea from the one point to the other: he is himself, however, persuaded that the Atlantic is *σύρρους* on both sides of Africa, and therefore that circumnavigation is possible. He as well as Poseidonius (ii, pp. 98–100) disbelieved the tale of the Phenicians sent by Nekôs. He must have derived his complete conviction, that Libya might be circumnavigated, from geographical theory, which led him to contract the dimensions of that continent southward,—inasmuch as the thing in his belief never had been done, though often attempted. Mannert (Geog. d. G. und Röm. i, p. 24) erroneously says that Strabo and others founded their belief on the narrative of Herodotus.

It is worth while remarking that Strabo cannot have read the story in Herodotus with much attention, since he mentions Darius as the king who sent the Phenicians round Africa, not Nekôs; nor does he take notice of the remarkable statement of these navigators respecting the position of the sun. There were doubtless many apocryphal narratives current in his time re-

verbial in ancient times). The circumnavigation of Libya is said to have been one of the projects conceived by Alexander the Great,[1] and we may readily believe that if he had lived longer, it would have been confided to Nearchus, or some other officer of the like competence: nor can there be any reason why it should not have succeeded, especially since it would have been undertaken from the eastward, to the great profit of geographical knowledge among the ancients, but with little advantage to their commerce. There is then adequate reason for admitting that these Phenicians rounded the cape of Good Hope from the East about 600 B. C., more than two thousand years earlier than Vasco de Gama did the same thing from the West: though the discovery was in the first instance of no avail, either for commerce or for geographical science.

Besides the maritime range of Tyre and Sidon, their trade by land in the interior of Asia was of great value and importance. They were the speculative merchants who directed the march of the caravans laden with Assyrian and Egyptian products across the deserts which separated them from inner Asia,[2]—an operation which presented hardly less difficulties, considering the Arabian depredators whom they were obliged to conciliate and even to employ as carriers, than the longest coast-voyage. They seem to have stood alone in antiquity in their willingness to brave, and their ability to surmount, the perils of a distant land-traffic;[3] and their descendants at Carthage and Utica were not less active in pushing caravans far into the interior of Africa.

specting attempts, successful and unsuccessful, to circumnavigate Africa, as we may see by the tale of Eudoxus (Strabo, ii, 98; Cornel. Nep. ap. Plin H. N. ii, 67, who gives the story very differently; and Pomp. Mela, iii, 9).

[1] Arrian, Exp. Al. vii, 1, 2.

[2] Herodot. i, 1. *Φοίνικας — ἀπαγινέοντας φόρτια Ἀσσύριά τε καὶ Αἰγύπτια.*

[3] See the valuable chapter in Heeren (Ueber den Verkehr der Alten Welt i, 2, Abschn. 4, p. 96) about the land trade of the Phenicians.

The twenty-seventh chapter of the prophet Ezekiel presents a striking picture of the general commerce of Tyre.

CHAPTER XIX

ASSYRIANS. — BABYLON.

The name of the Assyrians, who formed one wing of the early system of intercourse and commerce, rests chiefly upon the great cities of Nineveh and Babylon. To the Assyrians of Nineveh (as has been already mentioned) is ascribed in early times a very extensive empire, covering much of Upper Asia, as well as Mesopotamia or the country between the Euphrates and the Tigris. Respecting this empire, — its commencement, its extent, or even the mode in which it was put down, — nothing certain can be affirmed; but it seems unquestionable that many great and flourishing cities, — and a population inferior in enterprise, but not in industry, to the Phenicians, — were to be found on the Euphrates and Tigris, in times anterior to the first Olympiad. Of these cities, Nineveh on the Tigris and Babylon or the Euphrates were the chief;[1] the latter being in some sort of dependence, probably, on the sovereigns of Nineveh, yet governed by kings or chiefs of its own, and comprehending an hereditary order of priests named Chaldæans, masters of all the science and literature as well as of the religious ceremonies current among the people, and devoted, from very early times, to that habit of astronomical observation which their brilliant sky so much favored.

The people called Assyrians or Syrians — for among the Greek authors no constant distinction is maintained between the two[2] —

[1] Herodot. i, 178. Τῆς δὲ Ἀσσυρίης ἐστὶ μέν κου καὶ ἄλλα πολίσματα μέγαλα πολλά· τὸ δὲ ὀνομαστότατον καὶ ἰσχυρότατον, καὶ ἔνθα σφι, τῆς Νίνον ἀναστάτου γενομένης, τὰ βασιλήϊα κατεστήκεε, ἦν Βαβυλών.

The existence of these and several other great cities is an important item to be taken in, in our conception of the old Assyria: Opis on the Tigris, and Sittakê on one of the canals very near the Tigris, can be identified (Xenoph Anab. ii, 4, 13–25): compare Diodor. ii, 11.

[2] Herodot. i, 72; iii, 90–91; vii, 63; Strabo, xvi, p. 736, also ii, p. 84, in which he takes exception to the distribution of the οἰκουμένη (inhabited portion of the globe) made by Eratosthenês, because it did not include in the same compartment (σφραγὶς) Syria proper and Mesopotamia: he calls Ninus and Semiramis, Syrians. Herodotus considers the Armenians as colonists from the Phrygians (vii, 73).

The Homeric names Ἀρίμοι, Ἐρεμβοὶ (the first in the Iliad, ii, 783, the second in the Odyssey, iv, 84) coincide with the Oriental name of this race *Aram;* it seems more ancient, in the Greek habits of speech, than *Syrians* (see Strabo, xvi, p. 785).

The Hesiodic Catalogue too, as well as Stêsichorus, recognized *Arabus* as the son of Hermês, by Throniê, daughter of Bêlus (Hesiod, Fragm. 29, ed. Marktscheffel; Strabo, i, p. 42).

[1] Heeren, in his account of the Babylonians (Ideen über den Verkehr der Alten Welt, part i, Abtheilung 2, p. 168), speaks of this conquest of Babylon by Chaldæan barbarians from the northern mountains as a certain fact, explaining the great development of the Babylonian empire under Nabopolasar and Nebuchadnezzar from 630–580 B. C.; it was, he thinks, the new Chaldæan conquerors who thus extended their dominion over Judæa and Phenicia.

I agree with Volney (Chronologie des Babyloniens, ch. x, p. 215) in thinking this statement both unsupported and improbable. Mannert seems to suppose the Chaldæans of Arabian origin (Geogr. der Gr. und Röm., part v, s. 2, ch. xii, p. 419). The passages of Strabo (xvi, p. 739) are more favorable to this opinion than to that of Heeren; but we make out nothing distinct respecting the Chaldæans except that they were the priestly order

were distributed over the wide territory bounded on the east by Mount Zagros and its north-westerly continuation toward Mount Ararat, by which they were separated from the Medes, — and extending from thence westward and southward to the Euxine sea, the river Halys, the Mediterranean sea, and the Persian gulf, — thus covering the whole course of the Tigris and Euphrates south of Armenia, as well as Syria and Syria-Palæstine, and the territory eastward of the Halys called Kappadokia. But the Chaldæan order of priests appear to have been peculiar to Babylon and other towns in its territory, especially between that city and the Persian gulf. The vast, rich, and lofty temple of Bêlus in that city, served them at once as a place of worship and an astronomical observatory; and it was the paramount ascendency of this order which seems to have caused the Babylonian people generally to be spoken of as Chaldæans, — though some writers have supposed, without any good proof, a conquest of Assyrian Babylon by barbarians called Chaldæans from the mountains near the Euxine.[1]

There were exaggerated statements respecting the antiquity of their astronomical observations, which cannot be traced as of definite and recorded date higher than the era of Nabonassar[1]

among the Assyrians of Babylon, as they are expressly termed by Herodotus — *ὡς λέγουσι οἱ Χαλδαῖοι, ἐόντες ἱρέες τούτου τοῦ θεοῦ* (of Zeus Bêlus) (Herodot. i, 181).

The Chalybes and Chaldæi of the northern mountains seem to be known only through Xenophon (Anab. iv, 3, 4; v, 5, 17; Cyrop. iii, 2, 1); they are rude barbarians, and of their exploits or history no particulars reach us.

[1] The earliest Chaldæan astronomical observation, known to the astronomer Ptolemy, both precise and of ascertained date to a degree sufficient for scientific use, was a lunar eclipse of the 19th March 721 B. C. — the 27th year of the era of Nabonassar (Ideler, Ueber die Astronomischen Beobachtungen der Alten, p. 19, Berlin, 1806). Had Ptolemy known any older observations conforming to these conditions, he would not have omitted to notice them: his own words in the Almagest testify how much he valued the knowledge and comparison of observations taken at distant intervals (Almagest, b. 3, p. 62, ap. Ideler, *l. c.* p. 1), and at the same time imply that he had none more ancient than the era of Nabonassar (Alm. iii, p. 77, ap. Idel. p. 169).

That the Chaldæans had been, long before this period, in the habit of observing the heavens, there is no reason to doubt; and the exactness of those observations cited by Ptolemy implies (according to the judgment of Ideler *ib.* p. 167) long previous practice. The period of two hundred and twenty-three lunations, after which the moon reverts nearly to the same positions in reference to the apsides and nodes, and after which eclipses return nearly in the same order and magnitude, appears to have been discovered by the Chaldæans ("Defectus ducentis viginti tribus mensibus redire in suos orbes certum est," Pliny, H. N. ii, 13), and they deduced from hence the mean daily motions of the moon with a degree of accuracy which differs only by four seconds from modern lunar tables (Geminus, Isagoge in Arati Phænomena, c. 15; Ideler, *l. c.* pp. 153, 154, and in his Handbuch der Chronologie, vol. i, Absch. ii, p. 207).

There seem to have been Chaldæan observations, both made and recorded, of much greater antiquity than the era of Nabonassar; though we cannot lay much stress on the date of 1903 years anterior to Alexander the Great, which is mentioned by Simplicius (ad Aristot. de Cœlo, p. 123) as being the earliest period of the Chaldæan observations sent from Babylon by Kallisthenês to Aristotle. Ideler thinks that the Chaldæan observations anterior to the era of Nabonassar were useless to astronomers from the want of some fixed era, or definite cycle, to identify the date of each of them. The common civil year of the Chaldæans had been from the beginning (like that of the Greeks) a lunar year, kept in a certain degree of harmony with the sun by cycles of lunar years and intercalation. Down to the era of Nabonassar, the calender was in confusion, and there was nothing to verify either the time

(747 B. C.), as well as respecting the extent of their acquired knowledge, so largely blended with astrological fancies and occult influences of the heavenly bodies on human affairs. But however incomplete their knowledge may appear when judged by the standard of after-times, there can be no doubt, that compared with any of their contemporaries of the sixth century B. C. — either Egyptians, Greeks, or Asiatics — they stood preëminent, and had much to teach, not only to Thalês and Pythagoras, but

of accession of the kings, or that of astronomical phenomena observed, except the days and months of this lunar year. In the reign of Nabonassar, the astronomers at Babylon introduced (not into civil use, but for their own purposes and records) the Egyptian solar year, — of three hundred and sixty five days, or twelve months of thirty days each, with five added days, beginning with the first of the month Thoth, the commencement of the Egyptian year, — and they thus first obtained a continuous and accurate mode of marking the date of events. It is not meant that the Chaldæans then for the first time obtained from the Egyptians the *knowledge* of the solar year of three hundred and sixty-five days, but that they then for the first time adopted it in their notation of time for astronomical purposes, fixing the precise moment at which they began. Nor is there the least reason to suppose that the era of Nabonassar coincided with any political revolution or change of dynasty. Ideler discusses this point (pp. 146–173, and Handbuch der Chronol. pp. 215–220). Syncellus might correctly say — *Ἀπὸ Ναβονασάρου τοὺς χρόνους τῆς τῶν ἄστρων παρατηρησέως Χαλδαῖοι ἠκρίβωσαν* (Chronogr. p. 207).

We need not dwell upon the back reckonings of the Chaldæans for periods of 720,000, 490,000, 470,000 years, mentioned by Cicero, Diodorus, and Pliny (Cicero, De Divin. ii, 46; Diod. ii, 31; Pliny, H. N. vii, 57), and seemingly presented by Berosus and others as the preface of Babylonian history.

It is to be noted that Ptolemy always cited the Chaldæan observations as made by "*the Chaldæans*," never naming any individual; though in all the other observations to which he alludes, he is very scrupulous in particularizing the name of the observer. Doubtless he found the Chaldæan observations registered just in this manner; a point which illustrates what is said in the text respecting the collective character of their civilization, and the want of individual development or prominent genius.

The superiority of the Chaldæan priests to the Egyptian, as astronomical observers, is shown by the fact that Ptolemy, though living at Alexandria, never mentions the latter as astronomers, and cites no Egyptian observations while he cites thirteen Chaldæan observations in the years B. C. 721, 720 523, 502, 491, 383, 382, 245, 237, 229: the first ten being observations of lunar eclipses; the last three, of conjunctions of planets and fixed stars (Ideler, Handbuch der Chronologie, vol. i, Ab. ii, pp. 195–199).

even to later inquirers, such as Eudoxus and Aristotle. The conception of the revolving celestial sphere, the gnomon, and the division of the day into twelve parts, are affirmed by Herodotus[1] to have been first taught to the Greeks by the Babylonians; and the continuous observation of the heavens both by the Egyptian and Chaldæan priests, had determined with considerable exactness both the duration of the solar year and other longer periods of astronomical recurrence; thus impressing upon intelligent Greeks the imperfection of their own calendars, and furnishing them with a basis not only for enlarged observations of their own, but also for the discovery and application of those mathematical theories whereby astronomy first became a science.

Nor was it only the astronomical acquisitions of the priestly caste which distinguished the early Babylonians. The social condition, the fertility of the country, the dense population, and the persevering industry of the inhabitants, were not less remarkable. Respecting Nineveh,[2] once the greatest of the Assyrian

[1] Herodot. ii, 109.

[2] The ancient Ninus or Nineveh was situated on the eastern bank of the Tigris, nearly opposite the modern town of Mousul or Mosul. Herodotus (i, 193) and Strabo (xvi, p. 737) both speak of it as being destroyed; but Tacitus (Ann. xii, 13) and Ammian. Marcell. (xviii, 7) mention it as subsisting. Its ruins had been long remarked (see Thevenot, Voyages, lib. i, ch. xi, p. 176, and Niebuhr, Reisen, vol. ii, p. 360), but have never been examined carefully until recently by Rich, Ainsworth, and others: see Ritter, West-Asien, b. iii, Abtheil. iii, Abschn. i, s. 45, pp. 171–221.

Ktêsias, according to Diodorus (ii, 3), placed Ninus or Nineveh on the Euphrates, which we must presume to be an inadvertence,— probably of Diodorus himself, for Ktêsias would be less likely than he to confound the Euphrates and the Tigris. Compare Wesseling ad Diodor. ii, 3, and Bähr ad Ktesiæ Fragm. ii, Assyr. p. 392.

Mannert (Geographie der Gr. und Röm. part v, c. 14, pp. 439–448) disputes the identity of these ruins with the ancient city of Ninus or Nineveh, because, if this had been the fact, Xenophon and the Ten Thousand Greeks must have passed directly over them in the retreat along the eastern bank of the Tigris upward: and Xenophon, who particularly notices the deserted cities of Larissa and Mespila, says nothing of the great ruin of this once flourishing Assyrian capital. This argument once appeared to me so forcible, that I came to the same negative conclusion as Mannert, though his conjectures, as to the real site of the city, never appeared to me satisfactory But Ritter has removed the difficulty, by showing that the ruins opposite Mosul exactly correspond to the situation of that deserted city which Xenophon calls Mespila: the difference of name in this case is not of very great importance (Ritter, *ut sup.* p. 175). Consult also Forbiger, Handbuch der alten Geographie, sect. 96, p. 612.

The situation of Nineveh here pointed out is exactly what we should expect in reference to the conquests of the Median kings: it lies in that part of Assyria bordering on Media, and in the course of the conquests which the king Kyaxarês afterwards extended farther on to the Halys. (See Appendix at the end of this chapter.)

[1] Herodot. i, 193. Ἡ γῆ τῶν Ἀσσυρίων ὕεται μὲν ὀλίγῳ — while he speaks of rain falling at Thebes in Egypt as a prodigy, which never happened except just at the moment when the country was conquered by Cambysês, —οὐ γὰρ δὴ ὕεται τὰ ἄνω τῆς Αἰγύπτου τὸ παράπαν (iii, 10). It is not unimportant to notice this distinction between the *little* rain of Babylonia, and the *no* rain of Upper Egypt, — as a mark of measured assertion in the historian from whom so much of our knowledge of Grecian history is derived.

It chanced to rain hard during the four days which the traveller Niebuhr spent in going from the ruins of Babylon to Bagdad, at the end of November 1763 (Reisen, vol. ii, p. 292).

[2] Herodot. i, 193; Xenophon, Anab. i, 7 15; ii, 4, 13–22.

cities, we have no good information, nor can we safely reason from the analogy of Babylon, inasmuch as the peculiarities of the latter were altogether determined by the Euphrates, while Nineveh was seated considerably farther north, and on the east bank of the Tigris: but Herodotus gives us valuable particulars respecting Babylon as an eye-witness, and we may judge by his account respecting its condition after much suffering from the Persian conquest, what it had been a century earlier in the days of its full splendor.

The neighboring territory receiving but little rain,[1] owed its fertility altogether to the annual overflowing of the Euphrates, on which the labor bestowed, for the purpose of limiting, regularizing, and diffusing its supply of water, was stupendous. Embankments along the river, — artificial reservoirs in connection with it, to receive an excessive increase, — new curvilinear channels, dug for the water in places where the stream was too straight and rapid, — broad and deep canals crossing the whole space between the Euphrates and the Tigris, and feeding numerous rivulets[2] or ditches which enabled the whole breadth of land to be irrigated, — all these toilsome applications were requisite to insure due moisture for the Babylonian soil; but they were rewarded with an exuberance of produce, in the various descriptions of grain,

such as Herodotus hardly dares to particularize. The country produced no trees except the date-palm, which was turned to account in many different ways, and from the fruit of which, both copious and of extraordinary size, wine as well as bread were made.[1] Moreover, Babylonia was still more barren of stone than of wood, so that buildings as well as walls were constructed almost entirely of brick, for which the earth was well adapted; while a flow of mineral bitumen, found near the town and river of Is, higher up the Euphrates, served for cement. Such persevering and systematic labor, applied for the purpose of irrigation, excites our astonishment; yet the description of what was done for defence is still more imposing. Babylon, traversed in the middle by the Euphrates, was surrounded by walls three hundred feet in height, seventy-five feet in thickness, and composing a square of which each side was one hundred and twenty stadia (or nearly fifteen English miles) in length: around the outside of the walls was a broad and deep moat from whence the material for the bricks composing them had been excavated; while one hundred brazen gates served for ingress and egress. Besides, there was an interior wall less thick, but still very strong; and as a still farther obstruction to invaders from the north and north-east, another high and thick wall was built at some miles from the city, across much of the space between the Euphrates and the Tigris, — called the wall of Media, seemingly a little to the north of that point where the two rivers most nearly approach to each other, and joining the Tigris on its west bank. Of the houses many were three or four stories high, and the broad and straight streets, unknown in a Greek town until the distribution

[1] About the date-palms (*φοίνικες*) in the ancient Babylonia, see Theophrastus, Hist. Plant. ii, 6, 2–6; Xenoph. Cyrop. vii, 5, 12; Anab. ii, 3, 5; Diodor. ii, 53: there were some which bore no fruit, but which afforded good wood for house-purposes and furniture.

Theophrastus gives the same general idea of the fertility and produce of the soil in Babylonia as Herodotus, though the two hundred-fold, and sometimes three hundred-fold, which was stated to the latter as the produce of the land in grain, appears in his statement cut down to fifty-fold, or one hundred-fold (Hist. Plant. viii. 7, 4).

Respecting the numerous useful purposes for which the date-palm was made to serve (a Persian song enumerated three hundred and sixty), see Strabo, xiv, p. 742; Ammian Marcell. xxiv, 3.

of the peiræeus by Hippodamus, near the time of the Peloponnesian war, were well calculated to heighten the astonishment raised by the whole spectacle in a visitor like Herodotus. The royal palace, with its memorable terraces or hanging gardens, formed the central and commanding edifice in one half of the city, — the temple of Bêlus in the other half.

That celebrated temple, standing upon a basis of one square stadium, and inclosed in a precinct of two square stadia in dimension, was composed of eight solid towers, built one above the other, and is alleged by Strabo to have been as much as a stadium or furlong high (the height is not specified by Herodotus):[1] it was full of costly decorations, and possessed an extensive landed property. Along the banks of the river, in its passage through the city, were built spacious quays, and a bridge on stone piles, for the placing of which — as Herodotus was told — Semiramis had caused the river Euphrates to be drained off into the large side reservoir and lake constructed higher up its course.[2]

[1] Herodot. i, 178, Strabo, xiv, p. 738; Arrian, E. A. vii, 17, 7. Strabo does not say that it was a stadium in *perpendicular* height: we may suppose that the stadium represents the entire distance in upward march from the bottom to the top. He as well as Arrian say that Xerxês destroyed both the temple of Bêlus and all the other temples at Babylon (*καθεῖλεν, κατέσκαψεν*, iii, 16, 6; vii, 17, 4); he talks of the intention of Alexander to rebuild it, and of his directions given to level new foundations, carrying away the loose earth and ruins. This cannot be reconciled with the narrative of Herodotus, nor with the statement of Pliny (vi, 30), nor do I believe it to be true. Xerxês plundered the temple of much of its wealth and ornaments, but that he knocked down the vast building and the other Babylonian temples, is incredible. Babylon always continued one of the chief cities of the Persian empire.

[2] What is stated in the text respecting Babylon, is taken almost entirely from Herodotus: I have given briefly the most prominent points in his interesting narrative (i, 178–193), which well deserves to be read at length.

Herodotus is in fact our only original witness, speaking from his own observation and going into details, respecting the marvels of Babylon. Ktêsias, if his work had remained, would have been another original witness; but we have only a few extracts from him by Diodorus. Strabo seems not to have visited Babylon, nor can it be affirmed that Kleitarchus did so. Arrian had Aristobulus to copy, and is valuable as far as he goes; but he does not enter into many particulars respecting the magnitude of the city or its appurtenances. Berosus also, if we possessed his book, would have been an eye-witness of the state of Babylon more than a century and a half later

Besides this great town of Babylon itself, there were through out the neighborhood, between the canals which united the Euphrates and the Tigris, many rich and populous villages, while Borsippa and other considerable towns were situated lower down

than Herodotus, but the few fragments remaining are hardly at all descriptive (see Berosi Fragm. pp. 64–67, ed. Richter).

The magnitude of the works described by Herodotus naturally provokes suspicions of exaggeration; but there are good grounds for trusting him, in my judgment, on all points which fell under his own vision and means of verification, as distinguished from past facts, on which he could do no more than give what he heard. He had bestowed much attention on Assyria and its phenomena, as is evident from the fact that he had written (or prepared to write, if the suspicion be admissible that the work was never completed, — Fabricius, Biblioth. Græc. ii, 20, 5) a special Assyrian history, which has not reached us (Ἀσσυρίοισι λόγοισι, i, 106–184). He is very precise in the measures of which he speaks; thus having described the dimensions of the walls in "royal cubits," he goes on immediately to tell us how much that measure differs from an ordinary cubit. He designedly suppresses a part of what he had heard respecting the produce of the Babylonian soil, from the mere apprehension of not being believed.

To these reasons for placing faith in Herodotus we may add another, not less deserving of attention. That which seems incredible in the constructions which he describes, arises simply from their enormous bulk, and the frightful quantity of human labor which must have been employed to execute them. He does not tell us, like Berosus (Fragm. p. 66), that these wonderful fortifications were completed in fifteen days, — nor like Quintus Curtius, that the length of one stadium was completed on each successive day of the year (v, 1, 26). To bring to pass all that Herodotus has described, is a mere question of time, patience, number of laborers, and cost of maintaining them, — for the materials were both close at hand and inexhaustible.

Now what would be the limit imposed upon the power and will of the old kings of Babylonia on these points? We can hardly assign that limit with so much confidence as to venture to pronounce a statement of Herodotus incredible, when he tells us something which he has seen, or verified from eye-witnesses. The Pyramids and other works in Egypt are quite sufficient to make us mistrustful of our own means of appreciation; and the great wall of China (extending for twelve hundred English miles along what was once the whole northern frontier of the Chinese empire, — from twenty to twenty-five feet high, — wide enough for six horses to run abreast, and furnished with a suitable number of gates and bastions) *contains more material than all the buildings of the British empire put together*, according to Barrow's estimate (Transactions of the Royal Asiatic Society, vol. i, p. 7, *t. v.*; and Ideler, Ueber die Zeitrechnung der Chinesen, in the Abhandlungen of the Berlin Academy for 1837, ch. 3, p. 291).

Ktêsias gave the circuit of the walls of Babylon as three hundred and sixty stadia; Kleitarchus, three hundred and sixty-five stadia; Quintus Curtius, three hundred and sixty-eight stadia; and Strabo, three hundred

and eighty-five stadia; all different from Herodotus, who gives four hundred and eighty stadia, a square of one hundred and twenty stadia each side. Grosskurd (ad Strabon. xvi, p. 738), Letronne, and Heeren, all presume that the smaller number must be the truth, and that Herodotus must have been misinformed; and Grosskurd further urges, that Herodotus cannot have *seen* the walls, inasmuch as he himself tells us that Darius caused them to be razed after the second siege and reconquest (Herodot. iii, 159). But upon this we may observe: First, the expression (τὸ τεῖχος περιεῖλε) does not imply that the wall was so thoroughly and entirely razed by Darius as to leave no part standing, — still less, that the great and broad moat was in all its circuit filled up and levelled. This would have been a most laborious operation in reference to such high and bulky masses, and withal not necessary for the purpose of rendering the town defenceless; for which purpose the destruction of certain portions of the wall is sufficient. Next, Herodotus speaks distinctly of the walls and ditch as existing in his time, when he saw the place, which does not exclude the possibility that numerous breaches may have been designedly made in them, or mere openings left in the walls without any actual gates, for the purpose of obviating all idea of revolt. But, however this latter fact may be, certain it is that the great walls were either continuous, or discontinuous only to the extent of these designed breaches, when Herodotus saw them. He describes the town and its phenomena in the *present tense*: κέεται ἐν πεδίῳ μεγάλῳ, μέγαθος ἐοῦσα μέτωπον ἕκαστον 120 σταδίων, ἐούσης τετραγώνου· οὗτοι στάδιοι τῆς περιόδου τῆς πόλιος γίνονται συνάπαντες 480. Τὸ μὲν νῦν μέγαθος τοσοῦτόν ἐστι τοῦ ἄστεος τοῦ Βαβυλωνίου. Ἐκεκόσμητο δὲ ὡς οὐδὲν ἄλλο πόλισμα τῶν ἡμεῖς ἴδμεν· ταφρὸς μὲν πρῶτά μιν βάθεα τε καὶ εὖρεα καὶ πλέη ὕδατος περιθέει· μετὰ δὲ, τεῖχος πεντήκοντα μὲν πηχέων βασιληΐων ἐὸν τὸ εὖρος, ὕψος δὲ, διηκοσίων πηχέων. Ὁ δὲ βασιληΐος πηχὺς τοῦ μετρίου ἐστὶ πήχεος μέζων τρισὶ δακτυλίοισι (c. 178). Again (c. 181), — Τοῦτο μὲν δὴ τὸ τεῖχος θώρηξ ἐστι· ἕτερον δὲ ἐσωθεν τεῖχος περιθεῖ, οὐ πολλῷ τέῳ ἀσθενέστερον τοῦ ἑτέρου τείχους, στεινότερον δέ. Then he describes the temple of Zeus Bêlus, with its vast dimensions, — καὶ ἐς ἐμὲ τοῦτο ἔτι ἐὸν, δύο σταδίων πάντη, ἐὸν τετράγωνον, — in the language of one who had himself gone up to the top of it. After having mentioned the striking present phenomena of the temple, he specifies a statue of solid gold, twelve cubits high, which the Chaldæans told him had once been there, but which he did *not* see, and he carefully marks the distinction in his language, — ἦν δὲ ἐν τῷ τεμένεϊ τούτῳ ἔτι τὸν χρόνον ἐκεινον καὶ ἀνδριὰς δυώδεκα πήχεων, χρύσεος στέρεος. Ἐγὼ μὲν μιν οὐκ εἶδον· τὰ δὲ λέγεται ὑπὸ Χαλδαίων, ταῦτα λέγω (c. 183).

The argument, therefore, by which Grosskurd justifies the rejection of the statement of Herodotus is not to be reconciled with the language of the historian: Herodotus certainly saw both the walls and the ditch. Ktêsias saw them too, and his statement of the circuit, as three hundred and sixty

on the Euphrates itself. And the industry, agricultural as well as manufacturing, of the collective population, was not less persevering than productive: their linen, cotton, and woollen fabrics, and their richly ornamented carpets, were celebrated throughout all the Eastern regions. Their cotton was brought in part from islands in the Persian gulf, while the flocks of sheep tended by the Arabian nomads supplied them with wool finer even than that of Milêtus or Tarentum. Besides the Chaldæan order of priests, there seem to have been among them certain other tribes with peculiar hereditary customs: thus there were three tribes, probably near the mouth of the river, who restricted themselves to the eating of fish alone; but we have no evidences of a military caste (like that in Egypt) nor any other hereditary profession.

stadia, stands opposed to that of four hundred and eighty stadia, which appears in Herodotus. But the authority of Herodotus is, in my judgment, so much superior to that of Ktêsias, that I accept the larger figure as more worthy of credit than the smaller. Sixty English miles of circuit is, doubtless, a wonder, but forty-five miles in circuit is a wonder also: granting means and will to execute the lesser of these two, the Babylonian kings can hardly be supposed inadequate to the greater.

To me the height of these artificial mountains, called *walls*, appears even more astonishing than their length or breadth. Yet it is curious that on this point the two eye-witnesses, Herodotus and Ktêsias, both agree, with only the difference between royal cubits and common cubits. Herodotus states the height at two hundred royal cubits: Ktêsias, at fifty fathoms, which are equal to two hundred common cubits (Diod. ii, 7), — *τὸ δὲ ὕψος, ὡς μὲν Κτησίας φησὶ, πεντήκοντα ὀργυιῶν, ὡς δὲ ἔνιοι τῶν νεωτέρων ἔγραψαν, πηχῶν πεντήκοντα.* Olearius (ad Philostratum Vit. Apollon. Tyan. i, 25) shows plausible reason for believing that the more recent writers (*νεώτεροι*) cut down the dimensions stated by Ktêsias simply because they thought such a vast height incredible. The difference between the royal cubit and the common cubit, as Herodotus on this occasion informs us, was three digits in favor of the former; his two hundred royal cubits are thus equal to three hundred and thirty-seven feet eight inches: Ktêsias has not attended to the difference between royal cubits and common cubits, and his estimate, therefore, is lower than that of Herodotus by thirty-seven feet eight inches.

On the whole, I cannot think that we are justified, either by the authority of such counter-testimony as can be produced, or by the intrinsic wonder of the case, in rejecting the dimensions of the walls of Babylon as given by Herodotus.

Quintus Curtius states that a large proportion of the inclosed space was not occupied by dwellings, but sown and planted (v, 1, 26: compare Diodor ii, 9).

In order to present any conception of what Assyria was, in the early days of Grecian history, and during the two centuries preceding the conquest of Babylon by Cyrus in 536 B. C., we unfortunately have no witness earlier than Herodotus, who did not see Babylon until near a century after that event, — about seventy years after its still more disastrous revolt and second subjugation by Darius, Babylonia had become one of the twenty satrapies of the Persian empire, and besides paying a larger regular tribute than any of the other nineteen, supplied from its exuberant soil provision for the Great King and his countless host of attendants during one-third part of the year.[1] Yet it was then in a state of comparative degradation, having had its immense walls breached by Darius, and having afterwards undergone the ill usage of Xerxês, who, since he stripped its temples, and especially the venerated temple of Bêlus, of some of their richest ornaments, would probably be still more reckless in his mode of dealing with the civil edifices.[2] If in spite of such inflictions, and in spite of that manifest evidence of poverty and suffering in the people which Herodotus expressly notices, it continued to be what he describes, still counted as almost the chief city of the Persian empire, both in the time of the younger Cyrus and in that of Alexander,[3] — we may judge what it must once have been, without either foreign satrap or foreign tribute,[4] under its Assyrian kings and Chaldæan priests, during the last of the two centuries which intervened between the era of Nabonassar and the capture of the city by Cyrus the Great. Though several of the kings, during the first of these two centuries, had contributed much to the great works of Babylon, yet it was during the second century of the two, after the capture of Nineveh by the Medes, and under Nebuchadnezzar and Nitôkris, that the kings attained the maximum of their power, and the city its greatest enlargement. It was Nebuchadnezzar who constructed

[3] Xenoph. Anab. i, 4, 11; Arrian, Exp. Al. iii, 16, 3. *καὶ ἅμα τοῦ πολέμου τὸ ἆθλον ἡ Βαβυλὼν καὶ τὰ Σοῦσα ἐφαίνετο.*

[4] See the statement of the large receipts of the satrap Tritantæchmes and his immense establishment of horses and Indian dogs (Herodot. i 192).

the seaport Terêdon, at the mouth of the Euphrates, and who probably excavated the long ship canal of near four hundred miles, which joined it, — which was perhaps formed partly from a natural western branch of the Euphrates.[1] The brother of the poet Alkæus, — Antimenidas, who served in the Babylonian army, and distinguished himself by his personal valor (600–580 B. C.), — would have seen it in its full glory:[2] he is the earliest Greek of whom we hear individually in connection with the Babylonians. It marks[3] strikingly the contrast between the Persian kings and the Babylonian kings, on whose ruin they rose, that while the latter incurred immense expense to facilitate the communication between Babylon and the sea, the former artificially impeded the lower course of the Tigris, in order that their residence at Susa might be out of the reach of assailants.

That which strikes us most, and which must have struck the first Grecian visitors much more, both in Assyria and Egypt, is the unbounded command of naked human strength possessed by these early kings, and the effect of mere mass and indefatigable perseverance, unaided either by theory or by artifice, in the accomplishment of gigantic results.[1] In Assyria, the results were in great part exaggerations of enterprises in themselves useful to the people for irrigation and defence: religious worship was ministered to in the like manner, as well as the personal fancies and pomp of their kings: while in Egypt the latter class predominates more over the former. We scarcely trace in either of them the higher sentiment of art, which owes its first marked development to Grecian susceptibility and genius. But the human mind is in every stage of its progress, and most of all in its rude and unreflecting period, strongly impressed by visible and tangible magnitude, and awe-struck by the evidences of great power. To this feeling, for what exceeded the demands of practical convenience and security, the wonders both in Egypt and Assyria chiefly appealed; while the execution of such colossal works demonstrates habits of regular industry, a concentrated population under one government, and above all, an implicit submission to the regal and priestly sway, — contrasting forcibly with the small autonomous communities of Greece and western Europe, wherein the will of the individual citizen was so much more energetic and uncontrolled. The acquisition of habits of regular industry, so foreign to the natural temper of man, was brought about in Egypt and Assyria, in China and Hindostan, before it had acquired any footing in Europe; but it was purchased either by prostrate obedience to a despotic rule, or by imprisonment within the chain of a consecrated institution of caste. Even during the Homeric period of Greece, these countries had attained a certain civilization in mass, without the acquisition of any high mental qualities or the development of any individual genius: the religious and political sanction, sometimes combined and sometimes separate, determined for every one his mode of life, his creed, his duties, and his place in society, without leaving any scope for the will or reason of the agent himself. Now the Phenicians and Carthaginians manifest a degree of individual impulse and energy which puts them greatly above this type of civilization, though in their tastes, social feelings, and religion, they are still Asiatic.

[1] There is a valuable examination of the lower course of the Euphrates, with the changes which it has undergone, in Ritter, West-Asien, b. iii. Abtheil. iii, Abschnitt i, sect. 29, pp. 45–49, and the passage from Abydenus in the latter page.

For the distance between Terêdon or Diridôtis, at the mouth of the Euphrates (which remained separate from that of the Tigris until the first century of the Christian era), to Babylon, see Strabo, ii, p. 80; xvi, p. 739).

It is important to keep in mind the warning given by Ritter, that none of the maps of the course of the river Euphrates, prepared previously to the publication of Colonel Chesney's expedition in 1836, are to be trusted. That expedition gave the first complete and accurate survey of the course of the river, and led to the detection of many mistakes previously committed by Mannert, Reichard, and other able geographers and chartographers. To the immense mass of information contained in Ritter's comprehensive and laborious work, is to be added the farther merit, that he is always careful in pointing out where the geographical data are insufficient and fall short of certainty. See West-Asien, B. iii, Abtheilung iii, Abschnitt i, sect. 41, p 959.

[2] Strabo, xiii, p. 617, with the mutilated fragment of Alkæus, which O Müller has so ingeniously corrected (Rhenisch. Museum, i, 4, p. 287).

[3] Strabo, xvi, p. 740.

[1] Diodor. (i, 31) states this point justly with regard to the ancient kings of Egypt — *ἔργα μέγαλα καὶ θαυμαστὰ διὰ τὰς πολυχειρίας κατασκευάσαντας, ἀθάνατα τῆς ἑαυτῶν δόξης καταλιπεῖν ὑπομνήματα.*

And ever. the Babylonian community, though their Chaldæan priests are the parallel of the Egyptian priests, with a less measure of ascendency, combine with their industrial aptitude and constancy of purpose something of that strenuous ferocity of character which marks so many people of the Semitic race, — Jews, Phenicians, and Carthaginians. These Semitic people stand distinguished as well from the Egyptian life, — enslaved by childish caprices and antipathies, and by endless frivolities of ceremonial detail, — as from the flexible, many-sided, and self-organizing Greek; not only capable of opening both for himself and for the human race the highest walks of intellect, and the full creative agency of art, but also gentler by far in his private sympathies and dealings than his contemporaries on the Euphrates, the Jordan, or the Nile, — for we are not of course to compare him with the exigencies of western Europe in the eighteenth and nineteenth centuries.

Both in Babylonia and in Egypt, the vast monuments, embankments, and canals, executed by collective industry, appeared the more remarkable to an ancient traveller by contrast with the desert regions and predatory tribes immediately surrounding them. West of the Euphrates, the sands of Arabia extended northward, with little interruption, to the latitude of the gulf of Issus; they even covered the greater part of Mesopotamia,[1] or the country between the Euphrates and the Tigris, beginning a few days' journey northward of the wall called the wall of Media above mentioned, which — extending westward from the Tigris to one of the canals joining the Euphrates — had been erected to protect Babylon, against the incursion of the Medes.[2]

[1] See the description of this desert in Xenoph. Anab. i, 5, 1–8.

[2] The Ten Thousand Greeks passed from the outside to the inside of the wall of Media: it was one hundred feet high, twenty feet wide, and was reported to them as extending twenty parasangs or six hundred stadia (= seventy miles) in length (Xenoph. Anab. ii, 4, 12). Eratosthenês called it τὸ Σεμιράμιδος διατείχισμα (Strabo, ii, p. 80): it was seemingly about twenty-five miles north of Bagdad.

There is some confusion about the wall of Media: Mannert (Geogr. der G. und R. v, 2, p. 280) and Forbiger also (Alte Georg. sect. 97, p. 616, note 94) appear to have confounded the ditch dug by special order of Artaxerxês to oppose the march of the younger Cyrus, with the Nahar-Malcha or Royal canal between the Tigris and the Euphrates: see Xenoph. Anab. i, 7, 15.

It is singular that Herodotus makes no mention of the wall of Media, though his subject (i, 185) naturally conducts him to it: he seems to have sailed down the Euphrates to Babylon, and must, therefore, have seen it, if it had really extended to the Euphrates, as some authors have imagined. Probably, however, it was not kept up with any care, even in his time, seeing that its original usefulness was at an end, after the whole of Asia, from the Euxine to the Persian gulf, became subject to the Persians.

Eastward of the Tigris again, along the range of Mount Zagros, but at no great distance from the river, were found the Elymæi, Kossæi, Uxii, Parætakêni, etc., — tribes which, to use the expression of Strabo,[1] "as inhabiting a poor country, were under the necessity of living by the plunder of their neighbors." Such rude bands of depredators on the one side, and such wide tracts of sand on the two others, without vegetation or water, contrasted powerfully with the industry and productiveness of Babylonia. Babylon itself is to be considered, not as one continuous city, but as a city together with its surrounding district inclosed within immense walls, the height and thickness of which were in themselves a sufficient defence, so that the place was assailable only at its gates. In case of need, it would serve as shelter for the persons and property of the village inhabitants in Babylonia; and we shall see hereafter how useful under trying circumstances such a resource was, when we come to review the invasions of Attica by the Peloponnesians, and the mischiefs occasioned by a temporary crowd pouring in from the country, so as to overcharge the intra-mural accommodations of Athens. Spacious as Babylon was, however, it is affirmed by Strabo that Ninus or Nineveh was considerably larger.

APPENDIX.

Since the first edition of these volumes, the interesting work of Mr. Layard, — "Nineveh and its Remains," together with his illustrative Drawings, — "The Monuments of Nineveh," — have been published. And through his unremitting valuable exertions in surmounting all the difficulties connected with excavations on the spot, the British Museum has been enriched with a valuable collection of real Assyrian sculptures and other monuments. A

[1] Strabo, xvi, p. 744.

number of similar relics of Assyrian antiquity, obtained by M. Botta and others, have also been deposited in the museum of the Louvre at Paris.

In respect to Assyrian art, indeed to the history of art in general, a new world has thus been opened, which promises to be fruitful of instruction especially when we consider that the ground out of which the recent acquisitions have been obtained, has been yet most imperfectly examined, and may be expected to yield a much ampler harvest hereafter, assuming circumstances tolerably favorable to investigation. The sculptures to which we are now introduced, with all their remarkable peculiarities of style and idea, must undoubtedly date from the eighth or seventh century B. C., at the latest, — and may be much earlier. The style which they display forms a parallel and subject of comparison, though in many points extremely different, to that of early Egypt, — at a time when the ideal combinations of the Greeks were, as far as we know, embodied only in epic and lyric poetry.

But in respect to early Assyrian history, we have yet to find out whether much new information can be safely deduced from these interesting monuments. The cuneiform inscriptions now brought to light are indeed very numerous: and if they can be deciphered, on rational and trustworthy principles, we can hardly fail to acquire more or less of positive knowledge respecting a period now plunged in total darkness. But from the monuments of art alone, it would be unsafe to draw historical inferences. For example, when we find sculptures representing a king taking a city by assault, or receiving captives brought to him, etc., we are not to conclude that this commemorates any real and positive conquest recently made by the Assyrians. Our knowledge of the subjects of Greek sculpture on temples is quite sufficient to make us disallow any such inference, unless there be some corroborative proof Some means must first be discovered, of discriminating historical from mythical subjects: a distinction which I here notice, the rather, because Mr. Layard shows occasional tendency to overlook it in his interesting remarks and explanations: see, especially, vol. ii, ch. vi, p. 409.

From the rich and abundant discoveries made at Nimroud, combined with those at Kouyunjik and Khorsabad, Mr. Layard is inclined to comprehend all these three within the circuit of ancient Nineveh; admitting for that circuit the prodigious space alleged by Diodorus out of Ktêsias, four hundred and eighty stadia or near sixty English miles. (See Nineveh and its Remains, vol. ii, ch. ii, pp. 242–253.) Mr. Layard considers that the northwest portion of Nimroud exhibits monuments more ancient, and at the same time better in style and execution, than the south-west portion, — or than Kouyunjik and Khorsabad (vol. ii, ch. i, p. 204; ch. iii, p. 305). If this hypothesis, as to the ground covered by Nineveh, be correct, probably future excavations will confirm it — or, if incorrect, refute it. But I do not at all reject the supposition on the simple ground of excessive magnitude: on the contrary, I should at once believe the statement, if it were reported by Herodotus after a visit to the spot, like the magnitude of Babylon. The testimony of Ktêsias is, indeed, very inferior in value to that of Herodotus: yet it ought

hardly to be outweighed by the supposed improbability of so great a walled space, when we consider how little we know where to set bounds to the power of the Assyrian kings in respect to command of human labor for any process merely simple and toilsome, with materials both near and inexhaustible. Not to mention the great wall of China, we have only to look at the Picts Wall, and other walls built by the Romans in Britain, to satisfy ourselves that a great length of fortification, under circumstances much less favorable than the position of the ancient Assyrian kings, is noway incredible in itself. Though the walls of Nineveh and Babylon were much *larger* than those of Paris as it now stands, yet when we compare the two not merely in size, but in respect of costliness, elaboration, and contrivance, the latter will be found to represent an infinitely greater *amount of work*.

Larissa and Mespila, those deserted towns and walls which Xenophon saw in the retreat of the Ten Thousand (Anabas. iii, 4, 6–10), coincide in point of distance and situation with Nimroud and Kouyunjik, according to Mr. Layard's remark. Nor is his supposition improbable, that both of them were formed by the Medes out of the ruins of the conquered city of Nineveh. Neither of them singly seems at all adequate to the reputation of that ancient city, or rather walled circuit. According to the account of Herodotus Phraortes the second Median king had attacked Nineveh, but had been himself slain in the attempt, and lost nearly all his army. It was partly to revenge this disgrace that Kyaxares, son of Phraortes assailed Nineveh (Herod. i, 102–103): we may thus see a special reason, in addition to his own violence of temper (i, 73), why he destroyed the city after having taken it (*Νίνου ἀναστάτου γενομένης*, i, 178). It is easy to conceive that this vast walled space may have been broken up and converted into two Median towns, both on the Tigris. In the subsequent change from Median to Persian dominion, these towns also became depopulated, as far as the strange tales which Xenophon heard in his retreat can be trusted. The interposition of these two Median towns doubtless contributed, for the time, to put out of sight the traditions respecting the old Ninus which had before stood upon their site. But these traditions were never extinct, and a new town bearing the old name of Ninus must have subsequently arisen on the spot. This second Ninus is recognized by Tacitus, Ptolemy, and Ammianus, not only as existing, but as pretending to uninterrupted continuity of succession from the ancient "caput Assyriæ."

Mr. Layard remarks on the facility with which edifices, such as those in Assyria, built of sunburnt bricks, perish when neglected, and crumble away into earth, leaving little or no trace.

CHAPTER XX

EGYPTIANS.

If, on one side, the Phenicians were separated from the productive Babylonia by the Arabian desert; on the other side, the western portion of the same desert divided them from the no less productive valley of the Nile. In those early times which preceded the rise of Greek civilization, their land trade embraced both regions, and they served as the sole agents of international traffic between the two. Conveniently as their towns were situated for maritime commerce with the Nile, Egyptian jealousy had excluded Phenician vessels not less than those of the Greeks from the mouths of that river, until the reign of Psammetichus (672–618 B. C.); and thus even the merchants of Tyre could then reach Memphis only by means of caravans, employing as their instruments, as I have already observed, the Arabian tribes,[1] alternately plunderers and carriers. Respecting Egypt, as respecting Assyria, since the works of Hekatæus are unfortunately lost, our earliest information is derived from Herodotus, who visited Egypt about two centuries after the reign of Psammetichus, when it formed part of one of the twenty Persian satrapies. The Egyptian marvels and peculiarities which he recounts, are more numerous, as well as more diversified, than the Assyrian, and had the vestiges been effaced as completely in the former as in the latter, his narrative would probably have met with an equal degree of suspicion. But the hard stone, combined with the dry climate of Upper Egypt (where a shower of rain counted

[1] Strabo, xvi, pp. 766, 776, 778; Pliny, H. N. vi, 32. "Arabes, mirum dictu, ex innumeris populis pars æqua in commerciis aut latrociniis degunt: in universum gentes ditissimæ, ut apud quas maximæ opes Romanorum Parthorumque subsistant, — vendentibus quæ a mari aut sylvis capiunt, nihil invicem redimentibus."

The latter part of this passage of Pliny presents an enunciation sufficiently distinct, though by implication only, of what has been called the *mercantile theory* in political economy.

as a prodigy), have given such permanence to the monuments in the valley of the Nile, that enough has remained to bear out the father of Grecian history, and to show that, in describing what he professes to have seen, he is a guide perfectly trustworthy. For that which he heard, he appears only in the character of a reporter, and often an incredulous reporter; but though this distinction between his hearsay and his ocular evidence is not only obvious, but of the most capital moment,[1] — it has been too often neglected by those who depreciate him as a witness.

The mysterious river Nile, a god[2] in the eyes of ancient Egyptians, and still preserving both its volume and its usefulness undiminished amidst the general degradation of the country, reached the sea in the time of Herodotus by five natural mouths, besides two others artificially dug; — the Pelusiac branch formed the eastern boundary of Egypt, the Kanôpic branch — one hundred and seventy miles distant — the western; while the Sebennytic branch was a continuation of the straight line of the upper river: from this latter branched off the Saitic and the Mendesian arms.[3] Its overflowings are far more fertilizing than those of

[1] To give one example: Herodotus mentions an opinion given to him by the *γραμματιστὴς* (comptroller) of the property of Athênê at Sais, to the effect that the sources of the Nile were at an immeasurable depth in the interior of the earth, between Syênê and Elephantinê, and that Psammetichus had vainly tried to sound them with a rope many thousand fathoms in length (ii, 28). In mentioning this tale (perfectly deserving of being recounted at least, because it came from a person of considerable station in the country), Herodotus expressly says: "This comptroller seemed to me to be only bantering, though he professed to know accurately," — *οὗτος δὲ ἐμοίγε παίζειν ἐδόκεε, φάμενος εἰδέναι ἀτρεκέως.* Now Strabo (xvii, p. 819), in alluding to this story, introduces it just as if Herodotus had told it for a fact, — *Πολλὰ δ' Ἡρόδοτός τε καὶ ἄλλοι φλυαροῦσιν, οἷον*, etc.

Many other instances might be cited, both from ancient and modern writers, of similar carelessness or injustice towards this admirable author.

[2] *Οἱ ἱρέες τοῦ Νείλου*, Herod. ii, 90.

[3] The seven mouths of the Nile, so notorious in antiquity, are not conformable to the modern geography of the country: see Mannert, Geogr. der Gr. und Röm. x, 1, p. 539.

The breadth of the base of the Delta, between Pelusium and Kanôpus, is overstated by Herodotus (ii, 6-9) at three thousand six hundred stadia; Diodorus (i, 34) and Strabo, at thirteen hundred stadia, which is near the truth, though the text of Strabo in various passages is not uniform on this

the Euphrates in Assyria, — partly from their more uniform recurrence both in time and quantity, partly from the rich silt which it brings down and deposits, whereas the Euphrates served only as a moisture. The patience of the Egyptians had excavated, in middle Egypt, the vast reservoir — partly, it seems, natural and preëxisting — called the lake of Mœris: and in the Delta, a network of numerous canals; yet on the whole the hand of man had been less tasked than in Babylonia; whilst the soil annually enriched, yielded its abundant produce without either plough or spade to assist the seed cast in by the husbandman.[1] That under

matter, and requires correction. See Grosskurd's note on Strabo, ii, p. 64 (note 3, p. 101), and xvii, p. 186 (note 9, p. 332). Pliny gives the distance at one hundred and seventy miles (H. N. v, 9).

[1] Herod. i, 193. Παραγίνεται ὁ σῖτος (in Babylonia) οὐ, κατάπερ ἐν Αἰγύπτῳ, αὐτοῦ τοῦ ποτάμου ἀναβαίνοντος ἐς τὰς ἀρούρας, ἀλλὰ χερσί τε καὶ κηλωνηΐοισι ἀρδόμενος· ἡ γὰρ Βαβυλωνίη χώρη πᾶσα, κατάπερ ἡ Αἰγυπτίη, κατατέτμηται ἐς διωρύχας, etc.

Herodotus was informed that the canals in Egypt had been dug by the labor of that host of prisoners whom the victorious Sesostris brought home from his conquests (ii, 108). The canals in Egypt served the purpose partly of communication between the different cities, partly of a constant supply of water to those towns which were not immediately on the Nile: "that vast river, so constantly at work," (to use the language of Herodotus — ὑπὸ τοσούτου τε ποτάμου καὶ οὕτως ἐργατικοῦ, ii, 11), spared the Egyptians all the toil of irrigation which the Assyrian cultivator underwent (ii, 14).

Lower Egypt, as Herodotus saw it, though a continued flat, was unfit either for horse or car, from the number of intersecting canals, — ἄνιππος καὶ ἀναμάξευτος (ii, 108). But lower Egypt, as Volney saw it, was among the countries in the world best suited to the action of cavalry, so that he pronounces the native population of the country to have no chance of contending against the Mamelukes (Volney, Travels in Egypt and Syria, vol. i, ch. 12, sect. 2, p. 199). The country has reverted to the state in which it was (ἱππασίμη καὶ ἀμαξευομένη πᾶσα) before the canals were made, — one of the many striking illustrations of the difference between the Egypt which a modern traveller visits, and that which Herodotus and even Strabo saw, — δλην πλωτὴν διωρύγων ἐπὶ διώρυξι τμηθεισῶν (Strabo, xvii, p. 788).

Considering the early age of Herodotus, his remarks on the geological character of Egypt as a deposit of the accumulated mud by the Nile, appear to me most remarkable (ii, 8–14). Having no fixed number of years included in his religious belief as measuring the past existence of the earth, he carries his mind back without difficulty to what may have been effected by this river in ten or twenty thousand years, or "in the whole space of time elapsed before I was born," (ii, 11.)

About the lake of Mœris, see a note a little farther on.

these circumstances a dense and regularly organized population should have been concentrated in fixed abodes along the valley occupied by this remarkable river, is no matter of wonder; the marked peculiarities of the locality seem to have brought about such a result, in the earliest periods to which human society can be traced. Along the five hundred and fifty miles of its undivided course from Syênê to Memphis, where for the most part the mountains leave only a comparatively narrow strip on each bank, as well as in the broad expanse between Memphis and the Mediterranean, there prevailed a peculiar form of theocratic civilization, from a date which even in the time of Herodotus was immemorially ancient. But when we seek for some measure of this antiquity (earlier than the time when Greeks were first admitted into Egypt in the reign of Psammetichus), we find only the computations of the priests, reaching back for many thousand years, first, of government by immediate and present gods, next, of human kings. Such computations have been transmitted to us by Herodotus, Manetho, and Diodorus,[1] — agreeing in their essential conception of the fore-time, with gods in the first part of the series, and men in the second, but differing materially in events, names, and epochs: probably, if we possessed lists from other Egyptian temples, besides those which Manetho drew up at Heliopolis, or which Herodotus learned at Memphis, we should find discrepancies from both these two. To compare these lists, and to reconcile them as far as they admit of being reconciled, is interesting, as enabling us to understand the Egyptian mind, but conducts to no trustworthy chronological results, and forms no part of the task of an historian of Greece.

To the Greeks, Egypt was a closed world before the reign of Psammetichus, though after that time it gradually became an important part of their field both of observation and action. The astonishment which the country created in the mind of the earliest Grecian visitors may be learned even from the narrative of Herodotus, who doubtless knew it by report long before he went there. Both the physical and moral features of Egypt stood in strong contrast with Grecian experience: "not only (says Herodotus) does the climate differ from all other climates,

[1] See note in Appendix to this chapter.

and the river from all other rivers, but Egyptian laws and customs are opposed on almost all points to those of other men."[1] The delta was at that time full of large and populous cities,[2] built on artificial elevations of ground, and seemingly not much inferior to Memphis itself, which was situated on the left bank of the Nile (opposite to the site of the modern Cairo), a little higher up than the spot where the delta begins. From the time when the Greeks first became cognizant of Egypt, to the building of Alexandria and the reign of the Ptolemies, Memphis was the first city in Egypt, but it seems not to have been always so, — there had been an earlier period when Thebes was the seat of Egyptian power, and upper Egypt of far more consequence than middle Egypt. Vicinity to the delta, which must always have contained the largest number of cities and the widest surface of productive territory, probably enabled Memphis to usurp this honor from Thebes, and the predominance of lower Egypt was still farther confirmed when Psammetichus introduced Ionian and Karian troops as his auxiliaries in the government of the country. But the stupendous magnitude of the temples and palaces, the profusion of ornamental sculpture and painting, the immeasurable range of sculptures hewn in the rocks still remaining as attestations of the grandeur of Thebes, — not to mention Ombi, Edfu, and Elephantinê, — show that upper Egypt was once the place to which the land-tax from the productive delta was paid, and where the kings and priests who employed it resided. It has been even contended that Thebes itself was originally settled by emigrants from still higher regions of the river, and the remains yet

[1] Herodot. ii, 35. Αἰγύπτιοι ἅμα τῷ οὐρανῷ τῷ κατά σφέας ἐόντι ἑτεροίῳ, καὶ τῷ ποτάμῳ φύσιν ἀλλοίην παρεχομένῳ ἢ οἱ ἄλλοι πόταμοι, τὰ πολλὰ πάντα ἐμπαλιν τοῖσι ἄλλοισι ἀνθρώποισι ἐστήσαντο ἤθεα καὶ νόμους.

[2] Theokritus (Idyll. xvii, 83) celebrates Ptolemy Philadelphus king of Egypt as ruling over thirty-three thousand three hundred and thirty-three cities: the manner in which he strings these figures into three hexameter verses is somewhat ingenious. The priests, in describing to Herodotus the unrivalled prosperity which they affirmed Egypt to have enjoyed under Amasis, the last king before the Persian conquest, said that there were then twenty thousand cities in the country (ii, 177). Diodorus tells us that eighteen thousand different cities and considerable villages were registered in the Egyptian ἀναγραφαὶ (i, 31) for the ancient times, but that thirty thousand were numbered under the Ptolemies.

found along the Nile in Nubia are analogous, both in style and in grandeur, to those in Thebais.[1] What is remarkable is, that both the one and the other are strikingly distinguished from the Pyramids, which alone remain to illustrate the site of the ancient Memphis. There are no pyramids either in upper Egypt or in Nubia; but on the Nile, above Nubia, near the Ethiopian Meroê, pyramids in great number, though of inferior dimensions, are again found. From whence, or in what manner, Egyptian institutions first took their rise, we have no means of determining: but there seems little to bear out the supposition of Heeren,[2]

[1] Respecting the monuments of ancient Egyptian art, see the summary of O. Müller, Archäologie der Kunst, sects. 215–233, and a still better account and appreciation of them in Carl Schnaase, Geschichte der Bildenden Künste bey den Alten, Düsseldorf, 1843, vol. i, book ii, chs. 1 and 2.

In regard to the credibility and value of Egyptian history anterior to Psammetichus, there are many excellent remarks by Mr. Kenrick, in the preface to his work, "The Egypt of Herodotus," (the second book of Herodotus, with notes.) About the recent discoveries derived from the hieroglyphics, he says: "We know that it was the custom of the Egyptian kings to inscribe the temples and obelisks which they raised with their own names or with distinguishing hieroglyphics; but in no one instance do these names, as read by the modern decipherers of hieroglyphics on monuments said to have been raised by kings before Psammetichus, correspond with the names given by Herodotus." (Preface, p. xliv.) He farther adds in a note, "A name which has been read phonetically *Mena*, has been found at Thebes, and Mr. Wilkinson supposes it to be Menes. It is remarkable, however, that the names which follow are not phonetically written, so that it is probable that this is not to be read *Mena*. Besides, the cartouche, which immediately follows, is that of a king of the eighteenth dynasty; so that, at all events, it cannot have been engraved till many centuries after the supposed age of Menes; and the occurrence of the name no more decides the question of historical existence than that of Cecrops in the Parian Chronicle."

[2] Heeren, Ideen über den Verkehr der Alten Welt, part ii, 1, p. 403. The opinion given by Parthey, however (De Philis Insulâ, p. 100, Berlin, 1830), may perhaps be just: "Antiquissimâ ætate eundem populum, dicamus Ægyptiacum, Nili ripas inde a Meroë insulâ usque ad Ægyptum inferiorem occupâsse, e monumentorum congruentiâ apparet: posteriore tempore, tabulis et annalibus nostris longe superiore, alia stirps Æthiopica interiora terræ usque ad cataractam Syenensem obtinuit. Ex quâ ætate certa rerum notitia ad nos pervenit, Ægyptiorum et Æthiopum segregatio jam facta est. Herodotus cæterique scriptores Græci populos acute discernunt."

At this moment, Syênê and its cataract mark the boundary of two people

and other eminent authors, that they were transmitted down the Nile by Ethiopian colonists from Meroê. Herodotus certainly conceived Egyptians and Ethiopians (who in his time jointly occupied the border island of Elephantinê, which he had himself visited) as completely distinct from each other, in race and customs not less than in language, — the latter being generally of the rudest habits, of great stature, and still greater physical strength, — the chief part of them subsisting on meat and milk, and blest with unusual longevity. He knew of Meroê, as the Ethiopian metropolis and a considerable city, fifty-two days' journey higher up the river than Elephantinê, but his informants had given him no idea of analogy between its institutions and those of Egypt;[1] it was the migration of a large number of the Egyptian military caste, during the reign of Psammetichus, into Ethiopia, which first communicated civilized customs, in his judgment, to these southern barbarians. If there be really any connection between the social phenomena of Egypt and those of Meroê, it seems more reasonable to treat the latter as derivative from the former.[2]

The population of Egypt was classified into certain castes or hereditary professions, of which the number was not exactly defined, and is represented differently by different authors. The priests stand clearly marked out, as the order richest, most powerful, and most venerated, — distributed all over the country, and possessing exclusively the means of reading and writing,[1] besides a vast amount of narrative matter treasured up in the memory, the whole stock of medical and physical knowledge then attainable, and those rudiments of geometry, or rather land-measuring, which were so often called into use in a country annually inundated. To each god, and to each temple, throughout Egypt, lands and other properties belonged, whereby the numerous band of priests attached to him were maintained: it seems, too, that a farther portion of the lands of the kingdom was set apart for them in individual property, though on this point no certainty is attainable. Their ascendency, both direct and indirect, over the minds of the people, was immense; they prescribed that minute ritual under which the life of every Egyptian, not excepting the king himself,[2] was passed, and which was for themselves more full of harassing particularities than for any one else.[3] Every day in the year belonged to some particular god, and the priests alone knew to which. There were different gods in every nome, though Isis and Osiris were common to all, — and the priests of each god constituted a society apart, more or less important, according to the comparative celebrity of the temple: the high

and two languages, — Egyptians and Arabic language to the north, Nubians and Berber language to the south. (Parthey, *ibid.*)

[1] Compare Herodot. ii, 30–32; iii, 19–25; Strabo, xvi, p. 818. Herodotus gives the description of their armor and appearance as part of the army of Xerxês (vii, 69); they painted their bodies: compare Plin. H. N. xxxiii, 36. How little Ethiopia was visited in his time, may be gathered from the tenor of his statements: according to Diodorus (i, 37), no Greeks visited it earlier than the expedition of Ptolemy Philadelphus, — *οὕτως ἄξενα ἦν τὰ περὶ τοὺς τόπους τούτους, καὶ παντελῶς ἐπικίνδυνα.* Diodorus, however, is incorrect in saying that no Greek had ever gone as far southward as the frontier of Egypt: Herodotus certainly visited Elephantinê, probably other Greeks also.

The statements respecting the theocratical state of Meroê and its superior civilization come from Diodorus (iii, 2, 5, 7), Strabo (xvii, p. 822), and Pliny (H. N. vi, 29–33), much later than Herodotus. Diodorus seems to have had no older informants before him, about Ethiopia, than Agatharchidês and Artemidôrus, both in the second century B. C. (Diod. iii, 10.)

[1] Wesseling ad Diodor. iii, 3.

[1] Herodot. ii, 37. *Θεοσέβεες δὲ περισσῶς ἐόντες μάλιστα πάντων ἀνθρώπων*, etc. He is astonished at the retentiveness of their memory; some of them had more stories to tell than any one whom he had ever seen (ii, 77–109; Diodor. i, 73).

The word *priest* conveys to a modern reader an idea very different from that of the Egyptian *ἱερεῖς*, who were not a profession, but an order comprising many occupations and professions, — Josephus the Jew was in like manner an *ἱερεὺς κατὰ γένος* (cont. Apion. c. 3).

[2] Diodorus (i, 70–73) gives an elaborate description of the monastic strictness with which the daily duties of the Egyptian king were measured out by the priests: compare Plutarch, De Isid. et Osirid. p. 353, who refers to Hekatæus (probably Hekatæus of Abdêra) and Eudoxus. The priests represented that Psammetichus was the first Egyptian king who broke through the priestly canon limiting the royal allowance of wine: compare Strabo, xvii, p, 790.

The Ethiopian kings at Meroê are said to have been kept in the like pupillage by the priestly order, until a king named Ergamenês, during the reign of Ptolemy Philadelphus in Egypt, emancipated himself and put the chief priests to death (Diodor. iii, 6).

[3] Herodot. ii, 82–83.

priests of Hephæstos, whose dignity was said to have been transmitted from father to son through a series of three hundred and forty-one generations[1] (commemorated by the like number of colossal statues, which Herodotus himself saw), were second in importance only to the king. The property of each temple included troops of dependents and slaves, who were stamped with "holy marks,"[2] and who must have been numerous in order to suffice for the large buildings and their constant visitors.

Next in importance to the sacerdotal caste were the military caste or order, whose native name[3] indicated that they stood on the left hand of the king, while the priests occupied the right. They were classified into Kalasiries and Hermotybii, who occupied lands in eighteen particular nomes or provinces, principally in lower Egypt. The kalasiries had once amounted to one hundred and sixty thousand men, the hermotybii to two hundred and fifty thousand, when at the maximum of their population; but the highest point had long been past in the time of Herodotus. To each man of this soldier caste was assigned a portion of land equal to about six and a half English acres, free from any tax; what measures were taken to keep the lots of land in suitable harmony with a fluctuating number of holders, we know not. The statement of Herodotus relates to a time long past and gone, and describes what was believed, by the priests with whom he talked, to have been the primitive constitution of their country anterior to the Persian conquest: the like is still more true respecting the statement of Diodorus.[4] The latter says that the territory of Egypt was divided into three parts, — one part belonging to the king, another to the priests, and the remainder to the soldiers;[5] his language seems to intimate that every nome was so divided, and even that the three portions were equal, though he does not expressly say so. The result of these statements, combined with the history of Joseph in the book of Genesis, seems to be, that the lands of the priests and the soldiers were regarded as privileged property and exempt from all burdens, while the remaining soil was considered as the property of the king, who,

[1] Herodot. ii, 143.
[2] Herodot. ii, 30.

[4] Herodot. i. 165–166: Diodor. i, 73.

however, received from it a fixed proportion, one-fifth of the total produce, leaving the rest in the hands of the cultivators.[1] We are told that Sethos, priest of the god Phtha (= Hephæstos) at Memphis, and afterwards named king, oppressed the military caste and deprived them of their lands, in revenge for which they withheld from him their aid when Egypt was invaded by Sennacherib, — and also that, in the reign of Psammetichus, a large number (two hundred and forty thousand) of these soldiers migrated into Ethiopia from a feeling of discontent, leaving their wives and children behind them.[2] It was Psammetichus who first introduced Ionian and Karian mercenaries into the country, and began innovations on the ancient Egyptian constitution; so that the disaffection towards him, on the part of the native soldiers, no longer permitted to serve as exclusive guards to the king, is not difficult to explain. The kalasiries and hermotybii were interdicted from every description of art or trade. There can be little doubt that under the Persians their lands were made subject to the tribute, and this may partly explain the frequent revolts which they maintained, with very considerable bravery, against the Persian kings.

Herodotus enumerates five other *races* (so he calls them), or castes, besides priests and soldiers,[3] — herdsmen, swineherds, tradesmen, interpreters, and pilots; an enumeration which perplexes us, inasmuch as it takes no account of the husbandmen, who must always have constituted the majority of the population. It is, perhaps, for this very reason that they are not comprised in the list, — not standing out specially marked or congregated together, like the five above named, and therefore not seeming to constitute a race apart. The distribution of Diodorus, who specifies (over and above priests and soldiers) husbandmen, herdsmen, and artificers, embraces much more completely the whole popula-

[1] Besides this general rent or land-tax received by the Egyptian kings, there seem, also, to have been special crown-lands. Strabo mentions an island in the Nile (in the Thebaid) celebrated for the extraordinary excellence of its date-palms; the whole of this island belonged to the kings, without any other proprietor: it yielded a large revenue, and passed into the hands of the Roman government in Strabo's time (xvii, p. 818).
[2] Herodot. ii, 30–141.
[3] Herodot. ii. 164

tion.[1] It seems more the statement of a reflecting man, pushing out the principle of hereditary occupations to its consequences; (and the comments which the historian so abundantly interweaves with his narrative show that such was the character of the authorities which he followed); — while the list given by Herodotus comprises that which struck his observation. It seems that a certain proportion of the soil of the delta consisted of marsh land, including pieces of habitable ground, but impenetrable to an invading enemy, and favorable only to the growth of papyrus and other aquatic plants: other portions of the delta, as well as the upper valley, in parts where it widened to the eastward, were too wet for the culture of grain, though producing the richest herbage, and eminently suitable to the race of Egyptian herdsmen, who thus divided the soil with the husbandmen.[2] Herdsmen generally were held reputable, but the race of swineherds were hated and despised, from the extreme antipathy of all other Egyptians to the pig, — which animal yet could not be altogether proscribed, because there were certain peculiar occasions on which it was imperative to offer him in sacrifice to Selênê or Dionysus. Herodotus acquaints us that the swineherds were interdicted from all the temples, and that they always intermarried among themselves, other Egyptians disdaining such an alliance, — a statement which indirectly intimates that there was no standing objection against intermarriage of the remaining castes with each other. The caste or race of interpreters began only with the reign of Psammetichus, from the admission of Greek settlers, then for the first time tolerated in the country. Though they were half Greeks, the historian does not note them as of inferior account, except as compared with the two ascendant castes of soldiers and priests; moreover, the creation of a new caste shows that there was no consecrated or unchangeable total number.

[1] Diodor. i, 74. About the Egyptian castes generally, see Heeren, Ideen über den Verkehr der Alten Welt, part ii, 2, pp. 572–595.

[2] See the citation from Maillet's Travels in Egypt, in Heeren, Ideen, p. 590; also Volney's Travels, vol. i, ch. 6, p. 77.

The expression of Herodotus — *αἱ περὶ τὴν σπειρομένην Αἴγυπτον οἰκέουσι* — indicates that the portion of the soil used as pasture was not inconsiderable.

The inhabitants of the marsh land were the most warlike part of the population (Thucyd. i, 110).

Those whom Herodotus denominates tradesmen (*καπήλοι*) are doubtless identical with the artisans (*τεχνῖται*) specified by Diodorus, — the town population generally as distinguished from that of the country. During the three months of the year when Egypt was covered with water, festival days were numerous, — the people thronging by hundreds of thousands, in vast barges, to one or other of the many holy places, combining worship and enjoyment.[1] In Egypt, weaving was a trade, whereas in Greece it was the domestic occupation of females; and Herodotus treats it as one of those reversals of the order of nature which were seen only in Egypt,[2] that the weaver stayed at home plying his web while his wife went to market. The process of embalming bodies was elaborate and universal, giving employment to a large special class of men: the profusion of edifices, obelisks, sculpture and painting, all executed by native workmen, required a large body of trained sculptors,[3] who in the mechanical branch of their business attained a high excellence. Most of the animals in Egypt were objects of religious reverence, and many of them were identified in the closest manner with particular gods. The order of priests included a large number of hereditary feeders

[1] Herodot. ii, 59–60.

[2] Herodot. ii, 35; Sophokl. Œdip. Colon. 332: where the passage cited by the Scholiast out of Nymphodôrus is a remarkable example of the habit of ingenious Greeks to represent all customs which they thought worthy of notice, as having emanated from the design of some great sovereign: here Nymphodôrus introduces Sesostris as the author of the custom in question, in order that the Egyptians might be rendered effeminate.

[3] The process of embalming is minutely described (Herod. ii, 85–90); the word which he uses for it is the same as that for salting meat and fish, — *ταρίχευσις*: compare Strabo, xvi, p. 764.

Perfect exactness of execution, mastery of the hardest stone, and undeviating obedience to certain rules of proportion, are general characteristics of Egyptian sculpture. There are yet seen in their quarries obelisks not severed from the rock, but having three of their sides already adorned with hieroglyphics; so certain were they of cutting off the fourth side with precision (Schnaase, Gesch. der Bild. Künste, i, p. 428).

All the nomes of Egypt, however, were not harmonious in their feelings respecting animals: particular animals were worshipped in some nomes which in other nomes were objects even of antipathy, especially the crocodile (Herod. ii, 69; Strabo, xvii, p. 817: see particularly the fifteenth Satire of Juvenal)

and tenders of these sacred animals.[1] Among the sacerdotal order were also found the computers of genealogies, the infinitely subdivided practitioners in the art of healing, etc.,[2] who enjoyed good reputation, and were sent for as surgeons to Cyrus and Darius. The Egyptian city population was thus exceedingly numerous, so that king Sethon, when called upon to resist an invasion without the aid of the military caste, might well be supposed to have formed an army out of "the tradesmen, the artisans, and the market-people:"[3] and Alexandria, at the commencement of the dynasty of the Ptolemies, acquired its numerous and active inhabitants at the expense of Memphis and the ancient towns of lower Egypt.

The mechanical obedience and fixed habits of the mass of the Egyptian population (not priests or soldiers) was a point which made much impression upon Grecian observers; so that Solon is said to have introduced at Athens a custom prevalent in Egypt, whereby the nomarch or chief of each nome was required to investigate every man's means of living, and to punish with death those who did not furnish evidence of some recognized occupation.[4] It does not seem that the institution of caste in Egypt, though insuring unapproachable ascendency to the priests and much consideration to the soldiers, was attended with any such profound debasement to the rest as that which falls upon the lowest caste or sudras in India, — no such gulf between them as that between the twice-born and the once-born in the religion of Brahma. Yet those stupendous works, which form the permanent memorials of the country, remain at the same time as proofs of the oppressive exactions of the kings, and of the reckless caprice with which the lives as well as the contributions of the people were lavished. One hundred and twenty thousand Egyptians were said to have perished in the digging of the canal, which king Nekôs began but

[1] Herodot. ii, 65–72; Diodor. i, 83–90; Plutarch, Isid. et Osir. p. 380. Hasselquist identified all the birds carved on the obelisk near Matarea (Heliopolis), (Travels in Egypt, p. 99.)

[2] Herodot. ii, 82–83; iii, 1, 129. It is one of the points of distinction between Egyptians and Babylonians, that the latter had no surgeons or *ἰατροί*: they brought out the sick into the market-place, to profit by the sympathy and advice of the passers-by (Herodot. i, 197).

[3] Herodot. ii, 141.

[4] Herodot. iii, 177.

did not finish, between the Pelusian arm of the Nile and the Red sea;[1] while the construction of the two great pyramids, attributed to the kings Cheops and Chephrên, was described to Herodotus by the priests as a period of exhausting labor and extreme suffering to the whole Egyptian people, — and yet the great Labyrinth,[2] said to have been built by the dodekarchs, appeared to him a more stupendous work than the Pyramids, so that the toil employed upon it cannot have been less destructive. The moving of such vast masses of stone as were seen in the ancient edifices both of upper and lower Egypt, with the imperfect mechanical resources then existing, must have tasked the efforts of the people yet more severely than the excavation of the half-finished canal of Nekôs. Indeed, the associations with which the Pyramids were connected, in the minds of those with whom Herodotus conversed, were of the most odious character. Such vast works, Aristotle observes, are suitable to princes who desire to consume the strength and break the spirit of their people. With Greek despots, perhaps, such an intention may have been sometimes deliberately conceived; but the Egyptian kings may be presumed to have followed chiefly caprice, or love of pomp, — sometimes

[1] Herodot. ii, 158. Read the account of the foundation of Petersburg by Peter the Great: "Au milieu de ces réformes, grandes et petites, qui faisaient les amusemens du czar, et de la guerre terrible qui l'occupoit contre Charles XII, il jeta les fondemens de l'importante ville et du port de Pétersbourg, en 1714, dans un marais où il n'y avait pas une cabane. Pierre travailla de ses mains à la première maison: rien ne le rebuta: des ouvriers furent forcés de venir sur ce bord de la mer Baltique, des frontières d'Astrachan, des bords de la Mer Noire et de la Mer Caspienne. Il périt plus de cent mille hommes dans les travaux qu'il fallut faire, et dans les fatigues et la disette qu'on essuya: mais enfin la ville existe." (Voltaire, Anecdotes sur Pierre le Grand, en Œuvres Complètes, ed. Paris, 1825, tom. xxxi, p. 491.)

[2] Herodot. ii, 124–129. *τὸν λέων τετρυμένον ἐς τὸ ἐσχατον κακοῦ.* (Diodor i, 63–64.)

Περὶ *τῶν* Πυραμίδων (Diodorus observes) *οὐδὲν ὅλως οὐδὲ παρὰ τοῖς ἐγχωρίοις, οὐδὲ παρὰ τοῖς συγγραφεῦσιν, συμφωνεῖται.* He then alludes to some of the discrepant stories about the date of the Pyramids, and the names of their constructors. This confession, of the complete want of trustworthy information respecting the most remarkable edifices of lower Egypt, forms a striking contrast with the statement which Diodorus had given (c. 44), that the priests possessed records, "continually handed down from reign to reign respecting four hundred and seventy Egyptian kings."

views of a permanent benefit to be achieved, — as in the canal of Nekôs and the vast reservoir of Mœris,[1] with its channel joining the river, — when they thus expended the physical strength and even the lives of their subjects.

Sanctity of animal life generally, veneration for particular animals in particular nomes, and abstinence on religious grounds from certain vegetables, were among the marked features of Egyptian life, and served preëminently to impress upon the country that air of singularity which foreigners like Herodotus remarked in it. The two specially marked bulls, called apis at Memphis, and mnevis at Heliopolis, seem to have enjoyed a sort of national worship:[2] the ibis, the cat, and the dog were throughout most of the nomes venerated during life, embalmed like men after death, and if killed, avenged by the severest punishment of the offending party: but the veneration of the crocodile was confined to the neighborhood of Thebes and the lake of Mœris. Such veins of religious sentiment, which distinguished Egypt from Phenicia and Assyria, not less than from Greece, were explained by the native priests after their manner to Herodotus, though he declines from pious scruples to communicate what was told to him.[3] They seem remnants continued from a very early

[1] It appears that the lake of Mœris is, at least in great part, a natural reservoir, though improved by art for the purposes wanted, and connected with the river by an artificial canal, sluices, etc. (Kenrick ad Herodot. ii, 149.)

"The lake still exists, of diminished magnitude, being about sixty miles in circumference, but the communication with the Nile has ceased." Herodotus gives the circumference as three thousand six hundred stadia,=between four hundred and four hundred and fifty miles.

I incline to believe that there was more of the hand of man in it than Mr. Kenrick supposes, though doubtless the receptacle was natural.

[2] Herodot. ii, 38–46, 65–72; iii, 27–30: Diodor. i, 83–90.

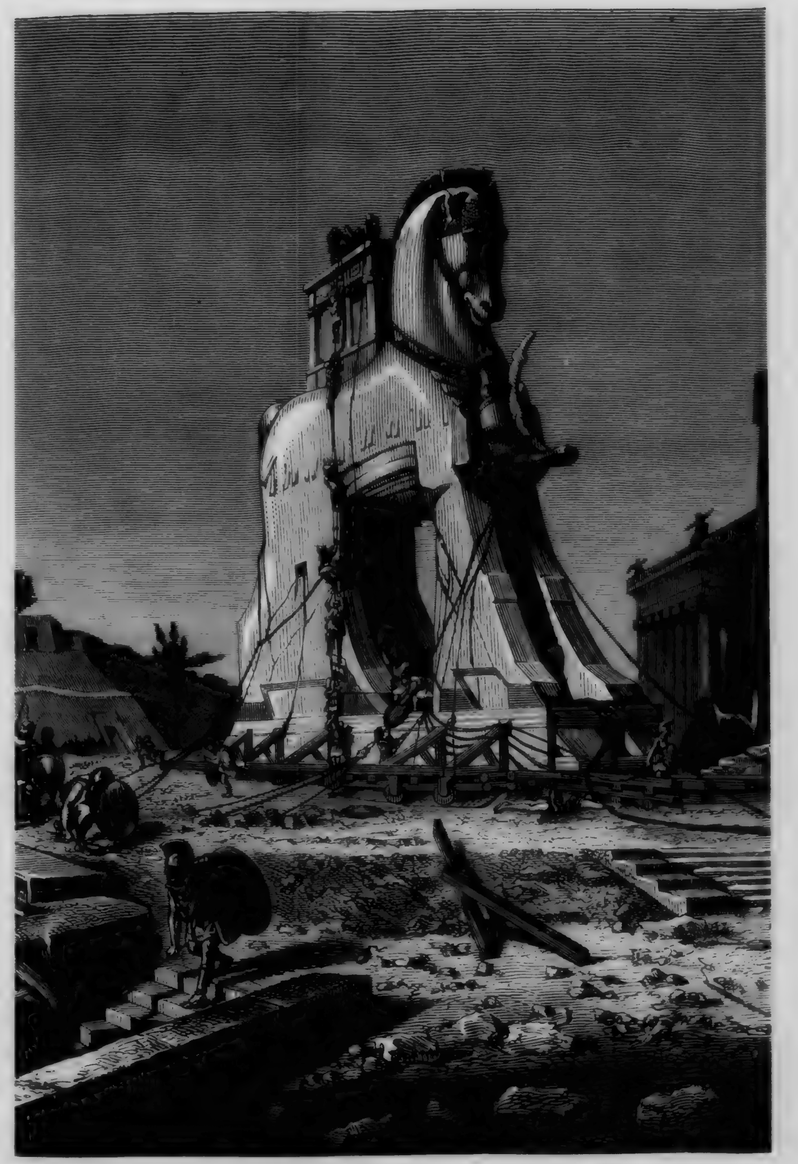
It is surprising to find Pindar introducing into one of his odes a plain mention of the monstrous circumstances connected with the worship of the goat in the Mendesian nome (Pindar, Fragm. Inc. 179, ed. Bergk). Pindar had also dwelt, in one of his Prosodia, upon the mythe of the gods having disguised themselves as animals, when seeking to escape Typhon; which was one of the tales told as an explanation of the consecration of animals in Egypt: see Pindar, Fragm. Inc. p. 61, ed. Bergk; Porphyr. de Abstinent. iii, p. 251, ed. Rhoer.

[3] Herodot. ii, 65. Diodorus does not feel the same reluctance to mention these ἀπόῤῥητα (i, 86).

stage of Fetichism, — and the attempts of different persons, noticed in Diodorus and Plutarch, to account for their origin, partly by legends, partly by theory, will give little satisfaction to any one.[1]

Though Thebes first, and Memphis afterwards, were undoubtedly the principal cities of Egypt, yet if the dynasties of Manetho are at all trustworthy, even in their general outline, the Egyptian kings were not taken uniformly either from one or the other. Manetho enumerates on the whole twenty-six different dynasties or families of kings, anterior to the conquest of the country by Kambysês, — the Persian kings between Kambysês and the revolt of the Egyptian Amyrtæus, in 405 B. C. constituting his twenty-seventh dynasty. Of these twenty-six dynasties, beginning with the year 5702 B. C., the first two are Thinites, — the third and fourth, Memphites, — the fifth, from the island of Elephantinê, — the sixth, seventh, and eighth, again Memphites, — the ninth and tenth, Herakleopolites, — the eleventh, twelfth, and thirteenth, Diospolites or Thebans, — the fourteenth, Choïtes, — the fifteenth and sixteenth, Hyksos, or shepherd kings, — the seventeenth, shepherd kings, overthrown and succeeded by Diospolites, — the eighteenth (B. C. 1655–1327, in which is included Rameses, the great Egyptian conqueror, identified by many authors with Sesostris, 1411 B. C.), nineteenth, and twentieth, Diospolites, — the twenty-first, Tanites, — the twenty-second, Bubastites, — the twenty-third, again Tanites, — the twenty-fourth, Saïtes, — the twenty-fifth, Ethiopians, beginning with Sabakôn, whom Herodotus also mentions, — the twenty-sixth, Saïtes, including Psammetichus, Nekôs, Apries or Uaphris, and Amasis or Amosis. We see by these lists, that, according to the manner in which Manetho construed the antiquities of his country, several other cities of Egypt, besides Thebes and Memphis, furnished kings to the whole territory; but we cannot trace any correspondence between the nomes which furnished kings, and those which Herodotus mentions to have been exclusively occupied by the military caste. Many of the separate nomes were of considerable substantive importance, and had a marked local character each to itself, religious as well as political; though

[1] Diodor. i, 86–87; Plutarch, De Isid. et Osirid. p. 377, *seq.*



the whole of Egypt, from Elephantinê to Pelusium and Kanôpus, is said to have always constituted one kingdom, from the earliest times which the native priests could conceive.

We are to consider this kingdom as engaged, long before the time when Greeks were admitted into it,[1] in a standing caravan-commerce with Phenicia, Palestine, Arabia, and Assyria. Ancient Egypt having neither vines nor olives, imported both wine and oil,[2] while it also needed especially the frankincense and aromatic products peculiar to Arabia, for its elaborate religious ceremonies. Towards the last quarter of the eighth century B. C. (a little before the time when the dynasty of the Mermnadæ in Lydia was commencing in the person of Gygês), we trace events tending to alter the relation which previously subsisted between these countries, by continued aggressions on the part of the Assyrian monarchs of Nineveh, — Salmaneser and Sennacherib. The former having conquered and led into captivity the ten tribes of Israel, also attacked the Phenician towns on the adjoining coast: Sidon, Palæ-Tyrus, and Akê yielded to him, but Tyre itself resisted, and having endured for five years the hardships of a blockade with partial obstruction of its continental aqueducts, was enabled by means of its insular position to maintain independence. It was just at this period that the Grecian establishments in Sicily were forming, and I have already remarked that the pressure of the Assyrians upon Phenicia, probably had some effect in determining that contraction of the Phenician occupations in Sicily, which really took place (B. C. 730–720). Respecting Sennacherib, we are informed by the Old Testament, that he invaded Judæa, and by Herodotus (who calls him king of the Assyrians and Arabians), that he assailed the pious king Sethos in Egypt: in both cases his army experienced a miraculous repulse and destruction. After this, the Assyrians of Nine-

[1] On this early trade between Egypt, Phenicia, and Palestine, anterior to any acquaintance with the Greeks, see Josephus cont. Apion. i, 12.

[2] Herodotus notices the large importation of wine into Egypt in his day, from all Greece as well as from Phenicia as well as the employment of the earthen vessels in which it was brought for the transport of water, in the journeys across the desert (iii, 6).

In later times, Alexandria was supplied with wine chiefly from Laodikeia, in Syria, near the mouth of the Orontes (Strabo, xvi, p. 751).

THE WOODEN HORSE OF TROY

veh, either torn by intestine dissension, or shaken by the attacks of the Medes, appear no longer active; but about the year 630 B. C., the Assyrians or Chaldæans of Babylon manifest a formidable and increasing power. It is, moreover, during this century that the old routine of the Egyptian kings was broken through, and a new policy displayed towards foreigners by Psammetichus, — which, while it rendered Egypt more formidable to Judæa and Phenicia, opened to Grecian ships and settlers the hitherto inaccessible Nile.

Herodotus draws a marked distinction between the history of Egypt before Psammetichus and the following period: the former he gives as the narration of the priests, without professing to guarantee it, — the latter he evidently believes to be well ascertained.[1] And we find that, from Psammetichus downward, Herodotus and Manetho are in tolerable harmony, whereas even for the sovereigns occupying the last fifty years before Psammetichus, there are many and irreconcilable discrepancies between them;[2] but they both agree in stating that Psammetichus reigned fifty-four years. So important an event as the first admission of the Greeks into Egypt, was made, by the informants of Herodotus, to turn upon two prophecies. After the death of Sethos, king and priest of Hephæstos, who left no son, Egypt became divided among twelve kings, of whom Psammetichus was one: it was under this dodekarchy, according to Herodotus, that the marvellous labyrinth near the lake of Mœris was constructed. The twelve lived and reigned for some time in perfect harmony, but a prophecy had been made known to them, that the one who should make libations in the temple of Hephæstos out of a brazen goblet would reign over all Egypt. Now it happened that one day, when they all appeared armed in that temple to offer sacrifice, the high priest brought out by mistake only eleven golden goblets instead of twelve, and Psammetichus, left without a goblet, made use of his brass helmet as a substitute. Being thus con-

---

[1] Herodot. ii, 147–154. *ἀπὸ Ψαμμητίχου, — πάντα καὶ τὰ ὕστερον ἐπιστάμεθα ἀτρεκέως.*

[2] See these differences stated and considered in Boeckh, Manetho und die Hundstern Periode, pp. 326–336, of which some account is given in the Appendix to this chapter.

sidered, though unintentionally, to have fulfilled the condition of the prophecy, by making libations in a brazen goblet, he became an object of terror to his eleven colleagues, who united to despoil him of his dignity, and drove him into the inaccessible marshes. In this extremity, he sent to seek counsel from the oracle of Lêtô at Butô, and received for answer an assurance, that "vengeance would come to him by the hands of brazen men showing themselves from the seaward." His faith was for the moment shaken by so startling a conception as that of brazen men for his allies: but the prophetic veracity of the priest at Butô was speedily shown, when an astonished attendant came to acquaint him, in his lurking-place, that brazen men were ravaging the sea-coast of the delta. It was a body of Ionian and Karian soldiers, who had landed for pillage, and the messenger who came to inform Psammetichus had never before seen men in an entire suit of brazen armor. That prince, satisfied that these were the allies whom the oracle had marked out for him, immediately entered into negotiation with the Ionians and Karians, enlisted them in his service, and by their aid in conjunction with his other partisans overpowered the other eleven kings, — thus making himself the one ruler of Egypt.[1]

Such was the tale by which the original alliance of an Egyptian king with Grecian mercenaries, and the first introduction of Greeks into Egypt, was accounted for and dignified. What followed is more authentic and more important. Psammetichus provided a settlement and lands for his new allies, on the Pelusiac or eastern branch of the Nile, a little below Bubastis. The Ionians were planted on one side of the river, the Karians on

[1] Herodot. ii, 149–152. This narrative of Herodotus, however little satisfactory in an historical point of view, bears evident marks of being the genuine tale which he heard from the priests of Hephæstos. Diodorus gives an account more historically plausible, but he could not well have had any positive authorities for that period, and he gives us seemingly the ideas of Greek authors of the days of the Ptolemies. Psammetichus (he tells us), as one of the twelve kings, ruled at Saïs and in the neighboring part of the delta: he opened a trade, previously unknown in Egypt, with Greeks and Phenicians, so profitable that his eleven colleagues became jealous of his riches and combined to attack him. He raised an army of foreign mercenaries and defeated them (Diodor. i, 66–67). Polyænus gives a different story about Psammetichus and the Karian mercenaries (vii 3).

the other; and the place was made to serve as a military position, not only for the defence of the eastern border, but also for the support of the king himself against malcontents at home: it was called the Stratopĕda, or the Camps.[1] He took pains, moreover, to facilitate the intercourse between them and the neighboring inhabitants, by causing a number of Egyptian children to be domiciled with them, in order to learn the Greek language; and hence sprung the interpreters; who, in the time of Herodotus, constituted a permanent hereditary caste or breed.

Though the chief purpose of this first foreign settlement in Egypt, between Pelusium and Bubastis, was to create an independent military force, and with it a fleet for the king, yet it was of course an opening both for communication and traffic to all Greeks and to all Phenicians, such as had never before been available. And it was speedily followed by the throwing open of the Kanôpic or westernmost branch of the river for the purposes of trade specially. According to a statement of Strabo, it was in the reign of Psammetichus that the Milesians with a fleet of thirty ships made a descent on that part of the coast, first built a fort in the immediate neighborhood, and then presently founded the town of Naukratis, on the right bank of the Kanôpic Nile. There is much that is perplexing in this affirmation of Strabo; but on the whole I am inclined to think that the establishment of the Greek factories and merchants at Naukratis may be considered as dating in the reign of Psammetichus,[2] — Naukratis being

[1] Herodot. ii, 154.

[2] Strabo, xvii, p. 801. *καὶ τὸ Μιλησίων τεῖχος· πλεύσαντες γὰρ ἐπὶ Ψαμμητίχου τριάκοντα νανσὶν Μιλήσιοι κατὰ Κυαξάρη (οὗτος δὲ τῶν Μήδων) κάτεσχον εἰς τὸ στόμα τὸ Βολβίτινον· εἶτ' ἐκβάντες ἐτείχισαν τὸ λεχθὲν κτίσμα· χρόνῳ δ' ἀναπλεύσαντες εἰς τὸν Σαϊτικὸν νομὸν, καταναυμαχήσαντες Ἴναρον, πόλιν ἔκτισαν Naύκρατιν οὐ πολὺ τῆς Σχεδίας ὑπερθεν.*

What is meant by the allusion to Kyaxarês, or to Inarus, in this passage, I do not understand. We know nothing of any relations either between Kyaxarês and Psammetichus, or between Kyaxarês and the Milesians. moreover, if by *κατὰ Κυαξάρη* be meant *in the time of Kyaxarês*, as the translators render it, we have in immediate succession *ἐπὶ Ψαμμητίχου*, — *κατὰ Κυαξάρη*, with the same meaning, which is, to say the least: of it, a very awkward sentence. The words *οὗτος δὲ τῶν Μήδων* look not unlike a comment added by some early reader of Strabo, who could not understand

a city of Egyptian origin, in which these foreigners were permitted to take up their abode, — not a Greek colony, as Strabo would have us believe. The language of Herodotus seems rather to imply that it was king Amasis — between whom and the death of Psammetichus there intervened nearly half a century — who first allowed Greeks to settle at Naukratis; but on comparing what the historian tells us respecting the courtezan Rhodôpis and the brother of Sapphô the Poetess, it is evident that there must have been both Greek trade and Greek establishments in that town long before Amasis came to the throne. We may consider, then, that both the eastern and western mouths of the Nile became open to the Greeks in the days of Psammetichus; the former as leading to the head-quarters of the mercenary Greek troops in Egyptian pay, — the latter for purposes of trade.

While this event afforded to the Greeks a valuable enlargement both of their traffic and of their field of observation, it seems to have occasioned an internal revolution in Egypt. The nome of Bubastis, in which the new military settlement of foreigners was planted, is numbered among those occupied by the Egyptian military caste:[1] whether their lands were in part taken away from them, we do not know; but the mere introduction of such foreigners must have appeared an abomination, to the strong conservative feeling of ancient Egypt. And Psammetichus

why Kyaxarês should be here mentioned, and who noted his difficulty in words which have subsequently found their way into the text. Then again, *Inarus* belongs to the period between the Persian and Peloponnesian wars; at least we know no other person of that name than the chief of the Egyptian revolt against Persia (Thucyd. i, 114) who is spoken of as a "Libyan, the son of Psammetichus." The mention of Kyaxarês, therefore, here appears unmeaning, while that of Inarus is an anachronism: possibly, the story that the Milesians founded Naukratis "after having worsted Inarus in a sea-fight," may have grown out of the etymology of the name Naukratis, in the mind of one who found Inarus the son of Psammetichus mentioned two centuries afterwards, and identified the two Psammetichuses with each other.

The statement of Strabo has been copied by Steph. Byz. v, *Ναύκρατις*. Eusebius also announces (Chron. i, p. 168) the Milesians as the founders of Naukratis, but puts the event at 753 B. C., during what he calls the Milesian thalassokraty: see Mr. Fynes Clinton ad ann. 732 B. C. in the Fasti Hellenici.

[1] Herodot. ii, 166

treated the native soldiers in a manner which showed of how much less account they had become since the "brazen helmets" had got footing in the land. It had hitherto been the practice to distribute such portions of the military as were on actual service in three different posts: at Daphnê, near Pelusium, on the north-eastern frontier, — at Marea, on the north-western frontier, near the spot where Alexandria was afterwards built, — and at Elephantinê, on the southern or Ethiopian boundary. Psammetichus, having no longer occasion for their services on the eastern frontier, since the formation of the mercenary camp, accumulated them in greater number and detained them for an unusual time at the two other stations, especially at Elephantinê. Here, as Herodotus tells us, they remained for three years unrelieved, and Diodorus adds that Psammetichus assigned to those native troops who fought conjointly with the mercenaries, the least honorable post in the line; until at length discontent impelled them to emigrate in a body of two hundred and forty thousand men into Ethiopia, leaving their wives and children behind in Egypt, — nor could they be induced by any instances on the part of Psammetichus to return. This memorable incident,[1] which is said to have given rise to a settlement in the southernmost regions of Ethiopia, called by the Greeks the Automoli (though the emigrant soldiers still called themselves by their old Egyptian name), attests the effect produced by the introduction of the foreign mercenaries in lowering the position of the native military. The number of the emigrants, however, is a point noway to be relied upon: we shall presently see that there were enough of them left behind to renew effectively the struggle for their lost dignity.

It was probably with his Ionian and Karian troops that Psammetichus carried on those warlike operations in Syria which filled so large a proportion of his long and prosperous reign of fifty-four years.[2] He besieged the city of Azôtus in Syria for twenty-nine years, until he took it, — the longest blockade which the historian had ever heard of: moreover, he was in that country when the destroying Scythian nomads, who had defeated the

Herodot. ii, 30: Diodor. i, 67.

[2] *Ἀπρίης — ὃς μετὰ Ψαμμήτιχον τὸν ἑωυτοῦ προπάτορα ἐγένετο εὐδαιμονέστατος τῶν πρότερον βασιλέων* (Herodot. ii, 161).

Median king Kyaxarês and possessed themselves of Upper Asia, advanced to invade Egypt, — an undertaking which Psammetichus, by large presents, induced them to abandon.[1]

There were, however, more powerful enemies than the Scythians, against whom he and his son Nekôs — who succeeded him, seemingly about 604 B. C.[2] — had to contend in Syria and the lands adjoining. It is just at this period, during the reigns of

[1] Herodot. i, 105; ii, 157.

[2] The chronology of the Egyptian kings from Psammetichus to Amasis is given in some points differently by Herodotus and by Manetho: —

According to Herodotus,			According to Manetho ap. African.		
Psammetichus	reigned	54 years.	Psammetichus	reigned	54 years.
Nekôs.....	"	16 "	Nechao II....	"	6 "
Psammis ...	"	6 "	Psammathis..	"	6 "
Apriês	"	25 "	Uaphris	"	19 "
Amasis.....	"	44 "	Amosis	"	44 "

Diodorus gives 22 years for Apriês and 55 years for Amasis (i, 68).

Now the end of the reign of Amasis stands fixed for 526 B. C., and, therefore, the beginning of his reign (according to both Herodotus and Manetho) to 570 B. C. or 569 B. C. According to the chronology of the Old Testament, the battles of Megiddo and Carchemisch, fought by Nekôs, fall from 609–605 B. C., and this coincides with the reign of Nekôs as dated by Herodotus, but not as dated by Manetho. On the other hand, it appears from the evidence of certain Egyptian inscriptions recently discovered, that the real interval from the beginning of Nechao to the end of Uaphris is only forty years, and not forty-seven years, as the dates of Herodotus would make it (Boeckh, Manetho und die Hundstern-Periode, pp. 341–348), which would place the accession of Nekôs in 610 or 609 B. C. Boeckh discusses at some length this discrepancy of dates, and inclines to the supposition that Nekôs reigned nine or ten years jointly with his father, and that Herodotus has counted these nine or ten years twice, once in the reign of Psammetichus, once in that of Nekôs. Certainly, Psammetichus can hardly have been very young when his reign began, and if he reigned fifty-four years, he must have reached an extreme old age, and may have been prominently aided by his son. Adopting the suppositions, therefore, that the last ten years of the reign of Psammetichus may be reckoned both for him and for Nekôs, — that for Nekôs separately only six years are to be reckoned, — and that the number of years from the beginning of Nekôs's separate reign to the end of Uaphris is forty, — Boeckh places the beginning of Psammetichus in 654 B. C., and not in 670 B. C., as the data of Herodotus would make it (*ib.* pp 342–350).

Mr. Clinton, Fast. Hellen. B. C. 616, follows Herodotus.

Nabopolassar and his son Nebuchadnezzar (B. C. 625–561) that the Chaldæans or Assyrians of Babylon appear at the maximum of their power and aggressive disposition, while the Assyrians of Ninus or Nineveh lose their substantive position through the taking of that town by Kyaxarês (about B. C. 600), — the greatest height which the Median power ever reached. Between the Egyptian Nekôs and his grandson Apriês — Pharaoh Necho and Pharaoh Hophra of the Old Testament — on the one side, and the Babylonian Nebuchadnezzar on the other, Judæa and Phenicia form the intermediate subject of quarrel: and the political independence of the Phenician towns is extinguished never again to be recovered. At the commencement of his reign, it appears, Nekôs was chiefly anxious to extend the Egyptian commerce, for which purpose he undertook two measures, both of astonishing boldness for that age, — a canal between the lower part of the eastern or Pelusiac Nile, and the inmost corner of the Red sea, — and the circumnavigation of Africa; his great object being to procure a water-communication between the Mediterranean and the Red sea. He began the canal — much about the same time as Nebuchadnezzar executed his canal from Babylon to Terêdon — with such reckless determination, that one hundred and twenty thousand Egyptians are said to have perished in the work; but either from this disastrous proof of the difficulty, or, as Herodotus represents, from the terrors of a menacing prophecy which reached him, he was compelled to desist. Next, he accomplished the circumnavigation of Africa, already above alluded to; but in this way too he found it impracticable to procure any available communication such as he wished.[1] It is plain that in both these enterprises he was acting under Phenician and Greek instigation; and we may remark that the point of the Nile from whence the canal took its departure, was close upon the mercenary camps or stratopeda. Being unable to connect the two seas together, he built and equipped an armed naval force both upon the one and the other, and entered upon aggressive enterprises, naval as well as military. His army, on march-

[1] Herodot. ii, 158. Respecting the canal of Nekôs, see the explanation of Mr. Kenrick on this chapter of Herodotus. From Bubastis to Suez the length would be about ninety miles.

ing into Syria, was met at Megiddo — Herodotus says Magdolum — by Josiah king of Judah, who was himself slain and so completely worsted, that Jerusalem fell into the power of the conqueror, and became tributary to Egypt. It deserves to be noted that Nekôs sent the raiment which he had worn on the day of his victory, as an offering to the holy temple of Apollo at Branchidæ near Milètus,[1] — the first recorded instance of a donation from an Egyptian king to a Grecian temple, and a proof that Hellenic affinities were beginning to take effect upon him: probably we may conclude that a large proportion of his troops were Milesians.

But the victorious career of Nekôs was completely checked by the defeat which he experienced at Carchemisch, or Circesium, on the Euphrates, from Nebuchadnezzar and the Babylonians, who not only drove him out of Judæa and Syria, but also took Jerusalem, and carried away the king and the principal Jews into captivity.[2] Nebuchadnezzar farther attacked the Phenician cities, and the siege of Tyre alone cost him severe toil for thirteen years. After this long and gallant resistance, the Tyrians were forced to submit, and underwent the same fate as the Jews: their princes and chiefs were dragged captive into the Babylonian territory, and the Phenician cities became numbered among the tributaries of Nebuchadnezzar. So they seemed to have remained, until the overthrow of Babylon by Cyrus: for we find among those extracts, unhappily, very brief, which Josephus has preserved out of the Tyrian annals, that during this interval there were disputes and irregularities in the government of Tyre,[1] — judges being for a time substituted in the place of kings; while Merbal and Hirom, two princes of the regal Tyrian line, detained captive in Babylonia, were successively sent down on the special petition of the Tyrians, and reigned at Tyre; the former four years, the latter twenty years, until the conquest of Babylon by Cyrus. The Egyptian king Apriês, indeed, the son of Psammis, and grandson of Nekôs, attacked Sidon and Tyre both by land and sea, but seemingly without any result.[2] To the Persian empire, as soon as Cyrus had conquered Babylon, they cheerfully and spontaneously submitted,[3] whereby the restoration of the captive Tyrians to their home was probably conceded to them, like that of the captive Jews.

Nekôs in Egypt was succeeded by his son Psammis, and he again, after a reign of six years, by his son Apriês; of whose power and prosperity Herodotus speaks in very high general

[1] Herodot. ii, 159. Diodorus makes no mention of Nekôs.

The account of Herodotus coincides in the main with the history of the Old Testament about Pharaoh Necho and Josiah. The great city of Syria which he calls Καδυτις seems to be Jerusalem, though Wesseling (ad Herodot. iii, 5) and other able critics dispute the identity. See Volney, Recherches sur l'Hist. Anc. vol. ii, ch. 13, p. 239: "Les Arabes ont conservé l'habitude d'appeler Jerusalem la Sainte par excellence, *el Qods*. Sans doute les Chaldéens et les Syriens lui donnèrent le même nom, qui dans leur dialecte est *Qadouta*, dont Hérodote rend bien l'orthographie quand il écrit Κάδυτις."

About Nebuchadnezzar, see the Fragment of Berosus ap. Joseph. cont. Apion. i, 19–20, and Antiqq. J. x, 11, 1, and Berosi Fragment. ed. Ritcher pp. 65–67.

[1] Menander ap. Joseph. Antiq. J. ix, 14, 2. Επὶ Ειθωβάλου τοῦ βασιλέως ἐπολιόρκησε Ναβουχοδονόσορος τὴν Τύρον ἐπ' ἔτη δεκάτρια. That this siege of thirteen years ended in the storming, capitulation, or submission (we know not which, and Volney goes beyond the evidence when he says, "Les Tyriens furent emportés *d'assaut* par le roi de Babylone," Recherches sur l'Histoire Ancienne, vol. ii, ch. 14, p. 250) of Tyre to the Chaldæan king, is quite certain from the mention which afterwards follows of the Tyrian princes being detained captive in Babylonia. Hengstenberg (De Rebus Tyriorum, pp. 34–77) heaps up a mass of arguments, most of them very inconclusive, to prove this point, about which the passage cited by Josephus from Menander leaves no doubt. What is *not* true, is, that Tyre was destroyed and laid desolate by Nebuchadnezzar: still less can it be believed that that king conquered Egypt and Libya, as Megasthenes, and even Berosus, so far as Egypt is concerned, would have us believe,— the argument of Larcher ad Herodot. ii, 168, is anything but satisfactory. The defeat of the Egyptian king at Carchemisch, and the stripping him of his foreign possessions in Judæa and Syria, have been exaggerated into a conquest of Egypt itself.

[2] Herodot. ii, 161. He simply mentions what I have stated in the text; while Diodorus tells us (i, 68) that the Egyptian king took Sidon by assault, terrified the other Phenician towns into submission, and defeated the Phenicians and Cyprians in a great naval battle, acquiring a vast spoil.

What authority Diodorus here followed, I do not know; but the measured statement of Herodotus is far the most worthy of credit.

[3] Herodot. iii, 19.

terms, though the few particulars which he recounts are of a contrary tenor. It was not till after a reign of twenty-five years, that Apriês undertook that expedition against the Greek colonies in Libya, — Kyrênê and Barca, — which proved his ruin. The native Libyan tribes near those cities, having sent to surrender themselves to him, and entreat his aid against the Greek settlers, Apriês despatched to them a large force composed of native Egyptians; who, as has been before mentioned, were stationed on the north-western frontier of Egypt, and were, therefore, most available for the march against Kyrênê. The Kyrenean citizens advanced to oppose them, and a battle ensued in which the Egyptians were completely routed with severe loss. It is affirmed that they were thrown into disorder from want of practical knowledge of Grecian warfare,[1] — a remarkable proof of the entire isolation of the Grecian mercenaries (who had now been long in the service of Psammetichus and his successors) from the native Egyptians.

This disastrous reverse provoked a mutiny in Egypt against Apriês, the soldiers contending that he had despatched them on the enterprise with a deliberate view to their destruction, in order to assure his rule over the remaining Egyptians. The malcontents found so much sympathy among the general population, that Amasis, a Saïtic Egyptian of low birth, but of considerable intelligence, whom Apriês had sent to conciliate them, was either persuaded or constrained to become their leader, and prepared to march immediately against the king at Saïs. Unbounded and reverential submission to the royal authority was a habit so deeply rooted in the Egyptian mind, that Apriês could not believe the resistance to be serious. He sent an officer of consideration named Patarbêmis to bring Amasis before him, and when the former returned, bringing back from the rebel nothing better than a contemptuous refusal to appear except at the head of an army, the exasperated king ordered his nose and ears to be cut off. This act of atrocity caused such indignation among the Egyptians round him, that most of them deserted and joined the revolters, who thus became irresistibly formidable in point of numbers. There yet remained to Apriês the foreign mercenaries, — thirty

[1] Herodot. ii, 161; iv. 159

thousand Ionians and Karians, — whom he summoned from their stratopeda on the Pelusiac Nile to his residence at Saïs; and this force, the creation of his ancestor Psammetichus, and the main reliance of his family, still inspired him with such unabated confidence, that he marched to attack the far superior numbers under Amasis at Momemphis. Though his troops behaved with bravery, the disparity of numbers, combined with the excited feeling of the insurgents, overpowered him: he was defeated and carried prisoner to Saïs, where at first Amasis not only spared his life, but treated him with generosity.[1] Such, however, was the antipathy of the Egyptians, that they forced Amasis to surrender his prisoner into their hands, and immediately strangled him.

It is not difficult to trace in these proceedings the outbreak of a long-suppressed hatred on the part of the Egyptian soldier-caste towards the dynasty of Psammetichus, to whom they owed their comparative degradation, and by whom that stream of Hellenism had been let in upon Egypt, which doubtless was not witnessed without great repugnance. It might seem, also, that this dynasty had too little of pure Egyptianism in them to find favor with the priests. At least Herodotus does not mention any religious edifices erected either by Nekôs or Psammis or Apriês, though he describes much of such outlay on the part of Psammetichus, — who built magnificent propylæa to the temple of Hephæstos at Memphis,[2] and a splendid new chamber or stable for the sacred bull Apis, — and more still on the part of Amasis.

Nevertheless, Amasis, though he had acquired the crown by this explosion of native antipathy, found the foreign adjuncts both already existing and eminently advantageous. He not only countenanced, but extended them; and Egypt enjoyed under him a degree of power and consideration such as it neither before possessed, nor afterwards retained, — for his long reign of forty-four years (570–526 B. C.) closed just six months before the Persian conquest of the country. He was eminently phil-Hellenic, and the Greek merchants at Naukratis, — the permanent settlers, as well as the occasional visitors, — obtained from him valuable en

[1] Herodot. ii, 162–169; Diodor. i, 68.
[2] Herodot. ii. 153.

largement of their privileges. Besides granting permission to various Grecian towns, to erect religious establishments for such of their citizens as visited the place, he also sanctioned the constitution of a formal and organized emporium or factory, invested with commercial privileges, and armed with authority exercised by presiding officers regularly chosen. This factory was connected with, and probably grew out of, a large religious edifice and precinct, built at the joint cost of nine Grecian cities: four of them Ionic, — Chios, Teôs, Phôkæa, and Klazomenæ; four Doric, — Rhodes, Knidus, Halikarnassus, and Phasêlis; and one Æolic, — Mitylênê. By these nine cities the joint temple and factory was kept up and its presiding magistrates chosen; but its destination, for the convenience of Grecian commerce generally, seems revealed by the imposing title of *The Hellênion*. Samos, Milêtus, and Ægina had each founded a separate temple at Naukratis, for the worship of such of their citizens as went there; probably connected—as the Hellênion was—with protection and facilities for commercial purposes. But though these three powerful cities had thus constituted each a factory for itself, as guarantee to the merchandise, and as responsible for the conduct, of its own citizens separately, — the corporation of the Hellênion served both as protection and control to all other Greek merchants. And such was the usefulness, the celebrity, and probably the pecuniary profit, of the corporation, that other Grecian cities set up claims to a share in it, and falsely pretended to have contributed to the original foundation.[1]

Naukratis was for a long time the privileged port for Grecian commerce with Egypt. No Greek merchant was permitted to deliver goods in any other part, or to enter any other of the

[1] Herodot. ii, 178. The few words of the historian about these Greek establishments at Naukratis are highly valuable, and we can only wish that he had told us more: he speaks of them in the present tense, from personal knowledge — *τὸ μὲν νῦν μέγιστον αὐτέων τέμενος καὶ οὐνομαστότατον ἐὸν καὶ χρησιμώτατον, καλεύμενον δὲ Ἑλλήνιον, αἵδε πόλις εἰσὶν αἱ παρέχουσαι — Τουτέων μὲν ἐστι τοῦτο τὸ τέμενος, καὶ προστάτας τοῦ ἐμπορίου αὗται αἱ πόλις εἰσὶν αἱ παρέχουσαι. Ὅσαι δὲ ἄλλαι πόλις μεταποιεῦνται, οὐδὲν σφι μετεὸν μεταποιεῦνται*

We are here let into a vein of commercial jealousy between the Greek cities about which we should have been glad to be farther informed.

mouths of the Nile except the Kanôpic. If forced into any of them by stress of weather, he was compelled to make oath that his arrival was a matter of necessity, and to convey his goods round by sea into the Kanôpic branch to Naukratis; and if the weather still forbade such a proceeding, the merchandise was put into barges and conveyed round to Naukratis by the internal canals of the delta. Such a monopoly, which made Naukratis in Egypt, something like Canton in China, or Nangasaki in Japan, no longer subsisted in the time of Herodotus.[1] But the factory of the Hellênion was in full operation and dignity, and very probably he himself, as a native of one of the contributing cities, Halikarnassus, may have profited by its advantages. At what precise time Naukratis first became licensed for Grecian trade, we cannot directly make out; but there seems reason to believe that it was the port to which the Greek merchants first went, so soon as the general liberty of trading with the country was conceded to them; and this would put it at least as far back as the foundation of Kyrênê, and the voyage of the fortunate Kôlæus, who was on his way with a cargo to Egypt, when the storms overtook him, — about 630 B. C., during the reign of Psammetichus. And in the time of the poetess Sapphô, and her brother Charaxus, it seems evident that Greeks had been some time established at Naukratis.[2] But Amasis, though his predecessors

[1] Herodot. ii, 179. *Ἦν δὲ τοπαλαιὸν μοίνη ἡ Naύκρατις ἐμπόριον, καὶ ἄλλο οὐδὲν Αἰγύπτου . . . . Οὕτω δὴ Naύκρατις ἐτετίμητο.*

[2] The beautiful Thracian courtezan, Rhodôpis, was purchased by a Samian merchant named Xanthês, and conveyed to Naukratis, in order that he might make money by her (*κατ' ἐργασίην*). The speculation proved a successful one, for Charaxus, brother of Sappho, going to Naukratis with a cargo of wine, became so captivated with Rhodôpis, that he purchased her for a very large sum of money, and gave her her freedom. She then carried on her profession at Naukratis on her own account, realized a handsome fortune, the tithe of which she employed in a votive offering at Delphi, and acquired so much renown, that the Egyptian Greeks ascribed to her the building of one of the pyramids, — a supposition, on the absurdity of which Herodotus makes proper comments, but which proves the great celebrity of the name of Rhodôpis (Herodot. ii, 134). Athenæus calls her Dôrichê, and distinguishes her from Rhodôpis (xiii, p. 596, compare Suidas, v, *Ῥοδωπίδος ἀνάθημα*). When Charaxus returned to Mitylênê, his sister Sappho composed a song, in which

had permitted such establishment, may doubtless be regarded as having given organization to the factories, and as having placed the Greeks on a more comfortable footing of security than they had ever enjoyed before.

This Egyptian king manifested several other evidences of his phil-Hellenic disposition, by donations to Delphi and other Grecian temples, and he even married a Grecian wife from the city of Kyrênê.[1] Moreover, he was in intimate alliance and relations of hospitality both with Polykratês despot of Samos, and with Crœsus king of Lydia.[2] He conquered the island of Cyprus, and rendered it tributary to the Egyptian throne: his fleet and army were maintained in good condition, and the foreign mercenaries, the great strength of the dynasty which he had supplanted, were not only preserved, but even removed from their camp near Pelusium to the chief town Memphis, where they served as the special guards of Amasis.[3] Egypt enjoyed under him a degree of power abroad, and prosperity at home — the river having been abundant in its overflowing — which was the more tenaciously remembered on account of the period of disaster and subjugation immediately following his death. And his contributions in architecture and sculpture, to the temples of Saïs[4] and Memphis, were on a scale of vastness surpassing everything before known in lower Egypt.

---

she greatly derided him for this proceeding, — a song which doubtless Herodotus knew, and which gives to the whole anecdote a complete authenticity.

Now we can hardly put the age of Sappho lower than 600–580 B. C. (see Mr. Clinton, Fasti Hellen ad ann. 595 B. C., and Ulrici, Geschichte der Griech. Lyrik, ch. xxiii, p. 360): Alkæus, too, her contemporary, had himself visited Egypt (Alcæi Fragm. 103, ed. Bergk; Strabo, i, p. 63). The Greek settlement at Naukratis, therefore, must be decidedly older than Amasis, who began to reign in 570 B. C., and the residence of Rhodôpis in that town must have begun earlier than Amasis. though Herodotus calls her *κατ' Ἄμασιν ἀκμάζουσα* (ii, 134). Nor can we construe the language of Herodotus strictly, when he says that it was Amasis who *permitted* the residence of Greeks at Naukratis (ii, 178).

APPENDIX.

The archæology of Egypt, as given in the first book of Diodorus, is so much blended with Grecian mythes, and so much colored over with Grecian motive, philosophy, and sentiment, as to serve little purpose in illustrating the native Egyptian turn of thought. Even in Herodotus, though his stories are in the main genuine Egyptian, we find a certain infusion of Hellenism which the priests themselves had in his day acquired, and which probably would not have been found in their communications with Solon, or with the poet Alkæus, a century and a half earlier. Still, his stories (for the tenor of which Diodorus unduly censures him, i, 69) are really illustrative of the national mind; but the narratives coined by Grecian fancy out of Egyptian materials, and idealizing Egyptian kings and priests so as to form a pleasing picture for the Grecian reader, are mere romance, which has rarely even the merit of amusing. Most of the intellectual Greeks had some tendency thus to dress up Egyptian history, and Plato manifests it considerably; but the Greeks who crowded into Egypt under the Ptolemies carried it still further. Hekatæus of Abdêra, from whom Diodorus greatly copied (i, 46), is to be numbered among them, and from him, perhaps, come the eponymous kings Ægyptus (i, 51) and Neileus (i, 63), the latter of whom was said to have given to the river its name of *Nile*, whereas it had before been called *Ægyptus* (this to save the credit of Homer, who calls it *Αἴγυπτος ποταμὸς*, Odyss. xiv, 258): also Macedon, Prometheus, Triptolemus, etc., largely blended with Egyptian antiquities, in Diodorus, (i, 18, 19, etc.) It appears that the name of king Neilos occurred in the list of Egyptian kings in Dikæarchus (ap. Schol. Apoll. Rhod. iv, 272; Dikæarch. Fragment. p. 100, ed. Fuhr).

That the *ἀναγραφαὶ* in the temples of Egypt reached to a vast antiquity and contained a list of names, human, semi-divine, and divine, very long indeed, — there is no reason to doubt. Herodotus, in giving the number of years between Dionysus and Amasis as 1500, expressly says that "the priests told him they knew this accurately, since they always kept an account, and always wrote down the number of years," — *καὶ ταῦτα Αἰγύπτιοι ἀτρεκέως φασὶν ἐπίστασθαι αἰεί τε λογιζόμενοι καὶ αἰεὶ ἀπογραφόμενοι τὰ ἔτεα* (ii. 145): compare Diodor. i, 44. He tells us that the priests read to him out of a manuscript of papyrus (*ἐκ βύβλου*, ii, 100) the names of the 330 successive kings from father to son, between Mên or Menês and Mœris; and the 341 colossal statues of chief priests, each succeeding his father, down to Sethos priest of Hephæstos and king (ii, 142), which were shown to him in the temple of Hephæstos at Memphis, afford a sort of monumental evidence analogous in its nature to a written list. So also the long period of 23,000 years given by Diodorus, from the rule of Hêlios down to the expedition of Alexander against Asia, 18,000 of which were occupied by the government of gods and demigods (i, 26, 24, 44, — his numbers do not all agree with one another), may probably be drawn from an *ἀναγραφή*. Many temples in

Egypt probably had such tablets or inscriptions, some differing from others But this only shows us that such *ἀναγραφαὶ* or other temple monuments do not of themselves carry any authority, unless in cases where there is fair reason to presume them nearly contemporary with the facts or persons which they are produced to avouch. It is plain that the temple inscriptions represent the ideas of Egyptian priests (of some unknown date anterior to Herodotus) respecting the entire range of Egyptian past history and chronology.

What the proportion of historical items may be, included in this aggregate, we have no means of testing, nor are the monuments in Egyptian temples in themselves a proof of the reality of the persons or events which they are placed to commemorate, any more than the Centauromachia or Amazonomachia on the frieze of a Grecian temple proves that there really existed Centaurs or Amazons. But it is interesting to penetrate, so far as we are enabled, into the scheme upon which the Egyptians themselves conceived and constructed their own past history, of which the gods form quite as essential an element as the human kings; for we depart from the Egyptian point of view when we treat the gods as belonging to Egyptian religion and the human kings to Egyptian history, — both are parts of the same series.

It is difficult to trace the information which Herodotus received from the Egyptian priests to any intelligible scheme of chronology; but this may be done in regard to Manetho with much plausibility, as the recent valuable and elaborate analysis of Boeckh (Manetho und die Hundsternperiode, Berlin, 1845) has shown. He gives good reason for believing that the dynasties of Manetho have been so arranged as to fill up an exact number of Sothiac cycles (or periods of the star Sirius, each comprehending 1460 Julian years = 1461 Egyptian years). The Egyptian calender recognized a year of 365 days exactly, taking no note of the six hours additional which go to make up the solar year: they had twelve months of thirty days, with five epagomens or additional days, and their year always began with the first of the month Thoth (Soth, Sothis). Their year being thus six hours shorter (or one day for every four years) than the Julian year with its recurrent leap year, the first of the Egyptian month Thoth fell back every four years one day in the Julian calender, and in the course of 1460 years it fell successively on every day of the Julian year, coming back again to the same day from which it had started. This period of 1460 years was called a Sothiac period, and was reckoned from the year in which the first of the Egyptian month Thoth coincided with the heliacal rising of Sirius in Egypt; that is, (for an interval from 2700 B. C. down to the Christian era) on the 20th July of the Julian year. We know from Censorinus that the particular revolution of the Sothiac period, in which both Herodotus and Manetho were included, ended in the year 139 after the Christian era, in which year the first of the Egyptian month Thoth fell on the 20th July, or coincided with the heliacal rising of Sirius in Egypt: knowing in what year this period ended, we also know that it must have begun in 1322 B. C., and that the period immediately preceding it must have begun in 2782 B. C. (Censorinus, De Die

Natali, c. 21; Ideler, Handbuch der Chronologie, vol. i, Abschn. 1, pp. 125-138.) The name Sothis, or Thoth, was the Egyptian name for Sirius or the Dog-star, the heliacal rising of which was an important phenomenon in that country, as coinciding nearly with the commencement of the overflowing of the Nile.

Boeckh has analyzed, with great care and ability, the fragmentary, partial, and in many particulars conflicting, versions of the dynasties of Manetho which have come down to us: after all, we know them very imperfectly, and it is clear that they have been much falsified and interpolated. He prefers, for the most part, the version reported as that of Africanus. The number of years included in the Egyptian chronology has been always a difficulty with critics, some of whom have eluded it by the supposition that the dynasties mentioned as successive were really simultaneous, — while others have supposed that the years enumerated were not full years, but years of one month or three months; nor have there been wanting other efforts of ingenuity to reconcile Manetho with the biblical chronology.

Manetho constructs his history of the past upon views purely Egyptian, applying to past time the measure of the Sothiac period or 1460 Julian years (= 1461 Egyptian years), and beginning both the divine history of Egypt, and the human history which succeeds it, each at the beginning of one of these Sothiac periods. Knowing as we do from Censorinus that a Sothiac period ended in 139 A. D., and, of course, began in 1322 B. C. — we also know that the third preceding Sothiac period must have begun in 5702 B. C. (1322 + 1460 + 1460 + 1460 = 5702). Now the year 5702 B. C. coincides with that in which Manetho places Menês, the first human king of Egypt; for his thirty-one dynasties end with the first year of Alexander the Great, 332 B. C., and include 5366 years in the aggregate, giving for the beginning of the series of dynasties, or accession of Menês, the date 5702 B. C. Prior to Menês he gives a long series of years as the time of the government of gods and demigods; this long time comprehends 24,837 years, or seventeen Sothiac periods of 1461 Egyptian years each. We see, therefore, that Manetho (or perhaps the sacerdotal *ἀναγραφαὶ* which he followed) constructed a system of Egyptian history and chronology out of twenty full Sothiac periods, in addition to that fraction of the twenty-first which had elapsed down to the time of Alexander, — about three-quarters of a century anterior to Manetho himself, if we suppose him to have lived during the time of Ptolemy Philadelphus, which, though not certain, is yet probable (Boeckh, p. 11). These results have not been brought out without some corrections of Manetho's figures, — corrections which are, for the most part, justified on reasonable grounds, and, where not so justified, are unimportant in amount; so that the approximation is quite sufficient to give a high degree of plausibility to Boeckh's hypothesis: see pp. 142–145.

Though there is no doubt that in the time of Manetho the Sothiac period was familiar to the Egyptian priests, yet as to the time at which it first became known we have no certain information: we do not know the time at which they first began to take notice of the fact that their year of 365 days

was six hours too short. According to the statement of Herodotus (ii, 4), the priests of Heliopolis represented the year of 365 days (which they said that the Egyptians had first discovered) as if it were an exact recurrence of the seasons, without any reference to the remaining six hours. This passage of Herodotus, our oldest informant, is perplexing. Geminus (Isagogê in Arati Phænomena, c. 6) says that the Egyptians intentionally refrained from putting in the six hours by any intercalation, because they preferred that their months, and the religious ceremonies connected with them, should from time to time come round at different seasons, — which has much more the air of an ingenious after-thought, than of a determining reason.

Respecting the principle on which the Egyptian chronology of Herodotus is put together, see the remarks of M. Bunsen, Ægyptens Stellung in der Welt-geschichte, vol. i, p. 145.

CHAPTER XXI.

DECLINE OF THE PHENICIANS. — GROWTH OF CARTHAGE.

THE preceding sketch of that important system of foreign nations, — Phenicians, Assyrians, and Egyptians, — who occupied the south-eastern portion of the (*οἰκουμένη*) inhabited world of an early Greek, brings them down nearly to the time at which they were all absorbed into the mighty Persian empire. In tracing the series of events which intervened between 700 B. C., and 530 B. C., we observe a material increase of power both in the Chaldæans and Egyptians, and an immense extension of Grecian maritime activity and commerce, — but we at the same time notice the decline of Tyre and Sidon, both in power and traffic. The arms of Nebuchadnezzar reduced the Phenician cities to the same state of dependence as that which the Ionian cities underwent half a century later from Crœsus and Cyrus, while the ships of Milêtus, Phôkæa, and Samos gradually spread over all those waters of the Levant which had once been exclusively Phenician. In the year 704 B. C., the Samians did not yet possess a single trireme,[1] down to the year 630 B. C. not a single

[1] Thucyd. i, 13.

Greek vessel had yet visited Libya; but when we reach 550 B. C., we find the Ionic ships predominant in the Ægean, and those of Corinth and Korkyra in force to the west of Peloponnesus, — we see the flourishing cities of Kyrênê and Barka already rooted in Libya, and the port of Naukratis a busy emporium of Grecian commerce with Egypt. The trade by land, which is all that Egypt had enjoyed prior to Psammetichus, and which was exclusively conducted by Phenicians, is exchanged for a trade by sea, of which the Phenicians have only a share, and seemingly a smaller share than the Greeks; and the conquest by Amasis of the island of Cyprus, half-filled with Phenician settlements and once the tributary dependence of Tyre, affords one mark of the comparative decline of that great city. In her commerce with the Red sea and the Persian gulf she still remained without a competitor, the schemes of the Egyptian king Nekôs having proved abortive; and even in the time of Herodotus, the spices and frankincense of Arabia were still brought and distributed only by the Phenician merchant.[1] But on the whole, both her political and industrial development are now cramped by impediments, and kept down by rivals, not before in operation; and the part which she will be found to play in the Mediterranean, throughout the whole course of this history, is one subordinate and of reduced importance.

The course of Grecian history is not directly affected by these countries, yet their effect upon the Greek mind was very considerable, and the opening of the Nile by Psammetichus constitutes an epoch in Hellenic thought. It supplied their observation with a large and diversified field of present reality, while it was at the same time one great source of those mysticizing tendencies which corrupted so many of their speculative minds. But to Phenicia and Assyria, the Greeks owe two acquisitions well deserving special mention, — the alphabet, and the first standard and scale of weight, as well as coined money. Of neither of these acquisitions can we trace the precise date. That the Greek alphabet is derived from the Phenician, the analogy of the two proves beyond dispute, though we know not how or where the inestimable present was handed over, of which no traces are to be found

[1] Herodot. iii, 107.

in the Homeric poems.[1] The Latin alphabet, which is nearly identical with the most ancient Doric variety of the Greek, was derived from the same source, — also the Etruscan alphabet, though — if O. Müller is correct in his conjecture — only at second-hand, through the intervention of the Greek.[2] If we cannot make out at what time the Phenicians made this valuable communication to the Greeks, much less can we determine when or how they acquired it themselves, — whether it be of Semitic invention, or derived from improvement upon the phonetic hieroglyphics of the Egyptians.[3]

Besides the letters of the alphabet, the scale of weight and that of coined money passed from Phenicia and Assyria into Greece. It has been shown by Boeckh, in his "Metrologie," that

[1] The various statements or conjectures to be found in Greek authors (all comparatively recent) respecting the origin of the Greek alphabet, are collected by Franz, Epigraphicê Græca, s. iii, pp. 12–20: "Omnino Græci alphabeti ut certa primordia sunt in origine Phœniciâ, ita certus terminus in litteraturâ Ionicâ seu Simonideâ. Quæ inter utrumque a veteribus ponuntur, incerta omnia et fabulosa.....Non commoramur in iis quæ de litterarum origine et propagatione ex fabulosâ Pelasgorum historiâ (cf. Knight, pp. 119–123; Raoul Rochette, pp. 67–87) neque in iis quæ de Cadmo narrantur quem unquam fuisse hodie jam nemo crediderit.....Alphabeti Phœnicii omnes 22 literas cum antiquis Græcis congruere, hodie nemo est qui ignoret." (pp. 14–15.) Franz gives valuable information respecting the changes gradually introduced into the Greek alphabet, and the erroneous statements of the Grammatici as to what letters were original, and what were subsequently added.

Kruse also, in his "Hellas," (vol. i, p. 13, and in the first Beylage, annexed to that volume,) presents an instructive comparison of the Greek, Latin, and Phenician alphabets.

The Greek authors, as might be expected, were generally much more fond of referring the origin of letters to native heroes or gods, such as Palamêdês, Promêtheus, Musæus, Orpheus, Linus, etc., than to the Phenicians. The oldest known statement (that of Stêsichorus, Schol. ap. Bekker. Anecdot. ii, p 786) ascribes them to Palamêdês.

Both Franz and Kruse contend strenuously for the existence and habit of writing among the Greeks in times long anterior to Homer: in which I dissent from them.

[2] See O. Müller, Die Etrusker (iv, 6), where there is much instruction on the Tuscan alphabet.

[3] This question is raised and discussed by Justus Olshausen, Ueber den Ursprung des Alphabetes (pp. 1–10), in the Kieler Philologische Studien, 1841.

the Æginæan scale,[1] — with its divisions, talent, mna, and obolus, — is identical with the Babylonian and Phenician: and that the word *mna*, which forms the central point of the scale, is of Chaldæan origin. On this I have already touched in a former chapter, while relating the history of Pheidôn of Argos, by whom what is called the Æginæan scale was first promulgated.

In tracing, therefore, the effect upon the Greek mind of early intercourse with the various Asiatic nations, we find that, as the Greeks made up their musical scale, so important an element of their early mental culture, in part by borrowing from Lydians and Phrygians, — so also their monetary and statical system, their alphabetical writing, and their duodecimal division of the day, measured by the gnomon and the shadow, were all derived from Assyrians and Phenicians. The early industry and commerce of these countries was thus in many ways available to Grecian advance, and would probably have become more so, if the great and rapid rise of the more barbarous Persians had not reduced them all to servitude. The Phenicians, though unkind rivals, were at the same time examples and stimulants to Greek maritime aspiration; and the Phenician worship of that goddess whom the Greeks knew under the name of Aphroditê, became communicated to the latter in Cyprus, in Kythêra, in Sicily, — perhaps also in Corinth.

The sixth century B. C., though a period of decline for Tyre and Sidon, was a period of growth for their African colony Carthage, which appears during this century in considerable traffic with the Tyrrhenian towns on the southern coast of Italy, and as thrusting out the Phôkæan settlers from Alalia in Corsica. The wars of the Carthaginians with the Grecian colonies in Sicily, so far as they are known to us, commence shortly after 500 B. C., and continue at intervals, with fluctuating success, for two centuries and a half.

The foundation of Carthage by the Tyrians is placed at different dates, the lowest of which, however, is 819 B. C.: other authorities place it in 878 B. C., and we have no means of deciding between them. I have already remarked that it is by no

[1] See Boeckh, Metrologie, chs. iv, v, vi; also the preceding volume of this History

means the oldest of the Tyrian colonies; but though Utica and Gadês may have been more ancient than Carthage,[1] the latter greatly outstripped them in wealth and power, and acquired a sort of federal preëminence over all the Phenician colonies on the coast of Africa. In those later times when the dominion of the Carthaginians had reached its maximum, it comprised the towns of Utica, Hippo, Adrumêtum, and Leptis, — all original Phenician foundations, and enjoying probably, even as dependents of Carthage, a certain qualified autonomy, — besides a great number of smaller towns planted by themselves, and inhabited by a mixed population called Liby-Phenicians. Three hundred such towns, — a dependent territory covering half the space between the lesser and the greater Syrtis, and in many parts remarkably fertile, — a city said to contain seven hundred thousand inhabitants, active, wealthy, and seemingly homogeneous, — and foreign dependencies in Sicily, Sardinia, the Balearic isles, and Spain, — all this aggregate of power, under one political management, was sufficient to render the contest of Carthage even with Rome for some time doubtful.

But by what steps the Carthaginians raised themselves to such a pitch of greatness we have no information, and we are even left to guess how much of it had already been acquired in the sixth century B. C. As in the case of so many other cities,

[1] Utica is said to have been founded 287 years earlier than Carthage; the author who states this, professing to draw his information from Phenician histories (Aristot. Mirab. Auscult. c. 134). Velleius Paterculus states Gadês to be older than Utica, and places the foundation of Carthage B. C. 819 (i, 2, 6). He seems to follow in the main the same authority as the composer of the Aristotelic compilation above cited. Other statements place the foundation of Carthage in 878 B. C. (Heeren, Ideen über den Verkehr, etc., part ii, b. i, p. 29). Appian states the date of the foundation as fifty years before the Trojan war (De Reb. Punic. c. 1); Philistus, as twenty-one years before the same event (Philist. Fragm. 50, ed. Göller); Timæus, as thirty-eight years earlier than the 1st Olympiad (Timæi Fragm. 21, ed. Didot); Justin, seventy-two years earlier than the foundation of Rome (xviii, 6).

The citation which Josephus gives from Menander's work, extracted from Tyrian *ἀναγραφαὶ*, placed the foundation of Carthage 143 years after the building of the temple of Jerusalem (Joseph. cont. Apion. i, c. 17-18). Apion said that Carthage was founded in the first year of Olympiad 7 (B. C. 748), (Joseph. c. Apion. ii, 2.)

we have a foundation-legend, decorating the moment of birth, and then nothing farther. The Tyrian princess Dido or Elisa, daughter of Belus, sister of Pygmalion king of Tyre, and wife of the wealthy Sichæus priest of Hêraklês in that city, — is said to have been left a widow in consequence of the murder of Sichæus by Pygmalion, who seized the treasures belonging to his victim. But Dido found means to disappoint him of his booty, possessed herself of the gold which had tempted Pygmalion, and secretly emigrated, carrying with her the sacred insignia of Hêraklês: a considerable body of Tyrians followed her. She settled at Carthage on a small hilly peninsula joined by a narrow tongue of land to the continent, purchasing from the natives as much land as could be surrounded by an ox's hide, which she caused to be cut into the thinnest strip, and thus made it sufficient for the site of her first citadel, Byrsa, which afterwards grew up into the great city of Carthage. As soon as her new settlement had acquired footing, she was solicited in marriage by several princes of the native tribes, especially by the Gætulian Jarbas, who threatened war if he were refused. Thus pressed by the clamors of her own people, who desired to come into alliance with the natives, yet irrevocably determined to maintain exclusive fidelity to her first husband, she escaped the conflict by putting an end to her life. She pretended to acquiesce in the proposition of a second marriage, requiring only delay sufficient to offer an expiatory sacrifice to the manes of Sichæus: a vast funeral pile was erected, and many victims slain upon it, in the midst of which Dido pierced her own bosom with a sword, and perished in the flames. Such is the legend to which Virgil has given a new color by interweaving the adventures of Æneas, and thus connecting the foundation legends of Carthage and Rome, careless of his deviation from the received mythical chronology. Dido was worshipped as a goddess at Carthage until the destruction of the city:[1] and it

[1] "Quamdiu Carthago invicta fuit, pro Deâ culta est." (Justin. xviii, 6; Virgil, Æneid, i, 340–370.) We trace this legend about Dido up to Timæus (Timæi Frag. 28, ed. Didot): Philistus seems to have followed a different story; — he said that Carthage had been founded by Azor and Karchêdôn (Philist. Fr. 50). Appian notices both stories (De Reb. Pun. 1): that of Dido was current both among the Romans and Carthaginians: of Zôrus (or Ezôrus) and Karchêdôn, the second is evidently of Greek coinage, the first seems genuine Phenician: see Josephus cont. Apion. i, c. 18–21

has been imagined with some probability that she is identical with Astartê, the divine patroness under whose auspices the colony was originally established, as Gadês and Tarsus were founded under those of Hêraklês, — the tale of the funeral pile and self-burning appearing in the religious ceremonies of other Cilician and Syrian towns.[1] Phenician religion and worship was diffused along with the Phenician colonies throughout the larger portion of the Mediterranean.

The Phôkæans of Ionia, who amidst their adventurous voyages westward established the colony of Massalia, (as early as 600 B. C.) were only enabled to accomplish this by a naval victory over the Carthaginians,— the earliest example of Greek and Carthaginian collision which has been preserved to us. The Carthaginians were jealous of commercial rivalry, and their traffic with the Tuscans and Latins in Italy, as well as their lucrative mine-working in Spain, dates from a period when Greek commerce in those regions was hardly known. In Greek authors, the denomination Phenicians is often used to designate the Carthaginians, as well as the inhabitants of Tyre and Sidon, so that we cannot always distinguish which of the two is meant; but it is remarkable that the distant establishment of Gadês, and the numerous settlements planted for commercial purposes along the western coast of Africa, and without the strait of Gibraltar, are expressly ascribed to the Tyrians.[2] Many of the other Phenician establishments on the southern coast of Spain seemed to have owed their origin to Carthage rather than to Tyre. But the relations between the two, so far as we know them, were constantly amicable, and Carthage, even at the period of her highest glory, sent Theôri with a tribute of religious recognition to the Tyrian Hêraklês: the visit of these envoys coincided with the siege of the town by Alexander the Great. On that critical occasion, the wives and children of the Tyrians were sent to find shelter at Carthage: two centuries before, when the Persian empire was in its age of growth and expansion, the Tyrians had refused to aid Kambysês with their fleet in his plans for conquering Carthage, and thus probably preserved their colony from subjugation.[3]

CHAPTER XXII.

WESTERN COLONIES OF GREECE — IN EPIRUS, ITALY, SICILY, AND GAUL.

The stream of Grecian colonization to the westward, as far as we can be said to know it authentically, with names and dates, begins from the 11th Olympiad. But it is reasonable to believe that there were other attempts earlier than this, though we must content ourselves with recognizing them as generally probable. There were doubtless detached bands of volunteer emigrants or marauders, who, fixing themselves in some situation favorable to commerce or piracy, either became mingled with the native tribes, or grew up by successive reinforcements into an acknowledged town. Not being able to boast of any filiation from the prytaneium of a known Grecian city, these adventurers were often disposed to fasten upon the inexhaustible legend of the Trojan war, and ascribe their origin to one of the victorious heroes in the host of Agamemnôn, alike distinguished for their valor and for their ubiquitous dispersion after the siege. Of such alleged settlements by fugitive Grecian or Trojan heroes, there were a great number, on various points throughout the shores of the Mediterranean; and the same honorable origin was claimed even by many non-Hellenic towns.

In the eighth century B. C., when this westerly stream of Grecian colonization begins to assume an authentic shape (735 B. C.), the population of Sicily — as far as our scanty information permits us to determine it — consisted of two races completely distinct from each other — Sikels and Sikans — besides the Elymi, a mixed race apparently distinct from both, and occupying Eryx and Egesta, near the westernmost corner of the island, — and the Phenician colonies and coast establishments formed for purposes of trade. According to the belief both of Thucydidês and Philistus, these Sikans, though they gave themselves out as indigen-

ous, were yet of Iberian origin[1] and emigrants of earlier date than the Sikels,— by whom they had been invaded and restricted to the smaller western half of the island, and who were said to have crossed over originally from the south-western corner of the Calabrian peninsula, where a portion of the nation still dwelt in the time of Thucydidês. The territory known to Greek writers of the fifth century B. C. by the names of Œnotria on the coast of the Mediterranean, and Italia on that of the gulfs of Tarentum and Squillace, included all that lies south of a line drawn across the breadth of the country, from the gulf of Poseidônia (Pæstum) and the river Silarus on the Mediterranean sea, to the north-west corner of the gulf of Tarentum; it was also bounded northwards by the Iapygians and Messapians, who occupied the Salentine peninsula, and the country immediately adjoining to Tarentum, and by the Peuketians on the Ionic gulf. According to the logographers Pherekydês and Hellanikus,[2] Œnotrus and Peuketius were sons of Lykaôn, grandsons of Pelasgus, and emigrants in very early times from Arcadia to this territory. An important statement in Stephanus Byzantinus[3] acquaints us that the serf-population, whom the great Hellenic cities in this portion of Italy employed in the cultivation of their lands, were called Pelasgi, seemingly even in the historical times: it is upon this name, probably, that the mythical genealogy of Pherekydês is constructed. This Œnotrian or Pelasgian race were the population whom the Greek colonists found there on their arrival. They were known apparently under other names, such as the Sikels, — mentioned even in the Odyssey, though their exact locality in that poem cannot be ascertained — the Italians, or Itali, properly so called, — the Morgêtes, — and the Chaones, —

[1] Thucyd. vi, 2; Philistus, Fragm. 3, ed. Göller, ap. Diodor. v, 6. Timæus adopted the opposite opinion (Diodor. *l. c.*), also Ephorus, if we may judge by an indistinct passage of Strabo) vi, p. 270). Dionysius of Halikarnassus follows Thucydidês (A. R. i, 22).

The opinion of Philistus is of much value on this point, since he was, or might have been, personally cognizant of Iberian mercenaries in the service of the elder Dionysius.

[2] Pherekyd. Fragm. 85, ed. Didot; Hellanik. Fr. 53, ed. Didot; Dionys Halik. A. R. i, 11, 13, 22; Skymnus Chius, v, 362; Pausan. viii, 3, 5.

[3] Stephan Byz. v, Χῖος.

all of them names of tribes either cognate or subdivisional.[1] The Chaones or Chaonians are also found, not only in Italy, but in Epirus, as one of the most considerable of the Epirotic tribes, — while Pandosia, the ancient residence of the Œnotrian kings in the southern corner of Italy,[2] was also the name of a township or locality in Epirus, with a neighboring river Acheron in both: from hence, and from some other similarities of name, it has been imagined that Epirots, Œnotrians, Sikels, etc., were all names of cognate people, and all entitled to be comprehended under the generic appellation of Pelasgi. That they belonged to the same ethnical kindred, there seems fair reason to presume, and also that in point of language, manners, and character, they were not very widely separated from the ruder branches of the Hellenic race.

It would appear too, as far as any judgment can be formed on a point essentially obscure, that the Œnotrians were ethnically akin to the primitive population of Rome and Latium on one side,[3] as they were to the Epirots on the other; and that tribes

[1] Aristot. Polit. vii, 9, 3. Ὤκουν δὲ τὸ πρὸς τὴν Ἰαπυγίαν καὶ τὸν Ἰόνιον Χῶνες (or Χάονες) τὴν καλουμένην Σίριν· ἦσαν δὲ καὶ οἱ Χῶνες Οἰνωτροὶ τὸ γένος.

Antiochus Fr. 3, 4, 6, 7, ed. Didot; Strabo, vi, p. 254; Hesych. v, Χώνην, Dionys. Hal. A. R. i, 12.

[2] Livy, viii, 24.

[3] For the early habitation of Sikels or Siculi in Latium and Campania, see Dionys. Hal. A. R. i, 1–21: it is curious that Siculi and Sicani, whether the same or different, the primitive ante-Hellenic population of Sicily, are also numbered as the ante-Roman population of Rome: see Virgil, Æneid, viii, 328, and Servius ad Æneid. xi, 317.

The alleged ancient emigration of Evander from Arcadia to Latium forms a parallel to the emigration of Œnotrus from Arcadia to southern Italy as recounted by Pherekydês: it seems to have been mentioned even as early as in one of the Hesiodic poems (Servius ad Virg. Æn. viii, 138): compare Steph. Byz. v, Παλλάντιον. The earliest Latin authors appear all to have recognized Evander and his Arcadian emigrants: see Dionys. Hal. i, 31–32, ii, 9, and his references to Fabius Pictor and Ælius Tubero, i, 79–80; also Cato ap. Solinum, c. 2. If the old reading Ἀρκάδων, in Thucyd. vi, 2 (which Bekker has now altered into Σικελῶν), be retained, Thucydidês would also stand as witness for a migration from Arcadia into Italy. A third emigration of Pelasgi, from Peloponnesus to the river Sarnus in southern Italy (near Pompeii), was mentioned by Conon (ap. Servium ad Virg. Æn. vii, 730).

of this race, comprising Sikels, and Itali properly so called, as sections, had at one time occupied most of the territory from the left bank of the river Tiber southward between the Apennines and the Mediterannean. Both Herodotus and his junior contemporary, the Syracusan Antiochus, extend Œnotria as far northward as the river Silarus,[1] and Sophoklês includes the whole coast of the Mediterranean, from the strait of Messina to the gulf of Genoa, under the three successive names of Œnotria, the Tyrrhenian gulf, and Liguria.[2] Before or during the fifth century B. C., however, a different population, called Opicians, Oscans, or Ausonians, had descended from their original seats on or north of the Apennines,[3] and had conquered the ter-

[1] Herodotus (i, 24–167) includes Elea (or Velia) in Œnotria, — and Tarentum in Italia; while Antiochus considers Tarentum as in Iapygia, and the southern boundary of the Tarentine territory as the northern boundary of Italia: Dionysius of Halikarnassus (A. R. ii, 1) seems to copy from Antiochus when he extends the Œnotrians along the whole south-western corner of Italy, within the line drawn from Tarentum to Poseidonia, or Pæstum. Hence the appellation *Οἰνωτρίδες νῆσοι* to the two islands opposite Elea (Strabo, vi, p. 253). Skymnus Chius (v. 247) recognizes the same boundaries.

Twelve Œnotrian cities are cited by name (in Stephanus Byzantinus) from the *Εὐρώπη* of Hekatæus (Frag. 30–39, ed. Didot): Skylax in his Periplus does not name Œnotrians; he enumerates Campanians, Samnites, and Lucanians (cap. 9-13). The intimate connection between Milêtus and Sybaris would enable Hekatæus to inform himself about the interior Œnotrian country.

Œnotria and Italia together, as conceived by Antiochus and Herodotus, comprised what was known a century afterwards as Lucania and Bruttium: see Mannert, Geographie der Griech. und Römer, part ix, b. 9, ch. i, p. 86. Livy, speaking with reference to 317 B. C., when the Lucanian nation as well as the Bruttians were in full vigor, describes only the sea-coast of the lower sea as Grecian, — "cum omni orâ Græcorum inferi maris a Thuriis Neapolim et Cumas," (ix, 19.) Verrius Flaccus considered the Sikels as *Græci* (Festus. v, Major Græcia, with Müller's note).

[2] Sophoklês, Triptolem. Fr. 527, ed. Dindorf. He places the lake Avernus, which was close to the Campanian Cumæ, in Tyrrhenia: see Lexicon Sophocleum, ad calc. ed. Brunck, v, *Ἄορνος*. Euripidês (Medea, 1310–1326) seems to extend Tyrrhenia to the strait of Messina.

[3] Aristot. Polit. vii, 9, 3. *ᾤκουν δὲ τὸ μὲν πρὸς τὴν Τυρρηνίαν Ὀπικοὶ, καὶ πρότερον καὶ νῦν καλούμενοι τὴν ἐπίκλησιν Αὔσονες.* Festus: "*Ausoniam* appellavit Auson, Ulyssis et Calypsûs filius, eam primam partem Italiæ in quâ sunt urbes Beneventum et Cales: deinde paulatim tota quoque Italia quæ Apennino finitur, dicta est Ausonia," etc. The original Ausonia would thus coincide nearly with the territory called Samnium, after the Sabine emigrants had conquered it: see Livy, viii, 16; Strabo, v, p. 250; Virg. Æn. vii, 727, with Servius. Skymnus Chius (v, 227) has copied from the same source as Festus. For the extension of Ausonians along various parts of the more southern coast of Italy, even to Rhegium, as well as to the Liparæan isles, see Diodor. v, 7–8; Cato, Origg. Fr. lib. iii, ap. Probum ad Virg. Bucol. v, 2. The Pythian priestess, in directing the Chalkidic emigrants to Rhegium, says to them, — *Ἔνθα πόλιν οἴκιζε, διδοῖ δέ σοι Αὔσονα χώραν* (Diodor. Fragm. xiii, p. 11, ap Scriptt. Vatic. ed. Maii). Temesa is Ausonian in Strabo, vi, p. 255.

ritory between Latium and the Silarus, expelling or subjugating the Œnotrian inhabitants, and planting outlying settlements even down to the strait of Messina and the Liparæan isles. Hence the more precise Thucydidês designates the Campanian territory, in which Cumæ stood, as the country of the Opici; a denomination which Aristotle extends to the river Tiber, so as to comprehend within it Rome and Latium.[1] Not merely Campania, but in earlier times even Latium, originally occupied by a Sikel or Œnotrian population, appears to have been partially overrun and subdued by fiercer tribes from the Apennines, and had thus received a certain intermixture of Oscan race. But in the regions south of Latium, these Oscan conquests were still more overwhelming; and to this cause (in the belief of inquiring Greeks of the fifth century B. C.)[2] were owing the first migrations of the Œnotrian

[1] Thucyd. vi, 3; Aristot. ap. Dionys. Hal. A. R. i, 72. *Ἀχαιῶν τινας τῶν ἀπὸ Τροίης ἀνακομιζομένων, — ἐλθεῖν εἰς τὸν τόπον τοῦτον τῆς Ὀπικῆς, ὃς καλεῖται Λάτιον.*

Even in the time of Cato the elder, the Greeks comprehended the Romans under the general, and with them contemptuous, designation of Opici (Cato ap. Plin. H. N. xxii, 1: see Antiochus ap. Strab. v, p. 242).

[2] Thucyd. vi, 2. *Σικελοὶ δὲ ἐξ Ἰταλίας φεύγοντες Ὀπικοὺς διέβησαν ἐς Σικελίαν* (see a Fragment of the geographer Menippus of Pergamus, in Hudson's Geogr. Minor. i, p. 76). Antiochus stated that the Sikels were driven out of Italy into Sicily by the Opicians and Œnotrians; but the Sikels themselves, according to him, were also Œnotrians (Dionys. H. i, 12–22). It is remarkable that Antiochus (who wrote at a time when the name of Rome had not begun to exercise that fascination over men's minds which the Roman power afterwards occasioned), in setting forth the mythical antiquity of the Sikels and Œnotrians, represents the eponymous Sikelus as an exile from Rome, who came into the south of Italy to the king Morgês, successor of Italus, — *Ἐπεὶ δὲ Ἴταλος κατεγήρα, Μόογης ἐβασίλευσεν. Ἐπὶ*

race out of southern Italy, which wrested the larger portion of Sicily from the preëxisting Sikanians.

This imperfect account, representing the ideas of Greeks of the fifth century B. C. as to the early population of southern Italy, is borne out by the fullest comparison which can be made between the Greek, Latin, and Oscan language, — the first two certainly, and the third probably, sisters of the same Indo-European family of languages. While the analogy, structural and radical, between Greek and Latin, establishes completely such community of family — and while comparative philology proves that on many points the Latin departs less from the supposed common type and mother-language than the Greek — there exists also in the former a non-Grecian element, and non-Grecian classes of words, which appear to imply a confluence of two or more different people with distinct tongues; and the same non-Grecian element, thus traceable in the Latin, seems to present itself still more largely developed in the scanty remains of the Oscan.[1] Moreover, the Greek colonies in Italy and Sicily

τούτου δὲ ἀνὴρ ἀφίκετο ἐκ Ῥώμης φυγὰς, Σικελὸς ὄνομα αὐτῷ (Antiochus ap. Dionys. H. i, 73: compare c. 12).

Philistus considered Sikelus to be a son of Italus: both he and Hellanikus believed in early migrations from Italy into Sicily, but described the emigrants differently (Philistus, Frag 2, ed. Didot).

[1] See the learned observations upon the early languages of Italy and Sicily, which Müller has prefixed to his work on the Etruscans (Einleitung, i, 12). I transcribe the following summary of his views respecting the early Italian dialects and races: "The notions which we thus obtain respecting the early languages of Italy are as follows: the *Sikel*, a sister language, nearly allied to the Greek or Pelasgic; the *Latin*, compounded from the Sikel and from the rougher dialect of the men called *Aborigines;* the *Oscan*, akin to the Latin in both its two elements; the language spoken by the Sabine emigrants in their various conquered territories, *Oscan;* the *Sabine proper*, a distinct and peculiar language, yet nearly connected with the non-Grecian element in Latin and Oscan, as well as with the language of the oldest Ausonians and Aborigines."

[N. B. This last statement, respecting the original Sabine language, is very imperfectly made out: it seems equally probable that the Sabellians may have differed from the Oscans no more than the Dorians from the Ionians: see Niebuhr, Röm. Gesch. tom. i, p. 69.]

"Such a comparison of languages presents to us a certain view, which I shall here briefly unfold, of the earliest history of the Italian races. At a period anterior to all records, a single people, akin to the Greeks, dwelling

caught several peculiar words from their association with the Sikels, which words approach in most cases very nearly to the Latin, — so that a resemblance thus appears between the language of Latium on the one side, and that of Œnotrians and Sikels (in southern Italy and Sicily) on the other, prior to the establishments of the Greeks. These are the two extremities of the Sikel population; between them appear, in the intermediate country, the Oscan or Ausonian tribes and language; and these latter seem to have been in a great measure conquerors and intruders from the central mountains. Such analogies of language countenance the supposition of Thucydidês and Antiochus, that these Sikels had once been spread over a still larger portion of southern Italy, and had migrated from thence into Sicily in consequence of Oscan invasions. The element of affinity existing between Latins, Œnotrians, and Sikels — to a certain degree also between all of them together and the Greeks, but not extending

extended from the south of Tuscany down to the straits of Messina, occupies in the upper part of its territory only the valley of the Tiber, — lower down, occupies the mountainous districts also, and in the south, stretches across from sea to sea, — called Sikels, Œnotrians, or Peucetians. Other mountain tribes, powerful, though not widely extended, live in the northern Abruzzo and its neighborhood: in the east, the Sabines, southward from them the cognate Marsi, more to the west the Aborigines, and among them probably the old Ausonians or Oscans. About 1000 years prior to the Christian era, there arises among these tribes — from whom almost all the popular migrations in ancient Italy have proceeded — a movement whereby the Aborigines more northward, the Sikels more southward, are precipitated upon the Sikels of the plains beneath. Many thousands of the great Sikel nation withdraw to their brethren the Œnotrians, and by degrees still farther across the strait to the island of Sicily. Others of them remain stationary in their residences, and form, in conjunction with the Aborigines, the Latin nation, — in conjunction with the Ausonians, the Oscan nation: the latter extends itself over what was afterwards called Samnium and Campania. Still, the population and power of these mountain tribes, especially that of the Sabines, goes on perpetually on the increase: as they pressed onward towards the Tiber, at the period when Rome was only a single town, so they also advanced southwards, and conquered, — first, the mountainous Opica; next, some centuries later, the Opician plain, Campania; lastly, the ancient country of the Œnotrians, afterwards denominated Lucania."

Compare Niebuhr, Römisch. Geschicht. vol. i, p. 80, 2d edit., and the first chapter of Mr. Donaldson's Varronianus.

to the Opicians or Oscans, or to the Iapygians — may be called Pelasgic, for want of a better name; but, by whatever name it be called, the recognition of its existence connects and explains many isolated circumstances in the early history of Rome as well as in that of the Italian and Sicilian Greeks.

The earliest Grecian colony in Italy or Sicily, of which we know the precise date, is placed about 735 B. C., eighteen years subsequent to the Varronian era of Rome; so that the causes, tending to subject and Hellenize the Sikel population in the southern region, begin their operation nearly at the same time as those which tended gradually to exalt and aggrandize the modified variety of it which existed in Latium. At that time, according to the information given to Thucydidês, the Sikels had been established for three centuries in Sicily: Hellanikus and Philistus — who both recognized a similar migration into that island out of Italy, though they give different names, both to the emigrants and to those who expelled them — assign to the migration a date three generations before the Trojan war.[1] Earlier than 735 B. C., however, though we do not know the precise era of its commencement, there existed one solitary Grecian establishment in the Tyrrhenian sea, — the Campanian Cumæ, near cape Misenum; which the more common opinion of chronologists supposed to have been founded in 1050 B. C., and which has even been carried back by some authors to 1139 B. C.[2] Without reposing any faith in this early chronology, we may at least feel certain that it is the most ancient Grecian establishment in any part of Italy, and that a considerable time elapsed before any other Greek colonists were bold enough to cut themselves off from the Hellenic world by occupying seats on the other side of

[1] Thucyd. vi, 2; Philistus, Frag. 2, ed. Didot.

[2] Strabo, v, p. 243; Velleius Patercul. i, 5; Eusebius, p 121. M. Raoul Rochette, assuming a different computation of the date of the Trojan war, pushes the date of Cumæ still farther back to 1139 B. C. (Histoire des Colonies Grecques, book iv, c. 12, p. 100.)

The mythes of Cumæ extended to a period preceding the Chalkidic settlement. See the stories of Aristæus and Dædalus ap. Sallust. Fragment Incert. p. 204, ed. Delphin.; and Servius ad Virgil. Æneid. vi, 17. The fabulous Thespiadæ, or primitive Greek settlers in Sardinia, were supposed in early ages to have left that island and retired to Cumæ (Diodor. v, 15).

the strait of Messina,[1] with all the hazards of Tyrrhenian piracy as well as of Scylla and Charybdis. The Campanian Cumæ — known almost entirely by this its Latin designation — received its name and a portion of its inhabitants from the Æolic Kymê in Asia Minor. A joint band of settlers, partly from this latter town, partly from Chalkis in Eubœa, — the former under the Kymæan Hippoklês, the latter under the Chalkidian Megasthenês, — having combined to form the new town, it was settled by agreement that Kymê should bestow the name, and that Chalkis should enjoy the title and honors of the mother-city.[2]

Cumæ, situated on the neck of the peninsula which terminates in cape Misenum, occupied a lofty and rocky hill overhanging the sea,[3] and difficult of access on the land side. The unexampled fertility of the Phlegræan plains in the immediate vicinity of the city, the copious supply of fish in the Lucrine lake,[4] and the gold mines in the neighboring island of Pithekusæ, — both subsisted and enriched the colonists. They were joined by fresh settlers from Chalkis, from Eretria, and even from Samos; and became numerous enough to form distinct towns at Dikæarchia and Neapolis, thus spreading over a large portion of the bay of Naples. In the hollow rock under the very walls of the town was situated the cavern of the prophetic Sibyl, — a parallel and reproduction of the Gergithian Sibyl, near Kymê in Æolis: in the immediate neighborhood, too, stood the wild woods and dark lake of Avernus, consecrated to the subterranean gods, and offering an establishment of priests, with ceremonies evoking the dead, for purposes of prophecy or for solving doubts and mysteries. It was here that Grecian imagination localized the Cimmerians and the fable of Odysseus; and the Cumæans derived gains from the nu-

merous visitors to this holy spot,[1] perhaps hardly less than those of the inhabitants of Krissa from the vicinity of Delphi. Of the relations of these Cumæans with the Hellenic world generally, we unfortunately know nothing; but they seem to have been in intimate connection with Rome during the time of the kings, and especially during that of the last king Tarquin,[2] — forming the intermediate link between the Greek and Latin world, whereby the feelings of the Teukrians and Gergithians near the Æolic Kymê, and the legendary stories of Trojan as well as Grecian heroes — Æneas and Odysseus — passed into the antiquarian imagination of Rome and Latium.[3] The writers of the Augustan age knew Cumæ only in its decline, and wondered at the vast extent of its ancient walls, yet remaining in their time. But during the two centuries prior to 500 B. C., these walls inclosed a full and thriving population, in the plenitude of prosperity, — with a surrounding territory extensive as well as fertile,[4] resorted to by purchasers of corn from Rome in years of scarcity, and unassailed as yet by formidable neighbors, — and with a coast and harbors well suited to maritime commerce. At that period, the town of Capua, if indeed it existed at all, was of very inferior importance, and the chief part of the rich plain around it was in-

The father of Hesiod was a native of the Æolic Kymê: we find in the Hesiodic Theogony (*ad fin.*) mention of Latinus as the son of Odysseus and Circê: Servius cites the same from the Ἀσπιδοποιΐα of Hesiod (Servius ad Virg. Æn. xii, 162; compare Cato, Fragment. p. 33, ed. Lion). The great family of the Mamilii at Tusculum, also derived their origin from Odysseus and Circê (Livy, i, 49).

The tomb of Elpênôr, the lost companion of Odysseus, was shown at Circeii in the days of Theophrastus (Hist. Plant v, 8, 3) and Skylax (c. 10).

Hesiod notices the promontory of Pelôrus, the strait of Messina, and the islet of Ortygia near Syracuse (Diodor. iv, 85; Strabo, i, p. 23)

[4] Livy, ii, 9.

cluded in the possessions of Cumæ[1] — not unworthy probably, in the sixth century B. C., to be numbered with Sybaris and Krotôn.

The decline of Cumæ begins in the first half of the fifth century B. C. (500–450 B. C.), first, from the growth of hostile powers in the interior, — the Tuscans and Samnites, — next, from violent intestine dissensions and a destructive despotism. The town was assailed by a formidable host of invaders from the interior, Tuscans reinforced by Umbrian and Daunian allies; which Dionysius refers to the 64th Olympiad (524–520 B. C.), though upon what chronological authority we do not know, and though this same time is marked by Eusebius as the date of the foundation of Dikæarchia from Cumæ. The invaders, in spite of great disparity of number, were bravely repelled by the Cumæans, chiefly through the heroic example of a citizen then first known and distinguished, — Aristodêmus Malakus. The government of the city was oligarchical, and the oligarchy from that day became jealous of Aristodêmus; who, on his part, acquired extraordinary popularity and influence among the people. Twenty years afterwards, the Latin city of Aricia, an ancient ally of Cumæ was attacked by a Tuscan host, and intreated succor from the Cumæans. The oligarchy of the latter thought this a good opportunity to rid themselves of Aristodêmus, whom they despatched by sea to Aricia, with rotten vessels and an insufficient body of troops. But their stratagem failed and proved their ruin; for the skill and intrepidity of Aristodêmus sufficed for the rescue of Aricia, and he brought back his troops victorious and devoted to himself personally. Partly by force, partly by stratagem, he subverted the oligarchy, put to death the principal rulers, and constituted himself despot: by a jealous energy, by disarming the people, and by a body of mercenaries, he maintained himself in this authority for twenty years, running his career of lust and iniquity until old age. At length a conspiracy of the oppressed population proved successful against him; he was slain, with all his family and many of his chief partisans, and the former government was restored.[2]

[1] Niebuhr, Römisch. Geschicht. vol. i, p. 76, 2d edit.

[2] The history of Aristodêmus Malakus is given at some length by Dionysius of Halikarnassus (viii, 3–10).

The despotism of Aristodêmus falls during the exile of the expelled Tarquin[1] (to whom he gave shelter) from Rome, and during the government of Gelôn at Syracuse; and this calamitous period of dissension and misrule was one of the great causes of the decline of Cumæ. Nearly at the same time, the Tuscan power, both by land and sea, appears at its maximum, and the Tuscan establishment at Capua begins, if we adopt the era of the town as given by Cato.[2] There was thus created at the expense of Cumæ a powerful city, which was still farther aggrandized afterwards when conquered and occupied by the Samnites; whose invading tribes, under their own name or that of Lucanians, extended themselves during the fifth and fourth centuries B. C., even to the shores of the gulf of Tarentum.[3] Cumæ was also exposed to formidable dangers from the sea-side: a fleet, either of Tuscans alone, or of Tuscans and Carthaginians united, assailed it in 474 B. C., and it was only rescued by the active interposition of Hiero, despot of Syracuse; by whose naval force the invaders were repelled with slaughter.[4] These incidents go partly to indicate, partly to explain, the decline of the most ancient Hellenic settlement in Italy,— a decline from which it never recovered.

After briefly sketching the history of Cumæ, we pass naturally to that series of powerful colonies which were established in Sicily and Italy, beginning with 735 B. C. — enterprises in which Chalkis, Corinth, Megara, Sparta, the Achæans in Peloponnesus, and the Lokrians out of Peloponnesus, were all concerned. Chalkis, the metropolis of Cumæ, became also the metropolis of Naxos, the most ancient Grecian colony in Sicily, on the eastern coast of the island, between the strait of Messina and Mount Ætna.

The great number of Grecian settlements, from different colonizing towns, which appear to have taken effect within a few years upon the eastern coast of Italy and Sicily — from the Iapygian cape to cape Pachynus — leads us to suppose that the extraordinary capacities of the country for receiving new settlers had become known only suddenly. The colonies follow so close upon each other, that the example of the first cannot have been the single determining motive to those which followed. I shall have occasion to point out, even a century later (on the occasion of the settlement of Kyrênê), the narrow range of Grecian navigation; so that the previous supposed ignorance would not be at all incredible, were it not for the fact of the preëxisting colony of Cumæ. According to the practice universal with Grecian ships — which rarely permitted themselves to lose sight of the coast except in cases of absolute necessity — every man, who navigated from Greece to Italy or Sicily, first coasted along the shores of Akarnania and Epirus until he reached the latitude of Korkyra; he then struck across first to that island, next to the Iapygian promontory, from whence he proceeded along the eastern coast of Italy (the gulfs of Tarentum and Squillace) to the southern promontory of Calabria and the Sicilian strait; he would then sail, still coastwise, either to Syracuse or to Cumæ, according to his destination. So different are nautical habits now, that this fact requires special notice; we must recollect, moreover, that in 735 B. C., there were yet no Grecian settlements either in Epirus or in Korkyra: outside of the gulf of Corinth, the world was non-Hellenic, with the single exception of the remote Cumæ. A little before the last-mentioned period, Theoklês (an Athenian or a Chalkidian — probably the latter) was cast by storms on the coast of Sicily, and became acquainted with the tempting character of the soil, as well as the dispersed and half-organized condition of the petty Sikel communities who occupied it.[1] The oligarchy of Chalkis, acting upon the information which he brought back, sent out under his guidance settlers,[2] Chalkidian and Naxian, who founded the Sicilian Naxos. Theoklês and his companions on landing first occupied the eminence of Taurus, im-

[2] The admixture of Naxian colonists may be admitted, as well upon the presumption arising from the name, as from the statement of Hellanikus, ap. Stephan. Byz. v, Χαλκίς.

Ephorus put together into one the Chalkidian and the Megarian migrations, which Thucydidês represents as distinct (Ephorus ap. Strabo, vi, p 267).

mediately overhanging the sea (whereon was established four centuries afterwards the town of Tauromenium, after Naxos had been destroyed by the Syracusan despot Dionysius); for they had to make good their position against the Sikels, who were in occupation of the neighborhood, and whom it was requisite either to dispossess or to subjugate. After they had acquired secure possession of the territory, the site of the city was transferred to a convenient spot adjoining; but the hill first occupied remained ever memorable, both to Greeks and to Sikels. On it was erected the altar of Apollo Archêgetês, the divine patron who (through his oracle at Delphi) had sanctioned and determined Hellenic colonization in the island. The altar remained permanently as a sanctuary common to all the Sicilian Greeks, and the Theôrs or sacred envoys from their various cities, when they visited the Olympic and other festivals of Greece, were always in the habit of offering sacrifice upon it immediately before their departure. To the autonomous Sikels, on the other hand, the hill was an object of durable but odious recollection, as the spot in which Grecian conquest and intrusion had first begun; and at the distance of three centuries and a half from the event, we find them still animated by this sentiment in obstructing the foundation of Tauromenium.[1]

At the time when Theoklês landed, the Sikels were in possession of the larger half of the island, lying chiefly to the east of the Heræan mountains,[2] — a chain of hills stretching in a southerly direction from that principal chain, called the Neurode or Nebrode mountains, which runs from east to west for the most part parallel with the northern shore. West of the Heræan hills were situated the Sikans; and west of these latter, Eryx and Egesta, the possessions of the Elymi: along the western portion of the northern coast, also, were placed Motyê, Soloêis, and Panormus (now Palermo), the Phenician or Carthaginian seaports. The formation, or at least the extension, of these three last-mentioned ports, however, was a consequence of the multiplied

[1] Thucyd. vi, 3; Diodor. xiv, 59–88.

[2] Mannert places the boundary of Sikels and Sikans at these mountains Otto Siefert (Akragas und sein Gebiet, Hamburg, 1845, p. 53) places it at the Gemelli Colles, rather more to the westward, — thus contracting the domain of the Sikans. compare Diodor. iv, 82–83.

Grecian colonies; for the Phenicians down to this time had not founded any territorial or permanent establishments, but had contented themselves with occupying in a temporary way various capes or circumjacent islets, for the purpose of trade with the interior. The arrival of formidable Greek settlers, maritime like themselves, induced them to abandon these outlying factories, and to concentrate their strength in the three considerable towns above named, all near to that corner of the island which approached most closely to Carthage. The east side of Sicily, and most part of the south, were left open to the Greeks, with no other opposition than that of the indigenous Sikels and Sikans, who were gradually expelled from all contact with the sea-shore, except on part of the north side of the island, — and who were indeed, so unpractised at sea as well as destitute of shipping, that in the tale of their old migration out of Italy into Sicily, the Sikels were affirmed to have crossed the narrow strait upon rafts at a moment of favorable wind.[1]

In the very next year[2] to the foundation of Naxos, Corinth began her part in the colonization of the island. A body of settlers, under the œkist Archias, landed in the islet Ortygia, farther southward on the eastern coast, expelled the Sikel occupants, and laid the first stone of the mighty Syracuse. Ortygia, two English miles in circumference, was separated from the main island only by a narrow channel, which was bridged over when the city was occupied and enlarged by Gelôn in the 72d Olympiad, if not earlier. It formed only a small part, though the most secure and best-fortified part, of the vast space which the city afterwards occupied; but it sufficed alone for the inhabitants during a considerable time, and the present city in its modern decline has again reverted to the same modest limits. Moreover, Ortygia offered another advantage of not less value; it lay across the entrance of a spacious harbor, approached by a narrow mouth, and its fountain of Arethusa was memorable in antiquity both for the abundance and goodness of its water. We should have been glad to learn something respecting the numbers, char-

[2] Mr. Fynes Clinton discusses the era of Syracuse, Fasti Hellenici, ad a. c. 734, and the same work, vol. ii, Appendix xi, p. 264.

acter, position, nationality, etc. of these primitive emigrants, the founders of a city which we shall hereafter find comprising a vast walled circuit, which Strabo reckons at one hundred and eighty stadia, but which the modern observations of Colonel Leake announce as fourteen English miles,[1] or about one hundred and twenty-two stadia. We are told only that many of them came from the Corinthian village of Tenea, and that one of them sold to a comrade on the voyage his lot of land in prospective, for the price of a honey-cake: the little which we hear about the determining motives[2] of the colony refers to the personal character of the œkist. Archias son of Euagêtus, one of the governing gens of the Bacchiadæ at Corinth, in the violent prosecution of unbridled lust, had caused, though unintentionally, the death of a free youth named Aktæon, whose father Melissus, after having vainly endeavored to procure redress, slew himself at the Isthmian games, invoking the vengeance of Poseidôn against the aggressor.[3] Such were the destructive effects of this paternal curse, that Archias was compelled to expatriate, and the Bacchiadæ placed him at the head of the emigrants to Ortygia, in 734 B. C.: at that time, probably, this was a sentence of banishment to which no man of commanding station would submit except under the pressure of necessity.

There yet remained room for new settlements between Naxos and Syracuse: and Theoklês, the œkist of Naxos, found himself in a situation to occupy part of this space only five years after the foundation of Syracuse: perhaps he may have been joined by fresh settlers. He attacked and expelled the Sikels[4] from the fertile spot called Leontini, seemingly about half-way down on the eastern coast between Mount Ætna and Syracuse; and also from Katana, immediately adjoining to Mount Ætna, which still retains both its name and its importance. Two new Chalkidic colonies were thus founded, — Theoklês himself becoming œkist of Leontini, and Euarchus chosen by the Katanæan settlers themselves, of Katana.

[4] Polyænus (v, 5, 1) describes the stratagem of Theoklês on this occasion

The city of Megara was not behind Corinth and Chalkis in furnishing emigrants to Sicily. Lamis the Megarian, having now arrived with a body of colonists, took possession first of a new spot called Trotilus, but afterwards joined the recent Chalkidian settlement at Leontini. The two bodies of settlers, however, could not live in harmony, and Lamis, with his companions, was soon expelled; he then occupied Thapsus,[1] at a little distance to the northward of Ortygia or Syracuse, and shortly afterwards died. His followers made an alliance with Hyblôn, king of a neighboring tribe of Sikels, who invited them to settle in his territory; they accepted the proposition, relinquished Thapsus, and founded, in conjunction with Hyblôn, the city called the Hyblæan Megara, between Leontini and Syracuse. This incident is the more worthy of notice, because it is one of the instances which we find of a Grecian colony beginning by amicable fusion with the preëxisting residents: Thucydidês seems to conceive the prince Hyblôn as betraying his people against their wishes to the Greeks.[2]

It was thus that, during the space of five years, several distinct bodies of Greek emigrants had rapidly succeeded each other in Sicily: for the next forty years, we do not hear of any fresh arrivals, which is the more easy to understand as there were during that interval several considerable foundations on the coast of Italy, which probably took off the disposable Greek settlers. At length, forty-five years after the foundation of Syracuse, a fresh body of settlers arrived, partly from Rhodes under Antiphêmus, partly from Krête under Entimus, and founded the city of Gela on the south-western front of the island, between cape Pachynus and Lilybæum (B. C. 690) — still on the territory of the Sikels, though extending ultimately to a portion of that of the Sikans.[3] The name of the city was given from that of the neighboring river Gela.

One other fresh migration from Greece to Sicily remains to

[1] Polyænus details a treacherous stratagem whereby this expulsion is said to have been accomplished (v, 5, 2).

[2] Thucydid. vi, 3. *Ὕβλωνος τοῦ βασιλέως προδόντος τὴν χώραν καὶ καθηγησαμένου.*

[3] Thucydid. vi, 4; Diodor. Excerpt. Vatican. ed. Maii, Fragm. xiii, p. 13 Pausanias, viii, 46, 2

be mentioned, though we cannot assign the exact date of it. The town of Zanklê (now Messina), on the strait between Italy and Sicily, was at first occupied by certain privateers or pirates from Cumæ, — the situation being eminently convenient for their operations. But the success of the other Chalkidic settlements imparted to this nest of pirates a more enlarged and honorable character: a body of new settlers joined them from Chalkis and other towns of Eubœa, the land was regularly divided, and two joint œkists were provided to qualify the town as a member of the Hellenic communion — Periêrês from Chalkis, and Kratæmenês from Cumæ. The name Zanklê had been given by the primitive Sikel occupants of the place, meaning in their language *a sickle;* but it was afterwards changed to Messênê by Anaxilas, despot of Rhegium, who, when he conquered the town, introduced new inhabitants, in a manner hereafter to be noticed.[1]

Besides these emigrations direct from Greece, the Hellenic colonies in Sicily became themselves the founders of sub-colonies. Thus the Syracusans, seventy years after their own settlement (B. C. 664), founded Akræ — Kasmenæ, twenty years afterwards (B. C. 644), and Kamarina forty-five years after Kasmenæ (B. C. 599): Daskôn and Menekôlus were the œkists of the latter, which became in process of time an independent and considerable town, while Akræ and Kasmenæ seem to have remained subject to Syracuse. Kamarina was on the south-western side of the island, forming the boundary of the Syracusan territory towards Gela. Kallipolis was established from Naxos, and Eubœa (a town so called) from Leontini.[2]

Hitherto, the Greeks had colonized altogether on the territory of the Sikels; the three towns which remain to be mentioned were all founded in that of the Sikans,[3] — Agrigentum or Akragas, Selinûs, and Himera. The two former were both on the south-western coast, — Agrigentum bordering upon Gela on the one side, and upon Selinus on the other. Himera was situated

[1] Thucydid. vi, 4.

[2] Strabo, vi, p. 272.

[3] Stephanus Byz. Σικανία, ἡ περίχωρος Ἀκραγαντινῶν. Herodot. vii, 170; Diodor. iv, 78.

Vessa, the most considerable among the Sikanian townships or villages, with its prince Teutus, is said to have been conquered by Phalaris despot of Agrigentum, through a mixture of craft and force (Polyæn. v, 1, 4).

on the westerly portion of the northern coast, — the single Hellenic establishment in the time of Thucydidês which that long line of coast presented. The inhabitants of the Hyblæan Megara were founders of Selinus, about 630 B. C., a century after their own establishment: the œkist Pamillus, according to the usual Hellenic practice, was invited from their metropolis Megara in Greece proper, but we are not told how many fresh settlers came with him: the language of Thucydidês leads us to suppose that the new town was peopled chiefly from the Hyblæan Megarians themselves. The town of Akragas, or Agrigentum, called after the neighboring river of the former name, was founded from Gela in B. C. 582. Its œkists were Aristonous and Pystilus, and it received the statutes and religious characteristics of Gela. Himera, on the other hand, was founded from Zanklê, under three œkists, Eukleidês, Simus, and Sakôn. The chief part of its inhabitants were of Chalkidic race, and its legal and religious characteristics were Chalkidic; but a portion of the settlers were Syracusan exiles, called Mylêtidæ, who had been expelled from home by a sedition, so that the Himeræan dialect was a mixture of Doric and Chalkidic. Himera was situated not far from the towns of the Elymi, — Eyrx and Egesta.

Such were the chief establishments founded by the Greeks in Sicily during the two centuries after their first settlement in 735 B. C. The few particulars just stated respecting them are worthy of all confidence,— for they come to us from Thucydidês, — but they are unfortunately too few to afford the least satisfaction to our curiosity. It cannot be doubted that these first two centuries were periods of steady increase and prosperity among the Sicilian Greeks, undisturbed by those distractions and calamities which supervened afterwards, and which led indeed to the extraordinary aggrandizement of some of their communities, but also to the ruin of several others: moreover, it seems that the Carthaginians in Sicily gave them no trouble until the time of Gelôn. Their position will indeed seem singularly advantageous, if we consider the extraordinary fertility of the soil in this fine island, especially near the sea, — its capacity for corn, wine, and oil, the species of cultivation to which the Greek husbandman had been accustomed under less favorable circumstances, — its abundant fisheries on the coast, so important in Grecian diet, and

continuing undiminished even at the present day, together with sheep, cattle, hides, wool, and timber from the native population in the interior. These natives seem to have been of rude pastoral habits, dispersed either among petty hill-villages, or in caverns hewn out of the rock, like the primitive inhabitants of the Balearic islands and Sardinia; so that Sicily, like New Zealand in our century, was now for the first time approached by organized industry and tillage.[1] Their progress, though very great, during this most prosperous interval (between the foundation of Naxos, in 735 B. C. to the reign of Gelôn at Syracuse in 485 B. C.), is not to be compared to that of the English colonies in America; but it was nevertheless very great, and appears greater from being concentrated as it was in and around a few cities. Individual spreading and separation of residence were rare, nor did they consist either with the security or the social feelings of a Grecian colonist. The city to which he belonged was the central point of his existence, where the produce which he raised was brought home to be stored or sold, and where alone his active life, political, domestic, religious, recreative, etc., was carried on. There were dispersed throughout the territory of the city small fortified places and garrisons,[2] serving as temporary protection to the cultivators in case of sudden inroad; but there was no permanent residence for the free citizen except the town itself. This was, perhaps, even more the case in a colonial settlement, where everything began and spread from one central point, than in Attica, where the separate villages had once nourished a population

[1] Of these Sikel or Sikan caverns many traces yet remain: see Otto Siefert, Akragas und sein Gebiet, pp. 39, 45, 49, 55, and the work of Captain W. H. Smyth, — Sicily and its Islands, London, 1824, p. 190.

"These cryptæ (observes the latter) appear to have been the earliest effort of a primitive and pastoral people towards a town, and are generally without regularity as to shape and magnitude: in after-ages they perhaps served as a retreat in time of danger, and as a place of security in case of extraordinary alarm, for women, children, and valuables. In this light, I was particularly struck with the resemblance these rude habitations bore to the caves I had seen in Owhyhee, for similar uses. The Troglodyte villages of Northern Africa, of which I saw several, are also precisely the same."

About the early cave-residences in Sardinia and the Balearic islands, consult Diodor. v, 15–17.

[2] Thucydid. vi, 45. τὰ περιπόλια τὰ ἐν τῇ χώρᾳ (of Syracuse).

politically independent. It was in the town, therefore, that the aggregate increase of the colony palpably concentrated itself, — property as well as population, — private comfort and luxury not less than public force and grandeur. Such growth and improvement was of course sustained by the cultivation of the territory, but the evidences of it were manifested in the town; and the large population which we shall have occasion to notice as belonging to Agrigentum, Sybaris, and other cities, will illustrate this position.

There is another point of some importance to mention in regard to the Sicilian and Italian cities. The population of the town itself may have been principally, though not wholly, Greek; but the population of the territory belonging to the town, or of the dependent villages which covered it, must have been in a great measure Sikel or Sikan. The proof of this is found in a circumstance common to all the Sicilian and Italian Greeks, — the peculiarity of their weights, measures, monetary system, and language. The pound and ounce are divisions and denominations belonging altogether to Italy and Sicily, and unknown originally to the Greeks, whose scale consisted of the obolus, the drachma, the mina, and the talent: among the Greeks, too, the metal first and most commonly employed for money was silver, while in Italy and Sicily copper was the primitive metal made use of. Now among all the Italian and Sicilian Greeks, a scale of weight and money arose quite different from that of the Greeks at home, and formed by a combination and adjustment of the one of these systems to the other; it is in many points complex and difficult to understand, but in the final result the native system seems to be predominant, and the Grecian system subordinate.[1] Such a conse-

[1] Respecting the statical and monetary system, prevalent among the Italian and Sicilian Greeks, see Aristot. Fragment. περὶ Πολιτειῶν, ed. Neumann, p. 102; Pollux, iv, 174, ix, 80–87; and above all, Boeckh, Metrologie, ch. xviii, p. 292, and the abstract and review of that work in the Classical Museum, No. 1; also, O. Müller, Die Etrusker, vol. i, p. 309.

The Sicilian Greeks reckoned by talents, each consisting of 120 litræ or libræ: the Æginæan obolus was the equivalent of the litra, having been the value in silver of a pound-weight of copper, at the time when the valuation was taken.

The common denominations of money and weight — with the exception

quence as this could not have ensued, if the Greek settlers in Italy and Sicily had kept themselves apart as communities, and had merely carried on commerce and barter with communities of Sikels: it implies a fusion of the two races in the same community, though doubtless in the relation of superior and subject, and not in that of equals. The Greeks on arriving in the country expelled the natives from the town, perhaps also from the lands immediately round the town; but when they gradually extended their territory, this was probably accomplished, not by the expulsion, but by the subjugation of those Sikel tribes and villages, much subdivided and each individually petty, whom their aggressions successively touched.

At the time when Theoklês landed on the hill near Naxos, and Archias in the islet of Ortygia, and when each of them expelled the Sikels from that particular spot, there were Sikel villages or little communities spread through all the neighboring country. By the gradual encroachments of the colony, some of these might be dispossessed and driven out of the plains near the coast into the more mountainous regions of the interior, but many of them doubtless found it convenient to submit, to surrender a portion of their lands, and to hold the rest as subordinate villagers of an Hellenic city-community:[1] and we find even at the time of the Athenian invasion (414 B. C.) villages existing in distinct identity as Sikels, yet subject and tributary to Syracuse. Moreover, the influence which the Greeks exercised, though in the first instance essentially compulsory, became also in part self-operating, — the ascendency of a higher over a lower civilization. It was the working of concentrated townsmen, safe among one another by their walls and by mutual confidence, and surrounded by more or less of ornament, public as well as private, — upon dispersed, unprotected, artless villagers, who could not be insensible to the charm of that superior intellect, imagination, and or-

of the talent, the meaning of which was altered while the word was retained — seem to have been all borrowed by the Italian and Sicilian Greeks from the Sikel or Italic scale, not from the Grecian, — *νούμμος, λίτρα, δεκάλιτρον, πεντηκοντάλιτρον, πεντούγκιον, ἑξᾶς, τετρᾶς, τριᾶς, ἡμίνα, ἡμιλίτριον* (see Fragments of Epicharmus and Sophron, ap. Ahrens de Dialecto Dorica, Appendix, pp. 435, 471, 472, and Athenæ. xi, p. 479).

[1] Thucyd vi, 88.

ganization, which wrought so powerfully upon the whole contemporaneous world. To understand the action of these superior emigrants upon the native but inferior Sikels, during those three earliest centuries (730–430 B. C.) which followed the arrival of Archias and Theoklês, we have only to study the continuance of the same action during the three succeeding centuries which preceded the age of Cicero. At the period when Athens undertook the siege of Syracuse (B. C. 415), the interior of the island was occupied by Sikel and Sikan communities, autonomous, and retaining their native customs and language;[1] but in the time of Verres and Cicero (three centuries and a half afterwards) the interior of the island, as well as the maritime regions had become Hellenized: the towns in the interior were then hardly less Greek than those on the coast. Cicero contrasts favorably the character of the Sicilians with that of the Greeks generally (*i. e.* the Greeks out of Sicily), but he nowhere distinguishes Greeks in Sicily from native Sikels;[2] nor Enna and Centuripi from Katana and Agrigentum. The little Sikel villages became gradually semi-Hellenized and merged into subjects of a Grecian town during the first three centuries, this change took place in the regions of the coast,— during the following three centuries, in the regions of the interior; and probably with greater rapidity and effect in the earlier period, not only because the action of the Grecian communities was then closer, more concentrated, and

[1] Thucyd. vi, 62–87; vii, 13.

[2] Cicero in Verrem, Act ii, lib. iv, c. 26–51; Diodor. v, 6.

Contrast the manner in which Cicero speaks of Agyrium, Centuripi, and Enna, with the description of these places as inhabited by autonomous Sikels, B. C. 396, in the wars of the elder Dionysius (Diodor. xiv, 55, 58, 78). Both Sikans and Sikels were at that time completely distinguished from the Greeks, in the centre of the island.

O. Müller states that "Syracuse, seventy years after its foundation, colonized Akræ, also Enna, situated in the centre of the island," (Hist. of Dorians, i, 6, 7). Enna is mentioned by Stephanus Byz. as a Syracusan foundation, but without notice of the date of its foundation, which must have been much later than Müller here affirms. Serra di Falco (Antichità di Sicilia, Introd. t. i, p. 9) gives Enna as having been founded later than Akræ, but earlier than Kasmenæ; for which date I find no authority. Talaria (see Steph Byz. *ad voc.*) is also mentioned as another Syracusan city, of which we do not know either the date or the particulars of foundation.

more compulsory, but because also the obstinate tribes could then retire into the interior.

The Greeks in Sicily are thus not to be considered as purely Greeks, but as modified by a mixture of Sikel and Sikan language, customs, and character. Each town included in its non-privileged population a number of semi-Hellenized Sikels (or Sikans, as the case might be), who, though in a state of dependence, contributed to mix the breed and influence the entire mass. We have no reason to suppose that the Sikel or Œnotrian language ever became written, like Latin, Oscan, or Umbrian:[1] the inscriptions of Segesta and Halesus are all in Doric Greek, which supplanted the native tongue for public purposes as a separate language, but not without becoming itself modified in the confluence. In following the ever-renewed succession of violent political changes, the inferior capacity of regulated and pacific popular government, and the more unrestrained and voluptuous license, which the Sicilian and Italian Greeks[2] exhibit as compared with Athens and the cities of Greece proper, — we must call to mind that we are not dealing with pure Hellenism; and that the native element, though not unfavorable to activity or increase of wealth, prevented the Grecian colonist from partaking fully in that improved organization which we so distinctly trace in Athens from Solon downwards. How much the taste, habits, ideas, religion, and local mythes, of the native Sikels passed into the minds of the Sikeliots or Sicilian Greeks, is shown by the character of their literature and poetry. Sicily was the native country of that rustic mirth and village buffoonery which gave birth to the primitive comedy, — politicized and altered at Athens so as to suit men of the market-place, the ekklesia, and the dikastery, — blending, in the comedies of the Syracusan Epicharmus, copious details about the indulgences of the table (for which the ancient Sicilians were renowned) with Pythagorean philosophy and moral maxims, — but given with all the naked simplicity of common life, in a sort of rhythmical prose, without even the restraint of a fixed metre, by the Syracusan Sophrôn in his lost Mimes, and afterwards polished as well as idealized in the Bucolic poetry of Theokritus.[1] That which is commonly termed the Doric comedy was in great part at least, the Sikel comedy taken up by Dorian composers, — the Doric race and dialect being decidedly predominant in Sicily: the manners thus dramatized belonged to that coarser vein of humor which the Doric Greeks of the town had in common with the semi-Hellenized Sikels of the circumjacent villages. Moreover, it seems probable that this rustic population enabled the despots of the Greco-Sicilian towns to form easily and cheaply those bodies of mercenary troops, by whom their power was sustained,[2] and whose presence rendered the continuance of popular government, even supposing it begun, all but impossible.

It was the destiny of most of the Grecian colonial establishments to perish by the growth and aggression of those inland powers upon whose coast they were planted, — powers which gradually acquired, from the vicinity of the Greeks, a military and political organization, and a power of concentrated action, such as they had not originally possessed. But in Sicily, the Sikels were not numerous enough even to maintain permanently their own nationality, and were ultimately penetrated on all sides by Hellenic ascendency and manners. We shall, nevertheless, come

Ahrens, De Dialecto Doricâ, sect. 1, p. 3.

[1] Timokreon, Fragment. 5 ap. Ahrens, De Dialecto Doricâ, p. 478, — Σικελὸς κομψὸς ἀνὴρ Ποτὶ τὰν ματέρ' ἔφα.

Bernhardy, Grundriss der Geschichte der Griech. Litteratur, vol. ii, ch. 120, sects. 2-5; Grysar, De Doriensium Comœdia, Cologne, 1828, ch. i, pp. 41, 55, 57, 210; Boeckh, De Græcæ Tragœd. Princip. p. 52; Aristot. ap. Athenæ. xi, 505. The κότταβος seems to have been a native Sikel fashion, borrowed by the Greeks (Athenæus, xv, pp. 666-668).

The Sicilian βουκολιασμὸς was a fashion among the Sicilian herdsmen earlier than Epicharmus, who noticed the alleged inventor of it, Diomus, the βούκολος Σικελιώτης (Athenæ. xiv, p. 619). The rustic manners and speech represented in the Sicilian comedy are contrasted with the town manners and speech of the Attic comedy, by Plautus, Persæ, Act iii Sc. 1, v, 31: —

"Librorum eccillum habeo plenum soracum.
Dabuntur dotis tibi inde sexcenti logi,
Atque Attici omnes, nullum Siculum acceperis."

Compare the beginning of the prologue to the Menæchmi of Plautus.

The comic μῦθος began at Syracuse with Epicharmus and Phormus (Aristot. Poet. v 5).

[2] Zenobius, Proverb. v, 84, — Σικελὸς στρατιώτης.

to one remarkable attempt, made by a native Sikel prince in the 82d Olympiad (455 B. C.), — the enterprising Duketius, — to group many petty Sikel villages into one considerable town, and thus to raise his countrymen into the Grecian stage of polity and organization. Had there been any Sikel prince endowed with these superior ideas at the time when the Greeks first settled in Sicily, the subsequent history of the island would probably have been very different; but Duketius had derived his projects from the spectacle of the Grecian towns around him, and these latter had acquired much too great power to permit him to succeed. The description of his abortive attempt, however, which we find in Diodorus,[1] meagre as it is, forms an interesting point in the history of the island.

Grecian colonization in Italy began nearly at the same time as in Sicily, and was marked by the same general circumstances. Placing ourselves at Rhegium (now Reggio) on the Sicilian strait, we trace Greek cities gradually planted on various points of the coast as far as Cumæ on the one sea, and Tarentum (Taranto) on the other. Between the two seas runs the lofty chain of the Apennines, calcareous in the upper part of its course, throughout middle Italy, — granitic and schistose in the lower part, where it traverses the territories now called the hither and the farther Calabria. The plains and valleys on each side of the Calabrian Apennines exhibit a luxuriance of vegetation extolled by all observers, and surpassing even that of Sicily;[2] and great as

[1] Diodor. xi, 90–91; xii, 9.

[2] See Dolomieu, Dissertation on the Earthquakes of Calabria Ultra, in 1783, in Pinkerton, Collection of Voyages and Travels, vol. v, p. 280.

"It is impossible (he observes) to form an adequate idea of the fertility of Calabria Ultra, particularly of that part called the Plain (south-west of the Apennines, below the gulf of St. Eufemia). The fields, productive of olive-trees of larger growth than any seen elsewhere, are yet productive of grain. Vines load with their branches the trees on which they grow, yet lessen not their crops. All things grow there, and nature seems to anticipate the wishes of the husbandman. There is never a sufficiency of hands to gather the whole of the olives, which finally fall and rot at the bottom of the trees that bore them, in the months of February and March. Crowds of foreigners, principally Sicilians, come there to help to gather them, and share the produce with the grower. Oil is their chief article of exportation: in every quarter their wines are good and precious." Compare pp 278–282.

the productive powers of this territory are now, there is full reason for believing that they must have been far greater in ancient times. For it has been visited by repeated earthquakes, each of which has left calamitous marks of devastation: those of 1638 and 1783 — especially the latter, whose destructive effects were on a terrific scale, both as to life and property[1] — are of a date sufficiently recent to admit of recording and measuring the damage done by each; and that damage, in many parts of the south-western coast, was great and irreparable. Animated as the epithets are, therefore, with which the modern traveller paints the present fertility of Calabria, we are warranted in enlarging their meaning when we conceive the country as it stood between 720–320 B. C., the period of Grecian occupation and independence; while the unhealthy air, which now desolates the plains generally, seems then to have been felt only to a limited extent, and over particular localities. The founders of Tarentum, Sybaris, Krotôn, Lokri, and Rhegium, planted themselves in situations of unexampled promise to the industrious cultivator, which the previous inhabitants had turned to little account: since the subjugation of the Grecian cities, these once rich possessions have sunk into poverty and depopulation, especially during the last three centuries, from insalubrity, indolence, bad administration, and fear of the Barbary corsairs.

The Œnotrians, Sikels, or Italians, who were in possession of these territories in 720 B. C., seem to have been rude petty communities, — procuring for themselves safety by residence on lofty eminences, — more pastoral than agricultural, and some of them consuming the produce of their fields in common mess, on a principle analogous to the syssitia of Sparta or Krête. King Italus was said to have introduced this peculiarity[2] among the southernmost portion of the Œnotrian population, and at the same time to have bestowed upon them the name of Italians, though they were also known by the name of Sikels. Through-

[1] Mr Keppel Craven observes (Tour through the Southern Provinces of Naples, ch xiii, p. 254), "The earthquake of 1783 may be said to have altered the face of the whole of Calabria Ultra, and extended its ravages as far northward as Cosenza."

[2] Aristot. Polit vii, 9, 3.

out the centre of Calabria between sea and sea, the high chain of the Apennines afforded protection to a certain extent both to their independence and to their pastoral habits. But these heights are made to be enjoyed in conjunction with the plains beneath, so as to alternate winter and summer pasture for the cattle: it is in this manner that the richness of the country is rendered available, since a large portion of the mountain range is buried in snow during the winter months. Such remarkable diversity of soil and climate rendered Calabria a land of promise for Grecian settlement: the plains and lower eminences being as productive of corn, wine, oil, and flax, as the mountains in summer-pasture and timber, — and abundance of rain falling upon the higher ground, which requires only industry and care to be made to impart the maximum of fertility to the lower: moreover, a long line of sea-coast, — though not well furnished with harbors, — and an abundant supply of fish, came in aid of the advantages of the soil. While the poorer freemen of the Grecian cities were enabled to obtain small lots of fertile land in the neighborhood, to be cultivated by their own hands, and to provide for the most part their own food and clothing, the richer proprietors made profitable use of the more distant portions of the territory by means of their cattle, sheep, and slaves.

Of the Grecian towns on this favored coast, the earliest as well as the most prosperous were Sybaris and Krotôn: both in the gulf of Tarentum, — both of Achæan origin, and conterminous with each other in respect of territory. Krotôn was placed not far to the west of the south-eastern extremity of the gulf, called in ancient times the Lakinian cape, and ennobled by the temple of the Lakinian Hêrê, which became alike venerated and adorned by the Greek resident as well as by the passing navigator: one solitary column of the temple, the humble remnant of its past magnificence, yet marks the extremity of this once celebrated promontory. Sybaris seems to have been planted in the year 720 B. C., Krotôn in 710 B. C.: Iselikeus was œkist of the former,[1] Myskellus of the latter. This large Achæan emi-

[1] Strabo, vi, p. 263. Kramer, in his new edition of Strabo follows Koray in suspecting the correctness of the name Ἰσελικεὺς, which certainly departs from the usual analogy of Grecian names. Assuming it to be incorrect, however, there are no means of rectifying it: Kramer prints, — *οἰκιστὴς δὲ αὐτῆς ὁ* Ἰσ... Ἑλικεὺς: thus making Ἑλικεὺς the ethnicon of the Achæan town Helikê.

There were also legends which connected the foundation of Krotôn with Hêraklês, who was affirmed to have been hospitably sheltered by the eponymous hero Krotôn. Hêraklês was *οἰκεῖος* at Krotôn: see Ovid. Metamorph. xv, 1-60; Jamblichus, Vit. Pythagor. c. 8, p. 30, c. 9, p. 37, ed Kuster.

gration seems to have been connected with the previous expulsion of the Achæan population from the more southerly region of Peloponnesus by the Dorians, though in what precise manner we are not enabled to see: the Achæan towns in Peloponnesus appear in later times too inconsiderable to furnish emigrants, but probably in the eighth century B. C. their population may have been larger. The town of Sybaris was planted between two rivers, the Sybaris and the Krathis,[1] the name of the latter borrowed from a river of Achaia, — the town of Krotôn about twenty-five miles distant, on the river Æsarus. The primitive settlers of Sybaris consisted in part of Trœzenians, who were, however, subsequently expelled by the more numerous Achæans, — a deed of violence which was construed by the religious sentiment of Antiochus and some other Grecian historians, as having drawn down upon them the anger of the gods in the ultimate destruction of the city by the Krotoniates.[2]

The fatal contest between these two cities, which ended in the ruin of Sybaris, took place in 510 B. C., after the latter had subsisted in her prosperity for two hundred and ten years. And the astonishing prosperity to which both of them attained is a sufficient proof that during the most of this period they had remained in peace at least, if not in alliance and common Achæan brotherhood. Unfortunately, the general fact of their great size, wealth, and power, is all that we are permitted to know. The walls of Sybaris embraced a circuit of fifty stadia, or more than six miles, while those of Krotôn were even larger, and comprised not less than twelve miles:[3] a large walled circuit was advantageous for sheltering the movable property in the territory around, which was carried in on the arrival of an invading enemy. Both cities

[1] Herodot. i, 145.

[2] Strabo, vi, p. 262; Livy, xxiv, 3

[3] Aristot. Polit. v, 2, 10

possessed an extensive dominion across the Calabrian peninsula from sea to sea; but the territorial range of Sybaris seems to have been greater and her colonies wider and more distant, — a fact which may, perhaps, explain the smaller circuit of the city.

The Sybarites were founders of Laus and Skidrus, on the Mediterranean sea in the gulf of Policastro, and even of the more distant Poseidonia, — now known by its Latin name of Pæstum, as well as by the temples which still remain to decorate its deserted site. They possessed twenty-five dependent towns, and ruled over four distinct native tribes or nations. What these nations were we are not told,[1] but they were probably different sections of the Œnotrian name. The Krotoniates also reached across to the Mediterranean sea, and founded (upon the gulf now called St. Euphemia) the town of Terina, and seemingly also that of Lametini.[2] The inhabitants of the Epizephyrian Lokri, which was situated in a more southern part of Calabria Ultra, near the modern town of Gerace, extended themselves in like manner across the peninsula, and founded upon the Mediterranean coast the towns of Hippônium, Medma, and Mataurum,[3] as well as Melæ and Itoneia, in localities not now exactly ascertained.

Myskellus of Rhypes in Achaia, the founder of Krotôn under the express indication of the Delphian oracle, is said to have thought the site of Sybaris preferable, and to have solicited permission from the oracle to plant his colony there, but he was admonished to obey strictly the directions first given.[4] It is farther

[4] Herodot. viii, 47. *Κροτωνιῆται, γένος εἰσὶν Ἀχαιοί*: the date of the foundation is given by Dionysius of Halikarnassus (A. R. ii, 59).

The oracular commands delivered to Myskellus are found at length in the Fragments of Diodorus, published by Maii (Scriptt. Vet. Fragm. x, p. 8): compare Zenob. Proverb. Centur. iii, 42.

Though Myskellus is thus given as the œkist of Krotôn, yet we find a Krotoniatic coin with the inscription *Ἡρακλῆς Οἰκίστας* (Eckhel, Doctrin. Numm. Vet. vol. i, p. 172): the worship of Hêraklês at Krotôn under this

affirmed that the foundation of Krotôn was aided by Archias, then passing along the coast with his settlers for Syracuse, who is also brought into conjunction in a similar manner with the foundation of Lokri: but neither of these statements appears chronologically admissible. The Italian Lokri (called Epizephyrian, from the neighborhood of cape Zephyrium) was founded in the year 683 B. C. by settlers from the Lokrians, — either the Ozolian Lokrians in the Krissæan gulf, or those of Opus on the Eubœan strait. This point was disputed even in antiquity, and perhaps both the one and the other may have contributed: Euanthus was the œkist of the place.[1] The first years of the Epizephyrian Lokri are said to have been years of sedition and discord. And the vile character which we hear ascribed to the primitive colonists, as well as their perfidious dealing with the natives, are the more to be noted, as the Lokrians, of the times both of Aristotle and of Polybius, fully believed these statements in regard to their own ancestors.

The original emigrants to Lokri were, according to Aristotle, a body of runaway slaves, men-stealers, and adulterers, whose only legitimate connection with an honorable Hellenic root arose from a certain number of well-born Lokrian women who accompanied them. These women belonged to those select families called the Hundred Houses, who constituted what may be called the nobility of the Lokrians in Greece proper, and their descendants continued to enjoy a certain rank and preëminence in the colony, even in the time of Polybius. The emigration is said to have been occasioned by disorderly intercourse between these noble Lokrian women and their slaves, — perhaps by intermarriage with persons of inferior station, where there had existed no re-

title is analogous to that of *Ἀπολλὼν Οἰκίστης καὶ Δωματίτης* at Ægina (Pythænêtus ap. Schol. Pindar. Nem. v, 81). There were various legends respecting Hêraklês, the Eponymus Krotôn, and Lakinius. Herakleidês Ponticus, Fragm. 30, ed. Köller; Diodor. iv, 24; Ovid, Metamorph. xv, 1–53.

[1] Strabo, vi, p. 259. Euantheia, Hyantheia, or Œantheia, was one of the towns of the Ozolian Lokrians on the north side of the Krissæan gulf, from which, perhaps, the emigrants may have departed, carrying with them the name and patronage of its eponymous œkist (Plutarch, Quæst. Græc. c. 5 Skylax, p. 14).

cognized *connubium*;[1] a fact referred, by the informants of Aristotle, to the long duration of the first Messenian war, — the Lokrian warriors having for the most part continued in the Messenian territory as auxiliaries of the Spartans during the twenty years of that war,[2] permitting themselves only rare and short visits to their homes. This is a story resembling that which we shall find in explanation of the colony of Tarentum. It comes to us too imperfectly to admit of criticism or verification; but the unamiable character of the first emigrants is a statement deserving credit, and very unlikely to have been invented. Their first proceedings on settling in Italy display a perfidy in accordance with the character ascribed to them. They found the territory in this southern portion of the Calabrian peninsula possessed by native Sikels, who, alarmed at their force, and afraid to try the hazard of resistance, agreed to admit them to a participation and joint residence. The covenant was concluded and sworn to by both parties in the following terms: "There shall be friendship between us, and we will enjoy the land in common, so long as we stand upon this earth and have heads upon our shoulders." At the time when the oath was taken, the Lokrians had put earth into their shoes and concealed heads of garlic upon their shoulders; so that, when they had divested themselves of these appendages, the oath was considered as no longer binding. Availing themselves of the first convenient opportunity, they attacked the Sikels by surprise and drove them out of the territory, of which they thus acquired the exclusive possession.[3] Their first establishment was formed upon the headland itself, cape Zephyrium (now Bruzzano); but after three or four years the site of the town was moved to an eminence in the neighboring plain, in which the Syracusans are said to have aided them.[4]

[1] Polyb. xii, 5, 8, 9; Dionys. Perieget. v, 365.

[2] This fact may connect the foundation of the colony of Lokri with Sparta; but the statement of Pausanias (iii, 3, 1), that the Spartans in the reign of king Polydorus founded both Lokri and Krotôn, seems to belong to a different historical conception.

[3] Polyb. xii, 5–12.

[4] Strabo, vi, p. 259. We find that, in the accounts given of the foundation of Korkyra, Krotôn, and Lokri, reference is made to the Syracusan settlers either as contemporary in the way of companionship, or as auxiliaries perhaps the accounts all come from the Syracusan historian Antiochus, who exaggerated the intervention of his own ancestors.

In describing the Grecian settlers in Sicily, I have already stated that they are to be considered as Greeks with a considerable infusion of blood, of habits, and of manners, from the native Sikels: the case is the same with the Italiots, or Italian Greeks, and in respect to these Epizephyrian Lokrians, especially, we find it expressly noticed by Polybius. Composed as their band was of ignoble and worthless men, not bound together by strong tribe-feelings or traditional customs, they were the more ready to adopt new practices, as well religious as civil,[1] from the Sikels. One in particular is noticed by the historian,— the religious dignity called the Phialêphorus, or censer-bearer, enjoyed among the native Sikels by a youth of noble birth, who performed the duties belonging to it in their sacrifices; but the Lokrians, while they identified themselves with the religious ceremony, and adopted both the name and the dignity, altered the sex, and conferred it upon one of those women of noble blood who constituted the ornament of their settlement. Even down to the days of Polybius, some maiden descended from one of these select Hundred Houses, still continued to bear the title and to perform the ceremonial duties of Phialêphorus. We learn from these statements how large a portion of Sikels must have become incorporated as dependents in the colony of the Epizephyrian Lokri, and how strongly marked was the intermixture of their habits with those of the Greek settlers; while the tracing back among them of all eminence of descent to a few emigrant women of noble birth, is a peculiarity belonging exclusively to their city.

That a body of colonists, formed of such unpromising materials, should have fallen into much lawlessness and disorder, is noway surprising; but these mischiefs appear to have become so utterly intolerable in the early years of the colony, as to force upon every one the necessity of some remedy. Hence arose a phenomenon new in the march of Grecian society, — the first pro-

[1] "Nil patrium, nisi nomen, habet Romanus alumnus," observes Propertius (iv, 37) respecting the Romans: repeated with still greater bitterness in the epistle in Sallust from Mithridatês to Arsacês, (p. 191, Delph. ed.) The remark is well-applicable to Lokri.

mulgation of written laws. The Epizephyrian Lokrians, having applied to the Delphian oracle for some healing suggestion under their distress, were directed to make laws for themselves;[1] and received the ordinances of a shepherd named Zaleukus, which he professed to have learned from the goddess Athênê in a dream. His laws are said to have been put in writing and promulgated in 664 B. C., forty years earlier than those of Drako at Athens.

That these first of all Grecian written laws were few and simple, we may be sufficiently assured. The only fact certain respecting them is their extraordinary rigor:[2] they seem to have enjoined the application of the *lex talionis* as a punishment for personal injuries. In this general character of his laws, Zaleukus was the counterpart of Drako. But so little was certainly known, and so much falsely asserted, respecting him, that Timæus the historian went so far as to call in question his real existence,[3] — against the authority not only of Ephorus, but also of Aristotle and Theophrastus. The laws must have remained, however, for a long time, formally unchanged; for so great was the aversion of the Lokrians, we are told, to any new law, that the man who ventured to propose one appeared in public with a rope round his neck, which was at once tightened if he failed to convince the assembly of the necessity of his proposition.[4] Of the government of the Epizephyrian Lokri we know only, that in

[1] Aristot. ap. Schol. Pindar. Olymp. x, 17.

[2] Proverb. Zenob. Centur. iv, 20. *Ζαλεύκου νόμος, ἐπὶ τῶν ἀποτόμων.*

[3] Strabo, vi, p. 259; Skymnus Chius, v, 313; Cicero de Legg. ii, 6, and Epist. ad Atticum, vi, 1.

Heyne, Opuscula, vol. ii, Epimetrum ii, pp. 60–68; Göller ad Timæi Fragment. pp. 220–259. Bentley (on the Epistles of Phalaris, ch. xii, p 274) seems to countenance, without adequate reason, the doubt of Timæus about the existence of Zaleukus. But the statement of Ephorus, that Zaleukus had collected his ordinances from the Kretan, Laconian, and Areiopagitic customs, when contrasted with the simple and far more credible statement above cited from Aristotle, shows how loose were the affirmations respecting the Lokrian lawgiver (ap. Strabo, vi, p. 260). Other statements, also, concerning him, alluded to by Aristotle (Politic. ii, 9, 3), were distinctly at variance with chronology.

Charondas, the lawgiver of the Chalkidic towns in Italy and Sicily, as far as we can judge amidst much confusion of testimony, seems to belong to an age much later than Zaleukus: I shall speak of him hereafter.

[4] Dêmosthen. cont. Timokrat. p. 744; Polyb. xii, 10.

later times it included a great council of one thousand members, and a chief executive magistrate called Kosmopolis: it is spoken of also as strictly and carefully administered.

The date of Rhegium (Reggio), separated from the territory of the Epizephyrian Lokri by the river Halex, must have been not only earlier than Lokri, but even earlier than Sybaris, — if the statement of Antiochus be correct, that the colonists were joined by those Messenians, who, prior to the first Messenian war, were anxious to make reparation to the Spartans for the outrage offered to the Spartan maidens at the temple of Artemis Limnatis, but were overborne by their countrymen and forced into exile. A different version, however, is given by Pausanias of this migration of Messenians to Rhegium, yet still admitting the fact of such migration at the close of the first Messenian war, which would place the foundation of the city earlier than 720 B. C. Though Rhegium was a Chalkidic colony, yet a portion of its inhabitants seem to have been undoubtedly of Messenian origin, and amongst them Anaxilas, despot of the town between 500-470 B. C., who traced his descent through two centuries to a Messenian emigrant named Alkidamidas.[1] The celebrity and power of Anaxilas, just at the time when the ancient history of the Greek towns was beginning to be set forth in prose, and with some degree of system, caused the Messenian element in the population of Rhegium to be noticed prominently; but the town was essentially Chalkidic, connected by colonial sisterhood with the Chalkidic settlements in Sicily,— Zanklê, Naxos, Katana, and Leontini. The original emigrants departed from Chalkis, as a tenth of the citizens consecrated by vow to Apollo in consequence of famine; and the directions of the god, as well as the invitation of the Zanklæans, guided their course to Rhegium. The town was flourishing, and acquired a considerable number of dependent villages around,[2] inhabited doubtless by cultivators of the indigenous population. But it seems to have been often at variance with the conterminous Lokrians, and received one severe defeat, in conjunction with the Tarentines, which will be hereafter recounted.

[1] Strabo, vi, p. 257; Pausan. iv, 23, 2.

[2] Strabo, vi, p. 258. *ἰσχυσε δὲ μάλιστα ἡ τῶν Ῥηγινῶν πόλις, καὶ περιοικίδας ἔσχε συχνὰς*, etc.

Between Lokri and the Lakinian cape were situated the Achæan colony of Kaulônia, and Skyllêtium; the latter seemingly included in the domain of Krotôn, though pretending to have been originally founded by Menestheus, the leader of the Athenians at the siege of Troy: Petilia, also, a hill-fortress north-west of the Lakinian cape, as well as Makalla, both comprised in the territory of Krotôn, were affirmed to have been founded by Philoktêtês. Along all this coast of the gulf of Tarentum, there were various establishments ascribed to the heroes of the Trojan war,[1] — Epeius, Philoktêtês, Nestor, — or to their returning troops. Of these establishments, probably the occupants had been small, miscellaneous, unacknowledged bands of Grecian adventurers,[2] who assumed to themselves the most honorable origin which they could imagine, and who became afterwards absorbed into the larger colonial establishments which followed; the latter adopting and taking upon themselves the heroic worship of Philoktêtês or other warriors from Troy, which the prior emigrants had begun.

During the flourishing times of Sybaris and Krotôn, it seems that these two great cities divided the whole length of the coast of the Tarentine gulf, from the spot now called Rocca Imperiale down to the south of the Lakinian cape. Between the point where the dominion of Sybaris terminated on the Tarentine side, and Tarentum itself, there were two considerable Grecian settlements, — Siris, afterwards called Herakleia, and Metapontium. The fertility and attraction of the territory of Siris, with its two rivers, Akiris and Siris, were well known even to the poet Archilochus[3] (660 B. C.), but we do not know the date at which it passed from the indigenous Chônians or Chaonians into the hands of Greek settlers. A citizen of Siris is mentioned among the suitors for the daughter of the Sikyonian Kleisthenês, (580–560 B. C.) We are told that some Kolophonian fugitives, emigrating to escape the dominion of the Lydian kings, attacked

[1] Strabo, vi, p. 263; Aristot. Mirab. Ausc. c. 106; Athenæ. xii, p. 523. It is to these reputed Rhodian companions of Tlêpolemus before Troy, that the allusion in Strabo refers, to Rhodian occupants near Sybaris (xiv, p 655).

[2] See Mannert, Geographie, part ix, b. 9, ch. 11, p. 234.

[3] Archiloch. Fragm. 17, ed. Schneidewin.

and possessed themselves of the spot, giving to it the name Polieion. The Chônians of Siris ascribed to themselves a Trojan origin, exhibiting a wooden image of the Ilian Athênê, which they affirmed to have been brought away by their fugitive ancestors after the capture of Troy. When the town was stormed by the Ionians, many of the inhabitants clung to this relic for protection, but were dragged away and slain by the victors,[1] whose sacrilege was supposed to have been the cause that their settlement was not durable. At the time of the invasion of Greece by Xerxês, the fertile territory of Siritis was considered as still open to be colonized; for the Athenians when their affairs appeared desperate, had this scheme of emigration in reserve as a possible resource;[2] and there were inspired declarations from some of the contemporary prophets, which encouraged them to undertake it. At length, after the town of Thurii had been founded by Athens, in the vicinity of the dismantled Sybaris, the Thurians tried to possess themselves of the Siritid territory, but were opposed by the Tarentines.[3] According to the compromise concluded between them, Tarentum was recognized as the metropolis of the colony, but joint possession was allowed both to Tarentines and Thurians. The former transferred the site of the city, under the new name Herakleia, to a spot three miles from the sea, leaving Siris as the place of maritime access to it.[4]

About twenty-five miles eastward of Siris, on the coast of the Tarentine gulf, was situated Metapontium, a Greek town which was affirmed by some to draw its origin from the Pylian companions of Nestor, — by others, from the Phocian warriors of Epe-

[1] Herodot. vi, 127; Strabo, vi, p. 263. The name Polieion seems to be read Πλεῖον in Aristot. Mirab. Auscult. 106.

Niebuhr assigns this Kolophonian settlement of Siris to the reign of Gygês in Lydia; for which I know no other evidence except the statement that Gygês took τῶν Κολοφωνίων τὸ ἄστυ (Herodot. i, 14); but this is no proof that the inhabitants then emigrated; for Kolophôn was a very flourishing and prosperous city afterwards.

Justin (xx, 2) gives a case of sacrilegious massacre committed near the statue of Athênê at Siris, which appears to be totally different from the tale respecting the Kolophonians.

[2] Herodot. viii, 62.

[3] Strabo, vi, p. 264.

[4] Strabo, vi, p. 264.

ius, on their return from Troy. The proofs of the former were exhibited in the worship of the Neleid heroes, — the proofs of the latter in the preservation of the reputed identical tools with which Epeius had constructed the Trojan horse.[1] Metapontium was planted on the territory of the Chônians or Œnotrians, but the first colony is said to have been destroyed by an attack of the Samnites,[2] at what period we do not know. It had been founded by some Achæan settlers, — under the direction of the œkist Daulius, despot of the Phocian Krissa, and invited by the inhabitants of Sybaris, who feared that the place might be appropriated by the neighboring Tarentines, colonists from Sparta and hereditary enemies in Peloponnesus of the Achæan race. Before the new settlers arrived, however, the place seems to have been already appropriated by the Tarentines; for the Achæan Leukippus only obtained their permission to land by a fraudulent promise, and, after all, had to sustain a forcible struggle both with them and with the neighboring Œnotrians, which was compromised by a division of territory. The fertility of the Metapontine territory was hardly less celebrated than that of the Siritid.[3]

Farther eastward of Metapontium, again at the distance of about twenty-five miles, was situated the great city of Taras, or

[1] Strabo, *l. c.*; Justin, xx, 2; Velleius Paterc. i, 1; Aristot. Mirab. Auscult. c. 108. This story respecting the presence and implements of Epeius may have arisen through the Phocian settlers from Krissa.

[2] The words of Strabo — *ἠφανίσθη δ' ὑπὸ Σαννιτῶν* (vi, p. 264) can hardly be connected with the immediately following narrative, which he gives out of Antiochus, respecting the revival of the place by new Achæan settlers, invited by the Achæans of Sybaris. For the latter place was reduced to impotence in 510 B. C.: invitations by the Achæans of Sybaris must, therefore, be anterior to that date. If Daulius despot of Krissa is to be admitted as the œkist of Metapontium, the plantation of it must be placed early in the first half of the sixth century B. C.; but there is great difficulty in admitting the extension of Samnite conquests to the gulf of Tarentum at so early a period as this. I therefore construe the words of Antiochus as referring to the original settlement of Metapontium by the Greeks, not to the revival of the town after its destruction by the Samnites.

[3] Strabo, *l. c.*; Stephanus Byz. (v, *Μεταπόντιον*) identifies Metapontium and Siris in a perplexing manner.

Livy (xxv, 15) recognizes Metapontium as Achæan: compare Heyne Opuscula, vol. ii, Prolus. xii, p. 207.

Tarentum, a colony from Sparta founded after the first Messenian war, seemingly about 707 B. C. The œkist Phalanthus, said to have been an Herakleid, was placed at the head of a body of Spartan emigrants, — consisting principally of some citizens called Epeunaktæ, and of the youth called Partheniæ, who had been disgraced by their countrymen on account of their origin, and were on the point of breaking out into rebellion. It was out of the Messenian war that this emigration is stated to have arisen, in a manner analogous to that which has been stated respecting the Epizephyrian Lokrians. The Lacedæmonians, before entering Messenia to carry on the war, had made a vow not to return until they should have completed the conquest; a vow in which it appears that some of them declined to take part, standing altogether aloof from the expedition. When the absent soldiers returned after many years of absence consumed in the war, they found a numerous progeny which had been born to their wives and daughters during the interval, from intercourse with those (Epeunaktæ) who had stayed at home. The Epeunaktæ were punished by being degraded to the rank and servitude of Helots; the children thus born, called Partheniæ,[1] were also cut off from all the rights of citizenship, and held in dishonor. But the parties punished were numerous enough to make themselves formidable, and a conspiracy was planned among them, intended to break out at the great religious festival of the Hyacinthia, in the temple of the Amyklæan Apollo. Palanthus was the secret chief of the conspirators, who agreed to commence their attack upon the authorities at the moment when he should put on his helmet. The leader, however, never intending that the scheme should be executed, betrayed it beforehand, stipulating for the safety of all those implicated in it. At the commencement of the festival, when the multitude were already assembled, a herald was directed to proclaim aloud, that Phalanthus would not on that day put on his helmet, — a proclamation

[1] Partheniæ, *i. e. children of virgins:* the description given by Varro of the Illyrian *virgines* illustrates this phrase: "Quas *virgines* ibi appellant, nonnunquam annorum xx, quibus mos eorum non denegavit, ante nuptias ut succumberent quibus vellent, et incomitatis ut vagari liceret, et *liberos habere*." (Varro, De Re Rusticâ, ii, 10, 9.)

which at once revealed to the conspirators that they were betrayed. Some of them sought safety in flight, others assumed the posture of suppliants; but they were merely detained in confinement, with assurance of safety, while Phalanthus was sent to the Delphian oracle to ask advice respecting emigration. He is said to have inquired whether he might be permitted to appropriate the fertile plain of Sikyon, but the Pythian priestess emphatically dissuaded him, and enjoined him to conduct his emigrants to Satyrium and Tarentum, where he would be "a mischief to the Iapygians." Phalanthus obeyed, and conducted the detected conspirators as emigrants to the Tarentine gulf,[1] which he reached a few years after the foundation of Sybaris and Krotôn by the Achæans. According to Ephorus, he found these prior emigrants at war with the natives, aided them in the contest, and received in return their aid to accomplish his own settlement. But this can hardly have consisted with the narrative of Antiochus, who represented the Achæans of Sybaris as retaining, even in their colonies, the hatred against the Dorian name which they had contracted in Peloponnesus.[2] Antiochus stated that Phalanthus and his colonists were received in a friendly manner by the indigenous inhabitants, and allowed to establish their new town in tranquillity.

If such was really the fact, it proves that the native inhabitants of the soil must have been of purely inland habits, making no use of the sea either for commerce or for fishery, otherwise they

[1] For this story respecting the foundation of Tarentum, see Strabo, vi, pp 278–280 (who gives the versions both of Antiochus and Ephorus); Justin iii, 4; Diodorus, xv, 66; Excerpta Vatican. lib. vii–x, ed. Maii, Fr. 12; Servius ad Virgil. Æneid. iii, 551.

There are several points of difference between Antiochus, Ephorus, and Servius; the story given in the text follows the former.

The statement of Hesychius (v, Παρθενεῖαι) seems on the whole somewhat more intelligible than that given by Strabo, — Οἱ κατὰ τὸν Μεσσηνιακὸν πόλεμον αὐτοῖς γενόμενοι ἐκ τῶν θεραπαίνων· καὶ οἱ ἐξ ἀνεκδότου λάθρα γεννώμενοι παῖδες. Justin translates Partheniæ, *Spurii*.

The local eponymous heroes Taras and Satyrus (from Satyrium) were celebrated and worshipped among the Tarentines See Cicero, Verr. iv, 60, 13; Servius ad Virg. Georg. ii, 197; Zumpt. ap Orelli, Onomasticon Tullian. ii, p. 570.

[2] Compare Strabo, vi, p. 264 and p. 280.

would hardly have relinquished such a site as that of Tarentum, — which, while favorable and productive, even in regard to the adjoining land, was with respect to sea-advantages without a parallel in Grecian Italy.[1] It was the only spot in the gulf which possessed a perfectly safe and convenient harbor, — a spacious inlet of the sea is there formed, sheltered by an isthmus and an outlying peninsula, so as to leave only a narrow entrance. This inlet, still known as the Mare Piccolo, though its shores and the adjoining tongue of land appear to have undergone much change, affords at the present day a constant, inexhaustible, and varied supply of fish, especially of shell-fish; which furnish both nourishment and employment to a large proportion among the inhabitants of the contracted modern Taranto, just as they once served the same purpose to the numerous, lively, and jovial population of the mighty Tarentum. The concentrated population of fishermen formed a predominant element in the character of the Tarentine democracy.[2] Tarentum was just on the borders

[1] Strabo, vi, p. 278; Polyb. x, 1.

[2] Juvenal, Sat. vi, 297. "Atque coronatum et petulans madidumque Tarentum:" compare Plato, Legg. i, p. 637; and Horat. Satir. ii, 4, 34. Aristot. Polit. iv, 4, 1. οἱ ἁλιεῖς ἐν Τάραντι καὶ Βυζαντίῳ. "Tarentina ostrea," Varro, Fragm. p. 301, ed. Bipont.

To illustrate this remark of Aristotle on the fishermen of Tarentum, as the predominant class in the democracy, I transcribe a passage from Mr. Keppel Craven's Tour in the Southern Provinces of Naples, ch. x, p. 182. "Swinburne gives a list of ninety-three different sorts of shell-fish which are found in the gulf of Taranto; but more especially in the Mare Piccolo. Among these, in ancient times, the murex and purpura ranked foremost in value; in our degenerate days, the mussel and oyster seem to have usurped a preëminence as acknowledged but less dignified; but there are numerous other tribes held in proportionate estimation for their exquisite flavor, and as greedily sought for during their respective seasons. The appetite for shell-fish of all sorts, which seems peculiar to the natives of these regions, is such as to appear exaggerated to a foreigner, accustomed to consider only a few of them as eatable. This taste exists at Taranto, if possible, in a stronger degree than in any other part of the kingdom, and accounts for the comparatively large revenue which government draws from this particular branch of commerce. The Mare Piccolo is divided into several portions, which are let to different societies, who thereby become the only privileged fishermen; the lower classes are almost all employed by these corporations, as every revolving season of the year affords occupation for them, so that Nature herself seems to have afforded the exclusive trade most suited to the

of the country originally known as Italy, within which Herodotus includes it, while Antiochus considers it in Iapygia, and regards Metapontium as the last Greek town in Italy.

Its immediate neighbors were the Iapygians, who, under various subdivisions of name and dialect, seem to have occupied the greater part of south-eastern Italy, including the peninsula denominated after them, — yet sometimes also called the Salentine, — between the Adriatic and the Tarentine gulf, — and who are even stated at one time to have occupied some territory on the south east of that gulf, near the site of Krotôn. The Iapygian name appears to have comprehended Messapians, Salentines, and Kalabrians; according to some, even Peuketians and Daunians, as far along the Adriatic as Mount Garganus, or Drion; Skylax notices in his time (about 360 B. C.) five different tongues in the country which he calls Iapygia.[1] The Messapians and Salentines are spoken of as emigrants from Krête, akin to the Minoian or primitive Kretans; and we find a national genealogy which recognizes Iapyx son of Dædaius, an emigrant from Sicily. But the story told to Herodotus was, that the Kretan soldiers who had accompanied Minos in his expedition to recover Dædalus from Kamikus in Sicily, were on their return home cast away on the shores of Iapygia, and became the founders of Hyria and other Messapian towns in the interior of the country.[1] Brundusium also, or Brentesion, as the Greeks called it,[2] inconsiderable in the days of Herodotus, but famous in the Roman times afterwards, as the most frequented seaport for voyaging to Epirus, was a Messapian town. The native language spoken by the Iapygian Messapians was a variety of the Oscan: the Latin poet Ennius, a native of Rudiæ in the Iapygian peninsula, spoke Greek, Latin, and Oscan, and even deduced his pedigree from the ancient national prince or hero Messapus.[3]

We are told that during the lifetime of Phalanthus, the Tarentine settlers gained victories over the Messapians and Peuketians, which they commemorated afterwards by votive offerings at Delphi, — and that they even made acquisitions at the expense of the inhabitants of Brundusium,[4] — a statement difficult to believe, if we look to the distance of the latter place, and to the circumstance that Herodotus, even in his time, names it only as a harbor. Phalanthus too, driven into exile, is said to have found a hospitable reception at Brundusium, and to have died there. Of the history of Tarentum, however, during the first two hundred and

inhabitants of Taranto. Both seas abound with varieties of testacea, but the inner gulf (the Mare Piccolo) is esteemed most favorable to their growth and flavor; the sandy bed is literally blackened by the mussels that cover it; the boats that glide over its surface are laden with them; they emboss the rocks that border the strand, and appear equally abundant on the shore, piled up in heaps." Mr. Craven goes on to illustrate still farther the wonderful abundance of this fishery; but that which has been already transcribed, while it illustrates the above-noticed remark of Aristotle, will at the same time help to explain the prosperity and physical abundance of the ancient Tarentum.

For an elaborate account of the state of cultivation, especially of the olive, near the degenerate modern Taranto, see the Travels of M. De Salis Marschlins in the Kingdom of Naples (translated by Aufrere, London, 1795), sect. 5, pp. 82–107, 163–178.

[1] Skylax does not mention at all the name of Italy; he gives to the whole coast, from Rhegium to Poseidonia on the Mediterranean, and from the same point to the limit between Thurii and Herakleia on the gulf of Tarentum, the name of Lucania (c. 12–13). From this point he extends Iapygia to the Mount Drion, or Garganus, so that he includes not only Metapontium, but also Herakleia in Iapygia.

Antiochus draws the line between Italy and Iapygia at the extremity of the Metapontine territory; comprehending Metapontium in Italy, and Tarentum in Iapygia (Antiochus, Frag. 6, ed. Didot; ap. Strabo, vi, p. 254).

Herodotus, however, speaks not only of Metapontium, but also of Tarentum, as being in Italy (i, 24; iii, 136; iv, 15).

I notice this discrepancy of geographical speech, between the two contemporaries Herodotus and Antiochus, the more especially, because Niebuhr has fallen into a mistake by exclusively following Antiochus, and by saying that *no writer*, even of the days of Plato, would have spoken of Tarentum as being *in Italy*, or of the Tarentines as Italiots. This is perfectly true respecting Antiochus, but is certainly not true with respect to Herodotus; nor can it be shown to be true with respect to Thucydidês, — for the passage of the latter, which Niebuhr produces, does not sustain his inference. (Niebuhr, Römische Geschichte, vol. i, pp. 16–18, 2d edit.)

thirty years of its existence, we possess no details; we have reason to believe that it partook in the general prosperity of the Italian Greeks during those two centuries, though it remained inferior both to Sybaris and to Krotôn. About the year 510 B. C., these two latter republics went to war, and Sybaris was nearly destroyed; while in the subsequent half-century, the Krotoniates suffered the terrible defeat of Sagra from the Lokrians, and the Tarentines experienced an equally ruinous defeat from the Iapygian Messapians. From these reverses, however, the Tarentines appear to have recovered more completely than the Krotoniates; for the former stand first among the Italiots, or Italian Greeks, from the year 400 B. C. down to the supremacy of the Romans, and made better head against the growth of the Lucanians and Bruttians of the interior.

Such were the chief cities of the Italian Greeks from Tarentum on the upper sea to Poseidonia on the lower; and if we take them during the period preceding the ruin of Sybaris (in 510 B. C.), they will appear to have enjoyed a degree of prosperity even surpassing that of the Sicilian Greeks. The dominion of Sybaris, Krotôn, and Lokri extended across the peninsula from sea to sea, and the mountainous regions of the interior of Calabria were held in amicable connection with the cities and cultivators in the plain and valley near the sea, — to the reciprocal advantage of both. The petty native tribes of Œnotrians, Sikels, or Italians, properly so called, were partially Hellenized, and brought into the condition of village cultivators and shepherds, dependent upon Sybaris and its fellow cities; a portion of them dwelling in the town, probably, as domestic slaves of the rich men, but most of them remaining in the country as serfs, penestæ, or coloni, intermingled with Greek settlers, and paying over parts of their produce to Greek proprietors.

But this dependence, though accomplished in the first instance by force, was yet not upheld exclusively by force, — it was to a great degree the result of an organized march of life, and of more productive cultivation brought within their reach,— of new wants, both created and supplied, — of temples, festivals, ships, walls, chariots, etc., which imposed upon the imagination of the rude landsman and shepherd. Against mere force the natives could

have found shelter in the unconquerable forests and ravines of the Calabrian Apennines, and in that vast mountain region of the Sila, lying immediately behind the plains of Sybaris, where even the French army, with its excellent organization, in 1807, found so much difficulty in reaching the bandit villagers.[1] It was not by arms alone, but by arms and arts combined, — a mingled influence, such as enabled imperial Rome to subdue the fierceness of the rude Germans and Britons, — that the Sybarites and Krotoniates acquired and maintained their ascendency over the natives of the interior. The shepherd of the banks of the river Sybaris or Krathis not only found a new exchangeable value for his cattle and other produce, becoming familiar with better diet and clothing, and improved cultivation of the olive and the vine, — but he was also enabled to display his prowess, if strong and brave, in the public games at the festival of the Lakinian Hêrê, or even at the Olympic games in Peloponnesus.[2] It is thus that we have to explain the extensive dominion, the great population and the wealth and luxury of the Sybarites and Krotoniates, — a population of which the incidental reports as given in figures are not trustworthy, but which we may well believe to have been very numerous. The native Œnotrians, while unable to combine in resisting Greek force, were at the same time less widely distinguished from the Greeks, in race and language, than the Oscans of middle Italy, and therefore more accessible to Greek pacific influences; while the Oscan race seem to have been both fiercer in repelling the assaults of the Greeks, and more intractable as to their seductions. Nor were the Iapygians modified by the neighborhood of Tarentum, in the same degree as the tribes adjoining to Sybaris and Krotôn were by their contact with those cities. The dialect of Tarentum,[3] as well as of Herakleia,

[1] See a description of the French military operations in these almost inaccessible regions, contained in a valuable publication by a French general officer, on service in that country for three years, "Calabria during a Military Residence of three years," London, 1832, Letter xx, p. 201.

The whole picture of Calabria contained in this volume is both interesting and instructive: military operations had never before been carried on, probably, in the mountains of the Sila.

[2] See Theokritus, Idyll. iv, 6–35, which illustrates the point here stated.

[3] Suidas, v, Ῥίνθων; Stephan. Byz. v, Τάρας: compare Bernhardy, Grun

though a marked Doric, admitted many local peculiarities, and the farces of the Tarentine poet Rhinthon, like the Syracusan Sophron, seem to have blended the Hellenic with the Italic in language as well as in character.

About the year 560 B. C., the time of the accession of Peisistratus at Athens, the close of what may properly be called the first period of Grecian history, Sybaris and Krotôn were at the maximum of their power, which each maintained for half a century afterwards, until the fatal dissension between them. We are told that the Sybarites, in that final contest, marched against Krotôn with an army of three hundred thousand men: fabulous as this number doubtless is, we cannot doubt that, for an irruption of this kind into an adjoining territory, their large body of semi-Hellenized native subjects might be mustered in prodigious force. The few statements which have reached us respecting them touch, unfortunately, upon little more than their luxury, fantastic self-indulgence, and extravagant indolence, for which qualities they have become proverbial in modern times as well as in ancient. Anecdotes illustrating these qualities were current, and served more than one purpose, in antiquity. The philosopher recounted them, in order to discredit and denounce the character which they exemplified, — while among gay companies, "Sybaritic tales," or tales respecting sayings and doing of ancient Sybarites, formed a separate and special class of excellent stories, to be told simply for amusement,[1] — with which view witty romancers

driss der Römischen Litteratur, Abschnitt ii, pt. 2, pp. 185–186, about the analogy of these φλύακες of Rhinthon with the native Italic Mimes.

The dialect of the other cities of Italic Greece is very little known: the ancient Inscription of Petilia is Doric: see Ahrens, De Dialecto Dorică, sect. 49, p. 418.

[1] Aristophan. Vesp. 1260. Αἰσωπικὸν γελοῖον, ἢ Συβαριτικόν. What is meant by Συβαριτικὸν γελοῖον is badly explained by the Scholiast, but is perfectly well illustrated by Aristophanês himself, in subsequent verses of the same play (1427–1436), where Philokleon tells two good stories respecting "a Sybaritan man," and a "woman in Sybaris:" Ἀνὴρ Συβαρίτης ἐξέπεσεν ἐξ ἅρματος, etc. — ἐν Συβάρει γυνή ποτε Κατέαξ' ἐχῖνον, etc.

These Συβάρια ἐπιφθέγματα are as old as Epicharmus, whose mind was much imbued with the Pythagorean philosophy. See Etymolog. Magn. Συβαρίζειν. Ælian amused himself also with the ἱστόριαι Συβαριτικαί (V. H. xiv, 20): compare Hesychius, Συβαριτικοὶ λόγοι, and Suidas, Συβαριτικὰς.

multiplied them indefinitely. It is probable that the Pythagorean philosophers (who belonged originally to Krotôn, but maintained themselves permanently as a philosophical sect in Italy and Sicily, with a strong tinge of ostentatious asceticism and mysticism), in their exhortations to temperance and in their denunciations of luxurious habits, might select by preference examples from Sybaris, the ancient enemy of the Krotonians, to point their moral, — and that the exaggerated reputation of the city thus first became the subject of common talk throughout the Grecian world; for little could be actually known of Sybaris in detail, since its humiliation dates from the first commencement of Grecian contemporaneous history. Hekatæus of Milêtus may perhaps have visited it in its full splendor, but even Herodotus knew it only by past report, and the principal anecdotes respecting it are cited from authors considerably later than him, who follow the tone of thought so common in antiquity, in ascribing the ruin of the Sybarites to their overweening corruption and luxury.[1]

Making allowance, however, for exaggeration on all these accounts, there can be no reason to doubt that Sybaris, in 560 B. C., was one of the most wealthy, populous, and powerful cities of the Hellenic name; and that it also presented both comfortable abundance among the mass of the citizens, arising from the easy

[1] Thus Herodotus (vi, 127) informs us that, at the time when Kleisthenês of Sikyon invited from all Greece suitors of proper dignity for the hand of his daughter, Smindyridês of Sybaris came among the number, "the most delicate and luxurious man ever known," (ἐπὶ πλεῖστον δὴ χλιδῆς εἰς ἀνὴρ ἀφίκετο — Herodot. vi, 127), and Sybaris was at that time (B. C. 580–560) in its greatest prosperity. In Chamæleon, Timæus, and other writers subsequent to Aristotle, greater details were given. Smindyridês was said to have taken with him to the marriage one thousand domestic servants, fishermen, bird-catchers, and cooks (Athenæ. vi, 271; xii, 541). The details of Sybaritic luxury, given in Athenæus, are chiefly borrowed from writers of this post-Aristotelian age, — Herakleidês of Pontus, Phylarchus, Klearchus, Timæus (Athenæ. xii, 519–522). The best-authenticated of all the examples of Sybaritic wealth, is the splendid figured garment, fifteen cubits in length, which Alkimenês the Sybarite dedicated as a votive offering in the temple of the Lakinian Hêrê. Dionysius of Syracuse plundered that temple, got possession of the garment, and is said to have sold it to the Carthaginians for the price of one hundred and twenty talents: Polemon, the Periegetes, seems to have seen it at Carthage (Aristot. Mirab. Ausc. 96; Athenæ. xii, 541). Whether the price be correctly stated, we are not in a situation to determine.

attainment of fresh lots of fertile land, and excessive indulgences among the rich, — to a degree forming marked contrast with Hellas proper, of which Herodotus characterized poverty as the foster-sister.[1] The extraordinary productiveness of the neighboring territory, — alleged by Varro, in his time, when the culture must have been much worse than it had been under the old Sybaris, to yield an ordinary crop of a hundred-fold,[2] and extolled by modern travellers, even in its present yet more neglected culture, — has been already touched upon. The river Krathis, — still the most considerable river of that region, — at a time when there was an industrious population to keep its water-course in order, would enable the extensive fields of Sybaris to supply abundant nourishment for a population larger perhaps than any other Grecian city could parallel. But though nature was thus bountiful, industry, good management, and well-ordered government were required to turn her bounty to account: where these are wanting, later experience of the same territory shows that its

[1] Herodot. vii, 102. τῇ Ἑλλάδι πενίη μὲν αἰεί κοτε σύντροφός ἐστι.

[2] Varro, De Re Rusticâ, i, 44. "In Sybaritano dicunt etiam cum centesimo redire solitum." The land of the Italian Greeks stands first for wheaten bread and beef; that of Syracuse for pork and cheese (Hermippus ap. Athenæ. i, p. 27): about the excellent wheat of Italy, compare Sophoklês, Triptolem. Fragm. 529, ed. Dindorf.

Theophrastus dwells upon the excellence of the land near Mylæ, in the territory of the Sicilian Messênê, which produced, according to him, thirty-fold. (Hist. Plant. ix, 2, 8, p. 259, ed. Schneid.) This affords some measure of comparison, both for the real excellence of the ancient Sybaritan territory, and for the estimation in which it was held; its estimated produce being more than three times that of Mylæ.

See in Mr. Keppel Craven's Tour in the Southern Provinces of Naples (chapters xi, xii, pp. 212-218), the description of the rich and productive plain of the Krathis (in the midst of which stood the ancient Sybaris), extending about sixteen miles from Cassano to Corigliano, and about twelve miles from the former town to the sea. Compare, also, the picture of the same country, in the work by a French officer, referred to in a previous note, "Calabria during a Military Residence of three years," London, 1832, Letter xxii, pp. 219-226.

Hekatæus (c. 39, ed. Klausen) calls Cosa, — Κόσσα, πόλις Οἰνωτρῶν ἐν μεσογαίᾳ. Cosa is considered to be identical, seemingly on good grounds, with the modern Cassano (Cæsar, Bell. Civ. iii, 22): assuming this to be correct, there must have been an Œnotrian dependent town within eight miles of the ancient city of Sybaris.

inexhaustible capacities may exist in vain. That luxury, which Grecian moralists denounced in the leading Sybarites, between 560 and 510 B. C., was the result of acquisitions vigorously and industriously pushed, and kept together by an orderly central force, during a century and a half that the colony had existed. Though the Trœzenian settlers who formed a portion of the original emigrants had been expelled when the Achæans became more numerous, yet we are told that, on the whole, Sybaris was liberal in the reception of new emigrants to the citizenship,[1] and that this was one of the causes of its remarkable advance. Of these additional comers, we may presume that many went to form its colonies on the Mediterranean sea, and some to settle both among its four dependent inland nations, and its twenty-five subject towns. Five thousand horsemen, we are told, clothed in showy attire, formed the processional march in certain Sybaritic festivals, — a number which is best appreciated by comparison with the fact, that the knights or horsemen of Athens, in her best days, did not exceed twelve hundred. The Sybaritic horses, if we are to believe a story purporting to come from Aristotle, were taught to move at the sound of the flute; and the garments of these wealthy citizens were composed of the finest wool from Milêtus in Ionia,[2] — the Tarentine wool not having then acquired the distinguished renown which it possessed five centuries afterwards towards the close of the Roman republic. Next to the great abundance of home produce, — corn, wine, oil, flax, cattle, fish, timber, etc., — the fact next in importance which we hear respecting Sybaris is, the great traffic carried on with Milêtus: these two cities were more intimately and affectionately connected together than any two Hellenic cities within the knowledge of Herodotus.[3] The tie between Tarentum and Knidus was also of a very intimate character,[4] so that the great intercourse, personal as well as commercial, between the Asiatic and the Italic

[3] Herodot. vi, 21. Respecting the great abundance of ship-timber in the territory of the Italiots (Italian Greeks), see Thucyd. vi, 90; vii, 25.

The pitch from the pine forests in the Sila was also abundant and celebrated (Strabo, vi, p. 261).

[4] Herodot. iii, 138.

Greeks, appears as a marked fact in the history of the sixth century before the Christian era.

In this respect, as well as in several others, the Hellenic world wears a very different aspect in 560 B. C. from that which it assumed a century afterwards, and in which it is best known to modern readers. At the former period, the Ionic and Italic Greeks are the great ornaments of the Hellenic name, and carried on a more lucrative trade with each other, than either of them maintained with Greece proper; which both of them recognized as their mother-country, though without admitting anything in the nature of established headship. The military power of Sparta is indeed at this time great and preponderant in Peloponnesus, but she has no navy, and she is only just essaying her strength, not without reluctance, in ultramarine interference. After the lapse of a century, these circumstances change materially. The independence of the Asiatic Greeks is destroyed, and the power of the Italic Greeks is greatly broken; while Sparta and Athens not only become the prominent and leading Hellenic states, but constitute themselves centres of action for the lesser cities, to a degree previously unknown.

It was during the height of their prosperity, seemingly, in the sixth century B. C., that the Italian Greeks either acquired for, or bestowed upon, their territory the appellation of Magna Græcia, which at that time it well deserved; for not only were Sybaris and Krotôn then the greatest Grecian cities situated near together, but the whole peninsula of Calabria may be considered as attached to the Grecian cities on the coast. The native Œnotrians and Sikels occupying the interior had become Hellenized, or semi-Hellenized, with a mixture of Greeks among them, — common subjects of these great cities; so that the whole extent of the Calabrian peninsula, within the line which joins Sybaris with Poseidonia, might then be fairly considered as Hellenic territory. Sybaris maintained much traffic with the Tuscan towns in the Mediterranean, and the communication between Greece and Rome, across the Calabrian isthmus,[1] may perhaps have been easier during the time of the Roman kings — whose expulsion was nearly contemporaneous with the ruin of Sybaris — than it

[1] Athenæus, xii, p. 519.

became during the first two centuries of the Roman republic. But all these relations underwent a complete change after the breaking up of the power of Sybaris in 510 B. C., and the gradual march of the Oscan population from middle Italy towards the south. Cumæ was overwhelmed by the Samnites, Poseidonia by the Lucanians; who became possessed not only of these maritime cities, but also of the whole inland territory — now called the Basilicata, with part of the hither Calabria — across from Poseidonia to the neighborhood of the gulf of Tarentum: while the Bruttians, — a mixture of outlying Lucanians with the Greco-Œnotrian population once subject to Sybaris, speaking both Greek and Oscan,[1] — became masters of the inland mountains in the farther Calabria, from Consentia nearly to the Sicilian strait. It was thus that the ruin of Sybaris, combined with the spread of the Lucanians and Bruttians, deprived the Italian Greeks of that inland territory which they had enjoyed in the sixth century B. C., and restricted them to the neighborhood of the coast. To understand the extraordinary power and prosperity of Sybaris and Krotôn, in the sixth century B. C., when the whole of this inland territory was subject to them, and before the rise of the Lucanians, and Bruttians, and when the name Magna Græcia was first given, it is necessary to glance by contrast at these latter periods; more especially since the name still continued to be applied by the Romans to Italian Greece after the contraction of territory had rendered it less appropriate.

Of Krotôn at this early period of its power and prosperity we know even less than of Sybaris. It stood distinguished both for the number of its citizens who received prizes at the Olympic games, and for the excellence of its surgeons or physicians. And what may seem more surprising, if we consider the extreme present insalubrity of the site upon which it stood, it was in ancient times proverbially healthy,[2] which was not so much the case with the more fertile Sybaris. Respecting all these cities of Italian Greeks, the same remark is applicable as was before made in reference to the Sicilian Greeks, — that the intermixture of the native population sensibly affected both their character and habits. We have no information respecting their government

[1] Festus, v, bilingues Brutaces.

[2] Strabo, vi, p. 262.

during this early period of prosperity, except that we find mention at Krotôn, as at the Epizephyrian Lokri, of a senate of one thousand members, yet not excluding occasionally the ekklesia, or general assembly.[1] Probably, the steady increase of their dominion in the interior, and the facility of providing maintenance for new population, tended much to make their political systems, whatever they may have been, work in a satisfactory manner. The attempt of Pythagoras and his followers to constitute themselves a ruling faction as well as a philosophical sect, will be recounted in a subsequent chapter. The proceedings connected with that attempt will show that there was considerable analogy and sympathy between the various cities of Italian Greece, so as to render them liable to be acted on by the same causes. But though the festivals of the Lakinian Hêrê, administered by the Krotoniates, formed from early times a common point of religious assemblage to all,[2] — yet the attempts to institute periodical meetings of deputies, for the express purpose of maintaining political harmony, did not begin until after the destruction of Sybaris, nor were they ever more than partially successful.

One other city, the most distant colony founded by Greeks in the western regions, yet remains to be mentioned; and we can do no more than mention it, since we have no facts to make up its history. Massalia, the modern Marseilles, was founded by the Ionic Phokæans in the 45th Olympiad, about 597 B. C.,[3] at the time when Sybaris and Krotôn were near the maximum of their power, — when the peninsula of Calabria was all Hellenic, and when Cumæ also had not yet been visited by those calamities which brought about its decline. So much Hellenism in the south of Italy doubtless facilitated the western progress of the

[1] Jamblichus, Vit. Pythagor. c. 9, p. 33; c. 35, p. 210.

[2] Athenæus, xii, 541.

[3] This date depends upon Timæus (as quoted by Skymnus Chius, 210) and Solinus; there seems no reason for distrusting it, though Thucydidês (i, 13) and Isokratês (Archidamus, p. 316) seem to conceive Massalia as founded by the Phokæans about 60 years later, when Ionia was conquered by Harpagus (see Bruckner, Historia Reip. Massiliensium, sect. 2, p. 9, Raoul Rochette, Histoire des Colonies Grecques, vol. iii, pp. 405–413, who, however, puts the arrival of the Phokæans, in these regions and at Tartêssus much too early).

adventurous Phokæan mariner. It would appear that Massalia was founded by amicable fusion of Phokæan colonists with the indigenous Gauls, if we may judge by the romantic legend of the Protiadæ, a Massaliotic family or gens existing in the time of Aristotle. Euxenus, a Phokæan merchant, had contracted friendly relations with Nanus, a native chief in the south of Gaul, and was invited to the festival in which the latter was about to celebrate the marriage of his daughter Petta. According to the custom of the country, the maiden was to choose for herself a husband among the guests, by presenting him with a cup: through accident, or by preference, Petta presented it to Euxenus, and became his wife. Prôtis of Massalia, the offspring of this marriage, was the primitive ancestor and eponym of the Protiadæ. According to another story respecting the origin of the same gens, Protis was himself the Phokæan leader who married Gyptis, daughter of Nannus king of the Segobrigian Gauls.[1]

Of the history of Massalia we know nothing, nor does it appear to have been connected with the general movement of the Grecian world. We learn generally that the Massaliots administered their affairs with discretion as well as with unanimity, and exhibited in their private habits an exemplary modesty, — that although preserving alliance with the people of the interior, they were scrupulously vigilant in guarding their city against surprise, permitting no armed strangers to enter, — that they introduced the culture of vines and olives, and gradually extended the Greek alphabet, language, and civilization among the neighboring Gauls, — that they possessed and fortified many positions along the coast of the gulf of Lyons, and founded five colonies along the eastern coast of Spain, — that their government was oligarchical, consisting of a perpetual senate of six hundred persons, yet admitting occasionally new members from without, and a small council of fifteen members, — that the Delphinian Apollo and the Ephesian Artemis were their chief deities, planted as guardians of their outlying posts, and transmitted to their colonies.[2] Although it is common to represent a deliberate march

[1] Aristotle, *Μασσαλιώτων πολιτεῖα*, ap. Athenæum, xiii, p. 576; Justin, xliii, 3. Plutarch (Solon, c. 2) seems to follow the same story as Justin.

[2] Strabo, iv, pp. 179–182: Justin, xliii, 4–5; Cicero, Pro Flacco. 26. La

and steady supremacy of the governing few, with contented obedience on the part of the many, as the characteristic of Dorian states, and mutability not less than disturbance as the prevalent tendency in Ionia, — yet there is no Grecian community to whom the former attributes are more pointedly ascribed than the Ionic Messalia. The commerce of the Massaliots appears to have been extensive, and their armed maritime force sufficiently powerful to defend it against the aggressions of Carthage, — their principal enemy in the western Mediterranean.

CHAPTER XXIII.

GRECIAN COLONIES IN AND NEAR EPIRUS.

On the eastern side of the Ionian sea were situated the Grecian colonies of Korkyra, Leukas, Anaktorium, Ambrakia, Apollonia, and Epidamnus.

Among these, by far the most distinguished, for situation, for wealth, and for power, was Korkyra, — now known as Corfu, the same name belonging, as in antiquity, both to the town and the island, which is separated from the coast of Epirus by a strait varying from two to seven miles in breadth. Korkyra was founded by the Corinthians, at the same time, we are told, as Syracuse. Chersikratês, a Bacchiad, is said to have accompanied Archias on his voyage from Corinth to Syracuse, and to have been left with a company of emigrants on the island of Korkyra, where he founded a settlement.[1] What inhabitants he found there, or how

rather appears from Aristotle (Polit. v, 5, 2; vi. 4–5) that the senate was originally a body completely close, which gave rise to discontent on the part of wealthy men not included in it: a mitigation took place by admitting into it, occasionally, men selected from the latter.

Some authors seem to have accused the Massaliots of luxurious and effeminate habits (see Athenæus, xii, p. 523).

[1] Strabo, vi, p. 269: compare Timæus, Fragm. 49, ed. Göller; Fr. 53, ed Didot.

they were dealt with, we cannot clearly make out. The island was generally conceived in antiquity as the residence of the Homeric Phæakians, and it is to this fact that Thucydidês ascribes in part the eminence of the Korkyræan marine.[1] According to another story, some Eretrians from Eubœa had settled there, and were compelled to retire. A third statement represents the Liburnians[2] as the prior inhabitants, — and this perhaps is the most probable, since the Liburnians were an enterprising, maritime, piratical race, who long continued to occupy the more northerly islands in the Adriatic along the Illyrian and Dalmatian coast. That maritime activity, and number of ships, both warlike and commercial, which we find at an early date among the Korkyræans, and in which they stand distinguished from the Italian and Sicilian Greeks, may be plausibly attributed to their partial fusion with preëxisting Liburnians; for the ante-Hellenic natives of Magna Græcia and Sicily, as has been already noticed, were as unpractised at sea as the Liburnians were expert.

At the time when the Corinthians were about to colonize Sicily, it was natural that they should also wish to plant a settlement at Korkyra, which was a post of great importance for facilitating the voyage from Peloponnesus to Italy, and was farther convenient for traffic with Epirus, at that period altogether non-Hellenic. Their choice of a site was fully justified by the prosperity and power of the colony, which, however, though sometimes in combination with the mother-city, was more frequently alienated from her and hostile, and continued so from an early period throughout most part of the three centuries from 700–400 B. C.[3] Perhaps also Molykreia and Chalkis,[4] on the south-western coast of Ætolia, not far from the mouth of the Corinthian gulf, may have been founded by Corinth at a date hardly less early than Korkyra.

It was at Corinth that the earliest improvements in Greek ship-building, and the first construction of the trireme or war-

[1] Thucyd. i, 25.

[3] Herodot. iii, 49.

[4] Thucyd. i, 108; iii, 102.

ship with a triple bank of oars, was introduced, and it was probably from Corinth that this improvement passed to Korkyra, as it did to Samos. In early times, the Korkyræan navy was in a condition to cope with the Corinthian, and the most ancient naval battle known to Thucydidês[1] was one between these two states, in 664 B. C. As far as we can make out, it appears that Korkyra maintained her independence, not only during the government of the Bacchiads at Corinth, but also throughout the long reign of the despot Kypselus, and a part of the reign of his son Periander. But towards the close of this latter reign, we find Korkyra subject to Corinth; and the barbarous treatment inflicted by Periander, in revenge for the death of his son, upon three hundred Korkyræan youths, has already been recounted in a former chapter.[2] After the death of Periander, the island seems to have regained its independence, but we are left without any particulars respecting it, from about 585 B. C. down to the period shortly preceding the invasion of Greece by Xerxes, — nearly a century. At this later epoch the Korkyræans possessed a naval force hardly inferior to any state in Greece. The expulsion of Kypselids from Corinth, and the reëstablishment of the previous oligarchy, or something like it, does not seem to have reconciled the Korkyræans to their mother-city; for it was immediately previous to the Peloponnesian war that the Corinthians preferred the bitterest complaints against them,[3] of setting at nought those obligations which a colony was generally understood to be obliged to render. No place of honor was reserved at the public festivals of Korkyra for Corinthian visitors, nor was it the practice to offer to the latter the first taste of the victims sacrificed,— observances which were doubtless respectfully fulfilled at Ambrakia and Leukas. Nevertheless, the Korkyræans had taken part conjointly with the Corinthians in favor of Syracuse, when that city was in imminent danger of being conquered and enslaved by Hippokratês[4] despot of Gela (about 492 B. C.), — an incident which shows that they were not destitute of generous sympathy with sister states, and leads us to imagine that their alienation

[1] Thucyd. i, 13.

[4] Herodot. vii. 155

from Corinth was as much the fault of the mother-city as their own.

The grounds of the quarrel were, probably, jealousies of trade, — especially trade with the Epirotic and Illyrian tribes, wherein both were to a great degree rivals. Safe at home, and industrious in the culture of their fertile island, the Korkyræans were able to furnish wine and oil to the Epirots on the main-land in exchange for the cattle, sheep, hides, and wool of the latter, — more easily and cheaply than the Corinthian merchant. And for the purposes of this trade, they had possessed themselves of a peræa or strip of the main-land immediately on the other side of the intervening strait, where they fortified various posts for the protection of their property.[1] The Corinthians were personally more popular among the Epirots than the Korkyræans;[2] but it was not until long after the foundation of Korkyra that they established their first settlement on the main-land, — Ambrakia, on the north side of the Ambrakiotic gulf, and near the mouth of the river Arachthus. It was during the reign of Kypselus, and under the guidance of his son Gorgus, that this settlement was planted, which afterwards became populous and considerable. We know nothing respecting its growth, and we hear only of a despot named Periander as ruling in it, probably related to the despot of the same name at Corinth.[3] Periander of Ambrakia was overthrown by a private conspiracy, provoked by his own brutality, and warmly seconded by the citizens, who lived constantly afterwards under a popular government.[4]

Notwithstanding the long-continued dissensions between Korkyra and Corinth, it appears that four considerable settlements on this same line of coast were formed by the joint enterprise of both, — Leukas and Anaktorium, to the south of the mouth of the Ambrakiotic gulf, — and Apollonia and Epidamnus, both in the territory of the Illyrians, at some distance to the north of the Akrokeraunian promontory. In the settlement of the two latter

[1] Thucyd. iii, 85. These fortifications are probably alluded to also i, 45–54. ἢ ἐς τῶν ἐκείνων τι χωρίων.
[2] Thucyd. i, 47
[3] Strabo, vii, p. 325, x, p. 452; Skymn. Chi. 453, Raoul Rochette. Hist des Colon. Grecq. vol. iii p. 294.
[4] Aristot Polit. v, 3, 5, v, 8, 9.

the Korkyræans seem to have been the principals, — in that of the two former, they were only auxiliaries; and it probably did not suit their policy to favor the establishment of any new colony on the intermediate coast opposite to their own island, between the promontory and the gulf above mentioned. Leukas, Anaktorium, and Ambrakia are all referred to the agency of Kypselus the Corinthian, and the tranquillity which Aristotle ascribes to his reign may be in part ascribed to the new homes thus provided for poor or discontented Corinthian citizens. Leukas was situated near the modern Santa Maura: the present island was originally a peninsula, and continued to be so until the time of Thucydidês; but in the succeeding half-century, the Leukadians cut through the isthmus, and erected a bridge across the narrow strait connecting them with the main-land. It had been once an Akarnanian settlement, named Epileukadii, the inhabitants of which falling into civil dissension, invited one thousand Corinthian settlers to join them. The new-comers choosing their opportunity for attack, slew or expelled those who had invited them, made themselves masters of the place with its lands, and converted it from an Akarnanian village into a Grecian town.[1] Anaktorium was situated a short distance within the mouth of the Ambrakian gulf, — founded, like Leukas, upon Akarnanian soil, and with a mixture of Akarnanian inhabitants, by colonists

[1] About Leukas, see Strabo, x, p. 452; Skylax, p. 34; Steph. Byz. v, Ἐπιλευκάδιοι.

Strabo seems to ascribe the cutting through of the isthmus to the original colonists. But Thucydidês speaks of this isthmus in the plainest manner (iii, 81), and of the Corinthian ships of war as being transported across it. The Dioryktos, or intervening factitious canal, was always shallow, only deep enough for boats, so that ships of war had still to be carried across by hand or machinery (Polyb. v, 5): both Plutarch (De Serâ Num. Vind. p. 552) and Pliny treat Leukadia as having again become a peninsula, from the accumulation of sand (H. N. iv, 1): compare Livy, xxxiii, 17.

Mannert (Geograph. der Gr. und Röm. part viii, b. 1, p. 72) accepts the statement of Strabo, and thinks that the Dioryktos had already been dug before the time of Thucydidês. But it seems more reasonable to suppose that Strabo was misinformed as to the date, and that the cut took place at some time between the age of Thucydidês and that of Skylax.

Boeckh (ad Corp. Inscriptt. Gr. t. i, p. 58) and W. C. Müller (De Corcyræor. Republicâ, Götting 1835, p. 18) agree with Mannert.

under the auspices of Kypselus or Periander. In both these establishments Korkyræan settlers participated;[1] in both, also, the usual religious feelings connected with Grecian emigration were displayed by the neighborhood of a venerated temple of Apollo overlooking the sea, — Apollo Aktius near Anaktorium, and Apollo Leukatas near Leukas.[2]

Between these three settlements, — Ambrakia, Anaktorium, and Leukas, — and the Akarnanian population of the interior, there were standing feelings of hostility; perhaps arising out of the violence which had marked the first foundation of Leukas. The Corinthians, though popular with the Epirots, had been indifferent or unsuccessful in conciliating the Akarnanians. It rather seems, indeed, that the Akarnanians were averse to the presence or neighborhood of any powerful seaport; for in spite of their hatred towards the Ambrakiots, they were more apprehensive of seeing Ambrakia in the hands of the Athenians than in that of its own native citizens.[3]

The two colonies, north of the Akrokeraunian promontory, and on the coast-land of the Illyrian tribes, — Apollonia and Epidamnus, — were formed chiefly by the Korkyræans, yet with some aid and a portion of the settlers from Corinth, as well as from other Doric towns. Especially it is to be noticed, that the œkist was a Corinthian and a Herakleid, Phalius the son of Eratokleidês, — for, according to the usual practice of Greece, whenever a city, itself a colony, founded a sub-colony, the œkist of the latter was borrowed from the mother-city of the former.[4] Hence the Corinthians acquired a partial right of control and interference in the affairs of Epidamnus, which we shall find hereafter leading to important practical consequences. Epidamnus, — better known under its subsequent name Dyrrhachium, — was situated on an isthmus on or near the territory of the Illyrian tribe called Taulantii, and is said to have been settled about 627

[1] Skymn. Chius, 458; Thucyd. i, 55; Plutarch, Themistoklês, c. 24.

[2] Thucyd. i, 46; Strabo, x, p. 452. Before 220 B. C., the temple of Apollo Aktius, which in the time of Thucydidês belonged to Anaktorium, had come to belong to the Akarnanians; it seems, also, that the town itself had been merged in the Akarnanian league, for Polybius does not mention it separately (Polyb. iv, 63).

[3] Thucyd. iii 94 95, 115.

[4] Thucyd. i, 24–26.

B. C. Apollonia, of which the god Apollo himself seems to have been recognized as œkist,[1] was founded under similar circumstances, during the reign of Periander of Corinth, on a maritime plain both extensive and fertile, near the river Aôus, two days' journey south of Epidamnus.

Both the one and the other of these two cities seem to have flourished, and to have received accession of inhabitants from Triphylia in Peloponnesus, when that country was subdued by the Eleians. Respecting Epidamnus, especially, we are told that it acquired great wealth and population during the century preceding the Peloponnesian war.[2] A few allusions which we find in Aristotle, too brief to afford much instruction, lead us to suppose that the governments of both began by being close oligarchies, under the management of the primitive leaders of the colony, — that in Epidamnus, the artisans and tradesmen in the town were considered in the light of slaves belonging to the public, — but that in process of time, seemingly somewhat before the Peloponnesian war, intestine dissensions broke up this oligarchy,[3] substituted a periodical senate, with occasional public

[1] The rhetor Aristeidês pays a similar compliment to Kyzikus, in his Panegyrical Address at that city, — the god Apollo had founded it personally and directly himself, not through any human œkist, as was the case with other colonies (Aristeidês, *Λόγος περὶ Κυζίκου*, Or. xvi, p. 414; vol. i, p. 384, Dindorf).

[2] Thucyd. i, 24. *ἐγένετο μεγάλη καὶ πολυάνθρωπος*; Strabo, vii, p. 316, viii, p. 357; Steph. Byz. v, *Ἀπολλωνία*; Plutarch, De Serâ Numin. Vind. p. 553; Pausan. v, 22, 2.

Respecting the plain near the site of the ancient Apollonia, Colonel Leake observes: "The cultivation of this noble plain, capable of supplying grain to all Illyria and Epirus, with an abundance of other productions, is confined to a few patches of maize near the villages," (Travels in Northern Greece, vol. i, ch. vii, p. 367.) Compare c. ii, p. 70.

The country surrounding Durazzo (the ancient Epidamnus) is described by another excellent observer as highly attractive, though now unhealthy. See the valuable topographical work, "Albanien, Rumelien, und die Oesterreichisch-montenegrinische Gränze," von Dr. Joseph Müller (Prag. 1844), p. 62.

[3] Thucyd. i, 25; Aristot. Polit. ii, 4, 13; iii, 11, 1; iv, 3, 8; v, 1, 6; v, 3, 4.

The allusions of the philosopher are so brief, as to convey little or no knowledge: see O. Müller, Dorians, b. iii, 9, 6; Tittmann, Griech. Staatsverfass. p. 491.

assemblies, in place of the permanent phylarchs, or chiefs of tribes, and thus introduced a form more or less democratical, yet still retaining the original single-headed archon. The Epidamnian government was liberal in the admission of metics, or resident aliens, — a fact which renders it probable that the alleged public slavery of artisans in that town was a status carrying with it none of the hardships of actual slavery. It was through an authorized selling agent, or polêtês, that all traffic between Epidamnus and the neighboring Illyrians was carried on, — individual dealing with them being interdicted.[1] Apollonia was in one respect pointedly distinguished from Epidamnus, since she excluded metics, or resident strangers, with a degree of rigor hardly inferior to Sparta. These few facts are all that we are permitted to hear respecting colonies both important in themselves and interesting as they brought the Greeks into connection with distant people and regions.

The six colonies just named, — Korkyra, Ambrakia, Anaktorium, Leukas, Apollonia, and Epidamnus, — form an aggregate lying apart from the rest of the Hellenic name, and connected with each other, though not always maintained in harmony, by analogy of race and position, as well as by their common original from Corinth. That the commerce which the Corinthian merchants carried on with them, and through them with the tribes in the interior, was lucrative, we can have no doubt; and Leukas and Ambrakia continued for a long time to be not merely faithful allies, but servile imitators, of their mother-city. The commerce of Korkyra is also represented as very extensive, and carried even to the northern extremity of the Ionic gulf. It would seem that they were the first Greeks to open a trade and to establish various settlements on the Illyrian and Dalmatian coasts, as the Phokæans were the first to carry their traffic along the Adriatic coast of Italy: the jars and pottery of Korkyra enjoyed great reputation throughout all parts of the gulf.[2] The

[1] Plutarch, Quæst. Græc. p. 297, c. 29; Ælian, V. H. xiii, 16.

[2] W. C. Müller, De Corcyræor. Repub. ch. 3, pp. 60–63; Aristot. Mirab Ausc. c. 104, Hesychius, v, *Κερκυραῖοι ἀμφορεῖς*; Herodot. i, 145.

The story given in the above passage of the Pseudo-Aristotle is to be taken in connection with the succeeding chapter of the same work (105), wherein the statement, largely credited in antiquity, is given, that the river

general trade of the island, and the encouragement for its shipping, must probably have been greater during the sixth century B. C., while the cities of Magna Græcia were at the maximum of their prosperity, than in the ensuing century, when they had comparatively declined. Nor can we doubt that the visitors and presents to the oracle of Dodona in Epirus, which was distant two days' journey on landing from Korkyra, and the importance of which was most sensible during the earlier periods of Grecian history, contributed to swell the traffic of the Korkyræans.

It is worthy of notice that the monetary system established at Korkyra was thoroughly Grecian and Corinthian, graduated on the usual scale of obols, drachms, minæ, and talents, without including any of those native Italian or Sicilian elements which were adopted by the cities in Magna Græcia and Sicily. The type of the Corinthian coins seems also to have passed to those of Leukas and Ambrakia.[1]

Of the islands of Zakynthus and Kephallenia, Zante and Cephalonia, we hear very little: of Ithaka, so interesting from the story of the Odyssey, we have have no historical information at all. The inhabitants of Zakynthus were Achæans from Peloponnesus: Kephallenia was distributed among four separate city governments.[2] Neither of these islands play any part in Grecian history until the time of the maritime empire of Athens, after the Persian war.

Danube forked at a certain point of its course into two streams, one flowing into the Adriatic, the other into the Euxine.

See the Inscriptions No. 1838 and No. 1845, in the collection of Boeckh and Boeckh's Metrologie, vii, 8, p. 97. Respecting the Corinthian coinage our information is confused and imperfect.

[1] Thucyd. ii, 30–66.

CHAPTER XXIV.

AKARNANIANS. — EPIROTS.

Some notice must be taken of those barbarous or non-Hellenic nations who formed the immediate neighbors of Hellas, west of the range of Pindus, and north of that range which connects Pindus with Olympus, — as well as of those other tribes, who, though lying more remote from Hellas proper, were yet brought into relations of traffic or hostility with the Hellenic colonies.

Between the Greeks and these foreign neighbors, the Akarnanians, of whom I have already spoken briefly in my preceding volume, form the proper link of transition. They occupied the territory between the river Achelôus, the Ionian sea, and the Ambrakian gulf: they were Greeks, and admitted as such to contend at the Pan-Hellenic games,[1] yet they were also closely connected with the Amphilochi and Agræi, who were not Greeks. In manners, sentiments, and intelligence, they were half-Hellenic and half-Epirotic, — like the Ætolians and the Ozolian Lokrians. Even down to the time of Thucydidês, these nations were subdivided into numerous petty communities, lived in unfortified villages, were frequently in the habit of plundering each other, and never permitted themselves to be unarmed: in case of attack, they withdrew their families and their scanty stock, chiefly cattle, to the shelter of difficult mountains or marshes. They were for the most part light-armed, few among them being trained to the panoply of the Grecian hoplite; but they were both brave and skilful in their own mode of warfare, and the sling, in the hands of the Akarnanian, was a weapon of formidable efficiency.[2]

Notwithstanding this state of disunion and insecurity, however, the Akarnanians maintained a loose political league among them-

---

[2] Pollux, i, 150; Thucyd. ii, 81

selves, and a hill near the Amphilochian Argos, on the shores of the Ambrakian gulf, had been fortified to serve as a judgment-seat, or place of meeting, for the settlement of disputes. And it seems that Stratus and Œniadæ had both become fortified in some measure towards the commencement of the Peloponnesian war. The former, the most considerable township in Akarnania, was situated on the Achelôus, rather high up its course, — the latter was at the mouth of the river, and was rendered difficult of approach by its inundations.[1] Astakus, Solium, Palærus, and Alyzia, lay on or near the coast of the Ionian sea, between Œniadæ and Leukas: Phytia, Koronta, Medeôn, Limnæa, and Thyrium, were between the southern shore of the Ambrakian gulf and the river Achelôus.

The Akarnanians appear to have produced many prophets. They traced up their mythical ancestry, as well as that of their neighbors the Amphilochians, to the most renowned prophetic family among the Grecian heroes, — Amphiaraus, with his sons Alkmæôn and Amphilochus: Akarnan, the eponymous hero of the nation, and other eponymous heroes of the separate towns, were supposed to be the sons of Alkmæôn.[2] They are spoken of, together with the Ætolians, as mere rude shepherds, by the lyric poet Alkman, and so they seem to have continued with little alteration until the beginning of the Peloponnesian war, when we hear of them, for the first time, as allies of Athens and as bitter enemies of the Corinthian colonies on their coast. The contact of those colonies, however, and the large spread of Akarnanian accessible coast, could not fail to produce some effect in socializing and improving the people. And it is probable that this effect would have been more sensibly felt, had not the Akarnanians been kept back by the fatal neighborhood of the Ætolians, with whom they were in perpetual feud, — a people the most unprincipled and unimprovable of all who bore the Hellenic

[1] Thucyd. ii, 102; iii, 105

[2] Thucyd. ii, 68–102; Stephan. Byz. v. *Φοίτιαι*. See the discussion in Strabo (x, p. 462), whether the Akarnanians did, or did not, take part in the expedition against Troy; Ephorus maintaining the negative, and stringing together a plausible narrative to explain *why* they did not. The time came when the Akarnanians gained credit with Rome for this supposed absence of their ancestors.

name, and whose habitual faithlessness stood in marked contrast with the rectitude and steadfastness of the Akarnanian character.[1] It was in order to strengthen the Akarnanians against these rapacious neighbors, that the Macedonian Kassander urged them to consolidate their numerous small townships into a few considerable cities. Partially, at least, the recommendation was carried into effect, so as to aggrandize Stratus and one or two other towns; but in the succeeding century, the town of Leukas seems to lose its original position as a separate Corinthian colony, and to pass into that of chief city of Akarnania,[2] which is lost only by the sentence of the Roman conquerors.

Passing over the borders of Akarnania, we find small nations or tribes not considered as Greeks, but known, from the fourth century B. C. downwards, under the common name of Epirots. This word signifies properly, inhabitants of a continent, as opposed to those of an island or a peninsula, and came only gradually to be applied by the Greeks as their comprehensive denomination to designate all those diverse tribes, between the Ambrakian gulf on the south and west, Pindus on the east, and the Illyrians and Macedonians to the north and north-east. Of these Epirots, the principal were, — the Chaonians, Thesprotians, Kassôpians, and Molossians,[3] who occupied the country inland as well as maritime along the Ionian sea, from the Akrokeraunian mountains to the borders of Ambrakia in the interior of the Ambrakian gulf. The Agræans and Amphilochians dwelt eastward of the last-mentioned gulf, bordering upon Akarnania: the Athamânes, the Tymphæans, and the Talares, lived along the western skirts and high range of Pindus. Among these various tribes it is difficult to discriminate the semi-Hellenic from the non-Hellenic; for Herodotus considers both Molossians and Thesprotians as Hellenic, — and the oracle of Dôdôna, as well as the Nekyomanteion, or holy cavern for evoking the dead, of Acheron, were both in the territory of the Thesprotians, and both, in the time of the historian, Hellenic. Thucydidês, on the other hand, treats both Molossians and Thesprotians as barbaric, and Strabo says

[1] Polyb. iv, 30: compare also ix, 40.

[2] Diodor. xix, 67; Livy, xxxiii, 16–17; xlv, 31.

[3] Skylax, c. 28–32.

the same respecting the Athamânes, whom Plato numbers as Hellenic.[1] As the Epirots were confounded with the Hellenic communities towards the south, so they become blended with the Macedonian and Illyrian tribes towards the north. The Macedonian Orestæ, north of the Cambunian mountains and east of Pindus, are called by Hekatæus a Molossian tribe; and Strabo even extends the designation Epirots to the Illyrian Paroræia and Atintânes, west of Pindus, nearly on the same parallel of latitude with the Orestæ.[2] It must be remembered, as observed above, that while the designations Illyrians and Macedonians are properly ethnical, given to denote analogies of language, habits, feeling, and supposed origin, and probably acknowledged by the people themselves, — the name Epirots belongs to the Greek language, is given by Greeks alone, and marks nothing except residence on a particular portion of the continent. Theopompus (about 340 B. C.) reckoned fourteen distinct Epirotic nations, among whom the Molossians and Chaonians were the principal. It is possible that some of these may have been semi-Illyrian, others semi-Macedonian, though all were comprised by him under the common name Epirots.[3]

Of these various tribes, who dwelt between the Akrokeraunian promontory and the Ambrakian gulf, some, at least, appear to have been of ethnical kindred with portions of the inhabitants of southern Italy. There were Chaonians on the gulf of Tarentum, before the arrival of the Greek settlers, as well as in Epirus; we do not find the name Thesprotians in Italy, but we find there a town named Pandosia, and a river named Acheron, the same as

[1] Herodot. ii, 56, v, 92, vi, 127; Thucyd. ii, 80; Plato, Minos, p. 315. The Chaonians and Thesprotians were separated by the river Thyamis (now Kalamas), — Thucyd. i, 46; Stephanus Byz. v, Τροία.

[2] Hekatæus, Fr. 77, ed. Klausen; Strabo, vii, p. 326; Appian, Illyric. c. 7. In the time of Thucydidês, the Molossi and the Atintânes were under the same king (ii, 80). The name Ἠπειρῶται, with Thucydidês, means only inhabitants of a continent, — οἱ ταύτῃ ἠπειρῶται (i, 47; ii, 80) includes Ætolians and Akarnanians (iii, 94–95), and is applied to inhabitants of Thrace (iv, 105).

Epirus is used in its special sense to designate the territory west of Pindus by Xenophon, Hellen. vi, 1, 7.

Compare Mannert, Geographie der Griech. und Römer, part vii, book 2 p. 283.

[3] Strabo, vii, p. 324..

among the Epirotic Thesprotians: the ubiquitous name Pelasgian is connected both with one and with the other. This ethnical affinity, remote or near, between Œnotrians and Epirots, which we must accept as a fact without being able to follow it into detail, consists at the same time with the circumstance, — that both seem to have been susceptible of Hellenic influences to an unusual degree, and to have been moulded, with comparatively little difficulty, into an imperfect Hellenism, like that of the Ætolians and Akarnanians. The Thesprotian conquerors of Thessaly passed in this manner into Thessalian Greeks, and the Amphilochians who inhabited Argos on the Ambrakian gulf, were Hellenized by the reception of Greeks from Ambrakia, though the Amphilochians situated without the city, still remained barbarous in the time of Thucydides:[1] a century afterwards, probably, they would be Hellenized, like the rest, by a longer continuance of the same influences, — as happened with the Sikels in Sicily.

To assign the names and exact boundaries of the different tribes inhabiting Epirus, as they stood in the seventh and sixth centuries B. C., at the time when the western stream of Grecian colonization was going on, and when the newly established Ambrakiots must have been engaged in subjugating or expelling the prior occupants of their valuable site, — is out of our power. We have no information prior to Herodotus and Thucydidês, and that which they tell us cannot be safely applied to a time either much earlier or much later than their own. That there was great analogy between the inland Macedonians and the Epirots, from Mount Bermius across the continent to the coast opposite Korkyra, in military equipment, in the fashion of cutting the hair, and in speech, we are apprized by a valuable passage of Strabo; who farther tells us, that many of the tribes spoke two different languages,[2] — a fact which at least, proves very close

[1] Thucyd. ii, 68.

[2] Strabo, vii, p. 324. In these same regions, under the Turkish government of the present day, such is the mixture and intercourse of Greeks, Albanians, Bulgaric Sclavonians, Wallachians, and Turks, that most of the natives find themselves under the necessity of acquiring two, sometimes three, languages: see Dr. Grisebach, Reise durch Rumelien und nach Brussa, ch. xii, vol. ii, p. 68.

intercommunion, if not a double origin and incorporation. Wars, or voluntary secessions and new alliances, would alter the boundaries and relative situation of the various tribes. And this would be the more easily effected, as all Epirus, even in the fourth century B. C., was parcelled out among an aggregate of villages, without any great central cities; so that the severance of a village from the Molossian union, and its junction with the Thesprotian (abstracting from the feelings with which it might be connected), would make little practical difference in its condition or proceedings. The gradual increase of Hellenic influence tended partially to centralize this political dispersion, enlarging some of the villages into small towns by the incorporation of some of their neighbors; and in this way, probably, were formed the seventy Epirotic cities which were destroyed and given up to plunder on the same day, by Paulus Emilius and the Roman senate. The Thesprotian Ephyrê is called a city, even by Thucydidês.[1] Nevertheless, the situation was unfavorable to the formation of considerable cities, either on the coast or in the interior, since the physical character of the territory is an exaggeration of that of Greece, — almost throughout, wild, rugged, and mountainous. The valleys and low grounds, though frequent, are never extensive, — while the soil is rarely suited, in any continuous spaces, for the cultivation of corn: insomuch that the flour for the consumption of Janina, at the present day, is transported from Thessaly over the lofty ridge of Pindus, by means of asses and mules;[2] while the fruits and vegetables are brought from Arta, the territory of Ambrakia. Epirus is essentially a pastoral country: its cattle as well as its shepherds and shepherd's dogs were celebrated throughout all antiquity; and its population then, as now, found divided village residence the most suitable to their means and occupations. In spite of this natural tendency, however, Hellenic influences were to a certain extent efficacious, and

[1] Livy, xlv, 34; Thucyd. i, 47. Phanotê, in the more northerly part of Epirus, is called only a *castellum*, though it was an important military post (Livy, xliii, 21).

[2] Leake's Travels in Northern Greece, ch. xxxviii, vol. iv, pp. 207, 210, 233; ch. ix, vol. i, p. 411; Cyprien Robert, Les Slaves de Turquie, book iv, ch. 2.

Βουβάται πρῶνες ἐξόχοι — Pindar, Nem. iv, 81; Cæsar, Bell. Civil. iii, 47

it is to them that we are to ascribe the formation of towns like Phœnikê, — an inland city a few miles removed from the sea, in a latitude somewhat north of the northernmost point of Korkyra, which Polybius notices as the most flourishing[1] of the Epirotic cities at the time when it was plundered by the Illyrians in 230 B. C. Passarôn, the ancient spot where the Molossian kings were accustomed on their accession to take their coronation-oath, had grown into a considerable town, in this last century before the Roman conquest; while Tekmôn, Phylakê, and Horreum also became known to us at the same period.[2] But the most important step which those kings made towards aggrandizement, was the acquisition of the Greek city of Ambrakia, which became the capital of the kingdom of Pyrrhus, and thus gave to him the only site suitable for a concentrated population which the country afforded.

If we follow the coast of Epirus from the entrance of the Ambrakian gulf northward to the Akrokeraunian promontory, we shall find it discouraging to Grecian colonization. There are none of those extensive maritime plains which the gulf of Tarentum exhibits on its coast, and which sustained the grandeur of Sybaris and Krôton. Throughout the whole extent, the mountain-region, abrupt and affording little cultivable soil, approaches near to the sea,[3] and the level ground, wherever it exists, must be commanded and possessed, as it is now, by villagers on hill-sites, always difficult of attack and often inexpugnable. From hence, and from the neighborhood of Korkyra, — herself well situated for traffic with Epirus, and jealous of neighboring rivals, — we may understand why the Grecian emigrants omitted this unprofitable tract, and passed on either northward to the maritime plains of Illyria, or westward to Italy. In the time of Herodotus and Thucydidês, there seems to have been no Hellenic settlement between Ambrakia and Apollonia. The harbor called Glykys Limên, and the neighboring valley and plain, the most considerable in Epirus, next to that of Ambrakia, near the junction of

[1] Polybius, ii, 5, 8.

[2] Plutarch, Pyrrh. c. i; Livy, xlv, 26.

[3] See the description of the geographical features of Epirus in Boué, La Turquie en Europe, Géographie Générale, vol. i, p. 57.

the lake and river of Acheron with the sea, were possessed by the Thesprotian town of Ephyrê, situated on a neighboring eminence; perhaps also, in part, by the ancient Thesprotian town of Pandosia, so pointedly connected, both in Italy and Epirus, with the river Acheron.[1] Amidst the almost inexpugnable mountains and gorges which mark the course of that Thesprotian river, was situated the memorable recent community of Suli, which held in dependence many surrounding villages in the lower grounds and in the plain, — the counterpart of primitive Epirotic rulers in situation, in fierceness, and in indolence, but far superior to them in energetic bravery and endurance. It appears that after the time of Thucydidês, certain Greek settlers must have found admission into the Epirotic towns in this region. For Demosthenes[2] mentions Pandosia, Buchetia, and Elæa, as settlements from Elis, which Philip of Macedon conquered and handed over to his brother-in-law the king of the Molossian Epirots; and Strabo tells us that the name of Ephyrê had been changed to Kichyrus, which appears to imply an accession of new inhabitants.

Both the Chaonians and Thesprotians appear, in the time of Thucydidês, as having no kings: there was a privileged kingly race, but the presiding chief was changed from year to year. The Molossians, however, had a line of kings, succeeding from father to son, which professed to trace its descent through fifteen generations downward, from Achilles and Neoptolemus to Tharypas about the year 400 B. C.; they were thus a scion of the great Æakid race. Admêtus, the Molossian king to whom Themistoklês presented himself as a suppliant, appears to have lived in the simplicity of an inland village chief. But Arrybas, his

[1] See the account of this territory in Colonel Leake's Travels in Northern Greece, vol. i. ch. v; his journey from Janina, through the district of Suli and the course of the Acheron, to the plain of Glyky and the Acherusian lake and marshes near the sea. Compare, also, vol. iv, ch. xxxv, p. 73.

"To the ancient sites (observes Colonel Leake) which are so numerous in the great valleys watered by the lower Acheron, the lower Thyamis, and their tributaries, it is a mortifying disappointment to the geographer not to be able to apply a single name with absolute certainty."

The number of these sites affords one among many presumptions that each must have been individually inconsiderable.

[2] Dêmosthenês, De Haloneso, ch. 7, p. 84 R; Strabo, vii, p. 324.

son or grandson, is said to have been educated at Athens, and to have introduced improved social regularity into his native country: while the subsequent kings both imitated the ambition and received the aid of Philip of Macedon, extending their dominion[1] over a large portion of the other Epirots: even in the time of Skylax, they covered a large inland territory, though their portion of sea-coast was confined. From the narrative of Thucydidês, we gather that all the Epirots, though held together by no political union, were yet willing enough to combine for purposes of aggression and plunder. The Chaonians enjoyed a higher military reputation than the rest, — but the account which Thucydidês gives of their expedition against Akarnania exhibits a blind, reckless, boastful impetuosity, which contrasts strikingly with the methodical and orderly march of their Greek allies and companions.[2] We may here notice, that the Kassopæans, whom Skylax places in the south-western portion of Epirus between the Acheron and the Ambrakian gulf, are not noticed either by Herodotus or Thucydidês: the former, indeed, conceives the river Acheron and the Thesprotians as conterminous with the Ambrakiotic territory.

To collect the few particulars known respecting these ruder communities adjacent to Greece, is a task indispensable for the just comprehension of the Grecian world, and for the appreciation of the Greeks themselves, by comparison or contrast with their contemporaries. Indispensable as it is, however, it can hardly be rendered in itself interesting to the reader, whose patience I have to bespeak by assuring him that the facts hereafter to be recounted of Grecian history would be only half understood without this preliminary survey of the lands around.

[1] Skylax, c. 32; Pausanias, i, 11; Justin, xvii, 6.

That the *Arrhybas* of Justin is the same as the *Tharypas* of Pausanias, — perhaps, also, the same as *Tharyps* in Thucydidês, who was a minor at the beginning of the Peloponnesian war, — seems probable.

PART II.

CONTINUATION OF HISTORICAL GREECE.

CHAPTER XXV.

ILLYRIANS, MACEDONIANS, PÆONIANS.

Different tribes of Illyrians. — Conflicts and contrast of Illyrians with Greeks. — Epidamnus and Apollonia in relation to the Illyrians. — Early Macedonians. — Their original seats. — General view of the country which they occupied — eastward of Pindus and Skardus. — Distribution and tribes of the Macedonians. — Macedonians round Edessa — the leading portion of the nation. — Pierians and Bottiæans — originally placed on the Thermaic gulf, between the Macedonians and the sea. — Pæonians. — Argeian Greeks who established the dynasty of Edessa — Perdikkas. — Talents for command manifested by Greek chieftains over barbaric tribes. — Aggrandizement of the dynasty of Edessa — conquests as far as the Thermaic gulf, as well as over the interior Macedonians. — Friendship between king Amyntas and the Peisistratids..... *pages* **1–19**

CHAPTER XXVI.

THRACIANS AND GREEK COLONIES IN THRACE.

Thracians — their numbers and abode. — Many distinct tribes, yet little diversity of character. — Their cruelty, rapacity, and military efficiency. — Thracian worship and character Asiatic. — Early date of the Chalkidic colonies in Thrace. — Methônê the earliest — about 720 B.C. — Several other small settlements on the Chalkidic peninsula and its three projecting headlands. — Chalkidic peninsula — Mount Athos. — Colonies in Pallênê, or the westernmost of the three headlands. — In Sithonia, or the middle headland. — In the headland of Athos — Akanthus, Stageira, etc. — Greek settlements east of the Strymôn in Thrace. — Island of Thasus. — Thracian Chersonesus. — Perinthus, Selymbria, and Byzantium. — Grecian settlements on the Euxine, south of the Danube. — Lemnos and Imbros..... .. 20–28

CHAPTER XXVII

KYRENE. — BARKA. — HESPERIDES.

First voyages of the Greeks to Libya. — Foundation of Kyrênê. — Founded by Battus from the island of Thêra. — Colony first settled in the island of Platea — afterwards removed to Kyrênê. — Situation of Kyrênê. — Fertility, produce, and prosperity. — Libyan tribes near Kyrênê. — Extensive dominion of Kyrênê and Barka over the Libyans. — Connection of the Greek colonies with the Nomads of Libya. — Manners of the Libyan Nomads. — Mixture of Greeks and Libyan inhabitants at Kyrênê. — Dynasty of Battus, Arkesilaus, Battus the Second, at Kyrênê — fresh colonists from Greece. — Disputes with the native Libyans. — Arkesilaus the Second, prince of Kyrênê — misfortunes of the city — foundation of Barka. — Battus the Third, a lame man — reform by Demônax, who takes away the supreme power from the Battiads. — New emigration — restoration of the Battiad Arkesilaus the Third. — Oracle limiting the duration of the Battiad dynasty — Violences at Kyrênê under Arkesilaus the Third. — Arkesilaus sends his submission to Kambysês, king of Persia. — Persian expedition from Egypt against Barka — Pheretimê, mother of Arkesilaus. — Capture of Barka by perfidy — cruelty of Pheretimê. — Battus the Fourth and Arkesilaus the Fourth — final extinction of the dynasty about 460–450 B.C. — Constitution of Demônax not durable. 29–49

CHAPTER XXVIII.

PAN-HELLENIC FESTIVALS — OLYMPIC, PYTHIAN, NEMEAN, AND ISTHMIAN.

Want of grouping and unity in the early period of Grecian history. — New causes, tending to favor union, begin after 560 B.C. — no general war between 776 and 560 B.C. known to Thucydidês. — Increasing disposition to religious, intellectual, and social union. — Reciprocal admission of cities to the religious festivals of each other. — Early splendor of the Ionic festival at Delos — its decline. — Olympic games — their celebrity and long continuance. — Their gradual increase — new matches introduced. — Olympic festival — the first which passes from a local to a Pan-Hellenic character. — Pythian games, or festival. — Early state and site of Delphi. — Phocian town of Krissa. — Kirrha, the seaport of Krissa. — Growth of Delphi and Kirrha — decline of Krissa. — Insolence of the Kirrhæans punished by the Amphiktyons. — First Sacred War, in 595 B.C. — Destruction of Kirrha. — Pythian games founded by the Amphiktyons. — Nemean and Isthmian games. — Pan-Hellenic character acquired by all the four festivals — Olympic, Pythian, Nemean, and Isthmian. — Increased frequentation of the other festivals in most Greek cities. — All other Greek cities, except Sparta, encouraged such visits. — Effect of these festivals upon the Greek mind. 50–78

CHAPTER XXIX.

LYRIC POETRY. — THE SEVEN WISE MEN.

Age and duration of the Greek lyric poetry. — Epical age preceding the lyrical. — Wider range of subjects for poetry — new metres — enlarged musical scale. — Improvement of the harp by Terpander — of the flute by Olympus and others. — Archilochus, Kallinus, Tyrtæus, and Alkman — 670–600 B.C. — New metres superadded to the Hexameter — Elegiac, Iambic, Trochaic. — Archilochus. — Simonidês of Amorgos, Kallinus, Tyrtæus. — Musical and poetical tendencies at Sparta. — Choric training — Alkman, Thalêtas. — Doric dialect employed in the choric compositions. — Arion and Stêsichorus — substitution of the professional in place of the popular chorus. — Distribution of the chorus by Stêsichorus — Strophê — Antistrophê — Epôdus. — Alkæus and Sappho. — Gnomic or moralizing poets. — Solon and Theognis. — Subordination of musical and orchestrical accompaniment to the words and meaning. — Seven Wise Men. — They were the first men who acquired an Hellenic reputation, without political genius. — Early manifestation of philosophy — in the form of maxims. — Subsequent growth of dialectics and discussion. — Increase of the habit of writing — commencement of prose compositions. — First beginnings of Grecian art. — Restricted character of early art, from religious associations. — Monumental ornaments in the cities — begin in the sixth century B.C. — Importance of Grecian art as a means of Hellenic union. 73–101

CHAPTER XXX.

GRECIAN AFFAIRS DURING THE GOVERNMENT OF PEISISTRATUS AND HIS SONS AT ATHENS.

Peisistratus and his sons at Athens — B.C. 560–510 — uncertain chronology as to Peisistratus. — State of feeling in Attica at the accession of Peisistratus. — Retirement of Peisistratus, and stratagem whereby he is reinstated. — Quarrel of Peisistratus with the Alkmæônids — his second retirement. — His second and final restoration. — His strong government — mercenaries — purification of Delos. — Mild despotism of Peisistratus. — His sons Hippias and Hipparchus. — Harmodius and Aristogeitôn. — They conspire and kill Hipparchus, B.C. 514. — Strong and lasting sentiment, coupled with great historical mistake, in the Athenian public. — Hippias despot alone — 514–510 B.C. — his cruelty and conscious insecurity. — Connection of Athens with the Thracian Chersonesus and the Asiatic coast of the Hellespont. — First Miltiadês — œkist of the Chersonese. — Second Miltiadês — sent out thither by the Peisistratids. — Proceedings of the exiled Alkmæônids against Hippias. — Conflagration and rebuilding of the Delphian temple. — The Alkmæônids rebuild the temple with magnificence. — Gratitude of the Delphians towards them — they procure from the oracle directions to Sparta, enjoining the expulsion of Hippias. — Spartan expeditions into Attica. — Expulsion of Hippias, and liberation of Athens. 102–124

CHAPTER XXXI.

GRECIAN AFFAIRS AFTER THE EXPULSION OF THE PEISISTRATIDS. — REVOLUTION OF KLEISTHENES AND ESTABLISHMENT OF DEMOCRACY AT ATHENS.

State of Athens after the expulsion of Hippias. — Opposing party-leaders — Kleisthenês — Isagoras. — Democratical revolution headed by Kleisthenês. — Rearrangement and extension of the political franchise. — Suppression of the four old tribes, and formation of ten new tribes, including an increased number of the population. — Imperfect description of this event in Herodotus — its real bearing. — Grounds of opposition to it in ancient Athenian feeling. — Names of the new tribes — their relation to the demes. — Demes belonging to each tribe usually not adjacent to each other. — Arrangements and functions of the deme. — Solonian constitution preserved, with modifications. — Change of military arrangement in the state. — The ten stratêgi, or generals. — The judicial assembly of citizens, or Heliæa, subsequently divided into fractions, each judging separately. — The political assembly, or ekklesia. — Financial arrangements. — Senate of Five Hundred. — ekklesiae, or political assembly. — Kleisthenês the real author of the Athenian democracy. — Judicial attributes of the people — their gradual enlargement. — Three points in Athenian constitutional law, hanging together: — Universal admissibility of citizens to magistracy — choice by lot — reduced functions of the magistrates chosen by lot. — Universal admissibility of citizens to the archonship — not introduced until after the battle of Platæ. — Constitution of Kleisthenês retained the Solonian law of exclusion as to individual office. — Difference between that constitution and the political state of Athens after Periklês. — Senate of Areopagus. — The ostracism. — Weakness of the public force in the Grecian governments. — Past violences of the Athenian nobles. — Necessity of creating a constitutional morality. — Purpose and working of the ostracism. — Securities against its abuse. — Ostracism necessary as a protection to the early democracy — afterwards dispensed with. — Ostracism analogous to the exclusion of a known pretender to the throne in a monarchy. — Effect of the long ascendency of Periklês, in strengthening constitutional morality. — Ostracism in other Grecian cities. — Striking effect of the revolution of Kleisthenês on the minds of the citizens. — Isagoras calls in Kleomenês and the Lacedæmonians against it. — Kleomenês and Isagoras are expelled from Athens. — Recall of Kleisthenês — Athens solicits the alliance of the Persians. — First connection between Athens and Platæa. — Disputes between Platæa and Thebes — decision of Corinth as arbitrator. — Second march of Kleomenês against Athens — desertion of his allies. — First appearance of Sparta as acting head of Peloponnesian allies. — Signal successes of Athens against Bœotians and Chalkidians. — Plantation of Athenian settlers, or klêruchs, in the territory of Chalkis. — Distress of the Thebans — they ask assistance from Ægina. — The Æginetans make war on Athens. — Preparations at Sparta to attack Athens anew — the Spartan allies are summoned, together with Hippias. — First formal convocation at Sparta — advance of Greece towards a political system. — Proceedings of the convocation — animated protest of Corinth against any interference in favor of Hippias — the Spartan allies refuse to interfere. — Aversion to single-headed rule — now predominant in Greece. — Striking development of Athenian energy after the revolution of Kleisthenês — language of Herodotus. — Effect of the idea or theory of democracy in exciting Athenian sentiment. — Patriotism of an Athenian between 500–400 B.C. — combined with an eager spirit of personal military exertion and sacrifice. — Diminution of this active sentiment in the restored democracy after the Thirty Tyrants. 126–181

CHAPTER XXXII.

RISE OF THE PERSIAN EMPIRE. — CYRUS.

State of Asia before the rise of the Persian monarchy. — Great power and alliances of Crœsus. — Rise of Cyrus — uncertainty of his early history. — Story of Astyagês. — Herodotus and Ktêsias. — Condition of the native Persians at the first rise of Cyrus. — Territory of Iran — between Tigris and Indus. — War between Cyrus and Crœsus. — Crœsus tests the oracles — triumphant reply from Delphi — munificence of Crœsus to the oracle. — Advice given to him by the oracle. — He solicits the alliance of Sparta. — He crosses the Halys and attacks the Persians. — Rapid march of Cyrus to Sardis. — Siege and capture of Sardis. — Crœsus becomes prisoner of Cyrus — how treated. — Remonstrance addressed by Crœsus to the Delphian god. — Successful justification of the oracle. — Fate of Crœsus impressive to the Greek mind. — The Mœræ, or Fates. — State of the Asiatic Greeks after the conquest of Lydia by Cyrus. — They apply in vain to Sparta for aid. — Cyrus quits Sardis — revolt of the Lydians suppressed. — The Persian general Mazarês attacks Ionia — the Lydian Paktyas. — Harpagus succeeds Mazarês — conquest of Ionia by the Persians. — Fate of Phôkæa. — Emigration of the Phôkæans vowed by all, executed only by one half. — Phôkæan colony first at Alalia, then at Elea. — Proposition of Bias for a Pan-Ionic emigration not adopted. — Entire conquest of Asia Minor by the Persians. 182–208

CHAPTER XXXIII.

GROWTH OF THE PERSIAN EMPIRE.

Conquests of Cyrus in Asia. — His attack of Babylon. — Difficult approach to Babylon — no resistance made to the invaders. — Cyrus distributes the river Gyndês into many channels. — He takes Babylon, by drawing off for a time the waters of the Euphratês. — Babylon left in undiminished strength and population. — Cyrus attacks the Massagetæ — is defeated and slain. — Extraordinary stimulus to the Persians, from the conquests of Cyrus. — Character of the Persians. — Thirst for foreign conquest among the Persians, for three reigns after Cyrus. — Kambysês succeeds his father Cyrus — his invasion of Egypt. — Death of Amasis, king of Egypt, at the time when the Persian expedition was preparing — his son Psammenitus succeeds. — Conquest of Egypt by Kambysês. — Submission of Kyrênê and Barka to Kambysês — his projects for conquering Libya and Ethiopia disappointed. — Insults of Kambysês to the

Egyptian religion. — Madness of Kambysês — he puts to death his younger brother, Smerdis. — Conspiracy of the Magian Patizeithês who sets up his brother as king under the name of Smerdis. — Death of Kambysês. — Reign of the false Smerdis — conspiracy of the seven Persian noblemen against him — he is slain — Darius succeeds to the throne. — Political bearing of this conspiracy — Smerdis represents Median preponderance, which is again put down by Darius. — Revolt of the Medes — suppressed. — Discontents of the satraps. — Revolt of Babylon. — Reconquered and dismantled by Darius. — Organization of the Persian empire by Darius. — Twenty satrapies with a fixed tribute apportioned to each. — Imposts upon the different satrapies. — Organizing tendency of Darius — first imperial coinage — imperial roads and posts. — Island of Samos — its condition at the accession of Darius. — Polykratês. — Polykratês breaks with Amasis, king of Egypt, and allies himself with Kambysês. — The Samian exiles, expelled by Polykratês, apply to Sparta for aid. — The Lacedæmonians attack Samos, but are repulsed. — Attack on Siphnos by the Samian exiles. — Prosperity of Polykratês. — He is slain by the Persian satrap Orœtês. — Mæandrius, lieutenant of Polykratês in Samos — he desires to establish a free government after the death of Polykratês — conduct of the Samians. — Mæandrius becomes despot. — Contrast between the Athenians and the Samians. — Sylosôn, brother of Polykratês, lands with a Persian army in Samos — his history. — Mæandrius agrees to evacuate the island. — Many Persian officers slain — slaughter of the Samians. — Sylosôn despot at Samos. — Application of Mæandrius to Sparta for aid — refused..... 209–252

CHAPTER XXXIV.

DEMOKEDES. — DARIUS INVADES SCYTHIA.

Conquering dispositions of Darius. — Influence of his wife, Atossa. — Dêmokêdês, the Krotoniate surgeon — his adventures — he is carried as a slave to Susa. — He cures Darius, who rewards him munificently. — He procures permission by artifice, and through the influence of Atossa, to return to Greece. — Atossa suggests to Darius an expedition against Greece. — Dêmokêdês, with some Persians, is sent to procure information for him. — Voyage of Dêmokêdês along the coast of Greece — he stays at Kroton — fate of his Persian companions. — Consequences which might have been expected to happen if Darius had then undertaken his expedition against Greece. — Darius marches against Scythia. — His naval force formed of Asiatic and insular Greeks. — He directs the Greeks to throw a bridge over the Danube and crosses the river. — He marches into Scythia — narrative of his march impossible and unintelligible, considered as history. — The description of his march is rather to be looked upon as a fancy-picture, illustrative of Scythian warfare. — Poetical grouping of the Scythians and their neighbors by Herodotus. — Strong impression produced upon the imagination of Herodotus by the Scythians. — Orders given by Darius to the Ionians at the bridge over the Danube. — The Ionians are left in guard of the bridge; their conduct when Darius's return is delayed. — The Ionian despots preserve the bridge and enable Darius to recross the river, as a means of support to their own dominion at home. — Opportunity lost of emancipation from

the Persians — Conquest of Thrace by the Persians as far as the river Strymon — Myrkinus near that river given to Histiæus. — Macedonians and Pæonians are conquered by Megabazus. — Insolence of the Persian envoys in Macedonia — they are murdered. — Histiæus founds a prosperous colony at Myrkinus — Darius sends for him into Asia. — Otanês Persian general on the Hellespont — he conquers the Pelasgian population of Lemnos, Imbros, etc. — Lemnos and Imbros captured by the Athenians and Miltiadês..... 252–280

CHAPTER XXXV.

IONIC REVOLT.

Darius carries Histiæus to Susa. — Application of the banished Hippias to Artaphernês, satrap of Sardis. — State of the island of Naxos — Naxian exiles solicit aid from Aristagoras of Milêtus. — Expedition against Naxos, undertaken by Aristagoras with the assistance of Artaphernês the satrap. — Its failure, through dispute between Aristagoras and the Persian general, Megabatês. — Alarm of Aristagoras — he determines to revolt against Persia — instigation to the same effect from Histiæus. — Revolt of Aristagoras and the Milesians — the despots in the various cities deposed and seized. — Extension of the revolt throughout Asiatic Greece — Aristagoras goes to solicit aid from Sparta. — Refusal of the Spartans to assist him. — Aristagoras applies to Athens — obtains aid both from Athens and Eretria. — March of Aristagoras up to Sardis with the Athenian and Eretrian allies — burning of the town — retreat and defeat of these Greeks by the Persians. — The Athenians abandon the alliance. — Extension of the revolt to Cyprus and Byzantium. — Phenician fleet called forth by the Persians — Persian and Phenician armament sent against Cyprus — the Ionians send aid thither — victory of the Persians — they reconquer the island. — Successes of the Persians against the revolted coast of Asia Minor. — Aristagoras loses courage and abandons the country. — Appearance of Histiæus, who had obtained leave of departure from Susa. — Histiæus is suspected by Artaphernês — flees to Chios. — He attempts in vain to procure admission into Milêtus — puts himself at the head of a small piratical squadron. — Large Persian force assembled, aided by the Phenician fleet, for the siege of Milêtus. — The allied Grecian fleet mustered at Ladê. — Attempts of the Persians to disunite the allies, by means of the exiled despots. — Want of command and discipline in the Grecian fleet. — Energy of the Phôkæan Dionysius — he is allowed to assume the command. — Discontent of the Grecian crews — they refuse to act under Dionysius. — Contrast of this incapacity of the Ionic crews with the subsequent severe discipline of the Athenian seamen. — Disorder and mistrust grow up in the fleet — treachery of the Samian captains. — Complete victory of the Persian fleet at Ladê — ruin of the Ionic fleet — severe loss of the Chians. — Voluntary exile and adventures of Dionysius. — Siege, capture, and ruin of Milêtus by the Persians. — The Phenician fleet reconquers all the coast-towns and islands. — Narrow escape of Miltiadês from their pursuit. — Cruelties of the Persians after the reconquest. — Movements and death of Histiæus. — Sympathy and terror of the Athenians at the capture of Milêtus — the tragic writer Phrynichus is fined..... 280–310

CHAPTER XXXVI.

FROM THE IONIC REVOLT TO THE BATTLE OF MARATHON.

Proceedings of the satrap Artaphernês after the reconquest of Ionia. — Mardonius comes with an army into Ionia — he puts down the despots in the Greek cities. — He marches into Thrace and Macedonia — his fleet destroyed by a terrible storm near Mount Athos — he returns into Asia. — Island of Thasos — prepares to revolt from the Persians — forced to submit. — Preparations of Darius for invading Greece — he sends heralds round the Grecian towns to demand earth and water — many of them submit. — Ægina among those towns which submitted — state and relations of this island. — Heralds from Darius are put to death, both at Athens and Sparta. — Effects of this act in throwing Sparta into a state of hostility against Persia. — The Athenians appeal to Sparta, in consequence of the *medism* (or submission to the Persians) of Ægina. — Interference of Sparta — her distinct acquisition and acceptance of the leadership of Greece. — One condition of recognized Spartan leadership was, the extreme weakness of Argos at this moment. — Victorious war of Sparta against Argos. — Destruction of the Argeians by Kleomenês, in the grove of the hero Argus. — Kleomenês returns without having attacked the city of Argos. — He is tried — his peculiar mode of defence — acquitted. — Argos unable to interfere with Sparta in the affair of Ægina and in her presidential power. — Kleomenês goes to Ægina to seize the *medizing* leaders — resistance made to him, at the instigation of his colleague Demaratus. — Demaratus is deposed, and Leotychidês chosen king, by the intrigues of Kleomenês. — Demaratus leaves Sparta and goes to Darius. — Kleomenês and Leotychidês go to Ægina, seize ten hostages, and convey them as prisoners to Athens. — Important effect of this proceeding upon the result of the first Persian invasion of Greece. — Assemblage of the vast Persian armament under Datis at Samos. — He crosses the Ægean — carries the island of Naxos without resistance — respects Delos. — He reaches Enbœa — siege and capture of Eretria. — Datis lands at Marathon. — Existing condition and character of the Athenians. — Miltiadês — his adventures — chosen one of the ten generals in the year in which the Persians landed at Marathon. — Themistoklês and Aristeidês. — Miltiadês, Aristeidês, and perhaps Themistoklês, were now among the ten stratêgi, or generals, in 490 B.C. — The Athenians ask aid from Sparta — delay of the Spartans. — Difference of opinion among the ten Athenian generals — five of them recommend an immediate battle, the other five are adverse to it. — Urgent instances of Miltiadês in favor of an immediate battle — casting-vote of the polemarch determines it. — March of the Athenians to Marathon — the Platæans spontaneously join them there. — Numbers of the armies. — Locality of Marathon. — Battle of Marathon — rapid charge of Miltiadês — defeat of the Persians. — Loss on both sides. — Ulterior plans of the Persians against Athens — party in Attica favorable to them. — Rapid march of Miltiadês back to Athens on the day of the battle. — The Persians abandon the enterprise, and return home. — Athens rescued through the speedy battle brought on by Miltiadês. — Change of Grecian feeling as to the Persians — terror which the latter inspired at the time of the battle of Marathon. — Immense effect of the Marathonian victory on the feelings of the Greeks — especially of the Athenians. — Who were the traitors that invited the Persians to Athens after the battle — false imputation on the Alkmæônids. — Supernatural belief connected with the battle — commemorations of it. — Return of Datis to Asia — fate of the Eretrian captives. — Glory of Miltiadês — his subsequent conduct — unsuccessful expedition against Paros — bad hurt of Miltiadês. — Disgrace of Miltiadês on his return. — He is fined — dies of his wound — the fine is paid by his son Kimon. — Reflections on the closing adventures of the life of Miltiadês. — Fickleness and ingratitude imputed to the Athenians — how far they deserve the charge. — Usual temper of the Athenian dikasts in estimating previous services. — Tendency of eminent Greeks to be corrupted by success. — In what sense it is apparently true that fickleness was an attribute of the Athenian democracy..... 311–378

CHAPTER XXXVII

IONIC PHILOSOPHERS. — PYTHAGORAS. — KROTON AND SYBARIS.

Phalaris despot of Agrigentum. — Thalês. — Ionic philosophers — not a school or succession. — Step in philosophy commenced by Thalês. — Vast problems with scanty means of solution. — One cause of the vein of skepticism which runs through Grecian philosophy. — Thalês — primeval element of water, or the fluid. — Anaximander. — Problem of the One and the Many — the Permanent and the Variable. — Xenophanês — his doctrine the opposite of that of Anaximander. — The Eleatic school. Parmenidês and Zeno, springing from Xenophanês — their dialectics — their great influence on Grecian speculation. — Pherekydês. — History of Pythagoras. — His character and doctrines. — Pythagoras more a missionary and schoolmaster than a politician — his political efficiency exaggerated by later witnesses. — His ethical training — probably not applied to all the members of his order. — Decline and subsequent renovation of the Pythagorean order. — Pythagoras not merely a borrower, but an original and ascendent mind. — He passes from Samos to Kroton. — State of Kroton — oligarchical government — excellent gymnastic training and medical skill. — Rapid and wonderful effects said to have been produced by the exhortations of Pythagoras. — He forms a powerful club, or society, consisting of three hundred men taken from the wealthy classes at Kroton. — Political influence of Pythagoras — was an indirect result of the constitution of the order. — Causes which led to the subversion of the Pythagorean order. — Violences which accompanied its subversion. — The Pythagorean order is reduced to a religious and philosophical sect, in which character it continues. — War between Sybaris and Kroton. — Defeat of the Sybarites, and destruction of their city, partly through the aid of the Spartan prince Dorieus. — Sensation excited in the Hellenic world by the destruction of Sybaris. — Gradual decline of the Greek power in Italy. — Contradictory statements and arguments respecting the presence of Dorieus. — Herodotus does not mention the Pythagoreans, when he alludes to the war between Sybaris and Kroton. — Charondas, lawgiver of Katana, Naxos, Zanklê Rhêgium, etc. 378–419

HISTORY OF GREECE.

PART II.

CONTINUATION OF HISTORICAL GREECE.

CHAPTER XXV.

ILLYRIANS, MACEDONIANS, PÆONIANS.

NORTHWARD of the tribes called Epirotic lay those more numerous and widely extended tribes who bore the general name of Illyrians; bounded on the west by the Adriatic, on the east by the mountain-range of Skardus, the northern continuation of Pindus,— and thus covering what is now called Middle and Upper Albania, together with the more northerly mountains of Montenegro, Herzegovina, and Bosnia. Their limits to the north and north-east cannot be assigned, but the Dardani and Autariatæ must have reached to the north-east of Skardus and even east of the Servian plain of Kossovo; while along the Adriatic coast, Skylax extends the race so far northward as to include Dalmatia, treating the Liburnians and Istrians beyond them as not Illyrian: yet Appian and others consider the Liburnians and Istrians as Illyrian, and Herodotus even includes under that name the Eneti, or Veneti, at the extremity of the Adriatic gulf.[1] The Bulini, accord-

[1] Herodot. i, 196; Skylax, c. 19–27; Appian, Illyric. c. 2, 4, 8.

The geography of the countries occupied in ancient times by the Illyrians, Macedonians, Pæonians, Thracians, etc., and now possessed by a great diversity of races, among whom the Turks and Albanians retain the prim-

ing to Skylax, were the northernmost Illyrian tribe: the Amantini, immediately northward of the Epirotic Chaonians, were the

itive barbarism without mitigation, is still very imperfectly understood, though the researches of Colonel Leake, of Boué, of Grisebach, and others (especially the valuable travels of the latter), have of late thrown much light upon it. How much our knowledge is extended in this direction, may be seen by comparing the map prefixed to Mannert's Geographie, or to O. Müller's Dissertation on the Macedonians, with that in Boué's Travels, but the extreme deficiency of the maps, even as they now stand, is emphatically noticed by Boué himself (see his Critique des Cartes de la Turquie in the fourth volume of his Voyage), — by Paul Joseph Schaffarik, the learned historian of the Sclavonic race, in the preface attached by him to Dr Joseph Müller's Topographical Account of Albania, — and by Grisebach, who in his surveys, taken from the summits of the mountains Peristeri and Ljubatrin, found the map differing at every step from the bearings which presented themselves to his eye. It is only since Boué and Grisebach that the idea has been completely dismissed, derived originally from Strabo, of a straight line of mountains (*εὐθεῖα γραμμή*, Strabo, lib. vii, Fragm. 3) running across from the Adriatic to the Euxine, and sending forth other lateral chains in a direction nearly southerly. The mountains of Turkey in Europe, when examined with the stock of geological science which M Viquesnel (the companion of Boué) and Dr. Grisebach bring to the task are found to belong to systems very different, and to present evidences of conditions of formation often quite independent of each other.

The thirteenth chapter of Grisebach's Travels presents the best account which has yet been given of the chain of Skardus and Pindus: he has been the first to prove clearly, that the Ljubatrin, which immediately overhangs the plain of Kossovo at the southern border of Servia and Bosnia, is the north-eastern extremity of a chain of mountains reaching southward to the frontiers of Ætolia, in a direction not very wide of N-S., — with the single interruption (first brought to view by Colonel Leake) of the Klissoura of Devol, — a complete gap, where the river Devol, rising on the eastern side, crosses the chain and joins the Apsus, or Beratino, on the western, — (it is remarkable that both in the map of Boué and in that annexed to Dr. Joseph Müller's Topographical Description of Albania, the river Devol is made to join the Genussus, or Skoumi, considerably north of the Apsus, though Colonel Leake's map gives the correct course.) In Grisebach's nomenclature Skardus is made to reach from the Ljubatrin as its north-eastern extremity, south-westward and southward as far as the Klissoura of Devol: south of that point Pindus commences, in a continuation, however, of the same axis.

In reference to the seats of the ancient Illyrians and Macedonians Grisebach has made another observation of great importance (vol. ii, p 121). Between the north-eastern extremity, Mount Ljubatrin, and the Klissoura of Devol, there are in the mighty and continuous chain of Skar-

southernmost. Among the southern Illyrian tribes are to be numbered the Taulantii, — originally the possessors, afterwards the immediate neighbors, of the territory on which Epidamnus was founded. The ancient geographer Hekatæus[1] (about 500

dus (above seven thousand feet high) only two passes fit for an army to cross: one near the northern extremity of the chain, over which Grisebach himself crossed, from Kalkandele to Prisdren, a very high *col*, not less than five thousand feet above the level of the sea; the other, considerably to the southward, and lower as well as easier, nearly in the latitude of Lychnidus, or Ochrida. It was over this last pass that the Roman Via Egnatia travelled, and that the modern road from Scutari and Durazzo to Bitolia now travels. With the exception of these two partial depressions, the long mountain-ridge maintains itself undiminished in height, admitting, indeed, paths by which a small company either of travellers or of Albanian robbers from the Dibren, may cross (there is a path of this kind which connects Struga with Ueskioub, mentioned by Dr. Joseph Müller, p. 70, and some others by Boué, vol. iv, p. 546), but nowhere admitting the passage of an army.

To attack the Macedonians, therefore, an Illyrian army would have to go through one or other of these passes, or else to go round the north-eastern pass of Katschanik, beyond the extremity of Ljubatrin. And we shall find that, in point of fact, the military operations recorded between the two nations carry us usually in one or other of these directions. The military proceedings of Brasidas (Thucyd. iv. 124), — of Philip the son of Amyntas king of Macedon (Diodor. xvi, 8), — of Alexander the Great in the first year of his reign (Arrian, i, 5), all bring us to the pass near Lychnidus (compare Livy, xxxii, 9; Plutarch, Flaminin. c. 4); while the Illyrian Dardani and Autariatæ border upon Pæonia, to the north of Pelagonia, and threaten Macedonia from the north-east of the mountain-chain of Skardus. The Autariatæ are not far removed from the Pæonian Agrianes, who dwelt near the sources of the Strymon, and both Autariatæ and Dardani threatened the return march of Alexander from the Danube into Macedonia, after his successful campaign against the Getæ, low down in the course of that great river (Arrian, i, 5). Without being able to determine the precise line of Alexander's march on this occasion, we may see that these two Illyrian tribes must have come down to attack him from Upper Mœsia, and on the eastern side of the Axius. This, and the fact that the Dardani were the immediate neighbors of the Pæonians, shows us that their seats could not have been far removed from Upper Mœsia (Livy, xlv, 29): the fauces Pelagoniæ (Livy, xxxi, 34) are the pass by which they entered Macedonia from the north. Ptolemy even places the Dardani at Skopiæ (Ueskioub) (iii, 9); his information about these countries seems better than that of Strabo.

[1] Hekatæi Fragm. ed. Klausen, Fr. 66–70; Thucyd. i, 26.

Skylax places the Encheleis north of Epidamnus and of the Taulantii

B.C.), is sufficiently well acquainted with them to specify their town Sesarêthus: he also named the Chelidonii as their northern, the Encheleis as their southern neighbors; and the Abri also as a tribe nearly adjoining. We hear of the Illyrian Parthini, nearly in the same regions, — of the Dassaretii,[1] near Lake Lychnidus, — of the Penestæ, with a fortified town Uscana, north of the Dassaretii, — of the Ardiæans, the Autariatæ, and the Dardanians, throughout Upper Albania eastward as far as Upper Mœsia, including the range of Skardus itself; so that there were some Illyrian tribes conterminous on the east with Macedonians, and on the south with Macedonians as well as with Pæonians. Strabo even extends some of the Illyrian tribes much farther northward, nearly to the Julian Alps.[2]

With the exception of some portions of what is now called Middle Albania, the territory of these tribes consisted principally of mountain pastures with a certain proportion of fertile valley, but rarely expanding into a plain. The Autariatæ had the reputation of being unwarlike, but the Illyrians generally were poor, rapacious, fierce, and formidable in battle. They shared with the remote Thracian tribes the custom of tattooing[3] their bodies and of offering human sacrifices: moreover, they were always ready to sell their military service for hire, like the modern Al

It may be remarked that Hekatæus seems to have communicated much information respecting the Adriatic: he noticed the city of Adria at the extremity of the Gulf, and the fertility and abundance of the territory around it (Fr. 58: compare Skymnus Chius, 384).

[1] Livy, xliii, 9–18. Mannert (Geograph. der Griech. und Römer, part vii ch. 9, p. 386, *seq.*) collects the points and shows how little can be ascertained respecting the localities of these Illyrian tribes.

[2] Strabo, iv, p. 206.

[3] Strabo, vii, p. 315; Arrian. i, 5, 4–11. So impracticable is the territory, and so narrow the means of the inhabitants, in the region called Upper Albania, that most of its resident tribes even now are considered as free, and pay no tribute to the Turkish government: the Pachas cannot extort it without greater expense and difficulty than the sum gained would repay. The same was the case in Epirus, or Lower Albania, previous to the time of Ali Pacha: in Middle Albania, the country does not present the like difficulties, and no such exemptions are allowed (Boué, Voyage en Turquie, vol. iii, p. 192). These free Albanian tribes are in the same condition with regard to the Sultan as the Mysians and Pisidians in Asia Minor with regard to the king of Persia in ancient times (Xenophon, Anab. iii, 2, 23).

banian Schkipetars, in whom probably their blood yet flows, though with considerable admixture from subsequent emigrations. Of the Illyrian kingdom on the Adriatic coast, with Skodra (Scutari) for its capital city, which became formidable by its reckless piracies in the third century B.C., we hear nothing in the flourishing period of Grecian history. The description of Skylax notices in his day, all along the northern Adriatic, a considerable and standing traffic between the coast and the interior, carried on by Liburnians, Istrians, and the small Grecian insular settlements of Pharus and Issa. But he does not name Skodra, and probably this strong post — together with the Greek town Lissus, founded by Dionysius of Syracuse — was occupied after his time by conquerors from the interior,[1] the predecessors of Agrôn and Gentius, — just as the coast-land of the Thermaic gulf was conquered by inland Macedonians.

Once during the Peloponnesian war, a detachment of hired Illyrians, marching into Macedonia Lynkêstis (seemingly over the pass of Skardus a little east of Lychnidus, or Ochrida), tried the valor of the Spartan Brasidas; and on that occasion — as in the expedition above alluded to of the Epirots against Akarnania — we shall notice the marked superiority of the Grecian character, even in the case of an armament chiefly composed of helots newly enfranchised, over both Macedonians and Illyrians, — we shall see the contrast between brave men acting in concert and obedience to a common authority, and an assailing host of warriors, not less brave individually, but in which every man is his own master,[2] and fights as he pleases. The rapid and impetuous rush of the Illyrians, if the first shock failed of its effect, was succeeded by an equally rapid retreat or flight. We hear nothing afterwards respecting these barbarians until the time of Philip of Macedon, whose vigor and military energy first repressed their incursions, and afterwards partially conquered them. It seems to have been about this period (400–350 B.C.) that the

[2] See the description in Thucydidês (iv. 124–128); especially the exhortation which he puts into the mouth of Brasidas, — *αὐτοκράτωρ μάχη* contrasted with the orderly array of Greeks.

"Illyriorum velocitas ad excursiones et impetus subitos."
(Livy, xxxi. 35.)

great movement of the Gauls from west to east took place, which brought the Gallic Skordiski and other tribes into the regions between the Danube and the Adriatic sea, and which probably dislodged some of the northern Illyrians so as to drive them upon new enterprises and fresh abodes.

What is now called Middle Albania, the Illyrian territory immediately north of Epirus, is much superior to the latter in productiveness.[1] Though mountainous, it possesses more both of low hill and valley, and ampler as well as more fertile cultivable spaces. Epidamnus and Apollonia formed the seaports of this territory, and the commerce with the southern Illyrians, less barbarous than the northern, was one of the sources[2] of their great prosperity during the first century of their existence, — a prosperity interrupted in the case of the Epidamnians by internal dissensions, which impaired their ascendency over their Illyrian neighbors, and ultimately placed them at variance with their mother-city Korkyra. The commerce between these Greek seaports and the interior tribes, when once the former became strong enough to render violent attack from the latter hopeless, was reciprocally beneficial to both of them. Grecian oil and wine were introduced among these barbarians, whose chiefs at the same time learned to appreciate the woven fabrics,[3] the polished and carved metallic work, the tempered weapons, and the pottery, which issued from Grecian artisans. Moreover, the importation sometimes of salt-fish, and always that of salt itself, was of the greatest importance to these inland residents, especially for such localities as possessed lakes abounding in fish, like that of Lychnidus. We hear of wars between the Autariatæ and the Ardiæi, respecting salt-springs near their boundaries, and also of other tribes whom the privation of salt reduced to the necessity of submitting t.

[2] Skymnus Chius, v, 418–425.

[3] Thucydidês mentions the *ὑφαντὰ καὶ λεῖα, καὶ ἡ ἄλλη κατασκευή*, which the Greek settlements on the Thracian coast sent up to king Seuthês (ii, 98): similar to the *ὑφάσμαθ' ἱερὰ*, and to the *χειρὰν τεκτόνων δαίδαλα*, offered as presents to the Delphian god (Eurip. Ion. 1141; Pindar, Pyth. v, 46)

the Romans.[1] On the other hand, these tribes possessed two articles of exchange so precious in the eyes of the Greeks, that Polybius reckons them as absolutely indispensable,[2] — cattle and slaves;

[1] Strabo, vii, p. 317; Appian, Illyric. 17; Aristot. Mirab. Ausc. c. 138. For the extreme importance of the trade in salt, as a bond of connection, see the regulations of the Romans when they divided Macedonia into four provinces, with the distinct view of cutting off all connection between one and the other. All *commercium* and *connubium* were forbidden between them: the fourth region, whose capital was Pelagonia (and which included all the primitive or Upper Macedonia, east of the range of Pindus and Skardus), was altogether inland, and it was expressly forbidden to draw its salt from the third region, or the country between the Axius and the Peneius; while on the other hand the Illyrian Dardani, situated northward of Upper Macedonia, received express permission to draw *their* salt from this third or maritime region of Macedonia: the salt was to be conveyed from the Thermaic gulf along the road of the Axius to Stobi in Pæonia, and was there to be sold at a fixed price.

The inner or fourth region of Macedonia, which included the modern Bitoglia and Lake Castoria, could easily obtain its salt from the Adriatic, by the communication afterwards so well known as the Roman Egnatian way; but the communication of the Dardani with the Adriatic led through a country of the greatest possible difficulty, and it was probably a great convenience to them to receive their supply from the gulf of Therma by the road along the Vardar (Axius) (Livy, xlv, 29). Compare the route of Grisebach from Salonichi to Scutari, in his Reise durch Rumelien, vol. ii.

[2] About the cattle in Illyria, Aristotle, De Mirab. Ausc. c. 128. There is a remarkable passage in Polybius, wherein he treats the importation of slaves as a matter of necessity to Greece (iv, 37). The purchasing of the Thracian slaves in exchange for salt is noticed by Menander, — *Θρᾷξ εὐγενὴς εἰ, πρὸς ἅλας ἠγορασμένος*: see Proverb. Zenob. ii, 12, and Diogenian, i, 100.

The same trade was carried on in antiquity with the nations on and near Caucasus, from the seaport of Dioskurias at the eastern extremity of the Euxine (Strabo, xi, p. 506). So little have those tribes changed, that the Circassians now carry on much the same trade. Dr. Clarke's statement carries us back to the ancient world: "The Circassians frequently sell their children to strangers, particularly to the Persians and Turks, and their princes supply the Turkish seraglios with the most beautiful of the prisoners of both sexes whom they take in war. In their commerce with the Tchernomorski Cossacks (north of the river Kuban), the Circassians bring considerable quantities of wood, and the delicious honey of the mountains, sewed up in goats' hides, with the hair on the outside. These articles they exchange for salt, a commodity found in the neighboring lakes, of a very excellent quality. Salt is more precious than any other kind of wealth to

which latter were doubtless procured from Illyria, often in exchange for salt, as they were from Thrace and from the Euxine and from Aquileia in the Adriatic, through the internal wars of one tribe with another. Silver-mines were worked at Damastium in Illyria. Wax and honey were probably also articles of export, and it is a proof that the natural products of Illyria were carefully sought out, when we find a species of iris peculiar to the country collected and sent to Corinth, where its root was employed to give the special flavor to a celebrated kind of aromatic unguent.[1]

Nor was the intercourse between the Hellenic ports and Illyrians inland exclusively commercial. Grecian exiles also found their way into Illyria, and Grecian mythes became localized there, as may be seen by the tale of Kadmus and Harmonia, from whom the chiefs of the Illyrian Encheleis professed to trace their descent.[2]

The Macedonians of the fourth century B.C. acquired, from the ability and enterprise of two successive kings, a great perfection in Greek military organization without any of the loftier Hellenic qualities. Their career in Greece is purely destructive, extinguishing the free movement of the separate cities, and dis-

the Circassians, and it constitutes the most acceptable present which can be offered to them. They weave mats of very great beauty, which find a ready market both in Turkey and Russia. They are also ingenious in the art of working silver and other metals, and in the fabrication of guns, pistols, and sabres. Some, which they offered us for sale, we suspected had been procured in Turkey in exchange for slaves. Their bows and arrows are made with inimitable skill, and the arrows being tipped with iron, and otherwise exquisitely wrought, are considered by the Cossacks and Russians as inflicting incurable wounds." (Clarke's Travels, vol. i, ch. xvi, p. 378.)

[1] Theophrast. Hist. Plant. iv, 5, 2; ix, 7, 4: Pliny, H. N. xiii, 2; xxi, 19. Strabo, vii, p. 326. Coins of Epidamnus and Apollonia are found not only in Macedonia, but in Thrace and in Italy: the trade of these two cities probably extended across from sea to sea, even before the construction of the Egnatian way; and the Inscription 2056 in the Corpus of Boeckh proclaims the gratitude of Odêssus (Varna) in the Euxine sea towards a citizen of Epidamnus (Barth, Corinthiorum Mercatur. Hist. p. 49; Aristot Mirab. Auscult. c. 104).

[2] Herodot. v, 61; viii, 137: Strabo, vii, p. 326. Skylax places the λόφο of Kadmus and Harmonia among the Illyrian Manii, north of the Encheleis (Diodor. xix, 53; Pausan. ix, 5, 3).

arming the citizen-soldier to make room for the foreign mercenary, whose sword was unhallowed by any feelings of patriotism, — yet totally incompetent to substitute any good system of central or pacific administration. But the Macedonians of the seventh and sixth centuries B. C. are an aggregate only of rude inland tribes, subdivided into distinct petty principalities, and separated from the Greeks by a wider ethnical difference even than the Epirots since Herodotus, who considers the Epirotic Molossians and Thesprotians as children of Hellen, decidedly thinks the contrary respecting the Macedonians.[1] In the main, however, they seem at this early period analogous to the Epirots in character and civilization. They had some few towns, but were chiefly village residents, extremely brave and pugnacious. The customs of some of their tribes enjoined that the man who had not yet slain an enemy should be distinguished on some occasions by a badge of discredit.[2]

The original seats of the Macedonians were in the regions east of the chain of Skardus (the northerly continuation of Pindus) — north of the chain called the Cambunian mountains, which connects Olympus with Pindus, and which forms the north-western boundary of Thessaly. But they did not reach so far eastward as the Thermaic gulf; apparently not farther eastward than Mount Bermius, or about the longitude of Edessa and Berrhoia. They thus covered the upper portions of the course of the rivers Haliakmôn and Erigôn, before the junction of the latter with the Axius; while the upper course of the Axius, higher than this point of junction, appears to have belonged to Pæonia, — though the boundaries of Macedonia and Pæonia cannot be distinctly marked out at any time.

The large space of country included between the above-mentioned boundaries is in great part mountainous, occupied by lateral ridges, or elevations, which connect themselves with the main line of Skardus. But it also comprises three wide alluvial basins, or plains, which are of great extent and well-adapted to

Herodot. v, 22.

[1] Aristot. Polit. vii, 2, 6. That the Macedonians were chiefly village residents, appears from Thucyd. ii, 100, iv, 124, though this does not exclude some towns.

cultivation, — the plain of Tettovo, or Kalkandele (northernmost of the three), which contains the sources and early course of the Axius, or Vardar, — that of Bitolia, coinciding to a great degree with the ancient Pelagonia, wherein the Erigon flows towards the Axius, — and the larger and more undulating basin of Greveno and Anaselitzas, containing the upper Haliakmôn with its confluent streams. This latter region is separated from the basin of Thessaly by a mountainous line of considerable length, but presenting numerous easy passes.[1] Reckoning the basin of Thessaly as a fourth, here are four distinct inclosed plains on the east side of this long range of Skardus and Pindus, — each generally bounded by mountains which rise precipitously to an alpine height, and each leaving only one cleft for drainage by a single river, — the Axius, the Erigôn, the Haliakmôn, and the Peneius respectively. All four, moreover, though of high level above the sea, are yet for the most part of distinguished fertility, especially the plains of Tettovo, of Bitolia, and Thessaly. The fat, rich land to the east of Pindus and Skardus is described as forming a marked contrast with the light calcareous soil of the Albanian plains and valleys on the western side. The basins of Bitolia and of the Haliakmôn, with the mountains around and adjoining, were possessed by the original Macedonians; that of Tettovo, on the north, by a portion of the Pæonians. Among the four, Thessaly is the most spacious; yet the two comprised in the primitive seats of the Macedonians, both of them very considerable in magnitude, formed a territory better calculated to nourish and to generate a considerable population, than the less favored home, and smaller breadth of valley and plain, occupied by Epirots or Illyrians. Abundance of corn easily raised, of pasture for cattle, and of new fertile land open to cultivation, would suffice to increase the numbers of hardy villagers, indifferent to luxury as well as to accumulation, and exempt from that oppressive extortion of rulers which now harasses the same fine regions.[2]

[1] Boué, Voyage en Turquie, vol. i, p. 199: "Un bon nombre de ces dirigés du nord au sud, comme pour inviter les habitans de passer d'une de ces provinces dans l'autre."

[2] For the general physical character of the region, both east and west of Skardus, continued by Pindus, see the valuable chapter of Grisebach's Travels above referred to (Reisen, vol. ii, ch. xiii, pp. 125–130; c. xiv, p. 175; c. xvi, pp. 214–216; c. xvii, pp. 244–245).

Respecting the plains comprised in the ancient Pelagonia, see also the Journal of the younger Pouqueville, in his progress from Travnik in Bosnia to Janina. He remarks, in the two days' march from Prelepe (Prilip) through Bitolia to Florina, "Dans cette route on parcourt des plaines luxuriantes couvertes de moissons, de vastes prairies remplies de trèfle, des plateaux abondans en pâturages inépuisables, où paissent d'innombrables troupeaux de bœufs, de chèvres, et de menu bétail.....Le blé, le mäis, et les autres grains sont toujours à très bas prix, a cause de la difficulté des débouchés, d'où l'on exporte une grande quantitié de laines, de cotons, de peaux d'agneaux, de buffles, et de chevaux, qui passent par le moyen des caravanes en Hongrie." (Pouqueville, Voyage dans la Grèce, tom. ii, ch. 62, p. 495.)

Again, M. Boué remarks upon this same plain, in his Critique des Cartes de la Turquie, Voyage, vol. iv, p. 483, "La plaine immense de Prilip, de Bitolia, et de Florina, n'est pas représentée (sur les cartes) de manière à ce qu'on ait une idée de son étendue, et surtout de sa largeur.....La plaine de Sarigoul est changée en vallée," etc. The basin of the Haliakmôn he remarks to be represented equally imperfectly on the maps: compare also his Voyage, i, pp. 211, 299, 300.

I notice the more particularly the large proportion of fertile plain and valley in the ancient Macedonia, because it is often represented (and even by O. Müller, in his Dissertation on the ancient Macedonians, attached to his History of the Dorians) as a cold and rugged land, pursuant to the statement of Livy (xlv, 29), who says, respecting the fourth region of Macedonia as distributed by the Romans, "Frigida hæc omnis, duraque cultu, et aspera plaga est: cultorum quoque ingenia terræ similia habet: ferociores eos et accolæ barbari faciunt, nunc bello exercentes, nunc in pace miscentes ritus suos."

This is probably true of the mountaineers included in the region, but it is too much generalized.

The inhabitants of this primitive Macedonia doubtless differed much in ancient times, as they do now, according as they dwelt on mountain or plain, and in soil and climate more or less kind; but all acknowledged a common ethnical name and nationality, and the tribes were in many cases distinguished from each other, not by having substantive names of their own, but merely by local epithets of Grecian origin. Thus we find Elymiotæ Macedonians, or Macedonians of Elymeia, — Lynkêstæ Macedonians, or Macedonians of Lynkus, etc. Orestæ is doubtless an adjunct

name of the same character. The inhabitants of the more northerly tracts, called Pelagonia and Deuriopis, were also portions of the Macedonian aggregate, though neighbors of the Pæonians, to whom they bore much affinity: whether the Eordi and Almopians were of Macedonian race, it is more difficult to say. The Macedonian language was different from Illyrian,[1] from Thracian, and seemingly also from Pæonian. It was also different from Greek, yet apparently not more widely distinct than that of the Epirots, — so that the acquisition of Greek was comparatively easy to the chiefs and people, though there were always some Greek letters which they were incapable of pronouncing. And when we follow their history, we shall find in them more of the regular warrior, conquering in order to maintain dominion and tribute, and less of the armed plunderer, — than in the Illyrians, Thracians, or Epirots, by whom it was their misfortune to be surrounded. They approach nearer to the Thessalians,[2] and to the other ungifted members of the Hellenic family.

The large and comparatively productive region covered by the various sections of Macedonians, helps to explain that increase of ascendency which they successively acquired over all their neighbors. It was not, however, until a late period that they became united under one government. At first each section, how many we do not know, had its own prince, or chief. The Elymiots, or inhabitants of Elymeia, the southernmost portion of Macedonia, were thus originally distinct and independent; also the Orestæ, in mountain-seats somewhat north-west of the Elymiots, — the Lynkêstæ and Eordi, who occupied portions of territory on the track of the subsequent Egnatian way, between Lychnidus (Ochrida) and Edessa, — the Pelagonians,[1] with a town of the same name, in the fertile plain of Bitolia, — and the more northerly Deuriopians. And the early political union was usually so loose, that each of these denominations probably includes many petty independencies, small towns, and villages. That section of the Macedonian name who afterwards swallowed up all the rest and became known as *The Macedonians*, had their original centre at Ægæ, or Edessa, — the lofty, commanding, and picturesque site of the modern Vodhena. And though the residence of the kings was in later times transferred to the marshy Pella, in the maritime plain beneath, yet Edessa was always retained as the regal burial-place, and as the hearth to which the religious continuity of the nation, so much reverenced in ancient times, was attached. This ancient town, which lay on the Roman Egnatian way from Lychnidus to Pella and Thessalonika, formed the pass over the mountain-ridge called Bermius, or that prolongation to the northward of Mount Olympus, through which the Haliakmôn makes its way out into the maritime plain at Verria, by a cleft more precipitous and impracticable than that of the Peneius in the defile of Tempê.

This mountain-chain called Bermius, extending from Olympus considerably to the north of Edessa, formed the original eastern boundary of the Macedonian tribes; who seem at first not to have reached the valley of the Axius in any part of its course, and who certainly did not reach at first to the Thermaic gulf. Between the last-mentioned gulf and the eastern counterforts of Olympus and Bermius there exists a narrow strip of plain land or low hill, which reaches from the mouth of the Peneius to the head of the Thermaic gulf. It there widens into the spacious and fertile plain of Salonichi, comprising the mouths of the Haliakmôn, the Axius, and the Echeidôrus: the river Ludias, which flows from Edessa into the marshes surrounding Pella, and which in antiquity joined the Haliakmôn near its mouth, has now altered its course so as to join the Axius. This narrow strip, between

[1] Polyb. xxviii, 8. 9. This is the most distinct testimony which we possess, and it appears to me to contradict the opinion both of Mannert (Geogr. der Gr. und Röm. vol. vii, p. 492) and of O. Müller (On the Macedonians, sects. 28–36), that the native Macedonians were of Illyrian descent.

The Macedonian military array seems to have been very like that of the Thessalians, — horsemen well-mounted and armed, and maintaining good order (Thucyd. ii, 101): of their infantry, before the time of Philip son of Amyntas, we do not hear much.

"Macedoniam, quæ tantis barbarorum gentibus attingitur, ut semper Macedonicis imperatoribus iidem fines imperii fuerint qui gladiorum atque pilorum." (Cicero, in Pison. c. xvi.)

[1] Strabo, lib. vii, Fragm. 20, ed. Tafel.

the mouths of the Peneius and the Haliakmôn, was the original abode of the Pierian Thracians, who dwelt close to the foot of Olympus, and among whom the worship of the Muses seems to have been a primitive characteristic; Grecian poetry teems with local allusions and epithets which appear traceable to this early fact, though we are unable to follow it in detail. North of the Pierians, from the mouth of the Haliakmôn to that of the Axius, dwelt the Bottiæans.[1] Beyond the river Axius, at the lower

[1] I have followed Herodotus in stating the original series of occupants on the Thermaic gulf, anterior to the Macedonian conquests. Thucydidês introduces the Pæonians between Bottiæans and Mygdonians: he says that the Pæonians possessed "a narrow strip of land on the side of the Axius, down to Pella and the sea," (ii, 96.) If this were true, it would leave hardly any room for the Bottiæans, whom, nevertheless, Thucydidês recognizes on the coast; for the whole space between the mouths of the two rivers, Axius and Haliakmôn, is inconsiderable; moreover, I cannot but suspect that Thucydidês has been led to believe, by finding in the Iliad that the Pæonian allies of Troy came from the Axius, that there *must have been* old Pæonian settlements at the mouth of that river, and that he has advanced the inference as if it were a certified fact. The case is analagous to what he says about the Bœotians in his preface (upon which O. Müller has already commented); he stated the emigration of the Bœotians into Bœotia as having taken place *after* the Trojan war, but saves the historical credit of the Homeric catalogue by adding that there had been *a fraction* of them in Bœotia *before*, from whom the contingent which went to Troy was furnished (*ἀποδασμός*, Thucyd. i, 12).

On this occasion, therefore, having to choose between Herodotus and Thucydidês, I prefer the former. O. Müller (On the Macedonians, sect. 11) would strike out just so much of the assertion of Thucydidês as positively contradicts Herodotus, and retain the rest; he thinks that the Pæonians came down *very near* to the mouth of the river, but *not quite*. I confess that this does not satisfy me; the more so as the passage from Livy by which he would support his view will appear, on examination, to refer to Pæonia high up the Axius, — not to a supposed portion of Pæonia near the mouth (Livy, xlv, 29).

Again, I would remark that the original residence of the Pierians between the Peneius and the Haliakmôn rests chiefly upon the authority of Thucydidês: Herodotus knows the Pierians in their seats between Mount Pangæus and the sea, but he gives no intimation that they had before dwelt south of the Haliakmôn; the tract between the Haliakmôn and the Peneius is by him conceived as Lower Macedonia, or Macedonis, reaching to the borders of Thessaly (vii, 127–173). I make this remark in reference to sects 7–17 of O. Müller's Dissertation, wherein the conception of Herodotus appears incorrectly apprehended, and some erroneous inferences founded upon it. That this tract was the original Pieria, there is sufficient reason for believing (compare Strabo, vii, Frag. 22, with Tafel's note, and ix, p 410; Livy, xliv, 91; but Herodotus notices it only as Macedonia.

part of its course, began the tribes of the great Thracian race, — Mygdonians, Krestônians, Edônians, Bisaltæ, Sithonians: the Mygdonians seem to have been originally the most powerful, since the country still continued to be called by their name, Mygdonia, even after the Macedonian conquest. These, and various other Thracian tribes, originally occupied most part of the country between the mouth of the Axius and that of the Strymon; together with that memorable three-pronged peninsula which derived from the Grecian colonies its name of Chalkidikê. It will thus appear, if we consider the Bottiæans as well as the Pierians to be Thracians, that the Thracian race extended originally southward as far as the mouth of the Peneius: the Bottiæans professed, indeed, a Kretan origin, but this pretension is not noticed by either Herodotus or Thucydidês. In the time of Skylax,[1] seemingly during the early reign of Philip the son of Amyntas, Macedonia and Thrace were separated by the Strymon.

We have yet to notice the Pæonians, a numerous and much-divided race, — seemingly neither Thracian nor Macedonian nor Illyrian, but professing to be descended from the Teukri of Troy, — who occupied both banks of the Strymon, from the neighborhood of Mount Skomius, in which that river rises, down to the lake near its mouth. Some of their tribes possessed the fertile plain of Siris (now Seres), — the land immediately north of Mount Pangæus, — and even a portion of the space through which Xerxês marched on his route from Akanthus to Therma. Besides this, it appears that the upper parts of the valley of the Axius were also occupied by Pæonian tribes; how far down the river they extended, we are unable to say. We are not to suppose that the whole territory between Axius and Strymon was continuously peopled by them. Continuous population is not the character of the ancient world, and it seems, moreover, that while the land immediately bordering on both rivers is in very

[1] Skylax, c. 67. The conquests of Philip extended the boundary beyond the Strymon to the Nestus (Strabo, lib. vii. Frag. 23, ed. Tafel).

many places of the richest quality, the spaces between the two are either mountain or barren low hill, — forming a marked contrast with the rich alluvial basin of the Macedonian river Erigon.[1] The Pæonians, in their north-western tribes, thus bordered upon the Macedonian Pelagonia, — in their northern tribes, upon the Illyrian Dardani and Autariatæ, — in their eastern, southern, and south-eastern tribes, upon the Thracians and Pierians;[2] that is, upon the second seats occupied by the expelled Pierians under Mount Pangæus.

Such was, as far as we can make it out, the position of the Macedonians and their immediate neighbors, in the seventh century B.C. It was first altered by the enterprise and ability of a family of exiled Greeks, who conducted a section of the Macedonian people to those conquests which their descendants, Philip and Alexander the Great, afterwards so marvellously multiplied.

Respecting the primitive ancestry of these two princes, there were different stories, but all concurred in tracing the origin of the family to the Herakleid or Temenid race of Argos. According to one story (which apparently cannot be traced higher than Theopompus), Karanus, brother of the despot Pheidon, had migrated from Argos to Macedonia, and established himself as conqueror at Edessa; according to another tale, which we find in Herodotus, there were three exiles of the Temenid race, Gauanês, Aëropus, and Perdikkas, who fled from Argos to Illyria, from whence they passed into Upper Macedonia, in such

[1] See this contrast noticed in Grisebach, especially in reference to the wide but barren region called the plain of Mustapha, no great distance from the left bank of the Axius (Grisebach, Reisen, v, ii, p. 225; Boué, Voyage, vol. i, p. 168).

For the description of the banks of the Axius (Vardar) and the Strymon, see Boué, Voyage en Turquie, vol. i, pp. 196–199. "La plaine ovale de Seres est un des diamans de la couronne de Byzance," etc. He remarks how incorrectly the course of the Strymon is depicted on the maps (vol. iv. p. 482).

[2] The expression of Strabo or his Epitomator — *τὴν Παιονίαν μέχρι Πελαγονίας καὶ Πιερίας ἐκτετάσθαι*, — seems quite exact, though Tafel finds a difficulty in it. See his Note on the Vatican Fragments of the seventh book of Strabo, Fr. 37. The Fragment 40 is expressed much more loosely. Compare Herodot. v, 13–16, vii, 124; Thucyd. ii, 96. Diodor. xx, 19.

poverty as to be compelled to serve the petty king of the town Lebæa in the capacity of shepherds. A remarkable prodigy happening to Perdikkas, foreshadows the future eminence of his family, and leads to his dismissal by the king of Lebæa, — from whom he makes his escape with difficulty, by the sudden rise of a river immediately after he had crossed it, so as to become impassable by the horsemen who pursued him. To this river, as to the saviour of the family, solemn sacrifices were still offered by the kings of Macedonia in the time of Herodotus. Perdikkas with his two brothers having thus escaped, established himself near the spot called the Garden of Midas on Mount Bermius, and from the loins of this hardy young shepherd sprang the dynasty of Edessa.[1] This tale bears much more the marks of a genuine local tradition than that of Theopompus. And the origin of the Macedonian family, or Argeadæ, from Argos, appears to have been universally recognized by Grecian inquirers,[2] — so that Alexander the son of Amyntas, the contemporary of the Persian invasion, was admitted by the Hellanodikæ to contend at the Olympic games as a genuine Greek, though his competitors sought to exclude him as a Macedonian.

The talent for command was so much more the attribute of the Greek mind than of any of the neighboring barbarians, that we easily conceive a courageous Argeian adventurer acquiring to himself great ascendency in the local disputes of the Macedonian tribes, and transmitting the chieftainship of one of those tribes to his offspring. The influence acquired by Miltiadês among the Thracians of the Chersonese, and by Phormion among the Akarnanians (who specially requested that, after his death, his son, or some one of his kindred, might be sent from Athens to command them),[3] was very much of this character: we may add the case of Sertorius among the native Iberians. In like manner, the kings of the Macedonian Lynkêstæ professed to be descended from the Bacchiadæ[4] of Corinth; and the neighbor-

Herodot. viii, 137–138.

[1] Herodot. v, 22. Argeadæ, Strabo, lib. vii, Fragm. 20, ed. Tafel, which may probably have been erroneously changed into Ægeadæ (Justin, vii, 1).

[3] Thucyd. iii, 7; Herodot. vi, 34–37; compare the story of Zalmoxis among the Thracians (iv, 94).

[4] Strabo, vii, p. 326.

hood of Epidamnus and Apollonia, in both of which doubtless members of that great gens were domiciliated, renders this tale even more plausible than that of an emigration from Argos. The kings of the Epirotic Molossi pretended also to a descent from the heroic Æakid race of Greece. In fact, our means of knowledge do not enable us to discriminate the cases in which these reigning families were originally Greeks, from those in which they were Hellenized natives pretending to Grecian blood.

After the foundation-legend of the Macedonian kingdom, we have nothing but a long blank until the reign of king Amyntas (about 520–500 B.C.), and his son Alexander, (about 480 B.C.) Herodotus gives us five successive kings between the founder Perdikkas and Amyntas, — Perdikkas, Argæus, Philippus, Aëropus, Alketas, Amyntas, and Alexander, — the contemporary and to a certain extent the ally of Xerxês.[1] Though we have no means of establishing any dates in this early series, either of names or of facts, yet we see that the Temenid kings, beginning from a humble origin, extended their dominions successively on all sides. They conquered the Briges,[2] originally their neighbors on Mount Bermius, — the Eordi, bordering on Edessa to the westward, who were either destroyed or expelled from the country, leaving a small remnant still existing in the time of Thucydidês at Physka between Strymon and Axius, — the Almopians, an inland tribe of unknown site, — and many of the interior Macedonian tribes who had been at first autonomous. Besides these inland conquests, they had made the still more important acquisition of Pieria, the territory which lay between Mount Bermius and the sea, from whence they expelled the original Pierians, who found new seats on the eastern bank of the Strymon between Mount Pangæus and the sea. Amyntas king of Macedon was thus master of a very considerable territory,

[1] Herodot. viii, 139. Thucydidês agrees in the number of kings, but does not give the names (ii, 100).

For the divergent lists of the early Macedonian kings, see Mr. Clinton's Fasti Hellenici, vol. ii, p. 221.

[2] This may be gathered, I think, from Herodot. vii, 73 and viii, 138. The alleged migration of the Briges into Asia, and the change of their name to Phryges, is a statement which I do not venture to repeat as credible

comprising the coast of the Thermaic gulf as far north as the mouth of the Haliakmôn, and also some other territory on the same gulf from which the Bottiæans had been expelled; but not comprising the coast between the mouths of the Axius and the Haliakmôn, nor even Pella, the subsequent capital, which were still in the hands of the Bottiæans at the period when Xerxês passed through.[1] He possessed also Anthemûs, a town and territory in the peninsula of Chalkidikê, and some parts of Mygdonia, the territory east of the mouth of the Axius; but how much, we do not know. We shall find the Macedonians hereafter extending their dominion still farther, during the period between the Persian and Peloponnesian war.

We hear of king Amyntas in friendly connection with the Peisistratid princes at Athens, whose dominion was in part sustained by mercenaries from the Strymon, and this amicable sentiment was continued between his son Alexander and the emancipated Athenians.[2] It is only in the reigns of these two princes that Macedonia begins to be implicated in Grecian affairs: the regal dynasty had become so completely Macedonized, and had so far renounced its Hellenic brotherhood, that the claim of Alexander to run at the Olympic games was contested by his competitors, and he was called upon to prove his lineage before the Hellanodikæ.

[1] Herodot. vii, 123. Herodotus recognizes both Bottiæans between the Axius and the Haliakmôn, — and Bottiæans at Olynthus, whom the Macedonians had expelled from the Thermaic gulf, — at the time when Xerxês passed (viii, 127). These two statements seem to me compatible, and both admissible: the former Bottiæans were expelled by the Macedonians subsequently, anterior to the Peloponnesian war.

My view of these facts, therefore differs somewhat from that of O. Müller (Macedonians, sect. 16).

[2] Herodot. i, 59, v, 94; viii, 136.

CHAPTER XXVI.

THRACIANS AND GREEK COLONIES IN THRACE.

THAT vast space comprised between the rivers Strymon and Danube, and bounded to the west by the easternmost Illyrian tribes, northward of the Strymon, was occupied by the innumerable subdivisions of the race called Thracians, or Threïcians They were the most numerous and most terrible race known to Herodotus: could they by possibility act in unison or under one dominion (he says), they would be irresistible. A conjunction thus formidable once seemed impending, during the first years of the Peloponnesian war, under the reign of Sitalkês king of the Odrysæ, who reigned from Abdêra at the mouth of the Nestus to the Euxine, and compressed under his sceptre a large proportion of these ferocious but warlike plunderers; so that the Greeks even down to Thermopylæ trembled at his expected approach. But the abilities of that prince were not found adequate to bring the whole force of Thrace into effective coöperation and aggression against others.

Numerous as the tribes of Thracians were, their customs and character (according to Herodotus) were marked by great uniformity: of the Getæ, the Trausi, and others, he tells us a few particularities. And the large tract over which the race were spread, comprising as it did the whole chain of Mount Hæmus and the still loftier chain of Rhodopê, together with a portion of the mountains Orbêlus and Skomius, was yet partly occupied by level and fertile surface, — such as the great plain of Adrianople, and the land towards the lower course of the rivers Nestus and Hebrus. The Thracians of the plain, though not less warlike, were at least more home-keeping, and less greedy of foreign plunder, than those of the mountains. But the general character of the race presents an aggregate of repulsive features unredeemed by the presence of even the commonest domestic affec-

tions.[1] The Thracian chief deduced his pedigree from a god called by the Greeks Hermês, to whom he offered up worship apart from the rest of his tribe, sometimes with the acceptable present of a human victim. He tattooed his body,[2] and that of the women belonging to him, as a privilege of honorable descent. he bought his wives from their parents, and sold his children for exportation to the foreign merchant: he held it disgraceful to cultivate the earth, and felt honored only by the acquisitions of war and robbery. The Thracian tribes worshipped deities whom the Greeks assimilate to Arês, Dionysus, and Artemis: the great sanctuary and oracle of their god Dionysus was in one of the loftiest summits of Rhodopê, amidst dense and foggy thickets, — the residence of the fierce and unassailable Satræ. To illustrate the Thracian character, we may turn to a deed perpetrated by the king of the Bisaltæ, — perhaps one out of several chiefs of that extensive Thracian tribe, — whose territory, between Strymon and Axius, lay in the direct march of Xerxês into Greece, and who fled to the desolate heights of Rhodopê, to escape the ignominy of being dragged along amidst the compulsory auxiliaries of the Persian invasion, forbidding his six sons to take any part in it. From recklessness, or curiosity, the sons disobeyed his commands, and accompanied Xerxês into Greece; they returned unhurt by the Greek spear; but the incensed father, when they again came into his presence, caused the eyes of all of them to be put out. Exultation of success manifested itself in the Thracians by increased alacrity in shedding blood; but as warriors, the only occupation which they esteemed, they were not less brave than patient of hardship, and maintained a good front, under their own peculiar array, against forces much superior in all military efficacy.[3] It appears that the Thynians and Bithy-

[1] Mannert assimilates the civilization of the Thracians to that of the Gauls when Julius Cæsar invaded them, — a great injustice to the latter, in my judgment (Geograph. Gr. und Röm. vol. vii, p. 23).

[2] Cicero, De Officiis, ii, 7. "Barbarum compunctum notis Threiciis." Plutarch (De Serâ Numin. Vindict. c. 13, p. 558) speaks as if the women only were tattooed, in Thrace: he puts a singular interpretation upon it, as a continuous punishment on the sex for having slain Orpheus.

[3] For the Thracians generally, see Herodot. v, 3–9, vii, 110, viii, 116, ix, 119; Thucyd. ii, 100, vii, 29–30; Xenophon, Anabas. vii, 2, 38, and the

nians,[1] on the Asiatic side of the Bosphorus, perhaps also the Mysians, were members of this great Thracian race, which was more remotely connected, also, with the Phrygians. And the whole race may be said to present a character more Asiatic than European, especially in those ecstatic and maddening religious rites, which prevailed not less among the Edonian Thracians than in the mountains of Ida and Dindymon of Asia, though with some important differences. The Thracians served to furnish the Greeks with mercenary troops and slaves, and the number of Grecian colonies planted on the coast had the effect of partially softening the tribes in the immediate vicinity, between whose chiefs and the Greek leaders intermarriages were not unfrequent. But the tribes in the interior seem to have retained their savage habits with little mitigation, so that the language in which Tacitus[2] describes them is an apt continuation to that of Herodotus, though coming more than five centuries after.

To note the situation of each one among these many different tribes, in the large territory of Thrace, which is even now so imperfectly known and badly mapped, would be unnecessary, and, indeed, impracticable. I shall proceed to mention the principal Grecian colonies which were formed in the country, noticing occasionally the particular Thracian tribes with which they came in contact.

The Grecian colonies established on the Thermaic gulf, as well as in the peninsula of Chalkidikê, emanating principally from Chalkis and Eretria, though we do not know their precise epoch, appear to have been of early date, and probably preceded the time when the Macedonians of Edessa extended their conquests to the sea. At that early period, they would find the Pierians still between the Peneius and Haliakmôn, — also a number of petty Thracian tribes throughout the broad part of the Chalkidic peninsula; they would find Pydna a Pierian town, and Therma, Anthemus, Chalastra, etc. Mygdonian.

The most ancient Grecian colony in these regions seems to

seventh book of the Anabasis generally, which describes the relations of Xenophon and the Ten Thousand Greeks with Seuthês the Thracian prince.

[1] **Xenoph.** Anab. vi, 2, 17; Herodot. vii, 75.

[2] **Tacit.** Annal. ii, 66; iv, 46.

have been Methônê, founded by the Eretrians in Pieria; nearly at the same time (if we may trust a statement of rather suspicious character, though the date itself is noway improbable) as Korkyra was settled by the Corinthians, (about 730–720 B.C.)[1] It was a little to the north of the Pierian town of Pydna, and separated by about ten miles from the Bottiæan town of Alôrus, which lay north of the Haliakmôn.[2] We know very little about Methônê, except that it preserved its autonomy and its Hellenism until the time of Philip of Macedon, who took and destroyed it. But though, when once established, it was strong enough to maintain itself in spite of conquests made all around by the Macedonians of Edessa, we may fairly presume that it could not have been originally planted on Macedonian territory. Nor in point of fact was the situation peculiarly advantageous for Grecian colonists, inasmuch as there were other maritime towns, not Grecian, in its neighborhood, — Pydna, Alôrus, Therma, Chalastra; whereas the point of advantage for a Grecian colony was, to become the exclusive seaport for inland indigenous people.

The colonies, founded by Chalkis and Eretria on all the three projections of the Chalkidic peninsula, were numerous, though for a long time inconsiderable. We do not know how far these projecting headlands were occupied before the arrival of the settlers from Eubœa, — an event which we may probably place at some period earlier than 600 B.C.; for after that period Chalkis and Eretria seem rather on the decline, — and it appears too, that the Chalkidian colonists in Thrace aided their mother-city Chalkis in her war against Eretria, which cannot be much later than 600 B.C., though it may be considerably earlier.

The range of mountains which crosses from the Thermaic to the Strymonic gulf, and forms the northern limit of the Chalkidic peninsula, slopes down towards the southern extremity, so as to leave a considerable tract of fertile land between the Torônaic and the Thermaic gulfs, including the fertile headland called Pallênê, — the westernmost of those three prongs of Chalkidikê which run out into the Ægean. Of the other two prongs, or projections, the easternmost is terminated by the sublime Mount Athos, which rises out of the sea as a precipitous rock six thou

[1] Plutarch, Quæst. Græc. p. 293.

[2] **Skylax**, c. 67.

sand four hundred feet in height, connected with the mainland by a ridge not more than half the height of the mountain itself, yet still high, rugged, and woody from sea to sea, leaving only little occasional spaces fit to be occupied or cultivated. The intermediate or Sithonian headland is also hilly and woody, though in a less degree, — both less inviting and less productive than Pallênê.[1]

Æneia, near that cape which marks the entrance of the inner Thermaic gulf, — and Potidæa, at the narrow isthmus of Pallênê, — were both founded by Corinth. Between these two towns lay the fertile territory called Krusis, or Krossæa, forming in after-times a part of the domain of Olynthus, but in the sixth century B.C. occupied by petty Thracian townships.[2] Within Pallênê were the towns of Mendê, a colony from Eretria, — Skiônê, which, having no legitimate mother-city traced its origin to Pellenian warriors returning from Troy, — Aphytis, Neapolis, Ægê, Therambôs, and Sanê,[3] either wholly or partly colonies from Eretria. In the Sithonian peninsula were Assa, Pilôrus, Singus, Sartê, Torônê, Galêpsus, Sermylê, and Mekyberna; all or most of these seem to have been of Chalkidic origin. But at the head of the Torônaic gulf (which lies between Sithonia and Pallênê) was placed Olynthus, surrounded by an extensive and fertile plain. Originally a Bottiæan town, Olynthus will be seen at the time of the Persian invasion to pass into the hands of the Chalkidian Greeks,[4] and gradually to incorporate with itself several of the petty neighboring establishments belonging to that race; whereby the Chalkidians acquired that marked preponderance in the peninsula which they retained, even against the efforts of Athens, until the days of Philip of Macedon.

[1] For the description of Chalkidikê, see Grisebach's Reisen, vol. ii. ch. 10, pp. 6–16, and Leake, Travels in Northern Greece, vol. iii, ch. 24, p. 152.

If we read attentively the description of Chalkidikê as given by Skylax (c. 67), we shall see that he did not conceive it as three-pronged, but as terminating only in the peninsula of Pallênê, with Potidæa at its isthmus

[2] Herodot. vii, 123; Skymnus Chius, v, 627.

[3] Strabo, x, p. 447; Thucyd. iv, 120–123; Pompon. Mela, ii, 2; Herodot. vii, 123.

[4] Herodot. vii, 122; viii, 127. Stephanus Byz. (v, Παλλήνη) gives us some idea of the mythes of the lost Greek writers, Hegesippus and Theagenês about Pallênê.

On the scanty spaces, admitted by the mountainous promontory, or ridge, ending in Athos, were planted some Thracian and some Pelasgic settlements of the same inhabitants as those who occupied Lemnos and Imbros; a few Chalkidic citizens being domiciliated with them, and the people speaking both Pelasgic and Hellenic. But near the narrow isthmus which joins this promontory to Thrace, and along the north-western coast of the Strymonic gulf, were Grecian towns of considerable importance, — Sanê, Akanthus, Stageira, and Argilus, all colonies from Andros, which had itself been colonized from Eretria.[1] Akanthus and Stageira are said to have been founded in 654 B.C.

Following the southern coast of Thrace, from the mouth of the river Strymôn towards the east, we may doubt whether, in the year 560 B.C., any considerable independent colonies of Greeks had yet been formed upon it. The Ionic colony of Abdêra, eastward of the mouth of the river Nestus, formed from Teôs in Ionia, is of more recent date, though the Klazomenians[2] had begun an unsuccessful settlement there as early as the year 651 B.C.; while Dikæa — the Chian settlement of Marôneia — and the Lesbian settlement of Ænus at the mouth of the Hebrus, are of unknown date.[3] The important and valuable territory near the mouth of the Strymôn, where, after many ruinous failures,[4] the Athenian colony of Amphipolis afterwards maintained itself, was at the date here mentioned possessed by Edonian Thracians and Pierians: the various Thracian tribes, — Satræ, Edonians, Dersæans, Sapæans, Bistones, Kikones, Pætians, etc. — were in force on the principal part of the tract between Strymôn and Hebrus, even to the sea-coast. It is to be remarked, however, that the island of Thasus, and that of Samothrace, each possessed what in Greek was called a Peræa,[5] — a strip of the adjoining mainland cultivated and defended by means of for-

[4] Thucyd. i, 100, iv. 102; Herodot. v, 11. Large quantities of corn are now exported from this territory to Constantinople (Leake, North. Gr. vol iii, ch. 25, p. 172).

[5] Herodot. vii, 108–109; Thucyd. i, 101.

tified posts, or small towns: probably, these occupations are of very ancient date, since they seem almost indispensable as a means of support to the islands. For the barren Thasus, especially, merits even at this day the uninviting description applied to it by the poet Archilochus, in the seventh century B.C., —"an ass's backbone, overspread with wild wood:"[1] so wholly is it composed of mountain, naked or wooded, and so scanty are the patches of cultivable soil left in it, nearly all close to the seashore. This island was originally occupied by the Phenicians, who worked the gold mines in its mountains with a degree of industry which, even in its remains, excited the admiration of Herodotus. How and when it was evacuated by them, we do not know; but the poet Archilochus[2] formed one of a body of Parian colonists who planted themselves on it in the seventh century B.C., and carried on war, not always successful, against the Thracian tribe called Saians: on one occasion, Archilochus found himself compelled to throw away his shield. By their mines and their possessions on the mainland (which contained even richer mines, at Skaptê Hylê, and elsewhere, than those in the island), the Thasian Greeks rose to considerable power and population. And as they seem to have been the only Greeks, until the settlement of the Milesian Histiæus on the Strymôn about 510 B.C., who actively concerned themselves in the mining districts of Thrace opposite to their island, we cannot be surprised to hear that their clear surplus revenue before the Persian conquest, about 493 B.C., after defraying the charges of their government without any taxation, amounted to the large sum of two hundred talents, sometimes even to three hundred talents, in each year (from forty-six thousand to sixty-six thousand pounds).

[1] . . . . ἠδὺ δ' ὥστ' ὄνου ῥάχις
Ἔστηκεν, ὕλης ἀγρίας ἐπιστεφής.

Archiloch. Fragm. 17–18, ed. Schneidewin.

The striking propriety of this description, even after the lapse of two thousand five hundred years, may be seen in the Travels of Grisebach, vol. i. ch. 7. pp. 210–218, and in Prokesch. Denkwürdigkeiten des Orients, Th. 3. p. 612. The view of Thasus from the sea justifies the title Ἠερίη (Œnomaus ap. Euseb. Præpar. Evang. vii, p. 256; Steph. Byz. Θάσσος).

Thasus (now Tasso) contains at present a population of about six thousand Greeks, dispersed in twelve small villages; it exports some good shiptimber, principally fir, of which there is abundance on the island, together with some olive oil and wax; but it cannot grow corn enough even for this small population. No mines either are now, or have been for a long time, in work.

[2] Archiloch. Fragm. 5, ed. Schneidewin; Aristophan. Pac. 1298, with the Scholia; Strabo, x, p. 487, xii, p. 549; Thucyd. iv. 104.

On the long peninsula called the Thracian Chersonese there may probably have been small Grecian settlements at an early date, though we do not know at what time either the Milesian settlement of Kardia, on the western side of the isthmus of that peninsula, near the Ægean sea, — or the Æolic colony of Sestus on the Hellespont, — were founded; while the Athenian ascendency in the peninsula begins only with the migration of the first Miltiadês, during the reign of Peisistratus at Athens. The Samian colony of Perinthus, on the northern coast of the Propontis,[1] is spoken of as ancient in date, and the Megarian colonies, Selymbria and Byzantium, belong to the seventh century B.C.: the latter of these two is assigned to the 30th Olympiad (657 B.C.), and its neighbor Chalkêdôn, on the opposite coast, was a few years earlier. The site of Byzantium in the narrow strait of the Bosphorus, with its abundant thunny-fishery,[2] which both employed and nourished a large proportion of the poorer freemen, was alike convenient either for maritime traffic, or for levying contributions on the numerous corn ships which passed from the Euxine into the Ægean; and we are even told that it held a considerable number of the neighboring Bithynian Thracians as tributary Periœki. Such dominion, though probably maintained during the more vigorous period of Grecian city life, became in later times impracticable, and we even find the Byzantines not always competent to the defence of their own small surrounding territory. The place, however, will be found to possess considerable importance during all the period of this history.[3]

The Grecian settlements on the inhospitable south-western coast of the Euxine, south of the Danube, appear never to have

Skymnus Chius, 699–715; Plutarch, Quæst. Græc. c. 57. See M. Raoul Rochette, Histoire des Colonies Grecques chs. xi–xiv, vol. iii, pp. 273–298

[1] Aristot. Polit. iv, 4, 1.

[2] Polyb. iv, 39, Phylarch. Fragm. 10, ed. Did-

attained any consideration: the principal traffic of Greek ships in that sea tended to more northerly ports, on the banks of the Borysthenês and in the Tauric Chersonese. Istria was founded by the Milesians near the southern embouchure of the Danube. — Apollonia and Odêssus on the same coast, more to the south, — all probably between 600–560 B. C. The Megarian or Byzantine colony of Mesambria, seems to have been later than the Ionic revolt; of Kallatis the age is not known. Tomi, north of Kallatis and south of Istria, is renowned as the place of Ovid's banishment.[1] The picture which he gives of that uninviting spot, which enjoyed but little truce from the neighborhood of the murderous Getæ, explains to us sufficiently why these towns acquired little or no importance.

The islands of Lemnos and Imbros, in the Ægean, were at this early period occupied by Tyrrhenian Pelasgi, were conquered by the Persians about 508 B.C., and seem to have passed into the power of the Athenians at the time when Ionia revolted from the Persians. If the mythical or poetical stories respecting these Tyrrhenian Pelasgi contain any basis of truth, they must have been a race of buccaneers not less rapacious than cruel. At one time, these Pelasgi seem also to have possessed Samothrace, but how or when they were supplanted by Greeks, we find no trustworthy account; the population of Samothrace at the time of the Persian war was Ionic.[2]

[1] Skymnus Chius, 720–740; Herodot. ii, 33, vi, 33; Strabo, vii, p. 319; Skylax, c. 68; Mannert, Geograph. Gr. Röm. vol. vii, ch. 8, pp. 126–140.

An inscription in Boeckh's Collection proves the existence of a pentapolis, or union, of five Grecian cities on this coast. Tomi, Kallatis, Mesambria, and Apollônia, are presumed by Blaramberg to have belonged to this union. See Inscript. No. 2056 *c*.

Syncellus, however (p. 213), places the foundation of Istria considerably earlier, in 651 B.C.

[2] Herodot. viii, 90.

CHAPTER XXVII.

KYRENE AND BARKA.—HESPERIDES.

It has been already mentioned, in a former chapter, that Psammetichus king of Egypt, about the middle of the seventh century B.C., first removed those prohibitions which had excluded Grecian commerce from his country. In his reign, Grecian mercenaries were first established in Egypt, and Grecian traders admitted, under certain regulations, into the Nile. The opening of this new market emboldened them to traverse the direct sea which separates Krête from Egypt, — a dangerous voyage with vessels which rarely ventured to lose sight of land, — and seems to have first made them acquainted with the neighboring coast of Libya, between the Nile and the gulf called the Great Syrtis. Hence arose the foundation of the important colony called Kyrênê.

As in the case of most other Grecian colonies, so in that of Kyrênê, both the foundation and the early history are very imperfectly known. The date of the event, as far as can be made out amidst much contradiction of statement, was about 630 B.C.:[1] Thêra was the mother-city, herself a colony from Lacedæmon; and the settlements formed in Libya became no inconsiderable ornaments to the Dorian name in Hellas.

According to the account of a lost historian, Meneklês,[2] — political dissension among the inhabitants of Thêra led to that emigration which founded Kyrênê; and the more ample legendary details which Herodotus collected, partly from Theræan, partly from Kyrenæan informants, are not positively inconsistent with this statement, though they indicate more particularly bad seasons, distress, and over-population. Both of them dwell emphatically on the Delphian oracle as the instigator as well as the

[1] See the discussion of the era of Kyrênê in Thrige, Historia Cyrênês chs. 22, 23, 24, where the different statements are noticed and compared.

[2] Schol. ad Pindar. Pyth. iv.

director of the first emigrants, whose apprehensions of a dangerous voyage and an unknown country were very difficult to overcome. Both of them affirmed that the original œkist Battus was selected and consecrated to the work by the divine command both called Battus the son of Polymnêstus, of the mythical breed called Minyæ. But on other points there was complete divergence between the two stories, and the Kyrenæans themselves, whose town was partly peopled by emigrants from Krête, described the mother of Battus as daughter of Etearchus, prince of the Kretan town of Axus.[1] Battus had an impediment in his speech, and it was on his intreating from the Delphian oracle a cure for this infirmity that he received directions to go as "a cattle-breeding œkist to Libya." The suffering Theræans were directed to assist him, but neither he nor they knew where Libya was, nor could they find any resident in Krête who had ever visited it. Such was the limited reach of Grecian navigation to the south of the Ægean sea, even a century after the foundation of Syracuse. At length, by prolonged inquiry, they discovered a man employed in catching the purple shellfish, named Korôbius,— who said that he had been once forced by stress of weather to the island of Platea, close to the shores of Libya, and on the side not far removed from the western limit of Egypt. Some Theræans being sent along with Korôbius to inspect this island, left him there with a stock of provisions, and returned to Thêra to conduct the emigrants. From the seven districts into which Thêra was divided, emigrants were drafted for the colony, one brother being singled out by lot from the different numerous families. But so long was their return to Platea deferred, that the provisions of Korôbius were exhausted, and he was only saved from starvation by the accidental arrival of a Samian ship, driven by contrary winds out of her course on the voyage to Egypt. Kôlæus, the master of this ship (whose immense profits made by the first voyage to Tartêssus have been noticed in a former chapter), supplied him with provisions for a year, — an act of kindness, which is said to have laid the first foundation of the alliance and good feeling afterwards prevalent between Thêra, Kyrênê, and Samos. At length the expected emigrants reached the island,

[1] Herodot. iv, 150-154.

having found the voyage so perilous and difficult, that they once returned in despair to Thêra, where they were only prevented by force from relanding. The band which accompanied Battus was all conveyed in two pentekonters, — armed ships, with fifty rowers each. Thus humble was the start of the mighty Kyrênê, which, in the days of Herodotus, covered a city-area equal to the entire island of Platea.[1]

That island, however, though near to Libya, and supposed by the colonists to be Libya, was not so in reality: the commands of the oracle had not been literally fulfilled. Accordingly, the settlement carried with it nothing but hardship for the space of two years, and Battus returned with his companions to Delphi, to complain that the promised land had proved a bitter disappointment. The god, through his priestess, returned for answer, "If you, who have never visited the cattle-breeding Libya, know it better than I, who *have*, I greatly admire your cleverness." Again the inexorable mandate forced them to return; and this time they planted themselves on the actual continent of Libya, nearly over against the island of Platea, in a district called Aziris, surrounded on both sides by fine woods, and with a running stream adjoining. After six years of residence in this spot, they were persuaded by some of the indigenous Libyans to abandon it, under the promise that they should be conducted to a better situation: and their guides now brought them to the actual site of Kyrênê, saying, "Here, men of Hellas, is the place for you to dwell, for here the sky is perforated."[2] The road through which they passed had led through the tempting region of Irasa with its fountain Thestê, and their guides took the precaution to carry them through it by night, in order that they might remain ignorant of its beauties.

Such were the preliminary steps, divine and human, which brought Battus and his colonists to Kyrênê. In the time of Herodotus, Irasa was an outlying portion of the eastern territory of this powerful city. But we trace in the story just related an

[1] Herodot. iv, 155.

[2] Herodot. iv, 158. *ἐνθαῦτα γὰρ ὁ οὐρανὸς τέτρηται.* Compare the jest ascribed to the Byzantian envoys, on occasion of the vaunts of Lysimachus (Plutarch, De Fortunâ Alexandr. Magn. c. 3, p. 338).

opinion prevalent among his Kyrenæan informants, that Irasa with its fountain Thestè was a more inviting position than Kyrênê with its fountain of Apollo, and ought in prudence to have been originally chosen; out of which opinion, according to the general habit of the Greek mind, an anecdote is engendered and accredited, explaining how the supposed mistake was committed. What may have been the recommendations of Irasa, we are not permitted to know: but descriptions of modern travellers, no less than the subsequent history of Kyrênê, go far to justify the choice actually made. The city was placed at the distance of about ten miles from the sea, having a sheltered port called Apollonia, itself afterwards a considerable town, — it was about twenty miles from the promontory Phykus, which forms the northernmost projection of the African coast, nearly in the longitude of the Peloponnesian Cape Tænarus (Matapan). Kyrênê was situated about eighteen hundred feet above the level of the Mediterranean, of which it commanded a fine view, and from which it was conspicuously visible, on the edge of a range of hills which slope by successive terraces down to the port. The soil immediately around, partly calcareous, partly sandy, is described by Captain Beechey to present a vigorous vegetation and remarkable fertility, though the ancients considered it inferior in this respect both to Barka[1] and Hesperides, and still more inferior to the more westerly region near Kinyps. But the abundant periodical rains, attracted by the lofty heights around, and justifying the expression of the "perforated sky," were even of greater importance, under an African sun, than extraordinary richness of soil.[2] The maritime regions near Kyrênê and Barka,

[1] Herodot iv, 198.

[2] See, about the productive powers of Kyrênê and its surrounding region, Herodot. iv, 199; Kallimachus (himself a Kyrenæan), Hymn. ad Apoll. 65, with the note of Spanheim; Pindar, Pyth. iv, with the Scholia *passim*: Diodor. iii, 49; Arrian, Indica, xliii, 13. Strabo (xvii, p. 837) saw Kyrênê from the sea in sailing by, and was struck with the view: he does not appear to have landed.

The results of modern observation in that country are given in the Viaggio of Della Cella and in the exploring expedition of Captain Beechey; see an interesting summary in the History of the Barbary States, by Dr. Russell (Edinburgh, 1835), ch. v, pp. 160–171. The chapter on this subject (c. 6) in Thrige's Historia Cyrênês is defective, as the author seems never to have seen the careful and valuable observations of Captain Beechey, and proceeds chiefly on the statements of Della Cella.

I refer briefly to a few among the many interesting notices of Captain Beechey. For the site of the ancient Hesperides (Bengazi), and the "beautiful fertile plain near it, extending to the foot of a long chain of mountains about fourteen miles distant to the south-eastward,"— see Beechey, Expedition, ch. xi, pp. 287–315; "a great many datepalm-trees in the neighborhood," (ch. xii, pp. 340–345.)

The distance between Bengazi (Hesperides) and Ptolemeta (Ptolemais, the port of Barka) is fifty-seven geographical miles, along a fertile and beautiful plain, stretching from the mountains to the sea. Between these two was situated the ancient Teucheira (*ib.* ch. xii, p. 347), about thirty-eight miles from Hesperides (p. 349), in a country highly productive wherever it is cultivated (pp. 350–355). Exuberant vegetation exists near the deserted Ptolemeta, or Ptolemais, after the winter rains (p. 364). The circuit of Ptolemais, as measured by the ruins of its walls, was about three and a half English miles (p. 380).

The road from Barka to Kyrênê presents continued marks of ancient chariot-wheels (ch. xiv, p. 406); after passing the plain of Mergê, it becomes hilly and woody, "but on approaching Grenna (Kyrênê) it becomes more clear of wood; the valleys produce fine crops of barley, and the hills excellent pasturage for cattle," (p. 409.) Luxuriant vegetation after the winter rains in the vicinity of Kyrênê (ch. xv, p. 465).

and Hesperides, produced oil and wine as well as corn, while the extensive district between these towns, composed of alternate mountain, wood, and plain, was eminently suited for pasture and cattle-breeding; and the ports were secure, presenting conveniences for the intercourse of the Greek trader with Northern Africa, such as were not to be found along all the coasts of the Great Syrtis westward of Hesperides. Abundance of applicable land, — great diversity both of climate and of productive season, between the sea-side, the low hill, and the upper mountain, within a small space, so that harvest was continually going on, and fresh produce coming in from the earth, during eight months of the year, — together with the monopoly of the valuable plant called the Silphium, which grew nowhere except in the Kyrenaic region, and the juice of which was extensively demanded throughout Greece and Italy, — led to the rapid growth of Kyrênê, in spite of serious and renewed political troubles. And even now, the immense remains which still mark its desolate site, the evidences of past labor and solicitude at the Fountain of

Apollo, and elsewhere, together with the profusion of excavated and ornamented tombs, — attest sufficiently what the grandeur of the place must have been in the days of Herodotus and Pindar. So much did the Kyrenæans pride themselves on the Silphium, found wild in their back country, from the island of Platea on the east to the inner recess of the Great Syrtis westward, — the leaves of which were highly salubrious for cattle, and the stalk for man, while the root furnished the peculiar juice for export, — that they maintained it to have first appeared seven years prior to the arrival of the first Grecian colonists in their city.[1]

But it was not only the properties of the soil which promoted the prosperity of Kyrênê. Isokratês[2] praises the well-chosen site of that colony because it was planted in the midst of indigenous natives apt for subjection, and far distant from any formidable enemies. That the native Libyan tribes were made conducive in an eminent degree to the growth of the Greco-Libyan cities, admits of no doubt; and in reviewing the history of these cities, we must bear in mind that their population was not pure Greek, but more or less mixed, like that of the colonies in Italy, Sicily, or Ionia. Though our information is very imperfect, we see enough to prove that the small force brought over by Battus the Stammerer was enabled first to fraternize with the indigenous Libyans, — next, reinforced by additional colonists and availing themselves of the power of native chiefs, to overawe and subjugate them. Kyrênê — combined with Barka and Hesperides, both of them sprung from her root[3] — exercised over the Libyan tribes between the borders of Egypt and the inner recess of the Great Syrtis, for a space of three degrees of longitude, an ascendency similar to that which Carthage possessed over the more westerly Libyans near the Lesser Syrtis. Within these Kyrenæan limits, and further westward along the shores of the Great Syrtis, the Libyan tribes were of pastoral habits; westward, beyond the Lake Tritônis and the Lesser Syrtis,[1] they began to be agricultural. Immediately westward of Egypt were the Adyrmachidæ, bordering upon Apis and Marea, the Egyptian frontier towns;[2] they were subject to the Egyptians, and had adopted some of the minute ritual and religious observances which characterized the region of the Nile. Proceeding westward from the Adyrmachidæ were found the Giligammæ, the Asbystæ, the Auschisæ, the Kabales, and the Nasamônes, — the latter of whom occupied the south-eastern corner of the Great Syrtis; — next, the Makæ, Gindânes, Lotophagi, Machlyes, as far as a certain river and lake called Tritôn and Tritônis, which seems to have been near the Lesser Syrtis. These last-mentioned tribes were not dependent either on Kyrênê or on Carthage, at the time of Herodotus, nor probably during the proper period of free Grecian history, (600–300 B.C.) In the third century B.C., the Ptolemaic governors of Kyrênê extended their dominion westward, while Carthage pushed her colonies and castles eastward, so that the two powers embraced between them the whole line of coast between the Greater and Lesser Syrtis, meeting at the spot called the Altars of the Brothers Philæni, — so celebrated for its commemorative legend.[3] But even in the sixth century B.C., Carthage was jealous of the extension of Grecian colonies along this coast, and aided the Libyan Makæ

[1] Theophrast. Hist. Pl. vi, 3, 3; ix, 1, 7; Skylax, c. 107.

[2] Isokratês, Or. v, ad Philipp. p. 84, (p. 107, ed. Bek.) Thêra being a colony of Lacedæmon, and Kyrênê of Thêra, Isokratês speaks of Kyrênê as a colony of Lacedæmon.

[3] Pindar, Pyth. iv, 26. Κυρήνην — *ἀστέων ῥίζαν* In the time of Herodotus these three cities may possibly have been spoken of as a Tripolis; but no one before Alexander the Great would have understood the expression Pentapolis, used under the Romans to denote Kyrênê, Apollonia, Ptolemais, Teucheira, and Berenikê, or Hesperides.

Ptolemais, originally the port of Barka had become autonomous, and of greater importance than the latter.

[1] The accounts respecting the lake called in ancient times Tritônis are, however, very uncertain: see Dr. Shaw's Travels in Barbary, p. 127. Strabo mentions a lake so called near Hesperides (xvii, p. 836); Pherekydês talks of it as near Irasa (Pherekyd. Fragm. 33 *d.* ed. Didot).

[2] Eratosthenês, born at Kyrênê and resident at Alexandria, estimated the road-journey between the two at five hundred and twenty-five Roman miles (Pliny, H. N. v, 6).

[3] Sallust, Bell. Jugurth. c. 75; Valerius Maximus, v, 6. Thrige (Histor. Cyr. c. 49) places this division of the Syrtis between Kyrênê and Carthage at some period between 400–330 B.C., anterior to the loss of the independence of Kyrênê; but I cannot think that it was earlier than the Ptolemies: compare Strabo, xvii, p. 836

(about 510 B.C.) to expel the Spartan prince Dorieus from his settlement near the river Kinyps. Near that spot was afterwards planted, by Phenician or Carthaginian exiles, the town of Leptis Magna[1] (now Lebida), which does not seem to have existed in the time of Herodotus. Nor does the latter historian notice the Marmaridæ, who appear as the principal Libyan tribe near the west of Egypt, between the age of Skylax and the third century of the Christian era. Some migration or revolution subsequent to the time of Herodotus must have brought this name into predominance.[2]

The interior country, stretching westward from Egypt along the thirtieth and thirty-first parallel of latitude, to the Great Syrtis, and then along the southern shore of that gulf, is to a great degree low and sandy, and quite destitute of trees; yet affording in many parts water, herbage, and a fertile soil.[3] But the

[1] The Carthaginian establishment Neapolis is mentioned by Skylax (c. 109), and Strabo states that Leptis was another name for the same place (xvii, p. 835).

[2] Skylax, c. 107; Vopiscus, Vit. Prob. c. 9; Strabo, xvii, p. 838; Pliny, H. N. v, 5. From the Libyan tribe Marmaridæ was derived the name Marmarika, applied to that region.

[3] ταπεινή τε καὶ ψαμμώδης (Herodot. iv, 191); Sallust, Bell. Jugurthin. c. 17.

Captain Beechey points out the mistaken conceptions which have been entertained of this region:—

"It is not only in the works of early writers that we find the nature of the Syrtis misunderstood; for the whole of the space between Mesurata (*i. e.* the cape which forms the western extremity of the Great Syrtis) and Alexandria is described by Leo Africanus, under the title of Barka, as a wild and desert country, where there is neither water nor land capable of cultivation. He tells us that the most powerful among the Mohammedan invaders possessed themselves of the fertile parts of the coast, leaving the others only the desert for their abode, exposed to all the miseries and privations attendant upon it; for this desert (he continues) is far removed from any habitations, and nothing is produced there whatever. So that if these poor people would have a supply of grain, or of any other articles necessary to their existence, they are obliged to pledge their children to the Sicilians who visit the coast; who, on providing them with these things, carry off the children they have received.....

"It appears to be chiefly from Leo Africanus that modern historians have derived their idea of what they term the district and desert of Barka. Yet the whole of the Cyrenaica is comprehended within the limits which they

maritime region north of this, constituting the projecting bosom of the African coast from the island of Platea (Gulf of Bomba) on the east to Hesperides (Bengazi) on the west, is of a totally different character; covered with mountains of considerable elevation, which reach their highest point near Kyrênê, interspersed with productive plain and valley, broken by frequent ravines which carry off the winter torrents into the sea, and never at any time of the year destitute of water. It is this latter advantage that causes them to be now visited every summer by the Bedouin Arabs, who flock to the inexhaustible Fountain of Apollo and to other parts of the mountainous region from Kyrênê to Hesperides, when their supply of water and herbage fails in the interior:[1] and the same circumstance must have

assign to it; and the authority of Herodotus, without citing any other, would be amply sufficient to prove that this tract of country not only was no desert, but was at all times remarkable for its fertility.....The impression left upon our minds, after reading the account of Herodotus, would be much more consistent with the appearance and peculiarities of both, in their actual state, than that which would result from the description of any succeeding writer.....The district of Barka, including all the country between Mesurata and Alexandria, neither is, nor ever was, so destitute and barren as has been represented: the part of it which constitutes the Cyrenaica is capable of the highest degree of cultivation, and many parts of the Syrtis afford excellent pasturage, while some of it is not only adapted to cultivation, but does actually produce good crops of barley and dhurra." (Captain Beechey, Expedition to Northern Coast of Africa, ch. x pp. 263, 265, 267, 269: comp. ch. xi, p. 321.)

[1] Justin, xiii, 7. "Amœnitatem loci et fontium ubertatem." Captain Beechey notices this annual migration of the Bedouin Arabs:—

"Teucheira (on the coast between Hesperides and Barka) abounds in wells of excellent water, which are reserved by the Arabs for their summer consumption, and only resorted to when the more inland supplies are exhausted: at other times it is uninhabited. Many of the excavated tombs are occupied as dwelling-houses by the Arabs during their summer visits to that part of the coast." (Beechey, Exp. to North. Afric. ch. xii, p. 354.)

And about the wide mountain plain, or table-land of Mergê, the site of the ancient Barka, "The water from the mountains inclosing the plain settles in pools and lakes in different parts of this spacious valley; and affords a constant supply, during the summer months, to the Arabs who frequent it." (ch. xiii. p. 390.) The red earth which Captain Beechey observed in this plain is noticed by Herodotus in regard to Libya (ii, 12). Stephan. Byz. notices also the bricks used in building (v. Βάρκη) Derna, too, to the

operated in ancient times to hold the nomadic Libyans in a sort of dependence on Kyrênê and Barka. Kyrênê appropriated the maritime portion of the territory of the Libyan Asbystæ;[1] the Auschisæ occupied the region south of Barka, touching the sea near Hesperides, — the Kabales near Teucheira in the territory of Barka. Over the interior spaces these Libyan Nomads, with their cattle and twisted tents, wandered unrestrained, amply fed upon meat and milk,[2] clothed in goatskins, and enjoying better health than any people known to Herodotus. Their breed of horses was excellent, and their chariots or wagons with four horses could perform feats admired even by Greeks: it was to these horses that the princes[3] and magnates of Kyrênê and Barka often owed the success of their chariots in the games of Greece. The Libyan Nasamônes, leaving their cattle near the sea, were in the habit of making an annual journey up the country to the Oasis of Augila, for the purpose of gathering the

eastward of Cyrene on the sea-coast, is amply provided with water (ch. xvi, p. 471).

About Kyrênê itself, Captain Beechey states: "During the time, about a fortnight, of our absence from Kyrene, the changes which had taken place in the appearance of the country about it were remarkable. We found the hills on our return covered with Arabs, their camels, flocks, and herds; the scarcity of water in the interior at this time having driven the Bedouins to the mountains, and particularly to Kyrene, where the springs afford at all times an abundant supply. The corn was all cut, and the high grass and luxuriant vegetation, which we had found it so difficult to wade through on former occasions, had been eaten down to the roots by the cattle." (ch. xviii, pp. 517–520.)

The winter rains are also abundant, between January and March, at Bengazi (the ancient Hesperides): sweet springs of water near the town (ch. xi, pp. 282, 315, 327). About Ptolemeta, or Ptolemais, the port of the ancient Barka, *ib.* ch. xii. p. 363.

[3] See the fourth, fifth, and ninth Pythian Odes of Pindar. In the description given by Sophoklês (Electra, 695) of the Pythian contests, in which pretence is made that Orestês has perished, ten contending chariots are supposed, of which two are Libyan, from Barka: of the remaining eight, one only comes from each place named.

date-harvest,[1] or of purchasing dates, — a journey which the Bedouin Arabs from Bengazi still make annually, carrying up their wheat and barley, for the same purpose. Each of the Libyan tribes was distinguished by a distinct mode of cutting the hair, and by some peculiarities of religious worship, though generally all worshipped the Sun and the Moon.[2] But in the neighborhood of the Lake Tritônis (seemingly the western extremity of Grecian coasting trade in the time of Herodotus, who knows little beyond, and begins to appeal to Carthaginian authorities), the Grecian deities Poseidôn and Athênê, together with the legend of Jason and the Argonauts, had been localized. There were, moreover, current prophecies announcing that one hundred Hellenic cities were destined one day to be founded round the lake, — and that one city in the island Phla surrounded by the lake, was to be planted by the Lacedæmonians.[3] These, indeed, were among the many unfulfilled prophecies which from every side cheated the Grecian ear, — proceeding in this case probably from Kyrenæan or Theræan traders, who thought the spot advantageous for settlement, and circulated their own hopes under the form of divine assurances. It was about the year 510 B.C.[4] that some of these Theræans conducted the Spartan prince Dorieus to found a colony in the fertile region of Kinyps, belonging to the Libyan Makæ. But Carthage, interested in preventing the extension of Greek settlements westward, aided the Libyans in driving him out.

The Libyans in the immediate neighborhood of Kyrênê were materially changed by the establishment of that town, and constituted a large part — at first, probably, far the largest part — of its constituent population. Not possessing that fierce tenacity of habits which the Mohammedan religion has impressed upon the Arabs of the present day, they were open to the mingled influence of constraint and seduction applied by Grecian settlers; so that in the time of Herodotus, the Kabales and the Asbystæ

[1] Herodot. iv, 172–182. Compare Hornemann's Travels in Africa, p. 48, and Heeren, Verkehr und Handel der Alten Welt, Th. ii, Abth. I. Abschnitt vi, p. 226.

[4] Herodot. iv, 42.

of the interior had come to copy Kyrenæan tastes and customs.[1] The Theræan colonists, having obtained not merely the consent but even the guidance of the natives to their occupation of Kyrênê, constituted themselves like privileged Spartan citizens in the midst of Libyan Periœki.[2] They seem to have married Libyan wives, whence Herodotus describes the women of Kyrênê and Barka as following, even in his time, religious observances indigenous and not Hellenic.[3] Even the descendants of the primitive œkist Battus were semi-Libyan. For Herodotus gives us the curious information that Battus was the Libyan word for a king, deducing from it the just inference, that the name Battus was not originally personal to the œkist, but acquired in Libya first as a title,[4] — and that it afterwards passed to his descendants as a proper name. For eight generations the reigning princes were called Battus and Arkesilaus, the Libyan denomination alternating with the Greek, until the family was finally deprived of its power. Moreover, we find the chief of Barka, kinsman of Arkesilaus of Kyrênê bearing the name of Alazir; a name certainly not Hellenic, and probably Libyan.[5] We are, therefore, to conceive the first Theræan colonists as established in their lofty fortified post Kyrênê, in the centre of Libyan Periœki, till then strangers to walls, to arts, and perhaps even to cultivated land. Probably these Periœki were always subject and tributary, in a greater or less degree, though they continued for half a century to retain their own king.

To these rude men the Theræans communicated the elements of Hellenism and civilization, not without receiving themselves much that was non-Hellenic in return; and perhaps the reactionary influence of the Libyan element against the Hellenic might have proved the stronger of the two, had they not been reinforced by new-comers from Greece. After forty years of Battus

[2] Herodot. iv, 161 *Θηραίων καὶ τῶν περιοίκων*, etc.

[3] Herodot. iv, 186–189. Compare, also, the story in Pindar, Pyth. ix. 109–126, about Alexidamus, the ancestor of Telesikratês the Kyrenæan how the former won, by his swiftness in running, a Libyan maiden, daughter of Antæus of Irasa. — and Kallimachus, Hymn. Apoll. 86.

[4] Herodot iv, 155

[5] Herodot. iv, 164.

the œkist (about 630–590 B.C.), and sixteen years of his son Arkesilaus (about 590–574 B.C.), a second Battus[1] succeeded, called Battus the Prosperous, to mark the extraordinary increase of Kyrênê during his presidency. The Kyrenæans under him took pains to invite new settlers from all parts of Greece without distinction, — a circumstance deserving notice in Grecian colonization, which usually manifested a preference for certain races, if it did not positively exclude the rest. To every newcomer was promised a lot of land, and the Delphian priestess strenuously seconded the wishes of the Kyrenæans, proclaiming that "whosoever should reach the place too late for the land-division, would have reason to repent it." Such promise of new land, as well as the sanction of the oracle, were doubtless made public at all the games and meetings of Greeks, and a large number of new colonists embarked for Kyrênê. The exact number is not mentioned, but we must conceive it to have been very great, when we are told that during the succeeding generation, not less than seven thousand Grecian hoplites of Kyrênê perished by the hands of the revolted Libyans, — yet leaving both the city itself and its neighbor Barka still powerful. The loss of so great a number as seven thousand Grecian hoplites has very few parallels throughout the whole history of Greece. In fact, this second migration, during the government of Battus the Prosperous, which must have taken place between 574–554 B.C., ought to be looked upon as the moment of real and effective colonization for Kyrênê. It was on this occasion, probably, that the port of Apollonia, which afterwards came to equal the city itself in importance, was first occupied and fortified, — for this second swarm of emigrants came by sea direct, while the original colonists had reached Kyrênê by land from the island of Platea through Irasa. The fresh emigrants came from Peloponnesus, Krete, and some other islands of the Ægean.

To furnish so many new lots of land, it was either necessary, or it was deemed expedient, to dispossess many of the Libyan Periœki, who found their situation in other respects also greatly

[1] Respecting the chronology of the Battiad princes, see Boeckh, ad Pindar Pyth. iv, p. 265. and Thirge, Histor. Cyrenes, p. 127, *seq*

changed for the worse. The Libyan king Adikran, himself among the sufferers, implored aid from Apriês king of Egypt, then in the height of his power; sending to declare himself and his people Egyptian subjects, like their neighbors the Adyrmachidæ. The Egyptian prince, accepting the offer, despatched a large military force of the native soldier-caste, who were constantly in station at the western frontier-town Marea, by the route along shore to attack Kyrênê. They were met at Irasa by the Greeks of Kyrénê, and, being totally ignorant of Grecian arms and tactics, experienced a defeat so complete that few of them reached home.[1] The consequences of this disaster in Egypt, where it caused the transfer of the throne from Apriês to Amasis, have been noticed in a former chapter.

Of course the Libyan Periœki were put down, and the redivision of lands near Kyrênê among the Greek settlers accomplished, to the great increase of the power of the city. And the reign of Battus the Prosperous marks a flourishing era in the town, and a large acquisition of land-dominion, antecedent to years of dissension and distress. The Kyrenæans came into intimate alliance with Amasis king of Egypt, who encouraged Grecian connection in every way, and who even took to wife Ladikê, a woman of the Battiad family at Kyrênê, so that the Libyan Periœki lost all chance of Egyptian aid against the Greeks.[2]

New prospects, however, were opened to them during the reign of Arkesilaus the Second, son of Battus the Prosperous, (about 554–544 B.C.) The behavior of this prince incensed and alienated his own brothers, who raised a revolt against him, seceded with a portion of the citizens, and induced a number of the Libyan Periœki to take part with them. They founded the Greco-Libyan city of Barka, in the territory of the Libyan Auschisæ, about twelve miles from the coast, distant from Kyrênê by sea about seventy miles to the westward. The space between the two, and even beyond Barka, as far as the more westerly Grecian colony called Hesperides, was in the days of Skylax provided with commodious ports for refuge or landing:[3] at what

[1] Herodot. iv, 159.
[2] Herodot. ii, 180–181
[3] Herodot. iv, 160; Skylax, c. 107; Hekatæus, Fragm. 300, ed. Klausen.

time Hesperides was founded we do not know, but it existed about 510 B.C.[1] Whether Arkesilaus obstructed the foundation of Barka is not certain; but he marched the Kyrenæan forces against those revolted Libyans who had joined it. Unable to resist, the latter fled for refuge to their more easterly brethren near the borders of Egypt, and Arkesilaus pursued them. At length, in a district called Leukôn, the fugitives found an opportunity of attacking him at such prodigious advantage, that they almost destroyed the Kyrenæan army, seven thousand hoplites (as has been before intimated) being left dead on the field. Arkesilaus did not long survive this disaster. He was strangled during sickness by his brother Learchus, who aspired to the throne; but Eryxô, widow of the deceased prince,[2] avenged the crime, by causing Learchus to be assassinated.

That the credit of the Battiad princes was impaired by such a series of disasters and enormities, we can readily believe. But it received a still greater shock from the circumstance, that Battus the Third, son and successor of Arkesilaus, was lame and deformed in his feet. To be governed by a man thus personally disabled, was in the minds of the Kyrenæans an indignity not to be borne, as well as an excuse for preëxisting discontents; and the resolution was taken to send to the Delphian oracle for advice. They were directed by the priestess to invite from Mantineia, a moderator, empowered to close discussions and provide a scheme of government, — the Mantineans selecting Demônax, one of the wisest of their citizens, to solve the same problem which had been committed to Solon at Athens. By his arrangement, the regal prerogative of the Battiad line was terminated, and a republican government established seemingly about 543 B.C.; the dispossessed prince retaining both the

[1] Herodot. iv, 204.
[2] Herodot. iv, 160. Plutarch (De Virtutibus Mulier. p. 261) and Polyænus (viii, 41) give various details of this stratagem on the part of Eryxô; Learchus being in love with her. Plutarch also states that Learchus maintained himself as despot for some time by the aid of Egyptian troops from Amasis, and committed great cruelties. His story has too much the air of a romance to be transcribed into the text, nor do I know from what authority it is taken.

landed domains[1] and the various sacerdotal functions which had belonged to his predecessors.

Respecting the government, as newly framed, however, Herodotus unfortunately gives us hardly any particulars. Demônax classified the inhabitants of Kyrênê into three tribes; composed of: 1. Theræans with their Libyan Periœki; 2. Greeks who had come from Peloponnesus and Krete; 3. Such Greeks as had come from all other islands in the Ægean. It appears, too, that a senate was constituted, taken doubtless from these three tribes, and we may presume, in equal proportion. It seems probable that there had been before no constitutional classification, nor political privilege, except what was vested in the Theræans, — that these latter, the descendants of the original colonists were the only persons hitherto *known to the constitution*, — and that the remaining Greeks, though free landed proprietors and hoplites, were not permitted to act as an integral part of the body politic, nor distributed in tribes at all.[2] The whole powers

[1] Herodot iv. 161. Τῷ *βασιλέϊ* Βάττῳ *τεμένεα ἐξελὼν καὶ ἱρωσύνας, τὰ ἄλλα πάντα τὰ πρωτερον εἶχον οἱ βασιλεὶς ἐς μέσον τῷ δήμῳ ἔθηκε.*

I construe the word *τεμένεα* as meaning all the domains, doubtless large, which had belonged to the Battiad princes; contrary to Thrige (Historia Cyrênês, ch. 38, p. 150), who restricts the expression to revenues derived from sacred property. The reference of Wesseling to Hesych. — *Βάττου τίλφιον* — is of no avail for illustrating this passage.

The supposition of O. Müller, that the preceding king had made himself despotic by means of Egyptian soldiers, appears to me neither probable in itself, nor admissible upon the simple authority of Plutarch's romantic story, when we take into consideration the silence of Herodotus. Nor is Müller correct in affirming that Demônax "restored the supremacy of the community:" that legislator superseded the old kingly political privileges, and framed a new constitution (see O. Müller, History of Dorians, b. iii, ch. 9. s. 13.)

[2] Both O. Müller (Dor. b. iii, 4, 5), and Thrige (Hist. Cyren. c. 38, p. 148), speak of Demônax as having abolished the old tribes and created new ones. I do not conceive the change in this manner. Demônax did not *abolish* any tribes, but distributed for the first time the inhabitants into tribes. It is possible indeed that, before his time, the Theræans of Kyrênê may have been divided among themselves into distinct tribes; but the other inhabitants, having emigrated from a great number of different places, had never before been thrown into tribes at all. Some formal

of government, — up to this time vested in the Battiad princes subject only to such check, how effective we know not, which the citizens of Theræan origin might be able to interpose, — were now transferred from the prince to the people; that is, to certain individuals or assemblies chosen somehow from among all the citizens. There existed at Kyrênê, as at Thêra and Sparta, a board of Ephors, and a band of three hundred armed police,[1] analogous to those who were called the Hippeis, or Horsemen, at Sparta: whether these were instituted by Demônax, we do not know, nor does the identity of titular office, in different states, afford safe ground for inferring identity of power. This is particularly to be remarked with regard to the Periœki at Kyrênê, who were perhaps more analogous to the Helots than to the Periœki of Sparta. The fact that the Periœki were considered in the new constitution as belonging specially to the Theræan branch of citizens, shows that these latter still continued a privileged order, like the Patricians with their Clients at Rome in relation to the Plebs.

That the rearrangement introduced by Demônax was wise, consonant to the general current of Greek feeling, and calculated to work well, there is good reason to believe: and no discontent within would have subverted it without the aid of extraneous force. Battus the Lame acquiesced in it peaceably during his life; but his widow and his son, Pheretimê and Arkesilaus, raised a revolt after his death, and tried to regain by force the kingly privileges of the family. They were worsted and obliged to flee, — the mother to Cyprus, the son to Samos, — where both employed themselves in procuring foreign arms to invade and conquer Kyrênê. Though Pheretimê could obtain no effective aid from Euelthôn prince of Salamis in Cyprus, her son was more successful in Samos, by inviting new Greek settlers to Kyrênê, under promise of a redistribution of the land. A large

enactment or regulation was necessary for this purpose, to define and sanction that religious, social, and political communion, which went to make up the idea of the Tribe. It is not to be assumed, as a matter of course that there must necessarily have been tribes anterior to Demônax, among a population so miscellaneous in its origin.

[1] Hesychius, *Τριακάτιοι*; Eustath. ad Hom. Odyss. p. 303; Heraclid. Pontic. De Polit. c. 4.

body of emigrants joined him on this promise; the period seemingly being favorable to it, since the Ionian cities had not long before become subject to Persia, and were discontented with the yoke. But before he conducted this numerous band against his native city, he thought proper to ask the advice of the Delphian oracle. Success in the undertaking was promised to him, but moderation and mercy after success was emphatically enjoined, on pain of losing his life; and the Battiad race was declared by the god to be destined to rule at Kyrênê for eight generations, but no longer, — as far as four princes named Battus and four named Arkesilaus.[1] "More than such eight generations (said the Pythia), Apollo forbids the Battiads even to aim at." This oracle was doubtless told to Herodotus by Kyrenæan informants when he visited their city after the final deposition of the Battiad princes, which took place in the person of the fourth Arkesilaus, between 460–450 B.C.; the invasion of Kyrênê by Arkesilaus the Third, sixth prince of the Battiad race, to which the oracle professed to refer, having occurred about 530 B.C. The words placed in the mouth of the priestess doubtless date from the later of these two periods, and afford a specimen of the way in which pretended prophecies are not only made up by antedating after-knowledge, but are also so contrived as to serve a present purpose. For the distinct prohibition of the god, "not even to aim at a longer lineage than eight Battiad princes," seems plainly intended to deter the partisans of the dethroned family from endeavoring to reinstate them.

Arkesilaus the Third, to whom this prophecy purports to have been addressed, returned with his mother Pheretimê and his army of new colonists to Kyrênê. He was strong enough to carry all before him, — to expel some of his chief opponents and seize upon others, whom he sent to Cypress to be destroyed; though the vessels were driven out of their course by storms to the peninsula of Knidus, where the inhabitants rescued the prisoners and sent them to Thêra. Other Kyrenæans, opposed to the Battiads, took refuge in a lofty private tower, the property

[1] Herodot. iv, 163. Ἐπὶ μὲν τέσσερας Βάττους, καὶ Ἀρκεσιλέως τέσσερας διδοῖ ὑμῖν Λοξίης βασιλεύειν Κυρήνης· πλέον μέντοι τούτου οἱ δὲ πειρῶσθα παραινέει.

of Aglômachus, wherein Arkesilaus caused them all to be burned, heaping wood around and setting it on fire. But after this career of triumph and revenge, he became conscious that he had departed from the mildness enjoined to him by the oracle, and sought to avoid the punishment which it had threatened by retiring from Kyrênê. At any rate, he departed from Kyrênê to Barka, to the residence of the Barkæan prince, his kinsman Alazir, whose daughter he had married. But he found in Barka some of the unfortunate men who had fled from Kyrênê to escape him: these exiles, aided by a few Barkæans, watched for a suitable moment to assail him in the market-place, and slew him, together with his kinsman the prince Alazir.[1]

The victory of Arkesilaus at Kyrênê, and his assassination at Barka, are doubtless real facts; but they seem to have been compressed together and incorrectly colored, in order to give to the death of the Kyrenæan prince the appearance of a divine judgment. For the reign of Arkesilaus cannot have been very short, since events of the utmost importance occurred within it. The Persians under Kambysês conquered Egypt, and both the Kyrenæan and the Barkæan prince sent to Memphis to make their submission to the conqueror, — offering presents and imposing upon themselves an annual tribute. The presents of the Kyrenæans, five hundred minæ of silver, were considered by Kambysês so contemptibly small, that he took hold of them at once and threw them among his soldiers. And at the moment when Arkesilaus died, Aryandes, the Persian satrap after the death of Kambysês, is found established in Egypt.[2]

During the absence of Arkesilaus at Barka, his mother Pheretimê had acted as regent, taking her place at the discussions in the senate; but when his death took place, and the feeling against the Battiads manifested itself strongly at Barka, she did not feel powerful enough to put it down, and went to Egypt to solicit aid from Aryandes. The satrap, being made to believe that Arkesilaus had met his death in consequence of steady devotion to the Persians, sent a herald to Barka to demand the men who had slain him. The Barkæans assumed the collective

[1] Herodot. iv, 163–164.

[2] Herodot. iii. 13; iv, 165–166

responsibility of the act, saying that he had done them injuries both numerous and severe, — a farther proof that his reign cannot have been very short. On receiving this reply, the satrap immediately despatched a powerful Persian armament, land-force as well as sea-force, in fulfilment of the designs of Pheretimê against Barka. They besieged the town for nine months, trying to storm, to batter, and to undermine the walls;[1] but their efforts were vain, and it was taken at last only by an act of the grossest perfidy. Pretending to relinquish the attempt in despair, the Persian general concluded a treaty with the Barkæans, wherein it was stipulated that the latter should continue to pay tribute to the Great King, but that the army should retire without farther hostilities: "I swear it (said the Persian general), and my oath shall hold good, as long as this earth shall keep its place." But the spot on which the oaths were exchanged had been fraudulently prepared: a ditch had been excavated and covered with hurdles, upon which again a surface of earth had been laid. The Barkæans, confiding in the oath, and overjoyed at their liberation, immediately opened their gates and relaxed their guard; while the Persians, breaking down the hurdles and letting fall the superimposed earth, so that they might comply with the letter of their oath, assaulted the city and took it without difficulty.

Miserable was the fate which Pheretimê had in reserve for these entrapped prisoners. She crucified the chief opponents of herself and her late son around the walls, on which were also affixed the breasts of their wives: then, with the exception of such of the inhabitants as were Battiads, and noway concerned in the death of Arkesilaus, she consigned the rest to slavery in Persia. They were carried away captive into the Persian empire, where Darius assigned to them a village in Baktria as their place of abode, which still bore the name of Barka, even in the days of Herodotus.

During the course of this expedition, it appears, the Persian army advanced as far as Hesperides, and reduced many of the Libyan tribes to subjection: these, together with Kyrênê and

[1] Polyænus (Strateg. vii, 28) gives a narrative in many respects different from this of Herodotus.

Barka, figure among the tributaries and auxiliaries of Xerxês in his expedition against Greece. And when the army returned to Egypt, by order of Aryandês, they were half inclined to seize Kyrênê itself in their way, though the opportunity was missed and the purpose left unaccomplished.[1]

Pheretimê accompanied the retreating army to Egypt, where she died shortly of a loathsome disease, consumed by worms; thus showing, says Herodotus,[2] that "excessive cruelty in revenge brings down upon men the displeasure of the gods." It will be recollected that in the veins of this savage woman the Libyan blood was intermixed with the Grecian. Political enmity in Greece proper kills, but seldom if ever mutilates or sheds the blood, of women.

We thus leave Kyrênê and Barka again subject to Battiad princes, at the same time that they are tributaries of Persia. Another Battus and another Arkesilaus have to intervene before the glass of this worthless dynasty is run out, between 460–450 B.C. I shall not at present carry the reader's attention to this last Arkesilaus, who stands honored by two chariot victories in Greece, and two fine odes of Pindar.

The victory of the third Arkesilaus, and the restoration of the Battiads, broke up the equitable constitution established by Demônax. His triple classification into tribes must have been completely remodelled, though we do not know how. For the number of new colonists whom Arkesilaus introduced must have necessitated a fresh distribution of land, and it is extremely doubtful whether the relation of the Theræan class of citizens with their Periœki, as established by Demônax, still continued to subsist. It is necessary to notice this fact, because the arrangements of Demônax are spoken of by some authors as if they formed the permanent constitution of Kyrênê; whereas they cannot have outlived the restoration of the Battiads, nor can they even have been revived after that dynasty was finally expelled, since the number of new citizens and the large change of property, introduced by Arkesilaus the Third, would render them inapplicable to the subsequent city.

CHAPTER XXVIII.

PAN-HELLENIC FESTIVALS — OLYMPIC, PYTHIAN, NEMEAN, AND ISTHMIAN.

In the preceding chapters I have been under the necessity of presenting to the reader a picture altogether incoherent and destitute of central effect, — to specify briefly each of the two or three hundred towns which agreed in bearing the Hellenic name, and to recount its birth and early life, as far as our evidence goes, — but without being able to point out any action and reaction, exploits or sufferings, prosperity or misfortune, glory or disgrace, common to all. To a great degree, this is a characteristic inseparable from the history of Greece from its beginning to its end, for the only political unity which it ever receives is the melancholy unity of subjection under all-conquering Rome. Nothing short of force will efface in the mind of a free Greek the idea of his city as an autonomous and separate organization; the village is a fraction, but the city is an unit, — and the highest of all political units, not admitting of being consolidated with others into a ten or a hundred, to the sacrifice of its own separate and individual mark. Such is the character of the race, both in their primitive country and in their colonial settlements, — in their early as well as in their late history, — splitting by natural fracture into a multitude of self-administering, indivisible cities. But that which marks the early historical period before Peisistratus, and which impresses upon it an incoherence at once so fatiguing and so irremediable, is, that as yet no causes have arisen to counteract this political isolation. Each city, whether progressive or stationary, prudent or adventurous, turbulent or tranquil, follows out its own thread of existence, having no partnership or common purposes with the rest, and not yet constrained into any active partnership with them by extraneous forces. In like manner, the races which on every side surround the Hellenic world appear distinct and unconnected, not yet taken up into any coöperating mass or system.

Contemporaneously with the accession of Peisistratus, this state of things becomes altered both in and out of Hellas, — the former as a consequence of the latter: for at that time begins the formation of the great Persian empire, which absorbs into itself not only Upper Asia and Asia Minor, but also Phenicia, Egypt, Thrace, Macedonia, and a considerable number of the Grecian cities themselves; and the common danger, threatening the greater states of Greece proper from this vast aggregate, drives them, in spite of great reluctance and jealousy, into active union. Hence arises a new impulse, counterworking the natural tendency to political isolation in the Hellenic cities, and centralizing their proceedings to a certain extent for the two centuries succeeding 560 B.C.; Athens and Sparta both availing themselves of the centralizing tendencies which had grown out of the Persian war. But during the interval between 776–560 B.C., no such tendency can be traced even in commencement, nor any constraining force calculated to bring it about. Even Thucydidês, as we may see by his excellent preface, knew of nothing during these two centuries except separate city-politics and occasional wars between neighbors: the only event, according to him, in which any considerable number of Grecian cities were jointly concerned, was the war between Chalkis and Eretria, the date of which we do not know. In this war, several cities took part as allies; Samos, among others, with Eretria, — Milêtus with Chalkis:[1] how far the alliances of either may have extended, we have no evidence to inform us, but the presumption is that no great number of Grecian cities was comprehended in them. Such as it was, however, this war between Chalkis and Eretria was the nearest approach, and the only approach, to a Pan-Hellenic proceeding which Thucydidês indicates between the Trojan and the Persian wars. Both he and Herodotus present this early period only by way of preface and contrast to that which follows, — when the Pan-Hellenic spirit and tendencies, though never at any time predominant, yet counted for a powerful element in history, and sensibly modified the universal instinct of city-isolation. They tell us little about it, either because they could find no trustworthy

[1] Thucyd. i, 15.

informants, or because there was nothing in it to captivate the imagination in the same manner as the Persian or the Peloponnesian wars. From whatever cause their silence arises, it is deeply to be regretted, since the phenomena of the two centuries from 776–560 B.C., though not susceptible of any central grouping, must have presented the most instructive matter for study, had they been preserved. In no period of history have there ever been formed a greater number of new political communities, under such variety of circumstances, personal as well as local. And a few chronicles, however destitute of philosophy, reporting the exact march of some of these colonies from their commencement, — amidst all the difficulties attendant on amalgamation with strange natives, as well as on a fresh distribution of land, — would have added greatly to our knowledge both of Greek character and Greek social existence.

Taking the two centuries now under review, then, it will appear that there is not only no growing political unity among the Grecian states, but a tendency even to the contrary, — to dissemination and mutual estrangement. Not so, however, in regard to the other feelings of unity capable of subsisting between men who acknowledge no common political authority, — sympathies founded on common religion, language, belief of race, legends, tastes and customs, intellectual appetencies, sense of proportion and artistic excellence, recreative enjoyments, etc. On all these points the manifestations of Hellenic unity become more and more pronounced and comprehensive, in spite of increased political dissemination, throughout the same period. The breadth of common sentiment and sympathy between Greek and Greek, together with the conception of multitudinous periodical meetings as an indispensable portion of existence, appears decidedly greater in 560 B.C. than it had been a century before. It was fostered by the increased conviction of the superiority of Greeks as compared with foreigners, — a conviction gradually more and more justified as Grecian art and intellect improved, and as the survey of foreign countries became extended, — as well as by the many new efforts of men of genius in the field of music, poetry, statuary, and architecture, each of whom touched chords of feeling belonging to other Greeks hardly less than to his own peculiar city. At the same time, the

life of each peculiar city continues distinct, and even gathers to itself a greater abundance of facts and internal interests. So that during the two centuries now under review there was in the mind of every Greek an increase both of the city-feeling and of the Pan-Hellenic feeling, but on the other hand a decline of the old sentiment of separate race, — Doric, Ionic, Æolic.

I have already, in my former volume, touched upon the many-sided character of the Grecian religion, entering as it did into all the enjoyments and sufferings, the hopes and fears, the affections and antipathies, of the people, — not simply imposing restraints and obligations, but protecting, multiplying, and diversifying all the social pleasures and all the decorations of existence. Each city and even each village had its peculiar religious festivals, wherein the sacrifices to the gods were usually followed by public recreations of one kind or other, — by feasting on the victims, processional marches, singing and dancing, or competition in strong and active exercises. The festival was originally local, but friendship or communion of race was shown by inviting others, non-residents, to partake in its attractions. In the case of a colony and its metropolis, it was a frequent practice that citizens of the metropolis were honored with a privileged seat at the festivals of the colony, or that one of their number was presented with the first taste of the sacrificial victim.[1] Reciprocal frequentation of religious festivals was thus the standing evidence of friendship and fraternity among cities not politically united. That it must have existed to a certain degree from the earliest days, there can be no reasonable doubt; though in Homer and Hesiod we find only the celebration of funeral games, by a chief at his own private expense, in honor of his deceased father or friend, — with all the accompanying recreations, however, of a public festival, and with strangers not only

[1] Thucyd. i, 26. See the tale in Pausanias (v, 25, 1) of the ancient chorus sent annually from Messênê in Sicily across the strait to Rhegium, to a local festival of the Rhegians, — thirty-five boys with a chorus-master and a flute-player: on one unfortunate occasion, all of them perished in crossing. For the Thêory (or solemn religious deputation) periodically sent by the Athenians to Delos, see Plutarch, Nicias, c. 3; Plato, Phædon, c. 1, p 58. Compare also Strabo, ix, p. 419, on the general subject.

present, but also contending for valuable prizes.[1] Passing to historical Greece during the seventh century B. C., we find evidence of two festivals, even then very considerable, and frequented by Greeks from many different cities and districts, — the festival at Delos, in honor of Apollo, the great place of meeting for Ionians throughout the Ægean, — and the Olympic games. The Homeric Hymn to the Delian Apollo, which must be placed earlier than 600 B.C., dwells with emphasis on the splendor of the Delian festival, — unrivalled throughout Greece, as it would appear, during all the first period of this history, for wealth, finery of attire, and variety of exhibitions as well in poetical genius as in bodily activity,[2] — equalling probably at that time, if not surpassing, the Olympic games. The complete and undiminished grandeur of this Delian Pan-Ionic festival is one of our chief marks of the first period of Grecian history, before the comparative prostration of the Ionic Greeks through the rise of Persia: it was celebrated periodically in every fourth year, to the honor of Apollo and Artemis. It was distinguished from the Olympic games by two circumstances both deserving of notice, — first, by including solemn matches not only of gymnastic, but also of musical and poetical excellence, whereas the latter had no place at Olympia; secondly, by the admission of men, women, and children indiscriminately as spectators, whereas women were formally excluded from the Olympic ceremony.[3] Such exclusion may have depended in part on the inland situation of Olympia, less easily approachable by females than the island of Delos; but even making allowance for this circumstance, both the one distinction and the other mark the rougher character of the Ætolo-Dorians in Peloponnesus. The Delian festival, which greatly dwindled away during the subjection of the Asiatic and insular Greeks to Persia, was revived afterwards by Athens during the period of her empire, when she was seeking in every way to strengthen her central ascendency in the

[2] Homer, Hymn. Apoll. 150; Thucyd. iii, 104.

[3] Pausan. v, 6, 5; Ælian, N. H. x, 1; Thucyd. iii, 104. When Ephesus, and the festival called Ephesia, had become the great place of Ionic meeting, the presence of women was still continued (Dionys. Hal. A R iv, 25)

Ægean. But though it continued to be ostentatiously celebrated under her management, it never regained that commanding sanctity and crowded frequentation which we find attested in the Homeric Hymn to Apollo for its earlier period.

Very different was the fate of the Olympic festival, — on the banks of the Alpheius[1] in Peloponnesus, near the old oracular temple of the Olympian Zeus, — which not only grew up uninterruptedly from small beginnings to the maximum of Pan-Hellenic importance, but even preserved its crowds of visitors and its celebrity for many centuries after the extinction of Greek freedom, and only received its final abolition, after more than eleven hundred years of continuance, from the decree of the Christian emperor Theodosius in 394 A.D. I have already recounted, in the preceding volume of this history, the attempt made by Pheidon, despot of Argos, to restore to the Pisatans, or to acquire for himself, the administration of this festival, — an event which proves the importance of the festival in Peloponnesus, even so early as 740 B.C. At that time, and for some years afterwards, it seems to have been frequented chiefly, if not exclusively, by the neighboring inhabitants of central and western Peloponnesus, — Spartans, Messenians, Arkadians, Triphylians, Pisatans, Eleians, and Achæans,[2] — and it forms an important link connecting the Etolo-Eleians, and their privileges as Agonothets to solemnize and preside over it, with Sparta. From the year 720 B.C., we trace positive evidences of the gradual presence of more distant Greeks, — Corinthians, Megarians, Bœotians, Athenians, and even Smyrnæans from Asia.

We observe also another proof of growing importance, in the increased number and variety of matches exhibited to the spectators, and in the substitution of the simple crown of olive, an honorary reward, in place of the more substantial present which the Olympic festival and all other Grecian festivals began by conferring upon the victor. The humble constitution of the Olympic games presented originally nothing more than a match of runners

[1] Strabo, viii. p. 353; Pindar, Olymp. viii, 2; Xenophon, Hellen. iv, 7, 2; iii, 2, 22.

[2] See K. F. Hermann, Lehrbuch der Griechischen Staats-Alterthümer sect. 10

in the measured course called the Stadium: a continuous series of the victorious runners was formally inscribed and preserved by the Eleians, beginning with Korœbus in 776 B. C., and was made to serve by chronological inquirers from the third century B.C. downwards, as a means of measuring the chronological sequence of Grecian events. It was on the occasion of the 7th Olympiad after Korœbus, that Daiklês the Messenian first received for his victory in the stadium no farther recompense than a wreath from the sacred olive-tree near Olympia:[1] the honor of being proclaimed victor was found sufficient, without any pecuniary addition. But until the 14th Olympiad, there was no other match for the spectators to witness beside that of simple runners in the stadium. On that occasion a second race was first introduced, of runners in the double stadium, or up and down the course; in the next, or 15th Olympiad (720 B.C.), a third match, the long course for runners, or several times up and down the stadium. There were thus three races, — the simple stadium, the double stadium, or diaulos, and the long course, or dolichos, all for runners, — which continued without addition until the 18th Olympiad, when the wrestling-match and the complicated pentathlon — including jumping, running, the quoit, the javelin, and wrestling — were both added. A farther novelty appears in the 23d Olympiad (688 B.C.), the boxing-match; and another, still more important, in the 25th (680 B.C.), the chariot with four full-grown horses. This last-mentioned addition is deserving of special notice, not merely as it diversified the scene by the introduction of horses, but also as it brought in a totally new class of competitors, — rich men and women, who possessed the finest horses and could hire the most skilful drivers, without any personal superiority, or power of bodily display, in themselves.[2] The prodigious

[1] Dionys. Halikarn. Ant. Rom. i, 71; Phlegon, De Olympiad. p. 140. For an illustration of the stress laid by the Greeks on the purely honorary rewards of Olympia, and on the credit which they took to themselves as competitors, not for money, but for glory, see Herodot. viii, 26. Compare the Scholia on Pindar, Nem. and Isthm. Argument, pp. 425–514, ed. Boeckh.

[2] See the sentiment of Agesilaus, somewhat contemptuous, respecting the chariot-race, as described by Xenophon (Agesilaus, ix, 6); the general feeling of Greece, however, is more in conformity with what Thucydidês

exhibition of wealth in which the chariot proprietors indulged, is not only an evidence of growing importance in the Olympic games, but also served materially to increase that importance, and to heighten the interest of spectators. Two farther matches were added in the 33d Olympiad (648 B.C.), — the pankration, or boxing and wrestling conjoined,[1] with the hand unarmed or divested of that hard leather cestus[2] worn by the pugilist, which rendered the blow of the latter more terrible, but at the same time prevented him from grasping or keeping hold of his adversary, — and the single race-horse. Many other novelties were introduced one after the other, which it is unnecessary fully to enumerate, — the race between men clothed in full panoply, and bearing each his shield, — the different matches between boys, analogous to those between full-grown men, and between colts, of the same nature as between full-grown horses. At the maximum of its attraction the Olympic solemnity occupied five days, but until the 77th Olympiad, all the various matches had been compressed into one, — beginning at daybreak and not always closing before dark.[3] The 77th Olympiad follows immediately after the success-

(vi, 16) puts into the mouth of Alkibiadês, and Xenophon into that of Simonidês (Xenophon, Hiero, xi, 5). The great respect attached to a family which had gained chariot victories is amply attested: see Herodot. vi, 35, 36, 103, 126, — *οἰκίη τεθριππότροφος*, — and vi, 70, about Demaratus king of Sparta.

[1] Antholog. Palatin. ix, 588; vol. ii, p. 299, Jacobs.

[2] The original Greek word for this covering (which surrounded the middle hand and upper portion of the fingers, leaving both the ends of the fingers and the thumb exposed) was *ἱμὰς*, the word for a thong, strap, or whip, of leather: the special word *μύρμηξ* seems to have been afterwards introduced (Hesychius, v, Ἱμάς): see Homer, Iliad, xxiii, 686. Cestus, or Cæstus, is the Latin word (Virg. Æn. v, 404), the Greek word *κεστὸς* is an adjective annexed to *ἱμὰς* — *κεστὸν ἱμάντα* — *πολύκεστος ἱμάς* (Iliad, xiv, 214; iii, 371). See Pausan. viii, 40, 3, for the description of the incident which caused an alteration in this hand-covering at the Nemean games. ultimately, it was still farther hardened by the addition of iron.

[3] Ἀέθλων *πεμπαμέρους ἁμίλλας*, — Pindar, Olymp. v, 6: compare Schol. ad Pindar. Olymp. iii, 33.

See the facts respecting the Olympic Agôn collected by Corsini (Dissertationes Agonisticæ, Dissert. i, sects. 8, 9, 10), and still more amply set forth with a valuable commentary, by Krause (Olympia, oder Darstellung der grossen Olympischen Spiele, Wien, 1838, sects. 8–11 especially).

ful expulsion of the Persian invaders from Greece, when the Pan-Hellenic feeling had been keenly stimulated by resistance to a common enemy; and we may easily conceive that this was a suitable moment for imparting additional dignity to the chief national festival.

We are thus enabled partially to trace the steps by which, during the two centuries succeeding 776 B.C., the festival of the Olympic Zeus in the Pisatid gradually passed from a local to a national character, and acquired an attractive force capable of bringing together into temporary union the dispersed fragments of Hellas, from Marseilles to Trebizond. In this important function it did not long stand alone. During the sixth century B.C., three other festivals, at first local, became successively nationalized, — the Pythia near Delphi, the Isthmia, near Corinth, the Nemea near Kleônæ, between Sikyôn and Argos.

In regard to the Pythian festival, we find a short notice of the particular incidents and individuals by whom its reconstitution and enlargement were brought about, — a notice the more interesting, inasmuch as these very incidents are themselves a manifestation of something like Pan-Hellenic patriotism, standing almost alone in an age which presents little else in operation except distinct city-interests. At the time when the Homeric Hymn to the Delphinian Apollo was composed (probably in the seventh century B.C.), the Pythian festival had as yet acquired little eminence. The rich and holy temple of Apollo was then purely oracular, established for the purpose of communicating to pious inquirers "the counsels of the immortals." Multitudes of visitors came to consult it, as well as to sacrifice victims and to deposit costly offerings; but while the god delighted in the sound of the harp as an accompaniment to the singing of pæans, he was by no means anxious to encourage horse-races and chariot-races in the neighborhood, — nay, this psalmist considers that the noise of horses would be "a nuisance," the drinking of mules a desecration to the sacred fountains, and the ostentation of fine-built chariots objectionable,[1] as tending to divert the attention of spectators away from the great temple and its wealth.

[1] Hom. Hymn. Apoll. 262.

Πημανέει σ' αἰεὶ κτυπὸς ἵππων ὠκειάων,
Ἀρδόμενοί τ' οὐρῆες ἐμῶν ἱερῶν ἀπὸ πηγέων·

From such inconveniences the god was protected by placing his sanctuary "in the rocky Pytho," — a rugged and uneven recess, of no great dimensions, embosomed in the southern declivity of Parnassus, and about two thousand feet above the level of the sea, while the topmost Parnassian summits reach a height of near eight thousand feet. The situation was extremely imposing, but unsuited by nature for the congregation of any considerable number of spectators, — altogether impracticable for chariot-races, — and only rendered practicable by later art and outlay for the theatre as well as for the stadium; the original stadium, when first established, was placed in the plain beneath. It furnished little means of subsistence, but the sacrifices and presents of visitors enabled the ministers of the temple to live in abundance,[1] and gathered together by degrees a village around it. Near the sanctuary of Pytho, and about the same altitude, was situated the ancient Phocian town of Krissa, on a projecting spur of Parnassus, — overhung above by the line of rocky precipice called the Phædriades, and itself overhanging below the deep ravine through which flows the river Pleistus. On the other side of this river rises the steep mountain Kirphis, which projects southward into the Corinthian gulf, — the river reaching that gulf through the broad Krissæan or Kirrhæan plain, which stretches westward nearly to the Lokrian town of Amphissa; a plain for the most part fertile and productive, though least so in

Ἔνθα τις ἀνθρώπων βουλήσεται εἰσοράασθαι
Ἅρματά τ' εὐποίητα καὶ ὠκυπόδων κτυπὸν ἵππων,
Ἢ νηόν τε μέγαν καὶ κτήματα πόλλ' ἐνεόντα.

Also v, 288–394. γυάλων ὑπὸ Παρνήσοιο — 484. ὑπὸ πτυχὶ Παρνήσοιο· Pindar, Pyth. viii, 90. Πυθῶνος ἐν γυάλοις — Strabo, ix, p. 418. πετρωδὲς χώριον καὶ θεατροειδὲς — Heliodorus, Æthiop. ii, 26: compare Will. Götte, Das Delphische Orakel (Leipzig, 1839), pp. 39–42.

[1] Βωμοί μ' ἐφερβον, οὔπιών τ' ἀεὶ ξένος, says Ion (in Euripidês, Ion. 334) the slave of Apollo, and the verger of his Delphian temple, who waters it from the Kastalian spring, sweeps it with laurel boughs, and keeps off with his bow and arrows the obtrusive birds (Ion, 105, 143, 154). Whoever reads the description of Professor Ulrichs (Reisen und Forschungen in Griechenland, ch. 7, p. 110) will see that the birds — eagles, vultures, and crows — are quite numerous enough to have been exceedingly troublesome. The whole play of Ion conveys a lively idea of the Delphian temple and its scenery, with which Euripidês was doubtless familiar.

its eastern part immediately under the Kirphis, where the seaport Kirrha was placed.[1] The temple, the oracle, and the wealth of Pytho, belong to the very earliest periods of Grecian antiquity; but the octennial solemnity in honor of the god included at first no other competition except that of bards, who sang each a pæan with the harp. It has been already mentioned, in my preceding volume, that the Amphiktyonic assembly held one of its half-yearly meetings near the temple of Pytho, the other at Thermopylæ.

In those early times when the Homeric Hymn to Apollo was composed, the town of Krissa appears to have been great and powerful, possessing all the broad plain between Parnassus, Kirphis, and the gulf, to which latter it gave its name, — and possessing also, what was a property not less valuable, the

[1] There is considerable perplexity respecting Krissa and Kirrha, and it still remains a question among scholars whether the two names denote the same place or different places; the former is the opinion of O. Müller (Orchomenos, p. 495). Strabo distinguishes the two, Pausanias identifies them, conceiving no other town to have ever existed except the seaport (x, 37, 4). Mannert (Geogr. Gr. Röm. viii, p. 148) follows Strabo, and represents them as different.

I consider the latter to be the correct opinion, upon the grounds, and partly, also, on the careful topographical examination of Professor Ulrichs, which affords an excellent account of the whole scenery of Delphi (Reisen und Forschungen in Griechenland, Bremen, 1840, chapters 1, 2, 3). The ruins described by him on the high ground near Kastri, called the Forty Saints, may fairly be considered as the ruins of Krissa; the ruins of Kirrha are on the sea-shore near the mouth of the Pleistus. The plain beneath might without impropriety be called either the Krissæan or the Kirrhæan plain (Herodot. viii, 32; Strabo, ix, p. 419). Though Strabo was right in distinguishing Krissa from Kirrha, and right also in the position of the latter under Kirphis, he conceived incorrectly the situation of Krissa; and his representation that there were two wars, — in the first of which, Kirrha was destroyed by the Krissæans, while in the second, Krissa itself was conquered by the Amphiktyons, — is not confirmed by any other authority.

The mere circumstance that Pindar gives us in three separate passages, Κρίσα, Κρισαῖον, Κρισαίοις (Isth. ii, 26; Pyth. v, 49, vi, 18), and in five other passages, Κίρρᾳ, Κίρρας, Κίρραθεν (Pyth. iii, 33, vii, 14, viii, 26, x, 24, xi, 20), renders it almost certain that the two names belong to different places, and are not merely two different names for the same place; the poet could not in this case have any metrical reason for varying the denomination, as the metre of the two words is similar.

adjoining sanctuary of Pytho itself, which the Hymn identifies with Krissa, not indicating Delphi as a separate place. The Krissæans, doubtless, derived great profits from the number of visitors who came to visit Delphi, both by land and by sea, and Kirrha was originally only the name for their seaport. Gradually, however, the port appears to have grown in importance at the expense of the town, just as Apollonia and Ptolemais came to equal Kyrênê and Barka, and as Plymouth Dock has swelled into Devonport; while at the same time, the sanctuary of Pytho with its administrators expanded into the town of Delphi, and came to claim an independent existence of its own. The original relations between Krissa, Kirrha, and Delphi, were in this manner at length subverted, the first declining and the two latter rising. The Krissæans found themselves dispossessed of the management of the temple, which passed to the Delphians, as well as of the profits arising from the visitors, whose disbursements went to enrich the inhabitants of Kirrha. Krissa was a primitive city of the Phocian name, and could boast of a place as such in the Homeric Catalogue, so that her loss of importance was not likely to be quietly endured. Moreover, in addition to the above facts, already sufficient in themselves as seeds of quarrel, we are told that the Kirrhæans abused their position as masters of the avenue to the temple by sea, and levied exorbitant tolls on the visitors who landed there, — a number constantly increasing from the multiplication of the transmarine colonies, and from the prosperity of those in Italy and Sicily. Besides such offence against the general Grecian public, they had also incurred the enmity of their Phocian neighbors by outrages upon women, Phocian as well as Argeian, who were returning from the temple.[1]

Thus stood the case, apparently, about 595 B.C., when the Amphiktyonic meeting interfered — either prompted by the

[1] Athenæus, xiii, p. 560; Æschinês cont. Ktesiphont. c. 36, p. 406; Strabo, ix, p. 418. Of the Akragallidæ, or Kraugallidæ, whom Æschinês mentions along with the Kirrhæans as another impious race who dwelt in the neighborhood of the god, — and who were overthrown along with the Kirrhæans, — we have no farther information. O. Müller's conjecture would identify them with the Dryopes (Dorians, i, 2, 5, and his Orchomenos, p. 496); Harpokration, v, Κραυγαλλίδαι.

Phocians, or perhaps on their own spontaneous impulse, out of regard to the temple — to punish the Kirrhæans. After a war of ten years, the first Sacred War in Greece, this object was completely accomplished, by a joint force of Thessalians under Eurylochus, Sikyonians under Kleisthenês, and Athenians under Alkmæon; the Athenian Solon being the person who originated and enforced, in the Amphiktyonic council, the proposition of interference. Kirrha appears to have made a strenuous resistance until its supplies from the sea were intercepted by the naval force of the Sikyonian Kleisthenês; and even after the town was taken, its inhabitants defended themselves for some time on the heights of Kirphis.[1] At length, however, they were thoroughly subdued. Their town was destroyed, or left to subsist merely as a landing-place; and the whole adjoining plain was consecrated to the Delphian god, whose domains thus touched the sea. Under this sentence, pronounced by the religious feeling of Greece, and sanctified by a solemn oath publicly sworn and inscribed at Delphi, the land was condemned to remain untilled and unplanted, without any species of human care, and serving only for the pasturage of cattle. The latter circumstance was convenient to the temple, inasmuch as it furnished abundance of victims for the pilgrims who landed and came to sacrifice, — for without preliminary sacrifice no man could consult the oracle;[2] while the entire prohibition of tillage was the only means of obviating the growth of another troublesome neighbor on the sea-board. The fate of Kirrha in this war is ascertained: that of Krissa is not so clear, nor do we know whether it was destroyed, or left subsisting in a position of inferiority with regard to Delphi. From this time forward, however, the Delphian community appears as substantive and autonomous, exercising in their own right the management of the temple; though we shall find, on more than one occasion, that the Phocians contest this right, and lay claim

[1] Schol. ad Pindar. Pyth. Introduct.; Schol. ad Pindar. Nem. ix, 2; Plutarch, Solon, c. 11; Pausan. ii, 9, 6. Pausanias (x, 37, 4) and Polyænus (Strateg. iii, 6) relate a stratagem of Solon, or of Eurylochus, to poison the water of the Kirrhæans with hellebore.

[2] Eurip. Ion. 230.

to the management of it for themselves,[1] — a remnant of that early period when the oracle stood in the domain of the Phocian Krissa. There seems, moreover, to have been a standing antipathy between the Delphians and the Phocians.

The Sacred War just mentioned, emanating from a solemn Amphiktyonic decree, carried on jointly by troops of different states whom we do not know to have ever before coöperated, and directed exclusively towards an object of common interest, is in itself a fact of high importance as manifesting a decided growth of Pan-Hellenic feeling. Sparta is not named as interfering, — a circumstance which seems remarkable when we consider both her power, even as it then stood, and her intimate connection with the Delphian oracle, — while the Athenians appear as the prime movers, through the greatest and best of their citizens: the credit of a large-minded patriotism rests prominently upon them.

But if this Sacred War itself is a proof that the Pan-Hellenic spirit was growing stronger, the positive result in which it ended reinforced that spirit still farther. The spoils of Kirrha were employed by the victorious allies in founding the Pythian games. The octennial festival hitherto celebrated at Delphi in honor of the god, including no other competition except in the harp and the pæan, was expanded into comprehensive games on the model of the Olympic, with matches not only of music, but also of gymnastics and chariots, — celebrated, not at Delphi itself, but on the maritime plain near the ruined Kirrha, — and under the direct superintendence of the Amphiktyons themselves. I have already mentioned that Solon provided large rewards for such Athenians as gained victories in the Olympic and Isthmian games, thereby indicating his sense of the great value of the national games as a means of promoting Hellenic intercommunion. It was the same feeling which instigated the foundation of the new games on the Kirrhæan plain, in commemoration of the vindicated honor of Apollo, and in the territory newly made over to him. They were celebrated in the latter half of summer, or first half of every third Olympic year, — the Amphiktyons being the ostensible agonothets, or administrators, and appointing persons to discharge

[1] Thucyd. i, 112.

the duty in their names.[1] At the first Pythian ceremony (in 586 B.C.), valuable rewards were given to the different victors; at the second (582 B.C.), nothing was conferred but wreaths of laurel, — the rapidly attained celebrity of the games being such as to render any farther reward superfluous. The Sikyonian despot Kleisthenês himself, one of the leaders in the conquest of Kirrha, gained the prize at the chariot-race of the second Pythia. We find other great personages in Greece frequently mentioned as competitors, and the games long maintained a dignity second only to the Olympic, over which, indeed, they had some advantages; first, that they were not abused for the purpose of promoting petty jealousies and antipathies of any administering state, as the Olympic games were perverted by the Eleians, on more than one occasion; next, that they comprised music and poetry as well as bodily display. From the circumstances attending their foundation, the Pythian games deserved, even more than the Olympic, the title bestowed on them by Demosthenês, — "The common Agôn of the Greeks."[2]

[1] Mr. Clinton thinks that the Pythian games were celebrated in the autumn: M. Boeckh refers the celebration to the spring: Krause agrees with Boeckh. (Clinton, Fast. Hell. vol. ii, p. 200, Appendix; Boeckh, ad Corp. Inscr. No. 1688, p. 813; Krause, Die Pythien, Nemeen und Isthmien, vol. ii, pp. 29–35.)

Mr. Clinton's opinion appears to me nearly the truth; the real time, as I conceive it, being about the beginning of August, or end of July. Boeckh admits that, with the exception of Thucydidês (v, 1–19), the other authorities go to sustain it; but he relies on Thucydidês to outweigh them. Now the passage of Thucydidês, properly understood, seems to me as much against Boeckh's view as the rest.

I may remark, as a certain additional reason in the case, that the Isthmia appear to have been celebrated in the third year of each Olympiad, and in the spring (Krause, p. 187). It seems improbable that these two great festivals should have come one immediately after the other, which, nevertheless, must be supposed, if we adopt the opinion of Boeckh and Krause.

The Pythian games would be sometimes a little earlier, sometimes a little later, in consequence of the time of full moon: notice being always sent round by the administrators beforehand of the commencement of the sacred month. See the references in K. F. Hermann, Lehrbuch der gottesdienstl. Alterth. der Griechen, ch. 49, not. 12. — This note has been somewhat modified since my first edition — see the note vol. vi, ch. liv

[2] Demosthen. Philipp iii, p. 119.

The Olympic and Pythian games continued always to be the most venerated solemnities in Greece: yet the Nemea and Isthmia acquired a celebrity not much inferior; the Olympic prize counting for the highest of all.[1] Both the Nemea and the Isthmia were distinguished from the other two festivals by occurring, not once in four years, but once in two years; the former in the second and fourth years of each Olympiad, the latter in the first and third years. To both is assigned, according to Greek custom, an origin connected with the interesting persons and circumstances of Grecian antiquity: but our historical knowledge of both begins with the sixth century B.C. The first historical Nemead is presented as belonging to Olympiad 52 or 53 (572–568 B.C.), a few years subsequent to the Sacred War above mentioned and to the origin of the Pythia. The festival was celebrated in honor of the Nemean Zeus, in the valley of Nemea, between Phlius and Kleônæ, — and originally by the Kleônæans themselves, until, at some period after 460 B.C., the Argeians deprived them of that honor and assumed the honors of administration to themselves.[2] The Nemean games had their Hellanodikæ[3] to superintend, to keep order, and to distribute the prizes, as well as the Olympic. Respecting the Isthmian festival, our first historical information is a little earlier, for it has already been stated

[1] Pindar, Nem. x, 28–33.

[2] Strabo, viii, p. 377; Plutarch, Arat. c. 28; Mannert, Geogr. Gr. Röm. pt. viii, p. 650. Compare the second chapter in Krause, Die Pythien, Nemeen und Isthmien, vol. ii, p. 108, *seq.*

That the Kleônæans continued without interruption to administer the Nemean festival down to Olympiad 80 (460 B.C.), or thereabouts, is the rational inference from Pindar, Nem. x, 42: compare Nem. iv, 17. Eusebius, indeed, states that the Argeians seized the administration for themselves in Olympiad 53, and in order to reconcile this statement with the above passage in Pindar, critics have concluded that the Argeians lost it again, and that the Kleônæans resumed it a little before Olympiad 80. I take a different view, and am disposed to reject the statement of Eusebius altogether; the more so as Pindar's tenth Nemean ode is addressed to an Argeian citizen named Theiæus. If there had been at that time an Argeian citizen named Theiæus. If there had been at that time a standing dispute between Argos and Kleônæ on the subject of the administration of the Nemea, the poet would hardly have introduced the mention of the Nemean prizes gained by the ancestors of Theiæus, under the untoward designation of "prizes received from Kleônæan men."

[3] See Boeckh, Corp Inscript. No. 1126.

that Solon conferred a premium upon every Athenian citizen who gained a prize at that festival as well as at the Olympian, — in or after 594 B.C. It was celebrated by the Corinthians at their isthmus, in honor of Poseidôn; and if we may draw any inference from the legends respecting its foundation, which is ascribed sometimes to Theseus, the Athenians appear to have identified it with the antiquities of their own state.[1]

[1] K. F. Hermann, in his Lehrbuch der Griechischen Staatsalterthümer (ch. 32, not. 7, and ch. 65, not. 3), and again in his more recent work (Lehrbuch der gottesdienstlichen Alterthümer der Griechen, part iii, ch. 49, also not. 6), both highly valuable publications, maintains, — 1. That the exaltation of the Isthmian and Nemean games into Pan-Hellenic importance arose directly after and out of the fall of the despots of Corinth and Sikyon. 2. That it was brought about by the paramount influence of the Dorians, especially by Sparta. 3. That the Spartans put down the despots of both these two cities.

The last of these three propositions appears to me untrue in respect to Sikyon, — improbable in respect to Corinth: my reasons for thinking so have been given in a former chapter. And if this be so, the reason for presuming Spartan intervention as to the Isthmian and Nemean games falls to the ground; for there is no other proof of it, nor does Sparta appear to have interested herself in any of the four national festivals except the Olympic, with which she was from an early period peculiarly connected.

Nor can I think that the first of Hermann's three propositions is at all tenable. No connection whatever can be shown between Sikyon and the Nemean games; and it is the more improbable in this case that the Sikyonians should have been active, inasmuch as they had under Kleisthenês a little before contributed to nationalize the Pythian games: a second interference for a similar purpose ought not to be presumed without some evidence. To prove his point about the Isthmia, Hermann cites only a passage of Solinus (vii, 14), "Hoc spectaculum, per Cypselum tyrannum intermissum, Corinthii Olymp. 49 solemnitati pristinæ reddiderunt." To render this passage at all credible, we must read *Cypselidas* instead of *Cypselum*, which deducts from the value of a witness whose testimony can never under any circumstances be rated high. But granting the alteration, there are two reasons against the assertion of Solinus. One, a positive reason, that Solon offered a large reward to Athenian victors at the Isthmian games: his legislation falls in 594 B.C., ten years before the time when the Isthmia are said by Solinus to have been renewed after a long intermission. The other reason (negative, though to my mind also powerful) is the silence of Herodotus in that long invective which he puts into the mouth of Sosiklês against the Kypselids (v, 92). If Kypselus had really been guilty of so great an insult to the feelings of the people as to suppress their most solemn festival, the fact would hardly have been omitted in the indictment which Sosiklês is made to urge against him. Aristotle, indeed, representing Kypselus as a mild and popular despot, introduces a contrary view of his character, which, if we admitted it, would of itself suffice to negative the supposition that he had suppressed the Isthmia.

We thus perceive that the interval between 600–560 B.C. exhibits the first historical manifestation of the Pythia, Isthmia, and Nemea, — the first expansion of all the three from local into Pan-Hellenic festivals. To the Olympic games, for some time the only great centre of union among all the widely dispersed Greeks, are now added three other sacred agônes of the like public, open, national character; constituting visible marks, as well as tutelary bonds, of collective Hellenism, and insuring to every Greek who went to compete in the matches, a safe and inviolate transit even through hostile Hellenic states.[1] These four, all in or near Peloponnesus, and one of which occurred in each year, formed the period, or cycle, of sacred games, and those who had gained prizes at all the four received the enviable designation of periodonikes:[2] the honors paid to Olympic victors on their return to their native city were prodigious, even in the sixth century B.C., and became even more extravagant afterwards. We may remark that in the Olympic games alone, the oldest as well as the most illustrious of the four, the musical and intellectual element was wanting: all the three more recent agônes included crowns for exercises of music and poetry, along with gymnastics, chariots, and horses.

Nor was it only in the distinguishing national stamp set upon these four great festivals that the gradual increase of Hellenic family-feeling exhibited itself, during the course of this earliest period of our history. Pursuant to the same tendencies, religious festivals in all the considerable towns gradually became more and more open and accessible, and attracted guests as well as

[1] Plutarch, Arat. c. 28. *καὶ συνεχύθη τότε πρῶτον* (by order of Aratus) *ἡ δεδομένη τοῖς ἀγωνισταῖς ἀσυλία καὶ ἀσφάλεια*, a deadly stain on the character of Aratus.

[2] Festus, v, Perihodos, p. 217, ed. Müller. See the animated protest of the philosopher Xenophanês against the great rewards given to Olympic victors (540–520 B.C.), Xenophan. Fragment. 2, p 357, ed Bergk.

competitors from beyond the border; the dignity of the state, as well as the honor rendered to the presiding god, being measured by numbers, admiration, and envy, in the frequenting visitors. There is no positive evidence, indeed, of such expansion in the Attic festivals earlier than the reign of Peisistratus, who first added the quadrennial or greater Panathenæa to the ancient annual or lesser Panathenæa; nor can we trace the steps of progress in regard to Thebes, Orchomenus, Thespiæ, Megara, Sikyôn, Pellênê, Ægina, Argos, etc., but we find full reason for believing that such was the general reality. Of the Olympic or Isthmian victors whom Pindar and Simonidês celebrated, many derived a portion of their renown from previous victories acquired at several of these local contests,[2] — victories sometimes so numerous, as to prove how wide-spread the habit of mutual frequentation had become;[3] though we find, even in the third century B.C., treaties of alliance between different cities, in which it is thought necessary to confer this mutual right by express stipulation. Temptation was offered, to the distinguished gymnastic or musical competitors, by prizes of great value; and Timæus even asserted, as a proof of the overweening pride of Kroton and Sybaris, that these cities tried to supplant the preëminence of the

[1] Thucyd. vi, 16. Alkibiadês says, *καὶ ὅσα αὖ ἐν τῇ πόλει χορηγίαις ἢ ἄλλῳ τῷ λαμπρύνομαι, τοῖς μὲν ἀστοῖς φθονεῖται φύσει, πρὸς δὲ τοὺς ξένους καὶ αὐτὴ ἰσχὺς φαίνεται.*

The greater Panathenæa are ascribed to Peisistratus by the Scholiast on Aristeidês, vol. iii, p. 323, ed. Dindorf: judging by what immediately precedes, the statement seems to come from Aristotle.

[2] Simonidês, Fragm. 154–158, ed. Bergk; Pindar, Nem. x, 45; Olymp. xiii. 107.

The distinguished athlete Theagenês is affirmed to have gained twelve hundred prizes in these various agônes: according to some, fourteen hundred prizes (Pausan. vi, 11, 2; Plutarch, Præcept. Reip. Ger. c. 14, p. 811).

An athlete named Apollonius arrived too late for the Olympic games, having stayed away too long, from his anxiety to get money at various agônes in Ionia (Pausan. v, 21, 5).

[3] See, particularly, the treaty between the inhabitants of Latus and those of Olûs in Krête, in Boeckh's Corp. Inscr. No. 2554, wherein this reciprocity is expressly stipulated. Boeckh places this Inscription in the third century B.C.

Olympic games, by instituting games of their own with the richest prizes, to be celebrated at the same time,[1] — a statement in itself not worthy of credit, but nevertheless illustrating the animated rivalry known to prevail among the Grecian cities, in procuring for themselves splendid and crowded games. At the time when the Homeric Hymn to Dêmêtêr was composed, the worship of that goddess seems to have been purely local at Eleusis; but before the Persian war, the festival celebrated by the Athenians every year, in honor of the Eleusinian Dêmêtêr, admitted Greeks of all cities to be initiated, and was attended by vast crowds of them.[2]

It was thus that the simplicity and strict local application of the primitive religious festival, among the greater states in Greece, gradually expanded, on certain great occasions periodically recurring, into an elaborate and regulated series of exhibitions, — not merely admitting, but soliciting the fraternal presence of all Hellenic spectators. In this respect Sparta seems to have formed an exception to the remaining states: her festivals were for herself alone, and her general rudeness towards other Greeks was not materially softened even at the Karneia,[3] or Hyakinthia, or Gymnopædiæ. On the other hand, the Attic Dionysia were gradually exalted, from their original rude spontaneous outburst of village

[1] Timæus, Fragm. 82, ed. Didot. The Krotoniates furnished a great number of victors both to the Olympic and to the Pythian games (Herodot. viii, 47; Pausan. x, 5, 5–x, 7, 3; Krause, Gymnastik und Agonistik der Hellenen, vol. ii, sect. 29, p. 752).

[2] Herodot. viii, 65. *καὶ αὐτῶν ὁ βουλόμενος καὶ τῶν ἄλλων Ἑλλήνων μυεῖται.*

The exclusion of all competitors, natives of Lampsakus, from the games celebrated in the Chersonesus to the honor of the œkist Miltiadês, is mentioned by Herodotus as something special (Herodot. vi, 38).

[3] See the remarks, upon the Lacedæmonian discouragement of stranger-visitors at their public festivals, put by Thucydidês into the mouth of Periklês (Thucyd. ii, 39).

Lichas the Spartan gained great renown by treating hospitably the strangers who came to the Gymnopædiæ at Sparta (Xenophon, Memorab. i, 2, 61; Plutarch, Kimon, c. 10), — a story which proves that *some* strangers came to the Spartan festivals, but which also proves that they were not many in number, and that to show them hospitality was a striking distinction from the general character of Spartans.

feeling in t ankfulness to the god, followed by song, dance, and revelry of various kinds, — into costly and diversified performances, first, by a trained chorus, next, by actors superadded to it ;[1] and the dramatic compositions thus produced, as they embodied the perfection of Grecian art, so they were eminently calculated to invite a Pan-Hellenic audience and to encourage the sentiment of Hellenic unity. The dramatic literature of Athens, however, belongs properly to a later period; previous to the year 560 B.C., we see only those commencements of innovation which drew upon Thespis[2] the rebuke of Solon, who himself contributed to impart to the Panathenaic festival a more solemn and attractive character, by checking the license of the rhapsodes, and insuring to those present a full, orderly recital of the Iliad.

The sacred games and festivals, here alluded to as a class, took hold of the Greek mind by so great a variety of feelings,[3] as to counterbalance in a high degree the political disseverance, and to keep alive among their wide-spread cities, in the midst of constant jealousy and frequent quarrel, a feeling of brotherhood and congenial sentiment such as must otherwise have died away. The Theôrs, or sacred envoys, who came to Olympia or Delphi from so many different points, all sacrificed to the same god and at the same altar, witnessed the same sports, and contributed by their donatives to enrich or adorn one respected scene. Nor must we forget that the festival afforded opportunity for a sort

[1] Aristot. Poetic. c. 3 and 4; Maximus Tyrius, Diss. xxi, p. 215; Plutarch, De Cupidine Divitiarum. c. 8, p. 527: compare the treatise, "Quod non potest suaviter vivi secundum Epicurum," c. 16, p. 1098. The old oracles quoted by Demosthenês, cont. Meidiam (c. 15, p. 531, and cont. Makartat. p. 1072: see also Buttmann's note on the former passage), convey the idea of the ancient simple Athenian festival.

[2] Plutarch, Solon, c. 29: see above, chap. xi, vol. iii, p. 195.

[3] The orator Lysias, in a fragment of his lost Panegyrical Oration preserved by Dionysius of Halikarnassus (vol. v, p. 520 R.), describes the influence of the games with great force and simplicity. Hêraklês, the founder of them, *ἀγῶνα μὲν σωμάτων ἐποίησε, φιλοτιμίαν δὲ πλούτῳ γνώμης δ' ἐπίδειξιν ἐν τῷ καλλίστῳ τῆς Ἑλλάδος· ἵνα τούτων ἁπάντων ἕνεκα ἐς τὸ αὐτὸ ἔλθωμεν, τὰ μὲν ὀψόμενοι, τὰ δ' ἀκουσόμενοι. Ἡγήσατο γὰρ τὸν ἐνθάδε σύλλογον ἀρχὴν γενέσθαι τοῖς Ἕλλησι τῆς πρὸς ἀλλήλους φιλίας.*

of fair, including much traffic amid so large a mass of spectators,[1] and besides the exhibitions of the games themselves, there were recitations and lectures in a spacious council-room for those who chose to listen to them, by poets, rhapsodes, philosophers, and historians, — among which last, the history of Herodotus is said to have been publicly read by its author.[2] Of the wealthy and great men in the various cities, many contended simply for the chariot victories and horse victories. But there were others whose ambition was of a character more strictly personal, and who stripped naked as runners, wrestlers, boxers, or pankratiasts, having gone through the extreme fatigue of a complete previous training. Kylon, whose unfortunate attempt to usurp the sceptre at Athens has been recounted, had gained the prize in the Olympic stadium: Alexander son of Amyntas, the prince of Macedon, had run for it.[3] The great family of the Diagoridæ at Rhodes,

[1] Cicero, Tusc. Quæst. v, 3. "*Mercatum* eum, qui haberetur maximo ludorum apparatu totius Græciæ celebritate: nam ut illic alii corporibus exercitatis gloriam et nobilitatem coronæ peterent, alii emendi aut vendendi quæstu et lucro ducerentur," etc.

Both Velleius Paterculus, also, (i. 8) and Justin (xiii, 5), call the Olympic festival by the name *mercatus*.

There were booths all round the Altis, or sacred precinct of Zeus (Schol Pindar. Olymp. xi, 55), during the time of the games.

Strabo observes with justice, respecting the multitudinous festivals generally — Ἡ *πανήγυρις, ἐμπορικόν τι πρᾶγμα* (x, p. 486), especially in reference to Delos: see Cicero pro Lege Maniliâ, c. 18: compare Pausanias, x, 32, 9, about the Panegyris and fair at Tithorea in Phokis, and Becker, Chariklês, vol. i, p. 283.

At the Attic festival of the Herakleia, celebrated by the communion called Mesogei, or a certain number of the demes constituting Mesogæa, a regular market-due, or *ἀγοραστικὸν*, was levied upon those who brought goods to sell (Inscriptiones Atticæ nuper repertæ 12, by E. Curtius, pp 3-7).

[2] Pausan. vi, 23, 5; Diodor. xiv, 109, xv, 7; Lucian, Quomodo Historia sit conscribenda, c. 42. See Krause, Olympia, sect. 29, pp. 183–186.

[3] Thucyd. i, 120; Herodot. v, 22–71. Eurybatês of Argos (Herodot. vi 92); Philippus and Phayllus of Kroton (v, 47; viii, 47); Eualkidês of Eretria (v, 102); Hermolykus of Athens (ix, 105).

Pindar (Nem. iv and vi) gives the numerous victories of the Bassidæ and Theandridæ at Ægina: also Melissus the pankratiast and his ancestors the Kleonymidæ of Thebes — *τιμάεντες ἀρχᾶθεν πρόξενοί τ' ἐπιχώριοι* (Isthm. iii, 25)

who furnished magistrates and generals to their native city, supplied a still greater number of successful boxers and pankratiasts at Olympia, while other instances also occur of generals named by various cities from the lists of successful Olympic gymnasts; and the odes of Pindar, always dearly purchased, attest how many of the great and wealthy were found in that list.[1] The perfect popularity and equality of persons at these great games, is a feature not less remarkable than the exact adherence to predetermined rule, and the self-imposed submission of the immense crowd to a handful of servants armed with sticks,[2] who executed the orders of the Eleian Hellanodikæ. The ground upon which the ceremony took place, and even the territory of the administering state, was protected by a "Truce of God," during the month of the festival, the commencement of which was formally announced by heralds sent round to the different states. Treaties of peace between different cities were often formally commemorated by pillars there erected, and the general impression of the scene suggested nothing but ideas of peace and brotherhood among Greeks.[3] And I may

Respecting the extreme celebrity of Diagoras and his sons, of the Rhodian gens Eratidæ, Damagêtus, Akusilaus, and Dorieus, see Pindar, Olymp. vii, 16–145, with the Scholia; Thucyd. iii, 11; Pausan. vi, 7, 1–2; Xenophon, Hellenic. i, 5, 19: compare Strabo, xiv, p. 655.

[1] The Latin writers remark it as a peculiarity of Grecian feeling, as distinguished from Roman, that men of great station accounted it an honor to contend in the games: see, as a specimen, Tacitus, Dialogus de Orator. c. 9. "Ac si in Græciâ natus esses, ubi ludicras quoque artes exercere honestum est, ac tibi Nicostrati robur Dii dedissent, non paterer immanes illos et ad pugnam natos lacertos levitate jaculi vanescere." Again, Cicero, pro Flacco, c. 13, in his sarcastic style: "Quid si etiam occisus est a piratis Adramyttenus, homo nobilis, cujus est fere nobis omnibus nomen auditum, Atinas pugil, Olympionices? hoc est apud Græcos (quoniam de eorum *gravitate* dicimus) prope majus et gloriosius, quam Romæ triumphasse"

[2] Lichas, one of the chief men of Sparta, and moreover a chariot-victor, received actual chastisement on the ground, from these staff-bearers, for an infringement of the regulations (Thucyd. v, 50).

[3] Thucyd. v, 18–47, and the curious ancient Inscription in Boeckh's Corpus Inscr. No. 11, p. 28, recording the convention between the Eleians and the inhabitants of the Arcadian town of Heræa.

The comparison of various passages referring to the Olympia, Isthmia, and Nemea (Thucydidês iii, 1., viii, 9–10, v, 49–51, and Xenophon, Hellenic iv, 7, 2; v. 1, 29) shows that various political business was often discussed

remark that the impression of the games as belonging to all Greeks, and to none but Greeks, was stronger and clearer during the interval between 600–300 B.C., than it came to be afterwards. For the Macedonian conquests had the effect of diluting and corrupting Hellenism, by spreading an exterior varnish of Hellenic tastes and manners over a wide area of incongruous foreigners, who were incapable of the real elevation of the Hellenic character; so that although in later times the games continued undiminished, both in attraction and in number of visitors, the spirit of Pan-Hellenic communion, which had once animated the scene, was gone forever.

CHAPTER XXIX.

LYRIC POETRY.—THE SEVEN WISE MEN.

THE interval between 776–560 B.C. presents to us a remarkable expansion of Grecian genius in the creation of their elegiac, iambic, lyric, choric, and gnomic poetry, which was diversified in a great many ways and improved by many separate masters. The creators of all these different styles — from Kallinus and Archilochus down to Stesichorus — fall within the two centuries here included; though Pindar and Simonidês, "the proud and high-crested bards,"[1] who carried lyric and choric poetry to the maximum of elaboration consistent with full poetical effect, lived in the succeeding century, and were contemporary with the tragedian Æschylus. The Grecian drama, comic as well as tragic, of the fifth century B.C., combined the lyric and choric song

at these games, — that diplomatists made use of the intercourse for the purpose of detecting the secret designs of states whom they suspected, and that the administering state often practised manœuvres in respect to the obligations of truce for the Hieromenia, or Holy Month.

[1] Himerius, Orat. iii, p. 426, Wernsdorf — *ἀγέρωχοι καὶ ὑψαυχένες*.

with the living action of iambic dialogue, — thus constituting the last ascending movement in the poetical genius of the race. Reserving this for a future time, and for the history of Athens, to which it more particularly belongs, I now propose to speak only of the poetical movement of the two earlier centuries, wherein Athens had little or no part. So scanty are the remnants, unfortunately, of these earlier poets, that we can offer little except criticisms borrowed at second-hand, and a few general considerations on their workings and tendency.[1]

Archilochus and Kallinus both appear to fall about the middle of the seventh century B.C., and it is with them that the innovations in Grecian poetry commence. Before them, we are told there existed nothing but the epos, or daktylic hexameter poetry, of which much has been said in my former volume, — being legendary stories or adventures narrated, together with addresses or hymns to the gods. We must recollect, too, that this was not only the whole poetry, but the whole literature of the age: prose composition was altogether unknown, and writing, if beginning to be employed as an aid to a few superior men, was at any rate generally unused, and found no reading public. The voice was the only communicant, and the ear the only recipient, of all those ideas and feelings which productive minds in the community found themselves impelled to pour out; both voice and ear being accustomed to a musical recitation, or chant, apparently something between song and speech, with simple rhythm and a still simpler occasional accompaniment from the primitive four-stringed harp. Such habits and requirements of the voice and ear were, at that time, inseparably associated with the success and popularity of the poet, and contributed doubtless to restrict the range of subjects with which he could deal. The

[1] For the whole subject of this chapter, the eleventh, twelfth, thirteenth, and fourteenth chapters of O. Müller's History of the Literature of Ancient Greece, wherein the lyric poets are handled with greater length than consists with the limits of this work, will be found highly valuable, — chapters abounding in erudition and ingenuity, but not always within the limits of the evidence.

The learned work of Ulrici (Geschichte der Griechischen Poesie — *Lyrik* is still more open to the same remark.

type was to a certain extent consecrated, like the primitive statues of the gods, from which men only ventured to deviate by gradual and almost unconscious innovations. Moreover, in the first half of the seventh century B.C., that genius which had once created an Iliad and an Odyssey was no longer to be found, and the work of hexameter narrative had come to be prosecuted by less gifted persons, — by those Cyclic poets of whom I have spoken in the preceding volumes.

Such, as far as we can make it out amidst very uncertain evidence, was the state of the Greek mind immediately before elegiac and lyric poets appeared; while at the same time its experience was enlarging by the formation of new colonies, and the communion among its various states tended to increase by the freer reciprocity of religious games and festivals. There arose a demand for turning the literature of the age — I use this word as synonymous with the poetry — to new feelings and purposes, and for applying the rich, plastic, and musical language of the old epic, to present passion and circumstance, social as well as individual. Such a tendency had become obvious in Hesiod, even within the range of hexameter verse; but the same causes which led to an enlargement of the subjects of poetry inclined men also to vary the metre.

In regard to this latter point, there is reason to believe that the expansion of Greek music was the immediate determining cause; for it has been already stated that the musical scale and instruments of the Greeks, originally very narrow, were materially enlarged by borrowing from Phrygia and Lydia, and these acquisitions seem to have been first realized about the beginning of the seventh century B.C., through the Lesbian harper Terpander, — the Phrygian (or Greco-Phrygian) flute-player Olympus, — and the Arkadian or Bœotian flute-player Klonas. Terpander made the important advance of exchanging the original four-stringed harp for one of seven strings, embracing the compass of one octave or two Greek tetrachords, and Olympus as well as Klonas taught many new nomes, or tunes, on the flute, to which the Greeks had before been strangers, — probably also the use of a flute of more varied musical compass. Terpander is said to have gained the prize at the first recorded celebration of the Lacedæmonian festival of the Karneia, in 676

B.C.: this is one of the best-ascertained points among the obscure chronology of the seventh century; and there seem grounds for assigning Olympus and Klonas to nearly the same period, a little before Archilochus and Kallinus.[1] To Terpander, Olympus, and Klonas, are ascribed the formation of the earliest musical nomes known to the inquiring Greeks of later times: to the first, nomes on the harp; to the two latter, on the flute, — every nome being the general scheme, or basis, of which the airs actually performed constituted so many variations, within certain

[1] These early innovators in Grecian music, rhythm, metre, and poetry belonging to the seventh century B.C., were very imperfectly known, even to those contemporaries of Plato and Aristotle who tried to get together facts for a consecutive history of music. The treatise of Plutarch, De Musicâ, shows what very contradictory statements he found. He quotes from four different authors, — Herakleidês, Glaukus, Alexander, and Aristoxenus, who by no means agreed in their series of names and facts. The first three of them blend together mythe and history; while even the Anagraphê or inscription at Sikyon, which professed to give a continuous list of such poets and musicians as had contended at the Sikyonian games, began with a large stock of mythical names, — Amphion, Linus, Pierius, etc. (Plutarch, Music. p. 1132.) Some authors, according to Plutarch (p. 1133), made the great chronological mistake of placing Terpander as contemporary with Hippônax; a proof how little of chronological evidence was then accessible.

That Terpander was victor at the Spartan festival of the Karneia, in 676 B.C., may well have been derived by Hellanikus from the Spartan registers: the name of the Lesbian harper Perikleitas, as having gained the same prize at some subsequent period (Plutarch, De Mus. p. 1133), probably rests on the same authority. That Archilochus was rather later than Terpander, and Thalêtas rather later than Archilochus, was the statement of Glaukus (Plutarch, De Mus. p. 1134). Klonas and Polymnêstus are placed later than Terpander; Archilochus later than Klonas: Alkman is said to have mentioned Polymnêstus in one of his songs (pp. 1133–1135). It can hardly be true that Terpander gained *four* Pythian prizes, if the festival was octennial prior to its reconstitution by the Amphiktyons (p. 1132). Sakadas gained three Pythian prizes *after* that period, when the festival was quadrennial (p. 1134).

Compare the confused indications in Pollux, iv, 65–66, 78–79. The abstract given by Photius of certain parts of the Chrestomathia of Proclus (published in Gaisford's edition of Hephæstion, pp. 375–389), is also extremely valuable, in spite of its brevity and obscurity, about the lyric and enoric poetry of Greece.

defined limits.[1] Terpander employed his enlarged instrumental power as a new accompaniment to the Homeric poems, as well as to certain epic proœmia or hymns to the gods of his own composition. But he does not seem to have departed from the hexameter verse and the daktylic rhythm, to which the new accompaniment was probably not quite suitable; and the idea may thus have been suggested of combining the words also according to new rhythmical and metrical laws.

It is certain, at least, that the age (670–600) immediately succeeding Terpander, — comprising Archilochus, Kallinus, Tyrtæus, and Alkman, whose relations of time one to another we have no certain means of determining,[2] though Alkman seems to have been the latest, — presents a remarkable variety both of new metres and of new rhythms, superinduced upon the previ-

[1] The difference between Νόμος and Μέλος appears in Plutarch, De Musicâ, p. 1132 — Καὶ τὸν Τέρπανδρον, κιθαρῳδικῶν ποιητὴν ὄντα νόμων, κατὰ νόμον ἕκαστον τοῖς ἔπεσι τοῖς ἑαυτοῦ καὶ τοῖς Ὁμήρου μέλη περιτιθέντα, ᾄδειν ἐν τοῖς ἀγῶσι· ἀποφῆναι δὲ τοῦτον λέγει ὀνόματα πρῶτον τοῖς κιθαρῳδικοῖς νόμοις.

The nomes were not many in number; they went by special names; and there was a disagreement of opinion as to the persons who had composed them (Plutarch, Music. p. 1133). They were monodic, not choric, — intended to be sung by one person (Aristot. Problem. xix, 15). Herodot. i, 23, about Arion and the Nomus Orthius.

[2] Mr. Clinton (Fasti Hellen. ad ann. 671, 665, 644) appears to me noway satisfactory in his chronological arrangements of the poets of this century. I agree with O. Müller (Hist. of Literat. of Ancient Greece, ch. xii, 9) in thinking that he makes Terpander too recent, and Thalêtas too ancient; I also believe both Kallinus and Alkman to have been more recent than the place which Mr. Clinton assigns to them; the epoch of Tyrtæus will depend upon the date which we assign to the second Messenian war.

How very imperfectly the chronology of the poetical names even of the sixth century B.C. — Sappho, Anakreon, Hippônax — was known even to writers of the beginning of the Ptolemaic age (or shortly after 300 B.C.), we may see by the mistakes noted in Athenæus, xiii, p. 599. Hermesianax of Kolophon, the elegiac poet, represented Anakreon as the lover of Sappho; this might perhaps be not absolutely impossible, if we supposed in Sappho an old age like that of Ninon de l'Enclos; but others (even earlier than Hermesianax, since they are quoted by Chamæleon) represented Anakreon, when in old age, as addressing verses to Sappho, still young. Again, the comic writer Diphilus introduced both Archilochus and Hippônax as the lovers of Sappho.

ous daktylic hexameter. The first departure from this latter is found in the elegiac verse, employed seemingly more or less by all the four above-mentioned poets, but chiefly by the first two, and even ascribed by some to the invention of Kallinus. Tyrtæus in his military march-songs employed the anapæstic metre, but in Archilochus as well as in Alkman we find traces of a much larger range of metrical variety, — iambic, trochaic, anapæstic, ionic, etc., — sometimes even asynartetic or compound metres, anapæstic or daktylic, blended with trochaic or iambic. What we have remaining from Mimnermus, who comes about the close of the preceding four, is elegiac; his contemporaries Alkæus and Sappho, besides employing most of those metres which they found existing, invented each a peculiar stanza of their own, which is familiarly known under a name derived from each. In Solon, the younger contemporary of Mimnermus, we have the elegiac, iambic, and trochaic: in Theognis, yet later, the elegiac only. But both Arion and Stesichorus appear to have been innovators in this department, the former by his improvement in the dithyrambic chorus or circular song and dance in honor of Dionysus, — the latter by his more elaborate choric compositions, containing not only a strophê and antistrophê, but also a third division or epode succeeding them, pronounced by the chorus standing still. Both Anakreon and Ibykus likewise added to the stock of existing metrical varieties. And we thus see that, within the century and a half succeeding Terpander, Greek poetry (or Greek literature, which was then the same thing) became greatly enriched in matter as well as diversified in form.

To a certain extent there seems to have been a real connection between the two: new forms were essential for the expression of new wants and feelings, — though the assertion that elegiac metre is especially adapted for one set of feelings,[1] trochaic for

[1] The Latin poets and the Alexandrine critics seem to have both insisted on the natural mournfulness of the elegiac metre (Ovid, Heroid. xv, 7; Horat. Art. Poet. 75): see also the fanciful explanation given by Didymus in the Etymologicon Magnum, v, Ἔλεγος.

We learn from Hephæstion (c. viii, p. 45, Gaisf.) that the anapæstic march-metre of Tyrtæus was employed by the comic writers also, for a

a second, and iambic for a third, if true at all, can only be admitted with great latitude of exception, when we find so many of them employed by the poets for very different subjects, — gay or melancholy, bitter or complaining, earnest or sprightly, — seemingly with little discrimination.

But the adoption of some new metre, different from the perpetual series of hexameters, was required when the poet desired to do something more than recount a long story or fragment of heroic legend, — when he sought to bring himself, his friends, his enemies, his city, his hopes and fears with regard to matters recent or impending, all before the notice of the hearer, and that, too, at once with brevity and animation. The Greek hexameter, like our blank verse, has all its limiting conditions bearing upon each separate line, and presents to the hearer no predetermined resting-place or natural pause beyond.[1] In reference to any long composition, either epic or dramatic, such unrestrained license is found convenient, and the case was similar for Greek epos and drama, — the single-lined iambic trimeter being generally used for the dialogue of tragedy and comedy, just as the daktylic hexameter had been used for the epic. The metrical changes introduced by Archilochus and his contemporaries may be compared to a change from our blank verse to the rhymed couplet and quatrain: the verse was thrown into little systems of two, three, or four lines, with a pause at the end of each; and the halt thus assured to, as well as expected and relished by, the ear, was generally coincident with a close, entire or partial,

totally different vein of feeling. See the Dissertation of Franck, Callinus, pp. 37–48 (Leips. 1816).

Of the remarks made by O. Müller respecting the metres of these early poets (History of the Literature of Ancient Greece, ch. xi, s. 8–12, etc.; ch. xii, s. 1–2, etc.), many appear to be uncertified and disputable.

For some good remarks on the fallibility of men's impressions respecting the natural and inherent ἦθος of particular metres, see Adam Smith (Theory of Moral Sentiment, part v, ch. i, p. 329), in the edition of his works by Dugald Stewart.

[1] See the observations in Aristotle (Rhetor. iii, 9) on the *λέξις εἰρομένη* as compared with *λέξις κατεστραμμένη*: — *λέξις εἰρομένη, ἣ οὐδὲν ἔχει τέλος αὑτὴ καθ' αὑτὴν, ἂν μὴ τὸ πρᾶγμα τὸ λεγομενον τελειώθῃ*: — *κατεστραμμένη δὲ, ἡ ἐν περιόδοις· λέγω δὲ περίοδον, λέξιν ἔχουσαν ἀρχὴν καὶ τελευτὴν αὑτὴν καθ' αὑτὴν καὶ μέγεθος εὐσύνοπτον*.

in the sense, which thus came to be distributed with greater point and effect. The elegiac verse, or common hexameter and pentameter (this second line being an hexameter with the third and sixth thesis,[1] or the last half of the third and sixth foot, suppressed, and a pause left in place of it), as well as the epode (or iambic trimeter followed by an iambic dimeter) and some other binary combinations of verse which we trace among the fragments of Archilochus, are conceived with a view to such increase of effect both on the ear and the mind, not less than to the direct pleasures of novelty and variety.

The iambic metre, built upon the primitive iambus, or coarse and licentious jesting,[2] which formed a part of some Grecian

[1] I employ, however unwillingly, the word *thesis* here (arsis and thesis) in the sense in which it is used by G. Hermann ("Illud tempus, in quo ictus est, *arsin;* ea tempora, quæ carent ictu, *thesin* vocamus," Element. Doctr. Metr. sect. 15), and followed by Boeckh, in his Dissertation on the Metres of Pindar (i, 4), though I agree with Dr. Barham (in the valuable Preface to his edition of Hephæstion, Cambridge, 1843, pp. 5–8) that the opposite sense of the words would be the preferable one, just as it was the original sense in which they were used by the best Greek musical writers: Dr. Barham's Preface is very instructive on the difficult subject of ancient rhythm generally.

[2] Homer, Hymn. ad Cererem, 202; Hesychius, v, Γεφυρίς; Herodot. v, 83; Diodor. v, 4. There were various gods at whose festivals scurrility (σωθασμὸς) was a consecrated practice, seemingly different festivals in different places (Aristot. Politic. vii, 15, 8).

The reader will understand better what this consecrated scurrility means by comparing the description of a modern traveller in the kingdom of Naples (Tour through the Southern Provinces of the Kingdom of Naples, by Mr. Keppel Craven, London, 1821, ch. xv, p. 287):—

"I returned to Gerace (the site of the ancient Epizephyrian Lokri) by one of those moonlights which are known only in these latitudes, and which no pen or pencil can portray. My path lay along some cornfields, in which the natives were employed in the last labors of the harvest, and I was not a little surprised to find myself saluted with a volley of opprobrious epithets and abusive language, uttered in the most threatening voice, and accompanied with the most insulting gestures. This extraordinary custom is of the most remote antiquity, and is observed towards all strangers during the harvest and vintage seasons; those who are apprized of it will keep their temper as well as their presence of mind, as the loss of either would only serve as a signal for still louder invectives, and prolong a contest in which success would be as hopeless as undesirable."

festivals (especially of the festivals of Dêmêtêr as well in Attica as in Paros, the native country of the poet), is only one amongst many new paths struck out by his inventive genius; whose exuberance astonishes us, when we consider that he takes his start from little more than the simple hexameter,[1] in which, too, he was a distinguished composer, — for even of the elegiac verse he is as likely to have been the inventor as Kallinus, just as he was the earliest popular and successful composer of table-songs, or Skolia, though Terpander may have originated some such before him. The entire loss of his poems, excepting some few fragments, enables us to recognize little more than one characteristic, — the intense personality which pervaded them, as well as that coarse, direct, and out-spoken license, which afterwards lent such terrible effect to the old comedy at Athens. His lampoons are said to have driven Lykambês, the father of Neobulê, to hang himself: the latter had been promised to Archilochus in marriage, but that promise was broken, and the poet assailed both father and daughter with every species of calumny.[2] In addition to this disappointment, he was poor, the son of a slave-mother, and an exile from his country, Paros, to the unpromising colony of Thasos. The desultory notices respecting him betray a state of suffering combined with loose conduct which vented itself sometimes in complaint, sometimes in libellous assault; and he was at last slain by some whom his muse had thus exasperated. His extraordinary poetical genius finds but one voice of encomium throughout antiquity. His triumphal song to Hêra-

[1] The chief evidence for the rhythmical and metrical changes introduced by Archilochus is to be found in the 28th chapter of Plutarch, De Musicâ, pp. 1140–1141, in words very difficult to understand completely. See Ulrici, Geschichte der Hellenisch. Poesie, vol. ii, p. 381.

The epigram ascribed to Theokritus (No. 18 in Gaisford's Poetæ Minores) shows that the poet had before him hexameter compositions of Archilochus, as well as lyric:—

ὡς ἐμμελής τ' ἔγεντο κἀπιδέξιος
ἔπεά τε ποιεῖν, πρὸς λύραν τ' ἀείδειν.

See the article on Archilochus in Welcker's Kleine Schriften, pp. 71–82, which has the merit of showing that iambic bitterness is far from being the only marked feature in his character and genius.

[2] See Meleager, Epigram cxix, 3; Horat. Epist. 19, 23, and Epod. vi, 13 with the Scholiast; Ælian, V. H. x, 13.

klês was still popularly sung by the victors at Olympia near two centuries after his death, in the days of Pindar; but that majestic and complimentary poet at once denounces the malignity, and attests the retributive suffering, of the great Parian iambist.[1]

Amidst the multifarious veins in which Archilochus displayed his genius, moralizing or gnomic poetry is not wanting, while his contemporary Simonidês, of Amorgos, devotes the iambic metre especially to this destination, afterwards followed out by Solon and Theognis. But Kallinus, the earliest celebrated elegiac poet, so far as we can judge from his few fragments, employed the elegiac metre for exhortations of warlike patriotism; and the more ample remains which we possess of Tyrtæus are sermons in the same strain, preaching to the Spartans bravery against the foe, and unanimity as well as obedience to the law at home. They are patriotic effusions, called forth by the circumstances of the time, and sung by single voice, with accompaniment of the flute,[2] to those in whose bosoms the flame of courage was to be kindled. For though what we peruse is in verse, we are still in the tide of real and present life, and we must suppose ourselves rather listening to an orator addressing the citizens when danger or dissension is actually impending. It is only in the hands of Mimnermus that elegiac verse comes to be devoted to soft and amatory subjects. His few fragments present a vein of passive and tender sentiment, illustrated by appropriate matter of legend, such as would be cast into poetry in all ages, and quite different from the rhetoric of Kallinus and Tyrtæus.

The poetical career of Alkman is again distinct from that of any of his above-mentioned contemporaries. Their compositions, besides hymns to the gods, were principally expressions of feeling intended to be sung by individuals, though sometimes also suited for the kômus, or band of festive volunteers, assembled on some occasion of common interest: those of Alkman were principally choric, intended for the song and accompanying dance of

[1] Pindar, Pyth. ii, 55; Olymp. ix, 1, with the Scholia; Eurip. Hercul. Furens, 583–683. The eighteenth epigram of Theokritus (above alluded to) conveys a striking tribute of admiration to Archilochus: compare Quintilian, x, 1, and Liebel, ad Archilochi Fragmenta, sects. 5, 6. 7

[2] Athenæus, xiv, p. 630

the chorus. He was a native of Sardis in Lydia, or at least his family were so; and he appears to have come in early life to Sparta, though his genius and mastery of the Greek language discountenance the story that he was brought over to Sparta as a slave. The most ancient arrangement of music at Sparta, generally ascribed to Terpander,[1] underwent considerable alteration, not only through the elegiac and anapæstic measures of Tyrtæus, but also through the Kretan Thalêtas and the Lydian Alkman The harp, the instrument of Terpander, was rivalled and in part superseded by the flute or pipe, which had been recently rendered more effective in the hands of Olympus, Klonas, and Polymnêstus, and which gradually became, for compositions intended to raise strong emotion, the favorite instrument of the two, — being employed as accompaniment both to the elegies of Tyrtæus, and to the hyporchemata (songs, or hymns, combined with dancing) of Thalêtas; also, as the stimulus and regulator to the Spartan military march.[2]

These elegies (as has been just remarked) were sung by one person, in the midst of an assembly of listeners, and there were doubtless other compositions intended for the individual voice. But in general such was not the character of music and poetry at Sparta; everything done there, both serious and recreative, was public and collective, so that the chorus and its performances received extraordinary development. It has been already stated, that the chorus usually, with song and dance combined, constituted an important part of divine service throughout all Greece, and was originally a public manifestation of the citizens gener-

[2] Thucyd. v, 69–70, with the Scholia, — *μετὰ τῶν πολεμικῶν νόμων..... Λακεδαιμόνιοι δὲ βραδέως καὶ ὑπὸ αὐλητῶν πολλῶν νόμῳ ἐγκαθεστώτων, οὐ τοῦ θείου χάριν, ἀλλ' ἵνα ὁμαλῶς μετὰ ῥυθμοῦ βαίνοιεν, καὶ μὴ διασπασθείη αὐτοῖς ἡ τάξις.*

Cicero, Tuscul. Qu. ii, 16. "Spartiatarum quorum procedit Mora ad tibiam, neque adhibetur ulla sine anapæstis pedibus hortatio."

The flute was also the instrument appropriated to Kômus, or the excited movement of half-intoxicated revellers (Hesiod, Scut. Hercul. 280; Athenæus xiv, pp. 617–618).

ally, — a large proportion of them being actively engaged in it, and receiving some training for the purpose as an ordinary branch of education. Neither the song nor the dance, under such conditions, could be otherwise than extremely simple. But in process of time, the performance at the chief festivals tended to become more elaborate, and to fall into the hands of persons expressly and professionally trained, — the mass of the citizens gradually ceasing to take active part, and being present merely as spectators. Such was the practice which grew up in most parts of Greece, and especially at Athens, where the dramatic chorus acquired its highest perfection. But the drama never found admission at Sparta, and the peculiarity of Spartan life tended much to keep up the popular chorus on its ancient footing. It formed, in fact, one element in that never-ceasing drill to which the Spartans were subject from their boyhood, and it served a purpose analogous to their military training, in accustoming them to simultaneous and regulated movement, — insomuch that the comparison between the chorus, especially in his Pyrrhic, or war-dances, and the military enomoty, seems to have been often dwelt upon.[2] In the singing of the solemn pæan in honor of Apollo, at the festival of the Hyakinthia, king Agesilaus was under the orders of the chorus-master, and sang in the place allotted to him;[3] while the whole body of Spartans without exception, — the old,

[1] Plato, Legg. vii, p. 803. *θύοντα καὶ ᾄδοντα καὶ ὀρχούμενον, ὥστε τοὺς μὲν θεοὺς ἱλέως αὐτῷ παρασκενάζειν δυνατὸν εἶναι*, etc.: compare p. 799; Maximus Tyr. Diss. xxxvii, 4; Aristophan. Ran. 950–975; Athenæus, xiv, p. 626; Polyb. iv, 30; Lucian, De Saltatione, c. 10, 11, 16, 31.

Compare Aristotle (Problem xix, 15) about the primitive character and subsequent change of the chorus; and the last chapter of the eighth book of his Politica: also, a striking passage in Plutarch (De Cupidine Divitiarum, c. 8, p. 527) about the transformation of the Dionysiac festival at Chæroneia from simplicity to costliness.

[2] Athenæus, xiv, p. 628; Suidas, vol. iii, p. 715, ed. Kuster; Plutarch, Instituta Laconica, c. 32, — *κωμῳδίας καὶ τραγῳδίας οὐκ ἠκρόωντο, ὅπως μήτε ἐν σπουδῇ, μήτε ἐν παιδίᾳ, ἀκούωσι τῶν ἀντιλεγόντων τοῖς νόμοις*, — which exactly corresponds with the ethical view implied in the alleged conversation between Solon and Thespis (Plutarch, Solon, c. 29: see above, ch. xi, vol. ii, p. 195), and with Plato, Legg. vii, p. 817.

[3] Xenophon, Agesilaus, ii, 17. *οἴκαδε ἀπελθὼν εἰς τὰ Ὑακίνθια. ὅπως ἤρχθη ὑπὸ τοῦ νομοποιοῦ, τὸν παιᾶνα τῷ θεῷ συνετετέλει*

the middle-aged, and the youth, the matrons, and the virgins, — were distributed in various choric companies,[1] and trained to harmony both of voice and motion, which was publicly exhibited at the solemnities of the Gymnopædiæ. The word *dancing* must be understood in a larger sense than that in which it is now employed, and as comprising every variety of rhythmical, accentuated, conspiring movements, or gesticulations, or postures of the body, from the slowest to the quickest;[2] cheironomy, or the decorous and expressive movement of the hands, being especially practised.

We see thus that both at Sparta and in Krête (which approached in respect to publicity of individual life most nearly to Sparta), the choric aptitudes and manifestations occupied a larger space than in any other Grecian city. And as a certain degree of musical and rhythmical variety was essential to meet this want,[3] while music was never taught to Spartan citizens individually, — we farther understand how strangers like Terpander, Polymnêstus, Thalêtas, Tyrtæus, Alkman, etc., were not only received, but acquired great influence at Sparta, in spite of the preponderant spirit of jealous seclusion in the Spartan character. All these masters appear to have been effective in their own special vocation, — the training of the chorus, — to which they imparted new rhythmical action, and for which they composed new music. But Alkman did this, and something more; he possessed the genius of a poet, and his compositions were read afterwards

Λάκαινα μὲν παρθένων ἀγέλα.

Also, Alkman, Fragm. 13, ed. Bergk; Antigon. Caryst. Hist. Mirab. c. 27.

[2] How extensively pantomimic the ancient orchêsis was, may be seen by the example in Xenophon, Symposion, vii, 5, ix, 3–6, and Plutarch, Symposion ix, 15, 2: see K. F. Hermann, Lehrbuch der gottesdienstlichen Alterthümer der Griechen, ch. 29.

"Sane ut in religionibus saltaretur, hæc ratio est: quod nullam majores nostri partem corporis esse voluerunt, quæ non sentiret religionem: nam cantus ad animum, saltatio ad mobilitatem corporis pertinet." (Servius ad Virgil. Eclog. v, 73.)

[3] Aristot. Politic. viii, 4, 6. *Οἱ Λάκωνες — οὐ μανθάνοντες ὅμως δύνανται κρίνειν ὀρθῶς, ὡς φασι, τὰ χρηστὰ καὶ τὰ μὴ τῶν μέλων.*

with pleasure by those who could not hear them sung or see them danced. In the little of his poems which remains, we recognize that variety of rhythm and metre for which he was celebrated. In this respect he (together with the Kretan Thalêtas, who is said to have introduced a more vehement style both of music and dance, with the Kretic and Pæonic rhythm, into Sparta[1]) surpassed Archilochus, and prepared the way for the complicated choric movements of Stesichorus and Pindar; some of the fragments, too, manifest that fresh outpouring of individual sentiment and emotion which constitutes so much of the charm of popular poetry. Besides his touching address in old age to the Spartan virgins, over whose song and dance he had been accustomed to preside, — he is not afraid to speak of his hearty appetite, satisfied with simple food and relishing a bowl of warm broth at the winter tropic.[2] And he has attached to the spring an epithet, which comes home to the real feelings of a poor country more than those captivating pictures which abound in verse, ancient as well as modern: he calls it "the season of short fare," — the crop of the previous year being then nearly consumed, the husbandman is compelled to pinch himself until his new harvest comes in.[1] Those who recollect that in earlier periods of our history, and in all countries where there is little accumulated stock, an exorbitant difference is often experienced in the price of corn before and after the harvest, will feel the justice of Alkman's description.

Judging from these and from a few other fragments of this poet, Alkman appears to have combined the life and exciting vigor of Archilochus in the song properly so called, sung by himself individually, — with a larger knowledge of musical and rhythmical effect in regard to the choric performance. He composed in the Laconian dialect, — a variety of the Doric with some intermixture of Æolisms. And it was from him, jointly with those other composers who figured at Sparta during the century after Terpander, as well as from the simultaneous development of the choric muse[3] in Argos, Sikyôn, Arcadia, and other parts of Peloponnesus, that the Doric dialect acquired permanent footing in Greece, as the only proper dialect for choric compositions. Continued by Stesichorus and Pindar, this habit passed even to the Attic dramatists, whose choric songs are thus in a great measure Doric, while their dialogue is Attic. At Sparta, as well as in other parts of Peloponnesus,[3] the musical and rhythmical style appears to have been fixed by Alkman and his contemporaries, and to have been tenaciously maintained, for two or three centuries, with little or no innovation; the more so, as the flute-players at Sparta formed an hereditary profession, who followed the routine of their fathers.[4]

---

[1] Homer, Hymn. Apoll. 340. Οἵοί τε Κρητῶν παιήονες, etc.: see Boeckh, De Metris Pindari, ii, 7, p. 143; Ephorus ap. Strabo, x, p. 480; Plutarch, De Musicâ, p. 1142.

Respecting Thalêtas, and the gradual alterations in the character of music at Sparta, Hoeckh has given much instructive matter (Kreta, vol. iii, pp. 340–377). Respecting Nymphæus of Kydonia, whom Ælian (V. H. xii, 50) puts in juxtaposition with Thalêtas and Terpander, nothing is known.

After what is called the second fashion of music (*κατάσταοις*) had thus been introduced by Thalêtas and his contemporaries, — the first fashion being that of Terpander, — no farther innovations were allowed. The ephors employed violent means to prohibit the intended innovations of Phrynis and Timotheus, after the Persian war: see Plutarch Agis, c. 10.

[2] Alkman, Fragm. 13–17, ed. Bergk, *ὁ πάμφαγος Ἀλκμάν*: compare Fr. 63. Aristides calls him *ὁ τῶν παρθένων ἐπαινέτης καὶ σύμβουλος* (Or. xlv, vol. ii, p. 40, Dindorf).

Of the Partheneia of Alkman (songs, hymns, and dances, composed for a chorus of maidens) there were at least two books (Stephanus Byzant. v, *Ἐρυσίχη*). He was the earliest poet who acquired renown in this species of composition, afterwards much pursued by Pindar, Bacchylidês, and Simonidês of Keôs: see Welcker, Alkman. Fragment. p. 10.

[1] Alkman, Frag. 64, ed. Bergk.

Ὥρας δ' ἐσῆκε τρεῖς, ὖθερος
Καὶ χεῖμα κ' ὠπώραν τρίταν·
Καὶ τέτρατον τὸ ἦρ, ὄκα
Σάλλει μὲν, ἐσθίειν δ' ἄδαν
Οὐκ ἐστί.

[2] Plutarch, De Musicâ, c. 9, p. 1134. About the dialect of Alkman, see Ahrens, De Dialecto Æolicâ, sects. 2, 4; about his different metres, Welcker, Alkman. Fragm. pp. 10–12.

[3] Plutarch, De Musicâ, c. 32, p. 1142, c. 37, p. 1144; Athenæus, xiv, p. 632. In Krête, also, the popularity of the primitive musical composers was maintained, though along with the innovator Timotheus: see Inscription No. 3053, ap. Boeckh, Corp. Ins.

[4] Herodot. vi, 60. They were probably a *γένος* with an heroic progenitor like the heralds, to whom the historian compares them.

Alkman was the last poet who addressed himself to the popular chorus. Both Arion and Stesichorus composed for a body of trained men, with a degree of variety and involution such as could not be attained by a mere fraction of the people. The primitive dithyrambus was a round choric dance and song in honor of Dionysus,[1] common to Naxos, Thebes, and seemingly to many other places, at the Dionysiac festival, — a spontaneous effusion of drunken men in the hour of revelry, wherein the poet Archilochus, "with the thunder of wine full upon his mind," had often taken the chief part.[2] Its exciting character approached to the worship of the Great Mother in Asia, and stood in contrast with the solemn and stately pæan addressed to Apollo. Arion introduced into it an alteration such as Archilochus had himself brought about in the scurrilous iambus. He converted it into an elaborate composition in honor of the god, sung and danced by a chorus of fifty persons, not only sober, but trained with great strictness; though its rhythm and movements, and its equipment in the character of satyrs, presented more or less an imitation of the primitive license. Born at Methymna in Lesbos, Arion appears as a harper, singer, and composer, much favored by Periander at Corinth, in which city he first "composed, denominated, and taught the dithyramb," earlier than any one known to Herodotus.[3] He did not, however, remain permanently there, but travelled from city to city, exhibiting at the festivals for money, — especially to Sicilian and Italian Greece, where he acquired large gains. We may here again remark how the poets as well as the festivals served to promote a sentiment of unity among the dispersed Greeks. Such transfer of the dithyramb, from the field

[2] Archiloch. Fragm. 72, ed. Bergk.

'Ως Διωνύσου ἄνακτος καλὸν ἐξάρξαι μέλος
Οἶδα διθύραμβον, οἴνῳ ξυγκεραννωθεὶς φρένας.

The old oracle quoted in Demosthen. cont. Meidiam, about the Dionysia at Athens, enjoins — Διονύσῳ δημοτελῆ ἱερὰ τελεῖν, καὶ κρατῆσα κερώσαι, καὶ χοροὺς ἱστάναι.

[3] Herodot. i, 23; Suidas, v, Ἀρίων; Pindar, Olymp. xiii, 25.

of spontaneous nature into the garden of art,[1] constitutes the first stage in the refinement of Dionysiac worship; which will hereafter be found still farther exalted in the form of the Attic drama.

The date of Arion seems about 600 B.C., shortly after Alkman: that of Stesichorus is a few years later. To the latter the Greek chorus owed a high degree of improvement, and in particular the last finished distribution of its performance into the strophê, the antistrophê, and the epôdus: the turn, the return, and the rest, — the rhythm and metre of the song during each strophê corresponded with that during the antistrophê, but was varied during the epôdus, and again varied during the following strophês. Until this time the song had been monostrophic, consisting of nothing more than one uniform stanza, repeated from the beginning to the end of the composition;[2] so that we may easily see how vast was the new complication and difficulty introduced by Stesichorus, — not less for the performers than for the composer, himself at that time the teacher and trainer of performers. Both this poet and his contemporary the flute-player Sakadas of Argos, — who gained the prize at the first three Pythian games founded after the Sacred War, — seem to have surpassed their predecessors in the breadth of subject which they embraced, borrowing from the inexhaustible province of ancient legend, and expanding the choric song into a well-sustained epical narrative.[3] Indeed, these Pythian games opened a new

[1] Aristot. Poetic. c. 6, ἐγέννησαν τὴν ποίησιν ἐκ τῶν αὐτοσχεδιασμάτων: again, to the same effect, *ibid.* c. 9.

[2] Alkman slightly departed from this rule: in one of his compositions of fourteen strophês, the last seven were in a different metre from the first seven (Hephæstion, c. xv, p. 134, Gaisf.; Hermann, Elementa Doctrin. Metricæ, c. xvii, sect. 595). Ἀλκμανικὴ καινοτομία καὶ Στησιχόρειος (Plutarch, De Musicâ, p. 1135).

[3] Pausanias, vi, 14, 4; x, 7, 3. Sakadas, as well as Stesichorus, composed an Ἰλίου πέρσις (Athenæus, xiii, p. 609).

"Stesichorum (observes Quintilian, x, 1) quam sit ingenio validus, materiæ quoque ostendunt, maxima bella et clarissimos canentem duces, et epici carminis onera lyrâ sustinentem. Reddit enim personis in agendo simul loquendoque debitam dignitatem: ac si tenuisset modum, videtur æmulari proximus Homerum potuisse: sed redundat, atque effunditur prod, ut est reprehendendum, ita copiæ vitium est."

career to musical composers just at the time when Sparta began to be closed against musical novelties.

Alkæus and Sappho, both natives of Lesbos, appear about contemporaries with Arion, B.C. 610–580. Of their once celebrated lyric compositions, scarcely anything remains. But the criticisms which are preserved on both of them place them in strong contrast with Alkman, who lived and composed under the more restrictive atmosphere of Sparta, — and in considerable analogy with the turbulent vehemence of Archilochus,[1] though without his intense private malignity. Both composed for their own local audience, and in their own Lesbian Æolic dialect; not because there was any peculiar fitness in that dialect to express their vein of sentiment, but because it was more familiar to their hearers. Sappho herself boasts of the preëminence of the Lesbian bards;[2] and the celebrity of Terpander, Perikleitas, and Arion, permits us to suppose that there may have been before her many popular bards in the island who did not attain to Hellenic celebrity. Alkæus included in his songs the fiercest bursts of political feeling, the stirring alternations of war and exile, and all the ardent relish of a susceptible man for wine and love.[3] The love-song seems to have formed the principal theme of Sappho, who, however, also composed odes or songs[4] on a great variety of other subjects, serious as well as satirical, and is said further to have first employed the Mixolydian mode in music. It displays the tendency of the age to metrical and rhythmical novelty, that Alkæus and Sappho are said to have each invented the peculiar stanza, well-known under their respective names, — combinations of the dactyl, trochee, and iambus, analogous to the asynartetic verses of Archilochus; they by no means confined themselves, however, to Alkaic and Sapphic metre. Both the one and the other composed hymns to the gods; indeed, this is a theme common to all the lyric and choric poets, whatever may be their peculiarities in other ways. Most of their compositions were songs for the single voice, not for the chorus. The poetry of Alkæus is the more worthy of note, as it is the earliest instance of the employment of the Muse in actual political warfare, and shows the increased hold which that motive was acquiring on the Grecian mind.

Simonidês of Keôs (Frag. 19, ed. Bergk) puts Homer and Stesichorus together: see the epigram of Antipater in the Anthologia, t. i, p. 328, ed Jacobs, and Dio Chrysostom, Or. 55, vol. ii, p. 284, Reisk. Compare Kleine, Stesichori Fragment. pp. 30–34 (Berlin 1828), and O. Müller, History of the Literature of Ancient Greece, ch. xiv, sect. 5.

The musical composers of Argos are affirmed by Herodotus to have been the most renowned in Greece, half a century after Sakadas (Her. iii, 131).

[2] Sappho, Fragm. 93, ed. Bergk. See also Plehn, Lesbiaca, pp. 145–165. Respecting the poetesses, two or three of whom were noted, contemporary with Sappho, see Ulrici, Gesch. der Hellen. Poesie, vol. ii, p. 370.

[3] Dionys. Hal. Ant. Rom. v, 82; Horat. Od. i, 32, ii, 13; Cicero, De Nat. Deor. i 28; the striking passage in Plutarch, Symposion iii, 1, 3, ap. Bergk. Fragm 42. In the view of Dionysius, the Æolic dialect of Alkæus and Sappho diminished the value of their compositions: the Æolic accent, analogous to the Latin, and acknowledging scarcely any oxyton words, must have rendered them much less agreeable in recitation or song.

[4] See Plutarch, De Music. p. 1136; Dionys. Hal. de Comp. Verb. c 23

The gnomic poets, or moralists in verse, approach by the tone of their sentiments more to the nature of prose. They begin with Simonidês of Amorgos or of Samos, the contemporary of Archilochus: indeed, the latter himself devoted some compositions to the illustrative fable, which had not been unknown even to Hesiod. In the remains of Simonidês of Amorgos we trace nothing relative to the man personally, though he too, like Archilochus, is said to have had an individual enemy, Orodœkidês, whose character was aspersed by his muse.[1] His only

p. 173, Reisk, and some striking passages of Himerius, in respect to Sappho (i. 4, 16, 19; Maximus Tyrius, Dissert. xxiv, 7–9), and the encomium of the critical Dionysius (De Compos. Verborum, c. 23, p. 173).

The author of the Parian marble adopts, as one of his chronological epochs (Epoch 37), the flight of Sappho, or exile, from Mitylênê to Sicily, somewhere between 604–596 B.C. There probably was something remarkable which induced him to single out this event; but we do not know what, nor can we trust the hints suggested by Ovid (Heroid. xv, 51).

Nine books of Sappho's songs were collected by the later literary Greeks, arranged chiefly according to the metres (C. F. Neue, Sapphonis Fragm. p 11, Berlin 1827). There were ten books of the songs of Alkæus (Athenæus, xi, p. 481), and both Aristophanês (Grammaticus) and Aristarchus published editions of them. (Hephæstion, c. xv, p. 134, Gaisf.) Dikæarchus wrote a commentary upon his songs (Athenæus, xi, p. 461).

[1] Welcker, Simonidis Amorgini Iambi qui supersunt, p. 9

considerable poem extant is devoted to a survey of the characters of women, in iambic verse, and by way of comparison with various animals, — the mare, the ass, the bee, etc. It follows out the Hesiodic vein respecting the social and economical mischief usually caused by women, with some few honorable exceptions; but the poet shows a much larger range of observation and illustration, if we compare him with his predecessor Hesiod; moreover, his illustrations come fresh from life and reality. We find in this early iambist the same sympathy with industry and its due rewards which are observable in Hesiod, together with a still more melancholy sense of the uncertainty of human events.

Of Solon and Theognis I have spoken in former chapters. They reproduce in part the moralizing vein of Simonidês, though with a strong admixture of personal feeling and a direct application to passing events. The mixture of political with social morality, which we find in both, marks their more advanced age: Solon bears in this respect the same relation to Simonidês, as his contemporary Alkæus bears to Archilochus. His poems, as far as we can judge by the fragments remaining, appear to have been short occasional effusions, — with the exception of the epic poem respecting the submerged island of Atlantis; which he began towards the close of his life, but never finished. They are elegiac, trimeter iambic, and trochaic tetrameter: in his hands certainly neither of these metres can be said to have any special or separate character. If the poems of Solon are short, those of Theognis are much shorter, and are indeed so much broken (as they stand in our present collection), as to read like separate epigrams or bursts of feeling, which the poet had not taken the trouble to incorporate in any definite scheme or series. They form a singular mixture of maxim and passion, — of general precept with personal affection towards the youth Kyrnus, — which surprises us if tried by the standard of literary composition, but which seems a very genuine manifestation of an impoverished exile's complaints and restlessness. What remains to us of Phokylidês, another of the gnomic poets nearly contemporary with Solon, is nothing more than a few maxims in verse, — couplets, with the name of the author in several cases embodied in them.

Amidst all the variety of rhythmical and metrical innovations

which have been enumerated, the ancient epic continued to be recited by the rhapsodes as before, and some new epical compositions were added to the existing stock: Eugammon of Kyrênê, about the 50th Olympiad, (580 B. C.) appears to be the last of the series. At Athens, especially, both Solon and Peisistratus manifested great solicitude as well for the recitation as for the correct preservation of the Iliad. Perhaps its popularity may have been diminished by the competition of so much lyric and choric poetry, more showy and striking in its accompaniments, as well as more changeful in its rhythmical character. Whatever secondary effect, however, this newer species of poetry may have derived from such helps, its primary effect was produced by real intellectual or poetical excellence, — by the thoughts, sentiment, and expression, not by the accompaniment. For a long time the musical composer and the poet continued generally to be one and the same person; and besides those who have acquired sufficient distinction to reach posterity, we cannot doubt that there were many known only to their own contemporaries. But with all of them the instrument and the melody constituted only the inferior part of that which was known by the name of music, — altogether subordinate to the "thoughts that breathe and words that burn."[1] Exactness and variety of rhythmical pronunciation gave to the latter their full effect upon a delicate ear; but such pleasure of the ear was ancillary to the emotion of mind arising out of the sense conveyed. Complaints are made by the poets, even so early as 500 B.C., that the accompaniment was becoming too prominent. But it was not until the age of the comic poet Aristophanês, towards the end of the fifth century B.C., that the primitive relation between the instrumental accompaniment and the words was really reversed, — and loud were the complaints to which it gave rise;[2] the performance of

Ἀλλ' αὐτῇ καὶ τοῖς ἔπεσιν πιστεύουσ' ἐλήλυθεν.

[2] See Pratinas ap. Athenæum, xiv, p. 617, also p. 636, and the striking fragment of the lost comic poet Pherekratês, in Plutarch, De Musicâ, p. 1141, containing the bitter remonstrance of *Music* (Μουσικὴ) against the wrong which she had suffered from the dithyrambist Melanippidês: compare also Aristophanês, Nubes, 951-972; Athenæus, xiv, p. 617; Horat

the flute or harp then became more elaborate, showy, and overpowering, while the words were so put together as to show off the player's execution. I notice briefly this subsequent revolution for the purpose of setting forth, by contrast, the truly intellectual character of the original lyric and choric poetry of Greece; and of showing how much the vague sentiment arising from mere musical sound was lost in the more definite emotion, and in the more lasting and reproductive combinations, generated by poetical meaning.

The name and poetry of Solon, and the short maxims, or sayings, of Phokylides, conduct us to the mention of the Seven Wise Men of Greece. Solon was himself one of the seven, and most if not all of them were poets, or composers in verse.[1] To most of them is ascribed also an abundance of pithy repartees, together with one short saying, or maxim, peculiar to each, serving as a sort of distinctive motto;[2] indeed, the test of an accomplished man about this time was his talent for singing or reciting poetry, and for making smart and ready answers. Respecting this constellation of wise men, — who in the next cen-

---

Τὸ *σοβαρὸν καὶ περιττὸν* — the character of the newer music (Plutarch, Agis, c. 10) — as contrasted with *τὸ σεμνὸν καὶ ἀπερίεργον* of the old music (Plutarch, De Musicâ, *ut sup.*): ostentation and affected display, against seriousness and simplicity. It is by no means certain that these reproaches against the more recent music of the Greeks were well founded; we may well be rendered mistrustful of their accuracy when we hear similar remarks and contrasts advanced with regard to the music of our last three centuries. The character of Greek poetry certainly tended to degenerate after Euripidês.

[1] Bias of Priênê composed a poem of two thousand verses, on the condition of Ionia (Diogen. Laërt. i, 85), from which, perhaps, Herodotus may have derived, either directly or indirectly, the judicious advice which he ascribes to that philosopher on the occasion of the first Persian conquest of Ionia (Herod. i, 170).

Not merely Xenophanês the philosopher (Diogen. Laërt. viii, 36, ix, 20), but long after him Parmenidês and Empedoklês, composed in verse.

[2] See the account given by Herodotus (vi, 128–129) of the way in which Kleisthenês of Sikyon tested the comparative education (*παίδευσις*) of the various suitors who came to woo his daughter, — *οἱ δὲ μνήστηρες ἔριν εἶχον ἀμφί τε μουσικῇ καὶ τῷ λεγομένῳ ἐς τὸ μέσον.*

tury of Grecian history, when philosophy came to be a matter of discussion and argumentation, were spoken of with great eulogy, — all the statements are confused, in part even contradictory. Neither the number, nor the names, are given by all authors alike. Dikæarchus numbered ten, Hermippus seventeen: the names of Solon the Athenian, Thalês the Milesian, Pittakus the Mitylenean, and Bias the Prienean, were comprised in all the lists, — and the remaining names as given by Plato[1] were, Kleobulus of Lindus in Rhodes, Myson of Chênæ, and Cheilon of Sparta. By others, however, the names are differently stated: nor can we certainly distribute among them the sayings, or mottoes, upon which in later days the Amphiktyons conferred the honor of inscription in the Delphian temple: Know thyself, — Nothing too much, — Know thy opportunity, — Suretyship is the precursor of ruin. Bias is praised as an excellent judge, and Myson was declared by the Delphian oracle to be the most discreet man among the Greeks, according to the testimony of the satirical poet Hippônax. This is the oldest testimony (540 B.C.) which can be produced in favor of any of the seven; but Kleobulus of Lindus, far from being universally extolled, is pronounced by the poet Simonidês to be a fool.[2] Dikæarchus, however, justly observed, that these seven or ten persons were not wise men, or philosophers, in the sense which those words bore in his day, but persons of practical discernment in reference to man and society,[3] — of the same turn of mind as their con-

temporary the fabulist Æsop, though not employing the same mode of illustration. Their appearance forms an epoch in Grecian history, inasmuch as they are the first persons who ever acquired an Hellenic reputation grounded on mental competency apart from poetical genius or effect, — a proof that political and social prudence was beginning to be appreciated and admired on its own account. Solon, Pittakus, Bias, and Thalês, were all men of influence — the first two even men of ascendency,[1] — in their respective cities. Kleobulus was despot of Lindus, and Periander (by some numbered among the seven) of Corinth. Thalês stands distinguished as the earliest name in physical philosophy, with which the other contemporary wise men are not said to have meddled; their celebrity rests upon moral, social, and political wisdom exclusively, which came into greater honor as the ethical feeling of the Greeks improved and as their experience became enlarged.

In these celebrated names we have social philosophy in its early and infantine state, — in the shape of homely sayings or admonitions, either supposed to be self-evident, or to rest upon some great authority divine or human, but neither accompanied by reasons nor recognizing any appeal to inquiry and discussion as the proper test of their rectitude. From such unsuspecting acquiescence, the sentiment to which these admonitions owe their force, we are partially liberated even in the poet Simonidês of Keôs, who (as before alluded to) severely criticizes the song of Kleobulus as well as its author. The half-century which followed the age of Simonidês (the interval between about 480–430 B.C.) broke down that sentiment more and more, by familiarizing the public with argumentative controversy in the public assembly, the popular judicature, and even on the dramatic stage. And the increased self-working of the Grecian mind, thus created, manifested itself in Sokratês, who laid open all ethical and social doctrines to the scrutiny of reason, and who first awakened among his countrymen that love of dialectics which never left them, — an analytical interest in the mental process of inquiring out, verifying, proving, and expounding truth. To this capital item of

[1] Cicero, De Republ. i. 7; Plutarch, in Delph. p. 385; Bernhardy, Grundriss der Griechischen Litteratur, vol. i, sect. 66, not. 3.

human progress, secured through the Greeks — and through them only — to mankind generally, our attention will be called at a later period of the history; at present, it is only mentioned in contrast with the naked, dogmatical laconism of the Seven Wise Men, and with the simple enforcement of the early poets: a state in which morality has a certain place in the feelings, — but no root, even among the superior minds, in the conscious exercise of reason.

The interval between Archilochus and Solon (660–580 B.C.) seems, as has been remarked in my former volume, to be the period in which writing first came to be applied to Greek poems, — to the Homeric poems among the number; and shortly after the end of that period, commences the era of compositions without metre or prose. The philosopher Pherekydês of Syros, about 550 B.C., is called by some the earliest prose-writer; but no prose-writer for a considerable time afterwards acquired any celebrity, — seemingly none earlier than Hekatæus of Milêtus,[1] about 510–490 B.C., — prose being a subordinate and ineffective species of composition, not always even perspicuous, but requiring no small practice before the power was acquired of rendering it interesting.[2] Down to the generation preceding Sokratês, the poets continued to be the grand leaders of the Greek mind: until then, nothing was taught to youth except to read, to remember, to recite musically and rhythmically, and to comprehend poetical composition. The comments of preceptors, addressed to their pupils, may probably have become fuller and more instructive, but the text still continued to be epic or lyric poetry. We must recollect also that these poets, so enunciated, were the best masters for acquiring a full command of the complicated accent and rhythm of the Greek language, — essential to an educated man in ancient times, and sure to be detected if not properly acquired. Not to mention the Choliambist Hippônax, who seems to have been possessed with the devil of Archilochus, and in part also with his

Pliny, H. N. vii, 57. Suidas v, Ἑκαταῖος.

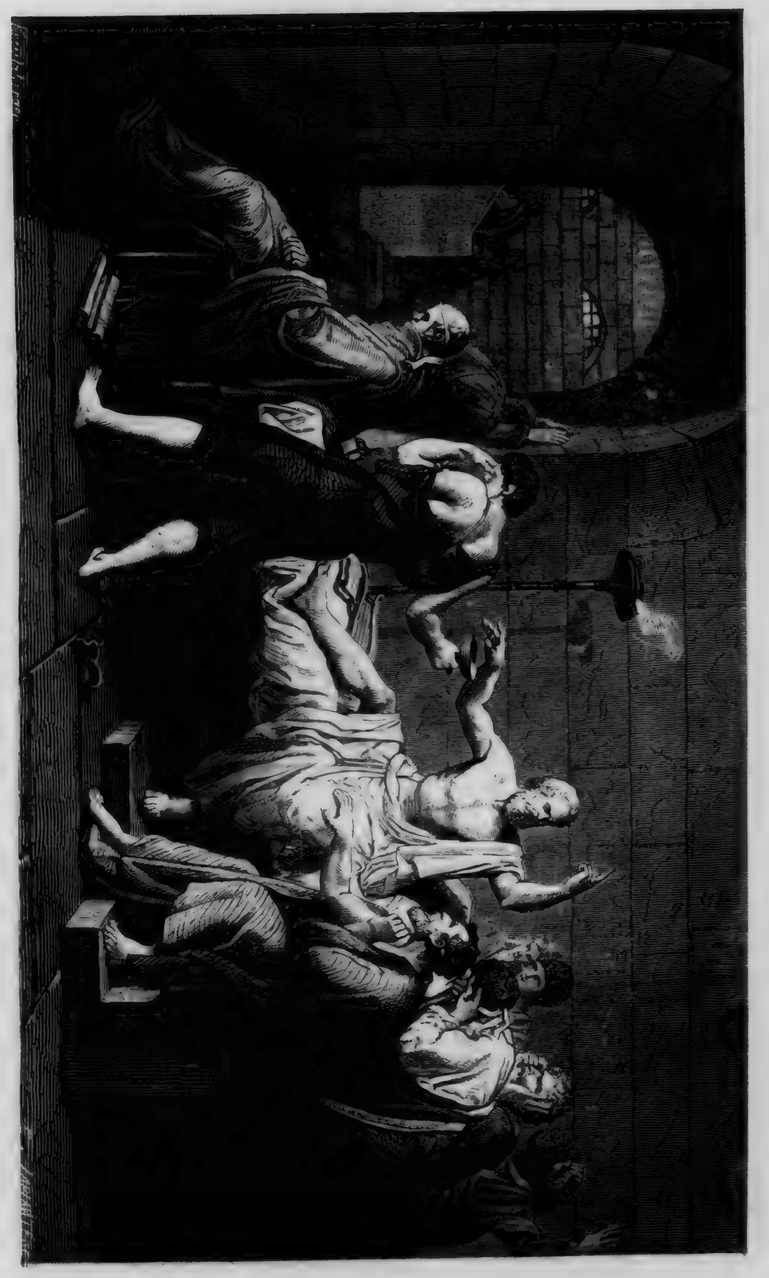
[2] H. Ritter (Geschichte der Philosophie, ch. vi, p. 243) has some good remarks on the difficulty and obscurity of the early Greek prose-writers, in reference to the darkness of expression and meaning universally charged upon the philosopher Herakleitus.

genius, — Anakreon, Ibykus, Pindar, Bacchylidês, Simonidês, and the dramatists of Athens, continue the line of eminent poets without intermission. After the Persian war, the requirements of public speaking created a class of rhetorical teachers, while the gradual spread of physical philosophy widened the range of instruction; so that prose composition, for speech or for writing, occupied a larger and larger share of the attention of men, and was gradually wrought up to high perfection, such as we see for the first time in Herodotus. But before it became thus improved, and acquired that style which was the condition of wide-spread popularity, we may be sure that it had been silently used as a means of recording information; and that neither the large mass of geographical matter contained in the Periegêsis of Hekatæus, nor the map first prepared by his contemporary, Anaximander, could have been presented to the world, without the previous labors of unpretending prose writers, who set down the mere results of their own experience. The acquisition of prose-writing, commencing as it does about the age of Peisistratus, is not less remarkable as an evidence of past, than as a means of future, progress.

Of that splendid genius in sculpture and architecture, which shone forth in Greece after the Persian invasion, the first lineaments only are discoverable between 600–560 B. C., in Corinth, Ægina, Samos, Chios, Ephesus, etc., — enough, however, to give evidence of improvement and progress. Glaukus of Chios is said to have discovered the art of welding iron, and Rhœkus, or his son Theodôrus of Samos, the art of casting copper or brass in a mould: both these discoveries, as far as can be made out, appear to date a little before 600 B.C.[1] The primitive memorial,

[1] See O. Müller, Archäologie der Kunst, sect. 61; Sillig, Catalogus Artificum, — under Theodôrus and Teleklês.

Thiersch (Epochen der Bildenden Kunst, pp. 182–190, 2d edit.) places Rhœkus near the beginning of the recorded Olympiads; and supposes two artists named Theodôrus, one the grandson of the other; but this seems to me not sustained by any adequate authority (for the loose chronology of Phny about the Samain school of artists is not more trustworthy than about the Chian school, — compare xxxv, 12, and xxxvi, 3), and, moreover intrinsically improbable. Herodotus (i, 51) speaks of "*the* Samian Theodorus" and seems to have known only one person so called: Diodôrus (i, 98) and Pausanias (x, 38, 3) give different accounts of Theodôrus, but the positive evidence does not enable us to verify the genealogies either of Thiersch or O. Müller. Herodotus (iv, 152) mentions the Ἡραῖον at Samos in connection with events near Olymp. 37; but this does not prove that the great temple which he himself saw, a century and a half later, had been begun before Olymp. 37, as Thiersch would infer. The statement of O. Müller, that this temple was begun in Olymp. 35, is not authenticated (Arch. der Kunst, sect. 53).



erected in honor of a god, did not even pretend to be an image, but was often nothing more than a pillar, a board, a shapeless stone, a post, etc., fixed so as to mark and consecrate the locality, and receiving from the neighborhood respectful care and decoration, as well as worship. Sometimes there was a real statue, though of the rudest character, carved in wood: and the families of carvers, — who, from father to son, exercised this profession, represented in Attica by the name of Dædalus, and in the Ægina by the name of Smilis, — adhered long, with strict exactness, to the consecrated type of each particular god. Gradually, the wish grew up to change the material, as well as to correct the rudeness, of such primitive idols; sometimes the original wood was retained as the material, but covered in part with ivory or gold, — in other cases, marble or metal was substituted. Dipœnus and Skyllis of Krête acquired renown as workers in marble, about the 50th Olympiad (580 B.C.), and from them downwards a series of names may be traced, more or less distinguished; moreover, it seems about the same period that the earliest temple-offerings, in works of art, properly so called, commence, — the golden statue of Zeus, and the large carved chest, dedicated by the Kypselids of Corinth at Olympia.[1] The pious associations, however, connected with the old type were so strong, that the

[1] Pausanias tells us distinctly that this chest was dedicated at Olympia by the Kypselids, descendants of Kypselus; and this seems credible enough. But he also tells us that this was the identical chest in which the infant Kypselus had been concealed, believing the story as told in Herodotus (v, 92). In this latter belief I cannot go along with him, nor do I think that there is any evidence for believing the chest to have been of more ancient date than the persons who dedicated it, — in spite of the opinions of O. Müller and Thiersch to the contrary (O. Müller, Archäol. der Kunst, sect. 57; Thiersch, Epochen der Griechischen Kunst, p. 169, 2d edit Pausan. v, 17, 2)

hand of the artist was greatly restrained in dealing with statues of the gods. It was in statues of men, especially in those of the victors at Olympia and other sacred games, that genuine ideas of beauty were first aimed at and in part attained, from whence they passed afterwards to the statues of the gods. Such statues of the athletes seem to commence somewhere between Olympiad 53–58, (568–548 B.C.)

Nor is it until the same interval of time (between 600–550 B.C.) that we find any traces of these architectural monuments, by which the more important cities in Greece afterwards attracted to themselves so much renown. The two greatest temples in Greece known to Herodotus were, the Artemision at Ephesus, and the Heræon at Samos: the former of these seems to have been commenced, by the Samian Theodorus, about 600 B.C., — the latter, begun by the Samian Rhœkus, can hardly be traced to any higher antiquity. The first attempts to decorate Athens by such additions proceeded from Peisistratus and his sons, near the same time. As far as we can judge, too, in the absence of all direct evidence, the temples of Pæstum in Italy and Selinus in Sicily seem to fall in this same century. Of painting, during these early centuries, nothing can be affirmed; it never at any time reached the same perfection as sculpture, and we may presume that its years of infancy were at least equally rude.

The immense development of Grecian art subsequently, and the great perfection of Grecian artists, are facts of great importance in the history of the human race. And in regard to the Greeks themselves, they not only acted powerfully on the taste of the people, but were also valuable indirectly as the common boast of Hellenism, and as supplying one bond of fraternal sympathy as well as of mutual pride, among its widely-dispersed sections. It is the paucity and weakness of these bonds which renders the history of Greece, prior to 560 B.C., little better than a series of parallel, but isolated threads, each attached to a separate city; and that increased range of joint Hellenic feeling and action, upon which we shall presently enter, though arising doubtless in great measure from new and common dangers threatening many cities at once, — also springs in part from those other causes which have been enumerated in this chapter

DEATH OF SOCRATES

Greece, vol. four.

as acting on the Grecian mind. It proceeds from the stimulus applied to all the common feelings in religion, art, and recreation, — from the gradual formation of national festivals, appealing in various ways to tastes and sentiments which animated every Hellenic bosom, — from the inspirations of men of genius, poets, musicians, sculptors, architects, who supplied more or less in every Grecian city, education for the youth, training for the chorus, and ornament for the locality, — from the gradual expansion of science, philosophy, and rhetoric, during the coming period of this history, which rendered one city the intellectual capital of Greece, and brought to Isokratês and Plato pupils from the most distant parts of the Grecian world. It was this fund of common tastes, tendencies, and aptitudes, which caused the social atoms of Hellas to gravitate towards each other, and which enabled the Greeks to become something better and greater than an aggregate of petty disunited communities like the Thracians or Phrygians. And the creation of such common, extra-political Hellenism, is the most interesting phenomenon which the historian has to point out in the early period now under our notice. He is called upon to dwell upon it the more forcibly, because the modern reader has generally no idea of national union without political union, — an association foreign to the Greek mind. Strange as it may seem to find a song-writer put forward as an active instrument of union among his fellow-Hellens, it is not the less true, that those poets, whom we have briefly passed in review, by enriching the common language, and by circulating from town to town either in person or in their compositions, contributed to fan the flame of Pan-Hellenic patriotism at a time when there were few circumstances to coöperate with them, and when the causes tending to perpetuate isolation seemed in the ascendant.

CHAPTER XXX.

GRECIAN AFFAIRS DURING THE GOVERNMENT OF PEISISTRATUS AND HIS SONS AT ATHENS.

We now arrive at what may be called the second period of Grecian history, beginning with the rule of Peisistratus at Athens and of Crœsus in Lydia.

It has been already stated that Peisistratus made himself despot of Athens in 560 B.C.: he died in 527 B.C., and was succeeded by his son Hippias, who was deposed and expelled in 510 B.C., thus making an entire space of fifty years between the first exaltation of the father and the final expulsion of the son. These chronological points are settled on good evidence: but the thirty-three years covered by the reign of Peisistratus are interrupted by two periods of exile, — one of them lasting not less than ten years, — the other, five years. And the exact place of the years of exile, being nowhere laid down upon authority, has been differently determined by the conjectures of chronologers.[1] Partly from this half-known chronology, partly from a very scanty collection of facts, the history of the half-century now before us can only be given very imperfectly: nor can we wonder at our ignorance, when we find that even among the Athenians themselves, only a century afterwards, statements the most incorrect and contradictory respecting the Peisistratids were in circulation, as Thucydidês distinctly, and somewhat reproachfully, acquaints us.

More than thirty years had now elapsed since the promulgation of the Solonian constitution, whereby the annual senate of Four Hundred had been created, and the public assembly (preceded in its action as well as aided and regulated by this senate) invested with a power of exacting responsibility from the magis-

[1] Mr. Fynes Clinton (Fast. Hellen. vol. ii, Appendix, c. 2, p. 201) has stated and discussed the different opinions on the chronology of Peisistratus and his sons.

trates after their year of office. The seeds of the subsequent democracy had thus been sown, and no doubt the administration of the archons had been practically softened by it; but nothing in the nature of a democratical sentiment had yet been created. A hundred years hence, we shall find that sentiment unanimous and potent among the enterprising masses of Athens and Peiræeus, and shall be called upon to listen to loud complaints of the difficulty of dealing with "that angry, waspish, intractable little old man, Dêmus of Pnyx," — so Aristophanes[1] calls the Athenian people to their faces, with a freedom which shows that *he* at least counted on their good temper. But between 560–510 B.C. the people are as passive in respect to political rights and securities as the most strenuous enemy of democracy could desire, and the government is transferred from hand to hand by bargains and cross-changes between two or three powerful men,[2] at the head of partisans who echo their voices, espouse their personal quarrels, and draw the sword at their command. It was this ancient constitution — Athens as it stood before the Athenian democracy — which the Macedonian Antipater professed to restore in 322 B.C., when he caused the majority of the poorer citizens to be excluded altogether from the political franchise.[3]

By the stratagem recounted in a former chapter,[4] Peisistratus

[1] Ἀγροῖκος ὀργὴν, κυαμοτρωξ, ἀκράχολος
Δῆμος Πυνκίτης, δύσκολον γεροντίον. — Aristoph. Equit. 41.

I need hardly mention that the Pnyx was the place in which the Athenian public assemblies were held.

[2] Plutarch (De Herodot. Malign. c. 15, p. 858) is angry with Herodotus for imparting so petty and personal a character to the dissensions between the Alkmæônids and Peisistratus; his severe remarks in that treatise, however, tend almost always to strengthen rather than to weaken the credibility of the historian.

[3] Plutarch, Phokion, c. 27, ἀπεκρίνατο φιλίαν ἔσεσθαι τοῖς Ἀθηναίοις καὶ ξυμμαχίαν, ἐκδοῦσι μὲν τοὺς περὶ Δημοσθένη καὶ Ὑπερίδην, πολιτευομένους δὲ τὴν πάτριαν ἀπὸ τιμήματος πολιτείαν, δεξαμένοις δὲ φρουρὰν εἰς τὴν Μουνυχίαν, ἔτι δὲ χρήματα τοῦ πολέμου καὶ ζημίαν προσεκτίσασιν. Compare Diodor. xviii, 18.

Twelve thousand of the poorer citizens were disfranchised by this change (Plutarch, Phokion, c. 28).

[4] See the preceding volume, ch. xi, p. 155.

had obtained from the public assembly a guard which he had employed to acquire forcible possession of the acropolis. He thus became master of the administration; but he employed his power honorably and well, not disturbing the existing forms farther than was necessary to insure to himself full mastery. Nevertheless, we may see by the verses of Solon[1] (the only contemporary evidence which we possess), that the prevalent sentiment was by no means favorable to his recent proceeding, and that there was in many minds a strong feeling both of terror and aversion, which presently manifested itself in the armed coalition of his two rivals, — Megaklês at the head of the Parali, or inhabitants of the sea-board, and Lykurgus at the head of those in the neighboring plain. As the conjunction of the two formed a force too powerful for Peisistratus to withstand, he was driven into exile, after no long possession of his despotism.

But the time came, how soon we cannot tell, when the two rivals who had expelled him quarrelled, and Megaklês made propositions to Peisistratus, inviting him to resume the sovereignty, promising his own aid, and stipulating that Peisistratus should marry his daughter. The conditions being accepted, a plan was laid between the two new allies for carrying them into effect, by a novel stratagem, — since the simulated wounds and pretence of personal danger were not likely to be played off a second time with success. The two conspirators clothed a stately woman, six feet high, named Phyê, in the panoply and costume of Athênê, — surrounded her with the processional accompaniments belonging to the goddess, — and placed her in a chariot with Peisistratus by her side. In this guise the exiled despot and his adherents approached the city and drove up to the acropolis, preceded by heralds, who cried aloud to the people: "Athenians, receive ye cordially Peisistratus, whom Athênê has honored above all other men, and is now bringing back into her own acropolis." The people in the city received the reputed goddess with implicit belief and demonstrations of worship, while among the country cantons the report quickly spread

[1] Solon. Fragm. 10, ed. Bergk. —

Εἰ δὲ πεπονθατε λυγρὰ δι' ὑμετέρην κακότητα,
Μήτι θεοῖς τούτων μοῖραν ἐπαμφέρετε, etc.

that Athênê had appeared in person to restore Peisistratus who thus found himself, without even a show of resistance, in possession of the acropolis and of the government. His own party, united with that of Megaklês, were powerful enough to maintain him, when he had once acquired possession; and probably all, except the leaders, sincerely believed in the epiphany of the goddess, which came to be divulged as having been a deception, only after Peisistratus and Megaklês had quarrelled.[1]

[1] Herodot. i, 60, καὶ ἐν τῷ ἄστεϊ πειθόμενοι τὴν γυναῖκα εἶναι αὐτὴν τὴν θεὸν, προσεύχοντό τε τὴν ἄνθρωπον καὶ ἐδέκοντο τὸν Πεισίστρατον. A later statement (Athenæus, xiii, p. 609) represents Phyê to have become afterwards the wife of Hipparchus.

Of this remarkable story, not the least remarkable part is the criticism with which Herodotus himself accompanies it. He treats it as a proceeding infinitely silly (πρῆγμα εὐηθέστατον, ὡς ἐγὼ εὑρίσκω, μακρῳ); he cannot conceive, how Greeks, so much superior to barbarians, — and even Athenians, the cleverest of all the Greeks, — could have fallen into such a trap. To him the story was told as a deception from the beginning, and he did not perhaps take pains to put himself into the state of feeling of those original spectators who saw the chariot approach, without any warning or preconceived suspicion. But even allowing for this, his criticism brings to our view the alteration and enlargement which had taken place in the Greek mind during the century between Peisistratus and Periklês. Doubtless, neither the latter nor any of his contemporaries could have succeeded in a similar trick.

The fact, and the criticism upon it, now before us, are remarkably illustrated by an analogous case recounted in a previous chapter, (vol. ii, p. 421 chap. viii.) Nearly at the same period as this stratagem of Peisistratus, the Lacedæmonians and the Argeians agreed to decide, by a combat of three hundred select champions, the dispute between them as to the territory of Kynuria. The combat actually took place, and the heroism of Othryades, sole Spartan survivor, has been already recounted. In the eleventh year of the Peloponnesian war, shortly after or near upon the period when we may conceive the history of Herodotus to have been finished, the Argeians concluded a treaty with Lacedæmon, and introduced as a clause into it the liberty of reviving their pretensions to Kynuria, and of again deciding the dispute by a combat of select champions. To the Lacedæmonians of that time this appeared extreme folly, — the very proceeding which had been actually resorted to a century before. Here is another case, in which the change in the point of view, and the increased positive tendencies in the Greek mind, are brought to our notice not less forcibly than by the criticism of Herodotus upon Phyê-Athênê

The daughter of Megaklês, according to agreement, quickly became the wife of Peisistratus, but she bore him no children; and it became known that her husband, having already adult sons by a former marriage, and considering that the Kylonian curse rested upon all the Alkmæónid family, did not intend that she should become a mother.[1] Megaklês was so incensed at this behavior, that he not only renounced his alliance with Peisistratus, but even made his peace with the third party, the adherents of Lykurgus, — and assumed so menacing an attitude, that the despot was obliged to evacuate Attica. He retired to Eretria in Eubœa, where he remained no less than ten years; but a considerable portion of that time was employed in making preparations for a forcible return, and he seems to have exercised, even while in exile, a degree of influence much exceeding that

Istrus (one of the Atthido-graphers of the third century B.C.) and Antiklês published books respecting the personal manifestations or epiphanies of the gods, — *Ἀπόλλωνος ἐπιφανεῖαι*: see Istri Fragment. 33–37, ed. Didot. If Peisistratus and Megaklês had never quarrelled, their joint stratagem might have continued to pass for a genuine epiphany, and might have been included as such in the work of Istrus. I will add, that the real presence of the gods, at the festivals celebrated in their honor, was an idea continually brought before the minds of the Greeks.

The Athenians fully believed the epiphany of the god Pan to Pheidippidês the courier, on his march to Sparta, a little before the battle of Marathôn (Herodot. vi, 105, *καὶ ταῦτα Ἀθηναῖοι πιστεύσαντες εἶναι ἀληθέα*), and even Herodotus himself does not controvert it, though he relaxes the positive character of history so far as to add — "as Pheidippidês himself said and recounted publicly to the Athenians." His informants in this case were doubtless sincere believers; whereas, in the case of Phyê, the story was told to him at first as a fabrication.

At Gela in Sicily, seemingly not long before this restoration of Peisistratus, Têlinês (ancestor of the despot Gelon) had brought back some exiles to Gela, "without any armed force, but merely through the sacred ceremonies and appurtenances of the subterranean goddesses," — *ἔχων σύδεμιὴν ἀνδρῶν δύναμιν, ἀλλ' ἱρὰ τούτεων τῶν θεῶν — τούτοισι δ' ὧν πίσυνος ἐών, κατήγαγε* (Herodot. vii, 153). Herodotus does not tell us the details which he had heard of the manner in which this restoration at Gela was brought about; but his general language intimates, that they were remarkable details, and they might have illustrated the story of Phyê Athênê.

[1] Herodot. i 61. Peisistratus — *ἐμίχθη οἱ οὐ κατὰ νόμον*.

of a private man. He lent valuable aid to Lygdamis of Naxos,[1] in constituting himself despot of that island, and he possessed, we know not how, the means of rendering valuable service to different cities, Thebes in particular. They repaid him by large contributions of money to aid in his reëstablishment: mercenaries were hired from Argos, and the Naxian Lygdamis came himself, both with money and with troops. Thus equipped and aided, Peisistratus landed at Marathon in Attica. How the Athenian government had been conducted during his ten years' absence, we do not know; but the leaders of it permitted him to remain undisturbed at Marathon, and to assemble his partisans both from the city and from the country: nor was it until he broke up from Marathon and had reached Pallênê on his way to Athens, that they took the field against him. Moreover, their conduct, even when the two armies were near together, must have been either extremely negligent or corrupt; for Peisistratus found means to attack them unprepared, routing their forces almost without resistance. In fact, the proceedings have altogether the air of a concerted betrayal: for the defeated troops, though unpursued, are said to have dispersed and returned to their homes forthwith, in obedience to the proclamation of Peisistratus, who marched on to Athens, and found himself a third time ruler.[2]

On this third successful entry, he took vigorous precautions for rendering his seat permanent. The Alkmæônidæ and their immediate partisans retired into exile; but he seized the children of those who remained, and whose sentiments he suspected, as hostages for the behavior of their parents, and placed them in Naxos, under the care of Lygdamis. Moreover, he provided himself with a powerful body of Thracian mercenaries, paid by taxes levied upon the people:[3] nor did he omit to conciliate the favor of the gods by a purification of the sacred island of Delos

[1] About Lygdamis, see Athenæus, viii, p. 348, and his citation from the lost work of Aristotle on the Grecian *Πολιτεῖαι*; also, Aristot. Polit. v, 8, 1.

[2] Herodot. i, 63.

[3] Herodot. i, 64. *ἐπικούροισί τε πολλοῖσι, καὶ χρημάτων συνόδοισι, τῶν μὲν αὐτόθεν, τῶν δὲ ἀπὸ Στρύμονος ποτάμου προσιόντων.*

all the dead bodies which had been buried within sight of the temple of Apollo were exhumed and reinterred farther off. At this time the Delian festival, — attended by the Asiatic Ionians and the islanders, and with which Athens was of course peculiarly connected, — must have been beginning to decline from its pristine magnificence; for the subjugation of the continental Ionic cities by Cyrus had been already achieved, and the power of Samos, though increased under the despot Polykratês, seems to have increased at the expense and to the ruin of the smaller Ionic islands. From the same feelings, in part, which led to the purification of Delos, — partly as an act of party revenge, — Peisistratus caused the houses of the Alkmæônids to be levelled with the ground, and the bodies of the deceased members of that family to be disinterred and cast out of the country.[1]

This third and last period of the rule of Peisistratus lasted several years, until his death in 527 B.C: it is said to have been so mild in its character, that he once even suffered himself to be cited for trial before the Senate of Areopagus; yet as we know that he had to maintain a large body of Thracian mercenaries out of the funds of the people, we shall be inclined to construe this eulogium comparatively rather than positively. Thucydidês affirms that both he and his sons governed in a wise and virtuous spirit, levying from the people only an income-tax of five per cent.[2] This is high praise coming from such an au-

[1] Isokratês, Or. xvi, De Bigis, c. 351.

[2] For the statement of Boeckh, Dr. Arnold, and Dr. Thirlwall, that Peisistratus had levied a tythe or tax of ten per cent., and that his sons reduced it to the half, I find no sufficient warrant: certainly, the spurious letter of Peisistratus to Solon in Diogenes Laërtius (i, 53) ought not to be considered as proving anything. Boeckh, Public Economy of Athens, B iii, c. 6 (i. 351 German); Dr. Arnold ad Thucyd. vi, 34; Dr. Thirlwall Hist. of Gr. ch. xi, pp. 72–74. Idomeneus (ap. Athenæ. xii, p. 533) considers the sons of Peisistratus to have indulged in pleasures to an extent more costly and oppressive to the people than their father. Nor do I think that there is sufficient authority to sustain the statement of Dr. Thirlwall (p. 68), "He (Peisistratus) possessed lands on the Strymon in Thrace, which yielded a large revenue." Herodotus (i, 64) tells us that Peisistratus brought mercenary soldiers from the Strymon, but that he levied the money to pay them in Attica — *ἐῤῥίζωσε τὴν τυραννίδα ἐπικούροισί τε πολλοῖσι, καὶ χρημάτων συνόδοισι, τῶν μὲν αὐτόθεν, τῶν δὲ ἀπο Στρύμωνος ποταμοῦ συνιόντων.* It is, indeed, possible to construe this passage so as to refer both *τῶν μὲν* and *τῶν δὲ* to *χρημάτων*, which would signify that Peisistratus obtained his funds partly from the river Strymon, and thus serve as basis to the statement of Dr. Thirlwall. But it seems to me that the better way of construing the words is to refer *τῶν μὲν* to *χρημάτων συνόδοισι*, and *τῶν δὲ* to *ἐπικούροισι*, — treating both of them as genitives absolute. It is highly improbable that he should derive money from the Strymon: it is highly probable that his mercenaries came from thence.

[1] Hermippus (ap. Marcellin. Vit. Thucyd. p. ix,) and the Scholiast on Thucyd. i, 20, affirm that Thucydidês was connected by relationship with the Peisistratidæ. His manner of speaking of them certainly lends countenance to the assertion; not merely as he twice notices their history, once briefly (i, 20) and again at considerable length (vi, 54–59), though it does not lie within the direct compass of his period, — but also as he so emphatically announces his own personal knowledge of their family relations, — *Ὅτι δὲ πρεσβύτατος ὢν Ἱππίας ἦρξεν, εἰδὼς μὲν καὶ ἀκοῇ ἀκριβέστερον ἄλλων ἰσχυρίζομαι* (vi. 55).

Aristotle (Politic. v, 9, 21) mentions it as a report (*φασι*) that Peisistratus obeyed the summons to appear before the Areopagus; Plutarch adds that the person who had summoned him did not appear to bring the cause to trial (Vit. Solon 31), which is not at all surprising: compare Thucyd. vi. 56, 57.

[2] Aristot. Politic. v, 9, 4 Dikæarchus, Vita Græciæ, pp. 140–166. ed Fuhr; Pausan. i, 18, 8.

thority, though it seems that we ought to make some allowance for the circumstance of Thucydidês being connected by descent with the Peisistratid family.[1] The judgment of Herodotus is also very favorable respecting Peisistratus; that of Aristotle favorable, yet qualified, — since he includes these despots among the list of those who undertook public and sacred works with the deliberate view of impoverishing as well as of occupying their subjects. This supposition is countenanced by the prodigious scale upon which the temple of Zeus Olympius at Athens was begun by Peisistratus, — a scale much exceeding either the Parthenôn or the temple of Athênê Polias, both of which were erected in later times, when the means of Athens were decidedly larger,[2] and her disposition to demonstrative piety certainly no way diminished. It was left by him unfinished, nor was it ever completed until the Roman emperor Hadrian undertook the task. Moreover, Peisistratus introduced the greater Panathenaic festival, solemnized every four years, in the third Olympic

year: the annual Panathenaic festival, henceforward called the Lesser, was still continued.

I have already noticed, at considerable length, the care which he bestowed in procuring full and correct copies of the Homeric poems, as well as in improving the recitation of them at the Panathenaic festival, — a proceeding for which we owe him much gratitude, but which has been shown to be erroneously interpreted by various critics. He probably also collected the works of other poets, — called by Aulus Gellius,[1] in language not well suited to the sixth century B.C., a library thrown open to the public; and the service which he thus rendered must have been highly valuable at a time when writing and reading were not widely extended. His son Hipparchus followed up the same taste, taking pleasure in the society of the most eminent poets of the day,[2] — Simonidês, Anakreon, and Lasus; not to mention the Athenian mystic Onomakritus, who, though not pretending to the gift of prophecy himself, passed for the proprietor and editor of the various prophecies ascribed to the ancient name of Musæus. The Peisistratids were well versed in these prophecies, and set great value upon them; but Onomakritus, being detected on one occasion in the act of interpolating the prophecies of Musæus, was banished by Hipparchus in consequence.[3] The statues of Hermês, erected by this prince or by his personal friends in various parts of Attica,[4] and inscribed with short moral sentences, are extolled by the author of the Platonic dialogue called Hipparchus, with an exaggeration which approaches to irony, but it is certain that both the sons of Peisistratus, as well as himself, were exact in fulfilling the religious obligations of the state, and ornamented the city in several ways, especially the public fountain Kallirrhoê. They are said to have maintained the preëxisting forms of law and justice, merely taking care always to keep themselves and their adherents in the effective

offices of state, and in the full reality of power. They were, moreover, modest and popular in their personal demeanor, and charitable to the poor; yet one striking example occurs of unscrupulous enmity, in their murder of Kimôn, by night, through the agency of hired assassins.[1] There is good reason, however, for believing that the government both of Peisistratus and of his sons was in practice generally mild until after the death of Hipparchus by the hands of Harmodius and Aristogeitôn, after which event the surviving Hippias became alarmed, cruel, and oppressive during his last four years. And the harshness of this concluding period left upon the Athenian mind[2] that profound and imperishable hatred, against the dynasty generally, which Thucydidês attests, — though he labors to show that it was not deserved by Peisistratus, nor at first by Hippias.

Peisistratus left three legitimate sons, — Hippias, Hipparchus, and Thessalus: the general belief at Athens among the contemporaries of Thucydidês was, that Hipparchus was the eldest of the three and had succeeded him; but the historian emphatically pronounces this to be a mistake, and certifies, upon his own responsibility, that Hippias was both eldest son and successor. Such an assurance from him, fortified by certain reasons in themselves not very conclusive, is sufficient ground for our belief, — the more so as Herodotus countenances the same version. But we are surprised at such a degree of historical carelessness in the Athenian public, and seemingly even in Plato,[3] about a matter both interesting and comparatively recent. In order to abate this surprise, and to explain how the name of Hipparchus came to supplant that of Hippias in the popular talk, Thucydidês recounts the memorable story of Harmodius and Aristogeitôn.

Of these two Athenian citizens,[4] both belonging to the ancient

[1] Herodot. vi, 38–103; Theopomp. ap. Athenæ. xii, p. 533.

[2] Thucyd. vi, 53; Pseudo-Plato, Hipparch. p. 230; Pausan. i, 23, 1.

[3] Thucyd. i. 20, about the general belief of the Athenian public in his time — *Ἀθηναίων γοῦν τὸ πλῆθος οἴονται ὑφ' Ἁρμοδίου καὶ Ἀριστογείτονος Ἱππαρχον τύραννον ὄντα ἀποθανεῖν, καὶ οὐκ ἴσασιν ὅτι Ἱππίας πρεσβύτατος ὢν ἦρχε τῶν Πεισιστράτου παιδῶν*, etc.

The Pseudo-Plato in the dialogue called Hipparchus adopts this belief, and the real Plato in his Symposion (c. 9, p. 182) seems to countenance it.

[4] Herodot. v. 55–58. Harmodius is affirmed by Plutarch to have been of the deme Aphidnæ (Plutarch, Symposiacon, i, 10, p. 628)

gens called Gephyræi, the former was a beautiful youth, attached to the latter by a mutual friendship and devoted intimacy, which Grecian manners did not condemn. Hipparchus made repeated propositions to Harmodius, which were repelled, but which, on becoming known to Aristogeitôn, excited both his jealousy and his fears lest the disappointed suitor should employ force, — fears justified by the proceedings not unusual with Grecian despots,[1] and by the absence of all legal protection against outrage from such a quarter. Under these feelings, he began to look about, in the best way that he could, for some means of putting down the despotism. Meanwhile Hipparchus, though not entertaining any designs of violence, was so incensed at the refusal of Harmodius, that he could not be satisfied without doing something to insult or humiliate him. In order to conceal the motive from which the insult really proceeded, he offered it, not directly to Harmodius, but to his sister. He caused this young maiden to be one day summoned to take her station in a religious procession as one of the kanêphoræ, or basket carriers, according to the practice usual at Athens; but when she arrived at the place where her fellow-maidens were assembled, she was dismissed with scorn as unworthy of so respectable a function, and the summons addressed to her was disavowed.[2] An insult thus publicly offered

It is to be recollected that he died before the introduction of the Ten Tribes, and before the recognition of the demes as political elements in the commonwealth.

[1] For the terrible effects produced by this fear of *ὕβρις εἰς τὴν ἡλικίαν*, see Plutarch, Kimon, 1; Aristot. Polit. v, 9, 17.

[2] Thucyd. vi, 56. *Τὸν δ' οὖν Ἁρμόδιον ἀπαρνηθέντα τὴν πείρασιν, ὥσπερ διενοεῖτο, προυπηλάκισεν· ἀδελφὴν γὰρ αὐτοῦ, κόρην, ἐπαγγείλαντες ἥκειν κανοῦν οἴσουσαν ἐν πομπῇ τινι, ἀπήλασαν, λέγοντες οὐδὲ ἐπαγγεῖλαι ἀρχὴν. διὰ τὸ μὴ ἀξίαν εἶναι.*

Dr. Arnold, in his note, supposes that this exclusion of the sister of Harmodius by the Peisistratids may have been founded on the circumstance that she belonged to the gens Gephyræi (Herodot. v, 57); her foreign blood, and her being in certain respects *ἄτιμος*, disqualified her (he thinks) from ministering to the worship of the gods of Athens.

There is no positive reason to support the conjecture of Dr. Arnold, which seems, moreover, virtually discountenanced by the narrative of Thucydidês, who plainly describes the treatment of this young woman as a deliberate, preconcerted insult. Had there existed any assignable ground of

filled Harmodius with indignation, and still farther exasperated the feelings of Aristogeitôn: both of them, resolving at all hazards to put an end to the despotism, concerted means for aggression with a few select associates. They awaited the festival of the Great Panathenæa, wherein the body of the citizens were accustomed to march up in armed procession, with spear and shield, to the acropolis; this being the only day on which an armed body could come together without suspicion. The conspirators appeared armed like the rest of the citizens, but carrying concealed daggers besides. Harmodius and Aristogeitôn undertook with their own hands to kill the two Peisistratids, while the rest promised to stand forward immediately for their protection against the foreign mercenaries; and though the whole number of persons engaged was small, they counted upon the spontaneous sympathies of the armed bystanders in an effort to regain their liberties, so soon as the blow should once be struck. The day of the festival having arrived, Hippias, with his foreign body-guard around him, was marshalling the armed citizens for procession, in the Kerameikus without the gates, when Harmodius and Aristogeitôn approached with concealed daggers to execute their purpose. On coming near, they were thunderstruck to behold one of their own fellow-conspirators talking familiarly with Hippias, who was of easy access to every man and they immediately concluded that the plot was betrayed. Expecting to be seized, and wrought up to a state of desperation, they resolved at least not to die without having revenged themselves on Hipparchus, whom they found within the city gates near the chapel called the Leôkorion, and immediately slew him. His attendant guards killed Harmodius on the spot; while Aristogeitôn, rescued for the moment by the surrounding crowd, was

exclusion, such as that which Dr. Arnold supposes, leading to the inference that the Peisistratids could not admit her without violating religious custom, Thucydidês would hardly have neglected to allude to it, for it would have lightened the insult; and indeed, on that supposition, the sending of the original summons might have been made to appear as an accidental mistake. I will add, that Thucydidês, though no way forfeiting his obligations to historical truth, is evidently not disposed to omit anything which can be truly said in favor of the Peisistratids.

afterwards taken, and perished in the tortures applied to make him disclose his accomplices.[1]

The news flew quickly to Hippias in the Kerameikus, who heard it earlier than the armed citizens near him, awaiting his order for the commencement of the procession. With extraordinary self-command, he took advantage of this precious instant of foreknowledge, and advanced towards them, — commanding them to drop their arms for a short time, and assemble on an adjoining ground. They unsuspectingly obeyed, and he immediately directed his guards to take possession of the vacant arms. He was now undisputed master, and enabled to seize the persons of all those citizens whom he mistrusted, — especially all those who had daggers about them, which it was not the practice to carry in the Panathenaic procession.

Such is the memorable narrative of Harmodius and Aristogeitôn, peculiarly valuable inasmuch as it all comes from Thucydidês.[2] To possess great power, — to be above legal restraint, — to inspire extraordinary fear, — is a privilege so much coveted by the giants among mankind, that we may well take notice of those cases in which it brings misfortune even upon themselves. The fear inspired by Hipparchus, — of designs which he did not really entertain, but was likely to entertain, and competent to execute without hindrance, — was here the grand cause of his destruction.

The conspiracy here detailed happened in 514 B.C., during the thirteenth year of the reign of Hippias, — which lasted four years longer, until 510 B.C. And these last four years, in the belief of the Athenian public, counted for his whole reign; nay, many of them made the still greater historical mistake of eliding these last four years altogether, and of supposing that the conspiracy of Harmodius and Aristogeitôn had deposed the Peisistratid gov-

[1] Thucyd. vi, 58, *οὐ ῥᾳδίως διετέθη*: compare Polyæn. i, 22; Diodorus, Fragm. lib. x, p. 62, vol. iv, ed. Wess.; Justin, ii, 9. See, also, a good note of Dr. Thirlwall on the passage, Hist. of Gr. vol. ii, ch. xi, p. 77, 2d ed. I agree with him, that we may fairly construe the indistinct phrase of Thucydidês by the more precise statements of later authors, who mention the torture.

[2] Thucyd. i, 20, vi, 54–59; Herodot. v, 55, 56, vi, 123; Aristot. Polit. v 8, 9

ernment and liberated Athens. Both poets and philosophers shared this faith, which is distinctly put forth in the beautiful and popular Skolion or song on the subject: the two friends are there celebrated as the authors of liberty at Athens, — "they slew the despot and gave to Athens equal laws."[1] So inestimable a present was alone sufficient to enshrine in the minds of the subsequent democracy those who had sold their lives to purchase it: and we must farther recollect that the intimate connection between the two, so repugnant to the modern reader, was regarded at Athens with sympathy, — so that the story took hold of the Athenian mind by the vein of romance conjointly with that of patriotism. Harmodius and Aristogeitôn were afterwards commemorated both as the winners and as the protomartyrs of Athenian liberty. Statues were erected in their honor shortly after the final expulsion of the Peisistratids; immunity from taxes and public burdens was granted to the descendants of their families; and the speaker who proposed the abolition of such immunities, at a time when the number had been abusively multiplied, made his only special exception in favor of this respected lineage.[2] And since the name of Hipparchus was universally notorious as the person slain, we discover how it was that he came to be considered by an uncritical public as the predominant member of the Peisistratid family, — the eldest son and successor of Peisistratus, — the reigning despot, — to the comparative neglect of Hippias. The same public probably cherished many

The statues were carried away from Athens by Xerxês, and restored to the Athenians by Alexander after his conquest of Persia (Arrian. Ex Al iii, 14, 16; Pliny, H. N. xxxiv, 4–8)

other anecdotes,[1] not the less eagerly believed because they could not be authenticated, respecting this eventful period.

Whatever may have been the moderation of Hippias before, indignation at the death of his brother, and fear for his own safety,[2] now induced him to drop it altogether. It is attested both by Thucydidês and Herodotus, and admits of no doubt, that his power was now employed harshly and cruelly, — that he put to death a considerable number of citizens. We find also a statement, noway improbable in itself, and affirmed both in Pausanias and in Plutarch, — inferior authorities, yet still in this case sufficiently credible, — that he caused Leæna, the mistress of Aristogeitôn, to be tortured to death, in order to extort from her a knowledge of the secrets and accomplices of the latter.[3] But as he could not but be sensible that this system of terrorism was full of peril to himself, so he looked out for shelter and support in case of being expelled from Athens; and with this view he sought to connect himself with Darius king of Persia, — a connection full of consequences to be hereafter developed. Æantidês, son of Hippoklus the despot of Lampsakus on the Hellespont, stood high at this time in the favor of the Persian monarch, which induced Hippias to give him his daughter Archedikê in marriage; no small honor to the Lampsakene, in the estimation of Thucydidês.[4] To explain how Hippias came to fix upon this town, however, it is necessary to say a few words on the foreign policy of the Peisistratids.

[1] One of these stories may be seen in Justin, ii, 9,— who gives the name of Dioklês to Hipparchus, — "Diocles, alter ex filiis, per vim stupratâ virgine, a fratre puellæ interficitur."

[2] Ἡ γὰρ δειλία φονικώτατόν ἐστιν ἐν ταῖς τυραννίσιν — observes Plutarch, (Artaxerxês, c. 25).

[3] Pausan. i, 23, 2; Plutarch, De Garrulitate, p. 897; Polyæn. viii, 45; Athenæus, xiii, p. 596.

[4] We can hardly be mistaken in putting this interpretation on the words of Thucydidês — Ἀθηναῖος ὤν, Λαμψακηνῷ ἔδωκε (vi, 59).

Some financial tricks and frauds are ascribed to Hippias by the author of the Pseudo-Aristotelian second book of the Œconomica (ii, 4). I place little reliance on the statements in this treatise respecting persons of early date, such as Kypselus or Hippias: in respect to facts of the subsequent period of Greece, between 450–300 B.C., the author's means of information will doubtless render him a better witness.

It has already been mentioned that the Athenians, even so far back as the days of the poet Alkæus, had occupied Sigeium in the Troad, and had there carried on war with the Mityleneans; so that their acquisitions in these regions date much before the time of Peisistratus. Owing probably to this circumstance, an application was made to them in the early part of his reign from the Dolonkian Thracians, inhabitants of the Chersonese on the opposite side of the Hellespont, for aid against their powerful neighbors the Absinthian tribe of Thracians; and opportunity was thus offered for sending out a colony to acquire this valuable peninsula for Athens. Peisistratus willingly entered into the scheme, and Miltiadês son of Kypselus, a noble Athenian, living impatiently under his despotism, was no less pleased to take the lead in executing it: his departure and that of other malcontents as founders of a colony suited the purpose of all parties. According to the narrative of Herodotus, — alike pious and picturesque, — and doubtless circulating as authentic at the annual games which the Chersonesites, even in his time, celebrated to the honor of their œkist, — it is the Delphian god who directs the scheme and singles out the individual. The chiefs of the distressed Dolonkians went to Delphi to crave assistance towards procuring Grecian colonists, and were directed to choose for their œkist the individual who should first show them hospitality on their quitting the temple. They departed and marched all along what was called the Sacred Road, through Phocis and Bœotia to Athens, without receiving a single hospitable invitation; at length they entered Athens, and passed by the house of Miltiadês, while he himself was sitting in front of it. Seeing men whose costume and arms marked them out as strangers, he invited them into his house and treated them kindly: they then apprized him that he was the man fixed upon by the oracle, and abjured him not to refuse his concurrence. After asking for himself personally the opinion of the oracle, and receiving an affirmative answer, he consented; sailing as œkist, at the head of a body of Athenian emigrants, to the Chersonese.[1]

Having reached this peninsula, and having been constituted despot of the mixed Thracian and Athenian population, he lost

[1] Herodot vi 36–37.

no time in fortifying the narrow isthmus by a wall reaching all across from Kardia to Paktya, a distance of about four miles and a half; so that the Absinthian invaders were for the time effectually shut out,[1] though the protection was not permanently kept up. He also entered into a war with Lampsakus, on the Asiatic side of the strait, but was unfortunate enough to fall into an ambuscade and become a prisoner. Nothing preserved his life except the immediate interference of Crœsus king of Lydia, coupled with strenuous menaces addressed to the Lampsakenes, who found themselves compelled to release their prisoner; Miltiadês having acquired much favor with this prince, in what manner we are not told. He died childless some time afterwards, while his nephew Stesagoras, who succeeded him, perished by assassination, some time subsequent to the death of Peisistratus at Athens.[2]

The expedition of Miltiadês to the Chersonese must have occurred early after the first usurpation of Peisistratus, since even his imprisonment by the Lampsakenes happened before the ruin of Crœsus, (546 B.C.) But it was not till much later, — probably during the third and most powerful period of Peisistratus, — that the latter undertook his expedition against Sigeium in the Troad. This place appears to have fallen into the hands of the Mityleneans: Peisistratus retook it,[3] and placed there his illegitimate son Hegesistratus as despot. The Mityleneans may

[1] Thus the Scythians broke into the Chersonese even during the government of Miltiadês son of Kimôn, nephew of Miltiadês the œkist, about forty years after the wall had been erected (Herodot. vi, 40). Again, Periklês reëstablished the cross-wall, on sending to the Chersonese a fresh band of one thousand Athenian settlers (Plutarch, Periklês, c. 19): lastly, Derkyllidas the Lacedæmonian built it anew, in consequence of loud complaints raised by the inhabitants of their defenceless condition, — about 397 B.C. (Xenophon, Hellen. iii, 2, 8–10.) So imperfect, however, did the protection prove, that about half a century afterwards, during the first years of the conquests of Philip of Macedon, an idea was entertained of digging through the isthmus, and converting the peninsula into an island (Demosthenês, Philippic ii, 6, p. 92, and De Halonneso, c. 10, p. 86); an idea, however, never carried into effect.

[2] Herodot. vi 38, 39.

[3] Herodot. v, 94. I have already said that I conceive this as a different [illegible] from that in which the poet Alkæus was engaged.

have been enfeebled at this time (somewhere between 537–527 B.C.) not only by the strides of Persian conquest on the mainland, but also by the ruinous defeat which they suffered from Polykratês and the Samians.[1] Hegesistratus maintained the place against various hostile attempts, throughout all the reign of Hippias, so that the Athenian possessions in those regions comprehended at this period both the Chersonese and Sigeium.[2] To the former of the two, Hippias sent out Miltiadês, nephew of the first œkist, as governor, after the death of his brother Stesagoras. The new governor found much discontent in the peninsula, but succeeded in subduing it by entrapping and imprisoning the principal men in each town. He farther took into his pay a regiment of five hundred mercenaries, and married Hegesipylê, daughter of the Thracian king Olorus.[3] It appears to have been about 515 B.C. that this second Miltiadês went out to the Chersonese.[4] He seems to have been obliged to quit it for a time, after the Scythian expedition of Darius, in consequence of having incurred the hostility of the Persians; but he was there from the beginning of the Ionic revolt until about 493 B.C., or two or three years before the battle of Marathon, on which occasion we shall find him acting commander of the Athenian army.

Both the Chersonese and Sigeium, though Athenian possessions were, however, now tributary and dependent on Persia. And it was to this quarter that Hippias, during his last years of alarm, looked for support in the event of being expelled from Athens: he calculated upon Sigeium as a shelter, and upon Æantidês, as well as Darius, as an ally. Neither the one nor the other failed him.

[1] Herodot. iii, 39.

[2] Herodot. vi, 104, 139, 140.

[3] Herodot. vi, 39–103. Cornelius Nepos, in his Life of Miltiadês, confounds in one biography the adventures of two persons, — Miltiadês son of Kypselus, the œkist, — and Miltiadês son of Kimôn, the victor of Marathon, — the uncle and the nephew.

[4] There is nothing that I know to mark the date except that it was earlier than the death of Hipparchus in 514 B.C., and also earlier than the expedition of Darius against the Scythians, about 516 B.C., in which expedition Miltiadês was engaged: see Mr. Clinton's Fasti Hellenici, and J. M. Schulze, Beitrag zu genaueren Zeitbestimmungen der Hellen. Geschichten von der 63sten bis zur 72sten Olympiade, p. 165, in the Kieler Philologische Studien 1841.

The same circumstances which alarmed Hippias, and rendered his dominion in Attica at once more oppressive and more odious, tended of course to raise the hopes of his enemies, the Athenian exiles, with the powerful Alkmæônids at their head. Believing the favorable moment to be come, they even ventured upon an invasion of Attica, and occupied a post called Leipsydrion in the mountain range of Parnês, which separates Attica from Bœotia.[1] But their schemes altogether failed: Hippias defeated and drove them out of the country. His dominion now seemed confirmed, for the Lacedæmonians were on terms of intimate friendship with him; and Amyntas king of Macedon, as well as the Thessalians were his allies. Yet the exiles whom he had beaten in the open field succeeded in an unexpected manœuvre, which, favored by circumstances, proved his ruin.

By an accident which had occurred in the year 548 B.C.,[2] the Delphian temple was set on fire and burnt. To repair this grave loss was an object of solicitude to all Greece; but the outlay required was exceedingly heavy, and it appears to have been long before the money could be collected. The Amphiktyons decreed that one-fourth of the cost should be borne by the Delphians themselves, who found themselves so heavily taxed by this assessment, that they sent envoys throughout all Greece to collect subscriptions in aid, and received, among other donations, from the Greek settlers in Egypt twenty minæ, besides a large present of alum from the Egyptian king Amasis: their munificent benefactor Crœsus fell a victim to the Persians in 546 B.C., so that his treasure was no longer open to them. The total sum required was three hundred talents (equal probably to about one hundred and fifteen thousand pounds sterling),[3] — a prodigious amount to be collected from the

[1] Herodot. v, 62. The unfortunate struggle at Leipsydrion became afterwards the theme of a popular song (Athenæus, xv, p. 695): see Hesychius, v, *Λειψύδριον*, and Aristotle, Fragm. *Ἀθηναίων Πολιτεία*, 37, ed. Neumann

If it be true that Alkibiadês, grandfather of the celebrated Alkibiadês took part with Kleisthenês and the Alkmæonid exiles in this struggle (see Isokratês, De Bigis, Or. xvi, p. 351), he must have been a mere youth.

[2] Pausan. x, 5, 5.

[3] Herodot. i, 50, ii, 180. I have taken the three hundred talents of Herodotus as being Æginæan talents, which are to Attic talents in the ratio of 5:3

dispersed Grecian cities, who acknowledged no common sovereign authority, and among whom the proportion reasonable to ask from each was so difficult to determine with satisfaction to all parties. At length, however, the money was collected, and the Amphiktyons were in a situation to make a contract for the building of the temple. The Alkmæônids, who had been in exile ever since the third and final acquisition of power by Peisistratus, took the contract; and in executing it, they not only performed the work in the best manner, but even went much beyond the terms stipulated; employing Parian marble for the frontage, where the material prescribed to them was coarse stone.[1] As was before remarked in the case of Peisistratus when he was in banishment, we are surprised to find exiles whose property had been confiscated so amply furnished with money, — unless we are to suppose that Kleisthenês the Alkmæônid, grandson of the Sikyonian Kleisthenês,[2] inherited through his mother wealth independent of Attica, and deposited it in the temple of the Samian Hêrê. But the fact is unquestionable, and they gained signal reputation throughout the Hellenic world for their liberal performance of so important an enterprise. That the erection took considerable time, we cannot doubt. It seems to have been finished, as far as

The Inscriptions prove that the accounts of the temple were kept by the Amphiktyons on the Æginæan scale of money: see Corpus Inscrip. Boeckh, No. 1688, and Boeckh, Metrologie, vii, 4.

[1] Herodot. vi, 62. The words of the historian would seem to imply that they only began to think of this scheme of building the temple after the defeat of Leipsydrion, and a year or two before the expulsion of Hippias; a supposition quite inadmissible, since the temple must have taken some years in building.

The loose and prejudiced statement in Philochorus, affirming that the Peisistratids caused the Delphian temple to be burnt, and also that they were at last deposed by the victorious arm of the Alkmæônids (Philochori Fragment. 70, ed. Didot) makes us feel the value of Herodotus and Thucydidês as authorities.

[2] Herodot. vi, 128; Cicero, De Legg. ii, 16. The deposit here mentioned by Cicero, which may very probably have been recorded in an inscription in the temple, must have been made before the time of the Persian conquest of Samos, — indeed, before the death of Polykratês in 522 B.C., after which period the island fell at once into a precarious situation, and very soon afterwards into the greatest calamities.

we can conjecture, about a year or two after the death of Hipparchus, — 512 B.C., — more than thirty years after the conflagration.

To the Delphians, especially, the rebuilding of their temple on so superior a scale was the most essential of all services, and their gratitude towards the Alkmæônids was proportionally great. Partly through such a feeling, partly through pecuniary presents, Kleisthenês was thus enabled to work the oracle for political purposes, and to call forth the powerful arm of Sparta against Hippias. Whenever any Spartan presented himself to consult the oracle, either on private or public business, the answer of the priestess was always in one strain, "Athens must be liberated." The constant repetition of this mandate at length extorted from the piety of the Lacedæmonians a reluctant compliance. Reverence for the god overcame their strong feeling of friendship towards the Peisistratids, and Anchimolius son of Aster was despatched by sea to Athens, at the head of a Spartan force to expel them. On landing at Phalêrum, however, he found them already forewarned and prepared, as well as farther strengthened by one thousand horse specially demanded from their allies in Thessaly. Upon the plain of Phalêrum, this latter force was found peculiarly effective, so that the division of Anchimolius was driven back to their ships with great loss and he himself slain.[1] The defeated armament had probably been small, and its repulse only provoked the Lacedæmonians to send a larger, under the command of their king Kleomenês in person, who on this occasion marched into Attica by land. On reaching the plain of Athens, he was assailed by the Thessalian horse, but repelled them in so gallant a style, that they at once rode off and returned to their native country; abandoning their allies with a faithlessness not unfrequent in the Thessalian character. Kleomenês marched on to Athens without farther resistance, and found himself, together with the Alkmæônids and the malcontent Athenians generally, in possession of the town. At that time there was no fortification except around the acropolis, into which Hippias retired with his mercenaries and the citizens most faithful to him; having taken care to provision it well beforehand, so that it

[1] Herodot. v, 62, 63.

was not less secure against famine than against assault. He might have defied the besieging force, which was noway prepared for a long blockade; but, not altogether confiding in his position, he tried to send his children by stealth out of the country; and in this proceeding the children were taken prisoners. To procure their restoration, Hippias consented to all that was demanded of him, and withdrew from Attica to Sigeium in the Troad within the space of five days.

Thus fell the Peisistratid dynasty in 510 B.C., fifty years after the first usurpation of its founder.[1] It was put down through the aid of foreigners,[2] and those foreigners, too, wishing well to it in their hearts, though hostile from a mistaken feeling of divine injunction. Yet both the circumstances of its fall, and the course of events which followed, conspire to show that it possessed few attached friends in the country, and that the expulsion of Hippias was welcomed unanimously by the vast majority of Athenians. His family and chief partisans would accompany him into exile, — probably as a matter of course, without requiring any formal sentence of condemnation; and an altar was erected in the acropolis, with a column hard by, commemorating both the past iniquity of the dethroned dynasty, and the names of all its members.[3]

[1] Herodot. v, 64, 65.

[2] Thucyd. vi, 56, 57.

[3] Thucyd. vi, 55. *ὡς ὁ τε βωμὸς σημαίνει, καὶ ἡ στήλη περὶ τῆς τῶν τυραννων ἀδικίας, ἡ ἐν τῇ Ἀθηναίων ἀκροπόλει σταθεῖσα.*

Dr. Thirlwall, after mentioning the departure of Hippias, proceeds as follows: "After his departure many severe measures were taken against his adherents, who appear to have been for a long time afterwards a formidable party. They were punished or repressed, some by death, others by exile or by the loss of their political privileges. The family of the tyrants was condemned to perpetual banishment, and appears to have been excepted from the most comprehensive decrees of amnesty passed in later times." (Hist. of Gr. ch. xi, vol. ii. p. 81.)

I cannot but think that Dr. Thirlwall has here been misled by insufficient authority. He refers to the oration of Andokidês de Mysteriis, sects. 106 and 78 (sect. 106 coincides in part with ch. 18, in the ed. of Dobree). An attentive reading of it will show that it is utterly unworthy of credit in regard to matters anterior to the speaker by one generation or more. The orators often permit themselves great license in speaking of past facts, but Andokidês in this chapter passes the bounds even of rhetorical license First, he states something not bearing the least analogy to the narrative of

Herodotus as to the circumstances preceding the expulsion of the Peisistratids, and indeed tacitly setting aside that narrative; next, he actually jumbles together the two capital and distinct exploits of Athens, — the battle of Marathon and the repulse of Xerxês ten years after it. I state this latter charge in the words of Sluiter and Valckenaer, before I consider the former charge: "Verissime ad hæc verba notat Valckenaerius — Confundere videtur Andocidês diversissima; Persica sub Miltiade et Dario et victoriam Marathoniam (v, 14) — quæque evenere sub Themistocle, Xerxis gesta. Hic urbem incendio delevit, non ille (v, 20). Nihil magis manifestum est, quam diversa ab oratore confundi." (Sluiter, Lection. Andocideæ p. 147.)

The criticism of these commentators is perfectly borne out by the words of the orator, which are too long to find a place here. But immediately prior to those words he expresses himself as follows, and this is the passage which serves as Dr. Thirlwall's authority: *Οἱ γὰρ πατέρες οἱ ὑμέτεροι, γενομένων τῇ πόλει κακῶν μεγάλων, ὅτε οἱ τύραννοι εἶχον τὴν πόλιν, ὁ δὲ δῆμος ἐφυγε, νικήσαντες μαχόμενοι τοὺς τυράννους ἐπὶ Παλληνίῳ, στρατηγοῦντος Λεωγόρου τοῦ προπάππου τοῦ ἐμοῦ, καὶ Χαρίου οὗ ἐκεῖνος τὴν θυγατέρα εἶχεν ἐξ ἧς ὁ ἡμέτερος ἦν πάππος, κατελθόντες εἰς τὴν πατρίδα τοὺς μὲν ἀπέκτειναν, τῶν δὲ φυγὴν κατέγνωσαν, τοὺς δὲ μένειν ἐν τῇ πόλει ἐάσαντες ἠτίμωσαν.*

Both Sluiter (Lect. And. p. 8) and Dr. Thirlwall (Hist. p. 80) refer this alleged victory of Leogoras and the Athenian demus to the action described by Herodotus (v, 64) as having been fought by Kleomenês of Sparta against the Thessalian cavalry. But the two events have not a single circumstance in common, except that each is a victory over the Peisistratidæ or their allies: nor could they well be the same event, described in different terms, seeing that Kleomenês, marching from Sparta to Athens, could not have fought the Thessalians at Pallênê, which lay on the road from *Marathon* to Athens. Pallênê was the place where Peisistratus, advancing from Marathon to Athens, on occasion of his second restoration, gained his complete victory over the opposing party, and marched on afterwards to Athens without farther resistance (Herodot. i, 63).

If, then, we compare the statement given by Andokidês of the preceding circumstances, whereby the dynasty of the Peisistratids was put down, with that given by Herodotus, we shall see that the two are radically different: we cannot blend them together, but must make our election between them. Not less different are the representations of the two as to the circumstances which immediately ensued on the fall of Hippias: they would scarcely appear to relate to the same event. That "the adherents of the Peisistratidæ were punished or repressed, some by death, others by exile, or by the loss of their political privileges," which is the assertion of Andokidês and Dr. Thirlwall, is not only not stated by Herodotus, but is highly improbable, if we accept the facts which he does state; for he tells us that Hippias capitulated and agreed to retire while possessing ample means of resistance, — simply from regard to the safety of his children. It is not to be supposed that he would leave his intimate partisans exposed to danger; such of them

as felt themselves obnoxious would naturally retire along with him; and if this be what is meant by "many persons condemned to exile," here is no reason to call it in question. But there is little probability that any one was put to death, and still less probability that any were punished by the loss of their political privileges. Within a year afterwards came the comprehensive constitution of Kleisthenês, to be described in the following chapter, and I consider it eminently unlikely that there were a considerable class of residents in Attica left out of this constitution, under the category of partisans of Peisistratus: indeed, the fact cannot be so, if it be true that the very first person banished under the Kleisthenean ostracism was a person named Hipparchus, a kinsman of Peisistratus (Androtion, Fr. 5, ed. Didot; Harpokration, v, Ἵππαρχος); and this latter circumstance depends upon evidence better than that of Andokidês. That there were a party in Attica attached to the Peisistratids, I do not doubt; but that they were "a powerful party," (as Dr. Thirlwall imagines,) I see nothing to show; and the extraordinary vigor and unanimity of the Athenian people under the Kleisthenean constitution will go far to prove that such could not have been the case.

I will add another reason to evince how completely Andokidês misconceives the history of Athens between 510–480 B.C. He says that when the Peisistratids were put down, many of their partisans were banished, many others allowed to stay at home with the loss of their political privileges; but that afterwards, when the overwhelming dangers of the Persian invasion supervened, the people passed a vote to restore the exiles and to remove the existing disfranchisements at home. He would thus have us believe that the exiled partisans of the Peisistratids were all restored, and the disfranchised partisans of the Peisistratids all enfranchised, just at the moment of the Persian invasion, and with the view of enabling Athens better to repel that grave danger. This is nothing less than a glaring mistake; for the first Persian invasion was undertaken with the express view of restoring Hippias, and with the presence of Hippias himself at Marathon; while the second Persian invasion was also brought on in part by the instigation of his family. Persons who had remained in exile or in a state of disfranchisement down to that time, in consequence of their attachment to the Peisistratids, could not in common prudence be called into action at the moment of peril, to help in repelling Hippias himself. It is very true that the exiles and the disfranchised were readmitted, shortly before the invasion of Xerxês, and under the then pressing calamities of the state. But these persons were not philo-Peisistratids; they were a number gradually accumulated from the sentences of exile and (atimy or) disfranchisement every year passed at Athens, — for these were punishments applied by the Athenian law to various crimes and public omissions, — the persons so sentenced were not politically disaffected, and their aid would then be of use in defending the state against a foreign enemy.

In regard to "the exception of the family of Peisistratus from the most comprehensive decrees of amnesty passed in later times," I will also

remark that, in the decree of amnesty, there is no mention of them by name, nor any special exception made against them: among a list of various categories excepted, those are named "who have been condemned to death or exile either as murderers or as despots," (ἢ σφαγεῦσιν ἢ τυράννοις, Andokid. c. 13.) It is by no means certain that the *descendants* of Peisistratus would be comprised in this exception, which mentions only the person himself condemned; but even if this were otherwise, the exception is a mere continuance of similar words of exception in the old Solonian law, anterior to Peisistratus; and, therefore, affords no indication of particular feeling against the Peisistratids.

Andokidês is a useful authority for the politics of Athens in his own time (between 420–390 B.C.), but in regard to the previous history of Athens between 510–480 B.C., his assertions are so loose, confused, and unscrupulous, that he is a witness of no value. The mere circumstance noted by Valckenaer, that he has confounded together Marathon and Salamis, would be sufficient to show this; but when we add to such genuine ignorance his mention of his two great-grandfathers in prominent and victorious leadership, which it is hardly credible that they could ever have occupied, — when we recollect that the facts which he alleges to have preceded and accompanied the expulsion of the Peisistratids are not only at variance with those stated by Herodotus, but so contrived as to found a factitious analogy for the cause which he is himself pleading, — we shall hardly be able to acquit him of something worse than ignorance in his deposition

---

CHAPTER XXXI.

GRECIAN AFFAIRS AFTER THE EXPULSION OF THE PEISISTRATIDS. — REVOLUTION OF KLEISTHENES AND ESTABLISHMENT OF DEMOCRACY AT ATHENS

With Hippias disappeared the mercenary Thracian garrison, upon which he and his father before him had leaned for defence as well as for enforcement of authority; and Kleomenês with his Lacedæmonian forces retired also, after staying only long enough to establish a personal friendship, productive subsequently of important consequences, between the Spartan king and the Athenian Isagoras. The Athenians were thus left to themselves, without any foreign interference to constrain them in their political arrangements.

It has been mentioned in the preceding chapter, that the Peisistratids had for the most part respected the forms of the Solonian constitution: the nine archons, and the probouleutic or preconsidering Senate of Four Hundred (both annually changed), still continued to subsist, together with occasional meetings of the people, — or rather of such portion of the people as was comprised in the gentes, phratries, and four Ionic tribes. The timocratic classification of Solon (or quadruple scale of income and admeasurement of political franchises according to it) also continued to subsist, — but all within the tether and subservient to the purposes of the ruling family, who always kept one of their number as real master, among the chief administrators, and always retained possession of the acropolis as well as of the mercenary force.

That overawing pressure being now removed by the expulsion of Hippias, the enslaved forms became at once endued with freedom and reality. There appeared again, what Attica had not known for thirty years, declared political parties, and pronounced opposition between two men as leaders, — on one side, Isagoras son of Tisander, a person of illustrious descent, — on the other, Kleisthenês the Alkmæônid, not less illustrious, and possessing at this moment a claim on the gratitude of his countrymen as the most persevering as well as the most effective foe of the dethroned despots. In what manner such opposition was carried on we are not told. It would seem to have been not altogether pacific; but at any rate, Kleisthenês had the worst of it, and in consequence of this defeat, says the historian, "he took into partnership the people, who had been before excluded from everything."[1] His partnership with the people gave birth to the Athenian democracy: it was a real and important revolution.

The political franchise, or the character of an Athenian citizen, both before and since Solon, had been confined to the primiti[ve]

---

[1] Herodot. v, 66–69: ἐσσούμενος δὲ ὁ Κλεισθένης τὸν δῆμον προσεταιρίζεται — ὡς γὰρ δὴ τὸν Ἀθηναίων δῆμον, πρότερον ἀπωσμένον πάντων τότε πρὸς τὴν ἑωυτοῦ μοίρην προσεθήκατο, etc.

four Ionic tribes, each of which was an aggregate of so many close corporations or quasi-families, — the gentes and the phratries. None of the residents in Attica, therefore, except those included in some gens or phratry, had any part in the political franchise. Such non-privileged residents were probably at all times numerous, and became more and more so by means of fresh settlers: moreover, they tended most to multiply in Athens and Peiræus, where emigrants would commonly establish themselves. Kleisthenês broke down the existing wall of privilege, and imparted the political franchise to the excluded mass. But this could not be done by enrolling them in new gentes or phratries, created in addition to the old; for the gentile tie was founded upon old faith and feeling, which, in the existing state of the Greek mind, could not be suddenly conjured up as a bond of union for comparative strangers: it could only be done by disconnecting the franchise altogether from the Ionic tribes as well as from the gentes which constituted them, and by redistributing the population into new tribes with a character and purpose exclusively political. Accordingly, Kleisthenês abolished the four Ionic tribes, and created in their place ten new tribes founded upon a different principle, independent of the gentes and phratries. Each of his new tribes comprised a certain number of demes or cantons, with the enrolled proprietors and residents in each of them. The demes taken altogether included the entire surface of Attica, so that the Kleisthenean constitution admitted to the political franchise all the free native Athenians; and not merely these, but also many Metics, and even some of the superior order of slaves.[1] Putting out of sight the general body of

[1] Aristot. Polit. iii, 1, 10, vi, 2, 11. Κλεισθένης, — πολλοὺς ἐφυλέτευσε ξένους καὶ δούλους μετοίκους.

Several able critics, and Dr. Thirlwall among the number, consider this passage as affording no sense, and assume some conjectural emendation to be indispensable; though there is no particular emendation which suggests itself as preëminently plausible. Under these circumstances, I rather prefer to make the best of the words as they stand; which, though unusual, seem to me not absolutely inadmissible. The expression ξένος μέτοικος (which is a perfectly good one, as we find in Aristoph. Equit. 347, — εἶπον δικαιότατον εἶπας εὖ κατὰ ξένον μετοίκου) may be considered as the correlative to δούλους μετοίκους, — the last word being construed both with δούλους and with ξένους. I apprehend that there always must have been in Attica a

slaves, and regarding only the free inhabitants, it was in point of fact a scheme approaching to universal suffrage, both political and judicial.

The slight and cursory manner in which Herodotus announces this memorable revolution tends to make us overlook its real importance. He dwells chiefly on the alteration in the number and names of the tribes: Kleisthenês, he says, despised the Ionians so much, that he would not tolerate the continuance in Attica of the four tribes which prevailed in the Ionic cities,[1] deriving their names from the four sons of Ion, — just as his grandfather, the Sikyonian Kleisthenês, hating the Dorians, had degraded and nicknamed the three Dorian tribes at Sikyôn. Such is the representation of Herodotus, who seems himself to have entertained some contempt for the Ionians,[2] and therefore to have suspected a similar feeling where it had no real existence. But the scope of Kleisthenês was something far more extensive: he abolished the four ancient tribes, not because they were Ionic, but because they had become incommensurate with the existing condition of the Attic people, and because such abolition procured both for himself and for his political scheme new as well as hearty allies. And indeed, if we study the circumstances of the case, we shall see very obvious reasons to suggest the proceeding. For more than thirty years — an entire generation — the old constitution had been a mere empty formality, working only in subservience to the reigning dynasty, and stripped of all real controlling power. We may be very sure, therefore, that both the Senate of Four Hundred and the popular assembly, divested of that free speech which imparted to them

certain number of intelligent slaves living apart from their masters (χωρὶς οἰκοῦντες), in a state between slavery and freedom, working partly on condition of a fixed payment to him, partly for themselves, and perhaps continuing to pass nominally as slaves after they had bought their liberty by instalments. Such men would be δοῦλοι μέτοικοι: indeed, there are cases in which δοῦλοι signifies *freedmen* (Meier, De Gentilitate Atticâ, p. 6): they must have been industrious and pushing men, valuable partisans to a political revolution. See K. F. Hermann, Lehrbuch der Griech. Staats Alterth ch. 111, not. 15.

[1] Herodot. v, 69. Κλεισθένης — ὑπεριδὼν Ἴωνας, ἵνα μὴ σφίσι αἱ αὐταὶ ἶσαι φυλαὶ καὶ Ἴωσι.

[2] Such a disposition seems evident in Herodot. i, 143

not only all their value but all their charm, had come to be of little public estimation, and were probably attended only by a few partisans; and thus the difference between qualified citizens and men not so qualified, — between members of the four old tribes, and men not members, — became during this period practically effaced. This, in fact, was the only species of good which a Grecian despotism ever seems to have done: it confounded the privileged and the non-privileged under one coercive authority common to both, so that the distinction between the two was not easy to revive when the despotism passed away. As soon as Hippias was expelled, the senate and the public assembly regained their efficiency. But had they been continued on the old footing, including none except members of the four tribes, these tribes would have been reinvested with a privilege which in reality they had so long lost, that its revival would have seemed an odious novelty, and the remaining population would probably not have submitted to it. If, in addition, we consider the political excitement of the moment, — the restoration of one body of men from exile, and the departure of another body into exile, — the outpouring of long-suppressed hatred, partly against these very forms, by the corruption of which the despot had reigned, — we shall see that prudence as well as patriotism dictated the adoption of an enlarged scheme of government. Kleisthenês had learned some wisdom during his long exile; and as he probably continued, for some time after the introduction of his new constitution, to be the chief adviser of his countrymen, we may consider their extraordinary success as a testimony to his prudence and skill not less than to their courage and unanimity.

Nor does it seem unreasonable to give him credit for a more generous forward movement than what is implied in the literal account of Herodotus. Instead of being forced against his will to purchase popular support by proposing this new constitution, Kleisthenês may have proposed it before, during the discussions which immediately followed the retirement of Hippias; so that the rejection of it formed the ground of quarrel — and no other ground is mentioned — between him and Isagoras. The latter doubtless found sufficient support, in the existing senate and public assembly, to prevent it from being carried without an actual appeal to the people, and his opposition to it is not difficult to

understand. For, necessary as the change had become, it was not the less a shock to ancient Attic ideas. It radically altered the very idea of a tribe, which now became an aggregation of demes, not of gentes, — of fellow-demots, not of fellow-gentiles; and it thus broke up those associations, religious, social, and political, between the whole and the parts of the old system, which operated powerfully on the mind of every old-fashioned Athenian. The patricians at Rome, who composed the gentes and curiæ, — and the plebs, who had no part in these corporations, — formed for a long time two separate and opposing fractions in the same city, each with its own separate organization. It was only by slow degrees that the plebs gained ground, and the political value of the patrician gens was long maintained alongside of and apart from the plebeian tribe. So too in the Italian and German cities of the Middle Ages, the patrician families refused to part with their own separate political identity, when the guilds grew up by the side of them; even though forced to renounce a portion of their power, they continued to be a separate fraternity, and would not submit to be regimented anew, under an altered category and denomination, along with the traders who had grown into wealth and importance.[1] But the reform of Kleisthenês effected this change all at once, both as to the name and as to the reality. In some cases, indeed, that which had been the name of a gens was retained as the name of a deme, but even then the old gentiles were ranked indiscriminately among the remaining demots; and the Athenian people, politically considered, thus became one homogeneous whole, distributed for convenience into parts, numerical, local, and politically equal. It is, however, to be remembered, that while the four Ionic tribes were abolished, the gentes and phratries which composed them were left untouched, and continued to subsist as family and religious associations, though carrying with them no political privilege.

The ten newly-created tribes, arranged in an established order of precedence, were called, — Erechthêis, Ægêis, Pandiônis,

[1] In illustration of what is here stated, see the account of the modifications of the constitution of Zurich, in Blüntschli, Staats und Rechts Geschichte der Stadt Zurich, book iii, ch. 2, p. 322; also, Kortüm, Entstehungs Geschichte der Freistädtischen Bünde im Mittelalter, ch. 5, pp. 74–75.

Leontis, Akamantis, Œnêis, Kekrōpis, Hippothoönis, Æantis, Antiochis; names borrowed chiefly from the respected heroes of Attic legend.[1] This number remained unaltered until the year 305 B.C., when it was increased to twelve by the addition of two new tribes, Antigonias and Demetrias, afterwards designated anew by the names of Ptolemais and Attalis. The mere names of these last two, borrowed from living kings, and not from legendary heroes, betray the change from freedom to subservience at Athens. Each tribe comprised a certain number of demes, — cantons, parishes, or townships, — in Attica. But the total number of these demes is not distinctly ascertained; for though we know that, in the time of Polemô (the third century B.C.), it was one hundred and seventy-four, we cannot be sure that it had always remained the same; and several critics construe the words of Herodotus to imply that Kleisthenês at first recognized exactly one hundred demes, distributed in equal proportion among his ten tribes.[2] But such construction of the words is more than doubtful, while the fact itself is improbable; partly because if the change of number had been so considerable as the difference between one hundred and one hundred and seventy-four, some positive evidence of it would probably be found, — partly because Kleisthenês would, indeed, have a motive to render the amount of citizen population nearly equal, but no motive to render the number of demes equal, in each of the ten tribes. It is well known how great is the force of local habits, and how unalterable are parochial or cantonal boundaries. In the absence of

[1] Respecting these Eponymous Heroes of the Ten Tribes, and the legends connected with them, see chapter viii of the Ἐπιτάφιος Λόγος, erroneously ascribed to Demosthenês.

[2] Herodot. v, 69. *δέκα δὲ καὶ τοὺς δήμους κατένεμε ἐς τὰς φυλάς.*

Schömann contends that Kleisthenês established exactly one hundred demes to the ten tribes (De Comitiis Atheniensium, Præf. p. xv and p. 363, and Antiquitat. Jur. Pub. Græc. ch. xxii, p. 260), and K. F. Hermann (Lehrbuch der Griech. Staats Alt. ch. 111) thinks that this is what Herodotus meant to affirm though he does not believe the fact to have really stood so.

I incline, as the least difficulty in the case, to construe *δέκα* with *φυλὰς* and not with *δήμους*, as Wachsmuth (i, 1, p. 271) and Dieterich (De Clisthene, a treatise cited by K. F. Hermann, but which I have not seen) construe it.

proof to the contrary, therefore, we may reasonably suppose the number and circumscription of the demes, as found or modified by Kleisthenês, to have subsisted afterwards with little alteration, at least until the increase in the number of the tribes.

There is another point, however, which is at once more certain, and more important to notice. The demes which Kleisthenês assigned to each tribe were in no case all adjacent to each other; and therefore the tribe, as a whole, did not correspond with any continuous portion of the territory, nor could it have any peculiar local interest, separate from the entire community. Such systematic avoidance of the factions arising out of neighborhood will appear to have been more especially necessary, when we recollect that the quarrels of the Parali, the Diakrii, the Pediaki, during the preceding century, had all been generated from local feud, though doubtless artfully fomented by individual ambition. Moreover, it was only by this same precaution that the local predominance of the city, and the formation of a city-interest distinct from that of the country, was obviated; which could hardly have failed to arise had the city by itself constituted either one deme or one tribe. Kleisthenês distributed the city (or found it already distributed) into several demes, and those demes among several tribes; while Peiræus and Phalêrum, each constituting a separate deme, were also assigned to different tribes; so that there were no local advantages either to bestow predominance, or to create a struggle for predominance, of one tribe over the rest.[1]

[1] The deme *Melitê* belonged to the tribe Kekropis; *Kollytus*, to the tribe Ægêis; *Kydathenæon*, to the tribe Pandionis; *Kerameis*, or *Kerameikus*, to the Akamantis; *Skambônidæ*, to the Leontis.

All these five were demes within the city of Athens, and all belonged to different tribes.

Peiræus belonged to the Hippothoöntis; *Phalêrum*, to the Æantis; *Xypetê*, to the Kekropis; *Thymætadæ*, to the Hippothoöntis. These four demes, adjoining to each other, formed a sort of quadruple local union, for festivals and other purposes, among themselves; though three of them belonged to different tribes.

See the list of the Attic demes, with a careful statement of their localities in so far as ascertained, in Professor Ross, Die Demen von Attika, Halle, 1846. The distribution of the city-demes, and of Peiræus and Phalêrum, among different tribes, appears to me a clear proof of the intention of the original distributors. It shows that they wished from the beginning to

Each deme had its own local interests to watch over: but the tribe was a mere aggregate of demes for political, military, and religious purposes, with no separate hopes or fears, apart from the whole state. Each tribe had a chapel, sacred rites and festivals, and a common fund for such meetings, in honor of its eponymous hero, administered by members of its own choice;[1] and the statues of all the ten eponymous heroes, fraternal patrons of the democracy, were planted in the most conspicuous part of the agora of Athens. In the future working of the Athenian government, we shall trace no symptom of disquieting local factions, — a capital amendment, compared with the disputes of the preceding century, and traceable, in part, to the absence of border-relations between demes of the same tribe.

The deme now became the primitive constituent element of the commonwealth, both as to persons and as to property. It had its own demarch, its register of enrolled citizens, its collective property, its public meetings and religious ceremonies, its taxes levied and administered by itself. The register of qualified citizens[2] was kept by the demarch, and the inscription of new citizens took place at the assembly of the demots, whose legitimate sons were enrolled on attaining the age of eighteen, and their adopted sons at any time when presented and sworn to by the adopting citizen. The citizenship could only be granted by a public vote of the people, but wealthy non-freemen were enabled sometimes to evade this law and purchase admission upon the register of some poor deme, probably by means of a fictitious adoption. At

make the demes constituting each tribe discontinuous, and that they desired to prevent both the growth of separate tribe-interests and ascendency of one tribe over the rest. It contradicts the belief of those who suppose that the tribe was at first composed of continuous demes, and that the breach of continuity arose from subsequent changes.

Of course there were many cases in which adjoining demes belonged to the same tribe; but not one of the ten tribes was made up altogether of adjoining demes.

[1] See Boeckh, Corp. Inscriptt. Nos. 85, 128, 213, etc.: compare Demosthen. cont. Theokrin. c. 4, p. 1326 R.

[2] We may remark that this register was called by a special name, the Lexiarchic register; while the primitive register of phrators and gentiles always retained, even in the time of the orators, its original name of the common register — Harpokration, v. *Κοινὸν γραμματεῖον καὶ ληξιαρχικόν.*

the meetings of the demots, the register was called over, and it sometimes happened that some names were expunged, — in which case the party thus disfranchised had an appeal to the popular judicature.[1] So great was the local administrative power, however, of these demes, that they are described as the substitute, under the Kleisthenean system, for the naukraries under the Solonian and ante-Solonian. The trittyes and naukraries, though nominally preserved, and the latter (as some affirm) augmented in number from forty-eight to fifty, appear henceforward as of little public importance.

Kleisthenês preserved, but at the same time modified and expanded, all the main features of Solon's political constitution; the public assembly, or ekklesia, — the preconsidering senate, composed of members from all the tribes, — and the habit of annual election, as well as annual responsibility of magistrates, by and to the ekklesia. The full value must now have been felt of possessing such preëxisting institutions to build upon, at a moment of perplexity and dissension. But the Kleisthenean ekklesia acquired new strength, and almost a new character, from the great increase of the number of citizens qualified to attend it; while the annually-changed senate, instead of being composed of four hundred members taken in equal proportion from each of the old four tribes, was enlarged to five hundred, taken equally from each of the new ten tribes. It now comes before us, under the name of Senate of Five Hundred, as an active and indispensable body throughout the whole Athenian democracy: and the practice now seems to have begun (though the period of commencement cannot be decisively proved), of determining the names of the senators by lot. Both the senate thus constituted, and the public assembly, were far more popular and vigorous than they had been under the original arrangement of Solon.

The new constitution of the tribes, as it led to a change in the annual senate, so it transformed, no less directly, the military

[1] See Schömann, Antiq. Jur. P. Græc. ch. xxiv. The oration of Demosthenês against Eubulidês is instructive about these proceedings of the assembled demots: compare Harpokration, v, *Διαψήφισις*, and Meier, De Bonis Damnatorum, ch. xii, p. 78, etc.

[2] Aristot. Fragment. de Republ., ed. Neumann, — *Ἀθην. πολιτ.* Fr. 40 p. 88; Schol. ad Aristophan. Ran. 37; Harpokration, v, *Δήμαρχος — Ναυκρασικά*; Photius, v, *Ναυκραρία.*

arrangements of the state, both as to soldiers and as to officers. The citizens called upon to serve in arms were now marshalled according to tribes, — each tribe having its own taxiarchs as officers for the hoplites, and its own phylarch at the head of the horsemen. Moreover, there were now created for the first time ten stratêgi, or generals, one from each tribe; and two hipparchs, for the supreme command of the horsemen. Under the prior Athenian constitution it appears that the command of the military force had been vested in the third archon, or polemarch, no stratêgi then existing; and even after the latter had been created, under the Kleisthenean constitution, the polemarch still retained a joint right of command along with them, — as we are told at the battle of Marathon, where Kallimachus the polemarch not only enjoyed an equal vote in the council of war along with the ten stratêgi, but even occupied the post of honor on the right wing.[1] The ten generals, annually changed, are thus (like the ten tribes) a fruit of the Kleisthenean constitution, which was at the same time powerfully strengthened and protected by such remodelling of the military force. The functions of the generals becoming more extensive as the democracy advanced, they seem to have acquired gradually not merely the direction of military and naval affairs, but also that of the foreign relations of the city generally, — while the nine archons, including the polemarch, were by degrees lowered down from that full executive and judicial competence which they had once enjoyed, to the simple ministry of police and preparatory justice. Encroached upon by the stratêgi on one side, they were also restricted in efficiency by the rise of the popular dikasteries or numerous jury-courts, on the other. We may be very sure that these popular dikasteries had not been permitted to meet or to act under the despotism of the Peisistratids, and that the judicial business of the city must then have been conducted partly by the Senate of Areopagus, partly by the archons; perhaps with a nominal responsibility of the latter at the end of their year of office to an acquiescent ekklesia. And if we even assume it to be true, as some writers contend, that the habit of direct popular judicature, over and above this annual trial of responsibility, had been partially introduced by Solon, it must have

[1] Herodot. vi, 109–111

been discontinued during the long coercion exercised by the supervening dynasty. But the outburst of popular spirit, which lent force to Kleisthenês, doubtless carried the people into direct action as jurors in the aggregate Heliæa, not less than as voters in the ekklesia, — and the change was thus begun which contributed to degrade the archons from their primitive character as judges, into the lower function of preliminary examiners and presidents of a jury. Such convocation of numerous juries, beginning first with the aggregate body of sworn citizens above thirty years of age, and subsequently dividing them into separate bodies or pannels, for trying particular causes, became gradually more frequent and more systematized: until at length, in the time of Periklês, it was made to carry a small pay, and stood out as one of the most prominent features of Athenian life. We cannot particularize the different steps whereby such final development was attained, and the judicial competence of the archon cut down to the mere power of inflicting a small fine; but the first steps of it are found in the revolution of Kleisthenês, and it seems to have been consummated by the reforms of Periklês. Of the function exercised by the nine archons as well as by many other magistrates and official persons at Athens, in convoking a dikastery, or jury-court, bringing on causes for trial, — and presiding over the trial, — a function constituting one of the marks of superior magistracy, and called the Hegemony, or presidency of a dikastery, — I shall speak more at length hereafter. At present, I wish merely to bring to view the increased and increasing sphere of action on which the people entered at the memorable turn of affairs now before us.

The financial affairs of the city underwent at this epoch as complete a change as the military: in fact, the appointment of magistrates and officers by tens, one from each tribe, seems to have become the ordinary practice. A board of ten, called Apodektæ, were invested with the supreme management of the exchequer, dealing with the contractors as to those portions of the revenue which were farmed, receiving all the taxes from the collectors, and disbursing them under competent authority. The first nomination of this board is expressly ascribed to Kleisthenês,[1] as a substitute for certain persons called Kôlakretæ, who

[1] Harpokration, v, Ἀποδέκται.

had performed the same function before, and who were now retained only for subordinate services. The duties of the apodektæ were afterwards limited to receiving the public income, and paying it over to the ten treasurers of the goddess Athênê, by whom it was kept in the inner chamber of the Parthenon, and disbursed as needed; but this more complicated arrangement cannot be referred to Kleisthenês. From his time forward too, the Senate of Five Hundred steps far beyond its original duty of preparing matters for the discussion of the ekklesia: it embraces, besides, a large circle of administrative and general superintendence, which hardly admits of any definition. Its sittings become constant, with the exception of special holidays, and the year is distributed into ten portions called Prytanies, — the fifty senators of each tribe taking by turns the duty of constant attendance during one prytany, and receiving during that time the title of The Prytanes: the order of precedence among the tribes in these duties was annually determined by lot. In the ordinary Attic year of twelve lunar months, or three hundred and fifty-four days, six of the prytanies contained thirty-five days, four of them contained thirty-six: in the intercalated years of thirteen months, the number of days was thirty-eight and thirty-nine respectively. Moreover, a farther subdivision of the prytany into five periods of seven days each, and of the fifty tribe-senators into five bodies of ten each, was recognized: each body of ten presided in the senate for one period of seven days, drawing lots every day among their number for a new chairman, called Epistatês, to whom during his day of office were confided the keys of the acropolis and the treasury, together with the city seal. The remaining senators, not belonging to the prytanizing tribe, might of course attend if they chose; but the attendance of nine among them, one from each of the remaining nine tribes, was imperatively necessary to constitute a valid meeting, and to insure a constant representation of the collective people.

During those later times known to us through the great orators, the ekklesia, or formal assembly of the citizens, was convoked four times regularly during each prytany, or oftener if necessity required, — usually by the senate, though the stratêgi had also the power of convoking it by their own authority. It was presided over by the prytanes, and questions were put to the

vote by their epistatês, or chairman; but the nine representatives of the non-prytanizing tribes were always present as a matter of course, and seem, indeed, in the days of the orators, to have acquired to themselves the direction of it, together with the right of putting questions for the vote,[1] — setting aside wholly or partially the fifty prytanes. When we carry our attention back, however, to the state of the ekklesia, as first organized by Kleisthenês (I have already remarked that expositors of the Athenian constitution are too apt to neglect the distinction of times, and to suppose that what was the practice between 400–330 B.C. had been always the practice), it will appear probable that he provided one regular meeting in each prytany, and no more; giving to the senate and the stratêgi power of convening special meetings if needful, but establishing one ekklesia during each prytany, or ten in the year, as a regular necessity of state. How often the ancient ekklesia had been convoked during the interval between Solon and Peisistratus, we cannot exactly say, — probably but seldom during the year. But under the Peisistratids, its convocation had dwindled down into an inoperative formality; and the reëstablishment of it by Kleisthenês, not merely with plenary determining powers, but also under full notice and preparation of matters beforehand, together with the best securities for orderly procedure, was in itself a revolution impressive to the mind of every Athenian citizen. To render the ekklesia efficient, it was indispensable that its meetings should be both frequent and free. Men thus became trained to the duty both of speakers and hearers, and each man, while he felt that he exercised his share of influence on the decision, identified his own safety and happiness with the vote of the majority, and became familiarized with the notion of a sovereign authority which he neither could nor ought to resist. This is an idea new to the Athenian bosom; and with it came the feelings sanctifying free speech and equal law, — words which no Athenian citizen ever afterwards heard unmoved: together with that sentiment of the entire commonwealth as one and indivisible, which always over-

[1] See the valuable treatise of Schömann, De Comitiis, *passim*; also his Antiq. Jur. Publ. Gr. ch. xxxi; Harpokration, v, Κυρία Ἐκκλησια; Pollux, viii, 95.

ruled, though it did not supplant, the local and cantonal special ties. It is not too much to say that these patriotic and ennobling impulses were a new product in the Athenian mind, to which nothing analogous occurs even in the time of Solon. They were kindled in part doubtless by the strong reaction against the Peisistratids, but still more by the fact that the opposing leader, Kleisthenês, turned that transitory feeling to the best possible account, and gave to it a vigorous perpetuity, as well as a well-defined positive object, by the popular elements conspicuous in his constitution. His name makes less figure in history than we should expect, because he passed for the mere renovator of Solon's scheme of government after it had been overthrown by Peisistratus. Probably he himself professed this object, since it would facilitate the success of his propositions: and if we confine ourselves to the letter of the case, the fact is in a great measure true, since the annual senate and the ekklesia are both Solonian, — but both of them under his reform were clothed in totally new circumstances, and swelled into gigantic proportions How vigorous was the burst of Athenian enthusiasm, altering instantaneously the position of Athens among the powers of Greece, we shall hear presently from the lips of Herodotus, and shall find still more unequivocally marked in the facts of his history.

But it was not only the people formally installed in their ekklesia, who received from Kleisthenês the real attributes of sovereignty, — it was by him also that the people were first called into direct action as dikasts, or jurors. I have already remarked, that this custom may be said, in a certain limited sense, to have begun in the time of Solon, since that lawgiver invested the popular assembly with the power of pronouncing the judgment of accountability upon the archons after their year of office. Here, again, the building, afterwards so spacious and stately, was erected on a Solonian foundation, though it was not itself Solonian. That the popular dikasteries, in the elaborate form in which they existed from Periklês downward, were introduced all at once by Kleisthenês, it is impossible to believe; yet the steps by which they were gradually wrought out are not distinctly discoverable. It would rather seem, that at first only the aggregate body of citizens above thirty years of age exercised judicial

functions, being specially convoked and sworn to try persons accused of public crimes, and when so employed bearing the name of the heliæa, or heliasts; private offences and disputes between man and man being still determined by individual magistrates in the city, and a considerable judicial power still residing in the Senate of Areopagus. There is reason to believe that this was the state of things established by Kleisthenês, and which afterwards came to be altered by the greater extent of judicial duty gradually accruing to the heliasts, so that it was necessary to subdivide the collective heliæa. According to the subdivision, as practised in the times best known, six thousand citizens above thirty years of age were annually selected by lot out of the whole number, six hundred from each of the ten tribes: five thousand of these citizens were arranged in ten pannels or decuries of five hundred each, the remaining one thousand being reserved to fill up vacancies in case of death or absence among the former. The whole six thousand took a prescribed oath, couched in very striking words, and every man received a ticket inscribed with his own name as well as with a letter designating his decury. When there were causes or crimes ripe for trial, the thesmothets, or six inferior archons, determined by lot, first, which decuries should sit, according to the number wanted, — next, in which court, or under the presidency of what magistrate, the decury B or E should sit, so that it could not be known beforehand in what cause each would be judge. In the number of persons who actually attended and sat, however, there seems to have been much variety, and sometimes two decuries sat together.[1] The arrangement here described, we must recollect, is given to us as belonging to those times when the dikasts received a regular pay, after every day's sitting; and it can hardly have long con-

[1] See in particular on this subject the treatise of Schömann, De Sortitione Judicum (Gripswald, 1820), and the work of the same author, Antiq. Jur. Publ. Græc. ch. 49–55, p. 264, *seqq.*; also Heffter, Die Athenäische Gerichtsverfassung, part ii, ch. 2, p. 51, *seqq.*; Meier und Schömann, Der Attische Prozess, pp. 127–135.

The views of Schömann respecting the sortition of the Athenian jurors have been bitterly attacked, but in no way refuted, by F. V. Fritzsche (De Sortitione Judicum apud Athenienses Commentatio, Leipsic, 1835).

Two or three of these dikastic tickets, marking the name and the deme

tinued without that condition, which was not realized before the time of Periklês. Each of these decuries sitting in judicature was called *The Heliæa*, — a name which belongs properly to the collective assembly of the people; this collective assembly having been itself the original judicature. I conceive that the practice of distributing this collective assembly, or heliæa, into sections of jurors for judicial duty, may have begun under one form or another soon after the reform of Kleisthenês, since the direct interference of the people in public affairs tended more and more to increase. But it could only have been matured by degrees into that constant and systematic service which the pay of Periklês called forth at last in completeness. Under the last-mentioned system the judicial competence of the archons was annulled, and the third archon, or polemarch, withdrawn from all military functions. Still, this had not been yet done at the time of the battle of Marathon, in which Kallimachus the polemarch not only commanded along with the stratêgi, but enjoyed a sort of preëminence over them: nor had it been done during the year after the battle of Marathon, in which Aristeidês was archon, — for the magisterial decisions of Aristeidês formed one of the principal foundations of his honorable surname, the Just.[1]

With this question, as to the comparative extent of judicial power vested by Kleisthenês in the popular dikastery and the archons, are in reality connected two others in Athenian constitutional law; relating, first, to the admissibility of all citizens for the post of archon, — next, to the choosing of archons by lot. It is well known that, in the time of Periklês, the archons, and

---

of the citizen, and the letter of the decury to which during that particular year he belonged, have been recently dug up near Athens: —

Δ. Διόδωρος Φρεάρριος. E. Δεινίας Ἀλαιεύς.

(Boeckh, Corp. Inscrip. Nos. 207–208.)

Fritzsche (p. 73) considers these to be tickets of senators, not of dikasts contrary to all probability.

For the Heliastic oath, and its remarkable particulars, see Demosthen cont. Timokrat. p. 746. See also Aristophanês, Plutus, 277 (with the valuable Scholia, though from different hands and not all of equal correctness and 972; Ekklesiazusæ, 678, *seqq.*

[1] Plutarch, Arist. 7; Herodot. vi, 109–111.

various other individual functionaries, had come to be chosen by lot, — moreover, all citizens were legally admissible, and might give in their names to be drawn for by lot, subject to what was called the dokimasy, or legal examination into their status of citizen, and into various moral and religious qualifications, before they took office; while at the same time the function of the archon had become nothing higher than preliminary examination of parties and witnesses for the dikastery, and presidence over it when afterwards assembled, together with the power of imposing by authority a fine of small amount upon inferior offenders.

Now all these three political arrangements hang essentially together. The great value of the lot, according to Grecian democratical ideas, was that it equalized the chance of office between rich and poor. But so long as the poor citizens were legally inadmissible, choice by lot could have no recommendation either to the rich or to the poor; in fact, it would be less democratical than election by the general mass of citizens, because the poor citizen would under the latter system enjoy an important right of interference by means of his suffrage, though he could not be elected himself.[1] Again, choice by lot could

---

[1] Aristotle puts these two together; election of magistrates by the mass of the citizens, but only out of persons possessing a high pecuniary qualification; this he ranks as the least democratical democracy, if one may use the phrase (Politic. iii, 6–11), or a mean between democracy and oligarchy, — an *ἀριστοκρατία*, or *πολιτεῖα*, in his sense of the word (iv, 7, 3). He puts the employment of the lot as a symptom of decisive and extreme democracy, such as would never tolerate a pecuniary qualification of eligibility.

So again Plato (Legg. iii, p. 692), after remarking that the legislator of Sparta first provided the senate, next the ephors, as a bridle upon the kings, says of the ephors that they were "something nearly approaching to an authority emanating from the lot," — *οἷον ψάλιον ἐνέβαλεν αὐτῇ τὴν τῶν ἐφόρων δύναμιν, ἐγγὺς τῆς κληρωτῆς ἀγαγὼν δυνάμεως.*

Upon which passage there are some good remarks in Schömann's edition of Plutarch's Lives of Agis and Kleomenês (Comment. ad Ag. c. 8, p. 119). It is to be recollected that the actual mode in which the Spartan ephors were chosen, as I have already stated in my first volume, cannot be clearly made out, and has been much debated by critics: —

"Mihi hæc verba, quum illud quidem manifestum faciant, quod etiam aliunde constat, sorte captos ephoros non esse, tum hoc alterum, quod Hermannus statuit, creationem sortitioni non absimilem fuisse, nequaquam

never under any circumstances be applied to those posts where special competence, and a certain measure of attributes possessed only by a few, could not be dispensed with without obvious peril, — nor was it ever applied, throughout the whole history of democratical Athens, to the stratêgi, or generals, who were always elected by show of hands of the assembled citizens. Accordingly, we may regard it as certain that, at the time when the archons first came to be chosen by lot, the superior and responsible duties once attached to that office had been, or were in course of being, detached from it, and transferred either to the popular dikasts or to the ten elected stratêgi: so that there remained to these archons only a routine of police and administration, important indeed to the state, yet such as could be executed by any citizen of average probity, diligence, and capacity. At least there was no obvious absurdity in thinking so; and the dokimasy excluded from the office men of notoriously discreditable life, even after they might have drawn the successful lot. Periklês,[1] though chosen stratêgus, year after year successively, was never archon; and it may even be doubted whether men of first-rate talents and ambition often gave in their names for the office. To those of smaller aspirations[2] it was doubtless a source of importance, but it imposed troublesome labor, gave no pay, and entailed a certain degree of peril upon any archon who might have given offence to pow-

demonstrare videntur. Nimirum nihil aliud nisi prope accedere ephororum magistratus ad eos dicitur, qui sortito capiantur. *Sortitis autem magistratibus hoc maxime proprium est, ut promiscue — non ex genere, censu, dignitate — a quolibet capi possint:* quamobrem quum ephori quoque fere promiscue fierent ex omni multitudine civium, poterat haud dubie magistratus eorum ἐγγὺς τῆς κληρωτῆς δυνάμεως esse dici, etiamsi *αἱρετοὶ* essent — h. e. suffragiis creati. Et video Lachmannum quoque, p. 165, not. 1, de Platonis loco similiter judicare."

The employment of the lot, as Schömann remarks, implies universal admissibility of all citizens to office: though the converse does not hold good, — the latter does not of necessity imply the former. Now, as we know that universal admissibility did not become the law of Athens until after the battle of Platæa, so we may conclude that the employment of the lot had no place before that epoch, — *i. e.* had no place under the constitution of Kleisthenês.

[1] Plutarch, Periklês, c. 9–16.

[2] See a passage about such characters in Plato, Republic, v, p. 475 B.

erful men, when he came to pass through the trial of accountability which followed immediately upon his year of office. There was little to make the office acceptable either to very poor men, or to very rich and ambitious men; and between the middling persons who gave in their names, any one might be taken without great practical mischief, always assuming the two guarantees of the dokimasy before, and accountability after, office. This was the conclusion — in my opinion a mistaken conclusion, and such as would find no favor at present — to which the democrats of Athens were conducted by their strenuous desire to equalize the chances of office for rich and poor. But their sentiment seems to have been satisfied by a partial enforcement of the lot to the choice of some offices, — especially the archons, as the primitive chief magistrates of the state, — without applying it to all, or to the most responsible and difficult. Nor would they have applied it to the archons, if it had been indispensably necessary that these magistrates should retain their original very serious duty of judging disputes and condemning offenders.

I think, therefore, that these three points: 1. The opening of the post of archon to all citizens indiscriminately; 2. The choice of archons by lot; 3. The diminished range of the archon's duties and responsibilities, through the extension of those belonging to the popular courts of justice on the one hand and to the stratêgi on the other — are all connected together, and must have been simultaneous, or nearly simultaneous, in the time of introduction: the enactment of universal admissibility to office certainly not coming after the other two, and probably coming a little before them.

Now in regard to the eligibility of all Athenians indiscriminately to the office of archon, we find a clear and positive testimony as to the time when it was first introduced. Plutarch tells us[1] that the oligarchical,[2] but high-principled Aristeidês, was himself the proposer of this constitutional change, — shortly after the battle of Platæa, with the consequent expulsion of the Persians from Greece, and the return of the refugee Athenians

[1] Plutarch, Arist. 22.

[2] So at least the supporters of the constitution of Kleisthenês were called by the contemporaries of Periklês.

to their ruined city. Seldom has it happened in the history of mankind, that rich and poor have been so completely equalized as among the population of Athens in that memorable expatriation and heroic struggle. Nor are we at all surprised to hear that the mass of the citizens, coming back with freshly-kindled patriotism as well as with the consciousness that their country had only been recovered by the equal efforts of all, would no longer submit to be legally disqualified from any office of state. It was on this occasion that the constitution was first made really "common" to all, and that the archons, stratêgi, and all functionaries, first began to be chosen from all Athenians without any difference of legal eligibility.[1] No mention is made of the lot, in this important statement of Plutarch, which appears to me every way worthy of credit, and which teaches us that, down to the invasion of Xerxês, not only had the exclusive principle of the Solonian law of qualification continued in force (whereby the first three classes on the census were alone admitted to all individual offices, and the fourth or Thêtic class excluded), but also the archons had hitherto been elected by the citizens, — not taken by lot.

Now for financial purposes, the quadruple census of Solon was retained long after this period, even beyond the Peloponnesian war and the oligarchy of Thirty. But we thus learn that Kleisthenês in his constitution retained it for political purposes also, in part at least: he recognized the exclusion of the great mass of the citizens from all individual offices, — such as the archon, the stratêgus, etc. In his time, probably, no complaints were raised on the subject. His constitution gave to the collective bodies — senate, ekklesia, and heliæa, or dikastery — a degree of power and importance such as they had never before known or imagined: and we may well suppose that the Athenian people of that day had no objection even to the proclaimed system and theory of being exclusively governed by men of wealth and station as individual magistrates, — especially since many of the newly-enfranchised citizens had been previously metics and slaves. Indeed, it is to be added that, even under the full

[1] Plutarch, Arist. *ut sup.* *γράφει ψήφισμα, κοινὴν εἶναι τὴν πολιτείαν, καὶ εἰς ἄρχοντας ἐξ Ἀθηναίων πάντων αἱρεῖσθαι.*

democracy of later Athens, though the people had then become passionately attached to the theory of equal admissibility of all citizens to office, yet, in practice, poor men seldom obtained offices which were elected by the general vote, as will appear more fully in the course of this history.[1]

The choice of the stratêgi remained ever afterwards upon the footing on which Aristeidês thus placed it. But the lot for the choice of archon must have been introduced shortly after his proposition of universal eligibility, and in consequence too of the same tide of democratical feeling, — introduced as a farther corrective, because the poor citizen, though he had become eligible, was nevertheless not elected. And at the same time, I imagine, that elaborate distribution of the Heliæa, or aggregate body of dikasts, or jurors, into separate pannels, or dikasteries, for the decision of judicial matters, was first regularized. It was this change that stole away from the archons so important a part of their previous jurisdiction: it was this change that Perikles more fully consummated by insuring pay to the dikasts. But the present is not the time to enter into the modifications which Athens underwent during the generation after the battle of Platæa. They have been here briefly noticed for the purpose of reasoning back, in the absence of direct evidence, to Athens as it stood in the generation before that memorable battle, after the reform of Kleisthenês. His reform, though highly democratical,

[1] So in the Italian republics of the twelfth and thirteenth century, the nobles long continued to possess the exclusive right of being elected to the consulate and the great offices of state, even after those offices had come to be elected by the people: the habitual misrule and oppression of the nobles gradually put an end to this right, and even created in many towns a resolution positively to exclude them. At Milan, towards the end of the twelfth century, the twelve consuls, with the Podestat, possessed all the powers of government: these consuls were nominated by one hundred electors chosen by and among the people. Sismondi observes: "Cependant le peuple imposa lui-même à ces électeurs, la règle fondamentale de choisir tous les magistrats dans le corps de la noblesse. Ce n'étoit point encore la possession des magistratures que l'on contestoit aux gentilshommes: on demandoit seulement qu'ils fussent les mandataires immédiats de la nation. Mais plus d'une fois, en dépit du droit incontestable des citoyens, les consuls regnant s'attribuèrent l'élection de leurs successeurs. (Sismondi, Histoire des Républiques Italiennes, chap. xii, vol ii, p. 240.)

stopped short of the mature democracy which prevailed from Periklês to Demosthenês, in three ways especially, among various others; and it is therefore sometimes considered by the later writers as an aristocratical constitution:[1] 1. It still recognized the archons as judges to a considerable extent, and the third archon, or polemarch, as joint military commander along with the stratêgi. 2. It retained them as elected annually by the body of citizens, not as chosen by lot.[2] 3. It still excluded

[1] Plutarch, Kimon, c. 15. *τὴν ἐπὶ Κλεισθένους ἐγείρειν ἀριστοκρατίαν πειρωμένου*: compare Plutarch, Aristeidês, c. 2, and Isokratês, Areopagiticus, Or. vii, p. 143, p. 192, ed. Bek.

[2] Herodotus speaks of Kallimachus the Polemarch, at Marathon, as *ὁ τῷ ἐνάμῳ λαχων Πολέμαρχος* (vi, 110).

I cannot but think that in this case he transfers to the year 490 B.C. the practice of his own time. The polemarch, at the time of the battle of Marathon, was in a certain sense the first stratêgus; and the stratêgi were never taken by lot, but always chosen by show of hands, even to the end of the democracy. It seems impossible to believe that the stratêgi were elected, and that the polemarch, at the time when his functions were the same as theirs, was chosen by lot.

Herodotus seems to have conceived the choice of magistrates by lot as being of the essence of a democracy (Herodot. iii, 80).

Plutarch also (Periklês, c. 9) seems to have conceived the choice of archons by lot as a very ancient institution of Athens: nevertheless, it results from the first chapter of his life of Aristeidês, — an obscure chapter, in which conflicting authorities are mentioned without being well discriminated, — that Aristeidês was *chosen archon by the people*, — not drawn by lot: an additional reason for believing this is, that he was archon in the year following the battle of Marathon, at which he had been one of the ten generals. Idomeneus distinctly affirmed this to be the fact, — *οὐ κυαμευτὸν, ἀλλ' ἑλομένων Ἀθηναίων* (Plutarch, Arist. c. 1).

Isokratês also (Areopagit. Or. vii, p. 144, p. 195, ed. Bekker) conceived the constitution of Kleisthenês as including all the three points noticed in the text: 1. A high pecuniary qualification of eligibility for individual offices. 2. Election to these offices by all the citizens, and accountability to the same after office. 3. No employment of the lot. — He even contends that this election is more truly democratical than sortition; since the latter process might admit men attached to oligarchy, which would not happen under the former, — *ἔπειτα καὶ δημοτικωτέραν ἐνόμιζον ταύτην τὴν κατάστασιν ἢ τὴν διὰ τοῦ λαγχάνειν γιγνομένην· ἐν μὲν γὰρ τῇ κληρώσει τὴν τύχην βραβεύσειν, καὶ πολλάκις λήψεσθαι τὰς ἀρχὰς τοὺς τῆς ὀλιγαρχίας ἐπιθυμοῦντας*, etc. This would be a good argument if there were no pecuniary qualification for eligibility, — such pecuniary qualification is a provision

the fourth class of the Solonian census from all individual office, the archonship among the rest. The Solonian law of exclusion, however, though retained in principle, was mitigated in practice thus far, — that whereas Solon had rendered none but members of the highest class on the census (the Pentakosiomedimni) eligible to the archonship, Kleisthenês opened that dignity to all the first three classes, shutting out only the fourth. That he did this may be inferred from the fact that Aristeidês, assuredly not a rich man, became archon.

I am also inclined to believe that the Senate of Five Hundred, as constituted by Kleisthenês, was taken, not by election, but by lot, from the ten tribes, — and that every citizen became eligible to it. Election for this purpose — that is, the privilege of annually electing a batch of fifty senators, all at once, by each tribe — would probably be thought more troublesome than valuable; nor do we hear of separate meetings of each tribe for purposes of election. Moreover, the office of senator was a collective, not an individual office; the shock, therefore, to the feelings of semi-democratized Athens, from the unpleasant idea of a poor man sitting among the fifty prytanes, would be less than if they conceived him as polemarch at the head of the right wing of the army, or as an archon administering justice.

A farther difference between the constitution of Solon and that of Kleisthenês is to be found in the position of the Senate of Areopagus. Under the former, that senate had been the principal body in the state, and he had even enlarged its powers; under the latter, it must have been treated at first as an enemy, and kept down. For as it was composed only of all the past archons, and as, during the preceding thirty years, every archon had been a creature of the Peisistratids, the Areopagites collectively must have been both hostile and odious to Kleisthenês and his partisans, — perhaps a fraction of its members might even retire into exile with Hippias. Its influence must have been

which he lays down, but which he does not find it convenient to insist upon emphatically.

I do not here advert to the *γραφὴ παρανόμων*, the *νομοφύλακες*, and the sworn *νομόθεται*, — all of them institutions belonging to the time of Periklês at the earliest; not to that of Kleisthenês.

sensibly lessened by the change of party, until it came to be gradually filled by fresh archons springing from the bosom of the Kleisthenean constitution. But during this important interval, the new-modelled Senate of Five Hundred, and the popular assembly, stepped into that ascendency which they never afterwards lost. From the time of Kleisthenês forward, the Areopagites cease to be the chief and prominent power in the state: yet they are still considerable; and when the second fill of the democratical tide took place, after the battle of Platæa, they became the focus of that which was then considered as the party of oligarchical resistance. I have already remarked that the archons, during the intermediate time (about 509–477 B.C.), were all elected by the ekklesia, not chosen by lot, — and that the fourth (or poorest and most numerous) class on the census were by law then ineligible; while election at Athens, even when every citizen without exception was an elector and eligible, had a natural tendency to fall upon men of wealth and station. We thus see how it happened that the past archons, when united in the Senate of Areopagus, infused into that body the sympathies, prejudices, and interests of the richer classes. It was this which brought them into conflict with the more democratical party headed by Periklês and Ephialtês, in times when portions of the Kleisthenean constitution had come to be discredited as too much imbued with oligarchy.

One other remarkable institution, distinctly ascribed to Kleisthenês, yet remains to be noticed, — the Ostracism; upon which I have already made some remarks,[1] in touching upon the memorable Solonian proclamation against neutrality in a sedition. It is hardly too much to say that, without this protective process, none of the other institutions would have reached maturity.

By the ostracism, a citizen was banished without special accusation, trial, or defence, for a term of ten years, — subsequently diminished to five. His property was not taken away, nor his reputation tainted; so that the penalty consisted solely in the banishment from his native city to some other Greek city. As to reputation, the ostracism was a compliment rather than otherwise;[2] and so it was vividly felt to be, when, about ninety years

[1] See above, chap. xi, vol. iii, p. 145.

[2] Aristeidês Rhetor. Orat. xlvi, vol. ii, p. 317, ed. Dindorf

after Kleisthenês, the conspiracy between Nikias and Alkibiadês fixed it upon Hyperbolus. The two former had both recommended the taking of an ostracizing vote, each hoping to cause the banishment of the other; but before the day arrived, they accommodated the difference. To fire off the safety-gun of the republic against a person so little dangerous as Hyperbolus, was denounced as the prostitution of a great political ceremony: "it was not against such men as him (said the comic writer, Plato),[1]

[1] Plutarch (Nikias, c. 11; Alkibiad. c. 13; Aristeid. c. 7): Thucyd. viii, 73. Plato Comicus said, respecting Hyperbolus —

Οὐ γὰρ τοιούτων οὕνεκ' ὀστραχ' ηὑρέθη.

Theophrastus had stated that Phæax, and not Nikias, was the rival of Alkibiadês on this occasion, when Hyperbolus was ostracized; but most authors, says Plutarch, represent Nikias as the person. It is curious that there should be any difference of statement about a fact so notorious, and in the best-known time of Athenian history.

Taylor thinks that the oration which now passes as that of Andokidês against Alkibiadês, is really by Phæax, and was read by Plutarch as the oration of Phæax in an actual contest of ostracism between Phæax, Nikias, and Alkibiadês. He is opposed by Ruhnken and Valckenaer (see Sluiter's preface to that oration, c. 1, and Ruhnken, Hist. Critic. Oratt. Græcor. p. 135). I cannot agree with either: I cannot think with him, that it is a real oration of Phæax; nor with them, that it is a real oration in any genuine cause of ostracism whatever. It appears to me to have been composed after the ostracism had fallen into desuetude, and when the Athenians had not only become somewhat ashamed of it, but had lost the familiar conception of what it really was. For how otherwise can we explain the fact, that the author of that oration complains that he is about to be ostracized without any secret voting, in which the very essence of the ostracism consisted, and from which its name was borrowed (*οὔτε διαψηφισαμένων κρυβδὴν*, c. 2)? His oration is framed as if the audience whom he was addressing were about to ostracize one out of the three, by show of hands. But the process of ostracizing included no meeting and haranguing, — nothing but simple deposit of the shells in a cask; as may be seen by the description of the special railing-in of the agora, and by the story (true or false) of the unlettered country-citizen coming into the city to give his vote, and asking Aristeidês, without even knowing his person, to write the name for him on the shell (Plutarch, Aristeid. c. 7). There was, indeed, previous discussion in the senate as well as in the ekklesia, whether a vote of ostracism should be entered upon at all; but the author of the oration to which I allude does not address himself to *that* question; he assumes that the vote is actually about to be taken, and that one of the three — himself, Nikias, or Alkibiadês — must be ostracized (c. 1). Now, doubtless, in practice, the de

that the oyster-shell (or potsherd) was intended to be used The process of ostracism was carried into effect by writing upon a shell, or potsherd, the name of the person whom a citizen thought it prudent for a time to banish; which shell, when deposited in the proper vessel, counted for a vote towards the sentence.

I have already observed that all the governments of the Grecian cities, when we compare them with that idea which a modern reader is apt to conceive of the measure of force belonging to a government, were essentially weak, the good as well as the bad, — the democratical, the oligarchical, and the despotic The force in the hands of any government, to cope with conspirators or mutineers, was extremely small, with the single exception of a despot surrounded by his mercenary troop; so that no tolerably sustained conspiracy or usurper could be put down except by the direct aid of the people in support of the government; which amounted to a dissolution, for the time, of constitutional authority, and was pregnant with reactionary consequences such as no man could foresee. To prevent powerful men from attempting usurpation was, therefore, of the greatest possible moment; and a despot or an oligarchy might exercise preventive means at pleasure,[1] much sharper than the ostracism, such as the assassination of Kimon, mentioned in my last chapter, as directed by the Peisistratids. At the very least, they might send away any one, from whom they apprehended attack or danger, without incurring even so much as the imputation of severity. But in a democracy, where arbitrary action of the magistrate was the thing of

cision commonly lay between two formidable rivals; but it was not publicly or formally put so before the people: every citizen might write upon the shell such name as he chose. Farther, the open denunciation of the injustice of ostracism as a system (c. 2), proves an age later than the banishment of Hyperbolus. Moreover, the author having begun by remarking that he stands in contest with Nikias as well as with Alkibiadês, says nothing more about Nikias to the end of the speech.

[1] See the discussion of the ostracism in Aristot. Politic. iii, 8, where he recognizes the problem as one common to all governments.

Compare, also, a good Dissertation — J. A. Paradys, De Ostracismo Atheniensium, Lugduni Batavor. 1793; K. F. Hermann, Lehrbuch der Griechischen Staatsalterthümer, ch. 130; and Schömann, Antiq. Jur. Pub Grec ch. xxxv, p. 233

all others most dreaded, and where fixed laws, with trial and defence as preliminaries to punishment, were conceived by the ordinary citizen as the guarantees of his personal security and as the pride of his social condition, — the creation of such an exceptional power presented serious difficulty. If we transport ourselves to the times of Kleisthenês, immediately after the expulsion of the Peisistratids, when the working of the democratical machinery was as yet untried, we shall find this difficulty at its maximum; but we shall also find the necessity of vesting such a power somewhere absolutely imperative. For the great Athenian nobles had yet to learn the lesson of respect for any constitution; their past history had exhibited continual struggles between the armed factions of Megaklês, Lykurgus, and Peisistratus, put down after a time by the superior force and alliances of the latter. And though Kleisthenês, the son of Megaklês, might be firmly disposed to renounce the example of his father, and to act as the faithful citizen of a fixed constitution, — he would know but too well that the sons of his father's companions and rivals would follow out ambitious purposes without any regard to the limits imposed by law, if ever they acquired sufficient partisans to present a fair prospect of success. Moreover, when any two candidates for power, with such reckless dispositions, came into a bitter personal rivalry, the motives to each of them, arising as well out of fear as out of ambition, to put down his opponent at any cost to the constitution, might well become irresistible, unless some impartial and discerning interference could arrest the strife in time. "If the Athenians were wise (Aristeidês is reported to have said,[1] in the height and peril of his parliamentary struggle with Themistoklês), they would cast both Themistoklês and me into the barathrum."[2] And whoever

[1] Plutarch, Aristeid. c. 3.

[2] The barathrum was a deep pit, said to have had iron spikes at the bottom, into which criminals condemned to death were sometimes cast. Though probably an ancient Athenian punishment, it seems to have become at the very least extremely rare, if not entirely disused, during the times of Athens historically known to us; but the phrase continued in speech after the practice had become obsolete. The iron spikes depend on the evidence of the Schol. Aristophan. Plutus, 431, — a very doubtful authority, when we read the legend which he blends with his statement.

reads the sad narrative of the Korkyræan sedition, in the third book of Thucydidês, together with the reflections of the historian upon it,[1] will trace the gradual exasperation of these party feuds, beginning even under democratical forms, until at length they break down the barriers of public as well as of private morality.

Against this chance of internal assailants Kleisthenês had to protect the democratical constitution, — first, by throwing impediments in their way and rendering it difficult for them to procure the requisite support; next, by eliminating them before any violent projects were ripe for execution. To do either the one or the other, it was necessary to provide such a constitution as would not only conciliate the good-will, but kindle the passionate attachment, of the mass of citizens, insomuch that not even any considerable minority should be deliberately inclined to alter it by force. It was necessary to create in the multitude, and through them to force upon the leading ambitious men, that rare and difficult sentiment which we may term a constitutional morality; a paramount reverence for the forms of the constitution, enforcing obedience to the authorities acting under and within those forms, yet combined with the habit of open speech, of action subject only to definite legal control, and unrestrained censure of those very authorities as to all their public acts, — combined too with a perfect confidence in the bosom of every citizen, amidst the bitterness of party contest, that the forms of the constitution will be not less sacred in the eyes of his opponents than in his own. This coexistence of freedom and self-imposed restraint, — of obedience to authority with unmeasured censure of the persons exercising it, — may be found in the aristocracy of England (since about 1688) as well as in the democracy of the American United States: and because we are familiar with it, we are apt to suppose it a natural sentiment; though there seem to be few sentiments more difficult to establish and diffuse among a community, judging by the experience of history. We may see how imperfectly it exists at this day in the Swiss cantons; and the many violences of the first French revolution illustrate, among various other lessons, the fatal effects arising from its absence, even among a people high in the scale of intelligence. Yet the diffusion of such constitutional morality, not merely among the majority of any community, but throughout the whole, is the indispensable condition of a government at once free and peaceable; since even any powerful and obstinate minority may render the working of free institutions impracticable, without being strong enough to conquer ascendency for themselves. Nothing less than unanimity, or so overwhelming a majority as to be tantamount to unanimity, on the cardinal point of respecting constitutional forms, even by those who do not wholly approve of them, can render the excitement of political passion bloodless, and yet expose all the authorities in the state to the full license of pacific criticism.

[1] Thucyd. iii, 70, 81, 82.

At the epoch of Kleisthenês, which by a remarkable coincidence is the same as that of the regifuge at Rome, such constitutional morality, if it existed anywhere else, had certainly no place at Athens; and the first creation of it in any particular society must be esteemed an interesting historical fact. By the spirit of his reforms, — equal, popular, and comprehensive, far beyond the previous experience of Athenians, — he secured the hearty attachment of the body of citizens; but from the first generation of leading men, under the nascent democracy, and with such precedents as they had to look back upon, no self-imposed limits to ambition could be expected: and the problem required was to eliminate beforehand any one about to transgress these limits, so as to escape the necessity of putting him down afterwards, with all that bloodshed and reaction, in the midst of which the free working of the constitution would be suspended at least, if not irrevocably extinguished. To acquire such influence as would render him dangerous under democratical forms, a man must stand in evidence before the public, so as to afford some reasonable means of judging of his character and purposes, and the security which Kleisthenês provided, was, to call in the positive judgment of the citizens respecting his future promise purely and simply, so that they might not remain too long neutral between two formidable political rivals, — pursuant in a certain way to the Solonian proclamation against neutrality in a sedition, as I have already remarked in a former chapter. He incorporated in the constitution itself the principle of *privilegium* (to employ the Roman phrase, which signifies, not a peculiar

favor granted to any one, but a peculiar inconvenience imposed), yet only under circumstances solemn and well defined, with full notice and discussion beforehand, and by the positive secret vote of a large proportion of the citizens. "No law shall be made against any single citizen, without the same being made against *all* Athenian citizens; unless it shall so seem good to six thousand citizens voting secretly."[1] Such was that general principle of the constitution, under which the ostracism was a particular case. Before the vote of ostracism could be taken, a case was to be made out in the senate and the public assembly to justify it. In the sixth prytany of the year, these two bodies debated and determined whether the state of the republic was menacing enough to call for such an exceptional measure.[2] If they decided in the affirmative, a day was named, the agora was railed round, with ten entrances left for the citizens of each tribe, and ten separate casks or vessels for depositing the suffrages, which consisted of a shell, or a potsherd, with the name of the person written on it whom each citizen designed to banish. At the end of the day, the number of votes was summed up, and if six thousand votes were found to have been given against any one person, that person was ostracized; if not, the ceremony ended in nothing.[3] Ten days were allowed to him for settling his af

[1] Andokidês, De Mysteriis, p. 12, c. 13. *Μηδὲ νόμον ἐπ' ἀνδρὶ ἐξεῖναι θεῖναι, ἐὰν μὴ τὸν αὐτὸν ἐπὶ πᾶσιν Ἀθηναίοις· ἐὰν μὴ ἑξακισχιλίοις δόξῃ, κρυβδὴν ψηφιζομένοις.* According to the usual looseness in dealing with the name of Solon, this has been called a law of Solon (see Petit. Leg. Att. p 188), though it certainly cannot be older than Kleisthenês.

"Privilegia ne irroganto," said the law of the Twelve Tables at Rome (Cicero, Legg. iii, 4–19).

[2] Aristotle and Philochorus, ap. Photium, App. p. 672 and 675, ed. Porson.

It would rather appear by that passage that the ostracism was never formally abrogated; and that even in the later times, to which the description of Aristotle refers, the form was still preserved of putting the question whether the public safety called for an ostracizing vote, long after it had passed both out of use and out of mind.

[3] Philochorus, *ut supra;* Plutarch, Aristeid. c. 7; Schol. ad Aristophan. Equit. 851; Pollux, viii, 19.

There is a difference of opinion among the authorities, as well as among the expositors, whether the minimum of six thousand applies to the votes given in all, or to the votes given against any one name. I embrace the

fairs, after which he was required to depart from Attica for ten years, but retained his property, and suffered no other penalty.

It was not the maxim at Athens to escape the errors of the people, by calling in the different errors, and the sinister interest besides, of an extra-popular or privileged few; nor was any third course open, since the principles of representative government were not understood, nor indeed conveniently applicable to very small communities. Beyond the judgment of the people — so the Athenians felt — there was no appeal; and their grand study was to surround the delivery of that judgment with the best securities for rectitude and the best preservatives against haste, passion, or private corruption. Whatever measure of good government could not be obtained in that way, could not, in their opinion, be obtained at all. I shall illustrate the Athenian proceedings on this head more fully when I come to speak of the working of their mature democracy: meanwhile, in respect to this grand protection of the nascent democracy, — the vote of ostracism, — it will be found that the securities devised by Kleisthenês, for making the sentence effectual against the really dangerous man, and against no one else, display not less foresight than patriotism. The main object was, to render the voting an expression of deliberate public feeling, as distinguished from mere factious antipathy: the large minimum of votes required, one-fourth of the entire citizen population, went far to insure this effect, — the more so, since each vote, taken as it was in a

latter opinion, which is supported by Philochorus, Pollux, and the Schol. on Aristophanês, though Plutarch countenances the former. Boeckh, in his Public Economy of Athens, and Wachsmuth, (i, 1, p. 272) are in favor of Plutarch and the former opinion; Paradys (Dissertat. De Ostr. p. 25), Platner, and Hermann (see K. F. Hermann, Lehrbuch der Gr. Staatsalt. ch. 130, not. 6) support the other, which appears to me the right one.

For the purpose, so unequivocally pronounced, of the general law determining the absolute minimum necessary for a *privilegium*, would by no means be obtained, if the simple majority of votes, among six thousand voters in all, had been allowed to take effect. A person might then be ostracized with a very small number of votes against him, and without creating any reasonable presumption that he was dangerous to the constitution; which was by no means either the purpose of Kleisthenês, or the well-understood operation of the ostracism, so long as it continued to be a reality.

secret manner, counted unequivocally for the expression of a genuine and independent sentiment, and could neither be coerced nor bought. Then again, Kleisthenês did not permit the process of ostracizing to be opened against any one citizen exclusively. If opened at all, every one without exception was exposed to the sentence; so that the friends of Themistoklês could not invoke it against Aristeidês,[1] nor those of the latter against the former, without exposing their own leader to the same chance of exile. It was not likely to be invoked at all, therefore, until exasperation had proceeded so far as to render both parties insensible to this chance, — the precise index of that growing internecive hostility, which the ostracism prevented from coming to a head. Nor could it even then be ratified, unless a case was shown to convince the more neutral portion of the senate and the ekklesia: moreover, after all, the ekklesia did not itself ostracize, but a future day was named, and the whole body of the citizens were solemnly invited to vote. It was in this way that security was taken not only for making the ostracism effectual in protecting the constitution, but to hinder it from being employed for any other purpose. And we must recollect that it exercised its tutelary influence, not merely on those occasions when it was actually employed, but by the mere knowledge that it might be employed, and by the restraining effect which that knowledge produced on the conduct of the great men. Again, the ostracism, though essentially of an exceptional nature, was yet an exception sanctified and limited by the constitution itself; so that the citizen, in giving his ostracizing vote, did not in any way depart from the constitution or lose his reverence for it. The issue placed before him — "Is there any man whom you think vitally dangerous to the state? if so, whom?" — though vague, was yet raised directly and legally. Had there been no ostracism, it might probably have been raised both indirectly and illegally, on the occasion of some special imputed crime of a suspected political leader, when accused before a court of justice,

[1] The practical working of the ostracism presents it as a struggle between two contending leaders, accompanied with chance of banishment to both — Periklês *πρὸς τὸν Θουκυδίδην εἰς ἀνῶνα περὶ τοῦ ὀστράκου καταστὰς, καὶ διακινδυνεύσας, ἐκεῖνον μὲν ἐξέβαλε, κατέλυσε δὲ τὴν ἀντιτεταγμένην ἑταιρείαν* (Plutarch, Periklês, c. 14; compare Plutarch, Nikias, c. 11).

— a perversion, involving all the mischief of the ostracism, without its protective benefits.

Care was taken to divest the ostracism of all painful consequence except what was inseparable from exile; and this is not one of the least proofs of the wisdom with which it was devised. Most certainly, it never deprived the public of candidates for political influence: and when we consider the small amount of individual evil which it inflicted, — evil too diminished, in the cases of Kimon and Aristeidês, by a reactionary sentiment which augmented their subsequent popularity after return, — two remarks will be quite sufficient to offer in the way of justification. First, it completely produced its intended effect; for the democracy grew up from infancy to manhood without a single attempt to overthrow it by force,[1] — a result, upon which no reflecting contemporary of Kleisthenês could have ventured to calculate. Next, through such tranquil working of the democratical forms, a constitutional morality quite sufficiently complete was produced among the leading Athenians, to enable the people after a certain time to dispense with that exceptional security which the ostracism offered.[2] To the nascent democ-

[1] It is not necessary in this remark to take notice, either of the oligarchy of Four Hundred, or that of Thirty, called the Thirty Tyrants, established during the closing years of the Peloponnesian war, and after the ostracism had been discontinued. Neither of these changes were brought about by the excessive ascendency of any one or few men: both of them grew out of the embarrassments and dangers of Athens in the latter period of her great foreign war.

[2] Aristotle (Polit. iii, 8, 6) seems to recognize the political necessity of the ostracism, as applied even to obvious superiority of wealth, connection, etc. (which he distinguishes pointedly from superiority of merit and character), and upon principles of symmetry only, even apart from dangerous designs on the part of the superior mind. No painter, he observes, will permit a foot, in his picture of a man, to be of disproportionate size with the entire body, though separately taken it may be finely painted; nor will the chorus-master allow any one voice, however beautiful, to predominate beyond a certain proportion over the rest.

His final conclusion is, however, that the legislator ought, if possible, so to construct his constitution, as to have no need of such exceptional remedy; but, if this cannot be done, then the second-best step is to apply the ostracism. Compare also v, 2, 5.

The last century of the free Athenian democracy realized the first of these alternatives.

racy, it was absolutely indispensable; to the growing yet militant democracy, it was salutary; but the full-grown democracy both could and did stand without it. The ostracism passed upon Hyperbolus, about ninety years after Kleisthenês, was the last occasion of its employment. And even this can hardly be considered as a serious instance: it was a trick concerted between two distinguished Athenians (Nikias and Alkibiadês), to turn to their own political account a process already coming to be antiquated. Nor would such a manœuvre have been possible, if the contemporary Athenian citizens had been penetrated with the same serious feeling of the value of ostracism as a safeguard of democracy, as had been once entertained by their fathers and grandfathers. Between Kleisthenês and Hyperbolus, we hear of about ten different persons as having been banished by ostracism. First of all, Hipparchus of the deme Cholargus, the son of Charmus, a relative of the recently-expelled Peisistratid despots;[1] then Aristeidês, Themistoklês, Kimon, and Thucydidês son of Melêsias, all of them renowned political leaders; also Alkibiadês and Megaklês (the paternal and maternal grandfathers of the distinguished Alkibiadês), and Kallias, belonging to another eminent family at Athens;[2] lastly, Damôn, the preceptor of Periklês in poetry and music, and eminent for his acquisitions in philosophy.[3] In this last case comes out the vulgar side of humanity, aristocratical as well as democratical; for with both, the process of philosophy and the persons of philosophers are wont to be alike unpopular. Even Kleisthenês himself is said to have been ostracized under his own law, and Xanthippus; but both upon authority too weak to trust.[4] Miltiadês was not ostracized at all, but tried and punished for misconduct in his command.

I should hardly have said so much about this memorable and

peculiar institution of Kleisthenês, if the erroneous accusations against the Athenian democracy, — of envy, injustice, and ill-treatment of their superior men, had not been greatly founded upon it, and if such criticisms had not passed from ancient times to modern with little examination. In monarchical governments, a pretender to the throne, numbering a certain amount of supporters, is, as a matter of course, excluded from the country. The duke of Bordeaux cannot now reside in France, — nor could Napoleon after 1815, — nor Charles Edward in England during the last century. No man treats this as any extravagant injustice, yet it is the parallel of the ostracism, — with a stronger case in favor of the latter, inasmuch as the change from one regal dynasty to another does not of necessity overthrow all the collateral institutions and securities of the country. Plutarch has affirmed that the ostracism arose from the envy and jealousy inherent in a democracy,[1] and not from justifiable fears, — an observation often repeated, yet not the less demonstrably untrue. Not merely because ostracism so worked as often to increase the influence of that political leader whose rival it removed, — but still more, because, if the fact had been as Plutarch says, this institution would have continued as long as the democracy; whereas it finished with the banishment of Hyperbolus, at a period when the government was more decisively democratical than it had been in the time of Kleisthenês. It was, in truth, a product altogether of fear and insecurity,[2] on the part both of the democracy and its best friends, — fear perfectly well-grounded, and only appearing needless because the precautions taken prevented attack. So soon as the diffusion of a constitutional morality had placed the mass of the citizens above all serious fear of an aggressive usurper the ostracism was discontinued. And doubtless the feeling, that it might safely be dispensed with, must have been strengthened by the long ascendency of Periklês, — by the spectacle of the great-

[2] Thucyd. viii, 73, διὰ δυνάμεως καὶ ἀξιώματος φόβον.

est statesman whom Athens ever produced, acting steadily within the limits of the constitution; as well as by the ill-success of his two opponents, Kimon and Thucydidês, — aided by numerous partisans and by the great comic writers, at a period when comedy was a power in the state such as it has never been before or since, — in their attempts to get him ostracized. They succeeded in fanning up the ordinary antipathy of the citizens towards philosophers, so far as to procure the ostracism of his friend and teacher Damôn: but Periklês himself, to repeat the complaint of his bitter enemy, the comic poet Kratinus,[1] "was out of the reach of the oyster-shell." If Periklês was not conceived to be dangerous to the constitution, none of his successors were at all likely to be so regarded. Damôn and Hyperbolus were the two last persons ostracized: both of them were cases, and the only cases, of an unequivocal abuse of the institution because, whatever the grounds of displeasure against them may have been, it is impossible to conceive either of them as menacing to the state, — whereas all the other known sufferers were men of such position and power, that the six or eight thousand citizens who inscribed each name on the shell, or at least a large proportion of them, may well have done so under the most conscientious belief that they were guarding the constitution against real danger. Such a change, in the character of the persons ostracized, plainly evinces that the ostracism had become dissevered from that genuine patriotic prudence which originally rendered it both legitimate and popular. It had served for two generations an inestimable tutelary purpose, — it lived to be twice dishonored, — and then passed, by universal acquiescence, into matter of history.

A process analogous to the ostracism subsisted at Argos,[2] at Syracuse, and in some other Grecian democracies. Aristotle states that it was abused for factious purposes: and at Syracuse,

[1] Kratinus ap. Plutarch, Periklês, 13.

Ὁ σχινοκέφαλος Ζεὺς ὁδὶ προσέρχεται
Περικλέης, τῷδεῖον ἐπὶ τοῦ κρανίου
Ἔχων, ἐπειδὴ τοὔστρακον παροίχεται.

For the attacks of the comic writers upon Damôn, see Plutarch, Periklês, c. 4.

[2] Aristot. Polit. iii. 8, 4 v. 2, 5

where it was introduced after the expulsion of the Gelonian dynasty, Diodorus affirms that it was so unjustly and profusely applied, as to deter persons of wealth and station from taking any part in public affairs; for which reason it was speedily discontinued. We have no particulars to enable us to appreciate this general statement. But we cannot safely infer that because the ostracism worked on the whole well at Athens, it must necessarily have worked well in other states, — the more so, as we do not know whether it was surrounded with the same precautionary formalities, nor whether it even required the same large minimum of votes to make it effective. This latter guarantee, so valuable in regard to an institution essentially easy to abuse, is not noticed by Diodorus in his brief account of the Petalism, — so the process was denominated at Syracuse.[1]

Such was the first Athenian democracy, engendered as well by the reaction against Hippias and his dynasty as by the memorable partnership, whether spontaneous or compulsory, between Kleisthenês and the unfranchised multitude. It is to be distinguished, both from the mitigated oligarchy established by Solon before, and from the full-grown and symmetrical democracy which prevailed afterwards from the beginning of the Peloponnesian war towards the close of the career of Periklês. It was, indeed, a striking revolution, impressed upon the citizen not less by the sentiments to which it appealed than by the visible change which it made in political and social life. He saw himself marshalled in the ranks of hoplites, alongside of new companions in arms, — he was enrolled in a new register, and his property in a new schedule, in his deme and by his demarch, an officer before unknown, — he found the year distributed afresh, for all legal purposes, into ten parts bearing the name of prytanies, each marked by a solemn and free-spoken ekklesia, at which he had a right to be present, — that ekklesia was convoked and presided by senators called prytanes, members of a senate novel both as to number and distribution, — his political duties were now performed as member of a tribe, designated by a name not before

[1] Diodor. xi, 55–87. This author describes very imperfectly the Athenian ostracism, transferring to it apparently the circumstances of the Syracusan Petalism.

pronounced in common Attic life, connected with one of ten heroes whose statues he now for the first time saw in the agora, and associating him with fellow-tribemen from all parts of Attica. All these and many others were sensible novelties, felt in the daily proceedings of the citizen. But the great novelty of all was, the authentic recognition of the ten new tribes as a sovereign dêmos, or people, apart from all specialties of phratric or gentile origin, with free speech and equal law; retaining no distinction except the four classes of the Solonian property-schedule with their gradations of elegibility. To a considerable proportion of citizens this great novelty was still farther endeared by the fact that it had raised them out of the degraded position of metics and slaves; and to the large majority of all the citizens, it furnished a splendid political idea, profoundly impressive to the Greek mind, — capable of calling forth the most ardent attachment as well as the most devoted sense of active obligation and obedience. We have now to see how their newly-created patriotism manifested itself.

Kleisthenês and his new constitution carried with them so completely the popular favor, that Isagoras had no other way of opposing it except by calling in the interference of Kleomenês and the Lacedæmonians. Kleomenês listened the more readily to this call, as he was reported to have been on an intimate footing with the wife of Isagoras. He prepared to come to Athens; but his first aim was to deprive the democracy of its great leader Kleisthenês, who, as belonging to the Alkmæônid family, was supposed to be tainted with the inherited sin of his great-grandfather Megaklês, the destroyer of the usurper Kylôn. Kleomenês sent a herald to Athens, demanding the expulsion "of the accursed," — so this family were called by their enemies, and so they continued to be called eighty years afterwards, when the same manœuvre was practised by the Lacedæmonians of that day against Periklês. This requisition had been recommended by Isagoras, and was so well-timed that Kleisthenês, not venturing to disobey it, retired voluntarily, so that Kleomenês, though arriving at Athens only with a small force, found himself master of the city. At the instigation of Isagoras, he sent into exile seven hundred families, selected from the chief partisans of Kleisthenês: his next attempt was to dissolve the new Senate of

Five Hundred and place the whole government in the hands of three hundred adherents of the chief whose cause he espoused. But now was seen the spirit infused into the people by their new constitution. At the time of the first usurpation of Peisistratus, the Senate of that day had not only not resisted, but even lent themselves to the scheme. But the new Senate of Kleisthenês resolutely refused to submit to dissolution, and the citizens manifested themselves in a way at once so hostile and so determined, that Kleomenês and Isagoras were altogether baffled. They were compelled to retire into the acropolis and stand upon the defensive; and this symptom of weakness was the signal for a general rising of the Athenians, who besieged the Spartan king on the holy rock. He had evidently come without any expectation of finding, or any means of overpowering, resistance; for at the end of two days his provisions were exhausted, and he was forced to capitulate. He and his Lacedæmonians, as well as Isagoras, were allowed to retire to Sparta; but the Athenians of the party captured along with him were imprisoned, condemned,[1] and executed by the people.

Kleisthenês, with the seven hundred exiled families, was immediately recalled, and his new constitution materially strengthened by this first success. Yet the prospect of renewed Spartan attack was sufficiently serious to induce him to send envoys to Artaphernês, the Persian satrap at Sardis, soliciting the admission of Athens into the Persian alliance: he probably feared the intrigues of the expelled Hippias in the same quarter. Artaphernês, having first informed himself who the Athenians were, and where they dwelt, — replied that, if they chose to send earth and water to the king of Persia, they might be received as allies, but upon no other condition. Such were the feelings of alarm under which the envoys had quitted Athens, that they went the length of promising this unqualified token of submission. But their countrymen, on their return, disavowed them with scorn and indignation.[2]

It was at this time that the first connection began between Athens and the little Bœotian town of Platæa, situated on the

[1] Herodot. v, 70-72: compare Schol. ad Aristophan. Lysistr. 274.
[2] Herodot. v, 73.

northern slope of the range of Kithæron, between that mountain and the river Asôpus, — on the road from Athens to Thebes; and it is upon this first occasion that we become acquainted with the Bœotians and their polities. In one of my preceding volumes,[1] the Bœotian federation has already been briefly described, as composed of some twelve or thirteen autonomous towns under the headship of Thebes, which was, or professed to have been, their mother-city. Platæa had been, so the Thebans affirmed, their latest foundation;[2] it was ill-used by them, and discontented with the alliance. Accordingly, as Kleomenês was on his way back from Athens, the Platæans took the opportunity of addressing themselves to him, craved the protection of Sparta against Thebes, and surrendered their town and territory without reserve. The Spartan king, having no motive to undertake a trust which promised nothing but trouble, advised them to solicit the protection of Athens, as nearer and more accessible for them in case of need. He foresaw that this would embroil the Athenians with Bœotia; and such anticipation was in fact his chief motive for giving the advice, which the Platæans followed. Selecting an occasion of public sacrifice at Athens, they dispatched thither envoys, who sat down as suppliants at the altar, surrendered their town to Athens, and implored protection against Thebes. Such an appeal was not to be resisted, and protection was promised; it was soon needed, for the Thebans invaded the Platæan territory, and an Athenian force marched to defend it. Battle was about to be joined, when the Corinthians interposed with their mediation, which was accepted by both parties. They decided altogether in favor of Platæa, pronouncing that the Thebans had no right to employ force against any seceding member of the Bœotian federation.[3] But the Thebans, finding the decision against them, refused to abide by it, and, attacking the Athenians on their return, sustained a complete defeat: the latter avenged this breach of faith by joining to Platæa the portion of Theban territory south of the Asôpus, and making that river the limit between

[1] See vol. ii, p. 295, part ii, ch. 3.

[2] Thucyd. iii, 61.

[3] Herodot. vi, 108. ἐᾶν Θηβαίους Βοιωτῶν τοὺς μὴ βουλομένους ἐς Βοιωτοὺς τελέειν. This is an important circumstance in regard to Grecian political feeling: I shall advert to it hereafter.

the two. By such success, however, the Athenians gained nothing, except the enmity of Bœotia, — as Kleomenês had foreseen. Their alliance with Platæa, long continued, and presenting in the course of this history several incidents touching to our sympathies, will be found, if we except one splendid occasion,[1]

[1] Herodot. vi, 108. Thucydidês (iii, 58), when recounting the capture of Platæa by the Lacedæmonians in the third year of the Peloponnesian war, states that the alliance between Platæa and Athens was then in its 93d year of date; according to which reckoning it would begin in the year 519 B.C., where Mr. Clinton and other chronologers place it.

I venture to think that the immediate circumstances, as recounted in the text from Herodotus (whether Thucydidês conceived them in the same way, cannot be determined), which brought about the junction of Platæa with Athens, cannot have taken place in 519 B.C., but must have happened *after* the expulsion of Hippias from Athens in 510 B.C., — for the following reasons: —

1. No mention is made of Hippias, who yet, if the event had happened in 519 B.C., must have been the person to determine whether the Athenians should assist Platæa or not. The Platæan envoys present themselves at a public sacrifice in the attitude of suppliants, so as to touch the feelings of the Athenian citizens generally: had Hippias been then despot, *he* would have been the person to be propitiated and to determine for or against assistance.

2. We know no cause which should have brought Kleomenês with a Lacedæmonian force near to Platæa in the year 519 B.C.: we know from the statement of Herodotus (v, 76) that no Lacedæmonian expedition against Attica took place at that time. But in the year to which I have referred the event, Kleomenês is on his march near the spot upon a known and assignable object. From the very tenor of the narrative, it is plain that Kleomenês and his army were not designedly in Bœotia, nor meddling with Bœotian affairs, at the time when the Platæans solicited his aid; he declines to interpose in the matter, pleading the great distance between Sparta and Platæa as a reason.

3. Again, Kleomenês, in advising the Platæans to solicit Athens, does not give the advice through good-will towards them, but through a desire to harass and perplex the Athenians, by entangling them in a quarrel with the Bœotians. At the point of time to which I have referred the incident, this was a very natural desire: he was angry, and perhaps alarmed, at the recent events which had brought about his expulsion from Athens. But what was there to make him conceive such a feeling against Athens during the reign of Hippias? That despot was on terms of the closest intimacy with Sparta: the Peisistratids were (ξείνους — ξεινίους ταμάλιστα — Herod. v, 63, 90, 91) "the particular guests" of the Spartans, who were only induced to take part against Hippias from a reluctant obedience to the

productive only of burden to the one party, yet insufficient as a protection to the other.

Meanwhile Kleomenês had returned to Sparta full of resentment against the Athenians, and resolved on punishing them, as well as on establishing his friend Isagoras as despot over them. Having been taught, however, by humiliating experience, that this was no easy achievement, he would not make the attempt, without having assembled a considerable force; he summoned allies from all the various states of Peloponnesus, yet without venturing to inform them what he was about to undertake. He at the same time concerted measures with the Bœotians, and with the Chalkidians of Eubœa, for a simultaneous invasion of Attica on all sides. It appears that he had greater confidence in their hostile dispositions towards Athens than in those of the Peloponnesians, for he was not afraid to acquaint them with his

oracles procured, one after another, by Kleisthenês. The motive, therefore assigned by Herodotus, for the advice given by Kleomenês to the Platæans, can have no application to the time when Hippias was still despot.

4. That Herodotus did not conceive the victory gained by the Athenians over Thebes as having taken place *before* the expulsion of Hippias, is evident from his emphatic contrast between their warlike spirit and success when liberated from the despots, and their timidity or backwardness while under Hippias (Ἀθηναῖοι τυραννευόμενοι μὲν, οὐδαμῶν τῶν σφέας περιοικεόντων ἔσαν τὰ πολέμια ἀμείνους, ἀπαλλαχθέντες δὲ τυράννων, μακρῳ τρῶτοι ἐγένοντο· δηλοῖ ὧν ταῦτα, ὅτι κατεχόμενοι μὲν, ἐθελοκάκεον, etc. v, 78). The man who wrote thus cannot have believed that, in the year 519 B.C., while Hippias was in full sway, the Athenians gained an important victory over the Thebans, cut off a considerable portion of the Theban territory for the purpose of joining it to that of the Platæans, and showed from that time forward their constant superiority over Thebes by protecting her inferior neighbor against her.

These different reasons, taking them altogether, appear to me to show that the first alliance between Athens and Platæa, as Herodotus conceives and describes it, cannot have taken place before the expulsion of Hippias, in 510 B.C.; and induce me to believe, either that Thucydidês was mistaken in the date of that event, or that Herodotus has not correctly described the facts. Not seeing any reason to suspect the description given by the latter, I have departed, though unwillingly, from the date of Thucydidês.

The application of the Platæans to Kleomenês, and his advice grounded thereupon, may be connected more suitably with his first expedition to Athens, after the expulsion of Hippias, than with his second.

design, — and probably the Bœotians were incensed with the recent interference of Athens in the affair of Platæa. As soon as these preparations were completed, the two kings of Sparta, Kleomenês and Demaratus, put themselves at the head of the united Peloponnesian force, marched into Attica, and advanced as far as Eleusis on the way to Athens. But when the allies came to know the purpose for which they were to be employed, a spirit of dissatisfaction manifested itself among them. They had no unfriendly sentiment towards Athens; and the Corinthians especially, favorably disposed rather than otherwise towards that city, resolved to proceed no farther, withdrew their contingent from the camp, and returned home. At the same time, king Demaratus, either sharing in the general dissatisfaction, or moved by some grudge against his colleague which had not before manifested itself, renounced the undertaking also. And these two examples, operating upon the preëxisting sentiment of the allies generally, caused the whole camp to break up and return home without striking a blow.[1]

We may here remark that this is the first instance known in which Sparta appears in act as recognized head of an obligatory Peloponnesian alliance,[2] summoning contingents from the cities to be placed under the command of her king. Her headship, previously recognized in theory, passes now into act, but in an unsatisfactory manner, so as to prove the necessity of precaution and concert beforehand, — which will be found not long wanting.

Pursuant to the scheme concerted, the Bœotians and Chalkidians attacked Attica at the same time that Kleomenês entered it. The former seized Œnoê and Hysiæ, the frontier demes of Attica on the side towards Platæa, while the latter assailed the northeastern frontier, which faces Eubœa. Invaded on three sides, the Athenians were in serious danger, and were compelled to concentrate all their forces at Eleusis against Kleomenês, leaving the Bœotians and Chalkidians unopposed. But the unexpected breaking up of the invading army from Peloponnesus

[1] Herodot. v, 75.

[2] Compare Kortüm, Zur Geschichte Hellenischer Staats-Verfassungen, p. 35 (Heidelberg, 1821).

I doubt, however, his interpretation of the words in Herodotus (v. 63) — ἔτε ἰδίῳ στόλῳ, εἴτε δημοσίῳ χρησόμενοι.

proved their rescue, and enabled them to turn the whole of their attention to the other frontier. They marched into Bœotia to the strait called Euripus, which separates it from Eubœa, intending to prevent the junction of the Bœotians and Chalkidians, and to attack the latter first apart. But the arrival of the Bœotians caused an alteration in their scheme; they attacked the Bœotians first, and gained a victory of the most complete character, — killing a large number, and capturing seven hundred prisoners. On the very same day they crossed over to Eubœa, attacked the Chalkidians, and gained another victory so decisive that it at once terminated the war. Many Chalkidians were taken, as well as Bœotians, and conveyed in chains to Athens, where after a certain detention they were at last ransomed for two minæ per man; and the tenth of the sum thus raised was employed in the fabrication of a chariot and four horses in bronze, which was placed in the acropolis to commemorate the victory. Herodotus saw this trophy when he was at Athens. He saw too, what was a still more speaking trophy, the actual chains in which the prisoners had been fettered, exhibiting in their appearance the damage undergone when the acropolis was burnt by Xerxês: an inscription of four lines described the offerings and recorded the victory out of which they had sprung.[1]

Another consequence of some moment arose out of this victory. The Athenians planted a body of four thousand of their citizens as klêruchs (lot-holders) or settlers upon the lands of the wealthy Chalkidian oligarchy called the Hippobotæ, — proprietors probably in the fertile plain of Lêlantum, between Chalkis and Eretria. This is a system which we shall find hereafter extensively followed out by the Athenians in the days of their power; partly with the view of providing for their poorer citizens, — partly to serve as garrison among a population either hostile or of doubtful fidelity. These Attic klêruchs (I can find no other name by which to speak of them) did not lose their birthright as Athenian citizens: they were not colonists in the Grecian sense, and they are known by a totally different name, — but they corresponded very nearly to the colonies formally planted out on the conquered lands by Rome. The increase of

[1] Herodot. v, 77; Ælian, V. H. vi, 1; Pausan i, 28, 2.

the poorer population was always more or less painfully felt in every Grecian city. For though the aggregate population never seems to have increased very fast, yet the multiplication of children in poor families caused the subdivision of the smaller lots of land, until at last they became insufficient for a maintenance; and the persons thus impoverished found it difficult to obtain subsistence in other ways, more especially as the labor for the richer classes was so much performed by imported slaves. Doubtless some families possessed of landed property became extinct; but this did not at all benefit the smaller and poorer proprietors; for the lands thus rendered vacant passed, not to them, but by inheritance, or bequest, or intermarriage, to other proprietors, for the most part in easy circumstances, — since one opulent family usually intermarried with another. I shall enter more fully at a future opportunity into this question, — the great and serious problem of population, as it affected the Greek communities generally, and as it was dealt with in theory by the powerful minds of Plato and Aristotle. At present it is sufficient to notice that the numerous klêruchies sent out by Athens, of which this to Eubœa was the first, arose in a great measure out of the multiplication of the poorer population, which her extended power was employed in providing for. Her subsequent proceedings with a view to the same object will not be always found so justifiable as this now before us, which grew naturally, according to the ideas of the time, out of her success against the Chalkidians.

The war between Athens, however, and Thebes with her Bœotian allies, still continued, to the great and repeated disadvantage of the latter, until at length the Thebans in despair sent to ask advice of the Delphian oracle, and were directed to "solicit aid from those nearest to them."[1] "How (they replied) are we to obey? Our nearest neighbors, of Tanagra, Korôneia, and Thespiæ, are now, and have been from the beginning, lending us all the aid in their power." An ingenious Theban, however, coming to the relief of his perplexed fellow-citizens, dived into the depths of legend and brought up a happy meaning. "Those nearest to us (he said) are the inhabitants of Ægina: for Thêbê (the eponym of Thebes) and Ægina (the eponym of that island)

[1] Herodot. v, 80.

were both sisters, daughters of Asôpus: let us send to crave assistance from the Æginetans." If his subtle interpretation (founded upon their descent from the same legendary progenitors) did not at once convince all who heard it, at least no one had any better to suggest; and envoys were at once sent to the Æginetans, — who, in reply to a petition founded on legendary claims, sent to the help of the Thebans a reinforcement of legendary, but venerated, auxiliaries, — the Æakid heroes. We are left to suppose that their effigies are here meant. It was in vain, however, that the glory and the supposed presence of the Æakids Telamôn and Pêleus were introduced into the Theban camp. Victory still continued on the side of Athens; and the discouraged Thebans again sent to Ægina, restoring the heroes,[1] and praying for aid of a character more human and positive. Their request was granted, and the Æginetans commenced war against Athens without even the decent preliminary of a herald and declaration.[2]

This remarkable embassy first brings us into acquaintance with the Dorians of Ægina, — oligarchical, wealthy, commercial, and powerful at sea, even in the earliest days; more analogous to Corinth than to any of the other cities called Dorian. The hos-

[1] In the expression of Herodotus, the Æakid heroes are *really* sent from Ægina, and *really* sent back by the Thebans (v. 80–81) — Οἱ δὲ σφι αἰτ ουσι ἐπικουρίην τοὺς Αἰακίδας συμπέμπειν ἐφασαν, αὐτις οἱ Θηβαῖοι πέμψαντες, τοὺς μὲν Αἰακίδας σφι ἀπεδίδοσαν, τῶν δὲ ἀνδρῶν ἐδέοντο Compare again v, 75; viii, 64; and Polyb. vii, 9, 2. θεῶν τῶν συστρατευομένων.

Justin gives a narrative of an analogous application from the Epizephyrian Lokrians to Sparta (xx, 3): "Territi Locrenses ad Spartanos decurrunt: auxilium supplices deprecantur: illi longinquâ militiâ gravati, auxilium a Castore et Polluce petere eos jubent. Neque legati responsum sociæ urbis spreverunt; profectique in proximum templum, facto sacrificio, auxilium deorum implorant. Litatis hostiis, *obtentoque, ut rebantur, quod petebant — haud secus lœti quam si deos ipsos secum avecturi essent* — pulvinaria iis in navi componunt, faustisque profecti ominibus, *solatia suis pro auxiliis* deportant." In comparing the expressions of Herodotus with those of Justin, we see that the former believes the direct literal presence and action of the Æakid heroes ("the Thebans sent back the heroes, and asked for men"), while the latter explains away the divine intervention into a mere fancy and feeling on the part of those to whom it is supposed to be accorded. This was the tone of those later authors whom Justin followed: compare also Pausan. iii, 19, 2.

[2] Herodot. v, 81–82

tility which they now began without provocation against Athens, — repressed by Sparta at the critical moment of the battle of Marathon, — then again breaking out, — and hushed for a while by the common dangers of the Persian invasion under Xerxês, was appeased only with the conquest of the island about twenty years after that event, and with the expulsion and destruction of its inhabitants some years later. There had been indeed, according to Herodotus,[1] a feud of great antiquity between Athens and Ægina, — of which he gives the account in a singular narrative, blending together religion, politics, exposition of ancient customs, etc.; but at the time when the Thebans solicited aid from Ægina, the latter was at peace with Athens. The Æginetans employed their fleet, powerful for that day, in ravaging Phalêrum and the maritime demes of Attica; nor had the Athenians as yet any fleet to resist them.[2] It is probable that the desired effect was produced, of diverting a portion of the Athenian force from the war against Bœotia, and thus partially relieving Thebes. But the war of Athens against both of them continued for a considerable time, though we have no information respecting its details.

Meanwhile the attention of Athens was called off from these combined enemies by a more menacing cloud, which threatened to burst upon her from the side of Sparta. Kleomenês and his countrymen, full of resentment at the late inglorious desertion of Eleusis, were yet more incensed by the discovery, which appears to have been then recently made, that the injunctions of the Delphian priestess for the expulsion of Hippias from Athens had been fraudulently procured.[3] Moreover, Kleomenês, when shut up in the acropolis of Athens with Isagoras, had found there various prophecies previously treasured up by the Peisistratids, many of which foreshadowed events highly disastrous to Sparta. And while the recent brilliant manifestations of courage, and repeated victories, on the part of Athens, seemed to indicate that such prophecies might perhaps be realized, — Sparta had to reproach herself, that, from the foolish and mischievous conduct

[1] Herodot. v, 83–88.

[2] Herodot. v, 81–89. μεγάλως Ἀθηναίους ἐσινέοντο.

[3] Herodot. v, 90.

of Kleomenês, she had undone the effect of her previous aid against the Peisistratids, and thus lost that return of gratitude which the Athenians would otherwise have testified. Under such impressions, the Spartan authorities took the remarkable step of sending for Hippias from his residence at Sigeium to Peloponnesus, and of summoning deputies from all their allies to meet him at Sparta.

The convocation thus summoned deserves notice as the commencement of a new era in Grecian politics. The previous expedition of Kleomenês against Attica presents to us the first known example of Spartan headship passing from theory into act: that expedition miscarried because the allies, though willing to follow, would not follow blindly, nor be made the instruments of executing purposes repugnant to their feelings. Sparta had now learned the necessity, in order to insure their hearty concurrence, of letting them know what she contemplated, so as to ascertain at least that she had no decided opposition to apprehend. Here, then, is the third stage in the spontaneous movement of Greece towards a systematic conjunction, however imperfect, of its many autonomous units. First we have Spartan headship suggested in theory, from a concourse of circumstances which attract to her the admiration of all Greece, — power, unrivalled training, undisturbed antiquity, etc.: next, the theory passes into act, yet rude and shapeless: lastly, the act becomes clothed with formalities, and preceded by discussion and determination. The first convocation of the allies at Sparta, for the purpose of having a common object submitted to their consideration, may well be regarded as an important event in Grecian political history. The proceedings at the convocation are no less important, as an indication of the way in which the Greeks of that day felt and acted, and must be borne in mind as a contrast with times hereafter to be described.

Hippias having been presented to the assembled allies, the Spartans expressed their sorrow for having dethroned him, — their resentment and alarm at the new-born insolence of Athens,[1] already tasted by her immediate neighbors, and menacing to every state represented in the convocation, — and their anxiety to

[1] Herodot. v, 90, 91.

restore Hippias, not less as a reparation for past wrong, than as a means, through his rule, of keeping Athens low and dependent But the proposition, though emanating from Sparta, was listened to by the allies with one common sentiment of repugnance. They had no sympathy for Hippias, — no dislike, still less any fear, of Athens, — and a profound detestation of the character of a despot. The spirit which had animated the armed contingents at Eleusis now reappeared among the deputies at Sparta, and the Corinthians again took the initiative. Their deputy Sosiklês protested against the project in the fiercest and most indignant strain: no language can be stronger than that of the long harangue which Herodotus puts into his mouth, wherein the bitter recollections prevalent at Corinth respecting Kypselus and Periander are poured forth. "Surely, heaven and earth are about to change places, — the fish are coming to dwell on dry land, and mankind going to inhabit the sea, — when you, Spartans, propose to subvert the popular governments, and to set up in the cities that wicked and bloody thing called a Despot.[1] First try what it is, for yourselves at Sparta, and then force it upon others if you can: you have not tasted its calamities as we have, and you take very good care to keep it away from yourselves. We adjure you, by the common gods of Hellas, — plant not despots in her cities: if you persist in a scheme so wicked, know that the Corinthians will not second you."

This animated appeal was received with a shout of approbation and sympathy on the part of the allies. All with one accord united with Sosiklês in adjuring the Lacedæmonians[2] "not to revolutionize any Hellenic city." No one listened to Hippias when he replied, warning the Corinthians that the time would come, when they, more than any one else, would dread and abhor the Athenian democracy, and wish the Peisistratidæ back again. He knew well, says Herodotus, that this would be, for he was better acquainted with the prophecies than any man. But no one then believed him, and he was forced to take his

[1] Herodot. v, 92.....*τυραννίδας ἐς τὰς πόλις κατάγειν παρασκευάζεσθε, τοῦ οὔτε ἀδικώτεροι οὐδέν ἐστι κατ' ἀνθρώπους οὔτε μιαιφονώτερον.*

[2] Herodot. v, 93. *μὴ ποιέειν μηδὲν νεώτερον περὶ πόλιν Ἑλλάδα.*

departure back to Sigeium: the Spartans not venturing to espouse his cause against the determined sentiment of the all s.[1]

That determined sentiment deserves notice, because it marks the present period of the Hellenic mind: fifty years later it will be found materially altered. Aversion to single-headed rule, and bitter recollection of men like Kypselus and Periander, are now the chords which thrill in an assembly of Grecian deputies: the idea of a revolution, implying thereby a great and comprehensive change, of which the party using the word disapproves, consists in substituting a permanent One in place of those periodical magistrates and assemblies which were the common attribute of oligarchy and democracy: the antithesis between these last two is as yet in the background, nor does there prevail either fear of Athens or hatred of the Athenian democracy. But when we turn to the period immediately before the Peloponnesian war, we find the order of precedence between these two sentiments reversed. The anti-monarchical feeling has not perished, but has been overlaid by other and more recent political antipathies, — the antithesis between democracy and oligarchy having become, not indeed the only sentiment, but the uppermost sentiment, in the minds of Grecian politicians generally, and the soul of active party-movement. Moreover, a hatred of the most deadly character has grown up against Athens and her democracy especially in the grandsons of those very Corinthians who now stand forward as her sympathizing friends. The remarkable change of feeling here mentioned is nowhere so strikingly exhibited as when we contrast the address of the Corinthian Sosiklês, just narrated, with the speech of the Corinthian envoys at Sparta, immediately antecedent to the Peloponnesian war, as given to us in Thucydidês.[2] It will hereafter be fully explained by the intermediate events, by the growth of Athenian power, and by the still more miraculous development of Athenian energy.

Such development, the fruit of the fresh-planted democracy as well as the seed for its sustentation and aggrandizement, continued progressive during the whole period just adverted to. But the first unexpected burst of it, under the Kleisthenean constitution, and after the expulsion of Hippias, is described by

[1] Herodot. v, 93–94.

[2] Thucydid. i, 68–71, 120–124.

Herodotus in terms too emphatic to be omitted. After narrating the successive victories of the Athenians over both Bœotians and Chalkidians, that historian proceeds: "Thus did the Athenians grow in strength. And we may find proof, not merely in this instance but everywhere else, how valuable a thing freedom is: since even the Athenians, while under a despot, were not superior in war to any of their surrounding neighbors, but, so soon as they got rid of their despots, became by far the first of all. These things show that while kept down by one man, they were slack and timid, like men working for a master; but when they were liberated, every single man became eager in exertions for his own benefit." The same comparison reappears a short time afterwards, where he tells us, that "the Athenians when free, felt themselves a match for Sparta; but while kept down by any man under a despotism, were feeble and apt for submission."[1]

Stronger expressions cannot be found to depict the rapid improvement wrought in the Athenian people by their new democracy. Of course this did not arise merely from suspension of previous cruelties, or better laws, or better administration. These, indeed, were essential conditions, but the active transforming cause here was, the principle and system of which such amendments formed the detail: the grand and new idea of the sovereign People, composed of free and equal citizens, — or liberty and equality, to use words which so profoundly moved the French nation half a century ago. It was this comprehensive political idea which acted with electric effect upon the Athenians, creating within them a host of sentiments, motives, sympathies, and capacities, to which they had before been strangers. Democracy in Grecian antiquity possessed the privilege,

[1] Herodot. v, 78–91. *Ἀθηναῖοι μεν νυν ἠυξηντο· δηλοῖ δὲ οὐ κατ' ἓν μόνον ἀλλὰ πανταχῇ, ἡ ἰσηγορίη ὡς ἐστι χρῆμα σπουδαῖον, εἰ καὶ Ἀθηναῖοι τυραννευόμενοι μὲν, οὐδαμῶν τῶν σφέας περιοικεόντων ἐσαν τὰ πολέμια ἀμείνους, ἀπαλλαχθέντες δὲ τυράννων, μακρῷ πρῶτοι ἐγένοντο· δηλοῖ ὧν ταῦτα, ὅτι κατεχόμενοι μὲν, ἐθελοκάκεον, ὡς δεσπότῃ ἐργαζόμενοι, ἐλευθερωθέντων δὲ, αὐτὸς ἕκαστος ἑωῦτῷ προθυμέετο κατεργάζεσθαι.*

(c. 91.) *Οἱ Λακεδαιμόνιοι — νόῳ λαβόντες, ὡς ἐλεύθερον μὲν ἐὸν τὸ γένος τὸ Ἀττικὸν, ἰσόρροπον τῷ ἑωῦτῶν ἂν γένοιτο, κατεχόμενον δὲ ὑπό τῳ τυραννίδι, ἀσθενὲς καὶ πειθαρχέεσθαι ἑτοῖμον.*

not only of kindling an earnest and unanimous attachment to the constitution in the bosoms of the citizens, but also of creating an energy of public and private action, such as could never be obtained under an oligarchy, where the utmost that could be hoped for was a passive acquiescence and obedience. Mr. Burke has remarked that the mass of the people are generally very indifferent about theories of government; but such indifference — although improvements in the practical working of all governments tend to foster it — is hardly to be expected among any people who exhibit decided mental activity and spirit on other matters; and the reverse was unquestionably true, in the year 500 B.C., among the communities of ancient Greece. Theories of government were there anything but a dead letter: they were connected with emotions of the strongest as well as of the most opposite character. The theory of a permanent ruling One, for example, was universally odious: that of a ruling Few, though acquiesced in, was never positively attractive, unless either where it was associated with the maintenance of peculiar education and habits, as at Sparta, or where it presented itself as the only antithesis to democracy, the latter having by peculiar circumstances become an object of terror. But the theory of democracy was preëminently seductive; creating in the mass of the citizens an intense positive attachment, and disposing them to voluntary action and suffering on its behalf, such as no coercion on the part of other governments could extort. Herodotus,[1] in his comparison of the three sorts of government, puts in the front rank of the advantages of democracy, "its most splendid name and promise," — its power of enlisting the hearts of the citizens in support of their constitution, and of providing for all a common bond of union and fraternity. This is what even democracy did not always do: but it was what no other government in Greece *could* do: a reason alone sufficient to stamp it as

[1] Herodot. iii, 80. Πλῆθος δὲ ἀρχον, πρῶτα μὲν, οὔνομα πάντων κάλλιστον ἔχει, ἰσονομίην· δεύτερα δὲ, τούτων τῶν ὁ μόναρχος, ποιέει οὐδέν· πάλῳ μὲν ἀρχὰς ἀρχει, ὑπεύθυνον δὲ ἀρχὴν ἔχει, βουλεύματα δὲ πάντα ἐς τὸ κοινὸν ἀναφέρει.

The democratical speaker at Syracuse, Athenagoras, also puts this name and promise in the first rank of advantages — (Thucyd. vi, 39) — ἐγὼ δὲ νομι, πρῶτα μὲν, δῆμον ξύμπαν ὀνόμασθαι, ὀλιγαρχίαν δὲ, μέρος, etc

the best government, and presenting the greatest chance of beneficent results, for a Grecian community. Among the Athenian citizens, certainly, it produced a strength and unanimity of positive political sentiment, such as has rarely been seen in the history of mankind, which excites our surprise and admiration the more when we compare it with the apathy which had preceded, — and which is even implied as the natural state of the public mind in Solon's famous proclamation against neutrality in a sedition.[1] Because democracy happens to be unpalatable to most modern readers, they have been accustomed to look upon the sentiment here described only in its least honorable manifestations, — in the caricatures of Aristophanês, or in the empty common-places of rhetorical declaimers. But it is not in this way that the force, the earnestness, or the binding value, of democratical sentiment at Athens is to be measured. We must listen to it as it comes from the lips of Periklês,[2] while he is strenuously enforcing upon the people those active duties for which it both implanted the stimulus and supplied the courage; or from the oligarchical Nikias in the harbor of Syracuse, when he is endeavoring to revive the courage of his despairing troops for one last death-struggle, and when he appeals to their democratical patriotism as to the only flame yet alive and burning even in that moment of agony.[3] From the time of Kleisthenês downward, the creation of this new mighty impulse makes an entire revolution in the Athenian character. And if the change still stood out in so prominent a manner before the eyes of Herodotus, much more must it have been felt by the contemporaries among whom it occurred.

The attachment of an Athenian citizen to his democratical constitution comprised two distinct veins of sentiment: first, his rights, protection, and advantages derived from it, — next, his obligations of exertion and sacrifice towards it and with reference

[1] See the preceding chapter xi, of this History, vol. iii, p. 145, respecting the Solonian declaration here adverted to.

[2] See the two speeches of Periklês in Thucyd. ii, 35–46, and ii, 60–64. Compare the reflections of Thucydidês upon the two democracies of Athens and Syracuse, vi, 69 and vii, 21–55.

[3] Thucyd. vii, 69. Πατρίδος τε τῆς ἐλευθερωτάτης ὑπομιμνήσκων καὶ τὴν αὐτῇ ἀνεπιτακτοῦ πᾶσιν ἐς τὴν δίαιτ-ω ἐξουσίας, etc.

to it. Neither of these two veins of sentiment was ever wholly absent; but according as the one or the other was present at different times in varying proportions, the patriotism of the citizen was a very different feeling. That which Herodotus remarks is, the extraordinary efforts of heart and hand which the Athenians suddenly displayed, — the efficacy of the active sentiment throughout the bulk of the citizens; and we shall observe even more memorable evidences of the same phenomenon in tracing down the history from Kleisthenês to the end of the Peloponnesian war: we shall trace a series of events and motives eminently calculated to stimulate that self-imposed labor and discipline which the early democracy had first called forth. But when we advance farther down, from the restoration of the democracy after the Thirty Tyrants to the time of Demosthenês, — I venture upon this brief anticipation, in the conviction that one period of Grecian history can only be thoroughly understood by contrasting it with another, — we shall find a sensible change in Athenian patriotism. The active sentiment of obligation is comparatively inoperative, — the citizen, it is true, has a keen sense of the value of the democracy as protecting him and insuring to him valuable rights, and he is, moreover, willing to perform his ordinary sphere of legal duties towards it; but he looks upon it as a thing established, and capable of maintaining itself in a due measure of foreign ascendency, without any such personal efforts as those which his forefathers cheerfully imposed upon themselves. The orations of Demosthenês contain melancholy proofs of such altered tone of patriotism, — of that languor, paralysis, and waiting for others to act, which preceded the catastrophe of Chæroneia, notwithstanding an unabated attachment to the democracy as a source of protection and good government.[1] That same preternatural activity which the allies of Sparta, at the beginning of the Peloponnesian war, both denounced and admired in the Athenians, is noted by the orator as now belonging to their enemy Philip.

[1] Compare the remarkable speech of the Corinthian envoys at Sparta (Thucyd. i, 68–71), with the φιλοπραγμοσύνη which Demosthenês so emphatically notices in Philip (Olynthiac. ii, 6, p. 13): also Philippic. i, 2, and the Philippics and Olynthiacs generally.

Such variations in the scale of national energy pervade history, modern as well as ancient, but in regard to Grecian history, especially, they can never be overlooked. For a certain measure, not only of positive political attachment, but also of active self-devotion, military readiness, and personal effort, was the indispensable condition of maintaining Hellenic autonomy, either in Athens or elsewhere; and became so more than ever when the Macedonians were once organized under an enterprising and semi-Hellenized prince. The democracy was the first creative cause of that astonishing personal and many-sided energy which marked the Athenian character, for a century downward from Kleisthenês. That the same ultra-Hellenic activity did not longer continue, is referable to other causes, which will be hereafter in part explained. No system of government, even supposing it to be very much better and more faultless than the Athenian democracy, can ever pretend to accomplish its legitimate end apart from the personal character of the people, or to supersede the necessity of individual virtue and vigor. During the half-century immediately preceding the battle of Chæroneia, the Athenians had lost that remarkable energy which distinguished them during the first century of their democracy, and had fallen much more nearly to a level with the other Greeks, in common with whom they were obliged to yield to the pressure of a foreign enemy. I here briefly notice their last period of languor, in contrast with the first burst of democratical fervor under Kleisthenês, now opening, — a feeling which will be found, as we proceed, to continue for a longer period than could have been reasonably anticipated, but which was too high-strung to become a perpetual and inherent attribute of any community.

CHAPTER XXXII.

RISE OF THE PERSIAN EMPIRE. — CYRUS.

In the preceding chapter, I have followed the history of Central Greece very nearly down to the point at which the history of the Asiatic Greeks becomes blended with it, and after which the two streams begin to flow to a great degree in the same channel. I now revert to the affairs of the Asiatic Greeks, and of the Asiatic kings as connected with them, at the point in which they were left in my seventeenth chapter.

The concluding facts recounted in that chapter were of sad and serious moment to the Hellenic world. The Ionic and Æolic Greeks on the Asiatic coast had been conquered and made tributary by the Lydian king Crœsus: "down to that time (says Herodotus) all Greeks had been free." Their conqueror Crœsus, who ascended the throne in 560 B.C., appeared to be at the summit of human prosperity and power in his unassailable capital, and with his countless treasures at Sardis. His dominions comprised nearly the whole of Asia Minor, as far as the river Halys to the east; on the other side of that river began the Median monarchy under his brother-in-law Astyagês, extending eastward to some boundary which we cannot define, but comprising in a southeastern direction Persis proper, or Farsistan, and separated from the Kissians and Assyrians on the west by the line of Mount Zagros — the present boundary-line between Persia and Turkey. Babylonia, with its wondrous city, between the Euphrates and the Tigris, was occupied by the Assyrians, or Chaldæans, under their king Labynêtus: a territory populous and fertile, partly by nature, partly by prodigies of labor, to a degree which makes us mistrust even an honest eye-witness who describes it afterwards in its decline, — but which was then in its most flourishing condition. The Chaldæan dominion under Labynêtus reached to the borders of Egypt, including, as dependent territories, both Judæa and Phœ-

nicia in Egypt, reigned the native king Amasis, powerful and affluent, sustained in his throne by a large body of Grecian mercenaries, and himself favorably disposed to Grecian commerce and settlement. Both with Labynêtus and with Amasis, Crœsus was on terms of alliance; and as Astyagês was his brother-in-law, the four kings might well be deemed out of the reach of calamity. Yet within the space of thirty years or a little more, the whole of their territories had become embodied in one vast empire, under the son of an adventurer as yet not known even by name.

The rise and fall of Oriental dynasties has been in all times distinguished by the same general features. A brave and adventurous prince, at the head of a population at once poor, warlike, and greedy, acquires dominion, — while his successors, abandoning themselves to sensuality and sloth, probably also to oppressive and irascible dispositions, become in process of time victims to those same qualities in a stranger which had enabled their own father to seize the throne. Cyrus, the great founder of the Persian empire, first the subject and afterwards the dethroner of the Median Astyagês, corresponds to this general description, as far at least as we can pretend to know his history. For in truth, even the conquests of Cyrus, after he became ruler of Media, are very imperfectly known, whilst the facts which preceded his rise up to that sovereignty cannot be said to be known at all: we have to choose between different accounts at variance with each other, and of which the most complete and detailed is stamped with all the character of romance. The Cyropædia of Xenophon is memorable and interesting, considered with reference to the Greek mind, and as a philosophical novel:[1] that it should have been quoted so largely as authority on matters of history, is only one proof among many how easily authors have been satisfied as to the essentials of historical evidence. The narrative given by Herodotus of the relations between Cyrus and Astyagês, agreeing with Xenophon in little more than the fact that it makes Cyrus son of Kambysês and Mandanê, and

[1] Among the lost productions of Antisthenês, the contemporary of Xenophon and Plato, and emanating like them from the tuition of Sokratês, was one Κῦρος, ἢ περὶ Βασιλείας (Diogenes Laërt. vi, 15).

grandson of Astyagês, goes even beyond the story of Romulus and Remus in respect to tragical incident and contrast. Astyagês, alarmed by a dream, condemns the new-born infant of his daughter Mandanê to be exposed: Harpagus, to whom the order is given, delivers the child to one of the royal herdsmen, who exposes it in the mountains, where it is miraculously suckled by a bitch.[1] Thus preserved, and afterwards brought up as the herdsman's child, Cyrus manifests great superiority both physical and mental, is chosen king in play by the boys of the village, and in this capacity severely chastises the son of one of the courtiers; for which offence he is carried before Astyagês, who recognizes him for his grandson, but is assured by the Magi that his dream is out, and that he has no farther danger to apprehend from the boy, — and therefore permits him to live. With Harpagus, however, Astyagês is extremely incensed, for not having executed his orders: he causes the son of Harpagus to be slain, and served up to be eaten by his unconscious father at a regal banquet. The father, apprized afterwards of the fact, dissembles his feelings, but conceives a deadly vengeance against Astyagês for this Thyestean meal. He persuades Cyrus, who has been sent back to his father and mother in Persia, to head a revolt

[1] That this was the real story — a close parallel of Romulus and Remus — we may see by Herodotus, i, 122. Some rationalizing Greeks or Persians transformed it into a more plausible tale, — that the herdsman's wife who suckled the boy Cyrus was named Κυνώ (Κυὼν is a dog, male or female); contending that this latter was the real basis of fact, and that the intervention of the bitch was an exaggeration built upon the name of the woman, in order that the divine protection shown to Cyrus might be still more manifest, — *οἱ δὲ τοκέες παραλαβόντες τὸ οὔνομα τοῦτο (ἵνα θειοτέρως δοκέῃ τοῖσι Πέρσῃσι περιεῖναί σφι ὁ παῖς), κατέβαλον φάτιν ὡς ἐκκείμενον Κῦρον κύων ἐξεθρεψε· ἐνθεῦτεν μὲν ἡ φάτις αυτὴ κεχωρήκεε.*

In the first volume of this History, I have noticed various transformations operated by Palæphatus and others upon the Greek mythes, — the ram which carried Phryxus and Hellê across the Hellespont is represented to us as having been in *reality* a man *named Krius*, who aided their flight, — the winged horse which carried Bellerophon was a ship *named* Pegasus, etc.

This same operation has here been performed upon the story of the suckling of Cyrus; for we shall run little risk in affirming that the miraculous story is the older of the two. The feelings which welcome a miraculous story are early and primitive; those which break down the miracle into a commonplace fact are of subsequent growth.

of the Persians against the Medes; whilst Astyagês — to fill up the Grecian conception of madness as a precursor to ruin — sends an army against the revolters, commanded by Harpagus himself. Of course the army is defeated, — Astyagês, after a vain resistance, is dethroned, — Cyrus becomes king in his place, — and Harpagus repays the outrage which he has undergone by the bitterest insults.

Such are the heads of a beautiful narrative which is given at some length in Herodotus. It will probably appear to the reader sufficiently romantic, though the historian intimates that he had heard three other narratives different from it, and that all were more full of marvels, as well as in wider circulation, than his own, which he had borrowed from some unusually sober-minded Persian informants.[1] In what points the other three stories departed from it, we do not hear.

To the historian of Halikarnassus, we have to oppose the physician of the neighboring town Knidus, — Ktêsias, who contradicted Herodotus, not without strong terms of censure, on many points, and especially upon that which is the very foundation of the early narrative respecting Cyrus; for he affirmed that Cyrus was noway related to Astyagês.[2] However indignant we may be with Ktêsias, for the disparaging epithets which he presumed to apply to an historian whose work is to us inestimable, — we must nevertheless admit that as surgeon, in actual attendance on king Artaxerxês Mnêmon, and healer of the

[1] Herodot. i, 95. *Ὡς ὦν Περσέων μετεξέτεροι λέγουσιν, οἱ μὴ βουλόμενοι σεμνοῦν τὰ περὶ Κῦρον, ἀλλὰ τὸν ἐόντα λέγειν λόγον, κατὰ ταῦτα γράψω· ἐπιστάμενος περὶ Κύρου καὶ τριφασίας ἄλλας λόγων ὁδοὺς φῆναι.* His informants were thus select persons, who differed from the Persians generally.

The long narrative respecting the infancy and growth of Cyrus is contained in Herodot. i, 107–129.

[2] See the Extracts from the lost Persian History of Ktêsias, in Photius Cod. lxxii, also appended to Schweighaüser's edition of Herodotus, vol. iv, p 345. *Φησὶ δὲ* (Ktêsias) *αὐτὸν τῶν πλειόνων ἃ ἱστορεῖ αὐτοπτην γενόμενον, ἢ παρ' αὐτῶν Περσῶν (ἐνθα τὸ ὁρᾶν μὴ ἐνεχώρει) αὐτήκοον καταστάντα, οὕτως τὴν ἱστορίαν συγγράψαι.*

To the discrepancies between Xenophon, Herodotus, and Ktêsias, on the subject of Cyrus, is to be added the statement of Æschylus (Persæ, 747), the oldest authority of them all, and that of the Armenian historians: see Bähr ad Ktesiam, p. 85: comp. Bähr's comments on the discrepancies, p 87

wound inflicted on that prince at Kunaxa by his brother Cyrus the younger,[1] he had better opportunities even than Herodotus of conversing with sober-minded Persians; and that the discrepancies between the two statements are to be taken as a proof of the prevalence of discordant, yet equally accredited, stories. Herodotus himself was in fact compelled to choose one out of four. So rare and late a plant is historical authenticity.

That Cyrus was the first Persian conqueror, and that the space which he overran covered no less than fifty degrees of longitude, from the coast of Asia Minor to the Oxus and the Indus, are facts quite indisputable; but of the steps by which this was achieved, we know very little. The native Persians whom he conducted to an empire so immense, were an aggregate of seven agricultural and four nomadic tribes, — all of them rude, hardy, and brave,[2] — dwelling in a mountainous region, clothed in skins, ignorant of wine or fruit, or any of the commonest luxuries of life, and despising the very idea of purchase or sale. Their tribes were very unequal in point of dignity, probably also in respect to numbers and powers, among one another: first in estimation among them stood the Pasargadæ; and the first phratry, or clan, among the Pasargadæ were the Achæmenidæ, to whom Cyrus himself belonged. Whether his relationship to the Median king whom he dethroned was a matter of fact, or a politic fiction, we cannot well determine. But Xenophon, in noticing the spacious deserted cities, Larissa and Mespila,[3] which he saw in his march with the Ten Thousand

[1] Xenophon, Anabas. i. 8, 26.

[2] Herodot. i, 71–153; Arrian, v, 4; Strabo, xv, p. 727; Plato, Legg. iii p. 695.

[3] Xenophon, Anabas. iii, 3, 6; iii, 4, 7–12. Strabo had read accounts which represented the last battle between Astyagês and Cyrus to have been fought near Pasargadæ (xv, p. 730).

It has been rendered probable by Ritter, however, that the ruined city which Xenophon called Mespila was the ancient Assyrian Nineveh, and the other deserted city which Xenophon calls Larissa, situated as it was on the Tigris, must have been originally Assyrian, and not Median. See about Nineveh, above, — the Chapter on the Babylonians, vol. iii, ch. xix, p. 305, note.

The land east of the Tigris, in which Nineveh and Arbêla were situated seems to have been called Aturia, — a dialectic variation of Assyria (Strabo xvi, p. 737; Dio Cass. lxviii, 28).

Greeks on the eastern side of the Tigris, gives us to understand that the conquest of Media by the Persians was reported to him as having been an obstinate and protracted struggle. However this may be, the preponderance of the Persians was at last complete: though the Medes always continued to be the second nation in the empire, after the Persians, properly so called; and by early Greek writers the great enemy in the East is often called "the Mede,[1]" as well as "the Persian." Ekbatana always continued to be one of the capital cities, and the usual summer residence, of the kings of Persia; Susa on the Choaspês, on the Kissian plain farther southward, and east of the Tigris, being their winter abode.

The vast space of country comprised between the Indus on the east, the Oxus and Caspian sea to the north, the Persian gulf and Indian ocean to the south, and the line of Mount Zagros to the west, appears to have been occupied in these times by a great variety of different tribes and people, but all or most of them belonging to the religion of Zoroaster, and speaking dialects of the Zend language.[2] It was known amongst its inhabitants by the common name of Iran, or Aria: it is, in its central parts at least, a high, cold plateau, totally destitute of wood and scantily supplied with water; much of it, indeed, is a salt and sandy desert, unsusceptible of culture. Parts of it are eminently fertile, where water can be procured and irrigation applied; and scattered masses of tolerably dense population thus grew up. But continuity of cultivation is not practicable, and in ancient times, as at present, a large proportion of the population of Iran seems to have consisted of wandering or nomadic tribes, with their tents and cattle. The rich pastures, and the freshness of the summer climate, in the region of mountain and valley near Ekbatana, are extolled by modern travellers, just as they attracted the Great King in ancient times, during the hot months. The

more southerly province called Persis proper (Farsistan) consists also in part of mountain land interspersed with valley and plain, abundantly watered, and ample in pasture, sloping gradually down to low grounds on the sea-coast which are hot and dry. The care bestowed, both by Medes and Persians, on the breeding of their horses, was remarkable.[1] There were doubtless material differences between different parts of the population of this vast plateau of Iran. Yet it seems that, along with their common language and religion, they had also something of a common character, which contrasted with the Indian population east of the Indus, the Assyrians west of Mount Zagros, and the Massagetæ and other Nomads of the Caspian and the sea of Aral, — less brutish, restless, and bloodthirsty, than the latter, — more fierce, contemptuous, and extortionate, and less capable of sustained industry, than the two former. There can be little doubt, at the time of which we are now speaking, when the wealth and cultivation of Assyria were at their maximum, that Iran also was far better peopled than ever it has been since European observers have been able to survey it; especially the northeastern portion, Baktria and Sogdiana: so that the invasions of the nomads from Turkestan and Tartary, which have been so destructive at various intervals since the Mohammedan conquest, were before that period successfully kept back.

The general analogy among the population of Iran probably enabled the Persian conqueror with comparative ease to extend his empire to the east, after the conquest of Ekbatana, and to become the full heir of the Median kings. And if we may believe Ktêsias, even the distant province of Baktria had been before subject to those kings: it at first resisted Cyrus, but finding that he had become son-in-law of Astyagês as well as master of his person, it speedily acknowledged his authority.[5]

According to the representation of Herodotus, the war between Cyrus and Crœsus of Lydia began shortly after the capture of Astyagês, and before the conquest of Baktria.[3] Crœsus was

[1] About the province of Persis, see Strabo, xv, p. 727; Diodor. xix, 21; Quintus Curtius, v, 13, 14, pp. 432–434, with the valuable explanatory notes of Mützell (Berlin, 1841). Compare, also, Morier's Second Journey in Persia, pp. 49–120, and Ritter, Erdkunde, West Asien, pp. 712–738.

[5] Ktêsias, Persica, c. 2.

[3] Herodot i, 153.

the assailant, wishing to avenge his brother-in-law, to arrest the growth of the Persian conqueror, and to increase his own dominions: his more prudent councillors in vain represented to him that he had little to gain, and much to lose, by war with a nation alike hardy and poor. He is represented, as just at that time recovering from the affliction arising out of the death of his son. To ask advice of the oracle, before he took any final decision, was a step which no pious king would omit; but in the present perilous question, Crœsus did more, — he took a precaution so extreme, that, if his piety had not been placed beyond all doubt by his extraordinary munificence to the temples, he might have drawn upon himself the suspicion of a guilty skepticism.[1] Before he would send to ask advice respecting the project itself, he resolved to test the credit of some of the chief surrounding oracles, — Delphi, Dôdôna, Branchidæ near Milêtus, Amphiaraus at Thebes, Trophônius at Lebadeia, and Ammôn in Libya. His envoys started from Sardis on the same day, and were all directed on the hundredth day afterwards to ask at the respective oracles how Crœsus was at that precise moment employed. This was a severe trial: of the manner in which it was met by four out of the six oracles consulted, we have no information, and it rather appears that their answers were unsatisfactory. But Amphiaraus maintained his credit undiminished, and Apollo at Delphi, more omniscient than Apollo at Branchidæ, solved the question with such unerring precision, as to afford a strong additional argument against persons who might be disposed to scoff at divination. No sooner had the envoys put the question to the Delphian priestess, on the day named, "What is Crœsus now doing?" than she exclaimed, in the accustomed hexameter verse,[2] "I know the number of grains of sand, and the measures of the sea; I understand the dumb, and I hear the man who speaks not. The smell reaches me of a hard-skinned tortoise boiled in a copper with lamb's flesh, — copper above and copper below." Crœsus was

[1] That this point of view should not be noticed in Herodotus, may appear singular, when we read his story (vi, 86) about the Milesian Glaukus, and the judgment that overtook him for having tested the oracle; but it is put forward by Xenophon as constituting part of the guilt of Crœsus (Cyropæd. vii, 2, 17).

[2] Herodot. i, 47 50.

westruck on receiving this reply. It described with the utmost detail that which he had been really doing, insomuch that he accounted the Delphian oracle and that of Amphiaraus the only trustworthy oracles on earth, — following up these feelings with a holocaust of the most munificent character, in order to win the favor of the Delphian god. Three thousand cattle were offered up, and upon a vast sacrificial pile were placed the most splendid purple robes and tunics, together with couches and censers of gold and silver: besides which he sent to Delphi itself the richest presents in gold and silver, — ingots, statues, bowls, jugs, etc., the size and weight of which we read with astonishment; the more so as Herodotus himself saw them a century afterwards at Delphi.[1] Nor was Crœsus altogether unmindful of Amphiaraus, whose answer had been creditable, though less triumphant than that of the Pythian priestess. He sent to Amphiaraus a spear and shield of pure gold, which were afterwards seen at Thebes by Herodotus: this large donative may help the reader to conceive the immensity of those which he sent to Delphi.

The envoys who conveyed these gifts were instructed to ask, at the same time, whether Crœsus should undertake an expedition against the Persians, — and, if so, whether he should prevail on any allies to assist him. In regard to the second question, the answer both of Apollo and Amphiaraus was decisive, recommending him to invite the alliance of the most powerful Greeks. In regard to the first and most momentous question, their answer was as remarkable for circumspection as it had been before for detective sagacity: they told Crœsus that, if he invaded the Persians, he would subvert a mighty monarchy. The blindness of Crœsus interpreted this declaration into an unqualified promise of success. He sent farther presents to the oracle, and again inquired whether his kingdom would be durable. "When a mule shall become king of the Medes (replied the priestess), then must thou run away, — be not ashamed."[2]

More assured than ever by such an answer, Crœsus sent to Sparta, under the kings Anaxandridês and Aristo, to tender presents and solicit their alliance.[3] His propositions were fa-

[1] Herodot. i, 52–54.
[2] Herodot. i, 55
[3] Herodot. i, 67–70.

vorably entertained, — the more so, as he had before gratuitously furnished some gold to the Lacedæmonians, for a statue to Apollo The alliance now formed was altogether general, — no express effort being as yet demanded from them, though it soon came to be. But the incident is to be noted, as marking the first plunge of the leading Grecian state into Asiatic politics; and that too without any of the generous Hellenic sympathy which afterwards induced Athens to send her citizens across the Ægean. Crœsus was the master and tribute-exactor of the Asiatic Greeks, and their contingents seem to have formed part of his army for the expedition now contemplated; which army consisted principally, not of native Lydians, but of foreigners.

The river Halys formed the boundary at this time between the Median and Lydian empires: and Crœsus, marching across that river into the territory of the Syrians or Assyrians of Kappadokia, took the city of Pteria and many of its surrounding dependencies, inflicting damage and destruction upon these distant subjects of Ekbatana. Cyrus lost no time in bringing an army to their defence considerably larger than that of Crœsus, and at the same time tried, though unsuccessfully, to prevail on the Ionians to revolt from him. A bloody battle took place between the two armies, but with indecisive result: and Crœsus, seeing that he could not hope to accomplish more with his forces as they stood, thought it wise to return to his capital, in order to collect a larger army for the next campaign. Immediately on reaching Sardis, he despatched envoys to Labynêtus king of Babylon; to Amasis king of Egypt; to the Lacedæmonians, and to other allies; calling upon all of them to send auxiliaries to Sardis during the course of the fifth coming month. In the mean time, he dismissed all the foreign troops who had followed him into Kappadokia.[1]

Had these allies appeared, the war might perhaps have been prosecuted with success; and on the part of the Lacedæmonians at least, there was no tardiness; for their ships were ready and their troops almost on board, when the unexpected news reached them that Crœsus was already ruined.[2] Cyrus had foreseen and forestalled the defensive plan of his enemy. He pushed on with

[1] Herodot. i, 77.
[2] Herodot. i, 82.

his army to Sardis without delay, compelling the Lydian prince to give battle with his own unassisted subjects. The open and spacious plain before that town was highly favorable to the Lydian cavalry, which at that time, Herodotus tells us, was superior to the Persian. But Cyrus devised a stratagem whereby this cavalry was rendered unavailable, — placing in front of his line the baggage camels, which the Lydian horses could not endure either to smell or to behold.[1] The horsemen of Crœsus were thus obliged to dismount; nevertheless, they fought bravely on foot, and were not driven into the town till after a sanguinary combat.

Though confined within the walls of his capital, Crœsus had still good reason for hoping to hold out until the arrival of his allies, to whom he sent pressing envoys of acceleration: for Sardis was considered impregnable, — one assault had already been repulsed, and the Persians would have been reduced to the slow process of blockade. But on the fourteenth day of the siege, accident did for the besiegers that which they could not have accomplished either by skill or force. Sardis was situated on an outlying peak of the northern side of Tmôlus; it was well-fortified everywhere except towards the mountain; and on that side, the rock, was so precipitous and inaccessible, that fortifications were thought unnecessary, nor did the inhabitants believe assault to be possible. But Hyrœades, a Persian soldier, having accidentally seen one of the garrison descending this precipitous rock to pick up his helmet, which had rolled down, watched his opportunity, tried to climb up, and found it not impracticable. Others followed his example, the strong-hold was thus seized first, and the whole city was speedily taken by storm.[2]

Cyrus had given especial orders to spare the life of Crœsus, who was accordingly made prisoner. But preparations were made for a solemn and terrible spectacle. The captive king was destined to be burnt in chains, together with fourteen Lydian youths, on a vast pile of wood: and we are even told that the pile was already kindled and the victim beyond the reach of human aid, when Apollo sent a miraculous rain to preserve him

[1] The story about the successful employment of the camels appears also in Xenophon, Cyropæd. vii, 1, 47.

[2] Herodot. i, 84.

As to the general fact of supernatural interposition, in one way or another, Herodotus and Ktêsias both agree, though they describe differently the particular miracles wrought.[1] It is certain that Crœsus, after some time, was released and well treated by his conqueror, and lived to become the confidential adviser of the latter as well as of his son Kambysês:[2] Ktêsias also acquaints us that a considerable town and territory near Ekbatana, called Barênê, was assigned to him, according to a practice which we shall find not unfrequent with the Persian kings.

The prudent counsel and remarks as to the relations between Persians and Lydians, whereby Crœsus is said by Herodotus to have first earned this favorable treatment, are hardly worth repeating; but the indignant remonstrance sent by Crœsus to the Delphian god is too characteristic to be passed over. He obtained permission from Cyrus to lay upon the holy pavement of the Delphian temple the chains with which he had at first been bound. The Lydian envoys were instructed, after exhibiting to the god these

[1] Compare Herodot. i, 84–87, and Ktêsias, Persica, c. 4; which latter seems to have been copied by Polyænus, vii, 6, 10.

It is remarkable that among the miracles enumerated by Ktêsias, no mention is made of fire or of the pile of wood kindled: we have the chains of Crœsus miraculously struck off, in the midst of thunder and lightning, but no *fire* mentioned. This is deserving of notice, as illustrating the fact that Ktêsias derived his information from *Persian* narrators, who would not be likely to impute to Cyrus the use of fire for such a purpose. The Persians worshipped fire as a god, and considered it impious to burn a dead body (Herodot. iii, 16). Now Herodotus seems to have heard the story, about the burning, from Lydian informants (*λέγεται ὑπὸ Λυδῶν*, Herodot. i, 87). whether the Lydians regarded fire in the same point of view as the Persians, we do not know; but even if they did, they would not be indisposed to impute to Cyrus an act of gross impiety, just as the Egyptians imputed another act equally gross to Kambysês, which Herodotus himself treats as a falsehood (iii, 16).

The long narrative given by Nikolaus Damaskênus of the treatment of Crœsus by Cyrus, has been supposed by some to have been borrowed from the Lydian historian Xanthus, elder contemporary of Herodotus. But it seems to me a mere compilation, not well put together, from Xenophon's Cyropædia, and from the narrative of Herodotus, perhaps including some particular incidents out of Xanthus (see Nikol. Damas. Fragm. ed. Orell. pp. 57–70, and the Fragments of Xanthus in Didot's Historic. Græcor. Fragm. p. 40).

[2] Justin (i, 7) seems to copy Ktêsias, about the treatment of Crœsus.

humiliating memorials, to ask whether it was his custom to deceive his benefactors, and whether he was not ashamed to have encouraged the king of Lydia in an enterprise so disastrous? The god, condescending to justify himself by the lips of the priestess, replied: "Not even a god can escape his destiny Crœsus has suffered for the sin of his fifth ancestor (Gygês), who, conspiring with a woman, slew his master and wrongfully seized the sceptre. Apollo employed all his influence with the Mœræ (Fates) to obtain that this sin might be expiated by the children of Crœsus, and not by Crœsus himself; but the Mœræ would grant nothing more than a postponement of the judgment for three years. Let Crœsus know that Apollo has thus procured for him a reign three years longer than his original destiny,[1] after having tried in vain to rescue him altogether. Moreover, he sent that rain which at the critical moment extinguished the burning pile. Nor has Crœsus any right to complain of the prophecy by which he was encouraged to enter on the war; for when the god told him, that he would subvert *a great empire*, it was his duty to have again inquired which empire the god meant, and if he neither understood the meaning, nor chose to ask for information, he has himself to blame for the result. Besides Crœsus neglected the warning given to him, about the acquisition of the Median kingdom by a mule: Cyrus was that mule, — son of a Median mother of royal breed, by a Persian father, at once of different race and of lower position."

This triumphant justification extorted even from Crœsus himself a full confession, that the sin lay with him, and not with the god.[2] It certainly illustrates, in a remarkable manner, the theological ideas of the time; and it shows us how much, in the mind

[1] Herodot. i, 91. *Προθυμεομένου δὲ Λοξίεω ὅπως ἂν κατὰ τοὺς παῖδας τοὺς Κροίσου γένοιτο τὸ Σαρδίων πάθος, καὶ μὴ κατ' αὐτὸν Κροῖσον, οὐκ οἷόν τε ἐγένετο παραγαγεῖν Μοίρας· ὅσον δὲ ἐνέδωκαν αὗται, ἠνύσατο, καὶ ἐχαρισατό οἱ· τρία γὰρ ἔτεα ἐπανεβάλετο τὴν Σαρδίων ἅλωσιν. Καὶ τοῦτο ἐπιστάμενος Κροῖσος, ὡς ὕστερον τοῖσι ἔτεσι τούτοισι ἁλοὺς τῆς πεπρωμένης.*

[2] Herodot. i, 91. *Ὁ δὲ ἀκούσας συνέγνω ἑωυτοῦ εἶναι τὴν ἁμαρτάδα, καὶ σὺ τοῦ θεοῦ.*

Xenophon also, in the Cyropædia (vii. 2, 16–25), brings Crœsus to the same result of confession and humiliation, though by steps somewhat different.

of Herodotus, the facts of the centuries preceding his own, unrecorded as they were by any contemporary authority, tended to cast themselves into a sort of religious drama; the threads of the historical web being in part put together, in part originally spun, for the purpose of setting forth the religious sentiment and doctrine woven in as a pattern. The Pythian priestess predicts to Gygês that the crime which he had committed in assassinating his master would be expiated by his fifth descendant, though, as Herodotus tells us, no one took any notice of this prophecy until it was at last fulfilled:[1] we see thus that the history of the first Mermnad king is made up after the catastrophe of the last. There was something in the main facts of the history of Crœsus profoundly striking to the Greek mind: a king at the summit of wealth and power, — pious in the extreme, and munificent towards the gods, — the first destroyer of Hellenic liberty in Asia, — then precipitated, at once and on a sudden, into the abyss of ruin. The sin of the first parent helped much towards the solution of this perplexing problem, as well as to exalt the credit of the oracle, when made to assume the shape of an unnoticed prophecy. In the affecting story (discussed in a former chapter[2]) of Solon and Crœsus, the Lydian king is punished with an acute domestic affliction, because he thought himself the happiest of mankind, — the gods not suffering any one to be arrogant except themselves;[3] and the warning of Solon is made to recur to Crœsus after he has become the prisoner of Cyrus, in the narrative of Herodotus. To the same vein of thought belongs the story, just recounted, of the relations of Crœsus with the Delphian oracle. An account is provided, satisfactory to the religious feelings of the Greeks, how and why he was ruined, — but nothing less than the overruling and omnipotent Mœræ could be invoked to explain so stupendous a result.

It is rarely that these supreme goddesses, or hyper-goddesses — since the gods themselves must submit to them — are brought into such distinct light and action. Usually, they are kept in the dark, or are left to be understood as the unseen stumbling-block

[1] Herodot. i, 13.

[2] See above, chap. xi, vol. iii, pp. 149–153.

[3] Herodot. vii, 10. *οὐ γὰρ ἐᾷ φρονέειν ἄλλον μέγα ὁ θεὸς ἢ ἑωυτόν*

in cases of extreme incomprehensibility; and it is difficult clearly to determine (as in the case of some complicated political constitutions) where the Greeks conceived sovereign power to reside, in respect to the government of the world. But here the sovereignty of the Mœræ, and the subordinate agency of the gods, are unequivocally set forth.[1] Yet the gods are still extremely pow-

[1] In the oracle reported in Herodot. vii, 141, as delivered by the Pythian priestess to Athens on occasion of the approach of Xerxês, Zeus is represented in the same supreme position as the present oracle assigns to the Mœræ, or Fates: Pallas in vain attempts to propitiate him in favor of Athens, just as, in this case, Apollo tries to mitigate the Mœræ in respect to Crœsus —

Οὐ δύναται Παλλὰς Δί' Ὀλύμπιον ἐξιλάσασθαι,
Λισσομένη πολλοῖσι λόγοις καὶ μήτιδι πυκνῇ, etc.

Compare also viii, 109, and ix, 16.

O. Müller (Dissertation on the Eumenides of Æschylus, p. 222, Eng. Transl.) says: "On no occasion does Zeus Soter exert his influence directly, like Apollo, Minerva, and the Erinnyes; but whereas Apollo is prophet and exegetes by virtue of wisdom derived from him, and Minerva is indebted to him for her sway over states and assemblies, — nay, the very Erinnyes exercise their functions in his name, — this Zeus stands always in the background, and has in reality only to settle a conflict existing within himself. For with Æschylus, as with all men of profound feeling among the Greeks from the earliest times, Jupiter is the only real god, in the higher sense of the word. Although he is, in the spirit of ancient theology, a generated god, arisen out of an imperfect state of things, and not produced till the third stage of a development of nature, — still he is, at the time we are speaking of, the spirit that pervades and governs the universe."

To the same purpose Klausen expresses himself (Theologumena Æschyli, pp. 6–69).

It is perfectly true that many passages may be produced from Greek authors which ascribe to Zeus the supreme power here noted. But it is equally true that this conception is not uniformly adhered to, and that sometimes the Fates, or Mœræ, are represented as supreme; occasionally represented as the stronger and Zeus as the weaker (Promêtheus, 515). The whole tenor of that tragedy, in fact, brings out the conception of a Zeus *τύραννος*, — whose power is not supreme, even for the time; and is not destined to continue permanently, even at its existing height. The explanations given by Klausen of this drama appear to me incorrect; nor do I understand how it is to be reconciled with the above passage quoted from O. Müller.

The two oracles here cited from Herodotus exhibit plainly the fluctuation of Greek opinion on this subject: in the one, the supreme determination, and the inexorability which accompanies it, are ascribed to Zeus, — in

erful, because the Mœræ comply with their requests up to a certain point, not thinking it proper to be wholly inexorable; but their compliance is carried no farther than they themselves choose. Nor would they, even in deference to Apollo,[1] alter the original sentence of punishment for the sin of Gygês in the person of his fifth descendant, — a sentence, moreover, which Apollo himself had formally prophesied shortly after the sin was committed; so that, if the Mœræ had listened to his intercession on behalf of Crœsus, his own prophetic credit would have been endangered. Their unalterable resolution has predetermined the ruin of Crœsus, and the grandeur of the event is manifested by the circumstance, that even Apollo himself cannot prevail upon them to alter it, or to grant more than a three years' respite. The religious element must here be viewed as giving the form — the historical element as giving the matter only, and not the whole matter — of the story; and these two elements will be found conjoined more or less throughout most of the history of Herodotus, though, as we descend to later times, we shall find the historical element in constantly increasing proportion. His conception of history is extremely different from that of Thucydidês, who lays down to himself the true scheme and purpose of the

the other, to the Mœræ. This double point of view adapted itself to different occasions, and served as a help for the interpretation of different events. Zeus was supposed to have certain sympathies for human beings; misfortunes happened to various men which he not only did not wish to bring on, but would have been disposed to avert; here the Mœræ, who had no sympathies, were introduced as an explanatory cause, tacitly implied as overruling Zeus. "Cum Furiis Æschylus Parcas tantum non ubique conjungit," says Klausen (Theol. Æsch. p. 39); and this entire absence of human sympathies constitutes the common point of both, — that in which the Mœræ and the Erinnyes differ from all the other gods, — *πέφρικα τὰν ὠλεσίοικον θεὰν, οὐ θεοῖς ὁμοίαν* (Æschyl. Sept. ad Theb. 720): compare Eumenid. 169, 172, and, indeed, the general strain of that fearful tragedy.

In Æschylus, as in Herodotus, Apollo is represented as exercising persuasive powers over the Mœræ (Eumenid 724), — *Μοίρας ἕπεισας ἀφθίτους θεῖναι βροτούς.*

[1] The language of Herodotus deserves attention. Apollo tells Crœsus: 'I applied to the Mœræ to get the execution of the judgment postponed from your time to that of your children, — but I could not prevail upon them; but as much as they would yield *of their own accord*, I procured for you." (*ὅσον δὲ ἐνέδωκαν αὐταὶ, ἐχρίσατό οἱ* — i, 91.)

historian, common to him with the philosopher, — to recount and interpret the past, as a rational aid towards the prevision of the future.[1]

The destruction of the Lydian monarchy, and the establishment of the Persians at Sardis — an event pregnant with consequences to Hellas generally — took place in 546 B.C.[2] Sorely did the Ionic Greeks now repent that they had rejected the propositions made to them by Cyrus for revolting from Crœsus, — though at the time when these propositions were made, it would have been highly imprudent to listen to them, since the Lydian power might reasonably be looked upon as the stronger. As soon as Sardis had fallen, they sent envoys to the conqueror, entreating that they might be enrolled as his tributaries, on the footing which they had occupied under Crœsus. The reply was a stern and angry refusal, with the exception of the Milesians, to whom the terms which they asked were granted:[3] why this favorable exception was extended to them, we do not know. The other continental Ionians and Æolians (exclusive of Milêtus, and exclusive also of the insular cities which the Persians had no means of attacking), seized with alarm, began to put themselves

[1] Thucyd. i, 22.

[2] This important date depends upon the evidence of Solinus (Polyhistor, i, 112) and Sosikratês (ap. Diog. Laërt. i, 95): see Mr. Clinton's Fasti Hellen. ad ann. 546, and his Appendix, ch. 17, upon the Lydian kings.

Mr. Clinton and most of the chronologists accept the date without hesitation, but Volney (Recherches sur l'Histoire Ancienne, vol. i, pp. 306–308; Chronologie des Rois Lydiens) rejects it altogether; considering the capture of Sardis to have occurred in 557 B.C., and the reign of Crœsus to have begun in 571 B.C. He treats very contemptuously the authority of Solinus and Sosikratês, and has an elaborate argumentation to prove that the date which he adopts is borne out by Herodotus. This latter does not appear to me at all satisfactory: I adopt the date of Solinus and Sosikratês, though agreeing with Volney that such positive authority is not very considerable, because there is nothing to contradict them, and because the date which they give seems in consonance with the stream of the history.

Volney's arguments suppose in the mind of Herodotus a degree of chronological precision altogether unreasonable, in reference to events anterior to contemporary records. He, like other chronologists, exhausts his ingenuity to find a proper point of historical time for the supposed conversation between Solon and Crœsus (p. 320).

[3] Herodot. i, 141.

in a condition of defence: it seems that the Lydian king had caused their fortifications to be wholly or partially dismantled, for we are told that they now began to erect walls; and the Phôkæans especially devoted to that purpose a present which they had received from the Iberian Arganthônius, king of Tartêssus. Besides thus strengthening their own cities, they thought it advisable to send a joint embassy entreating aid from Sparta; they doubtless were not unapprized that the Spartans had actually equipped an army for the support of Crœsus. Their deputies went to Sparta, where the Phôkæan Pythermus, appointed by the rest to be spokesman, clothing himself in a purple robe,[1] in order to attract the largest audience possible, set forth their pressing need of succor against the impending danger. The Lacedæmonians refused the prayer; nevertheless, they despatched to Phôkæa some commissioners to investigate the state of affairs, — who perhaps, persuaded by the Phôkæans, sent Lakrinês, one of their number, to the conqueror at Sardis, to warn him that he should not lay hands on any city of Hellas, — for the Lacedæmonians would not permit it. "Who are these Lacedæmonians? (inquired Cyrus from some Greeks who stood near him) — How many are there of them, that they venture to send me such a notice?" Having received the answer, wherein it was stated that the Lacedæmonians had a city and a regular market at Sparta, he exclaimed: "I have never yet been afraid of men like these, who have a set place in the middle of their city, where they meet to cheat one another and forswear themselves. If I live, they shall have troubles of their own to talk about, apart from the Ionians." To buy or sell, appeared to the Persians a contemptible practice; for they carried out consistently, one step farther, the principle upon which even many able Greeks condemned the lending of money on interest; and the speech of Cyrus was intended as a covert reproach of Grecian habits generally.[2]

This blank menace of Lakrinês, an insulting provocation to

[1] Herodot. i, 152. The purple garment, so attractive a spectacle amid the plain clothing universal at Sparta, marks the contrast between Asiatic and European Greece.

[2] Herodot. i, 153. *ταῦτα ἐς τοὺς πάντας Ἕλληνας ἀπέρριψε ὁ Κῦρος τὸ ἔπεα*, etc.

the enemy rather than a real support to the distressed, was the only benefit which the Ionic Greeks derived from Sparta. They were left to defend themselves as best they could against the conqueror; who presently, however, quitted Sardis to prosecute in person his conquests in the East, leaving the Persian Tabalus with a garrison in the citadel, but consigning both the large treasure captured, and the authority over the Lydian population, to the Lydian Paktyas. As he carried away Crœsus along with him, he probably considered himself sure of the fidelity of those Lydians whom the deposed monarch recommended. But he had not yet arrived at his own capital, when he received the intelligence that Paktyas had revolted, arming the Lydian population, and employing the treasure in his charge to hire fresh troops. On hearing this news, Cyrus addressed himself to Crœsus, according to Herodotus, in terms of much wrath against the Lydians, and even intimated that he should be compelled to sell them all as slaves. Upon which Crœsus, full of alarm for his people, contended strenuously that Paktyas alone was in fault, and deserving of punishment; but he at the same time advised Cyrus to disarm the Lydian population, and to enforce upon them effeminate attire, together with habits of playing on the harp and shopkeeping. "By this process (he said) you will soon see them become women instead of men."[1] This suggestion is said to have been accepted by Cyrus, and executed by his general Mazarês. The conversation here reported, and the deliberate plan for enervating the Lydian character supposed to be pursued by Cyrus, is evidently an hypothesis imagined by some of the contemporaries or predecessors of Herodotus, — to explain the contrast between the Lydians whom they saw before them, after two or three generations of slavery, and the old irresistible horsemen of whom they heard in fame, at the time when Crœsus was lord from the Halys to the Ægean sea.

To return to Paktyas, — he had commenced his revolt, come down to the sea-coast, and employed the treasures of Sardis in levying a Grecian mercenary force, with which he invested the place and blocked up the governor Tabalus. But he manifested no courage worthy of so dangerous an enterprise; for no sooner

[1] Herodot. i. 155.

had he heard that the Median general Mazarês was approaching at the head of an army dispatched by Cyrus against him, than he disbanded his force and fled to Kymê for protection as a suppliant. Presently, arrived a menacing summons from Mazarês, demanding that he should be given up forthwith, which plunged the Kymæans into profound dismay; for the idea of giving up a suppliant to destruction was shocking to Grecian sentiment. They sent to solicit advice from the holy temple of Apollo, at Branchidæ near Milêtus; and the reply directed, that Paktyas should be surrendered. Nevertheless, so ignominious did such a surrender appear, that Aristodikus and some other Kymæan citizens denounced the messengers as liars, and required that a more trustworthy deputation should be sent to consult the god. Aristodikus himself, forming one of the second body, stated the perplexity to the oracle, and received a repetition of the same answer; whereupon he proceeded to rob the birds'-nests which existed in abundance in and about the temple. A voice from the inner oracular chamber speedily arrested him, exclaiming: "Most impious of men, how darest thou to do such things? Wilt thou snatch my suppliants from the temple itself?" Unabashed by the rebuke, Aristodikus replied: "Master, thus dost *thou* help suppliants thyself: and dost thou command the Kymæans to give up a suppliant?" "Yes, I do command it[1] (rejoined the god forthwith), in order that the crime may bring destruction upon you the sooner, and that you may not in future come to consult the oracle upon the surrender of suppliants."

The ingenuity of Aristodikus completely nullified the oracular response, and left the Kymæans in their original perplexity. Not choosing to surrender Paktyas, nor daring to protect him against a besieging army, they sent him away to Mitylênê, whither the envoys of Mazarês followed and demanded him; offering a reward so considerable, that the Kymæans became fearful of trusting them, and again conveyed away the suppliant to Chios, where he took refuge in the temple of Athênê Poliuchus. But here again the pursuers followed, and the Chians were persuaded to drag him from the temple and surrender him, on consideration of receiving the territory of Atarneus (a dis

[1] Herodot. i, 159.

trict on the continent over against the island of Lesbos) as purchase-money. Paktyas was thus seized and sent prisoner to Cyrus, who had given the most express orders for this capture: hence the unusual intensity of the pursuit. But it appears that the territory of Atarneus was considered as having been ignominiously acquired by the Chians; none even of their own citizens would employ any article of its produce for holy or sacrificial purposes.[1]

Mazarês next proceeded to the attack and conquest of the Greeks on the coast; an enterprise which, since he soon died of illness, was completed by his successor Harpagus. The towns assailed successively made a gallant but ineffectual resistance: the Persian general by his numbers drove the defenders within their walls, against which he piled up mounds of earth, so as either to carry the place by storm or to compel surrender. All of them were reduced, one after the other: with all, the terms of subjection were doubtless harder than those which had been imposed upon them by Crœsus, because Cyrus had already refused to grant these terms to them, with the single exception of Milêtus, and because they had since given additional offence by aiding the revolt of Paktyas. The inhabitants of Priênê were sold into slavery: they were the first assailed by Mazarês, and had perhaps been especially forward in the attack made by Paktyas on Sardis.[2]

Among these unfortunate towns, thus changing their master and passing out into a harsher subjection, two deserve especial notice, — Teôs and Phôkæa. The citizens of the former, so soon

[1] Herodot. i, 160. The short fragment from Charôn of Lampsakus, which Plutarch (De Malignitat. Herod. p. 859) cites here, in support of one among his many unjust censures on Herodotus, is noway inconsistent with the statement of the latter, but rather tends to confirm it.

In writing this treatise on the alleged ill-temper of Herodotus, we see that Plutarch had before him the history of Charôn of Lampsakus, more ancient by one generation than the historian whom he was assailing, and also belonging to Asiatic Greece. Of course, it suited the purpose of his work to produce all the contradictions to Herodotus which he could find in Charôn: the fact that he has produced none of any moment, tends to strengthen our faith in the historian of Halikarnassus, and to show that in the main his narrative was in accordance with that of Charôn.

[2] Herodot. i, 161–169.

as the mound around their walls had rendered farther resistance impossible, embarked and emigrated, some to Thrace, where they founded Abdêra, — others to the Cimmerian Bosphorus, where they planted Phanagoria; a portion of them, however, must have remained to take the chances of subjection, since the town appears in after-times still peopled and still Hellenic.[1]

The fate of Phôkæa, similar in the main, is given to us with more striking circumstances of detail, and becomes the more interesting, since the enterprising mariners who inhabited it had been the torch-bearers of Grecian geographical discovery in the west. I have already described their adventurous exploring voyages of former days into the interior of the Adriatic, and along the whole northern and western coasts of the Mediterranean as far as Tartêssus (the region around and adjoining to Cadiz), — together with the favorable reception given to them by old Arganthônius, king of the country, who invited them to emigrate in a body to his kingdom, offering them the choice of any site which they might desire. His invitation was declined, though probably the Phôkæans may have subsequently regretted the refusal; and he then manifested his good-will towards them by a large present to defray the expence of constructing fortifications round their town.[2] The walls, erected in part, by this aid, were

[1] Herodot. i, 168; Skymnus Chius, Fragm. v, 153; Dionys. Perieg. v, 553.

[2] Herodot. i, 163. Ὁ δὲ πυθόμενος παρ' αὐτῶν τὸν Μῆδον ὡς αὔξοιτο, ἐδίδου σφι χρήματα τείχος περιβαλέσθαι τὴν πόλιν.

I do not understand why the commentators debate what or who is meant by τὸν Μῆδον: it plainly means the Median or Persian power generally: but the chronological difficulty is a real one, if we are to suppose that there was time between the first alarm conceived of the Median power of the Ionians, and the siege of Phôkæa by Harpagus, to inform Arganthônius of the circumstances, and to procure from him this large aid as well as to build the fortifications. The Ionic Greeks neither actually did conceive, nor had reason to conceive, any alarm respecting Persian power, until the arrival of Cyrus before Sardis; and within a month from that time Sardis was in his possession. If we are to suppose communication with Arganthônius, grounded upon this circumstance, at the distance of Tartêssus, and under the circumstances of ancient navigation, we must necessarily imagine, also, that the attack made by Harpagus upon Phôkæa — which city he assailed before any of the rest — was postponed for at least two or three years. Such postponement is not wholly impossible, yet it is not in the

both extensive and well built; yet they could not hinder Harpagus from raising his mounds of earth up against them, while he was politic enough at the same time to tempt them with offers of a moderate capitulation; requiring only that they should breach their walls in one place by pulling down one of the towers, and consecrate one building in the interior of the town as a token of subjection. To accept these terms, was to submit themselves to the discretion of the besieger, for there could be no security that they would be observed; and the Phôkæans, while they asked for one day to deliberate upon their reply, entreated that, during that day, Harpagus should withdraw his troops altogether from the walls. With this demand the latter complied, intimating, at the same time, that he saw clearly through the meaning of it. The Phôkæans had determined that the inevitable servitude impending over their town should not be shared by its inhabitants, and they employed their day of grace in preparation for collective exile, putting on shipboard their wives and children as well as their furniture and the movable decorations of their temples. They then set sail for Chios, leaving to the conqueror a deserted town for the occupation of a Persian garrison.[1]

spirit of the Herodotean narrative, nor do I think it likely. It is much more probable that the informants of Herodotus made a slip in chronology, and ascribed the donations of Arganthônius to a motive which did not really dictate them.

As to the fortifications (which Phôkæa and the other Ionic cities are reported to have erected after the conquest of Sardis by the Persians), the case may stand thus. While these cities were all independent, before they were first conquered by Crœsus, they must undoubtedly have had fortifications. When Crœsus conquered them, he directed the demolition of the fortifications; but demolition does not necessarily mean pulling down the entire walls: when one or a few breaches are made, the city is laid open, and the purpose of Crœsus would thus be answered. Such may well have been the state of the Ionian cities at the time when they first thought it necessary to provide defences against the Persians at Sardis: they repaired and perfected the breached fortifications.

The conjecture of Larcher (see the Notes both of Larcher and Wesseling), — *τὸν Ανδὸν* instead of *τὸν Μῆδον*, — is not an unreasonable one, if it had any authority: the donation of Arganthônius would then be transferred to the period anterior to the Lydian conquest: it would get rid of the chronological difficulty above adverted to, but it would introduce some new awkwardness into the narrative.

[1] Herodot. i, 164.

It appears that the fugitives were not very kindly received at Chios; at least, when they made a proposition for purchasing from the Chians the neighboring islands of Œnussæ as a permanent abode, the latter were induced to refuse by apprehensions of commercial rivalry. It was necessary to look farther for a settlement: and Arganthônius their protector, being now dead, Tartêssus was no longer inviting. Twenty years before, however, the colony of Alalia in the island of Corsica had been founded from Phôkæa by the direction of the oracle, and thither the general body of Phôkæans now resolved to repair. Having prepared their ships for this distant voyage, they first sailed back to Phôkæa, surprised the Persian garrison whom Harpagus had left in the town, and slew them: they then sunk in the harbor a great lump of iron, and bound themselves by a solemn and unanimous oath never again to see Phôkæa until that iron should come up to the surface. Nevertheless, in spite of the oath, the voyage of exile had been scarcely begun when more than half of them repented of having so bound themselves, — and became homesick.[1] They broke their vow and returned to Phôkæa. But as Herodotus does not mention any divine judgment as having been consequent on the perjury, we may, perhaps, suspect that some gray-headed citizen, to whom transportation to Corsica might be little less than a sentence of death, both persuaded himself, and certified to his companions, that he had seen the sunken lump of iron raised up and floating for a while buoyant upon the waves. Harpagus must have been induced to pardon the previous slaughter of his Persian garrison, or at least to believe that it had been done by those Phôkæans who still persisted in exile. He wanted tribute-paying subjects, not an empty military post, and the repentant home-seekers were allowed to number themselves among the slaves of the Great King.

Meanwhile the smaller but more resolute half of the Phôkæans executed their voyage to Alalia in Corsica, with their

[1] Herodot. i, 165. *ὑπερημίσεας τῶν ἀστῶν ἔλαβε πόθος τε καὶ οἶκτος τῆς πόλιος καὶ τῶν ἠθέων τῆς χώρης· ψευδόρκιοί τε γενόμενοι*, etc. The colloquial term which I have ventured to place in the text expresses exactly, as well as briefly, the meaning of the historian. A public oath, taken by most of the Greek cities with similar ceremony of lumps of iron thrown into the sea, is mentioned in Plutarch. Aristid. c. 25.

wives and children, in sixty pentekontêrs, or armed ships, and established themselves along with the previous settlers. They remained there for five years,[1] during which time their indiscriminate piracies had become so intolerable (even at that time, piracy committed against a foreign vessel seems to have been both frequent and practised without much disrepute), that both the Tyrrhenian seaports along the Mediterranean coast of Italy, and the Carthaginians, united to put them down. There subsisted particular treaties between these two, for the regulation of the commercial intercourse between Africa and Italy, of which the ancient treaty preserved by Polybius between Rome and Carthage (made in 509 B.C.) may be considered as a specimen.[2] Sixty Carthaginian and as many Tuscan ships attacked the sixty Phôkæan ships near Alalia, and destroyed forty of them, yet not without such severe loss to themselves that the victory was said to be on the side of the latter; who, however, in spite of this Kadmeian victory (so a battle was denominated in which the victors lost more than the vanquished), were compelled to carry back their remaining twenty vessels to Alalia, and to retire with their wives and families, in so far as room could be found for them, to Rhegium. At last, these unhappy exiles found a permanent home by establishing the new settlement of Elea, or Velia, in the gulf of Policastro, on the Italian coast (then called Œnôtrian) southward from Poseidônia, or Pæstum. It is probable that they were here joined by other exiles from Ionia, in particular by the Kolophonian philosopher and poet Xenophanês, from whom what was afterwards called the Eleatic school of philosophy, distinguished both for bold consistency and dialectic acuteness, took its rise. The Phôkæan captives, taken prisoners in the naval combat by Tyrrhenians and Carthaginians, were stoned to death; but a divine judgment overtook the Tyrrhenian town of Agylla, in consequence of this cruelty; and even in the time of Herodotus, a century afterwards, the Agyllæans were still expiating the sin by a periodical solemnity and agon, pursuant to the penalty which the Delphian oracle had imposed upon them.[3]

Such was the fate of the Phôkæan exiles, while their brethren

[1] Herodot. i, 166.
[2] Herodot. i, 167.
[3] Aristot. Polit. iii, 5, 11; Polyb. iii, 22.

at home remained as subjects of Harpagus, in common with all the other Ionic and Æolic Greeks except Milêtus. For even the insular inhabitants of Lesbos and Chios, though not assailable by sea, since the Persians had no fleet, thought it better to renounce their independence and enrol themselves as Persian subjects, — both of them possessing strips of the mainland which they were unable to protect otherwise. Samos, on the other hand, maintained its independence, and even reached, shortly after this period, under the despotism of Polykratês, a higher degree of power than ever. Perhaps the humiliation of the other maritime Greeks around may have rather favored the ambition of this unscrupulous prince, to whom I shall revert presently. But we may readily conceive that the public solemnities in which the Ionic Greeks intermingled, in place of those gay and richly-decked crowds which the Homeric hymn describes in the preceding century as assembled at Delos, presented scenes of marked despondency: one of their wisest men, indeed, Bias of Priênê, went so far as to propose, at the Pan-Ionic festival, a collective emigration of the entire population of the Ionic towns to the island of Sardinia. Nothing like freedom, he urged, was now open to them in Asia; but in Sardinia, one great Pan-Ionic city might be formed, which would not only be free herself, but mistress of her neighbors. The proposition found no favor; the reason of which is sufficiently evident from the narrative just given respecting the unconquerable local attachment on the part of the Phôkæan majority. But Herodotus bestows upon it the most unqualified commendation, and regrets that it was not acted upon.[1] Had such been the case, the subsequent history of Carthage, Sicily, and even Rome, might have been sensibly altered.

Thus subdued by Harpagus, the Ionic and Æolic Greeks were employed as auxiliaries to him in the conquest of the south-western inhabitants of Asia Minor, — Karians, Kaunians, Lykians, and Doric Greeks of Knidus and Halikarnassus. Of the fate of the latter town, Herodotus tells us nothing, though it was

[1] Herodot. i, 170. *Πυνθάνομαι γνώμην Βίαντα ἄνδρα Πριηνέα ἀποδέξασθαι Ἴωσι χρησιμωτάτην, τῇ εἰ ἐπείθοντο, παρεῖχε ἂν σφι εὐδαιμονέειν Ἑλλήνων μάλιστα.*

his native place. The inhabitants of Knidus, a place situated on a long outlying tongue of land, at first tried to cut through the narrow isthmus which joined them to the continent, but abandoned the attempt with a facility which Herodotus explains by referring it to a prohibition of the oracle:[1] nor did either the Karians or the Kaunians offer any serious resistance. The Lykians only, in their chief town Xanthus, made a desperate defence. Having in vain tried to repel the assailants in the open field, and finding themselves blocked up in their city, they set fire to it with their own hands; consuming in the flames their women, children, and servants, while the armed citizens marched out and perished to a man in combat with the enemy.[2] Such an act of brave and even ferocious despair is not in the Grecian character. In recounting, however, the languid defence and easy submission of the Greeks of Knidus, it may surprise us to call to mind that they were Dorians and colonists from Sparta. So that the want of steadfast courage, often imputed to Ionic Greeks as compared to Dorian, ought properly to be charged on Asiatic Greeks as compared with European; or rather upon that mixture of indigenous with Hellenic population, which all the Asiatic colonies, in common with most of the other colonies, presented, and which in Halikarnassus was particularly remarkable; for it seems to have been half Karian, half Dorian, and was even governed by a line of Karian despots.

Harpagus and the Persians thus mastered, without any considerable resistance, the western and southern portions of Asia Minor; probably, also, though we have no direct account of it, the entire territory within the Halys which had before been ruled by Crœsus. The tributes of the conquered Greeks were transmitted to Ekbatana instead of to Sardis. While Harpagus was thus employed, Cyrus himself had been making still more extensive conquests in Upper Asia and Assyria, of which I shall speak in the coming chapter.

[1] Herodot. i, 174.

[2] Herodot. i, 176. The whole population of Xanthus perished, except eighty families accidentally absent: the subsequent occupants of the town were recruited from strangers. Nearly five centuries afterwards, their descendants in the same city slew themselves in the like desperate and tragical manner, to avoid surrendering to the Roman arms under Marcus Brutus (Plutarch, Brutus, c. 31).

CHAPTER XXXIII.

GROWTH OF THE PERSIAN EMPIRE.

In the preceding chapter an account has been given, the best which we can pick out from Herodotus, of the steps by which the Asiatic Greeks became subject to Persia. And if his narrative is meagre, on a matter which vitally concerned not only so many of his brother Greeks, but even his own native city, we can hardly expect that he should tell us much respecting the other conquests of Cyrus. He seems to withhold intentionally various details which had come to his knowledge, and merely intimates in general terms that while Harpagus was engaged on the coast of the Ægean, Cyrus himself assailed and subdued all the nations of Upper Asia, "not omitting any one of them."[1] He alludes to the Baktrians and the Sakæ,[2] who are also named by Ktêsias as having become subject partly by force, partly by capitulation; but he deems only two of the exploits of Cyrus worthy of special notice, — the conquest of Babylon, and the final expedition against the Massagetæ. In the short abstract which we now possess of the lost work of Ktêsias, no mention appears of the important conquest of Babylon; but his narrative, as far as the abstract enables us to follow it, diverges materially from that of Herodotus, and must have been founded on data altogether different.

"I shall mention (says Herodotus)[3] those conquests which gave Cyrus most trouble, and are most memorable: after he had subdued all the rest of the continent, he attacked the Assyrians." Those who recollect the description of Babylon and its surrounding territory, as given in a former chapter, will not be surprised to learn that the capture of it gave the Persian aggressor much trouble: their only surprise will be, how it could ever have been

[1] Herodot. i, 177.

[2] Herodot. i, 153.

[3] Herodot. i, 177. *τὰ δέ οἱ πάρεσχε πόνον τε πλεῖστον, καὶ ἀξιαπηγητότατά ἐστι, τούτων ἐπιμνήσομαι.*

taken at all, — or, indeed, how a hostile army could have even reached it. Herodotus informs us that the Babylonian queen Nitôkris — mother of that very Labynêtus who was king when Cyrus attacked the place — had been apprehensive of invasion from the Medes after their capture of Nineveh, and had executed many laborious works near the Euphratês for the purpose of obstructing their approach. Moreover, there existed what was called the wall of Media (probably built by her, but certainly built prior to the Persian conquest), one hundred feet high and twenty feet thick,[1] across the entire space of seventy-five miles which joined the Tigris with one of the canals of the Euphratês. And the canals themselves, as we may see by the march of the Ten Thousand Greeks after the battle of Kunaxa, presented means of defence altogether insuperable by a rude army such as that of the Persians. On the east, the territory of Babylonia was defended by the Tigris, which cannot be forded

[1] See Xenophon, Anabas. i, 7, 15; ii, 4, 12. For the inextricable difficulties in which the Ten Thousand Greeks were involved, after the battle of Kunaxa, and the insurmountable obstacles which impeded their march, assuming any resisting force whatever, see Xenoph. Anab. ii, 1, 11; ii, 2, 3; ii, 3, 10; ii, 4, 12–13. These obstacles, doubtless, served as a protection to them against attack, not less than as an impediment to their advance; and the well-supplied villages enabled them to obtain plenty of provisions: hence the anxiety of the Great King to help them across the Tigris out of Babylonia. But it is not easy to see how, in the face of such difficulties, any invading army could reach Babylon.

Ritter represents the wall of Media as having reached across from the Euphratês to the Tigris at the point where they come nearest together, about two hundred stadia or twenty-five miles across. But it is nowhere stated, so far as I can find, that this wall reached to the Euphratês, — still less that its length was two hundred stadia, for the passages of Strabo cited by Ritter do not prove either point (ii, 80; xi, 529). And Xenophon (ii, 4, 12) gives the length of the wall as I have stated it in the text, = 20 parasangs = 600 stadia = 75 miles.

The passage of the Anabasis (i, 7, 15) seems to connect the Median wall with the canals, and not with the river Euphratês. The narrative of Herodotus, as I have remarked in a former chapter, leads us to suppose that he descended that river to Babylon; and if we suppose that the wall did not reach the Euphratês, this would afford some reason why he makes no mention of it. See Ritter, West Asien, b. iii, Abtheilung iii, Abschn. i, sect. 29, pp. 19–22.

lower than the ancient Nineveh or the modern Mosul.[1] In addition to these ramparts, natural as well as artificial, to protect the territory, — populous, cultivated, productive, and offering every motive to its inhabitants to resist even the entrance of an enemy, — we are told that the Babylonians were so thoroughly prepared for the inroad of Cyrus that they had accumulated a store of provisions within the city walls for many years.

Strange as it may seem, we must suppose that the king of Babylon, after all the cost and labor spent in providing defences for the territory, voluntarily neglected to avail himself of them, suffered the invader to tread down the fertile Babylonia without resistance, and merely drew out the citizens to oppose him when he arrived under the walls of the city, — if the statement of Herodotus is correct.[2] And we may illustrate this unaccountable omission by that which we know to have happened in the march of the younger Cyrus to Kunaxa against his brother Artaxerxês Mnêmon. The latter had caused to be dug, expressly in preparation for this invasion, a broad and deep ditch, thirty feet wide and eight feet deep, from the wall of Media to the river Euphratês, a distance of twelve parasangs, or forty-five English miles, leaving only a passage of twenty feet broad close alongside of the river. Yet when the invading army arrived at this important pass, they found not a man there to defend it, and all of them marched without resistance through the narrow inlet. Cyrus the younger, who had up to that moment felt assured that his brother would fight, now supposed that he had given up the idea of defending Babylon:[3] instead of which, two days afterwards,

[1] Ὁ Τίγρης μέγας τε καὶ οὐδαμοῦ διαβατὸς ἐς τε ἐπὶ τὴν ἐκβολήν (Arrian, vii, 7, 7). By which he means, that it is not fordable below the ancient Nineveh, or Mosul; for a little above that spot, Alexander himself forded it with his army, a few days before the battle of Arbêla — not without very great difficulty (Arrian, iii, 7, 8; Diodor. xvii, 55).

[2] Herodot. i, 190. ἐπεὶ δὲ ἐγένετο ἐλαύνων ἀγχοῦ τῆς πόλιος, συνέβαλόν τε οἱ Βαβυλώνιοι, καὶ ἐσσωθέντες τῇ μάχῃ, κατειλήθησαν ἐς τὸ ἄστυ.

Just as if Babylon was as easy to be approached as Sardis, — οἷά τε ἐπιστάμενοι ἔτι πρότερον τὸν Κῦρον οὐκ ἀτρεμίζοντα, ἀλλ' ὁρέοντες αἰτὸν παντὶ ὁμοίως ἐθνεῖ ἐπιχειρέοντα, προεσάξαντο σίτια ἐτέων κάρτα πολλῶν.

[3] Xenophon, Anabas. i, 7, 14–20; Diodor. xiv, 22; Plutarch, Artaxerxês, c. 7. I follow Xenophon without hesitation, where he differs from those two latter.

Artaxerxês attacked him on an open plain of ground, where there was no advantage of position on either side; though the invaders were taken rather unawares in consequence of their extreme confidence, arising from recent unopposed entrance within the artificial ditch.

This anecdote is the more valuable as an illustration, because all its circumstances are transmitted to us by a discerning eye-witness. And both the two incidents here brought into comparison demonstrate the recklessness, changefulness, and incapacity of calculation, belonging to the Asiatic mind of that day, — as well as the great command of hands possessed by these kings, and their prodigal waste of human labor.[1] We shall see, as we advance in this history, farther evidences of the same attributes, which it is essential to bear in mind, for the purpose of appreciating both Grecian dealing with Asiatics, and the comparative absence of such defects in the Grecian character. Vast walls and deep ditches are an inestimable aid to a brave and well commanded garrison; but they cannot be made entirely to supply the want of bravery and intelligence.

In whatever manner the difficulties of approaching Babylon may have been overcome, the fact that they were overcome by Cyrus is certain. On first setting out for this conquest, he was about to cross the river Gyndês (one of the affluents from the East which joins the Tigris near the modern Bagdad, and along which lay the high road crossing the pass of Mount Zagros from Babylon to Ekbatana), when one of the sacred white horses, which accompanied him, insulted the river[2] so far as to march in and try to cross it by himself. The Gyndês resented this insult, and the horse was drowned: upon which Cyrus swore in his wrath that he would so break the strength of the river as that women in future should pass it without wetting their knees. Accordingly, he employed his entire army, during the whole summer season, in digging three hundred and sixty artificial channels to disseminate the unity of the stream. Such, accord-

[1] Xenophon, Cyropæd. iii, 3, 26, about the *πολυχειρία* of the barbaric kings.

[2] Herodot. 189–202. *ἐνθαῦτά οἱ τῶν τις ἱρῶν ἵππων τῶν λευκῶν ὑπὸ ὕβριος ἰσβὰς ἐς τὸν πόταμον, διαβαίνειν ἐπειρᾶτο.....Κάρτα τε ἐχαλέπαινε τῷ ποτάμῳ ὁ Κῦρος τοῦτο ὑβρίσαντι*, etc.

ing to Herodotus, was the incident which postponed for one year the fall of the great Babylon; but in the next spring Cyrus and his army were before the walls, after having defeated and driven in the population who came out to fight. But the walls were artificial mountains (three hundred feet high, seventy-five feet thick, and forming a square of fifteen miles to each side), within which the besieged defied attack, and even blockade, having previously stored up several years' provision. Through the midst of these walls, however, flowed the Euphratês; and this river, which had been so laboriously trained to serve for protection, trade, and sustenance to the Babylonians, was now made the avenue of their ruin. Having left a detachment of his army at the two points where the Euphratês enters and quits the city, Cyrus retired with the remainder to the higher part of its course, where an ancient Babylonian queen had prepared one of the great lateral reservoirs for carrying off in case of need the superfluity of its water. Near this point Cyrus caused another reservoir and another canal of communication to be dug, by means of which he drew off the water of the Euphratês to such a degree that it became not above the height of a man's thigh. The period chosen was that of a great Babylonian festival, when the whole population were engaged in amusement and revelry; and the Persian troops left near the town, watching their opportunity, entered from both sides along the bed of the river, and took it by surprise with scarcely any resistance. At no other time, except during a festival, could they have done this, says Herodotus, had the river been ever so low; for both banks throughout the whole length of the town were provided with quays, with continuous walls, and with gates at the end of every street which led down to the river at right angles: so that if the population had not been disqualified by the influences of the moment, they would have caught the assailants in the bed of the river "as a trap," and overwhelmed them from the walls alongside. Within a square of fifteen miles to each side, we are not surprised to hear that both the extremities were already in the power of the besiegers before the central population heard of it, and while they were yet absorbed in unconscious festivity.[1]

[1] Herodot. i, 191 This latter portion of the story, if we may judge from

Such is the account given by Herodotus of the circumstances which placed Babylon — the greatest city of western Asia — in the power of the Persians. To what extent the information communicated to him was incorrect, or exaggerated, we cannot now decide; but the way in which the city was treated would lead us to suppose that its acquisition cannot have cost the conqueror either much time or much loss. Cyrus comes into the list as king of Babylon, and the inhabitants with their whole territory become tributary to the Persians, forming the richest satrapy in the empire; but we do not hear that the people were otherwise ill-used, and it is certain that the vast walls and gates were left untouched. This was very different from the way in which the Medes had treated Nineveh, which seems to have been ruined and for a long time absolutely uninhabited, though reoccupied on a reduced scale under the Parthian empire; and very different also from the way in which Babylon itself was treated twenty years afterwards by Darius, when reconquered after a revolt.

---

the expression of Herodotus, seems to excite more doubt in his mind than all the rest, for he thinks it necessary to add, "as the residents at Babylon say," *ὡς λέγεται ὑπὸ τῶν ταύτῃ οἰκημένων*. Yet if we assume the size of the place to be what he has affirmed, there seems nothing remarkable in the fact that the people in the centre did not at once hear of the capture; for the first business of the assailants would be to possess themselves of the walls and gates. It is a lively illustration of prodigious magnitude, and as such it is given by Aristotle (Polit. iii, 1, 12); who, however, exaggerates it by giving as a report that the inhabitants in the centre did not hear of the capture until the third day. No such exaggeration as this appears in Herodotus.

Xenophon, in the Cyropædia (vii, 5, 7–18), following the story that Cyrus drained off the Euphratês, represents it as effected in a manner differing from Herodotus. According to him, Cyrus dug two vast and deep ditches, one on each side round the town, from the river above the town to the river below it: watching the opportunity of a festival day in Babylon, he let the water into both of these side ditches, which fell into the main stream again below the town: hence the main stream in its passage through the town became nearly dry. The narrative of Xenophon, however, betrays itself, as not having been written from information received on the spot, like that of Herodotus; for he talks of *αἱ ἄκραι* of Babylon, just as he speaks of the *ἄκραι* of the hill-towns of Karia (compare Cyropædia, vii, 4, 1, 7, with vii, 1, 34). There were no *ἄκραι* on the dead flat of Babylon.

The importance of Babylon, marking as it does one of the peculiar forms of civilization belonging to the ancient world in a state of full development, gives an interest even to the half-authenticated stories respecting its capture; but the other exploits ascribed to Cyrus, — his invasion of India, across the desert of Arachosia,[1] — and his attack upon the Massagetæ, nomads ruled by queen Tomyris, and greatly resembling the Scythians, across the mysterious river which Herodotus calls Araxês, — are too little known to be at all dwelt upon. In the latter he is said to have perished, his army being defeated in a bloody battle.[2] He was buried at Pasargadæ, in his native province of Persis proper, where his tomb was honored and watched until the breaking up of the empire,[3] while his memory was held in profound veneration among the Persians.

Of his real exploits, we know little except their results; but in what we read respecting him there seems, though amidst constant fighting, very little cruelty. Xenophon has selected his life as the subject of a moral romance, which for a long time was cited as authentic history, and which even now serves as an authority, expressed or implied, for disputable and even incorrect conclusions. His extraordinary activity and conquests admit of no doubt. He left the Persian empire[4] extending from Sogdiana and the rivers Jaxartês and Indus eastward, to the Hellespont and the Syrian coast westward, and his successors made no permanent addition to it except that of Egypt. Phenicia and Judæa were dependencies of Babylon, at the time when he conquered it, with their princes and grandees in Babylonian captivity[5] They seem to have yielded to him, and become his tributaries, without difficulty; and the restoration of their captives was con-

---

[2] Herodot. i, 205–214; Arrian, v, 4, 14; Justin, i, 8; Strabo, xi, p. 512.

According to Ktêsias, Cyrus was slain in an expedition against the Derbikes, a people in the Caucasian regions, — though his army afterwards prove victorious and conquer the country (Ktesiæ Persica, c. 8–9), — see the comment of Bähr on the passage, in his edition of Ktêsias.

[3] Strabo, xv, pp. 730, 731; Arrian, vi, 29.

[4] The town Kyra, or Kyropolis, on the river Sihon, or Jaxartês, was said to have been founded by Cyrus, — it was destroyed by Alexander (Strabo, xi, pp. 517, 518; Arrian, iv, 2, 2; Curtius, vii, 6, 16).

[5] Herodot iii 19.

ceded to them. It was from Cyrus that the habits of the Persian kings took commencement, to dwell at Susa in the winter, and Ekbatana during the summer. The primitive territory of Persis, with its two towns of Persepolis and Pasargadæ, being reserved for the burial-place of the kings and the religious sanctuary of the empire. How or when the conquest of Susiana was made, we are not informed; it lay eastward of the Tigris, between Babylonia and Persis proper, and its people, the Kissians, as far as we can discern, were of Assyrian and not of Arian race. The river Choaspês, near Susa, was supposed to furnish the only water fit for the palate of the Great King, and is said to have been carried about with him wherever he went.[1]

While the conquests of Cyrus contributed to assimilate the distinct types of civilization in western Asia, — not by elevating the worse, but by degrading the better, — upon the native Persians themselves they operated as an extraordinary stimulus, provoking alike their pride, ambition, cupidity, and warlike propensities. Not only did the territory of Persis proper pay no tribute to Susa or Ekbatana, — being the only district so exempted between the Jaxartês and the Mediterranean, — but the vast tributes received from the remaining empire were distributed to a great degree among its inhabitants. Empire to them meant, — for the great men, lucrative satrapies, or pachalics, with powers altogether unlimited, pomp inferior only to that of the Great King, and standing armies which they employed at their own discretion, sometimes against each other,[2] — for the common soldiers, drawn from their fields or flocks, constant plunder, abundant maintenance, and an unrestrained license, either in the suite of one of the satraps, or in the large permanent troop which moved from Susa to Ekbatana with the Great King. And if the entire population of Persis proper did not migrate from their abodes to occupy some of those more inviting spots which the immensity of the imperial dominion furnished, — a dominion extending (to use the language of Cyrus the younger, before the battle of Kunaxa)[3] from the region of insupportable heat to

[1] Herodot. i, 188; Plutarch, Artaxerxês, c. 5; Diodor. xvii, 71.

[2] Xenophon, Anabas. i, 1, 8.

[3] Xenophon, Anabas. i, 7, 6; Cyropæd. viii, 7, 19.

that of insupportable cold, — this was only because the early kings discouraged such a movement, in order that the nation might maintain its military hardihood,[1] and be in a situation to furnish undiminished supplies of soldiers.

The self-esteem and arrogance of the Persians was no less remarkable than their avidity for sensual enjoyment. They were fond of wine to excess; their wives and their concubines were both numerous; and they adopted eagerly from foreign nations new fashions of luxury as well as of ornament. Even to novelties in religion, they were not strongly averse; for though they were disciples of Zoroaster, with magi as their priests, and as indispensable companions of their sacrifices, worshipping Sun, Moon, Earth, Fire, etc., and recognizing neither image, temple, nor altar, — yet they had adopted the voluptuous worship of the goddess Mylitta from the Assyrians and Arabians. A numerous male offspring was the Persian's boast, and his warlike character and consciousness of force were displayed in the education of these youths, who were taught, from five years old to twenty, only three things, — to ride, to shoot with the bow, and to speak the truth.[2] To owe money, or even to buy and sell, was accounted among the Persians disgraceful, — a sentiment which they defended by saying, that both the one and the other imposed the necessity of telling falsehood. To exact tribute from subjects, to receive pay or presents from the king, and to give away without forethought whatever was not immediately wanted, was their mode of dealing with money. Industrious pursuits were left to the conquered, who were fortunate if by paying a fixed contribution, and sending a military contingent when required, they could purchase undisturbed immunity for their remaining concerns.[3] They could not thus purchase safety for the family

[1] Herodot. ix, 122.

[2] The modern Persians at this day exhibit almost matchless skill in shooting with the firelock, as well as with the bow, on horseback. See Sir John Malcolm, Sketches of Persia, ch. xvii, p. 201; see also Kinneir, Geographical Memoir of the Persian Empire, p. 32.

[3] About the attributes of the Persian character, see Herodot. i, 131–140: compare i, 153.

He expresses himself very strongly as to the facility with which the Persians imbibed foreign customs, and especially foreign luxuries (i, 135),

hearth, since we find instances of noble Grecian maidens torn from their parents for the harem of the satrap.[1]

To a people of this character, whose conceptions of political society went no farther than personal obedience to a chief, a conqueror like Cyrus would communicate the strongest excitement and enthusiasm of which they were capable. He had found them slaves, and made them masters; he was the first and greatest of national benefactors,[2] as well as the most forward of leaders in the field; they followed him from one conquest to another, during the thirty years of his reign, their love of empire growing with the empire itself. And this impulse of aggrandizement continued unabated during the reigns of his three next successors, — Kambysês, Darius, and Xerxês, — until it was at length violently stifled by the humiliating defeats of Platæa and Salamis; after which the Persians became content with defending themselves at home, and playing a secondary game. But at the time when Kambysês son of Cyrus succeeded to his father's sceptre, Persian spirit was at its highest point, and he was not long in fixing upon a prey both richer and less hazardous than the Massagetæ, at the opposite extremity of the empire. Phenicia and Judæa being already subject to him, he resolved to invade Egypt, then highly flourishing under the long and prosperous reign of Amasis. Not much pretence was needed to color the aggression, and the various stories which Herodotus mentions as causes of the war, are only interesting inasmuch as they imply a vein of Egyptian party feeling, — affirming that the invasion was brought upon Amasis by a daughter of Apriés, and was thus a judgment upon him for having deposed the latter. As to the manner in which she had produced this effect, indeed, the most contradictory stories were circulated.[3]

Kambysês summoned the forces of his empire for this new enterprise, and among them both the Phenicians and the Asiatic

— *ξεινικὰ δὲ νόμαια Πέρσαι προσίενται ἀνδρῶν μάλιστα, — καὶ εὐπαθείας τι παντοδαπὰς πυνθανόμενοι ἐπιτηδεύουσι.*

That rigid tenacity of customs and exclusiveness of tastes, which mark the modern Orientals, appear to be of the growth of Mohammedanism, and to distinguish them greatly from the old Zoroastrian Persians.

[1] Herodot. ix, 76; Plutarch, Artaxerx. c. 26.

[2] Herodot. i 210; iii, 159.

[3] Herodot iii. 1–4.

Greeks, Æolic as well as Ionic,[1] insular as well as continental, — nearly all the maritime force and skill of the Ægean sea. He was apprized by a Greek deserter from the mercenaries in Egypt, named Phanês, of the difficulties of the march, and the best method of surmounting them; especially the three days of sandy desert, altogether without water, which lay between Egypt and Judæa. By the aid of the neighboring Arabians, — with whom he concluded a treaty, and who were requited for this service with the title of equal allies, free from all tribute, — he was enabled to surmount this serious difficulty, and to reach Pelusium at the eastern mouth of the Nile, where the Ionian and Karian troops in the Egyptian service, as well as the Egyptian military, were assembled to oppose him.[2]

Fortunately for himself, the Egyptian king Amasis had died during the interval of the Persian preparations, a few months before the expedition took place, — after forty-four years of unabated prosperity. His death, at this critical moment, was probably the main cause of the easy conquest which followed; his son Psammenitus succeeding to his crown, but neither to his abilities nor his influence. The result of the invasion was foreshadowed, as usual, by a menacing prodigy, — rain falling at Thebes in Upper Egypt; and was brought about by a single victory, though bravely disputed, at Pelusium, — followed by the capture of Memphis, with the person of king Psammenitus, after a siege of some duration. Kambysês had sent forward a Mitylenæan ship to Memphis, with heralds to summon the city; but the Egyptians, in a paroxysm of fury, rushed out of the walls, destroyed the vessel, and tore the crew into pieces, — a savage proceeding, which drew upon them severe retribution after the capture. Psammenitus, after being at first treated with harshness and insult, was at length released, and even allowed to

[1] Herodot. iii, 1, 19, 44.

[2] The narrative of Ktêsias is, in respect both to the Egyptian expedition and to the other incidents of Persian history, quite different in its details from that of Herodotus, agreeing only in the main events (Ktêsias, Persica, c. 7). To blend the two together is impossible.

Tacitus (Histor. i, 11) notes the difficulty of approach for an invading army to Egypt: "Egyptum, provinciam aditu difficilem, annonæ fecundam, superstitione ac lasciviâ discordem et mobilem," etc.

retain his regal dignity as a dependent of Persia. But being soon detected, or at least believed to be concerned, in raising revolt against the conquerors, he was put to death, and Egypt was placed under a satrap.[1]

There yet lay beyond Egypt territories for Kambysês to conquer, — though Kyrênê and Barka, the Greek colonies near the coast of Libya, placed themselves at once out of the reach of danger by sending to him tribute and submission at Memphis. He projected three new enterprises: one against Carthage, by sea; the other two, by land, against the Ethiopians, far to the southward up the course of the Nile, and against the oracle and oasis of Zeus Ammon, amidst the deserts of Libya. Towards Ethiopia he himself conducted his troops, but was compelled to bring them back without reaching it, since they were on the point of perishing with famine; while the division which he sent against the temple of Ammon is said to have been overwhelmed by a sand-storm in the desert. The expedition against Carthage was given up, for a reason which well deserves to be commemorated. The Phenicians, who formed the most efficient part of his navy, refused to serve against their kinsmen and colonists, pleading the sanctity of mutual oaths as well as the ties both of relationship and traffic.[2] Even the frantic Kambysês was compelled to accept, and perhaps to respect, this honorable refusal, which was not imitated by the Ionic Greeks when Darius and Xerxês demanded the aid of their ships against Athens, — we must add, however, that they were then in a situation much more exposed and helpless than that in which the Phenicians stood before Kambysês.

Among the sacred animals so numerous and so different throughout the various nomes of Egypt, the most venerated of all was the bull Apis. Yet such peculiar conditions were required by the Egyptian religion as to the birth, the age, and the marks of this animal, that, when he died, it was difficult to find a new calf properly qualified to succeed him. Much time was sometimes spent in the search, and when an unexceptionable successor was at last found, the demonstrations of joy in Memphis were extravagant and universal. At the moment when Kambysês returned to Memphis from his Ethiopian expedition, full of humiliation for the result, it so happened that a new Apis was just discovered; and as the population of the city gave vent to their usual festival pomp and delight, he construed it into an intentional insult towards his own recent misfortunes. In vain did the priests and magistrates explain to him the real cause of these popular manifestations; he persisted in his belief, punished some of them with death and others with stripes, and commanded every man seen in holiday attire to be slain. Furthermore, — to carry his outrage against Egyptian feeling to the uttermost pitch, — he sent for the newly-discovered Apis, and plunged his dagger into the side of the animal, who shortly afterwards died of the wound.[1]

[1] Herodot. iii, 10–16. About the Arabians, between Judæa and Egypt see iii, c. 5, 88–91.

[2] Herodot. iii, 19

After this brutal deed, — calculated to efface in the minds of the Egyptian priests the enormities of Cheops and Chephrên, and doubtless unparalleled in all the twenty-four thousand years of their anterior history, — Kambysês lost every spark of reason which yet remained to him, and the Egyptians found in this visitation a new proof of the avenging interference of their gods. Not only did he commit every variety of studied outrage against the conquered people among whom he was tarrying, as well as their temples and their sepulchres, — but he also dealt his blows against his Persian friends and even his nearest blood-relations. Among these revolting atrocities, one of the greatest deserves peculiar notice, because the fate of the empire was afterwards materially affected by it. His younger brother Smerdis had accompanied him into Egypt, but had been sent back to Susa, because the king became jealous of the admiration which his personal strength and qualities called forth.[2] That jealousy was aggravated into alarm and hatred by a dream, portending dominion and conquest to Smerdis; so that the frantic Kambysês sent to

[1] Herodot. iii, 29.

[2] Ktêsias calls the brother Tanyoxarkês, and says that Cyrus had left him satrap, without tribute, of Baktria and the neighboring regions (Persica, c. 8). Xenophon, in the Cyropædia, also calls him Tanyoxarkês, but gives him a different satrapy (Cyropæd. viii, 7, 11).

Susa secretly a confidential Persian, Prexaspês, with express orders to get rid of his brother. Prexaspês fulfilled his commission effectively, burying the slain prince with his own hands,[1] and keeping the deed concealed from all except a few of the chiefs at the regal residence.

Among these few chiefs, however, there was one, the Median Patizeithês, belonging to the order of the Magi, who saw in it a convenient stepping-stone for his own personal ambition, and made use of it as a means of covertly supplanting the dynasty of the great Cyrus. Enjoying the full confidence of Kambysês, he had been left by that prince, on departing for Egypt, in the entire management of the palace and treasures, with extensive authority.[2] Moreover, he happened to have a brother extremely resembling in person the deceased Smerdis; and as the open and dangerous madness of Kambysês contributed to alienate from him the minds of the Persians, he resolved to proclaim this brother king in his room, as if it were the younger son of Cyrus succeeding to the disqualified elder. On one important point, the false Smerdis differed from the true. He had lost his ears, which Cyrus himself had caused to be cut off for an offence; but the personal resemblance, after all, was of little importance, since he was seldom or never allowed to show himself to the people.[3] Kambysês, having heard of this revolt in Syria on his return from Egypt, was mounting his horse in haste for the purpose of going to suppress it, when an accident from his sword put an end to his life. Herodotus tells us that, before his death, he summoned the Persians around him, confessed that he had been guilty of putting his brother to death, and apprized them that the reigning Smerdis was only a Median pretender, — conjuring them at the same time not to submit to the disgrace of being ruled by any other than a Persian and an Achæmenid. But if it be true that he ever made known the facts, no one believed him. For Prexaspês, on his part, was compelled by regard to his own safety, to deny that he had imbrued his hands in the blood

[3] Herodot. iii, 68–69. — "Auribus decisis vivere jubet," says Tacitus, about a case under the Parthian government (Annal. xii, 14), — nor have the Turkish authorities given up the infliction of it at the present moment or at least down to a very recent period.

of a son of Cyrus;[1] and thus the opportune death of Kambysês placed the false Smerdis without opposition at the head of the Persians, who all, or for the most part, believed themselves to be ruled by a genuine son of Cyrus. Kambysês had reigned for seven years and five months.

For seven months did Smerdis reign without opposition, seconded by his brother Patizeithês; and if he manifested his distrust of the haughty Persians around him, by neither inviting them into his palace nor showing himself out of it, he at the same time studiously conciliated the favor of the subject provinces, by remission of tribute and of military service for three years.[2] Such a departure from the Persian principle of government was in itself sufficient to disgust the warlike and rapacious Achæmenids at Susa. But it seems that their suspicions as to his genuine character had never been entirely set at rest, and in the eighth month those suspicions were converted into certainty. According to what seems to have been the Persian usage, he had taken to himself the entire harem of his predecessor, among whose wives was numbered Phædymê, daughter of a distinguished Persian, named Otanês. At the instance of her father, Phædymê undertook the dangerous task of feeling the head of Smerdis while he slept, and thus detected the absence of ears.[3] Otanês, possessed of the decisive information, lost no time in concerting, with five other noble Achæmenids, means for ridding themselves of a king who was at once a Mede, a Magian, and a man without ears;[4] Darius, son of Hystaspês, the satrap of Persis proper, arriving just in time to join the conspiracy as the seventh. How these seven noblemen slew Smerdis in his palace at Susa, — how they subsequently debated among themselves whether they should establish in Persia a monarchy, an oligarchy, or a democracy, — how, after the first of the three had been resolved upon, it was determined that the future king, whichever he might be, should be bound to take his wives only from the families of the seven con-

spirators, — how Darius became king, from the circumstance of his horse being the first to neigh among those of the conspirators at a given spot, by the stratagem of the groom Œbarês, — how Otanês, standing aside beforehand from this lottery for the throne, reserved for himself as well as for his descendants perfect freedom and exemption from the rule of the future king, whichsoever might draw the prize, — all these incidents may be found recounted by Herodotus with his usual vivacity, but with no small addition of Hellenic ideas as well as of dramatic ornament.

It was thus that the upright tiara, the privileged head-dress of the Persian kings,[1] passed away from the lineage of Cyrus, yet without departing from the great phratry of the Achæmenidæ, — to which Darius and his father Hystaspês, as well as Cyrus, belonged. That important fact is unquestionable, and probably the acts ascribed to the seven conspirators are in the main true, apart from their discussions and intentions. But on this as well as on other occasions, we must guard ourselves against an illusion which the historical manner of Herodotus is apt to create. He presents to us with so much descriptive force the personal narrative, — individual action and speech, with all its accompanying hopes, fears, doubts, and passions, — that our attention is distracted from the political bearing of what is going on; which we are compelled often to gather up from hints in the speeches of performers, or from consequences afterwards indirectly noticed. When we put together all the incidental notices which he lets drop, it will be found that the change of sceptre from Smerdis to Darius was a far larger political event than his direct narrative would seem to announce. Smerdis represents preponderance to the Medes over the Persians, and comparative degradation to the latter; who, by the installation of Darius, are again placed in the ascendent. The Medes and the Magians are in this case identical; for the Magians, though indispensable in the capacity of priests to the Persians, were essentially one of the seven Median

Compare Aristophan. Aves, 487, with the Scholia, and Herodot. vii, 61; Arrian, iv, 6, 29. The cap of the Persians generally was loose, low, clinging about the head in folds; that of the king was high and erect above the head. tribes.[1] It thus appears that though Smerdis ruled as a son of the great Cyrus, yet he ruled by means of Medes and Magians, depriving the Persians of that supreme privilege and predominance to which they had become accustomed.[2] We see this by what followed immediately after the assassination of Smerdis and his brother in the palace. The seven conspirators, exhibiting the bloody heads of both these victims as an evidence of their deed, instigated the Persians in Susa to a general massacre of the Magians, many of whom were actually slain, and the rest only escaped by flight, concealment, or the hour of night. And the anniversary of this day was celebrated afterwards among the Persians by a solemnity and festival, called the Magophonia; no Magian being ever allowed on that day to appear in public.[3] The descendants of the Seven maintained a privileged name and rank,[4] even down to the extinction of the monarchy by Alexander the Great.

[1] Herodot. i, 101–120.

[2] In the speech which Herodotus puts into the mouth of Kambysês on his deathbed, addressed to the Persians around him in a strain of prophetic adjuration (iii, 65), he says: Καὶ δὴ ὑμῖν τάδε ἐπισκήπτω, θεοὺς τοὺς βασιληίους ἐπικαλέων, καὶ πᾶσιν ὑμῖν καὶ μάλιστα Ἀχαιμενιδέων τοῖσι παρεοῦσι, μὴ περιϊδεῖν τὴν ἡγεμονίην αὐτις ἐς Μήδους περιελθοῦσαν· ἀλλ' εἴτε δόλῳ ἔχουσι αὐτὴν κτησάμενοι (the personification of the deceased son of Cyrus), δόλῳ ἀπαιρεθῆναι ὑπὸ ὑμέων· εἴτε καὶ σθένεϊ τεῳ κατεργασάμενοι, σθένεϊ κατὰ τὸ κάρτερον ἀνασώσασθαι (the forcible opposition of the Medes to Darius, which he put down by superior force on the Persian side): compare the speech of Gobryas, one of the seven Persian conspirators (iii, 73), and that of Prexaspês (iii, 75); also Plato, Legg. iii, 12, p. 695.

Heeren has taken a correct view of the reign of Smerdis the Magian, and its political character (Ideen über den Verkehr, etc., der Alten Welt, part i, abth. i, p. 431).

[3] Herodot. iii, 79. Σπασάμενοι δὲ τὰ ἐγχειρίδια, ἔκτεινον ὅκου τινα μάγον εὕρισκον· εἰ δὲ μὴ νὺξ ἐπελθοῦσα ἔσχε, ἔλιπον ἂν οὐδένα μάγον· Ταύτην τὴν ἡμέρην θεράπευουσι Πέρσαι κοινῇ μάλιστα τῶν ἡμερέων· καὶ ἐν αὐτῇ ὁρτὴν μεγάλην ἀνάγουσι, ἡ κέκληται ὑπὸ Περσέων Μαγοφόνια.

The periodical celebration of the Magophonia is attested by Ktêsias, — one of the few points of complete agreement with Herodotus. He farther agrees in saying that a Magian usurped the throne, through likeness of person to the deceased son of Cyrus, whom Kambysês had slain, — but all his other statements differ from Herodotus (Ktêsias, 10–14).

[4] Even at the battle of Arbela, — "Summæ Orsines præerat, a septem

Furthermore, it appears that the authority of Darius was not readily acknowledged throughout the empire, and that an interval of confusion ensued before it became so.[1] The Medes actually revolted, and tried to maintain themselves by force against Darius, who however found means to subdue them: though, when he convoked his troops from the various provinces, he did not receive from the satraps universal obedience. The powerful Orœtês, especially, who had been appointed by Cyrus satrap of Lydia and Ionia, not only sent no troops to the aid of Darius against the Medes,[2] but even took advantage of the disturbed state of the government to put to death his private enemy Mitrobatês satrap of Phrygia, and appropriate that satrapy in addition to his own. Aryandês also, the satrap nominated by Kambysês in Egypt, comported himself as the equal of Darius rather than as his subject.[3] The subject provinces generally, to whom Smerdis had granted remission of tribute and military service for the space of three years, were grateful and attached to his memory, and noway pleased with the new dynasty; moreover, the revolt of the Babylonians, conceived a year or two before it was executed, took its rise from the feelings of this time.[4] But the renewal of the old conflict between the two principal sections of the empire, Medes and Persians, is doubtless the most important feature in this political revolution. The false Smerdis with his brother, both of them Medes and Magians, had revived the Median nationality to a state of supremacy over the Persian, recalling the memory of what it had been under Astyagês; while Darius, — a pure Persian, and not (like the mule Cyrus) half Mede and half Persian, — replaced the Persian nationality in its

ascendent condition, though not without the necessity of suppressing by force a rebellion of the Medes.[1]

[1] Herodot. i, 130. Ἀστυάγης μέν νυν βασιλεύσας ἐπ' ἔτεα πέντε καὶ τριήκοντα, οὕτω τῆς ἀρχῆς κατεπαύθη. Μῆδοι δὲ ὑπέκυψαν Πέρσῃσι διὰ τὴν τούτου πικρότητα.....Ὑστέρῳ μέντοι χρόνῳ μετεμέλησέ τέ σφι ταῦτα ποιήσασι, καὶ ἀπέστησαν ἀπὸ Δαρείου· ἀποστάντες δὲ, ὀπίσω κατεστράφθησαν, μάχῃ νικηθέντες· τότε δὲ, ἐπὶ Ἀστυάγεος, οἱ Πέρσαι τε καὶ ὁ Κῦρος ἐπαναστάντες τοῖσι Μήδοισι, ἦρχον τὸ ἀπὸ τούτου τῆς Ἀσίης.

This passage — asserting that the Medes, some time after the deposition of Astyagês and the acquisition of Persian supremacy by Cyrus, repented of having suffered their discontent against Astyagês to place this supremacy in the hands of the Persians, revolted from Darius, and were reconquered after a contest — appears to me to have been misunderstood by chronologists. Dodwell, Larcher, and Mr. Fynes Clinton (indeed, most, if not all, of the chronologists) explain it as alluding to a revolt of the Medes against the Persian king Darius Nothus, mentioned in the Hellenica of Xenophon i, 2, 12), and belonging to the year 408 B.C. See Larcher ad Herodot. i, 130, and his Vie d'Hérodote, prefixed to his translation (p. lxxxix); also Mr. Clinton, Fasti Hellenici, ad ann. 408 and 455, and his Appendix, c, 18, p. 316.

The revolt of the Medes alluded to by Herodotus is, in my judgment, completely distinct from the revolt mentioned by Xenophon: to identify the two, as these eminent chronologists do, is an hypothesis not only having nothing to recommend it, but open to grave objection. The revolt mentioned by Herodotus was against Darius son of Hystaspês, not against Darius Nothus; and I have set forth with peculiar care the circumstances connected with the conspiracy and accession of the former, for the purpose of showing that they all decidedly imply that conflict between Median and Persian supremacy, which Herodotus directly announces in the passage now before us.

1. When Herodotus speaks of Darius, without any adjective designation, why should we imagine that he means any other than Darius the son of Hystaspês, on whom he dwells so copiously in his narrative? Once only in the course of his history (ix, 108) another Darius (the young prince, son of Xerxês the First) is mentioned; but with this exception, Darius son of Hystaspês is uniformly, throughout the work, spoken of under his simple name: Darius Nothus is never alluded to at all.

2. The deposition of Astyagês took place in 559 B.C.; the beginning of the reign of Darius occurred in 520 B.C.; now repentance on the part of the Medes, for what they had done at the former of those two epochs, might naturally prompt them to try to repair it in the latter. But between the deposition of Astyagês in 559 B.C., and the revolt mentioned by Xenophon against Darius Nothus in 408 B.C., the interval is more than one hundred and fifty years. To ascribe a revolt which took place in 408 B.C., to repent

It has already been observed that the subjugation of the recusant Medes was not the only embarrassment of the first years of

---

ance for something which had occurred one hundred and fifty years before, is unnatural and far-fetched, if not positively inadmissible.

The preceding arguments go to show that the natural construction of the passage in Herodotus points to Darius son of Hystaspês, and not to Darius Nothus; but this is not all. There are yet stronger reasons why the reference to Darius Nothus should be discarded.

The supposed mention, in Herodotus, of a fact so late as 408 B.C., perplexes the whole chronology of his life and authorship. According to the usual statement of his biography, which every one admits, and which there is no reason to call in question, he was born in 484 B.C. Here, then, is an event alluded to in his history, which occurred when the historian was seventy-six years old, and the allusion to which he must be presumed to have written when about eighty years old, if not more; for his mention of the fact by no means implies that it was particularly recent. Those who adopt this view, do not imagine that he wrote his whole history at that age; but they maintain that he made later additions, of which they contend that this is one. I do not say that this is impossible: we know that Isokratês composed his Panathenaic oration at the age of ninety-four; but it must be admitted to be highly improbable, — a supposition which ought not to be advanced without some cogent proof to support it. But here no proof whatever is produced. Herodotus mentions a revolt of the Medes against Darius, — Xenophon also mentions a revolt of the Medes against Darius; hence, chronologists have taken it as a matter of course, that both authors must allude to the same event; though the supposition is unnatural as regards the text, and still more unnatural as regards the biography, of Herodotus.

In respect to that biography, Mr. Clinton appears to me to have adopted another erroneous opinion; in which, however, both Larcher and Wesseling are against him, though Dahlmann and Heyse agree with him. He maintains that the passage in Herodotus (iii, 15), wherein it is stated that Pausiris succeeded his father Amyrtæus by consent of the Persians in the government of Egypt, is to be referred to a fact which happened subsequent to the year 414 B.C., or the tenth year of Darius Nothus; since it was in that year that Amyrtæus acquired the government of Egypt. But this opinion rests altogether upon the assumption that a certain Amyrtæus, whose name and date occur in Manetho (see Eusebius, Chronicon), is the same person as the Amyrtæus mentioned in Herodotus; which identity is not only not proved, but is extremely improbable, since Mr. Clinton himself admits (F. H. Appendix, p. 317), while maintaining the identity: "He (Amyrtæus) had conducted a war against the Persian government *more than fifty years before*." This, though not impossible, is surely very improbable; it is at least equally probable that the Amyrtæus of Manetho was a different person from (perhaps even the *grandson* of) that Amyrtæus in Herodotus, who had

Darius. Orœtês, satrap of Phrygia, Lydia, and Ionia, ruling seemingly the entire western coast of Asia Minor, — possessing a large military force and revenue, and surrounded by a body-guard of one thousand native Persians, — maintained a haughty independence. He secretly made away with couriers sent to summon him to Susa, and even wreaked his vengeance upon some of the principal Persians who had privately offended him.

---

carried on war against the Persians more than fifty years before; it appears to me, indeed, that this is the more reasonable hypothesis of the two.

I have permitted myself to prolong this note to an unusual length, because the supposed mention of such recent events in the history of Herodotus, as those in the reign of Darius Nothus, has introduced very gratuitous assumptions as to the time and manner in which that history was composed. It cannot be shown that there is a single event of precise and ascertained date, alluded to in his history, later than the capture of the Lacedæmonian heralds in the year 430 B.C. (Herodot. vii, 137: see Larcher, Vie d'Hérodote, p. lxxxix); and this renders the composition of his history as an entire work much more smooth and intelligible.

It may be worth while to add, that whoever reads attentively Herodotus, vi, 98, — and reflects at the same time that the destruction of the Athenian armament at Syracuse (the greatest of all Hellenic disasters, hardly inferior, for its time, to the Russian campaign of Napoleon, and especially impressive to one living at Thurii, as may be seen by the life of Lysias, Plutarch. Vit. x, Oratt. p. 835) happened during the reign of Darius Nothus in 413 B.C., — will not readily admit the hypothesis of additions made to the history during the reign of the latter, or so late as 408 B.C. Herodotus would hardly have dwelt so expressly and emphatically upon mischief done by Greeks to each other in the reigns of Darius son of Hystaspês, Xerxês, and Artaxerxês, if he had lived to witness the greater mischiefs so inflicted during the reign of Darius Nothus, and had kept his history before him for the purpose of inserting new events. The destruction of the Athenians before Syracuse would have been a thousand times more striking to his imagination than the revolt of the Medes against Darius Nothus, and would have impelled him with much greater force to alter or enlarge the chapter vi, 98.

The sentiment too which Herodotus places in the mouth of Demaratus respecting the Spartans (vii, 104) appears to have been written *before* the capture of the Spartans in Sphakteria, in 425 B.C., rather than *after* it: compare Thucyd. iv, 40.

Dahlmann (Forschungen auf dem Gebiete der Geschichte, vol. ii, pp. 41-47) and Heyse (Quæstiones Herodoteæ, pp. 74–77, Berlin, 1827) both profess to point out six passages in Herodotus which mark events of later date than 430 B.C. But none of the chronological indications which they adduce appear to me trustworthy.

Darius, not thinking it prudent to attack him by open force, proposed to the chief Persians at Susa, the dangerous problem of destroying him by stratagem. Thirty among them volunteered to undertake it, and Bagæus, son of Artontês, to whom on drawing lots the task devolved, accomplished it by a manœuvre which might serve as a lesson to the Ottoman government, in its embarrassments with contumacious Pashas. Having proceeded to Sardis, furnished with many different royal ordinances, formally set forth and bearing the seal of Darius, — he was presented to Orœtês in audience, with the public secretary of the satrapy close at hand, and the Persian guards standing around. He presented his ordinances to be read aloud by the secretary, choosing first those which related to matters of no great importance; but when he saw that the guards listened with profound reverence, and that the king's name and seal imposed upon them irresistibly, he ventured upon the real purport of his perilous mission. An ordinance was handed to the secretary, and read by him aloud, as follows: "Persians, king Darius forbids you to serve any longer as guards to Orœtês." The obedient guards at once delivered up their spears, when Bagæus caused the final warrant to be read to them: "King Darius commands the Persians in Sardis to kill Orœtês." The guards drew their swords and killed him on the spot: his large treasure was conveyed to Susa: Darius became undisputed master, and probably Bagæus satrap.[1]

Another devoted adherent, and another yet more memorable piece of cunning, laid prostrate before Darius the mighty walls and gates of the revolted Babylon. The inhabitants of that city had employed themselves assiduously, — both during the lax provincial superintendence of the false Smerdis, and during the period of confusion and conflict which elapsed before Darius became firmly established and obeyed, — in making every preparation both for declaring and sustaining their independence. Having accumulated a large store of provisions and other requisites for a long siege, without previous detection, they at length proclaimed their independence openly. And such was the intensity of their resolution to maintain it, that they had recourse to a proceeding, which, if correctly reported by Herodotus, forms

[1] Herodot. iii, 127, 128.

one of the most frightful enormities recorded in his history. To make their provisions last out longer, they strangled all the women in the city, reserving only their mothers, and one woman to each family for the purpose of baking.[1] We cannot but suppose that this has been magnified from a partial into an universal destruction. Yet taking it even with such allowance, it illustrates that ferocious force of will, — and that predominance of strong nationality, combined with antipathy to foreigners, over all the gentler sympathies, — which seems to mark the Semitic nations, and which may be traced so much in the Jewish history of Josephus.

Darius, assembling all the forces in his power, laid siege to the revolted city, but could make no impression upon it, either by force or by stratagem. He tried to repeat the proceeding by which Cyrus had taken it at first; but the besieged were found this time on their guard. The siege had lasted twenty months without the smallest progress, and the Babylonians derided the besiegers from the height of their impregnable walls, when a distinguished Persian nobleman Zopyrus, — son of Megabyzus, who had been one of the seven conspirators against Smerdis, — presented himself one day before Darius in a state of frightful mutilation: his nose and ears were cut off, and his body misused in every way. He had designedly so maimed himself, "thinking it intolerable that Assyrians should thus laugh the Persians to scorn,"[2] in the intention which he presently intimated to Darius, of passing into the town as a deserter, with a view of betraying it, — for which purpose measures were concerted. The Babylonians, seeing a Persian of the highest rank in so calamitous a condition, readily believed his assurance, that he had been thus punished by the king's order, and that he came over to them as the only means of procuring for himself single vengeance. They intrusted him with the command of a detachment, with which he gained several advantages in different sallies, according to previous concert with Darius, until at length, the confidence of the Babylonians becom-

[1] Herodot. iii, 150.

[2] Herodot. iii, 155. *δεινόν τι ποιεύμενος, Ἀσσυρίους Πέρσῃσι καταγελᾶν* Compare the speech of Mardonius, vii, 9.

The horror of Darius, at the first sight of Zopyrus in this condition, is strongly dramatized by Herodotus.

ing unbounded, they placed in his hands the care of the principal gates. At the critical moment these gates were thrown open, and the Persians became masters of the city.[1]

Thus was the impregnable Babylon a second time reduced,[2] and Darius took precautions on this occasion to put it out of condition for resisting a third time. He caused the walls and gates to be demolished, and three thousand of the principal citizens to be crucified: the remaining inhabitants were left in the dismantled city, fifty thousand women being levied by assessment upon the neighboring provinces, to supply the place of the women strangled when it first revolted.[3] Zopyrus was ap

[1] Herodot. iii, 154–158.

[2] Ktêsias represents the revolt and recapture of Babylon to have taken place, not under Darius, but under his son and successor Xerxês. He says that the Babylonians, revolting, slew their satrap Zopyrus; that they were besieged by Xerxês, and that Megabyzus son of Zopyrus caused the city to be taken by practising that very stratagem which Herodotus ascribes to Zopyrus himself (Persica, c. 20–22).

This seems inconsistent with the fact, that Megabyzus was general of the Persian army in Egypt in the war with the Athenians, about 460 B.C. (Diodor. Sic. xi, 75–77): he would hardly have been sent on active service had he been so fearfully mutilated; moreover, the whole story of Ktêsias appears to me far less probable than that of Herodotus; for on this, as on other occasions, to blend the two together is impossible.

[3] Herodot. iii, 159, 160. "From the women thus introduced (says Herodotus) the present Babylonians are sprung."

To crucify subdued revolters by thousands is, fortunately, so little in harmony with modern European manners, that it may not be amiss to strengthen the confidence of the reader in the accuracy of Herodotus, by producing an analogous narrative of incidents far more recent. Voltaire gives, from the MS. of General Lefort, one of the principal and confidential officers of Peter the Great, the following account of the suppression of the revolted Strelitzes at Moscow, in 1698: these Strelitzes were the old native militia, or Janissaries, of the Russian Czars, opposed to all the reforms of Peter.

"Pour étouffer ces troubles, le czar part secrètement de Vienne, arrive enfin à Moscou, et surprend tout le monde par sa présence: il récompense les troupes qui ont vaincu les Strélitz: les prisons étaient pleines de ces malheureux. Si leur crime était grand, le châtiment le fut aussi. Leurs chefs, plusieurs officiers, et quelques prêtres, furent condamnés à la mort quelques-uns furent roués, deux femmes enterrées vives. On pendit autour des murailles de la ville et on fit périr dans d'autres supplices deux mille Strelitz: leurs corps restèrent deux jours exposés sur les grands chemins et surtout autour du monastère où résidaient les princesses Sophie et Eudoxe. On érigea des colonnes de pierre où le crime et le châtiment furent gravés. Un très-grand nombre qui avaient leurs femmes et leurs enfans furent dispersés avec leurs familles dans la Sibérie, dans le royaume d'Astrakhan, dans le pays d'Azof: par là du moins leur punition fut utile à l'état: ils servirent à défricher des terres qui manquaient d'habitans et de culture." (Voltaire, Histoire de Russie, part i, ch. x, tom. 31, of the Œuvres Complètes de Voltaire, p. 148, ed. Paris, 1825.)

pointed satrap of the territory for life, with enjoyment of its entire revenues, receiving besides every additional reward which it was in the power of Darius to bestow, and generous assurances from the latter that he would rather have Zopyrus without wounds than the possession of Babylon. I have already intimated in a former chapter that the demolition of the walls here mentioned is not to be regarded as complete and continuous, nor was there any necessity that it should be so. Partial demolition would be quite sufficient to leave the city without defence; and the description given by Herodotus of the state of things as they stood at the time of his visit, proves that portions of the walls yet subsisted. One circumstance is yet to be added in reference to the subsequent condition of Babylon under the Persian empire. The city with the territory belonging to it constituted a satrapy, which not only paid a larger tribute (one thousand Euboic talents of silver) and contributed a much larger amount of provisions in kind for the maintenance of the Persian court, than any other among the twenty satrapies of the empire, but furnished besides an annual supply of five hundred eunuch youths.[1] We may presume that this was intended in part as a punishment for the past revolt, since the like obligation was not imposed upon any other satrapy.

Thus firmly established on the throne, Darius occupied it for thirty-six years, and his reign was one of organization, different from that of his two predecessors; a difference which the Persians well understood and noted, calling Cyrus the father, Kambysês the master, and Darius the retail-trader, or huckster.[2] In

[1] Herodot. iii, 92.

[2] Herodot. iii, 89. What the Persian denomination was, which Herodotus or his informants translated *κάπηλος*, we do not know; but this latter word was used often by Greeks to signify a cheat, or deceiver generally: see Etymologic. Magn p. 490, 11, and Suidas, v *Κάπηλος*. Ὁ δ' Αἰσχυλος καὶ

the mouth of he Persians this latter epithet must be construed as no insignificant compliment, since it intimates that he was the first to introduce some methodical order into the imperial administration and finances. Under the two former kings there was no definite amount of tribute levied upon the subject provinces: which furnished what were called presents, subject to no fixed limit except such as might be satisfactory to the satrap in each district. But Darius — succeeding as he did to Smerdis, who had rendered himself popular with the provinces by large financial exemptions, and having farther to encounter jealousy and dissatisfaction from Persians, his former equals in rank — probably felt it expedient to relieve the provinces from the burden of undefined exactions. He distributed the whole empire into twenty departments, imposing upon each a fixed annual tax, and a fixed contribution for the maintenance of the court. This must doubtless have been a great improvement, though the limitation of the sum which the Great King at Susa would require, did not at all prevent the satrap in his own province from indefinite requisitions beyond it. The latter was a little king, who acted nearly as he pleased in the internal administration of his province, — subject only to the necessity of sending up the imperial tribute, of keeping off foreign enemies, and of furnishing an adequate military contingent for the foreign enterprises of the Great King. To every satrap was attached a royal secretary, or comptroller, of the revenue,[1] who probably managed the imperial finances in the province, and to whom the court of Susa might perhaps look as a watch upon the satrap himself. It is not to be supposed that the Persian authorities in any province meddled with the details of taxation, or contribution, as they bore upon individuals. The court having fixed the entire sum payable by the satrapy in the aggregate, the satrap or the secretary apportioned it among the various component districts, towns, or provinces, leaving to the local authorities in each of these latter the task of assessing it upon individual inhabitants. From necessity, therefore, as well as from indolence of temper and political incompetence, the Persians were compelled to respect authorities which they found standing both in town and country, and to leave in their hands a large measure of genuine influence; frequently overruled, indeed, by oppressive interference on the part of the satrap, whenever any of his passions prompted, — but never entirely superseded. In the important towns and stations, Persian garrisons were usually kept, and against the excesses of the military there was probably little or no protection to the subject people. Yet still, the provincial governments were allowed to continue, and often even the petty kings who had governed separate districts during their state of independence prior to the Persian conquest, retained their title and dignity as tributaries to the court of Susa.[1] The empire of the Great King was thus an aggregate of heterogeneous elements, connected together by no tie except that of common fear and subjection, — noway coherent nor self-supporting, nor pervaded by any common system or spirit of nationality. It resembled, in its main political features, the Turkish and Persian empires of the present day,[2] though distinguished materially by the many differences arising out of Mohammedanism and Christianity, and apparently not reaching the same extreme of rapacity, corruption, and cruelty in detail.

Darius distributed the Persian empire into twenty satrapies, each including a certain continuous territory, and one or more nations inhabiting it, the names of which Herodotus sets forth. The amount of tribute payable by each satrapy was determined: payable in gold, according to the Euboic talent, by the Indians in the easternmost satrapy, — in silver, according to the Babylonian, or larger talent, by the remaining nineteen. Herodotus computes the ratio of gold to silver as 13 : 1. From the nineteen satrapies which paid in silver, there was levied annually

δόλια πάντα καλεῖ κώπηλα — "*Κώπηλα προσφέρων τεχνήματα.*" (Æschylus, Fragmem. 328, ed. Dindorf: compare Euripid. Hippolyt. 953.)

[1] Herodot. iii, 128. This division of power, and double appointment by the Great King, appears to have been retained until the close of the Persian empire: see Quintus Curtius, v, 1, 17–20 (v, 3, 19–21, Zumpt). The present Turkish government nominates a Defterdar as finance administrator in each province, with authority derived directly from itself, and professedly independent of the Pacha.

[1] Herodot. iii, 15.

[2] Respecting the administration of the modern Persian empire, see Kinneir, Geograph. Memoir of Persia, pp. 29, 43 47

the sum of seven thousand seven hundred and forty Babylonian talents, equal to something about two million nine hundred and sixty-four thousand pounds sterling: from the Indians, who alone paid in gold, there was received a sum equal (at the rate of 1 : 13) to four thousand six hundred and eighty Euboic talents of silver, or to about one million two hundred and ninety thousand pounds sterling.[1]

To explain how it happened that this one satrapy was charged with a sum equal to two-fifths of the aggregate charge on the

[1] Herodot. iii, 95. The text of Herodotus contains an erroneous summing up of items, which critics have no means of correcting with certainty. Nor is it possible to trust the large sum which he alleges to have been levied from the Indians, though all the other items, included in the nineteen silver-paying divisions, seem within the probable truth; and indeed both Rennell and Robertson think the total too small: the charges on some of the satrapies are decidedly smaller than the reality.

The vast sum of fifty thousand talents is said to have been found by Alexander the Great, laid up by successive kings at Susa alone, besides the treasures at Persepolis, Pasargadæ, and elsewhere (Arrian, iii, 16, 12; Plutarch, Alexand. 37). Presuming these talents to be Babylonian or Æginæan talents (in the proportion 5 : 3 to Attic talents), fifty thousand talents would be equal to nineteen million pounds sterling; if they were Attic talents, it would be equal to eleven million six hundred thousand pounds sterling. The statements of Diodorus give even much larger sums (xvii, 66–71: compare Curtius, v, 2, 8; v, 6, 9; Strabo, xv, p. 730). It is plain that the numerical affirmations were different in different authors, and one cannot pretend to pronounce on the trustworthiness of such large figures without knowing more of the original returns on which they were founded That there were prodigious sums of gold and silver, is quite unquestionable. Respecting the statement of the Persian revenue given by Herodotus see Boeckh, Metrologie, ch. v, 1–2.

Amedée Jaubert, in 1806, estimated the population of the modern Persian empire at about seven million souls; of which about six million were settled population, the rest nomadic: he also estimated the Schah's revenue at about two million nine hundred thousand tomans, or one million five hundred thousand pounds sterling. Others calculated the population higher, at nearer twelve million souls. Kinneir gives the revenue at something more than three million pounds sterling: he thinks that the whole territory between the Euphratês and the Indus does not contain above eighteen millions of souls (Geogr. Memoir of Persia, pp. 44–47: compare Ritter, West Asien, Abtheil. ii, Abschn. iv, pp. 879–889).

The modern Persian empire contains not so much as the eastern half of the ancient, which covered all Asiatic Turkey and Egypt besides.

other nineteen, Herodotus dwells upon the vast population, the extensive territory, and the abundant produce in gold, among those whom he calls Indians, — the easternmost inhabitants of the earth, since beyond them there was nothing but uninhabitable sand, — reaching, as far as we can make it out, from Baktria southward along the Indus to its mouth, but how far eastward we cannot determine. Darius is said to have undertaken an expedition against them and subdued them: moreover, he is affirmed to have constructed and despatched vessels down the Indus, from the city of Kaspatyri and the territory of the Paktyes, in its upper regions, all the way down to its mouth: then into the Indian ocean, round the peninsula of Arabia, and up the Red Sea to Egypt. The ships were commanded by Skylax, — a Greek of Karyanda on the southwestern coast of Asia Minor;[1] who, if this statement be correct, executed a scheme of nautical enterprise not only one hundred and seventy years earlier, but also far more extensive, than the famous voyage of Nearchus, admiral of Alexander the Great, — since the latter only went from the Indus to the Persian gulf. The eastern portions of the Persian empire remained so unknown and unvisited until the Macedonian invasion, that we are unable to criticize these isolated statements of Herodotus. None of the Persian kings subsequent to Darius appear to have visited them, and whether the prodigious sum demandable from them according to the Persian rent-roll was ever regularly levied, may reasonably be doubted. At the same time, we may reasonably believe that the mountains in the northern parts of Persian India — Cabul and Little Thibet — were at that time extremely productive in gold, and that quantities of that metal, such as now appear almost fabulous, may have been often obtained. It appears that the produce of gold in all parts of the earth, as far

[1] Herodot. iii, 102, iv, 44. See the two Excursus of Bähr on these two chapters, vol. ii, pp. 648–671 of his edit. of Herodotus.

It certainly is singular that neither Nearchus, nor Ptolemy, nor Aristobulus, nor Arrian, take any notice of this remarkable voyage distinctly asserted by Herodotus to have been accomplished. Such silence, however, affords no sufficient reason for calling the narrative in question. The attention of the Persian kings, successors to Darius, came to be far more occupied with the western than with the eastern portions of their empire.

as hitherto known, is obtained exclusively near the surface; so that a country once rich in that metal may well have been exhausted of its whole supply, and left at a later period without any gold at all.

Of the nineteen silver-paying satrapies, the most heavily imposed was Babylonia, which paid one thousand talents: the next in amount of charge was Egypt, paying seven hundred talents, besides the produce of the fish from the lake of Mœris. The remaining satrapies varied in amount, down as low as one hundred and seventy talents, which was the sum charged on the seventh satrapy (in the enumeration of Herodotus), comprising the Sattagydæ, the Gandarii, the Dodikæ, and the Aparytæ. The Jonians, Æolians, Magnesians on the Mæander, and on Mount Sipylus, Karians, Lykians, Milyans, and Pamphylians, — including the coast of Asia Minor, southward of Kanê, and from thence round the southern promontory to Phasêlis, — were rated as one division, paying four hundred talents. But we may be sure that much more than this was really taken from the people, when we read that Magnesia alone afterwards paid to Themistoklês a revenue of fifty talents annually.[1] The Mysians and Lydians were included, with some others, in another division, and the Hellespontine Greeks in a third, with Phrygians, Bithynians, Paphlagonians, Mariandynians, and Syrians, paying three hundred and sixty talents, — nearly the same as was paid by Syria proper, Phenicia, and Judæa, with the island of Cyprus. Independent of this regular tribute, and the undefined sums extorted over and above it,[2] there were some dependent nations, which, though exempt from tribute, furnished occasional sums called presents; and farther contributions were exacted for the maintenance of the vast suite who always personally attended the king. One entire third of this last burden was borne by Babylonia alone in consequence of its exuberant fertility.[3] It was paid in produce, as indeed the peculiar productions of every part of the empire seem to have been sent up for the regal consumption.

[3] Herodot. iii, 117.

However imperfectly we are now able to follow the geographical distribution of the subject nations as given by Herodotus, it is extremely valuable as the only professed statistics remaining, of the entire Persian empire. The arrangement of satrapies, which he describes, underwent modification in subsequent times; at least it does not harmonize with various statements in the Anabasis of Xenophon, and in other authors who recount Persian affairs belonging to the fourth century B.C. But we find in no other author except Herodotus any entire survey and distribution of the empire. It is, indeed, a new tendency which now manifests itself in the Persian Darius, compared with his predecessors: not simply to conquer, to extort, and to give away, — but to do all this with something like method and system,[1] and to define the obligations of the satraps towards Susa. Another remarkable example of the same tendency is to be found in the fact, that Darius was the first Persian king who coined money: his coin, both in gold and silver, the Daric, was the earliest produce of a Persian mint.[2] The revenue, as brought to Susa in metallic money of various descriptions, was melted down separately, and poured in a fluid state into jars or earthenware vessels; when the metal had cooled and hardened, the jar was broken, leaving a standing solid mass, from which portions were cut off as the oc-

[1] Plato, Legg. iii, 12, p. 695.

[2] Herodot. iv, 166; Plutarch, Kimon, 10.

The gold Daric, of the weight of two Attic drachmæ (Stater Daricus), equivalent to twenty Attic silver drachmæ (Xenoph. Anab. i, 7, 18), would be about 16*s.* 3*d.* English. But it seems doubtful whether that ratio between gold and silver (10:1) can be reckoned upon as the ordinary ratio in the fifth and fourth centuries B.C. Mr. Hussey calculates the golden Daric as equal to £1, 1*s.* 3*d.* English (Hussey, Essay on the Ancient Weights and Money, Oxford, 1836, ch. iv, s. 8, p. 68; ch. vii, s. 3, p. 103).

I cannot think, with Mr. Hussey, that there is any reason for believing either the name or the coin *Daric* to be older than Darius son of Hystaspês Compare Boeckh, Metrologie, ix, 5, p. 129.

Particular statements respecting the value of gold and silver, as exchanged one against the other, are to be received with some reserve as the basis of any general estimate, since we have not the means of comparing a great many such statements together. For the process of coinage was imperfectly performed, and the different pieces, both of gold and silver, in circulation, differed materially in weight one with the other. Herodotus gives the ratio of gold to silver as 13:1.

casion required.[1] And in addition to these administrative, financial, and monetary arrangements, of which Darius was the first originator, we may probably ascribe to him the first introduction of that system of roads, resting-places, and permanent relays of couriers, which connected both Susa and Ekbatana with the distant portions of the empire. Herodotus describes in considerable detail the imperial road from Sardis to Susa. a journey of ninety days, crossing the Halys, the Euphratês, the Tigris, the Greater and Lesser Zab, the Gyndês, and the Choaspês. And we may see by this account that in his time it was kept in excellent order, with convenience for travellers.[2]

It was Darius also who first completed the conquest of the Ionic Greeks by the acquisition of the important island of Samos. That island had maintained its independence, at the time when the Persian general Harpagus effected the conquest of Ionia. It did not yield voluntarily when Chios and Lesbos submitted, and the Persians had no fleet to attack it; nor had the Phenicians yet been taught to round the Triopian cape. Indeed, the depression which overtook the other cities of Ionia, tended rather to the aggrandizement of Samos, under the energetic and unscrupulous despotism of Polykratês. That ambitious Samian, about ten years after the conquest of Sardis by Cyrus (seemingly between 536 – 532 B.C.), contrived to seize by force or fraud the government of his native island, with the aid of his brothers Pantagnôtus and Sylosôn, and a small band of conspirators.[3] At first, the three brothers shared the supreme power; but presently Polykrates put to death Pantagnôtus, banished Sylosôn, and made himself despot alone. In this station, his ambition, his perfidy, and his good fortune, were alike remarkable. He con-

[1] Herodot. iii, 96.

[2] Herodot. v, 52–53; viii, 98. "It appears to be a favorite idea with all barbarous princes, that the badness of the roads adds considerably to the natural strength of their dominions. The Turks and Persians are undoubtedly of this opinion: the public highways are, therefore, neglected, and particularly so towards the frontiers." (Kinneir, Geog. Mem. of Pers p. 43.)

The description of Herodotus contrasts favorably with the picture here given by Mr. Kinneir.

[3] Herodot. iii. 120.

quered several of the neighboring islands, and even some towns on the mainland; he carried on successful war against Milêtus; and signally defeated the Lesbian ships which came to assist Milêtus; he got together a force of one hundred armed ships called pentekonters, and one thousand mercenary bowmen, — aspiring to nothing less than the dominion of Ionia, with the islands in the Ægean. Alike terrible to friend and foe by his indiscriminate spirit of aggression, he acquired a naval power which seems at that time to have been the greatest in the Grecian world.[1] He had been in intimate alliance with Amasis, king of Egypt, who, however, ultimately broke with him. Considering his behavior towards allies, such rupture is not at all surprising; but Herodotus ascribes it to the alarm which Amasis conceived at the uninterrupted and superhuman good fortune of Polykratês, — a degree of good fortune sure to draw down ultimately corresponding intensity of suffering from the hands of the envious gods. Indeed, Herodotus, — deeply penetrated with this belief in an ever-present nemesis, which allows no man to be very happy, or long happy, with impunity, — throws it into the form of an epistolary warning from Amasis to Polykratês, advising him to inflict upon himself some seasonable mischief or suffering; in order, if possible, to avert the ultimate judgment, — to let blood in time, so that the plethora of happiness might not end in apoplexy.[2] Pursuant to such counsel, Polykratês threw into the sea a favorite ring, of matchless price and beauty; but unfortunately, in a few days, the ring reappeared in the belly of a fine fish, which a fisherman had sent to him as a present. Amasis now foresaw that the final apoplexy was inevitable, and broke off the alliance with Polykratês without delay, — a well-known story, interesting as evidence of ancient belief, and not less to be noted as showing the power of that belief to beget fictitious details out of real characters, such as I have already touched upon in the history of Solon and Crœsus, and elsewhere.

[1] Herodot. iii, 39; Thucyd. i, 13

[2] Herodot. iii, 40–42....ἦν δὲ μὴ ἐναλλὰξ ἤδη τὠπὸ τούτου αἱ εὐτύχιαί τοι τοιαύταισι πάθαισι προσπίπτωσι, τρόπῳ τῷ ἐξ ἐμεῦ ὑποκειμένῳ ἀκέο: compare vii, 203, and i, 32.

The facts mentioned by Herodotus rather lead us to believe that it was Polykratês, who, with characteristic faithlessness, broke off his friendship with Amasis;[1] finding it suitable to his policy to cultivate the alliance of Kambysês, when that prince was preparing for his invasion of Egypt. In that invasion, the Ionic subjects of Persia were called upon to serve, and Polykratês, deeming it a good opportunity to rid himself of some Samian malcontents, sent to the Persian king to tender auxiliaries from himself. Kambysês, having eagerly caught at the prospect of aid from the first naval potentate in the Ægean, forty Samian triremes were sent to the Nile, having on board the suspected persons, as well as conveying a secret request to the Persian king that they might never be suffered to return. Either they never went to Egypt, however, or they found means to escape; very contradictory stories had reached Herodotus. But they certainly returned to Samos, attacked Polykratês at home, and were driven off by his superior force without making any impression. Whereupon they repaired to Sparta to entreat assistance.[2]

We may here notice the gradually increasing tendency in the Grecian world to recognize Sparta as something like a head, protector, or referee, in cases either of foreign danger or internal dispute. The earliest authentic instance known to us, of application to Sparta in this character, is that of Crœsus against Cyrus: next, that of the Ionic Greeks against the latter: the instance of the Samians now before us, is the third. The important events connected with, and consequent upon, the expulsion of the Peisistratidæ from Athens, manifesting yet more formally the headship of Sparta, occur fifteen years after the present event; they have been already recounted in a previous chapter, and serve as a farther proof of progress in the same direction. To watch the growth of these new political habits, is essential to a right understanding of Grecian history.

On reaching Sparta, the Samian exiles, borne down with despondency and suffering, entered at large into the particulars of their case. Their long speaking annoyed instead of moving the

[1] Herodot. iii, 44.

[2] Herodot. iii. 44.

Spartans, who said, or are made to say: "We have forgotten the first part of the speech, and the last part is unintelligible to us." Upon which the Samians appeared the next day, simply with an empty wallet, saying: "Our wallet has no meal in it." "Your wallet is superfluous," (said the Spartans;) *i. e.* the words would have been sufficient without it.[1] The aid which they implored was granted.

We are told that both the Lacedæmonians and the Corinthians, — who joined them in the expedition now contemplated, — had separate grounds of quarrel with the Samians,[2] which operated as a more powerful motive than the simple desire to aid the suffering exiles. But it rather seems that the subsequent Greeks generally construed the Lacedæmonian interference against Polykratês as an example of standing Spartan hatred against despots. Indeed, the only facts which we know, to sustain this anti-despotic sentiment for which the Lacedæmonians had credit, are, their proceedings against Polykratês and Hippias; there may have been other analogous cases, but we cannot specify them with certainty. However this may be, a joint Lacedæmonian and Corinthian force accompanied the exiles back to Samos, and assailed Polykratês in the city. They did their best to capture it, for forty days, and were at one time on the point of succeeding, but were finally obliged to retire without any success. "The city would have been taken," says Herodotus, "if all the Lacedæmonians had acted like Archias and Lykôpas," — who, pressing closely upon the retreating Samians, were shut within the town-gates, and perished. The historian had heard this exploit in personal conversation with Archias, grandson of the person above mentioned, in the deme Pitana at Sparta, — whose father had been named Samius, and who respected the Samians above any other Greeks, because they had bestowed upon the two brave warriors, slain within their town, an honorable and public funeral.[3] It is rarely that Herodotus thus specifies his informants: had he done so more frequently the value as well as the interest of his history would have been materially increased.

[1] Herodot. iii, 46. *τῷ θυλάκῳ περιείργασθαι.*

[2] Herodot. iii, 47, 48, 52.

[3] Herodot. iii. 54–56

On the retirement of the Lacedæmonian force, the Samian exiles were left destitute; and looking out for some community to plunder, weak as well as rich, they pitched upon the island of Siphnos. The Siphnians of that day were the wealthiest islanders in the Ægean, from the productiveness of their gold and silver mines, — the produce of which was annually distributed among the citizens, reserving a tithe for the Delphian temple.[1] Their treasure-chamber was among the most richly furnished of which that holy place could boast, and they themselves, probably, in these times of early prosperity, were numbered among the most brilliant of the Ionic visitors at the Delian festival. The Samians landing at Siphnos, demanded a contribution, under the name of a loan, of ten talents: which being refused, they proceeded to ravage the island, inflicting upon the inhabitants a severe defeat, and ultimately extorting from them one hundred talents. They next purchased from the inhabitants of Hermionê, in the Argolic peninsula, the neighboring island of Hydrea, famous in modern Greek warfare. But it appears that their plans must have been subsequently changed, for, instead of occupying it, they placed it under the care of the Trœzenians, and repaired themselves to Krete, for the purpose of expelling the Zakynthian settlers at Kydônia. In this they succeeded, and were induced to establish themselves in that place. But after they had remained there five years, the Kretans obtained naval aid from Ægina, whereby the place was recovered, and the Samian intruders finally sold into slavery.[2]

Such was the melancholy end of the enemies of Polykratês: meanwhile, that despot himself was more powerful and prosperous than ever. Samos, under him, was "the first of all cities, Hellenic or barbaric:[3]" and the great works admired by Herodotus in the island,[4] — an aqueduct for the city, tunnelled through a mountain for the length of seven furlongs, — a mole to protect the harbor, two furlongs long and twenty fathoms deep, and the vast temple of Hêrê, may probably have been enlarged and com-

pleted, if not begun, by him. Aristotle quotes the public works of Polykratês as instances of the profound policy of despots, to occupy as well as to impoverish their subjects.[1] The earliest of all Grecian thalassokrats, or sea-kings, — master of the greatest naval force in the Ægean, as well as of many among its islands, — he displayed his love of letters by friendship to Anakreon, and his piety by consecrating to the Delian Apollo[2] the neighboring island of Rhêneia. But while thus outshining all his contemporaries, victorious over Sparta and Corinth, and projecting farther aggrandizement, he was precipitated on a sudden into the abyss of ruin;[3] and that too, as if to demonstrate unequivocally the agency of the envious gods, not from the revenge of any of his numerous victims, but from the gratuitous malice of a stranger whom he had never wronged and never even seen. The Persian satrap Orœtês, on the neighboring mainland, conceived an implacable hatred against him: no one could tell why, — for he had no design of attacking the island; and the trifling reasons conjecturally assigned, only prove that the real reason, whatever it might be, was unknown. Availing himself of the notorious ambition and cupidity of Polykratês, Orœtês sent to Samos a messenger, pretending that his life was menaced by Kambysês, and that he was anxious to make his escape with his abundant treasures. He proposed to Polykratês a share in this treasure, sufficient to make him master of all Greece, as far as that object could be achieved by money, provided the Samian prince would come over to convey him away. Mæandrius, secretary of Polykratês, was sent over to Magnêsia on the Mæander, to make inquiries; he there saw the satrap with eight large coffers full of gold, — or rather apparently so, being in reality full of stones, with a layer of gold at the top,[4] — tied up ready for departure. The cupidity of Polykratês was not proof against so rich a bait: he crossed over to Magnêsia with a considerable suite, and thus came into the power of Orœtês, in spite of the warnings of his

prophets and the agony of his terrified daughter, to whom his approaching fate had been revealed in a dream. The satrap slew him and crucified his body; releasing all the Samians who accompanied him, with an intimation that they ought to thank him for procuring them a free government, — but retaining both the foreigners and the slaves as prisoners.[1] The death of Orœtês himself, which ensued shortly afterwards, has already been described. It is considered by Herodotus as a judgment for his flagitious deed in the case of Polykratês.[2]

At the departure of the latter from Samos, in anticipation of a speedy return, Mæandrius had been left as his lieutenant at Samos; and the unexpected catastrophe of Polykratês filled him with surprise and consternation. Though possessed of the fortresses, the soldiers, and the treasures, which had constituted the machinery of his powerful master, he knew the risk of trying to employ them on his own account. Partly from this apprehension, partly from the genuine political morality which prevailed with more or less force in every Grecian bosom, he resolved to lay down his authority and enfranchise the island. "He wished (says the historian, in a remarkable phrase)[3] to act like the justest of men; but he was not allowed to do so." His first proceeding was to erect in the suburbs an altar in honor of Zeus Eleutherius, and to inclose a piece of ground as a precinct, which still existed in the time of Herodotus: he next convened an assembly of the Samians. "You know (says he) that the whole power of Polykratês is now in my hands, nor is there anything to hinder me from continuing to rule over you. Nevertheless, what I condemn in another I will not do myself, — and I have always disapproved of Polykratês, and others like him, for seeking to rule over men as good as themselves. Now that Polykratês has come to the end of his destiny, I at once lay down the command, and proclaim among you equal law; reserving to myself as privileges, first, six talents out of the treasures of Polykratês, — next, the hereditary

[2] Herodot. iii, 126. Ὀροίτεα Πολυκράτεος τίσιες μετῆλθον.

[3] Herodot. iii, 142. τῷ δ ἐδικαιότατα ἀνδρῶν βουλομένῳ γενέσθαι, οὐκ ἐξεγένετο. Compare his remark on Kadmus, who voluntarily resigned the despotism at Kôs (vii 164).

priesthood of Zeus Eleutherius for myself and my descendants forever. To him I have just set apart a sacred precinct, as the God of that freedom which I now hand over to you."

This reasonable and generous proposition fully justifies the epithet of Herodotus. But very differently was it received by the Samian hearers. One of the chief men among them, Telesarchus, exclaimed, with the applause of the rest, "*You* rule us, low-born and scoundrel as you are! you are not worthy to rule: don't think of that, but give us some account of the money which you have been handling."[1]

Such an unexpected reply caused a total revolution in the mind of Mæandrius. It left him no choice but to maintain dominion at all hazards, — which he accordingly resolved to do. Retiring into the acropolis, under pretence of preparing his money-accounts for examination, he sent for Telesarchus and his chief political enemies, one by one, — intimating that they were open to inspection. As fast as they arrived they were put in chains, while Mæandrius remained in the acropolis, with his soldiers and his treasures, as the avowed successor of Polykratês. And thus the Samians, after a short hour of insane boastfulness, found themselves again enslaved. "It seemed (says Herodotus) that they were not willing to be free."[2]

We cannot but contrast their conduct on this occasion with that of the Athenians about twelve years afterwards, on the expulsion of Hippias, which has been recounted in a previous chapter. The position of the Samians was far the more favorable of the two, for the quiet and successful working of a free government; for they had the advantage of a voluntary as well as a sincere resignation from the actual despot. Yet the thirst for reactionary investigation prevented them even from taking a reasonable estimate of their own power of enforcing it: they passed at once from extreme subjection to overbearing and ruinous rashness. Whereas the Athenians, under circumstances far less promising, avoided the fatal mistake of sacrificing the pre-

[1] Herodot. iii, 142. Ἀλλ' οὐδ' ἄξιος εἰ σύ γ' ἡμέων ἄρχειν, γεγονώς τε κακὸς, καὶ ἐὼν ὀλεθρος· ἀλλὰ μᾶλλον ὅκως λόγον δώσεις τῶν ἐνεχείρισας χρημάτων.

[2] Herodot. iii, 143. οὐ γὰρ δὴ, ὡς οἰκασι, ἐβουλέατο εἶναι ἐλεύθεροι.

pects of the future to recollections of the past; showed themselves both anxious to acquire the rights, and willing to perform the obligations, of a free community; listened to wise counsels, maintained unanimous action, and overcame, by heroic efforts, forces very greatly superior. If we compare the reflections of Herodotus on the one case and on the other,[1] we shall be struck with the difference which those reflections imply between the Athenians and the Samians, — a difference partly referable, doubtless, to the pure Hellenism of the former, contrasted with the half-Asiatized Hellenism of the latter, — but also traceable in a great degree to the preliminary lessons of the Solonian constitution, overlaid, but not extinguished, during the despotism of the Peisistratids which followed.

The events which succeeded in Samos are little better than a series of crimes and calamities. The prisoners, whom Mæandrius had detained in the acropolis, were slain during his dangerous illness, by his brother Lykarêtus, under the idea that this would enable him more easily to seize the sceptre. But Mæandrius recovered, and must have continued as despot for a year or two: it was, however, a weak despotism, contested more or less in the island, and very different from the iron hand of Polykratês In this untoward condition, the Samians were surprised by the arrival of a new claimant for their sceptre and acropolis, — and, what was much more formidable, a Persian army to back him.

Sylosôn, the brother of Polykratês, having taken part originally in his brother's conspiracy and usurpation, had been at first allowed to share the fruits of it, but quickly found himself banished. In this exile he remained during the whole life of Polykratês, and until the accession of Darius to the Persian throne, which followed about a year after the death of Polykratês. He happened to be at Memphis, in Egypt, during the time when Kambysês was there with his conquering army, and when Darius, then a Persian of little note, was serving among his guards. Sylosôn was walking in the agora of Memphis, wearing a scarlet cloak, to which Darius took a great fancy, and proposed to buy it. A divine inspiration prompted Sylosôn to reply,[2] "I cannot

[1] Herodot. v, 78, and iii, 142, 143.

[2] Herodot. iii, 139. Ὁ δὲ Συλοσῶν, ὁρέων τὸν Δαρεῖον μεγάλως ἐπιθυμέοντα τῆς χλάνιδος, θείῃ τύχῃ χρεώμενος, λέγει, etc

for any price sell it; but I give it you for nothing, if it must be yours." Darius thanked him, and accepted the cloak; and for some years the donor accused himself of a silly piece of good-nature.[1] But as events came round, Sylosôn at length heard with surprise that the unknown Persian, whom he had presented with the cloak at Memphis, was installed as king in the palace at Susa. He went thither, proclaimed himself as a Greek, as well as benefactor of the new king, and was admitted to the regal presence. Darius had forgotten his person, but perfectly remembered the adventure of the cloak, when it was brought to his mind, — and showed himself forward to requite, on the scale becoming the Great King, former favors, though small, rendered to the simple soldier at Memphis. Gold and silver were tendered to Sylosôn in profusion, but he rejected them, — requesting that the island of Samos might be conquered and handed over to him, without slaughter or enslavement of inhabitants. His request was complied with. Otanês, the originator of the conspiracy against Smerdis, was sent down to the coast of Ionia with an army, carried Sylosôn over to Samos, and landed him unexpectedly on the island.[2]

Mæandrius was in no condition to resist the invasion, nor were the Samians generally disposed to sustain him. He accordingly concluded a convention with Otanês, whereby he agreed to make way for Sylosôn, to evacuate the island, and to admit the Persians at once into the city; retaining possession, however — for such time as might be necessary to embark his property and treasures — of the acropolis, which had a separate landing-place, and even a subterranean passage and secret portal for embarkation, — probably one of the precautionary provisions of Polykratês. Otanês willingly granted these conditions, and himself with his principal officers entered the town, the army being quartered around; while Sylosôn seemed on the point of ascending the seat of his deceased brother without violence or bloodshed. But the Samians were destined to a fate more calamitous. Mæandrius had a brother named Charilaus, violent in his temper, and half a madman, whom he was obliged to keep in confine-

[1] Herodot. iii, 140. ἠπίστατό οἱ τοῦτο ἀπολωλέναι δι' εὐηθίην.

[2] Herodot. iii, 141–144.

ment. This man looking out of his chamber-window, saw the Persian officers seated peaceably throughout the town and even under the gates of the acropolis, unguarded, and relying upon the convention: it seems that these were the chief officers, whose rank gave them the privilege of being carried about on their seats.[1] The sight inflamed both his wrath and his insane ambition; he clamored for liberty and admission to his brother, whom he reviled as a coward no less than a tyrant. "Here are you, worthless man, keeping me, your own brother, in a dungeon, though I have done no wrong worthy of bonds; while you do not dare to take your revenge on the Persians, who are casting you out as a houseless exile, and whom it would be so easy to put down. If you are afraid of them, give me your guards; I will make the Persians repent of their coming here, and I will send you safely out of the island forthwith."[2]

Mæandrius, on the point of quitting Samos forever, had little personal motive to care what became of the population. He had probably never forgiven them for disappointing his honorable intentions after the death of Polykratês, nor was he displeased to hand over to Sylosôn an odious and blood-stained sceptre, which he foresaw would be the only consequence of his brother's mad project. He therefore sailed away with his treasures, leaving the acropolis to his brother Charilaus; who immediately armed the guards, sallied forth from his fortress, and attacked the unsuspecting Persians. Many of the great officers were slain without resistance before the army could be got together; but at length Otanês collected his troops and drove the assailants back into the acropolis. While he immediately began the siege of that fortress, he also resolved, as Mæandrius had foreseen, to take a signal revenge for the treacherous slaughter of so many of his friends and companions. His army, no less incensed than himself, were directed to fall upon the Samian people and massacre them without discrimination, — man and boy, on ground sacred as well as profane. The bloody order was too faithfully executed, and Samos was handed over to Sylosôn, stripped of its male inhabitants.[1] Of Charilaus and the acropolis we hear no farther. perhaps he and his guards may have escaped by sea. Lykarêtus,[2] the other brother of Mæandrius, must have remained either in the service of Sylosôn or in that of the Persians; for we find him some years afterwards intrusted by the latter with an important command.

Sylosôn was thus finally installed as despot of an island peopled chiefly, if not wholly, with women and children: we may, however, presume, that the deed of blood has been described by the historian as more sweeping than it really was. It seems, nevertheless, to have sat heavily on the conscience of Otanês, who was induced sometime afterwards, by a dream and by a painful disease, to take measures for repeopling the island.[3] From whence the new population came, we are not told: but wholesale translations of inhabitants from one place to another were familiar to the mind of a Persian king or satrap.

Mæandrius, following the example of the previous Samian exiles under Polykratês, went to Sparta and sought aid for the purpose of reëstablishing himself at Samos. But the Lacedæmonians had no disposition to repeat an attempt which had before turned out so unsuccessfully, nor could he seduce king Kleomenês by the display of his treasures and finely-wrought gold plate. The king, however, not without fear that such seductions might win over some of the Spartan leading men, prevailed with the ephors to send Mæandrius away.[4]

Sylosôn seems to have remained undisturbed at Samos, as a tributary of Persia, like the Ionic cities on the continent: some years afterwards we find his son Æakês reigning in the island.[5] Strabo states that it was the harsh rule of Sylosôn which caused the depopulation of the island. But the cause just recounted out of Herodotus is both very different and sufficiently plausible in

[1] Herodot. iii, 146. *τῶν Περσέων τοὺς διφροφορευμένους καὶ λόγου πλείστου ἀξίους.*

[2] Herodot. iii, 145. *Ἐμὲ μέν, ὦ κάκιστε ἀνδρῶν, ἐόντα σεωυτοῦ ἀδελφεὸν, καὶ ἀδικήσαντα οὐδὲν ἄξιον δεσμοῦ, δήσας γοργύρης ἠξίωσας· ὁρέων δὲ τοὺς Πέρσας ἐκβάλλοντάς τέ σε καὶ ἄνοικον ποιεῦντας, οὐ τολμᾷς τίσασθαι, οὕτω δή τι ἐόντας εὐπετέας χειρωθῆναι.*

The highly dramatic manner of Herodotus cannot be melted down into smooth historical recital.

[1] Herodot. iii, 149. *ἐρημον ἐοῦσαν ἀνδρῶν.*

itself; and as Strabo seems in the main to have derived his account from Herodotus, we may suppose that on this point he has incorrectly remembered his authority.[1]

CHAPTER XXXIV.

DEMOKEDES. — DARIUS INVADES SCYTHIA.

Darius had now acquired full authority throughout the Persian empire, having put down the refractory satrap Orœtês, as well as the revolted Medes and Babylonians. He had, moreover, completed the conquest of Ionia, by the important addition of Samos; and his dominion thus comprised all Asia Minor, with its neighboring islands. But this was not sufficient for the ambition of a Persian king, next but one in succession to the great Cyrus. The conquering impulse was yet unabated among the Persians, who thought it incumbent upon their king, and whose king thought it incumbent upon himself, to extend the limits of the empire. Though not of the lineage of Cyrus, Darius had taken pains to connect himself with it by marriage; he had married Atossa and Artystonê, daughters of Cyrus, — and Parmys, daughter of Smerdis, the younger son of Cyrus. Atossa had been first the wife of her brother Kambysês; next, of the Magian Smerdis, his successor; and thirdly of Darius, to whom she bore four children.[2] Of those children the eldest was Xerxês, respecting whom more will be said hereafter.

Atossa, mother of the only Persian king who ever set foot in Greece, the Sultana Validi of Persia during the reign of Xerxês, was a person of commanding influence in the reign of her

Strabo, xiv, p. 638. He gives a proverbial phrase about the depopulation of the island —

Ἔκητι Συλοσῶντος εὐρυχωρίη,

which is perfectly consistent with the narrative of Herodotus.

[1] Herodot. iii, 88, vii, 2.

last husband,[1] as well as in that of her son, and filled no inconsiderable space even in Grecian imagination, as we may see both by Æschylus and Herodotus. Had her influence prevailed, the first conquering appetites of Darius would have been directed, not against the steppes of Scythia, but against Attica and Peloponnesus; at least, so Herodotus assures us. The grand object of the latter in his history is to set forth the contentions of Hellas with the barbarians or non-Hellenic world; and with an art truly epical, which manifests itself everywhere to the careful reader of his nine books, he preludes to the real dangers which were averted at Marathon and Platæa, by recounting the first conception of an invasion of Greece by the Persians, — how it originated, and how it was abandoned. For this purpose — according to his historical style, wherein general facts are set forth as subordinate and explanatory accompaniments to the adventures of particular persons, — he give us the interesting, but romantic, history of the Krotoniate surgeon Dêmokêdês.

Dêmokêdês, son of a citizen of Krotôn named Kalliphôn, had turned his attention in early youth to the study and practice of medicine and surgery (for that age, we can make no difference between the two), and had made considerable progress in it. His youth coincides nearly with the arrival of Pythagoras at Krotôn, (550 – 520,) where the science of the surgeon, as well as the art of the gymnastic trainer, seem to have been then prosecuted more actively than in any part of Greece. His father Kalliphôn, however, was a man of such severe temper, that the son ran away from him, and resolved to maintain himself by his talents elsewhere. He went to Ægina, and began to practice in his profession; and so rapid was his success, even in his first year, — though very imperfectly equipped with instruments and apparatus,[2] — that the citizens of the island made a contract with him to remain there for one year, at a salary of one talent (about

[1] Herodot. vii, 3. ἡ γὰρ Ἄτοσσα εἶχε τὸ πᾶν κράτος. Compare the description given of the ascendency of the savage Sultana Parysatis over her son Artaxerxês Mnêmon (Plutarch, Artaxerxês, c. 16, 19, 23).

[2] Herodot. iii, 131. ἀσκενὴς περ ἐὼν, καὶ ἔχων οὐδὲν τῶν δοκα περὶ τὴν τέχνην ἐστιν ἐργαλήϊα, — the description refers to surgical rather than to medical practice.

That curious assemblage of the cases of particular patients with remarks

three hundred and eighty-three pounds sterling, an Æginæan talent). The year afterwards he was invited to come to Athens, then under the Peisistratids, at a salary of one hundred minæ, or one and two-thirds of a talent; and in the following year, Polykratês of Samos tempted him by the offer of two talents. With that

known in the works of Hippokratês, under the title Ἐπιδήμιαι (Notes of visits to different cities), is very illustrative of what Herodotus here mentions about Dêmokêdês. Consult, also, the valuable Prolegomena of M Littré, in his edition of Hippokratês now in course of publication, as to the character, means of action, and itinerant habits of the Grecian *ἰατροί*: see particularly the preface to vol. v, p. 12, where he enumerates the various places visited and noted by Hippokratês. The greater number of the Hippokratic observations refer to various parts of Thrace, Macedonia, and Thessaly; but there are some, also, which refer to patients in the islands of Syros and Delos, at Athens, Salamis, Elis, Corinth, and Œniadæ in Akarnania. "On voit par là combien étoit juste le nom de Periodeutes ou voyageurs donnés à ces anciens médecins."

Again, M. Littré, in the same preface, p. 25, illustrates the proceedings and residence of the ancient *ἰατρός*: "On se tromperoit si on se représentoit la demeure d'un médecin d'alors comme celle d'un médecin d'aujourd'hui. La maison du médecin de l'antiquité, du moins au temps d'Hippocrate et aux époques voisines, renfermoit un local destiné à la pratique d'un grand nombre d'opérations, contenant les machines et les instrumens nécessaires, et de plus étant aussi une boutique de pharmacie. Ce local se nommait *ἰατρεῖον*." See Plato, Legg. i, p. 646, iv, p. 720. Timæus accused Aristotle of having begun as a surgeon, practising to great profit in surgery, or *ἰατρεῖον*, and having quitted this occupation late in life, to devote himself to the study of science, — *σοφιστὴν ὀψιμαθῆ καὶ μισητὸν ὑπάρχοντα, καὶ τὸ πολυτίμητον ἰατρεῖον ἀρτίως ἀποκεκλεικότα* (Polyb. xii, 9).

See, also, the Remarques Retrospectives attached by M. Littré to volume iv, of the same work (pp. 654–658), where he dwells upon the intimate union of surgical and medical practice in antiquity. At the same time, it must be remarked that a passage in the remarkable medical oath, published in the collection of Hippokratic treatises, recognizes in the plainest manner the distinction between the physician and the operator, — the former binds himself by this oath not to perform the operation "even of lithotomy, but to leave it to the operators, or workmen:" *Οὐ τεμέω δὲ οὐδὲ μὴν λιθιῶντας, ἐκχωρήσω δὲ ἐργάτῃσιν ἀνδράσι πρήξιος τῆσδε* (Œuvres d'Hippocrate, vol. iv. p. 630, ed. Littré). M. Littré (p. 617) contests this explanation, remarking that the various Hippokratic treatises represent the *ἰατρὸς* as performing all sorts of operations, even such as require violent and mechanical dealing. But the words of the oath are so explicit, that it seems more reasonable to assign to the oath itself a later date than the treatises, when the habits of practitioners may have changed.

despot he remained, and accompanied him in his last calamitous visit to the satrap Orœtês: on the murder of Polykratês, being seized among the slaves and foreign attendants, he was left to languish with the rest in imprisonment and neglect. When again, soon after, Orœtês himself was slain, Dêmokêdês was numbered among his slaves and chattels and sent up to Susa.

He had not been long at that capital, when Darius, leaping from his horse in the chase, sprained his foot badly, and was carried home in violent pain. The Egyptian surgeons, supposed to be the first men in their profession,[1] whom he habitually employed, did him no good, but only aggravated his torture; for seven days and nights he had no sleep, and he as well as those around him began to despair. At length, some one who had been at Sardis, accidentally recollected that he had heard of a Greek surgeon among the slaves of Orœtês: search was immediately made, and the miserable slave was brought, in chains as well as in rags,[2] into the presence of the royal sufferer. Being asked whether he understood surgery, he affected ignorance; but Darius, suspecting this to be a mere artifice, ordered out the scourge and the pricking instrument, to overcome it. Dêmokêdês now saw that there was no resource, admitted that he had acquired some little skill, and was called upon to do his utmost in the case before him. He was fortunate enough to succeed perfectly, in alleviating the pain, in procuring sleep for the exhausted patient, and ultimately in restoring the foot to a sound state. Darius, who had abandoned all hopes of such a cure, knew no bounds to his gratitude. As a first reward, he presented him with two sets of chains in solid gold, — a commemoration of the state in which Dêmokêdês had first come before him, — he next sent him into the harem to visit his wives. The conducting eunuchs introduced him as the man who had restored the king to life, and the grateful sultanas each gave to him a saucer full of golden coins called staters;[3] in all so numerous, that the slave Skitôn,

[1] About the Persian habit of sending to Egypt for surgeons, compare Herodot. iii, 1.

[2] Herodot iii, 129. *τὸν δὲ ὡς ἐξεῦρον ἐν τοῖσι Ὀροίτεω ἀνδραπόδοισι δκοτε δὴ ἀπημελημένον, παρῆγον ἐς μέσον, πέδας τε ἕλκοντα καὶ ῥάκεσιν ἐσθημένον*

[3] Herodot. iii, 130. The golden stater was equal to about 1*l.* 1*s.* 3*d* English money (Hussey, Ancient Weights, vii, 3, p. 103).

who followed him, was enriched by merely picking up the pieces which dropped on the floor. Nor was this all. Darius gave him a splendid house and furniture, made him the companion of his table, and showed him every description of favor. He was about to crucify the Egyptian surgeons who had been so unsuccessful in their attempts to cure him; but Dêmokêdês had the happiness of preserving their lives, as well as of rescuing an unfortunate companion of his imprisonment, — an Eleian prophet, who had followed the fortunes of Polykratês.

But there was one favor which Darius would on no account grant; yet upon this one Dêmokêdês had set his heart, — the liberty of returning to Greece. At length accident, combined with his own surgical skill, enabled him to escape from the splendor of his second detention, as it had before extricated him from the misery of the first. A tumor formed upon the breast of Atossa; at first, she said nothing to any one, but as it became too bad for concealment, she was forced to consult Dêmokêdês. He promised to cure her, but required from her a solemn oath that she would afterwards do for him anything which he should ask, — pledging himself at the same time to ask nothing indecent.[1] The cure was successful, and Atossa was required to repay it by procuring his liberty. He knew that the favor would be refused, even to her, if directly solicited, but he taught her a stratagem for obtaining under false pretences the consent of Darius. She took an early opportunity, Herodotus tells us,[2] in bed, of reminding Darius that the Persians expected from him some positive addition to the power and splendor of the empire; and when Darius, in answer, acquainted her that he contemplated a speedy expedition against the Scythians, she entreated him to postpone it, and to turn his forces first against Greece: "I have

The ladies in a Persian harem appear to have been less unapproachable and invisible than those in modern Turkey; in spite of the observation of Plutarch, Artaxerxês, c. 27.

[1] Herodot. iii, 133. *δεήσεσθαι δὲ οὐδενὸς τῶν ὅσα αἰσχύνην ἔστι φέροντα.* Another Greek physician at the court of Susa, about seventy years afterwards, — Apollonidês of Kôs, — in attendance on a Persian princess, did not impose upon himself the same restraint: his intrigue was divulged, and he was put to death miserably (Ktêsias, Persica, c. 42).

[2] Herodot. iii, 134.

heard (she said) about the maidens of Sparta, Athens, Argos, and Corinth, and I want to have some of them as slaves to serve me — (we may conceive the smile of triumph with which the sons of those who had conquered at Platæa and Salamis would hear this part of the history read by Herodotus); — you have near you the best person possible to give information about Greece, — that Greek who cured your foot." Darius was induced by this request to send some confidential Persians into Greece to procure information, along with Dêmokêdês. Selecting fifteen of them, he ordered them to survey the coasts and cities of Greece, under guidance of Dêmokêdês, but with peremptory orders upon no account to let him escape or to return without him. He next sent for Dêmokêdês himself, explained to him what he wanted, and enjoined him imperatively to return as soon as the business had been completed; he farther desired him to carry away with him all the ample donations which he had already received, as presents to his father and brothers, promising that on his return fresh donations of equal value should make up the loss: lastly, he directed that a storeship, "filled with all manner of good things," should accompany the voyage. Dêmokêdês undertook the mission with every appearance of sincerity. The better to play his part, he declined to take away what he already possessed at Susa, — saying, that he should like to find his property and furniture again on coming back, and that the storeship alone, with its contents, would be sufficient both for the voyage and for all necessary presents.

Accordingly, he and the fifteen Persian envoys went down to Sidon in Phenicia, where two armed triremes were equipped, with a large storeship in company; and the voyage of survey into Greece was commenced. They visited and examined all the principal places in Greece, — probably beginning with the Asiatic and insular Greeks, crossing to Eubœa, circumnavigating Attica and Peloponnesus, then passing to Korkyra and Italy. They surveyed the coasts and cities, taking memoranda[1] of everything worthy of note which they saw: this Periplûs, if it had been preserved, would have been inestimable, as an account

[1] Herodot. iii, 136. *προσίσχοντες δὲ αἰτῆς τὰ παραθαλάσσια ἐθηήσαντο καὶ ἀπεγράφοντο*

of the actual state of the Grecian world about 518 B.C. As soon as they arrived at Tarentum, Dêmokêdês — now within a short distance of his own home, Krotôn — found an opportunity of executing what he had meditated from the beginning. At his request Aristophilidês, the king of Tarentum, seized the fifteen Persians, and detained them as spies, at the same time taking the rudders from off their ships, — while Dêmokêdes himself made his escape to Krotôn. As soon as he had arrived there, Aristophilidês released the Persians, and suffered them to pursue their voyage: they went on to Krotôn, found Dêmokêdês in the market-place, and laid hands upon him. But his fellow-citizens released him, not without opposition from some who were afraid of provoking the Great King, and in spite of remonstrances, energetic and menacing, from the Persians themselves: indeed, the Krotôniates not only protected the restored exile, but even robbed the Persians of their storeship. The latter, disabled from proceeding farther, as well by this loss as by the secession of Dêmokêdês, commenced their voyage homeward, but unfortunately suffered shipwreck near the Iapygian cape, and became slaves in that neighborhood. A Tarentine exile, named Gillus, ransomed them and carried them up to Susa, — a service for which Darius promised him any recompense that he chose. Restoration to his native city was all that Gillus asked; and that too, not by force, but by the mediation of the Asiatic Greeks of Knidus, who were on terms of intimate alliance with the Tarentines. This generous citizen, — an honorable contrast to Dêmokêdês, who had not scrupled to impel the stream of Persian conquest against his country, in order to procure his own release, — was unfortunately disappointed of his anticipated recompense. For though the Knidians, at the injunction of Darius, employed all their influence at Tarentum to procure a revocation of the sentence of exile, they were unable to succeed, and force was out of the question.[1] The last words addressed by Dêmokêdês at parting to his Persian companions, exhorted them to acquaint Darius that he (Dêmokêdês) was about to marry the daughter of the Krotoniate Milo, — one of the first men in Krotôn, as well as the greatest wrestler of his time. The reputation of Milo was very great with

[1] Herodot. iii, 137, 138.

Darius, — probably from the talk of Dêmokêdês himself: moreover, gigantic muscular force could be appreciated by men who had no relish either for Homer or Solon. And thus did this clever and vainglorious Greek, sending back his fifteen Persian companions to disgrace, and perhaps to death, deposit in their parting ears a braggart message, calculated to create for himself a factitious name at Susa. He paid a large sum to Milo as the price of his daughter, for this very purpose.[1]

Thus finishes the history of Dêmokêdês, and of the "first Persians (to use the phrase of Herodotus) who ever came over from Asia into Greece."[2] It is a history well deserving of attention, even looking only to the liveliness of the incidents, introducing us as they do into the full movement of the ancient world, — incidents which I see no reason for doubting, with a reasonable allowance for the dramatic amplification of the historian. Even at that early date, Greek medical intelligence stands out in a surpassing manner, and Dêmokêdês is the first of those many able Greek surgeons who were seized, carried up to Susa,[3] and there detained for the Great King, his court, and harem.

But his history suggests, in another point of view, far more serious reflections. Like the Milesian Histiæus, of whom I shall speak hereafter,) he cared not what amount of risk he brought upon his country in order to procure his own escape from a splendid detention at Susa. And the influence which he originated and brought to bear was on the point of precipitating upon Greece the whole force of the Persian empire, at a time when Greece was in no condition to resist it. Had the first aggressive

[1] Herodot. iii, 137. *κατὰ δὴ τοῦτό μοι σπεῦσαι δοκέει τὸν γάμον τοῦτον τελέσας χρήματα μέγαλα Δημοκήδης, ἵνα φανῇ πρὸς Δαρείου ἐὼν καὶ ἐν τῇ ἑωϋτοῦ δόκιμος.*

[2] Herodot. iii. 138.

[3] Xenophon, Memorab. iv, 2, 33. *Ἄλλους δὲ πόσους οἶει* (says Sokratês) *διὰ σοφίαν ἁναρπάστους π ὸς βασιλέα γεγονέναι, καὶ ἐκεῖ δουλεύειν.*

We shall run little risk in conjecturing that, among the intelligent and able men thus carried off, surgeons and physicians would be selected as the first and most essential.

Apollônidês of Kôs — whose calamitous end has been alluded to in a previous note — was resident as surgeon, or physician, with Artaxerxês Longimanus (Ktêsias, Persica, c. 30), and Polykritus of Mendê, as well as Ktêsias himself, with Artaxerxês Mnêmon (Plutarch, Artaxerxês, c. 31)

expedition of Darius, with his own personal command and fresh appetite for conquest, been directed against Greece instead of against Scythia (between 516–514 B.C.), Grecian independence would have perished almost infallibly. For Athens was then still governed by the Peisistratids; what she was, under them, we have had occasion to notice in a former chapter. She had then no courage for energetic self-defence, and probably Hippias himself, far from offering resistance, would have found it advantageous to accept Persian dominion as a means of strengthening his own rule, like the Ionian despots: moreover, Grecian habit of coöperation was then only just commencing. But fortunately, the Persian invader did not touch the shore of Greece until more than twenty years afterwards, in 490 B.C.; and during that precious interval, the Athenian character had undergone the memorable revolution which has been before described. Their energy and their organization had been alike improved, and their force of resistance had become decupled; moreover, their conduct had so provoked the Persian that resistance was then a matter of necessity with them, and submission on tolerable terms an impossibility. When we come to the grand Persian invasion of Greece, we shall see that Athens was the life and soul of all the opposition offered. We shall see farther, that with all the efforts of Athens, the success of the defence was more than once doubtful; and would have been converted into a very different result, if Xerxês had listened to the best of his own counsellors. But had Darius, at the head of the very same force which he conducted into Scythia, or even an inferior force, landed at Marathon in 514 B.C., instead of sending Datis in 490 B.C.,—he would have found no men like the victors of Marathon to meet him. As far as we can appreciate the probabilities, he would have met with little resistance except from the Spartans singly, who would have maintained their own very defensible territory against all his efforts, — like the Mysians and Pisidians in Asia Minor, or like the Mainots of Laconia in later days; but Hellas generally would have become a Persian satrapy. Fortunately, Darius, while bent on invading some country, had set his mind on the attack of Scythia, alike perilous and unprofitable. His personal ardor was wasted on those unconquerable regions, where he narrowly escaped the disastrous fate of Cyrus, — nor

did he ever pay a second visit to the coasts of the Ægean. Yet the amorous influences of Atossa, set at work by Dêmokêdês might well have been sufficiently powerful to induce Darius to assail Greece instead of Scythia, — a choice in favor of which all other recommendations concurred; and the history of free Greece would then probably have stopped at this point, without unrolling any of the glories which followed. So incalculably great has been the influence of Grecian development, during the two centuries between 500–300 B.C., on the destinies of mankind, that we cannot pass without notice a contingency which threatened to arrest that development in the bud. Indeed, it may be remarked that the history of any nation, considered as a sequence of causes and effects, affording applicable knowledge, requires us to study not merely real events, but also imminent contingencies, — events which were on the point of occurring, but yet did not occur. When we read the wailings of Atossa in the Persæ of Æschylus, for the humiliation which her son Xerxês had just undergone in his flight from Greece,[1] we do not easily persuade ourselves to reverse the picture, and to conceive the same Atossa twenty years earlier, numbering as her slaves at Susa the noblest Hêrakleid and Alkmæônid maidens from Greece. Yet the picture would really have been thus reversed, — the wish of Atossa would have been fulfilled, and the wailings would have been heard from enslaved Greek maidens in Persia, — if the mind of Darius had not happened to be preoccupied with a project not less insane even than those of Kambysês against Ethiopia and the Libyan desert. Such at least is the moral of the story of Dêmokêdês.

That insane expedition across the Danube into Scythia comes now to be recounted. It was undertaken by Darius for the purpose of avenging the inroad and devastation of the Scythians in Media and Upper Asia, about a century before. The lust of conquest imparted unusual force to this sentiment of wounded dignity, which in the case of the Scythians could hardly be connected with any expectation of plunder or profit. In spite of the dissuading admonition of his brother Artabanus,[2] Darius

[1] Æschyl. Pers. 435–845, etc.

[2] Herodot. iv. 1, 83. There is nothing to mark the precise year of the

summoned the whole force of his empire, army and navy, to the Thracian Bosphorus, — a force not less than seven hundred thousand horse and foot, and six hundred ships, according to Herodotus. On these prodigious numbers we can lay no stress. But it appears that the names of all the various nations composing the host were inscribed on two pillars, erected by order of Darius on the European side of the Bosphorus, and afterwards seen by Herodotus himself in the city of Byzantium, — the inscriptions were bilingual, in Assyrian characters as well as Greek. The Samian architect Mandroklês had been directed to throw a bridge of boats across the Bosphorus, about half-way between Byzantium and the mouth of the Euxine. So peremptory were the Persian kings that their orders for military service should be punctually obeyed, and so impatient were they of the idea of exemptions, that when a Persian father named Œobazus entreated that one of his three sons, all included in the conscription, might be left at home, Darius replied that all three of them

Scythian expedition; but as the accession of Darius is fixed to 521 B.C., and as the expedition is connected with the early part of his reign, we may conceive him to have entered upon it as soon as his hands were free; that is, as soon as he had put down the revolted satraps and provinces, Orœtês, the Medes, Babylonians, etc. Five years seems a reasonable time to allow for these necessities of the empire, which would bring the Scythian expedition to 516–515 B.C. There is reason for supposing it to have been before 514 B.C., for in that year Hipparchus was slain at Athens, and Hippias the surviving brother, looking out for securities and alliances abroad, gave his daughter in marriage to Æantidês son of Hippoklus, despot of Lampsakus, "perceiving that Hippoklus and his son had great influence with Darius," (Thucyd. vi, 59.) Now Hippoklus could not well have acquired this influence *before* the Scythian expedition; for Darius came down then for the first time to the western sea; Hippoklus served upon that expedition (Herodot. iv, 138), and it was probably then that his favor was acquired, and farther confirmed during the time that Darius stayed at Sardis after his return from Scythia.

Professor Schultz (Beiträge zu genaueren Zeit-bestimmungen der Hellen. Geschicht. von der 63n bis zur 72n Olympiade, p. 168, in the Kieler Philolog. Studien) places the expedition in 513 B.C.; but I think a year or two earlier is more probable. Larcher, Wesseling, and Bähr (ad Herodot. iv, 145) place it in 508 B.C., which is later than the truth indeed, Larcher himself places the reduction of Lemnos and Imbros by Cœanês in 511 B.C., though that event decidedly came after the Scythian expedition (Herodot. v. 27; Larcher, Table Chronologique, Trad. d'Hérodot. t. vii, pp. 633–635).

should be left at home, — an answer which the unsuspecting father heard with delight. They were indeed all left at home, — for they were all put to death.[1] A proceeding similar to this is ascribed afterwards to Xerxês;[2] whether true or not as matters of fact, both tales illustrate the wrathful displeasure with which the Persian kings were known to receive such petitions for exemption.

The naval force of Darius seems to have consisted entirely of subject Greeks, Asiatic and insular; for the Phœnician fleet was not brought into the Ægean until the subsequent Ionic revolt. At this time all or most of the Asiatic Greek cities were under despots, who leaned on the Persian government for support, and who appeared with their respective contingents to take part in the Scythian expedition.[3] Of Ionic Greeks were seen, — Strattis, despot of Chios; Æakês son of Sylosôn, despot of Samos; Laodamas, of Phôkæa; and Histiæus, of Milêtus. From the Æolic towns, Aristagoras of Kymê; from the Hellespontine Greeks, Daphnis of Abydus, Hippoklus of Lampsakus, Hêrophantus of Parium, Metrodôrus of Prokonnêsus, Aristagoras of Kyzikus, and Miltiadês of the Thracian Chersonese. All these are mentioned, and there were probably more. This large fleet, assembled at the Bosphorus, was sent forward into the Euxine to the mouth of the Danube, — with orders to sail up the river two days' journey, above the point where its channel begins to divide, and to throw a bridge of boats over it; while Darius, having liberally recompensed the architect Mandroklês, crossed the bridge over the Bosphorus, and began his march through Thrace, receiving the submission of various Thracian tribes in his way, and subduing others, — especially the Getæ north of Mount Hæmus, who were compelled to increase still farther the numbers of his vast army.[4] On arriving at the Danube, he found the bridge finished and prepared for his passage by the Ionians: we may remark here, as on so many other occasions, that all operations requiring intelligence are performed for the Persians either by Greeks or by Phenicians, — more usually by the for-

[4] Herodot. iv 89–93.

mer. He crossed this greatest of all earthly rivers,[1] — for so the Danube was imagined to be in the fifth century B.C., — and directed his march into Scythia.

As far as the point now attained, our narrative runs smoothly and intelligibly: we know that Darius marched his army into Scythia, and that he came back with ignominy and severe loss. But as to all which happened between his crossing and recrossing the Danube, we find nothing approaching to authentic statement, — nothing even which we can set forth as the probable basis of truth on which exaggerating fancy has been at work. All is inexplicable mystery. Ktêsias indeed says that Darius marched for fifteen days into the Scythian territory, — that he then exchanged bows with the king of Scythia, and discovered the Scythian bow to be the largest, — and that, being intimidated by such discovery, he fled back to the bridge by which he had crossed the Danube, and recrossed the river with the loss of one-tenth part of his army,[2] being compelled to break down the bridge before all had passed. The length of march is here the only thing distinctly stated; about the direction nothing is said. But the narrative of Ktêsias, defective as it is, is much less perplexing than that of Herodotus, who conducts the immense host of Darius as it were through fairy-land, — heedless of distance, large intervening rivers, want of all cultivation or supplies, destruction of the country — in so far as it could be destroyed — by the retreating Scythians, etc. He tells us that the Persian army consisted chiefly of foot, — that there were no roads nor agriculture; yet his narrative carries it over about twelve degrees of longitude from the Danube to the country east of the Tanais, across the rivers Tyras

[1] Herod. iv, 48–50. Ἴστρος — *μέγιστος ποτάμων πάντων τῶν ἡμεῖς ἴδμεν*, etc.

[2] Ktêsias, Persica, c. 17. Justin (ii, 5 — compare also xxxviii, 7) seems to follow the narrative of Ktêsias.

Æschylus (Persæ, 864), who presents the deceased Darius as a glorious contrast with the living Xerxês, talks of the splendid conquests which he made by means of others, — "without crossing the Halys himself, nor leaving his home." We are led to suppose, by the language which Æschylus puts into the mouth of the Eidôlon of Darius (v, 720–745), that he had forgotten, or had never heard of the bridge thrown across the Bosphorus by order of Darius; for the latter is made to condemn severely the impious insolence of Xerxês in bridging over the Hellespont.

(Dniester), Hypanis (Bog), Borysthenês (Dnieper), Hypakyris, Gerrhos, and Tanais.[1] How these rivers could have been passed in the face of enemies by so vast a host, we are left to conjecture, since it was not winter time, to convert them into ice: nor does the historian even allude to them as having been crossed either in the advance or in the retreat. What is not less remarkable is, that in respect to the Greek settlement of Olbia, or Borysthenês, and the agricultural Scythians and Mix-hellenes between the Hypanis and the Borysthenês, across whose country it would seem that this march of Darius must have carried him, — Herodotus does not say anything; though we should have expected that he would have had better means of informing himself about this part of the march than about any other, and though the Persians could hardly have failed to plunder or put in requisition this, the only productive portion of Scythia.

The narrative of Herodotus in regard to the Persian march north of the Ister seems indeed destitute of all the conditions of reality. It is rather an imaginative description, illustrating the desperate and impracticable character of Scythian warfare, and grouping in the same picture, according to that large sweep of the imagination which is admissible in epical treatment, the Scythians, with all their barbarous neighbors from the Carpathian mountains to the river Wolga. The Agathyrsi, the Neuri, the Androphagi, the Melanchlæni, the Budini, the Gelôni, the Sarmatians, and the Tauri, — all of them bordering on that vast quadrangular area of four thousand stadia for each side, called Scythia, as Herodotus conceives it,[2] — are brought into deliberation and action in consequence of the Persian approach. And Herodotus

[1] Herodot. iv, 136. *ἅτε δὲ τοῦ Περσικοῦ πολλοῦ ἐόντος πεζοῦ στρατοῦ, καὶ τὰς ὁδοὺς οὐκ ἐπισταμένου, ὥστε οὐ τετμημένων τῶν ὁδῶν, τοῦ δὲ Σκυθικοῦ, ἱππότεω, καὶ τὰ σύντομα τῆς ὁδοῦ ἐπισταμένου*, etc. Compare c. 128.

The number and size of the rivers are mentioned by Herodotus as the principal wonder of Scythia, c. 82 — *Θωϋμάσια δὲ ἡ χώρη αὐτὴ οὐκ ἔχει, χωρὶς ἢ ὅτι ποτάμους τε πολλῷ μεγίστους καὶ ἀριθμὸν πλείστους*, etc. He ranks the Borysthenês as the largest of all rivers except the Nile and the Danube (c. 53). The Hypanis also (Bog) is *πόταμος ἐν ὀλίγοισι μέγας* (c. 52)

But he appears to forget the existence of these rivers when he is describing the Persian march.

[2] Herodot. iv, 101.

takes that opportunity of communicating valuable particulars respecting the habits and manners of each. The kings of these nations discuss whether Darius is justified in his invasion, and whether it be prudent in them to aid the Scythians. The latter question is decided in the affirmative by the Sarmatians, the Budini, and the Gelôni, all eastward of the Tanais,[1] — in the negative by the rest. The Scythians, removing their wagons with their wives and children out of the way northward, retreat and draw Darius after them from the Danube all across Scythia and Sarmatia to the northeastern extremity of the territory of the Budini,[2] several days' journey eastward of the Tanais. Moreover, they destroy the wells and ruin the herbage as much as they can, so that during all this long march, says Herodotus, the Persians "found nothing to damage, inasmuch as the country was barren;" it is therefore not easy to see what they could find to live upon. It is in the territory of the Budini, at this easternmost terminus on the borders of the desert, that the Persians perform the only positive acts which are ascribed to them throughout the whole expedition. They burn the wooden wall before occupied, but now deserted, by the Gelôni, and they build, or begin to build, eight large fortresses near the river Oarus. For what purpose these fortresses could have been intended, Herodotus gives no intimation; but he says that the unfinished work was yet to be seen even in his day.[3]

Having thus been carried all across Scythia and the other territories above mentioned in a northeasterly direction, Darius and his army are next marched back a prodigious distance in a northwesterly direction, through the territories of the Melanchlæni, the Androphagi, and the Neuri, all of whom flee affrighted into

[2] Herodot. iv, 120–122.

[3] Herodot. iv, 123. Ὅσον μὲν δὴ χρόνον οἱ Πέρσαι ἦισαν διὰ τῆς Σκυθικῆς καὶ τῆς Σαυροματίδος χώρης, οἱ δὲ εἶχον οὐδὲν σίνεσθαι, ἅτε τῆς χώρης ἐούσης χέρσου· ἐπεὶ δὲ τε ἐς τὴν τῶν Βουδίνων χώρην ἐσέβαλον etc. See Rennell, Geograph. System of Herodotus, p. 114, about the Oarus.

The erections, whatever they were, which were supposed to mark the extreme point of the march of Darius, may be compared to those evidences of the extreme advance of Dionysus, which the Macedonian army saw on the north of the Jaxartês — "Liberi patris terminos." Quintus Curtius vii. 9, 15, (vii, 37, 16, Zumpt.)

the northern desert, having been thus compelled against their will to share in the consequences of the war. The Agathyrsi peremptorily require the Scythians to abstain from drawing the Persians into *their* territory, on pain of being themselves treated as enemies:[1] the Scythians in consequence respect the boundaries of the Agathyrsi, and direct their retreat in such a manner as to draw the Persians again southward into Scythia. During all this long march backwards and forwards, there are partial skirmishes and combats of horse, but the Scythians steadily refuse any general engagement. And though Darius challenges them formally, by means of a herald, with taunts of cowardice, the Scythian king Idanthyrsus not only refuses battle, but explains and defends his policy, and defies the Persian to come and destroy the tombs of their fathers, — it will then, he adds, be seen whether the Scythians are cowards or not.[2] The difficulties of Darius have by this time become serious, when Idanthyrsus sends to him the menacing presents of a bird, a mouse, a frog, and five arrows: the Persians are obliged to commence a rapid retreat towards the Danube, leaving, in order to check and slacken the Scythian pursuit, the least effective and the sick part of their army encamped, together with the asses which had been brought with them,— animals unknown to the Scythians, and causing great alarm by their braying.[3] However, notwithstanding some delay thus caused, as well as the anxious haste of Darius to reach the Danube, the Scythians, far more rapid in their movements, arrive at the river before him, and open a negotiation with the Ionians left in guard of the bridge, urging them to break it down and leave the Persian king to his fate, — inevitable destruction with his whole army.[4]

---

[1] Herodot. iv, 125. Hekatæus ranks the Melanchlæni as a Scythian ἔθνος (Hekat. Fragment. 154, ed. Klausen): he also mentions several other subdivisions of Scythians, who cannot be farther authenticated (Fragm. 155–160).

[2] Herodot. iv, 126, 127.

[3] Herodot. iv, 128–132. The bird, the mouse, the frog, and the arrows, are explained to mean: Unless you take to the air like a bird, to the earth like a mouse, or to the water like a frog, you will become the victim of the Scythian arrows.

[4] Herodot. iv, 133.

Here we reënter the world of reality, at the north bank of the Danube, the place where we before quitted it. All that is reported to have passed in the interval, if tried by the tests of historical matter of fact, can be received as nothing better than a perplexing dream. It only acquires value when we consider it as an illustrative fiction, including, doubtless, some unknown matter of fact, but framed chiefly to exhibit in action those unattackable Nomads, who formed the northeastern barbarous world of a Greek, and with whose manners Herodotus was profoundly struck. "The Scythians[1] (says he) in regard to one of the greatest of human matters, have struck out a plan cleverer than any that I know. In other respects I do not admire them; but they have contrived this great object, that no invader of their country shall ever escape out of it, or shall ever be able to find out and overtake them, unless they themselves choose. For when men have neither walls nor established cities, but are all house-carriers and horse-bowmen, — living, not from the plough, but from cattle, and having their dwellings on wagons, — how can they be otherwise than unattackable and impracticable to meddle with?" The protracted and unavailing chase ascribed to Darius, — who can neither overtake his game nor use his arms, and who hardly even escapes in safety, — embodies in detail this formidable attribute of the Scythian Nomads. That Darius actually marched into the country, there can be no doubt. Nothing else is certain, except his ignominious retreat out of it to the Danube; for of the many different guesses,[2] by which critics

[1] Herodot. iv, 46. Τῷ δὲ Σκυθικῷ γένεϊ ἐν μὲν τὸ μέγιστον τῶν ἀνθρωπηίων πρηγμάτων σοφώτατα πάντων ἐξεύρηται, τῶν ἡμεῖς ἴδμεν· τὰ μέντοι ἄλλα οὐκ ἀγαμαι. Τὸ δὲ μέγιστον οὕτω σφι ἀνεύρηται, ὥστε ἀποφυγέειν τε μηδένα ἐπελθόντα επὶ σφέας, μὴ βουλομένους τε ἐξευρεθηναι, καταλαβεῖν μὴ οἷόν τε εἶναι. Τοῖσι γὰρ μήτε ἄστεα μήτε τείχεα ἢ ἐκτισμένα, ἀλλὰ φερέοικοι ἐόντες πάντες, ἅωσι ἱπποτόξοται, ζῶντες μὴ ἀπ' ἀρότου, ἀλλ' ἀπὸ κτηνέων, οἰκήματα δέ σφι ἢ ἐπὶ ζευγέων, κῶς οὐκ ἂν εἶησαν οὗτοι ἀμαχοί τε καὶ ἄποροι προσμίσγειν;

Ἐξεύρηται δ' σφ. ταῦτα, τῆς τε γῆς ἐούσης ἐπιτηδέης, καὶ τῶν ποτάμων ἐόντων σφι συμμάχων, etc.

Compare this with the oration of the Scythian envoys to Alexander the Great, as it stands in Quintus Curtius, vii. 8, 22 (vii, 35, 22, Zumpt).

[2] The statement of Strabo (vii, p. 305), which restricts the march of Darius to the country between the Danube and the Tyras (Dniester), is justly

have attempted to cut down the gigantic sketch of Herodotus into a march with definite limits and direction, not one rests upon any positive grounds, or carries the least conviction. We can trace the pervading idea in the mind of the historian, but cannot find out what were his substantive data.

The adventures which took place at the passage of that river, both on the out-march and the home-march, wherein the Ionians are concerned, are far more within the limits of history. Here Herodotus possessed better means of information, and had less of a dominant idea to illustrate. That which passed between Darius and the Ionians on his first crossing is very curious: I have reserved it until the present moment, because it is particularly connected with the incidents which happened on his return.

On reaching the Danube from Thrace, he found the bridge of boats ready, and when the whole army had passed over, he ordered the Ionians to break it down, as well as to follow him in his land-march into Scythia;[1] the ships being left with nothing but the rowers and seamen essential to navigate them homeward.

pronounced by Niebuhr (Kleine Schriften, p. 372) to be a mere supposition suggested by the probabilities of the case, because it could not be understood how his large army should cross even the Dniester: it is not to be treated as an affirmation resting upon any authority. "As Herodotus tells us what is impossible (adds Niebuhr), we know nothing at all historically respecting the expedition."

So again the conjecture of Palmerius (Exercitationes ad Auctores Græcos, p. 21) carries on the march somewhat farther than the Dniester, — to the Hypanis, or *perhaps* to the Borysthenês. Rennell, Klaproth, and Reichard, are not afraid to extend the march on to the Wolga. Dr. Thirlwall stops within the Tanais, admitting, however, that no correct historical account can be given of it. Eichwald supposes a long march up the Dniester into Volhynia and Lithuania.

Compare Ukert, Skythien, p. 26; Dahlmann, Historische Forschungen, ii, pp. 159–164; Schaffarik, Slavische Alterthümer, i, 10, 3, i, 13, 4–5; and Mr. Kenrick, Remarks on the Life and Writings of Herodotus, prefixed to his Notes on the Second Book of Herodotus, p. xxi. The latter is among those who cannot swim the Dniester: he says: "Probably the Dniester (Tyras) was the real limit of the expedition, and Bessarabia, Moldavia, and the Bukovina, the scene of it."

[1] Herodot. iv, 97. Δαρεῖος ἐκέλευσε τοὺς Ἴωνας τὴν σχεδίην λύσαντας πεσθαι κατ' ἠπειρον ἑωϋτῷ, καὶ τὸν ἐκ ῶν νέων στρατόν.

His order was on the point of being executed, when, fortunately for him, the Mitylenæan general Kôês ventured to call in question the prudence of it, having first asked whether it was the pleasure of the Persian king to listen to advice. He urged that the march on which they were proceeding might prove perilous, and retreat possibly unavoidable; because the Scythians, though certain to be defeated if brought to action, might perhaps not suffer themselves to be approached or even discovered. As a precaution against all contingencies, it was prudent to leave the bridge standing and watched by those who had constructed it. Far from being offended at the advice, Darius felt grateful for it, and desired that Kôês would ask him after his return for a suitable reward, — which we shall hereafter find granted. He then altered his resolution, took a cord, and tied sixty knots in it. "Take this cord (said he to the Ionians), untie one of the knots in it each day after my advance from the Danube into Scythia. Remain here and guard the bridge until you shall have untied all the knots; but if by that time I shall not have returned, then depart and sail home."[1] After such orders he began his march into the interior.

This anecdote is interesting, not only as it discloses the simple expedients for numeration and counting of time then practised, but also as it illustrates the geographical ideas prevalent. Darius did not intend to come back over the Danube, but to march round the Mæotis, and to return into Persia on the eastern side of the Euxine. No other explanation can be given of his orders. At first, confident of success, he orders the bridge to be destroyed forthwith: he will beat the Scythians, march through their country, and reenter Media from the eastern side of the Euxine. When he is reminded that possibly he may not be able to find the Scythians, and may be obliged to retreat, he still continues persuaded that this must happen within sixty days, if it happens at all; and that, should he remain absent more than sixty days, such delay will be a convincing proof that he will take the other road of return instead of repassing the Danube. The reader

[1] Herodot. iv, 98. *ἢν δὲ ἐν τούτῳ τῷ χρόνῳ μὴ παρέω, ἀλλὰ διέλθωσι ὑμὶν αἱ ἡμέραι τῶν ἀμμάτων ἐκπλέετε ἐς τὴν ὑμετέρην αὐτέων· μέχρι δὲ τούτου ἐπεί τε οὕτω μετέδοξε, φυλάσσετε τὴν σχεδίην.*

who looks at a map of the Euxine and its surrounding territories may be startled at so extravagant a conception. But he should recollect that there was no map of the same or nearly the same accuracy before Herodotus, much less before the contemporaries of Darius. The idea of entering Media by the north from Scythia and Sarmatia over the Caucasus, is familiar to Herodotus in his sketch of the early marches of the Scythians and Cimmerians: moreover, he tells us that after the expedition of Darius, there came some Scythian envoys to Sparta, proposing an offensive alliance against Persia, and offering on their part to march across the Phasis into Media from the north,[1] while the Spartans were invited to land on the shores of Asia Minor, and advance across the country to meet them from the west. When we recollect that the Macedonians and their leader, Alexander the Great, having arrived at the river Jaxartês, on the north of Sogdiana, and on the east of the sea of Aral, supposed that they had reached the Tanais, and called the river by that name,[2] — we shall not be astonished at the erroneous estimation of distance implied in the plan conceived by Darius.

The Ionians had already remained in guard of the bridge beyond the sixty days commanded, without hearing anything of the Persian army, when they were surprised by the appearance, not of that army, but of a body of Scythians, who acquainted them that Darius was in full retreat and in the greatest distress, and that his safety with the whole army depended upon that bridge. They endeavored to prevail upon the Ionians, since the sixty days included in their order to remain had now elapsed, to break the bridge and retire; assuring them that, if this were done, the destruction of the Persians was inevitable, — of course, the Ionians themselves would then be free. At first, the latter were favorably disposed towards the proposition, which was warmly espoused by the Athenian Miltiadês, despot, or governor, of the Thracian Chersonese.[3] Had he prevailed, the victor of Marathon

[1] Herodot. iv, 84. Compare his account of the marches of the Cimmerians and of the Scythians into Asia Minor and Media respectively (Herodot i, 103, 104, iv, 12).

[2] Arrian, Exp. Al. iii, 6, 15; Plutarch, Alexand. c. 45; Quint. Curt. vii 7, 4, vii, 8, 30 (vii, 29, 5, vii, 36, 7, Zumpt).

[3] Herodot iv 133, 136, 137.

—for such we shall hereafter find him — would have thus inflicted a much more vital blow on Persia than even that celebrated action, and would have brought upon Darius the disastrous fate of his predecessor Cyrus. But the Ionian princes, though leaning at first towards his suggestion, were speedily converted by the representations of Histiæus of Milêtus, who reminded them that the maintenance of his own ascendency over the Milesians, and that of each despot in his respective city, was assured by means of Persian support alone, — the feeling of the population being everywhere against them: consequently, the ruin of Darius would be their ruin also. This argument proved conclusive. It was resolved to stay and maintain the bridge, but to pretend compliance with the Scythians, and prevail upon them to depart, by affecting to destroy it. The northern portion of the bridge was accordingly destroyed, for the length of a bow-shot, and the Scythians departed under the persuasion that they had succeeded in depriving their enemies of the means of crossing the river.[1] It appears that they missed the track of the retreating host, which was thus enabled, after the severest privation and suffering, to reach the Danube in safety. Arriving during the darkness of the night, Darius was at first terrified to find the bridge no longer joining the northern bank: an Egyptian herald, of stentorian powers of voice, was ordered to call as loudly as possible the name of Histiæus the Milesian. Answer being speedily made, the bridge was reëstablished, and the Persian army passed over before the Scythians returned to the spot.[2]

There can be no doubt that the Ionians here lost an opportunity eminently favorable, such as never again returned, for emancipating themselves from the Persian dominion. Their despots, by whom the determination was made, especially the Milesian Histiæus, were not induced to preserve the bridge by any honorable reluctance to betray the trust reposed in them, but simply by selfish regard to the maintenance of their own unpopular dominion. And we may remark that the real character of this impelling motive, as well as the deliberation accompanying it, may be assumed as resting upon very good evidence, since we are now arrived within the personal knowledge of the Milesian historian

[1] Herodot. iv, 137–139. [2] Herodot. iv, 140, 141

Hekatæus, who took an active part in the Ionic revolt a few years afterwards, and who may, perhaps, have been personally engaged in this expedition. He will be found reviewing with prudence and sobriety the chances of that unfortunate revolt, and distrusting its success from the beginning; while Histiæus of Milêtus will appear on the same occasion as the fomenter of it, in order to procure his release from an honorable detention at Susa, near the person of Darius. The selfishness of this despot having deprived his countrymen of that real and favorable chance of emancipation which the destruction of the bridge would have opened to them, threw them into perilous revolt a few years afterwards against the entire and unembarrassed force of the Persian king and empire.

Extricated from the perils of Scythian warfare, Darius marched southward from the Danube through Thrace to the Hellespont, where he crossed from Sestus into Asia. He left, however, a considerable army in Europe, under the command of Megabazus, to accomplish the conquest of Thrace. Perinthus on the Propontis made a brave resistance,[1] but was at length subdued, and it appears that all the Thracian tribes, and all the Grecian colonies between the Hellespont and the Strymon, were forced to submit, giving earth and water, and becoming subject to tribute.[2] Near the lower Strymon, was the Edonian town of Myrkinus, which Darius ordered to be made over to Histiæus of Milêtus; for both this Milesian, and Kôês of Mitylênê, had been desired by the Persian king to name their own reward for their fidelity to him on the passage over the Danube.[3] Kôês requested that he might be constituted despot of Mitylênê, which was accomplished by Persian authority; but Histiæus solicited that the territory near Myrkinus might be given to him for the foundation of a colony. As soon as the Persian conquests extended thus far, the site in question was presented to Histiæus, who entered actively upon his new scheme. We shall find the territory near Myrkinus eminent hereafter as the site of Amphipolis. It offered great temptation to settlers, as fertile, well wooded, convenient for maritime commerce, and near to auriferous and

[1] Herodot. iv, 143, 144, v, 1, 2. [2] Herodot. v, 2.
[3] Herodot. v, 11.

argentiferous mountains.[1] It seems, however, that the Persian dominion in Thrace was disturbed by an invasion of the Scythians, who, in revenge for the aggression of Darius, overran the country as far as the Thracian Chersonese, and are even said to have sent envoys to Sparta proposing a simultaneous invasion of Persia from different sides, by Spartans and Scythians. The Athenian Miltiadês, who was despot, or governor, of the Chersonese, was forced to quit it for some time, and Herodotus ascribes his retirement to the incursion of these Nomads. But we may be permitted to suspect that the historian has misconceived the real cause of such retirement. Miltiadês could not remain in the Chersonese after he had incurred the deadly enmity of Darius by exhorting the Ionians to destroy the bridge over the Danube.[2]

[1] Herodot. v, 23.

[2] Herodot. vi, 40–84. That Miltiadês could have remained in the Chersonese undisturbed, during the interval between the Scythian expedition of Darius and the Ionic revolt, — when the Persians were complete masters of those regions, and when Otanês was punishing other towns in the neighborhood for evasion of service under Darius, after he had declared so pointedly against the Persians on a matter of life and death to the king and army, — appears to me, as it does to Dr. Thirlwall (History of Gr. vol. ii, App. ii, p. 486, ch. xiv, pp. 226–249), eminently improbable. So forcibly does Dr. Thirlwall feel the difficulty, that he suspects the reported conduct and exhortations of Miltiadês at the bridge over the Danube to have been a falsehood, fabricated by Miltiadês himself, twenty years afterwards, for the purpose of acquiring popularity at Athens during the time immediately preceding the battle of Marathon.

I cannot think this hypothesis admissible. It directly contradicts Herodotus on a matter of fact very conspicuous, and upon which good means of information seem to have been within his reach. I have already observed that the historian Hekatæus must have possessed personal knowledge of all the relations between the Ionians and Darius, and that he very probably may have been even present at the bridge: all the information given by Hekatæus upon these points would be open to the inquiries of Herodotus. The unbounded gratitude of Darius towards Histiæus shows that some one or more of the Ionic despots present at the bridge must have powerfully enforced the expediency of breaking it down. That the name of the despot who stood forward as prime mover of this resolution should have been forgotten and not mentioned at the time, is highly improbable; yet such must have been the case if a fabrication by Miltiadês twenty years afterwards could successfully fill up the blank with his own name. The two most prominent matters talked of, after the retreat of Darius, in

Nor did the conquests of Megabazus stop at the western bank of the Strymon. He carried his arms across that river, conquer-

reference to the bridge, would probably be the name of the leader who urged its destruction, and the name of Histiæus, who preserved it. Indeed, the mere fact of the mischievous influence exercised by the latter afterwards would be pretty sure to keep these points of the case in full view.

There are means of escaping from the difficulty of the case, I think, without contradicting Herodotus on any matter of fact important and conspicuous, or indeed on any matter of fact whatever. We see by vi, 40, that Miltiadês *did quit the Chersonese* between the close of the Scythian expedition of Darius and the Ionic revolt; Herodotus, indeed, tells us that he quitted it in consequence of an incursion of the Scythians: but without denying the fact of such an incursion, we may reasonably suppose the historian to have been mistaken in assigning it as the cause of the flight of Miltiadês. The latter was prevented from living in the Chersonese continuously, during the interval between the Persian invasion of Scythia and the Ionic revolt, by fear of Persian enmity. It is not necessary for us to believe that he was never there at all, but his residence there must have been interrupted and insecure. The chronological data in Herodot. vi, 40, are exceedingly obscure and perplexing; but it seems to me that the supposition which I suggest introduces a plausible coherence into the series of historical facts, with the slightest possible contradiction to our capital witness.

The only achievement of Miltiadês, between the affair on the Danube and his return to Athens shortly before the battle of Marathon, is the conquest of Lemnos; and *that* must have taken place evidently while the Persians were occupied by the Ionic revolt, (between 502–494 B.C.) There is nothing in his recorded deeds inconsistent with the belief, therefore, that between 515–502 B.C. he may not have resided in the Chersonese at all, or at least not for very long together: and the statement of Cornelius Nepos, that he quitted it immediately after the return from Scythia, from fear of the Persians, may be substantially true. Dr. Thirlwall observes (p. 487) — "As little would it appear that when the Scythians invaded the Chersonese, Miltiadês was conscious of having endeavored to render them an important service. He flies before them, though he had been so secure while the Persian arms were in his neighborhood." He has here put his finger on what I believe to be the error of Herodotus, — the supposition that Miltiadês fled from the Chersonese to avoid the Scythians, whereas he really left it to avoid the Persians.

The story of Strabo (xiii, p. 591), that Darius caused the Greek cities on the Asiatic side of the Hellespont to be burnt down, in order to hinder them from affording means of transport to the Scythians into Asia, seems to me highly improbable. These towns appear in their ordinary condition, Abydus among them, at the time of the Ionic revolt a few years afterwards. Herodot. v, 117.

ing the Pæonians, and reducing the Macedonians under Amyntas to tribute. A considerable number of the Pæonians were transported across into Asia, by express order of Darius; whose fancy had been struck by seeing at Sardis a beautiful Pæonian woman carrying a vessel on her head, leading a horse to water, and spinning flax, all at the same time. This woman had been brought over, we are told, by her two brothers, Pigrês und Mantyês, for the express purpose of arresting the attention of the Great King. They hoped by this means to be constituted despots of their countrymen, and we may presume that their scheme succeeded, for such part of the Pæonians as Megabazus could subdue were conveyed across to Asia and planted in some villages in Phrygia. Such violent transportations of inhabitants were in the genius of the Persian government.[1]

From the Pæonian lake Prasias, seven eminent Persians were sent as envoys into Macedonia, to whom Amyntas readily gave the required token of submission, inviting them to a splendid banquet. When exhilarated with wine, they demanded to see the women of the regal family, who, being accordingly introduced, were rudely dealt with by the strangers. At length, the son of Amyntas, Alexander, resented the insult, and exacted for it a signal vengeance. Dismissing the women, under pretence that they should return after a bath, he brought back in their place youths in female attire, armed with daggers: the Persians, proceeding to repeat their caresses, were all put to death. Their retinue and splendid carriages and equipment which they had brought with them disappeared at the same time, without any tidings reaching the Persian army. And when Bubarês, another eminent Persian, was sent into Macedonia to institute researches, Alexander contrived to hush up the proceeding by large bribes, and by giving him his sister Gygæa in marriage.[2]

Meanwhile Megabazus crossed over into Asia, carrying with him the Pæonians from the river Strymon. Having been in

[1] Herodot. v, 13–16. Nikolaus Damaskênus (Fragm. p. 36, ed. Orell.) tells a similar story about the means by which a Mysian woman attracted the notice of the Lydian king Alyattês. Such repetition of a striking story, in reference to different people and times, has many parallels in ancient history.

[2] Herodot. v, 20. 21

those regions, he had become alarmed at the progress of Histiæus with his new city of Myrkinus, and communicated his apprehensions to Darius; who was prevailed upon to send for Histiæus, retaining him about his person, and carrying him to Susa as counsellor and friend, with every mark of honor, but with the secret intention of never letting him revisit Asia Minor. The fears of the Persian general were probably not unreasonable but this detention of Histiæus at Susa, became in the sequel an important event.[1]

On departing for his capital, Darius nominated his brother Artaphernês satrap of Sardis, and Otanês, general of the forces on the coast, in place of Megabazus. The new general dealt very severely with various towns near the Propontis, on the ground that they had evaded their duty in the late Scythian expedition, and had even harassed the army of Darius in its retreat. He took Byzantium and Chalkêdon, as well as Antandrus in the Troad, and Lampônium; and with the aid of a fleet from Lesbos, he achieved a new conquest, — the islands of Lemnos and Imbros, at that time occupied by a Pelasgic population, seemingly without any Greek inhabitants at all.

These Pelasgi were of cruel and piratical character, if we may judge by the tenor of the legends respecting them; Lemnian misdeeds being cited as a proverbial expression for atrocities.[2] They were distinguished also for ancient worship of Hêphæstus, together with mystic rites in honor of the Kabeiri, and even human sacrifices to their Great Goddess. In their two cities, — Hephæstias on the east of the island, and Myrina on the west, — they held out bravely against Otanês, nor did they

[1] Herodot. v, 23. 24.

[2] Herodot. vi, 138. Æschyl. Choêphor. 632; Stephan. Byz. v, Λῆμνος. The mystic rites in honor of the Kabeiri at Lemnos and Imbros are particularly noticed by Pherekydês (ap. Strabo, x, p. 472): compare Photius, v, Κάβειροι, and the remarkable description of the periodical Lemnian solemnity in Philostratus (Heroi. p. 740).

The volcanic mountain Mosychlus, in the northeastern portion of the island, was still burning in the fourth century B.C. (Antimach. Fragment. xviii, p. 103, Düntzer Epicc. Græc. Fragm.)

Welcker's Dissertation (Die Æschylische Trilogie, p. 248, *seqq.*) enlarges much upon the Lemnian and Samothracian worship.

submit until they had undergone long and severe hardship. Lykarêtus, brother of that Mæandrius whom we have already noticed as despot of Samos, was named governor of Lemnos; but he soon after died.[1] It is probable that the Pelasgic population of the islands was greatly enfeebled during this struggle, and we even hear that their king Hermon voluntarily emigrated, from fear of Darius.[2]

Lemnos and Imbros thus became Persian possessions, held by a subordinate prince as tributary. A few years afterwards their lot was again changed, — they passed into the hands of Athens, the Pelasgic inhabitants were expelled, and fresh Athenian settlers introduced. They were conquered by Miltiadês from the Thracian Chersonese; from Elæus at the south of that peninsula to Lemnos being within less than one day's sail with a north wind. The Hephæstieans abandoned their city and evacuated the island with little resistance; but the inhabitants of Myrina stood a siege,[3] and were not expelled without difficulty: both of them found abodes in Thrace, on and near the peninsula of Mount Athos. Both these islands, together with that of Skyros (which was not taken until after the invasion of Xerxês), remained connected with Athens in a manner peculiarly intimate At the peace of Antalkidas (387 B.C.), — which guaranteed universal autonomy to every Grecian city, great and small, — they were specially reserved, and considered as united with Athens.[4] The property in their soil was held by men who, without losing their Athenian citizenship, became Lemnian kleruchs, and as such were classified apart among the military force of the state; while absence in Lemnos or Imbros seems to have been

[1] Herodot. v, 26, 27. The twenty-seventh chapter is extremely perplexing. As the text reads at present, we ought to make Lykarêtus the subject of certain predications which yet seem properly referable to Otanês. We must consider the words from *Οἱ μὲν δὴ Λήμνιοι* — down to *τελευτᾷ* — as parenthetical, which is awkward; but it seems the least difficulty in the case, and the commentators are driven to adopt it.

[2] Zenob. Proverb. iii, 85.

[3] Herodot. vi, 140. Charax ap. Stephan. Byz. v. *Ἡφαιστία*.

[4] Xenophon, Hellen. v, 1, 31. Compare Plato, Menexenus, c. 17, p. 245, where the words *ἡμέτεραι ἀποίκιαι* doubtless mean Lemnos, Imbros, and Skyros.

accepted as an excuse for delay before the courts of justice, so as to escape the penalties of contumacy, or departure from the country.[1] It is probable that a considerable number of poor Athenian citizens were provided with lots of land in these islands, though we have no direct information of the fact, and are even obliged to guess the precise time at which Miltiadês made the conquest. Herodotus, according to his usual manner, connects the conquest with an ancient oracle, and represents it as the retribution for ancient legendary crime committed by certain Pelasgi, who, many centuries before, had been expelled by the Athenians from Attica, and had retired to Lemnos. Full of this legend, he tells us nothing about the proximate causes or circumstances of the conquest, which must probably have been accomplished by the efforts of Athens, jointly with Miltiadês from the Chersonese, during the period that the Persians were occupied in quelling the Ionic revolt, between 502–494 B.C., — since it is hardly to be supposed that Miltiadês would have ventured thus to attack a Persian possession during the time that the satraps had their hands free. The acquisition was probably facilitated by the fact, that the Pelasgic population of the islands had been weakened, as well by their former resistance to the Persian Otanês, as by some years passed under the deputy of a Persian satrap.

In mentioning the conquest of Lemnos by the Athenians and

[1] Thucyd. iv, 28, v, 8, vii, 57; Phylarchus ap. Athenæum, vi, p. 255; Dêmosthen. Philippic. 1, c. 12, p. 17, R.: compare the Inscription, No. 1686, in the collection of Boeckh, with his remarks, p. 297.

About the stratagems resorted to before the Athenian dikastery, to procure delay by pretended absence in Lemnos or Skyros, see Isæus, Or. vi, p. 58 (p. 80, Bek.); Pollux, viii, 7, 81; Hesych. v, *Ἴμβριος*; Suidas, v, *Λημνία δίκη*: compare also Carl Rhode, Res Lemnicæ, p. 50 (Wratislaw 1829).

It seems as if *εἰς Λῆμνον πλεῖν* had come to be a proverbial expression at Athens for getting out of the way, — evading the performance of duty: this seems to be the sense of Dêmosthenês, Philipp. i, c. 9, p. 14. *ἀλλ' εἰς μὲν Λῆμνον τὸν παρ' ὑμῶν ἵππαρχον δεῖ πλεῖν, τῶν δ' ὑπὲρ τῶν τῆς πόλεως κτημάτων ἀγωνιζομένων Μενέλαον ἱππαρχεῖν.*

From the passage of Isæus above alluded to, which Rhode seems to me to construe incorrectly, it appears that there was a legal *connubium* between Athenian citizens and Lemnian women.

Miltiadês, I have anticipated a little on the course of events, because that conquest, — though coinciding in point of time with the Ionic revolt (which will be recounted in the following chapter), and indirectly caused by it, in so far as it occupied the attention of the Persians, — lies entirely apart from the operations of the revolted Ionians. When Miltiadês was driven out of the Chersonese by the Persians, on the suppression of the Ionic revolt, his fame, derived from having subdued Lemnos,[1] contributed both to neutralize the enmity which he had incurred as governor of the Chersonese, and to procure his election as one of the ten generals for the year of the Marathonian combat.

CHAPTER XXXV.

IONIC REVOLT.

HITHERTO, the history of the Asiatic Greeks has flowed in a stream distinct from that of the European Greeks. The present chapter will mark the period of confluence between the two.

At the time when Darius quitted Sardis on his return to Susa, carrying with him the Milesian Histiæus, he left Artaphernês, his brother, as satrap of Sardis, invested with the supreme command of Western Asia Minor. The Grecian cities on the coast, comprehended under his satrapy, appear to have been chiefly governed by native despots in each; and Milêtus especially, in the absence of Histiæus, was ruled by his son-in-law Aristagoras. That city was now in the height of power and prosperity, — in every respect the leading city of Ionia. The return of Darius to Susa may be placed seemingly about 512 B.C., from which time forward the state of things above described continued, without disturbance, for eight or ten years, — "a respite from suffering," to use the significant phrase of the historian.[2]

[1] Herodot. vi, 136.

[2] Herodot. v, 27. Μετὰ δὲ οὐ πολλὸν χρόνον, ἀπ' ὧν κακῶν ἦν — or ἀνεσι-

It was about the year 506 B.C., that the exiled Athenian despot Hippias, after having been repelled from Sparta by the unanimous refusal of the Lacedæmonian allies to take part in his cause, presented himself from Sigeium as a petitioner to Artaphernês at Sardis. He now, doubtless, found the benefit of the alliance which he had formed for his daughter with the despot Æantidês of Lampsakus, whose favour with Darius would stand him in good stead. He made pressing representations to the satrap, with a view of procuring restoration to Athens, on condition of holding it under Persian dominion; and Artaphernês was prepared, if an opportunity offered, to aid him in his design. So thoroughly had he resolved on espousing actively the cause of Hippias, that when the Athenians despatched envoys to Sardis, to set forth the case of the city against its exiled pretender, he returned to them an answer not merely of denial, but of menace, — bidding them receive Hippias back again, if they looked for safety.[1] Such a reply was equivalent to a declaration of war,

κακῶν — if the conjecture of some critics be adopted. Mr. Clinton, with Larcher and others (see Fasti Hellen. App. 18, p. 314), construe this passage as if the comma were to be placed after *μετὰ δὲ*, so that the historian would be made to affirm that the period of repose lasted only a short time. It appears to me that the comma ought rather to be placed after *χρόνον*, and that the "short time" refers to those evils which the historian had been describing before. There must have been an interval of eight years at least, if not of ten years, between the events which the historian had been describing — the evils inflicted by the attacks of Otanês — and the breaking out of the Ionic revolt; which latter event no one places earlier than 504 B.C., though some prefer 502 B.C., others even 500 B.C.

If, indeed, we admitted with Wesseling (ad Herodot. vi, 40; and Mr. Clinton seems inclined towards the same opinion, see p. 314, *ut sup.*) that the Scythian expedition is to be placed in 508–507 B.C., then indeed the interval between the campaign of Otanês and the Ionic revolt would be contracted into one or two years. But I have already observed that I cannot think 508 B.C. a correct date for the Scythian expedition: it seems to me to belong to about 515 B.C. Nor do I know what reason there is for determining the date as Wesseling does, except this very phrase *οὐ πολλὸν χρόνον*, which is on every supposition exceedingly vague, and which he appears to me not to have construed in the best way.

[1] Herodot. v, 96. Ὁ δὲ Ἀρταφέρνης ἐκέλευέ σφεας εἰ βουλοίατο σόοι εἶναι, καταδέκεσθαι ὀπίσω τὸν Ἱππίην.

and as it was construed at Athens. It leads us to infer that he was even then revolving in his mind an expedition against Attica, in conjunction with Hippias; but, fortunately for the Athenians, other projects and necessities intervened to postpone for several years the execution of the scheme.

Of these new projects, the first was that of conquering the island of Naxos. Here, too, as in the case of Hippias, the instigation arose from Naxian exiles, — a rich oligarchy which had been expelled by a rising of the people. This island, like all the rest of the Cyclades, was as yet independent of the Persians.[1] It was wealthy, prosperous, possessing a large population both of freemen and slaves, and defended as well by armed ships as by a force of eight thousand heavy-armed infantry. The exiles applied for aid to Aristagoras, who saw that he could turn them into instruments of dominion for himself in the island, provided he could induce Artaphernês to embark in the project along with him, — his own force not being adequate by itself. Accordingly, he went to Sardis, and laid his project before the satrap, intimating that as soon as the exiles should land with a powerful support, Naxos would be reduced with little trouble: that the neighboring islands of Paros, Andros, Tênos, and the other Cyclades, could not long hold out after the conquest of Naxos, nor even the large and valuable island of Eubœa. He himself engaged, if a fleet of one hundred ships were granted to him, to accomplish all these conquests for the Great King, and to bear the expenses of the armament besides. Artaphernês warmly entered into the scheme, loaded him with praise, and promised him in the ensuing spring two hundred ships instead of one hundred. A messenger despatched to Susa, having brought back the ready consent of Darius, a large armament was forthwith equipped, under the command of the Persian Megabatês, to be placed at

[1] Herodot. v, 31. Plutarch says that Lygdamis, established as despot at Naxos by Peisistratus (Herodot. i, 64), was expelled from this post by the Lacedæmonians (De Herodot. Malignitat. c. 21, p. 859). I confess that I do not place much confidence in the statements of that treatise, as to the many despots expelled by Sparta: we neither know the source from whence Plutarch borrowed them, nor any of the circumstances connected with them.

the disposal of Aristagoras, — composed both of Persians and of all the tributaries near the coast.[1]

With this force Aristagoras and the Naxian exiles set sail from Milêtus, giving out that they were going to the Hellespont. On reaching Chios, they waited in its western harbor of Kaukasa for a fair wind to carry them straight across to Naxos. No suspicion was entertained in that island of its real purpose, nor was any preparation made for resistance, and the success of Aristagoras would have been complete, had it not been defeated by an untoward incident ending in dispute. Megabatês, with a solicitude which we are surprised to discern in a Persian general, personally made the tour of his fleet, to see that every ship was under proper watch, and discovered a ship from Myndus (an Asiatic Dorian city near Halikarnassus), left without a single man on board. Incensed at this neglect, he called before him Skylax, the commander of the ship, and ordered him to be put in chains, with his head projecting outwards through one of the apertures for oars in the ship's side. Skylax was a guest and friend of Aristagoras, who, on hearing of this punishment, interceded with Megabatês for his release; but finding the request refused, took upon him to release the prisoner himself. He even went so far as to treat the remonstrance of Megabatês with disdain, reminding him that, according to the instructions of Artaphernês, he was only second and himself (Aristagoras) first. The pride of Megabatês could not endure such treatment: as soon as night arrived, he sent a private intimation to Naxos of the coming of the fleet, warning the islanders to be on their guard. The warning thus fortunately received was turned by the Naxians to the best account. They carried in their property, laid up stores, and made every preparation for a siege, so that when the fleet, probably delayed by the dispute between its leaders, at length arrived, it was met by a stout resistance, remained on the shore of the island for four months in prosecution of an unavailing siege, and was obliged to retire without accomplishing anything beyond the erection of a fort, as lodgment for the Naxian exiles. After a large cost incurred, not only by the Persians, but also by

[1] Herodot. v, 30, 31.

Aristagoras himself, the unsuccessful armament was brought back to the coast of Ionia.[1]

The failure of this expedition threatened Aristagoras with entire ruin. He had incensed Megabatês, deceived Artaphernês, and incurred an obligation, which he knew not how to discharge, of indemnifying the latter for the costs of the fleet. He began to revolve in his mind the scheme of revolting from Persia, when it so happened that there arrived nearly at the same moment a messenger from his father-in-law, Histiæus, who was detained at the court of Susa, secretly instigating him to this very resolution. Not knowing whom to trust with this dangerous message, Histiæus had caused the head of a faithful slave to be shaved, — branded upon it the words necessary, — and then despatched him, so soon as his hair had grown, to Milêtus, with a verbal intimation to Aristagoras that his head was to be again shaved and examined.[2] Histiæus sought to provoke this perilous rising, simply as a means of procuring his own release from Susa, and in the calculation that Darius would send him down to the coast to reëstablish order. His message, arriving at so critical a moment, determined the faltering resolution of Aristagoras, who convened his principal partisans at Milêtus, and laid before them the formidable project of revolt. All of them approved it, with one remarkable exception, — the historian Hekatæus of Milêtus; who opposed it as altogether ruinous, and contended that the power of Darius was too vast to leave them any prospect of success. When he found direct opposition fruitless, he next insisted upon the necessity of at once seizing the large treasures in the neighboring temple of Apollo, at Branchidæ, for the purpose of carrying on the revolt. By this means alone, he said, could the Milesians, too feeble to carry on the contest with their own force alone, hope to become masters at sea, — while, if *they* did not take these treasures, the victorious enemy surely would. Neither of these recommendations, both of them indicating sagacity and foresight in the proposer, were listened to. Probably the seizure of the treasures, — though highly useful for the impending struggle, and though

[1] Herodot. v, 34, 35.

[2] Herodot. v, 35: compare Polyæn. i, 24, and Aulus Gellius, N. A. xvii. 9.

in the end they fell into the hands of the enemy, as Hekatæus anticipated, — would have been insupportable to the pious feelings of the people, and would thus have proved more injurious than beneficial:[1] perhaps, indeed, Hekatæus himself may have urged it with the indirect view of stifling the whole project. We may remark that he seems to have urged the question as if Milêtus were to stand alone in the revolt; not anticipating, as indeed no prudent man could then anticipate, that the Ionic cities generally would follow the example.

Aristagoras and his friends resolved forthwith to revolt, and their first step was to conciliate popular favor throughout Asiatic Greece by putting down the despots in all the various cities, — the instruments not less than the supports of Persian ascendency, as Histiæus had well urged at the bridge of the Danube. The opportunity was favorable for striking this blow at once on a considerable scale. The fleet, recently employed at Naxos, had not yet dispersed, but was still assembled at Myus, with many of the despots present at the head of their ships. Iatragoras was despatched from Milêtus, at once to seize as many of them as he could, and to stir up the soldiers to revolt. This decisive proceeding was the first manifesto against Darius. Iatragoras was successful: the fleet went along with him, and many of the despots fell into his hands, — among them Histiæus (a second person so named) of Termera, Oliatus of Mylasa (both Karians),[2] Kôês of Mitylênê, and Aristagoras (also a second person so named) of Kymê. At the same time the Milesian Aristagoras himself, while he formally proclaimed revolt against Darius, and invited the Milesians to follow him, laid down his own authority, and affected to place the government in the hands of the people. Throughout most of the towns of Asiatic Greece, insular and continental, a similar revolution was brought about; the despots were expelled, and the feelings of the citizens were thus warmly interested in the revolt. Such of these despots as fell into the hands of Aristagoras were surrendered into the hands of their former subjects, by whom they were for the most part quietly dismissed, and we shall find them hereafter active auxil-

[1] Herodot. v, 36.

[2] Compare Herodotus, v, 121, and vii, 98. Oliatus was son of Ibanôlis as was also the Mylasian Herakleidês mentioned in v, 121.

iaries to the Persians. To this treatment the only exception mentioned is Kôês, who was stoned to death by the Mitylenæans.[1]

By these first successful steps the Ionic revolt was made to assume an extensive and formidable character; much more so, probably, than the prudent Hekatæus had anticipated as practicable. The naval force of the Persians in the Ægean was at once taken away from them, and passed to their opponents, who were thus completely masters of the sea; and would in fact have remained so, if a second naval force had not been brought up against them from Phenicia, — a proceeding never before resorted to, and perhaps at that time not looked for.

Having exhorted all the revolted towns to name their generals, and to put themselves in a state of defence, Aristagoras crossed the Ægean to obtain assistance from Sparta, then under the government of king Kleomenês; to whom he addressed himself, "holding in his hand a brazen tablet, wherein was engraved the circuit of the entire earth, with the whole sea and all the rivers." Probably this was the first map or plan which had ever been seen at Sparta, and so profound was the impression which it made, that it was remembered there even in the time of Herodotus.[3] Having emphatically entreated the Spartans to step forth in aid of their Ionic brethren, now engaged in a desperate struggle for freedom, — he proceeded to describe the wealth and

[1] Herodot. v, 36, 37; vi, 9.

[2] Herodot. v, 49. Τῷ δὴ (Κλεομένεϊ) ἐς λόγους ἦιε, ὡς Λακεδαιμόνιοι λέγουσι, ἔχων χάλκεον πίνακα, ἐν τῷ γῆς ἁπάσης περίοδος ἐνετέτμητο, καὶ θάλασσά τε πᾶσα καὶ ποταμοὶ πάντες.

The earliest map of which mention is made was prepared by Anaximander in Ionia, apparently not long before this period: see Strabo, i, p. 7; Agathemerus, 1, c. 1; Diogen. Laërt. ii, 1.

Grosskurd, in his note on the above passage of Strabo, as well as Larcher and other critics, appear to think, that though this tablet or chart of Anaximander was the earliest which embraced the whole known earth, there were among the Greeks others still earlier, which described particular countries. There is no proof of this, nor can I think it probable: the passage of Apollonius Rhodius (iv, 279) with the Scholia to it, which is cited as evidence, appears to me unworthy of attention.

Among the Roman Agrimensores, it was the ancient practice to engrave their plans, of land surveyed, upon tablets of brass, which were deposited in the public archives, and of which copies were made for private use, though the original was referred to in case of legal dispute (Siculus Flaccus ap. Rei Agrariæ Scriptores, p. 16, ed. Goes: compare Giraud, Recherches sur le Droit de Propriété, p. 116, Aix, 1838).

abundance (gold, silver, brass, vestments, cattle, and slaves), together with the ineffective weapons and warfare of the Asiatics. The latter, he said, could be at once put down, and the former appropriated, by military training such as that of the Spartans, — whose long spear, brazen helmet and breastplate, and ample shield, enabled them to despise the bow, the short javelin, the light wicker target, the turban and trowsers, of a Persian.[1] He then traced out on his brazen plan the road from Ephesus to Susa, indicating the intervening nations, all of them affording a booty more or less rich; but he magnified especially the vast treasures at Susa: "Instead of fighting your neighbors, he concluded, Argeians, Arcadians, and Messenians, from whom you get hard blows and small reward, why do you not make yourself ruler of all Asia,[2] a prize not less easy than lucrative?" Kleomenês replied to these seductive instigations by desiring him to come for an answer on the third day. When that day arrived, he put to him the simple question, how far it was from Susa to the sea? To which Aristagoras answered, with more frankness than dexterity, that it was a three months' journey; and he was proceeding to enlarge upon the facilities of the road when Kleomenês interrupted him: "Quit Sparta before sunset, Milesian stranger; you are no friend to the Lacedæmonians, if you want to carry them a three months' journey from the sea." In spite of this peremptory mandate, Aristagoras tried a last resource. he took in his hand the bough of supplication, and again went to the house of Kleomenês, who was sitting with his daughter Gorgô, a girl of eight years old. He requested Kleomenês to send away the child, but this was refused, and he was desired to proceed; upon which he began to offer to the Spartan king a bribe for compliance, bidding continually higher and higher from ten talents up to fifty. At length, the little girl suddenly ex-

[1] Herodot. v, 49. δεικνὺς δὲ ταῦτα ἔλεγε ἐς τὴν τῆς γῆς περίοδον, τὴν ἐφέρετο ἐν τῷ πίνακι ἐντετμημένην.

[2] Herodot. v. 49. πάρεχον δὲ τῆς Ἀσίης πάσης ἄρχειν εὐπετέως, ἄλλο τι εἰρήσεσθε;

claimed, "Father, the stranger will corrupt you, if you do not at once go away." The exclamation so struck Kleomenès, that he broke up the interview, and Aristagoras forthwith quitted Sparta.[1]

Doubtless Herodotus heard the account of this interview from Lacedæmonian informants. But we may be permitted to doubt, whether any such suggestions were really made, or any such hopes held out, as those which he places in the mouth of Aristagoras, — suggestions and hopes which might well be conceived in 450–440 B.C., after a generation of victories over the Persians, but which have no pertinence in the year 502 B.C. Down even to the battle of Marathon, the name of the Medes was a terror to the Greeks, and the Athenians are highly and justly extolled as the first who dared to look them in the face.[2] To talk about an easy march up to the treasures of Susa and the empire of all Asia, at the time of the Ionic revolt, would have been considered as a proof of insanity. Aristagoras may very probably have represented, that the Spartans were more than a match for Persians in the field; but even thus much would have been considered, in 502 B.C., rather as the sanguine hope of a petitioner than as the estimate of a sober looker-on.

The Milesian chief had made application to Sparta, as the presiding power of Hellas, — a character which we thus find more and more recognized and passing into the habitual feeling of the Greeks. Fifty years previously to this, the Spartans had been flattered by the circumstance, that Crœsus singled them out from all other Greeks to invite as allies: now they accepted such priority as a matter of course.[2]

---

[1] Herodot. v, 49, 50, 51. Compare Plutarch, Apophthegm. Laconic. p. 240.

We may remark, both in this instance and throughout all the life and time of Kleomenês, that the Spartan king has the active management and direction of foreign affairs, — subject, however, to trial and punishment by the ephors in case of misbehavior (Herodot. vi, 82). We shall hereafter find the ephors gradually taking into their own hands, more and more, the actual management.

[2] Herodot. vi, 112. *πρῶτοί τε ἀνέσχοντο ἐσθῆτί τε Μηδικὴν ὁρέοντες, καὶ ἄνδρας ταύτην ἐσθημένους· τέως δὲ ἦν τοῖσι Ἕλλησι καὶ τὸ οὔνομα τὸ Μήδων φόβος ἀκοῦσαι.*

[3] Aristagoras says to the Spartans (v, 49) — *τὰ κατήκοντα γάρ ἐστι ταῦτα· Ἰώνων παῖδας δούλους εἶναι ἀντ' ἐλευθέρων, ὀνειδος καὶ ἄλγος μέγιστον μὲν*

Rejected at Sparta, Aristagoras proceeded to Athens, now decidedly the second power in Greece. And here he found an easier task, not only as it was the metropolis, or mother-city, of Asiatic Ionia, but also as it had already incurred the pronounced hostility of the Persian satrap, and might look to be attacked as soon as the project came to suit his convenience, under the instigation of Hippias: whereas the Spartans had not only no kindred with Ionia, beyond that of common Hellenism, but were in no hostile relations with Persia, and would have been provoking a new enemy by meddling in the Asiatic war. The promises and representations of Aristagoras were accordingly received with great favor by the Athenians: who, over and above the claims of sympathy, had a powerful interest in sustaining the Ionic revolt as an indirect protection to themselves, — and to whom the abstraction of the Ionic fleet from the Persians afforded a conspicuous and important relief. The Athenians at once resolved to send a fleet of twenty ships, under Melanthius, as an aid to the revolted Ionians, — ships which are styled by Herodotus, "the beginning of the mischiefs between Greeks and barbarians," — as the ships in which Paris crossed the Ægean had before been called in the Iliad of Homer. Herodotus farther remarks that it seems easier to deceive many men together than one, — since Aristagoras, after having failed with Kleomenês, thus imposed upon the thirty thousand citizens of Athens.[1] But on this remark two comments suggest themselves. First, the circumstances of Athens and Sparta were not the same in regard to the Ionic quarrel, — an observation which Herodotus himself had made a little while before: the Athenians had a material interest in the quarrel, political as well as

---

αὐτοῖσι ἡμῖν, ἔτι δὲ τῶν λοιπῶν ὑμῖν, ὅσῳ προεστέατε τῆς Ἑλλάδος (Herodotus, v, 49). In reference to the earlier incident (Herodot. i, 70) — *Τουτέων τε ὧν εἵνεκεν οἱ Λακεδαιμόνιοι τὴν συμμαχίην ἐδέξαντο, καὶ ὅτι ἐκ πάντων σφέας προκρίνας Ἑλλήνων, αἱρέετο φίλους* (Crœsus).

An interval of rather more than forty years separates the two events, during which both the feelings of the Spartans, and the feelings of others towards them, had undergone a material change.

[1] Herodot. v, 99. *πολλοὺς γὰρ οἷκε εἶναι εὐπετέστερον διαβάλλειν ἢ ἕνα. εἰ Κλεομένεα μὲν τὸν Λακεδαιμόνιον μοῦνον οὐκ οἷός τε ἐγένετο διαβαλέειν τρηΐς δὲ μυριάσας Ἀθηναίων ἐποίησε τοῦτο.*

sympathetic, while the Spartans had none. Secondly, the ultimate result of their interference, as it stood in the time of Herodotus, though purchased by severe intermediate hardship, was one eminently gainful and glorifying, not less to Athens than to Greece.[1]

When Aristagoras returned, he seems to have found the Persians engaged in the siege of Milêtus. The twenty Athenian ships soon crossed the Ægean, and found there five Eretrian ships which had also come to the succor of the Ionians; the Eretrians generously taking this opportunity to repay assistance formerly rendered to them by the Milesians in their ancient war with Chalkis. On the arrival of these allies, Aristagoras organized an expedition from Ephesus up to Sardis, under the command of his brother Charopinus, with others. The ships were left at Korêssus,[2] a mountain and seaport five miles from Ephesus, while the troops marched up under Ephesian guides, first, along the river Kayster, next, across the mountain range of Tmôlus to Sardis. Artaphernês had not troops enough to do more than hold the strong citadel, so that the assailants possessed themselves of the town without opposition. But he immediately recalled his force near Milêtus,[3] and summoned Persians and Lydians from all the neighboring districts, thus becoming more than a match for Charopinus; who found himself, moreover, obliged to evacuate Sardis, owing to an accidental conflagration. Most of the houses in that city were built in great part with reeds or straw, and all of them had thatched roofs; hence it happened that a spark touching one of them set the whole city in flame. Obliged to abandon their dwellings by this accident, the population of the town congregated in the market-place, — and as reinforcements were hourly crowding in, the position of the Ionians and Athe-

Herodot. v, 98; Homer, Iliad, v, 62. The criticism of Plutarch (De Malignitat. Herodot. p. 861) on this passage, is rather more pertinent than the criticisms in that ill-tempered composition generally are.

[2] About Korêssus, see Diodor. xiv, 99, and Xenophon, Hellen. i, 2, 7.

[3] Charôn of Lampsakus, and Lysanias in his history of Eretria, seem to have mentioned this first siege of Milêtus, and the fact of its being raised in consequence of the expedition to Sardis; see Plutarch, de Herodot. Malignit. p. 861, — though the citation is given there confusedly, so that we cannot make much out of it.

nians became precarious: they evacuated the town, took up a position on Mount Tmôlus, and, when night came, made the best of their way to the sea-coast. The troops of Artaphernês pursued, overtook them near Ephesus, and defeated them completely. Eualkidês, the Eretrian general, a man of eminence and a celebrated victor at the solemn games, perished in the action, together with a considerable number of troops. After this unsuccessful commencement, the Athenians betook themselves to their vessels and sailed home, in spite of pressing instances on the part of Aristagoras to induce them to stay. They took no farther part in the struggle;[1] a retirement at once so sudden and so complete, that they must probably have experienced some glaring desertion on the part of their Asiatic allies, similiar to that which brought so much danger upon the Spartan general Derkyllidas, in 396 B.C. Unless such was the case, they seem open to censure rather for having too soon withdrawn their aid, than for having originally lent it.[2]

The burning of a place so important as Sardis, however, including the temples of the local goddess Kybêbê, which perished with the remaining buildings, produced a powerful effect on both sides, — encouraging the revolters, as well as incensing the Persians. Aristagoras despatched ships along the coast, northward as far as Byzantium, and southward as far as Cyprus. The Greek cities near the Hellespont and the Propontis were induced, either by force or by inclination, to take part with him: the Karians embraced his cause warmly; even the Kaunians, who had not declared themselves before, joined him as soon as they heard of the capture of Sardis; while the Greeks in Cyprus, with the single exception of the town of Amathûs, at once renounced the authority of Darius, and prepared for a strenuous contest. Onesilus of Salamis, the most considerable city in the island, — finding the population willing, but his brother, the despot Gorgus, reluctant, — shut the latter out of the gates, took the command of the united forces of Salamis and other revolting cities, and

[1] Herodot. v, 102, 103. It is a curious fact that Charôn of Lampsakus made no mention of this defeat of the united Athenian and Ionian force see Plutarch. de Herodot. Malign. *ut sup.*

[2] About Derkyllidas, see Xenophon, Hellen. iii, 2, 17–19.

laid siege to Amathûs. These towns of Cyprus were then, and seem always afterwards to have continued, under the government of despots; who, however, unlike the despots in Ionia generally, took part along with their subjects in the revolt against Persia.[1]

The rebellion had now assumed a character more serious than ever, and the Persians were compelled to put forth their strongest efforts to subdue it. From the number of different nations comprised in their empire, they were enabled to make use of the antipathies of one against the other; and the old adverse feeling of Phenicians against Greeks was now found extremely serviceable. After a year spent in getting together forces,[2] the Phenician fleet was employed to transport into Cyprus the Persian general Artybius with a Kilikian and Egyptian army,[3] — while the force under Artaphernês at Sardis was so strengthened as to enable him to act at once against all the coast of Asia Minor, from the Propontis to the Triopian promontory. On the other side, the common danger had for the moment brought the Ionians into a state of union foreign to their usual habit, and we hear now, for the first and the last time, of a tolerably efficient Pan-Ionic authority.[4]

Apprized of the coming of Artybius with the Phenician fleet, Onesilus and his Cyprian supporters solicited the aid of the Ionic fleet, which arrived shortly after the disembarkation of the Persian force in the island. Onesilus offered to the Ionians their choice, whether they would fight the Phenicians at sea or the Persians on land. Their natural determination was in favor of the sea-fight, and they engaged with a degree of courage and unanimity

[1] Herodot. v, 103, 104, 108. Compare the proceedings in Cyprus against Artaxerxês Mnêmon, under the energetic Evagoras of Salamis (Diodor. xiv, 98, xv, 2), about 386 B.C.: most of the petty princes of the island became for the time his subjects, but in 351 B.C. there were nine of them independent (Diodor. xvi, 42), and seemingly quite as many at the time when Alexander besieged Tyre (Arrian, ii, 20, 8).

[2] Herodot. v, 116. Κύπριοι μὲν δὴ, ἐνιαυτὸν ἐλεύθεροι γενόμενοι, αὖτις ἐς νέης κατεδεδούλωντο.

[3] Herodot. vi, 6. Κίλικες καὶ Αἰγύπτιοι.

[4] Herodot. v, 109. Ἡμέας ἀπέπεμψε τὸ κοινὸν τῶν Ἰώνων φυλάξοντας τὴν θάλασσαν, etc.: compare vi, 7.

which procured for them a brilliant victory; the Samians being especially distinguished.[1] But the combat on land, carried on at the same time, took a different turn. Onesilus and the Salaminians brought into the field, after the fashion of Orientals rather than of Greeks, a number of scythed chariots, destined to break the enemy's ranks; while on the other hand the Persian general Artybius was mounted on a horse, trained to rise on his hind legs and strike out with his fore legs against an opponent on foot. In the thick of the fight, Onesilus and his Karian shield-bearer came into personal conflict with this general and his horse; and by previous concert, when the horse so reared as to get his fore legs over the shield of Onesilus, the Karian with a scythe severed the legs from his body, while Onesilus with his own hand slew Artybius. But the personal bravery of the Cypriots was rendered useless by treachery in their own ranks. Stêsênor, despot of Kurium, deserted in the midst of the battle, and even the scythed chariots of Salamis followed his example. The brave Onesilus, thus weakened, perished in the total rout of his army, along with Aristokyprus despot of Soli, on the north coast of the island: this latter being son of that Philokyprus who had been immortalized more than sixty years before, in the poems of Solon. No farther hopes now remained for the revolters, and the victorious Ionian fleet returned home. Salamis relapsed under the sway of its former despot Gorgus, while the remaining cities in Cyprus were successively besieged and taken: not without a resolute defence, however, since Soli alone held out five months.[2]

[1] Herodot. v, 112.

[2] Herodot. v, 112–115. It is not uninteresting to compare, with this reconquest of Cyprus by the Persians, the conquest of the same island by the Turks in 1570, when they expelled from it the Venetians. See the narrative of that conquest (effected in the reign of Selim the Second by the Seraskier Mustapha-Pasha), in Von Hammer, Geschichte des Osmannischen Reichs, book xxxvi, vol. iii, pp. 578–589. Of the two principal towns, Nikosia in the centre of the island, and Famagusta on the northeastern coast, the first, after a long siege, was taken by storm, and the inhabitants of every sex and age either put to death or carried into slavery; while the second, after a most gallant defence, was allowed to capitulate. But the terms of the capitulation were violated in the most flagitious manner by the Seraskier, who treated the brave Venetian governor, Bragadino, with frightful cruelty

Meanwhile the principal force of Darius having been assembled at Sardis, — Daurisês, Hymeas, and other generals who had married daughters of the Great King, distributed their efforts against different parts of the western coast. Daurisês attacked the towns near the Hellespont,[1] — Abydus, Perkôtê, Lampsakus, and Pæsus, — which made little resistance. He was then ordered southward into Karia, while Hymeas, who, with another division, had taken Kios on the Propontis, marched down to the Hellespont and completed the conquest of the Troad as well as of the Æolic Greeks in the region of Ida. Artaphernês and Otanês attacked the Ionic and Æolic towns on the coast, — the former taking Klazomenæ,[2] the latter Kymê. There remained Karia, which, with Milêtus in its neighborhood, offered a determined resistance to Daurisês. Forewarned of his approach, the Karians assembled at a spot called the White Pillars, near the confluence of the rivers Mæander and Marsyas. Pixodarus, one of their chiefs, recommended the desperate expedient of fighting with the river at their back, so that all chance of flight might be cut off;

---

cutting off his nose and ears, exposing him to all sorts of insults, and ultimately causing him to be flayed alive. The skin of this unfortunate general was conveyed to Constantinople as a trophy, but in after-times found its way to Venice.

We read of nothing like this treatment of Bragadino in the Persian reconquest of Cyprus, though it was a subjugation after revolt; indeed, nothing like it in all Persian warfare.

Von Hammer gives a short sketch (not always very accurate as to ancient times) of the condition of Cyprus under its successive masters, — Persians, Græco-Egyptians, Romans, Arabians, the dynasty of Lusignan, Venetians, and Turks, — the last seems decidedly the worst of all.

In reference to the above-mentioned piece of cruelty, I may mention that the Persian king Kambysês caused one of the royal judges (according to Herodotus v, 25), who had taken a bribe to render an iniquitous judgment, to be flayed alive, and his skin to be stretched upon the seat on which his son was placed to succeed him; as a lesson of justice to the latter. A similar story is told respecting the Persian king Artaxerxês Mnêmon; and what is still more remarkable, the same story is also recounted in the Turkish history, as an act of Mohammed the Second (Von Hammer, Geschichte des Osmannisch. Reichs, book xvii, vol. ii, p. 209; Diodorus, xv, 10). Ammianus Marcellinus (xxiii, 6) had good reason to treat the reality of the fact as problematical.

[1] Herodot. v, 117.

[2] Herodot. v, 122–124.

but most of the chiefs decided in favor of a contrary policy,[1] — to let the Persians pass the river, in hopes of driving them back into it and thus rendering their defeat total. Victory, however, after a sharp contest, declared in favor of Daurisês, chiefly in consequence of his superior numbers: two thousand Persians, and not less than ten thousand Karians, are said to have perished in the battle. The Karian fugitives, reunited after the flight, in the grove of noble plane-trees consecrated to Zeus Stratius, near Labranda,[2] were deliberating whether they should now submit to the Persians or emigrate forever, when the appearance of a Milesian reinforcement restored their courage. A second battle was fought, and a second time they were defeated, the loss on this occasion falling chiefly on the Milesians.[3] The victorious Persians now proceeded to assault Karian cities, but Herakleidês of Mylasa laid an ambuscade for them with so much skill and good fortune, that their army was nearly destroyed, and Daurisês with other Persian generals perished. This successful effort, following upon two severe defeats, does honor to the constancy of the Karians, upon whom Greek proverbs generally fasten a mean reputation. It saved for the time the Karian towns, which the Persians did not succeed in reducing until after the capture of Milêtus.[4]

On land, the revolters were thus everywhere worsted, though

---

[1] Herodot. v, 118. On the topography of this spot, as described in Herodotus, see a good note in Weissenborn, Beyträge zur genaueren Erforschung der alt. Griechischen Geschichte, p. 116, Jena, 1844.

He thinks, with much reason, that the river Marsyas here mentioned cannot be that which flows through Kelænæ, but another of the same name which flows into the Mæander from the southwest.

[2] About the village of Labranda and the temple of Zeus Stratius, see Strabo, xiv, p. 659. Labranda was a village in the territory of, and seven miles distant from, the inland town of Mylasa; it was Karian at the time of the Ionic revolt, but partially Hellenized before the year 350 B.C. About this latter epoch, three rural tribes of Mylasa —constituting along with the citizens of the town, the Mylasene community — were, Ταρκόνδαρα, Ὀρώσονδα, Λάβρανδα, — see the Inscription in Boeckh's Collection, No. 2693, and in Franz, Epigraphicê Græca, No. 73, p. 191. In the Lydian language λάβρυς is said to have signified a hatchet (Plutarch, Quæst. Gr. c. 45 p. 314).

[3] Herodot. v, 118, 119.

[4] Herodot. v, 120, 121; vi, 25.

at sea the Ionians still remained masters. But the unwarlike Aristagoras began to despair of success, and to meditate a mean desertion of the companions and countrymen whom he had himself betrayed into danger. Assembling his chief advisers, he represented to them the unpromising state of affairs, and the necessity of securing some place of refuge, in case they were expelled from Milêtus. He then put the question to them, whether the island of Sardinia, or Myrkinus in Thrace, near the Strymon (which Histiæus had begun some time before to fortify, as I have mentioned in the preceding chapter), appeared to them best adapted to the purpose. Among the persons consulted was Hekatæus the historian, who approved neither the one nor the other scheme, but suggested the erection of a fortified post in the neighboring island of Leros; a Milesian colony, wherein a temporary retirement might be sought, should it prove impossible to hold Milêtus, but which permitted an easy return to that city, so soon as opportunity offered.[1] Such an opinion must doubtless have been founded on the assumption, that they would be able to maintain superiority at sea. And it is important to note such confident reliance upon this superiority in the mind of a sagacious man, not given to sanguine hopes, like Hekatæus, — even under circumstances very unprosperous on land. Emigration to Myrkinus, as proposed by Aristagoras, presented no hope of refuge at all; since the Persians, if they regained their authority in Asia Minor, would not fail again to extend it to the Strymon. Nevertheless, the consultation ended by adopting this scheme, since, probably, no Ionians could endure the immeasurable distance of Sardinia as a new home. Aristagoras set sail for Myrkinus, taking with him all who chose to bear him company; but he perished not long after landing, together with nearly all his company, in the siege of a neighboring Thracian town.[2] Though making profession to lay down his supreme authority at the commencement of the revolt, he had still contrived to retain it in great measure; and on departing for Myrkinus, he devolved it on Pythagoras, a citizen in high esteem. It appears however that the Milesians, glad to get rid of a leader who had brought them

[1] Herodot. v, 125; Strabo, xiv, p. 635.

[2] Herodot. v, 126.

nothing but mischief,[1] paid little obedience to his successor, and made their government from this period popular in reality as well as in profession. The desertion of Aristagoras, with the citizens whom he carried away, must have seriously damped the spirits of those who remained: nevertheless, it seems that the cause of the Ionic revolters was quite as well conducted without him.

Not long after his departure, another despot — Histiæus of Milêtus, his father-in-law, and jointly with him the fomenter of the revolt — presented himself at the gates of Milêtus for admission. The outbreak of the revolt had enabled him, as he had calculated, to procure leave of departure from Darius. That prince had been thrown into violent indignation by the attack and burning of Sardis, and by the general revolt of Ionia, headed (so the news reached him) by the Milesian Aristagoras, but carried into effect by the active coöperation of the Athenians. "The Athenians (exclaimed Darius), who are *they?*" On receiving the answer, he asked for his bow, placed an arrow on the string, and shot as high as he could towards the heavens, saying: "Grant me, Zeus, to revenge myself on the Athenians." He at the same time desired an attendant to remind him thrice every day at dinner: "Master, remember the Athenians;" for as to the Ionians, he felt assured that their hour of retribution would come speedily and easily enough.[2]

This Homeric incident deserves notice as illustrating the epical handling of Herodotus. His theme is, the invasions of Greece by Persia: he has now arrived at the first eruption, in the bosom of Darius, of that passion which impelled the Persian forces towards Marathon and Salamis, — and he marks the beginning of the new phase by act and word both alike significant. It may be compared to the libation and prayer addressed by Achilles in the Iliad to Zeus, at the moment when he is sending forth Patroklus and the Myrmidons to the rescue of the despairing Greeks.

Herodot. vi, 5. Οἱ δὲ Μιλήσιοι, ἅσμενοι ἀπαλλαχθέντες καὶ Ἀρισταγόρεω, οὐδαμῶς ἕτοιμοι ἔσαν ἄλλον τύραννον δέκεσθαι ἐς τὴν χώρην, οἷά τε ἐλευθερίης γευσάμενοι.

[2] Herodot. v, 105. Ὦ Ζεῦ, ἐκγενέσθαί μοι Ἀθηναίους τίσασθαι. Compare the Thracian practice of communicating with the gods by shooting arrows high up into the air (Herodot. iv, 94).

At first, Darius had been inclined to ascribe the movement in Ionia to the secret instigation of Histiæus, whom he called into his presence and questioned. But the latter found means to satisfy him, and even to make out that no such mischief would have occurred, if he, Histiæus, had been at Milêtus instead of being detained at Susa. "Send me down to the spot, he asseverated, and I engage not merely to quell the revolt, and put into your hands the traitor who heads it, but also, not to take off this tunic from my body, before I shall have added to your empire the great island of Sardinia." An expedition to Sardinia, though never realized, appears to have been among the favorite fancies of the Ionic Greeks of that day.[1] By such boasts and assurances he obtained his liberty, and went down to Sardis, promising to return as soon as he should have accomplished them.[2]

But on reaching Sardis he found the satrap Artaphernês better informed than the Great King at Susa. Though Histiæus, when questioned as to the causes which had brought on the outbreak, affected nothing but ignorance and astonishment, Artaphernês detected his evasions, and said: "I will tell you how the facts stand, Histiæus: it is you that have stitched this shoe, and Aristagoras has put it on."[3] Such a declaration promised little security to the suspected Milesian who heard it; and accordingly, as soon as night arrived, he took to flight, went down to the coast, and from thence passed over to Chios. Here he found himself seized on the opposite count, as the confidant of Darius and the enemy of Ionia: he was released, however, on proclaiming himself not merely a fugitive escaping from Persian custody, but also as the prime author of the Ionic revolt. And

[1] Herodot. v, 107, vi, 2. Compare the advice of Bias of Priênê to the Ionians, when the Persian conqueror Cyrus was approaching, to found a Pan-Ionic colony in Sardinia (Herodot. i, 170): the idea started by Aristagoras has been alluded to just above (Herodot. v, 124).

Pausanias (iv, 23, 2) puts into the mouth of Mantiklus, son of Aristomenês, a recommendation to the Messenians, when conquered a second time by the Spartans, to migrate to Sardinia.

[2] Herodot. v, 106, 107.

[3] Herodot. vi, 1. Οὕτω τοι, Ἰστίαιε, ἔχει κατὰ ταῦτα τὰ πρήγματα τοῦ ἐ τὸ ἐπίδημα ἔρραψας μὲν σὺ, ὑπεδήσατο δὲ Ἀρισταγόρης.

he farther added, in order to increase his popularity, that Darius had contemplated the translation of the Ionian population to Phenicia, as well as that of the Phenician population to Ionia,—to prevent which translation he, Histiæus, had instigated the revolt. This allegation, though nothing better than a pure fabrication, obtained for him the good-will of the Chians, who carried him back to Milêtus. But before he departed, he avenged himself on Artaphernês by despatching to Sardis some false letters, implicating many distinguished Persians in a conspiracy jointly with himself: these letters were so managed as to fall into the hands of the satrap himself, who became full of suspicion, and put to death several of the parties, to the great uneasiness of all around him.[1]

On arriving at Milêtus, Histiæus found Aristagoras no longer present, and the citizens altogether adverse to the return of their old despot. Nevertheless, he tried to force his way by night into the town, but was repulsed and even wounded in the thigh. He returned to Chios, but the Chians refused him the aid of any of their ships: he next passed to Lesbos, from the inhabitants of which island he obtained eight triremes, and employed them to occupy Byzantium, pillaging and detaining the Ionian merchantships as they passed into or out of the Euxine.[2] The few remaining piracies of this worthless traitor, mischievous to his countrymen down to the day of his death, hardly deserve our notice, amidst the last struggles and sufferings of the subjugated Ionians, to which we are now hastening.

A vast Persian force, both military and naval, was gradually concentrating itself near Milêtus, against which city Artaphernês had determined to direct his principal efforts. Not only the whole army of Asia Minor, but also the Kilikian and Egyptian troops fresh from the conquest of Cyprus, and even the conquered Cypriots themselves, were brought up as reinforcements; while the entire Phenician fleet, no less than six hundred ships strong, coöperated on the coast.[3] To meet such a land-force in the field, being far beyond the strength of the Ionians, the joint Pan-Ionic council resolved that the Milesians should be left to

[1] Herodot. vi, 2–5.

[2] Herodot. vi, 5-26

[3] Herodot. vi, 6–9

defend their own fortifications, while the entire force of the confederate cities should be mustered on board the ships. At sea they had as yet no reason to despair, having been victorious over the Phenicians near Cyprus, and having sustained no defeat. The combined Ionic fleet, including the Æolic Lesbians, amounting in all to the number of three hundred and fifty-three ships, was accordingly mustered at Ladê, — then a little island near Milêtus, but now joined on to the coast, by the gradual accumulation of land in the bay at the mouth of the Mæander. Eighty Milesian ships formed the right wing, one hundred Chian ships the centre, and sixty Samian ships the left wing; while the space between the Milesians and the Chians was occupied by twelve ships from Priênê, three from Myus, and seventeen from Teôs, — the space between the Chians and Samians was filled by eight ships from Erythræ, three from Phôkæa, and seventy from Lesbos.[1]

The total armament thus made up was hardly inferior in number to that which, fifteen years afterwards, gained the battle of Salamis against a far larger Persian fleet than the present. Moreover, the courage of the Ionians, on ship-board, was equal to that of their contemporaries on the other side of the Ægean; while in respect of disagreement among the allies, we shall hereafter find the circumstances preceding the battle of Salamis still more menacing than those before the coming battle of Ladê. The chances of success, therefore, were at least equal between the two; and indeed the anticipations of the Persians and Phenicians on the present occasion were full of doubt, so that they thought it necessary to set on foot express means for disuniting the Ionians, — it was fortunate for the Greeks that Xerxês at Salamis could not be made to conceive the prudence of aiming at the same object. There were now in the Persian camp all those various despots whom Aristagoras, at the beginning of the revolt, had driven out of their respective cities. At the instigation of Artaphernês, each of these men despatched secret communications to their citizens in the allied fleet, endeavoring to detach them severally from the general body, by promises of gentle treatment in the event of compliance, and by threats of

[1] Herodot. vi. 8.

extreme infliction from the Persians if they persisted in armed efforts. Though these communications were sent to each without the knowledge of the rest, yet the answer from all was one unanimous negative.[1] And the confederates at Ladê seemed more one, in heart and spirit, than the Athenians, Spartans, and Corinthians will hereafter prove to be at Salamis.

But there was one grand difference which turned the scale, — the superior energy and ability of the Athenian leaders at Salamis, coupled with the fact that they *were* Athenians, — that is, in command of the largest and most important contingent throughout the fleet.

At Ladê, unfortunately, this was quite otherwise: each separate contingent had its own commander, but we hear of no joint commander at all. Nor were the chiefs who came from the larger cities — Milesian, Chian, Samian, or Lesbian — men like Themistoklês, competent and willing to stand forward as self-created leaders, and to usurp for the moment, with the general consent and for the general benefit, a privilege not intended for them. The only man of sufficient energy and forwardness to do this, was the Phôkæan Dionysius, — unfortunately, the captain of the smallest contingent of the fleet, and therefore enjoying the least respect. For Phôkæa, once the daring explorer of the western waters, had so dwindled down since the Persian conquest of Ionia, that she could now furnish no more than three ships; and her ancient maritime spirit survived only in the bosom of her captain. When Dionysius saw the Ionians assembled at Lade, willing, eager, full of talk and mutual encouragement, but untrained and taking no thought of discipline, or nautical practice, or coöperation in the hour of battle, — he saw the risk which they ran for want of these precautions, and strenuously remonstrated with them: "Our fate hangs on the razor's edge, men of Ionia: either to be freemen or slaves, — and slaves too, caught after running away. Set yourself at once to work and duty, — you will then have trouble indeed at first, with certain victory and freedom afterwards. But if you persist in this carelessness and disorder, there is no hope for you to escape the king's revenge for your revolt. Be persuaded and commit yourself to

[1] Herodot. vi, 9, 10

me; and I pledge myself, if the gods only hold an equal balance, that your enemies either will not fight, or will be severely beaten."[1]

The wisdom of this advice was so apparent, that the Ionians, quitting their comfortable tents on the shore of Ladê and going on board their ships, submitted themselves to the continuous nautical labors and manœuvres imposed upon them by Dionysius. The rowers, and the hoplites on the deck, were exercised in their separate functions, and even when they were not so employed, the ships were kept at anchor, and the crews on board, instead of on shore; so that the work lasted all day long, under a hot summer's sun. Such labor, new to the Ionian crews, was endured for seven successive days, after which they broke out with one accord into resolute mutiny and refusal: "Which of the gods have we offended, to bring upon ourselves such a retribution as this? madmen as we are, to put ourselves into the hands of this Phôkæan braggart, who has furnished only three ships![2] He has now got us, and is ruining us without remedy: many of us are already sick, many others are sickening; we had better make up our minds to Persian slavery, or any other mischiefs, rather than go on with these present sufferings. Come, we will not obey this man any longer." And they forthwith refused to execute his orders, resuming their tents on shore, with the enjoyments of shade, rest, and inactive talk, as before.

I have not chosen to divest this instructive scene of the dramatic liveliness with which it is given in Herodotus, — the more so as it has all the air of reality, and as Hekatæus, the historian, was probably present in the island of Ladê, and may have described what he actually saw and heard. When we see the in-

[1] Herodot. vi, 11. Ἐπὶ ξυροῦ γὰρ ἀκμῆς ἔχεται ἡμῖν τὰ πρήγματα, ἄνδρες Ἴωνες, ἢ εἶναι ἐλευθέροισι ἢ δούλοισι, καὶ τούτοισι ὡς δρηπέτῃσι· νῦν ὦν ὑμέες, ἢν μὲν βούλησθε ταλαιπωρίας ἐνδέκεσθαι, τὸ παραχρῆμα μὲν πόνος ὑμῖν ἔσται, οἷοί τε δὲ ἐσεσθε, ὑπερβαλλόμενοι τοὺς ἐναντίους, εἶναι ἐλεύθεροι, etc.

[2] Herodot. vi, 2. Οἱ Ἴωνες, οἷα ἀπαθέες ἐόντες πόνων τοιούτων τετριμένοι τε ταλαιπωρίῃσί τε καὶ ἠελίῳ, ἔλεξαν πρὸς ἑωϋτοὺς τάδε — Τίνα δαιμόνων παραβάντες, τάδε ἀναπίμπλαμεν, οἵτινες παραφρονήσαντες, καὶ ἐκπλώσαντες ἐκ τοῦ νόου, ἀνδρὶ Φωκαέι ἀλαζόνι, παρεχομένῳ νέας τρεῖ·, ἐπιτρέψαντες ἡμέας αὐτοὺς ἔχομεν, etc.

tolerable hardship which these nautical manœuvres and labors imposed upon the Ionians, though men not unaccustomed to ordinary ship-work, — and when we witness their perfect incapacity to submit themselves to such a discipline, even with extreme danger staring them in the face, — we shall be able to appreciate the severe and unremitting toil whereby the Athenian seaman afterwards purchased that perfection of nautical discipline which characterized him at the beginning of the Peloponnesian war. It will appear, as we proceed with this history, that the full development of the Athenian democracy worked a revolution in Grecian military marine, chiefly by enforcing upon the citizen seaman a strict continuous training, such as was only surpassed by the Lacedæmonian drill on land, — and by thus rendering practicable a species of nautical manœuvring which was unknown even at the time of the battle of Salamis. I shall show this more fully hereafter: at present, I contrast it briefly with the incapacity of the Ionians at Ladê, in order that it may be understood how painful such training really was. The reader of Grecian history is usually taught to associate only ideas of turbulence and anarchy with the Athenian democracy; but the Athenian navy, the child and champion of that democracy, will be found to display an indefatigable labor and obedience nowhere else witnessed in Greece, and of which even the first lessons, as in the case now before us, prove to others so irksome as to outweigh the prospect of extreme and imminent peril. The same impatience of steady toil and discipline, which the Ionians displayed to their own ruin before the battle of Ladê, will be found to characterize them fifty years afterwards as allies of Athens, as I shall have occasion to show when I come to describe the Athenian empire.

Ending in this abrupt and mutinous manner, the judicious suggestions of the Phôkæan leader did more harm than good. Perhaps his manner of dealing may have been unadvisedly rude, but we are surprised to see that no one among the leaders of the larger contingents had the good sense to avail himself of the first readiness of the Ionians, and to employ his superior influence in securing the continuance of a good practice once begun. Not one such superior man did this Ionic revolt throw up. From the day on which the Ionians discarded Dionysius, their camp be-

came a scene of disunion and mistrust. Some of them grew so reckless and unmanageable, that the better portion despaired of maintaining any orderly battle and the Samians in particular now repented that they had declined the secret offers made to them by their expelled despot,[1] — Æakês, son of Sylosôn. They sent privately to renew the negotiation, received a fresh promise of the same indulgence, and agreed to desert when the occasion arrived. On the day of battle, when the two fleets were on the point of coming to action, the sixty Samian ships all sailed off, except eleven, whose captains disdained such treachery. Other Ionians followed their example; yet amidst the reciprocal crimination which Herodotus had heard, he finds it difficult to determine who was most to blame, though he names the Lesbians as among the earliest deserters.[2] The hundred ships from Chios, constituting the centre of the fleet — each ship carrying forty chosen soldiers fully armed — formed a brilliant exception to the rest; they fought with the greatest fidelity and resolution, inflicting upon the enemy, and themselves sustaining, heavy loss. Dionysius, the Phôkæan, also behaved in a manner worthy of his previous language, — capturing with his three ships the like number of Phenicians. But these examples of bravery did not compensate the treachery or cowardice of the rest, and the defeat of the Ionians at Ladê was complete as well as irrecoverable. To the faithful Chians, the loss was terrible, both in the battle and after it. For though some of their vessels escaped from the defeat safely to Chios, others were so damaged as to be obliged to run ashore close at hand on the promontory of Mykalê, where the crews quitted them, with the intention of marching northward, through the Ephesian territory, to the continent opposite their own island. We hear with astonishment that, at that critical moment, the Ephesian women were engaged in solemnizing the Thesmophoria, — a festival celebrated at night, in the open air, in some uninhabited portion of the territory, and without the presence of any male person. As the Chian fugitives entered the Ephesian territory by night, their coming being neither known nor anticipated, — it was believed that they were thieves or pirates coming to seize the women, and under this

[1] Herodot. vi, 13.

[2] Herodot. vi, 14, 15.

error they were attacked by the Ephesians and slain.[1] It would seem from this incident that the Ephesians had taken no part in the Ionic revolt, nor are they mentioned amidst the various contingents. Nor is anything said either of Kolophon, or Lebedus, or Eræ.[2]

The Phôkæan Dionysius, perceiving that the defeat of Ladê was the ruin of the Ionic cause, and that his native city was again doomed to Persian subjection, did not think it prudent even to return home. Immediately after the battle he set sail, not for Phôkæa, but for the Phenician coast, at this moment stripped of its protecting cruisers. He seized several Phenician merchantmen, out of which considerable profit was obtained: then setting sail for Sicily, he undertook the occupation of a privateer against the Carthaginians and Tyrrhenians, abstaining from injury towards Greeks.[3] Such an employment seems then to have been perfectly admissible. A considerable body of Samians also migrated to Sicily, indignant at the treachery of their admirals in the battle, and yet more indignant at the approaching restoration of their despot Æakês. How these Samian emigrants became established in the Sicilian town of Zanklê,[4] I shall mention as a part of the course of Sicilian events, which will come hereafter.

The victory of Ladê enabled the Persians to attack Milêtus by sea as well as by land; they prosecuted the siege with the utmost vigor, by undermining the walls, and by various engines of attack: in which department their resources seem to have been enlarged since the days of Harpagus. In no long time the city was taken by storm, and miserable was the fate reserved to it. The adult male population was chiefly slain; while such of them as were preserved, together with the women and children, were sent in a body to Susa, to await the orders of Darius, — who assigned to them a residence at Ampê, not far from the mouth of the Tigris. The temple at Branchidæ was burned and pillaged, as Hekatæus had predicted at the beginning of the revolt: the

[1] Herodot. vi, 16.

[4] Herodot. vi, 22–25.

large treasures therein contained must have gone far to defray the costs of the Persian army. The Milesian territory is said to have been altogether denuded of its former inhabitants, — the Persians retaining for themselves the city with the plain adjoining to it, and making over the mountainous portions to the Karians of Pedasa. Some few of the Milesians found a place among the Samian emigrants to Sicily.[1] It is certain, however, that new Grecian inhabitants must have been subsequently admitted into Milêtus; for it appears ever afterwards as a Grecian town, though with diminished power and importance.

The capture of Milêtus, in the sixth year from the commencement of the revolt,[2] carried with it the rapid submission of

[1] Herodot. vi, 18, 19, 20, 22.

Μίλητος μέν νυν Μιλησίων ἠρήμωτο.

[2] Herodot. vi, 18, *αἱρέουσι κατ' ἄκρης, ἐν τῷ ἄκτῳ ἔτεϊ ἀπὸ τῆς ἀποστάσιος τῆς Ἀρισταγόρεω.* This is almost the only distinct chronological statement which we find in Herodotus respecting the Ionic revolt. The other evidences of time in his chapters are more or less equivocal: nor is there sufficient testimony before us to enable us to arrange the events, between the commencement of the Ionic revolt, and the battle of Marathon, into the precise years to which they belong. The battle of Marathon stands fixed for August or September, 490 B.C.: the siege of Milêtus may probably have been finished in 496–495 B.C., and the Ionic revolt may have begun in 502–501 B.C. Such are the dates which, on the whole, appear to me most probable, though I am far from considering them as certain.

Chronological critics differ considerably in their arrangement of the events here alluded to among particular years. See Appendix, No. 5, p. 244, in Mr. Clinton's Fasti Hellenici; Professor Schultz, Beyträge zu genaueren Zeitbestimmungen von der 63n zur 72n Olympiade, pp. 177–183, in the Kieler Philologische Studien; and Weissenborn, Beyträge zur genaueren Erforschung der alten Griechischen Geschichte, Jena, 1844, p. 87, *seqq.*: not to mention Reiz and Larcher. Mr. Clinton reckons only ten years from the beginning of the Ionic revolt to the battle of Marathon; which appears to me too short; though, on the other hand, the fourteen years reckoned by Larcher — much more the sixteen years reckoned by Reiz — are too long. Mr. Clinton compresses inconveniently the latter portion of the interval, — that portion which elapsed between the siege of Milêtus and the battle of Marathon. And the very improbable supposition to which he is obliged to resort, — of a confusion in the language of Herodotus between Attic and Olympic years, — indicates that he is pressing the text of the historian too closely, when he states, "that Herodotus specifies a term of three years between the capture of Milêtus, and the expedition of Datis:" see F. H. ad ann. 499. He places the capture of Milêtus in 494

the neighboring towns in Karia.[1] During the next summer, — the Phenician fleet having wintered at Milêtus, — the Persian forces by sea and land reconquered all the Asiatic Greeks, insular as well as continental. Chios, Lesbos, and Tenedos, — the towns in the Chersonese, — Selymbria and Perinthus in Thrace, — Prokonnêsus and Artakê in the Propontis, — all these towns were taken or sacked by the Persian and Phenician fleet.[2] The inhabitants of Byzantium and Chalkêdôn fled for the most part, without even awaiting its arrival, to Mesembria, and the Athenian Miltiadês only escaped Persian captivity by a rapid flight from his abode in the Chersonese to Athens. His pursuers were

B.C.; which I am inclined to believe a year later — if not two years later — than the reality. Indeed, as Mr. Clinton places the expedition of Aristagoras against Naxos (which was *immediately before* the breaking out of the revolt, since Aristagoras seized the Ionic despots while that fleet yet remained congregated immediately at the close of the expedition) in 501 B.C., and as Herodotus expressly says that Milêtus was taken in the sixth year after the revolt, it would follow that this capture ought to belong to 495, and not to 494 B.C. I incline to place it either in 496, or in 495; and the Naxian expedition in 502 or 501, leaning towards the earlier of the two dates: Schultz agrees with Larcher in placing the Naxian expedition in 504 B.C., yet he assigns the capture of Milêtus to 496 B.C., — whereas, Herodotus states that the last of these two events was in the sixth year after the revolt, which revolt immediately succeeded on the first of the two, within the same summer. Weissenborn places the capture of Milêtus in 496 B.C., and the expedition to Naxos in 499, — suspecting that the text in Herodotus — *ἐκτῷ ἔτεϊ* — is incorrect, and that it ought to be *τετάρτῳ ἔτεϊ*, the fourth year (p. 125: compare the chronological table in his work, p. 222). He attempts to show that the particular incidents composing the Ionic revolt, as Herodotus recounts it, cannot be made to occupy more than four years; but his reasoning is, in my judgment, unsatisfactory, and the conjecture inadmissible. The distinct affirmation of the historian, as to the entire interval between the two events, is of much more evidentiary value than our conjectural summing up of the details.

It is vain, I think, to try to arrange these details according to precise years: this can only be done very loosely.

[1] Herodot. vi, 25.

[2] Herodot. vi, 31–33. It may perhaps be to this burning and sacking of the cities in the Propontis, and on the Asiatic side of the Hellespont, that Strabo (xiii, p. 591) makes allusion; though he ascribes the proceeding to a different cause, — to the fear of Darius that the Scythians would cross into Asia to avenge themselves upon him for attacking them, and that the towns on the coast would furnish them with vessels for the passage

indeed so close upon him, that one of his ships, with his son Metiochus on board, fell into their hands. As Miltiadês had been strenuous in urging the destruction of the bridge over the Danube, on the occasion of the Scythian expedition, the Phenicians were particularly anxious to get possession of his person, as the most acceptable of all Greek prisoners to the Persian king; who, however, when Metiochus the son of Miltiadês was brought to Susa, not only did him no harm, but treated him with great kindness, and gave him a Persian wife with a comfortable maintenance.[1]

Far otherwise did the Persian generals deal with the reconquered cities on and near the coast. The threats which had been held out before the battle of Ladê were realized to the full. The most beautiful Greek youths and virgins were picked out, to be distributed among the Persian grandees as eunuchs, or inmates of the harems; the cities with their edifices, sacred as well as profane, were made a prey to the flames; and in the case of the islands, Herodotus even tells us, that a line of Persians was formed from shore to shore, which swept each territory from north to south, and drove the inhabitants out of it.[2] That much of this hard treatment is well founded, there can be no doubt. But it must be exaggerated as to extent of depopulation and destruction, for these islands and cities appear ever afterwards as occupied by a Grecian population, and even as in a tolerable, though reduced, condition. Samos was made an exception to the rest, and completely spared by the Persians, as a reward to its captains for setting the example of desertion at the battle of Ladê; at the same time, Æakês the despot of that island was reinstated in his government.[3] It appears that several other despots were also replaced in their respective cities, though we are not told which.

Amidst the sufferings endured by so many innocent persons, of every age and of both sexes, the fate of Histiæus excites but little sympathy. Having learned, while carrying on his piracies at Byzantium, the surrender of Milêtus, he thought it expedient to sail with his Lesbian vessels to Chios, where admittance was

[1] Herodot. vi, 41.
[2] Herodot. vi, 31, 32, 33
[3] Herodot. vi, 25

refused to him. But the Chians, weakened as they had been by the late battle, were in little condition to resist, so that he defeated their troops and despoiled the island. During the present break-up of the Asiatic Greeks, there were doubtless many who, like the Phôkæan Dionysius, did not choose to return home to an enslaved city, yet had no fixed plan for a new abode: of these exiles, a considerable number put themselves under the temporary command of Histiæus, and accompanied him to the plunder of Thasos.[1] While besieging that town, he learned the news that the Phenician fleet had quitted Milêtus to attack the remaining Ionic towns; and he left his designs on Thasos unfinished, in order to go and defend Lesbos. But in this latter island the dearth of provisions was such, that he was forced to cross over to the continent to reap the standing corn around Atarneus and in the fertile plain of Mysia near the river Kaïkus. Here he fell in with a considerable Persian force under Harpagus, — was beaten, compelled to flee, and taken prisoner. On his being carried to Sardis, Artaphernês the satrap caused him to be at once crucified: partly, no doubt, from genuine hatred, but partly also under the persuasion that, if he were sent up as a prisoner to Susa, he might again become dangerous,— since Darius would even now spare his life, under an indelible sentiment of gratitude for the maintenance of the bridge over the Danube. The head of Histiæus was embalmed and sent up to Susa, where Darius caused it to be honorably buried, condemning this precipitate execution of a man who had once been his preserver.[2]

We need not wonder that the capture of Milêtus excited the strongest feeling, of mixed sympathy and consternation, among the Athenians. In the succeeding year (so at least we are led to think, though the date cannot be positively determined) it was selected as the subject of a tragedy, — The Capture of Milêtus, — by the dramatic poet Phrynichus; which, when performed, so painfully wrung the feelings of the Athenian audience, that they burst into tears in the theatre, and the poet was condemned to pay a fine of one thousand drachmæ, as "having

[1] Herodot. vi, 26–28. ἄγων Ἰώνων καὶ Αἰολέων συχνούς
[2] Herodot. vi, 28, 29, 30.

recalled to them their own misfortunes."[1] The piece was forbidden to be afterwards acted, and has not come down to us. Some critics have supposed that Herodotus has not correctly assigned the real motive which determined the Athenians to impose this fine.[2] For it is certain that the subjects usually selected for tragedy were portions of heroic legend, and not matters of recent history; so that the Athenians might complain of Phrynichus on the double ground, — for having violated an established canon of propriety, as well as for touching their sensibilities too deeply. Still, I see no reason for doubting that the cause assigned by Herodotus is substantially the true one; but it is very possible that Phrynichus, at an age when tragic poetry had not yet reached its full development, might touch this very tender subject with a rough and offensive hand, before a people who had fair reason to dread the like cruel fate for themselves. Æschylus, in his Persæ, would naturally carry with him the full tide of Athenian sympathy, while dwelling on the victories of Salamis and Platæa. But to interest the audience in Persian success and Grecian suffering, was a task in which much greater poets than Phrynichus would have failed, — and which no judicious poet would have undertaken. The sack of Magdeburg, by Count Tilly, in the Thirty Years' war, was not likely to be endured as the subject of dramatic representation in any Protestant town of Germany.

CHAPTER XXXVI.

FROM THE IONIC REVOLT TO THE BATTLE OF MARATHON.

In the preceding chapter, I indicated the point of confluence between the European and Asiatic streams of Grecian history, — the commencement of a decided Persian intention to conquer Attica; manifested first in the form of a threat by Artaphernês the satrap, when he enjoined the Athenians to take back Hippias as the only condition of safety, and afterwards converted into a passion in the bosom of Darius in consequence of the burning of Sardis. From this time forward, therefore, the affairs of Greece and Persia came to be in direct relation one with the other, and capable of being embodied, much more than before, into one continuous narrative.

The reconquest of Ionia being thoroughly completed, Artaphernês proceeded to organize the future government of it, with a degree of prudence and forethought not often visible in Persian proceedings. Convoking deputies from all the different cities, he compelled them to enter into a permanent convention, for the amicable settlement of disputes, so as to prevent all employment of force by any one against the others. Moreover, he caused the territory of each city to be measured by parasangs (each parasang was equal to thirty stadia, or about three miles and a half), and arranged the assessments of tribute according to this measurement, without any material departure, however, from the sums which had been paid before the revolt.[1]

Unfortunately, Herodotus is unusually brief in his allusion to this proceeding, which it would have been highly interesting to be able to comprehend perfectly. We may, however, assume it as certain, that both the population and the territory of many among the Ionic cities, if not of all, were materially altered in consequence of the preceding revolt, and still more in conse-

[1] Herodot. vi, 42.

quence of the cruelties with which the suppression of the revolt had been accompanied. In regard to Milêtus, Herodotus tells us that the Persians retained for themselves the city with its circumjacent plain, but gave the mountain portion of the Milesian territory to the Karians of Pêdasa.[1] Such a proceeding would naturally call for a fresh measurement and assessment of tribute; and there may have been similar transfers of land elsewhere. I have already observed that the statements which we find in Herodotus, of utter depopulation and destruction falling upon the cities, cannot be credited in their full extent; for these cities are all peopled, and all Hellenic, afterwards. But there can be no doubt that they are partially true, and that the miseries of those days, as stated in the work of Hekatæus, as well as by contemporary informants with whom Herodotus had probably conversed, must have been extreme. New inhabitants would probably be admitted in many of them, to supply the loss sustained; and such infusion of fresh blood would strengthen the necessity for the organization introduced by Artaphernês, in order to determine clearly the obligations due from the cities both to the Persian government and towards each other. Herodotus considers that the arrangement was extremely beneficial to the Ionians, and so it must unquestionably have appeared, coming as it did immediately after so much previous suffering. He farther adds, that the tribute then fixed remained unaltered until his own day, — a statement requiring some comment, which I reserve until the time arrives for describing the condition of the Asiatic Greeks after the repulse of Xerxês from Greece proper.

Meanwhile, the intentions of Darius for the conquest of Greece were now effectively manifested: Mardonius, invested with the supreme command, and at the head of a large force, was sent down in the ensuing spring for the purpose. Having reached Kilikia in the course of the march, he himself got on ship-board and went by sea to Ionia, while his army marched across Asia Minor to the Hellespont. His proceeding in Ionia surprises us, and seems to have appeared surprising as well to Herodotus himself as to his readers. Mardonius deposed the despots throughout the various Greek cities,[2] and left the people of each

[1] Herodot. vi. 20.

[2] Herodot. vi, 43. In recounting this deposition of the despots by Mardonius, Herodotus reasons from it as an analogy for the purpose of vindicating the correctness of another of his statements, which, he acquaints us, many persons disputed; namely, the discussion which he reports to have taken place among the seven conspirators, after the death of the Magian Smerdis, whether they should establish a monarchy, an oligarchy, or a democracy, — *ἐνθαῦτα μέγιστον θώϋμα ἐρέω τοῖσι μὴ ἀποδεκομένοισι τῶν Ἑλλήνων, Περσέων τοῖσι ἑπτα Ὀτάνεα γνώμην ἀποδέξασθαι, ὡς χρέων εἴη δημοκρατέεσθαι Πέρσας· τοὺς γὰρ τυράννους τῶν Ἰώνων καταπαύσας πάντας ὁ Μαρδόνιος, δημοκρατίας κατίστα ἐς τὰς πόλιας.* Such passages as this let us into the controversies of the time, and prove that Herodotus found many objectors to his story about the discussion on theories of government among the seven Persian conspirators (iii, 80–82).

to govern themselves, subject to the Persian dominion and tribute. This was a complete reversal of the former policy of Persia, and must be ascribed to a new conviction, doubtless wise and well founded, which had recently grown up among the Persian leaders, that on the whole their unpopularity was aggravated, more than their strength was increased, by employing these despots as instruments. The phenomena of the late Ionic revolt were well calculated to teach such a lesson; but we shall not often find the Persians profiting by experience, throughout the course of this history.

Mardonius did not remain long in Ionia, but passed on with his fleet to the Hellespont, where the land-force had already arrived. He transported it across into Europe, and began his march through Thrace; all of which had already been reduced by Megabazus, and does not seem to have participated in the Ionic revolt. The island of Thasus surrendered to the fleet without any resistance, and the land-force was conveyed across the Strymon to the Greek city of Akanthus, on the western coast of the Strymonic gulf. From hence his land-force marched into Macedonia, and subdued a considerable portion of its inhabitants, perhaps some of those not comprised in the dominion of Amyntas, since that prince had before submitted to Megabazus. Meanwhile, he sent his fleet to double the promontory of Mount Athos, and to join the land-force again at the gulf of Therma, with a view of conquering as much of Greece as he could, and even of prosecuting the march as far as Athens and Eretria;[1] so that the expedition afterwards accomplished by Xerxês would

[1] Herodot. vi, 43, 44, *ἐπορεύοντο δὲ ἐπί τε Ἐρετρίαν καὶ Ἀθήνας.*

have been tried at least by Mardonius, twelve or thirteen years earlier, had not a terrible storm completely disabled the fleet. The sea near Athos was then, and is now, full of peril to navigators. One of the hurricanes, so frequent in its neighborhood, overtook the Persian fleet, destroyed three hundred ships, and drowned or cast ashore not less than twenty thousand men: of those who reached the shore, many died of cold, or were devoured by the wild beasts on that inhospitable tongue of land. This disaster checked altogether the farther progress of Mardonius, who also sustained considerable loss with his land-army, and was himself wounded, in a night attack made upon him by the tribe of Thracians called Brygi. Though strong enough to repel and avenge this attack, and to subdue the Brygi, he was yet in no condition to advance farther. Both the land-force and the fleet were conveyed back to the Hellespont, and from thence across to Asia, with all the shame of failure. Nor was Mardonius again employed by Darius, though we cannot make out that the fault was imputable to him.[1] We shall hear of him again under Xerxês.

The ill-success of Mardonius seems to have inspired the Thasians, so recently subdued, with the idea of revolting. At least, they provoked the suspicion of Darius by making active preparations for defence, building war-ships, and strengthening their fortifications. The Thasians were at this time in great opulence, chiefly from their gold and silver mines, both in their island and in their mainland territory opposite. Their mines at Skaptê Hylê, in Thrace, yielded to them an annual income of eighty talents; and altogether their surplus revenue — after defraying all the expenses of government, so that the inhabitants were entirely untaxed — was two hundred talents (forty-six thousand pounds, if Attic talents; more, if either Euboic or Æginæan). With these large means, they were enabled soon to make preparations which excited notice among their neighbors, many of whom were doubtless jealous of their prosperity, and perhaps inclined to dispute with them possession of the profitable mines

[1] Herodot. vi, 44–94. Charon of Lampsakus had noticed the storm near Mount Athos, and the destruction of the fleet of Mardonius (Charonis Fragment. 3, ed. Didot; Athenæ. ix, p. 394).

of Skaptê Hylê. As in other cases, so in this: the jealousies among subject neighbors often procured revelations to the superior power: the proceedings of the Thasians were made known, and they were forced to raze their fortifications as well as to surrender all their ships to the Persians at Abdêra.[1]

Though dissatisfied with Mardonius, Darius was only the more eagerly bent on his project of conquering Greece, and Hippias was at his side to keep alive his wrath against the Athenians.[2] Orders were despatched to the maritime cities of his empire to equip both ships of war and horse-transports for a renewed attempt. His intentions were probably known in Greece itself by this time, from the recent march of his army to Macedonia; but he thought it advisable to send heralds round to most of the Grecian cities, in order to require from each the formal token of submission, — earth and water; and thus to ascertain what extent of resistance his intended expedition was likely to experience. The answers received were to a high degree favorable. Many of the continental Greeks sent their submission, as well as all those islanders to whom application was made. Among the former, we are probably to reckon the Thebans and Thessalians, though Herodotus does not particularize them. Among the latter, Naxos, Eubœa, and some of the smaller islands, are not included; but Ægina, at that time the first maritime power of Greece, is expressly included.[3]

Nothing marks so clearly the imminent peril in which the liberties of Greece, were now placed, and the terror inspired by the Persians after their reconquest of Ionia, as this abasement on the part of the Æginetans, whose commerce with the Asiatic islands and continent, doubtless impressed them strongly with the melancholy consequences of unsuccessful resistance to the Great King. But on the present occasion, their conduct was dictated as much by antipathy to Athens as by fear, so that Greece was thus threatened with the intrusion of the Persian arm as ally and arbiter in her internal contests: a contingency which, if it had

[1] Herodot. vi, 46–48. See a similar case of disclosure arising from jealousy between Tenedos and Lesbos (Thucyd. iii, 2).

[2] Herodot. vi, 94.

[3] Herodot. vi, 48–49; viii, 46.

occurred now in the dispute between Ægina and Athens, would have led to the certain enslavement of Greece, — though when it did occur nearly a century afterwards, towards the close of the Peloponnesian war, and in consequence of the prolonged struggle between Lacedæmon and Athens, Greece had become strong enough in her own force to endure it without the loss of substantial independence. The war between Thebes and Ægina on one side, and Athens on the other, — begun several years before, and growing out of the connection between Athens and Platæa, — had never yet been terminated. The Æginetans had taken part in that war from gratuitous feeling, either of friendship for Thebes, or of enmity to Athens, without any direct ground of quarrel,[1] and they had begun the war even without the formality of notice. Though a period apparently not less than fourteen years (from about 506–492 B.C.) had elapsed since it began, the state of hostility still continued; and we may well conceive that Hippias, the great instigator of Persian attack upon Greece, would not fail to enforce upon all the enemies of Athens the prudence of seconding, or at least of not opposing, the efforts of the Persian to reinstate him in that city. It was partly under this feeling, combined with genuine alarm, that both Thebes and Ægina manifested submissive dispositions towards the heralds of Darius.

Among these heralds, some had gone both to Athens and to Sparta, for the same purpose of demanding earth and water. The reception given to them at both places was angry in the extreme. The Athenians cast the herald into the pit called the barathrum,[2] into which they sometimes precipitated public crimi-

[1] Herodot. v, 81–89. See above, chapter xxxi. The legendary story there given as the provocation of Ægina to the war is evidently not to be treated as a real and historical cause of war: a state of quarrel causes all such stories to be raked up, and some probably to be invented. It is like the old alleged quarrel between the Athenians and the Pelasgi of Lemnos (vi, 137–140).

[2] It is to this treatment of the herald that the story in Plutarch's Life of Themistoklês must allude, if that story indeed be true; for the Persian king was not likely to send a second herald, after such treatment of the first. An interpreter accompanied the herald, speaking Greek as well as his own native language. Themistoklês proposed and carried a vote that

nals: the Spartans threw the herald who came to them into a well, desiring the unfortunate messenger to take earth and water from thence to the king. The inviolability of heralds was so ancient and undisputed in Greece, from the Homeric times downward, that nothing short of the fiercest excitement could have instigated any Grecian community to such an outrage. But to the Lacedæmonians, now accustomed to regard themselves as the first of all Grecian states, and to be addressed always in the character of superiors, the demand appeared so gross an insult as to banish from their minds for the time all recollection of established obligations. They came subsequently, however, to repent of the act as highly criminal, and to look upon it as the cause of misfortunes which overtook them thirty or forty years afterwards: how they tried at that time to expiate it, I shall hereafter recount.[1]

But if, on the one hand, the wounded dignity of the Spartans hurried them into the commission of this wrong, it was on the other hand of signal use to the general liberties of Greece, by rousing them out of their apathy as to the coming invader, and placing them with regard to him in the same state of inexpiable

he should be put to death, for having employed the Greek language as medium for barbaric dictation (Plutarch, Themist. c. 6). We should be glad to know from whom Plutarch copied this story.

Pausanias states that it was Miltiadês who proposed the putting to death of the heralds at Athens (iii, 12, 6); and that the divine judgment fell upon his family in consequence of it. From whom Pausanias copied this statement I do not know: certainly not from Herodotus, who does not mention Miltiadês in the case, and expressly says that he does not know in what manner the divine judgment overtook the Athenians for the crime: "except (says he) that their city and country was afterwards laid waste by Xerxês; but I do not think that this happened on account of the outrage on the heralds." (Herodot. vii, 133.)

The belief that there must have been a divine judgment of some sort or other, presented a strong stimulus to invent or twist some historical fact to correspond with it. Herodotus has sufficient regard for truth to resist this stimulus and to confess his ignorance; a circumstance which goes, along with others, to strengthen our confidence in his general authority. His silence weakens the credibility, but does not refute the allegation of Pausanias with regard to Miltiadês — which is certainly not intrinsically improbable.

[1] Herodot. vii, 133.

hostility as Athens and Eretria. We see at once the bonds drawn closer between Athens and Sparta. The Athenians, for the first time, prefer a complaint at Sparta against the Æginetans for having given earth and water to Darius, — accusing them of having done this with views of enmity to Athens, and in order to invade Attica conjointly with the Persian. This they represented "as treason to Hellas," calling upon Sparta as head of Greece to interfere. And in consequence of their appeal, Kleomenês king of Sparta went over to Ægina, to take measures against the authors of the late proceeding, "for the general benefit of Hellas."[1]

The proceeding now before us is of very great importance in the progress of Grecian history. It is the first direct and positive historical manifestation of Hellas as an aggregate body, with Sparta as its chief, and obligations of a certain sort on the part of its members, the neglect or violation of which constitutes a species of treason. I have already pointed out several earlier incidents, showing how the Greek political mind, beginning from entire severance of states, became gradually prepared for this idea of a permanent league with mutual obligations and power of enforcement vested in a permanent chief, — an idea never fully carried into practice, but now distinctly manifest and partially operative. First, the great acquired power and territory of Sparta, her military training, her undisturbed political traditions, create an unconscious deference towards her, such as was not felt towards any other state: next, she is seen in the proceedings against Athens, after the expulsion of Hippias, as summoning and conducting to war a cluster of self-obliged Peloponnesian allies, with certain formalities which gave to the alliance an imposing permanence and solemnity: thirdly, her position becomes

[1] Herodot. vi, 49. Ποιήσασι δέ σφι (Αἰγινήταις) ταῦτα ἰθέως Ἀθηναῖοι ἐπεκέατο, δοκέοντες ἐπὶ σφίσι ἔχοι τας τοὺς Αἰγινήτας δεδωκέναι (γῆν καὶ ὕδωρ), ὡς ἅμα τῷ Πέρσῃ ἐπὶ σφέας στρατεύωνται. Καὶ ἀσμενοι προφάσιος ἐπελάβοντο· φοιτεόντές τε ἐς τὴν Σπάρτην, κατηγόρεον τῶν Αἰγινητέων τὰ πεποιήκοιεν, τροδόντες τὴν Ἑλλάδα. Compare viii, 144, ix, 7. τὴν Ἑλλάδα δεινὸν ποιούμενοι προδοῦναι — a new and very important phrase.

vii, 61. Τότε δὲ τὸν Κλεομένεα, ἐόντα ἐν τῇ Αἰγίνῃ, καὶ κατὰ τὰ Ἑλλάδι ἀγαθὰ προσεργαζόμενον, etc.

recognized as first power or president of Greece, both by foreigners who invite alliance (Crœsus), or by Greeks who seek help, such as the Platæans against Thebes, or the Ionians against Persia. But Sparta has not been hitherto found willing to take on herself the performance of this duty of protector-general. She refused the Ionians and the Samian Mæandrius, as well as the Platæans, in spite of their entreaties founded on common Hellenic lineage: the expedition which she undertook against Polykratês of Samos, was founded upon private motives of displeasure, even in the estimation of the Lacedæmonians themselves: moreover, even if all these requests had been granted, she might have seemed to be rather obeying a generous sympathy than performing a duty incumbent upon her as superior. But in the case now before us, of Athens against Ægina, the latter consideration stands distinctly prominent. Athens is not a member of the cluster of Spartan allies, nor does she claim the compassion of Sparta, as defenceless against an overpowering Grecian neighbor. She complains of a Pan-Hellenic obligation as having been contravened by the Æginetans to her detriment and danger, and calls upon Sparta to enforce upon the delinquents respect to these obligations. For the first time in Grecian history, such a call is made; for the first time in Grecian history, it is effectively answered. We may reasonably doubt, whether it would have been thus answered, — considering the tardy, unimpressible, and home-keeping character of the Spartans, with their general insensibility to distant dangers,[1] — if the adventure of the Persian herald had not occurred to gall their pride beyond endurance; to drive them into unpardonable hostility with the Great King; and to cast them into the same boat with Athens for keeping off an enemy who threatened the common liberties of Hellas.

From this time, then, we may consider that there exists a recognized political union of Greece against the Persians,[2] — or at least something as near to a political union as Grecian temper will permit, — with Sparta as its head for the present. To such a preëminence of Sparta, Grecian history had been gradually

[1] Thucyd. i, 70–118. ἄοκνοι πρὸς ὑμᾶς (*i. e.* the Spartans) μελλητὰς καὶ ἀσκόλημηταὶ πρὸς ἐνδημοτάτους.

[2] Herodot. vii, 145–148. Οἱ συνωμόται Ἑλλήνων ἐπὶ τῷ Πέρσῃ.

tending; but the final event which placed it beyond dispute, and which humbled for the time her ancient and only rival -- Argos — is now to be noticed.

It was about three or four years before the arrival of these Persian heralds in Greece, and nearly at the time when Milêtus was besieged by the Persian generals, that a war broke out between Sparta and Argos,[1] — on what grounds Herodotus does not inform us. Kleomenês, encouraged by a promise of the oracle that he should take Argos, led the Lacedæmonian troops to the banks of the Erasinus, the border river of the Argeian territory. But the sacrifices, without which no river could be crossed, were so unfavorable, that he altered his course, extorted some vessels from Ægina and Sikyon,[2] and carried his troops by sea to Nauplia, the seaport belonging to Argos, and to the territory of Tiryns. The Argeians having marched their forces down to resist him, the two armies joined battle at Sêpeia, near Tiryns: Kleomenês, by a piece of simplicity on the part of his enemies, which we find it difficult to credit in Herodotus, was enabled to attack them unprepared, and obtained a decisive victory. For the Argeians, it is stated, were so afraid of being overreached by stratagem, in the post which their army occupied over against the enemy, that they listened for the commands proclaimed aloud by the Lacedæmonian herald, and performed with their own army the same order which they thus heard given.

[1] That which marks the siege of Milêtus, and the defeat of the Argeians by Kleomenês, as contemporaneous, or nearly so, is, the common oracular dictum delivered in reference to both: in the same prophecy of the Pythia, one half alludes to the sufferings of Milêtus, the other half to those of Argos (Herodot. vi, 19–77).

Χρεωμένοισι γὰρ Ἀργείοισι ἐν Δελφοῖσι περὶ σωτηρίης τῆς πόλιος τῆς σφετέρης, τὸ μὲν ἐς αὐτοὺς τοὺς Ἀργείους φέρον, τὴν δὲ παρενθήκην ἔχρησε ἐς Μιλησίους.

I consider this evidence of date to be better than the statement of Pausanias. That author places the enterprise against Argos immediately (*αὐτικα* — Paus. iii, 4, 1) after the accession of Kleomenês, who, as he was king when Mæandrius came from Samos (Herodot. iii, 148), must have come to the throne not later than 518 or 517 B.C. This would be thirty-seven years prior to 480 B.C.; a date much too early for the war between Kleomenês and the Argeians, as we may see by Herodotus (vii, 149).

[2] Herodot. vi, 92.

This came to the knowledge of Kleomenês, who communicated private notice to his soldiers, that when the herald proclaimed orders to go to dinner, they should not obey, but immediately stand to their arms. We are to presume that the Argeian camp was sufficiently near to that of the Lacedæmonians to enable them to hear the voice of the herald, yet not within sight, from the nature of the ground. Accordingly, so soon as the Argeians heard the herald in the enemy's camp proclaim the word to go to dinner,[1] they went to dinner themselves; and in this disorderly condition they were easily overthrown by the Spartans. Many of them perished in the field, while the fugitives took refuge in a thick grove consecrated to their eponymous hero Argus. Kleomenês pursued and inclosed them therein: but thinking it safer to employ deceit rather than force, he ascertained from deserters the names of the chief Argeians thus shut up, and then invited them out successively by means of a herald, — pretending that he had received their ransom, and that they were released. As fast as each man came out, he was put to death; the fate of these unhappy sufferers being concealed from their comrades within the grove by the thickness of the foliage, until some one climbing to the top of a tree detected and proclaimed the destruction going on, — after about fifty of the victims had perished. Unable to entice any more of the Argeians from their consecrated refuge, which they still vainly hoped would protect them, Kleomenês set fire to the grove, and burnt it to the ground, insomuch that the persons within it appear to have been destroyed, either by fire or by sword.[2] After the conflagration had begun, he inquired for the first time to whom the grove belonged, and learnt that it belonged to the hero Argus.

Not less than six thousand citizens, the flower and strength of Argos, perished in this disastrous battle and retreat. And so completely was the city prostrated, that Kleomenês might easily have taken it, had he chosen to march thither forthwith and attack it with vigor. If we are to believe later historians whom

[1] Herodot. vi, 78; compare Xenophon, Rep. Laced. xii, 6. Orders for evolutions in the field, in the Lacedæmonian military service, were not proclaimed by the herald, but transmitted through the various gradations of officers (Thucyd. v, 66).

[2] Herodot. vi, 79, 80.

Pausanias, Polyænus, and Plutarch have copied, ne did march thither and attack it, but was repulsed by the valor of the Argeian women; who, in the dearth of warriors occasioned by the recent defeat, took arms along with the slaves, headed by the poetess Telesilla, and gallantly defended the walls.[1] This is probably a mythe, generated by a desire to embody in detail the dictum of the oracle a little before, about "the female conquering the male."[2] Without meaning to deny that the Argeian women might have been capable of achieving so patriotic a deed, if Kleomenês had actually marched to the attack of their city, we are compelled, by the distinct statement of Herodotus, to affirm that he never did attack it. Immediately after the burning of the sacred grove of Argos, he dismissed the bulk of his army to Sparta, retaining only one thousand choice troops, — with whom he marched up to the Hêræum, or great temple of Hêrê, between Argos and Mykênæ, to offer sacrifice. The priest in attendance forbade him to enter, saying that no stranger was allowed to offer sacrifice in the temple. But Kleomenês had once already forced his way into the sanctuary of Athênê, on the Athenian acropolis, in spite of the priestess and her interdict, — and he now acted still more brutally towards the Argeian priest, for he directed his helots to drag him from the altar and scourge him.

[1] Pausan. ii, 20, 7; Polyæn. viii, 33; Plutarch, De Virtut. Mulier, p. 245, Suidas, v, Τελέσιλλα.

Plutarch cites the historian Sokratês of Argos for this story about Telesilla; an historian, or perhaps composer of a περιήγησις Ἄργους, of unknown date: compare Diogen. Laërt. ii, 5, 47, and Plutarch, Quæstion Romaic. pp. 270–277. According to his representation, Kleomenês and Demaratus jointly assaulted the town of Argos, and Demaratus, after having penetrated into the town and become master of the Pamphyliakon, was driven out again by the women. Now Herodotus informs us that Kleomenês and Demaratus were never employed upon the same expedition, after the disagreement in their march to Attica (v, 75; vi, 64).

[2] Herodot. vi, 77

Ἀλλ' ὅταν ἡ θηλεῖα τὸν ἄρσενα νικήσασα
Ἐξελάσῃ, καὶ κῦδος ἐν Ἀργείοισιν ἄρηται, etc.

If this prophecy can be said to have any distinct meaning, it probably refers to Hêrê, as protectress of Argos, repulsing the Spartans.

Pausanias (ii, 20, 7) might well doubt whether Herodotus understood this oracle in the same sense as he did: it is plain that Herodotus could not have so understood it.

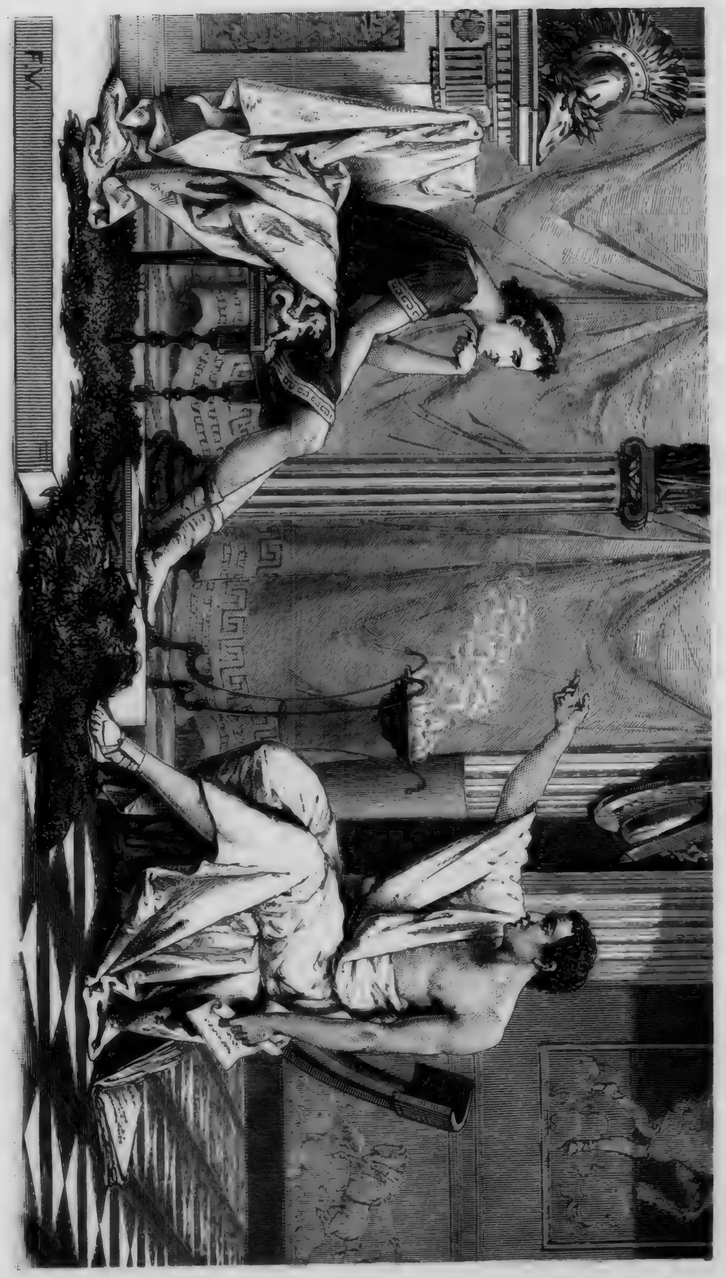
Having offered sacrifice, Kleomenês returned with his remaining force to Sparta.[1]

But the army whom he had sent home returned with a full persuasion that Argos might easily have been taken, — that the king alone was to blame for having missed the opportunity. As soon as he himself returned, his enemies — perhaps his colleague Demaratus — brought him to trial before the ephors, on a charge of having been bribed, against which he defended himself as follows: He had invaded the hostile territory on the faith of an assurance from the oracle that he should take Argos; but so soon as he had burnt down the sacred grove of the hero Argus, — without knowing to whom it belonged, — he became at once sensible that this was all that the god meant by *taking Argos*, and therefore that the divine promise had been fully realized. Accordingly, he did not think himself at liberty to commence any fresh attack, until he had ascertained whether the gods would approve it and would grant him success. It was with this view that he sacrificed in the Hêræum. But though his sacrifice was favorable, he observed that the flame kindled on the altar flashed back from the bosom of the statue of Hêrê, and not from her head. If the flame had flashed from her head, he would have known at once that the gods intended him to take the city by storm;[2] but the flash from her bosom plainly indicated that the

[1] Herodot. vi, 80, 81: compare v, 72.

[2] Herodot. vi, 82. εἰ μὲν γὰρ ἐκ τῆς κεφαλῆς τοῦ ἀγάλματος ἐξέλαμψε, αἱρέειν ἂν κατ' ἀκρῆς τὴν πόλιν· ἐκ τῶν στηθέων δὲ λάμψαντος, πᾶν οἱ πεποιῆσθαι ὅσον ὁ θεὸς ἤθελε.

For the expression αἱρέειν κατ' ἀκρῆς, compare Herodot vi, 21, and Damm. Lex. Homer. v, ἀκρός. In this expression, as generally used, the last words κατ' ἀκρῆς have lost their primitive and special sense, and do little more than intensify the simple αἱρέειν, — equivalent to something like "de fond en comble:" for Kleomenês is accused by his enemies, — φάμενοί μιν δωροδοκήσαντα, οὐκ ἐλέειν τὸ Ἄργος, παρέον εὐπετέως μιν ἑλεῖν. But in the story recounted by Kleomenês, the words κατ' ἀκρῆς come back to their primitive meaning, and serve as the foundation for his religious inference, from type to thing typified: if the light had shone from the head or *top* of the statue, this would have intimated that the gods meant him to take the city "*from top to bottom*."



In regard to this very illustrative story, — which there seems no reason for mistrusting, — the contrast between the point of view of Herodotus and that of the Spartan ephors deserves notice. The former, while he affirms

topmost success was out of his reach, and that he had already reaped all the glories which they intended for him. We may see that Herodotus, though he refrains from criticizing this story, suspects it to be a fabrication. Not so the Spartan ephors: to them it appeared not less true as a story than triumphant as a defence, insuring to Kleomenès an honorable acquittal.[1]

Though this Spartan king lost the opportunity of taking Argos, his victories already gained had inflicted upon her a blow such as she did not recover for a generation, and put her for a time out of all condition to dispute the primacy of Greece with Lacedæmon. I have already mentioned that both in legend and in earliest history, Argos stands forth as the first power in Greece, with legendary claims to headship, and decidedly above Lacedæmon; who gradually usurps from her, first the reality of superior power, next the recognition of preëminence, — and is now, at the period which we have reached, taking upon herself both the rights and the duties of a presiding state over a body of allies who are bound both to her and to each other. Her title to this honor, however, was never admitted at Argos, and it is very probable that the war just described grew in some way or other out of the increasing presidential power which circumstances were tending to throw into her hands. And the complete temporary prostration of Argos was an essential condition to the quiet acquisition of this power by Sparta. Occurring as it did two or three years before the above-recounted adventure of the heralds, it removed the only rival at that time both willing and able to compete with Sparta, — a rival who might well have prevented any effective union under another chief, though she could no longer have secured any Pan-Hellenic ascendency for herself, — a rival who would have seconded Ægina in her submission to the Persians, and would thus have lamed incurably the defen-

distinctly that it was the real story told by Kleomenês, suspects its truth, and utters as much of skepticism as his pious fear will permit him; the latter find it in complete harmony, both with their canon of belief and with their religious feeling, — Κλεομένης δέ σφι ἔλεξε, οὔτε εἰ ψευδόμενος οὔτε εἰ ἀληθέα λέγων, ἔχω σαφηνέως εἰπαι· ἔλεξε δ' ὧν..... Ταῦτα δὲ λέγων, πιστά τε καὶ οἰκοτα ἐδόκεε Σπαρτ ήτησι λέγειν, καὶ ἀπέφυ;ε πολλὸν τοὺς διώκοντας.

[1] Compare Pausanias, ii, 20, 8.

ARISTOTELES AND HIS PUPIL, ALEXANDER
Greece, vols. four.

sive force of Greece. The ships which Kleomenês had obtained from the Æginetans as well as from the Sikyonians, against their own will, for landing his troops at Nauplia, brought upon both these cities the enmity of Argos, which the Sikyonians compromised by paying a sum of money, while the Æginetans refused to do so.[1] And thus the circumstances of the Kleomenic war had the effect not only of enfeebling Argos, but of alienating her from natural allies and supporters, and clearing the ground for undisputed Spartan primacy.

Returning now to the complaint preferred by Athens to the Spartans against the traitorous submission of Ægina to Darius, we find that king Kleomenês passed immediately over to that island for the purpose of inquiry and punishment. He was proceeding to seize and carry away as prisoners several of the leading Æginetans, when Krius and some others among them opposed to him a menacing resistance, telling him that he came without any regular warrant from Sparta and under the influence of Athenian bribes, — that, in order to carry authority, both the Spartan kings ought to come together. It was not of their own accord that the Æginetans ventured to adopt so dangerous a course. Demaratus, the colleague of Kleomenês in the junior or Prokleid line of kings, had suggested to them the step and promised to carry them through it safely.[2] Dissension between the two coördinate kings was no new phenomenon at Sparta; but in the case of Demaratus and Kleomenês, it had broken out some years previously on the occasion of the march against Attica; and Demaratus, hating his colleague more than ever, entered into the present intrigue with the Æginetans with the deliberate purpose of frustrating his intervention. He succeeded, and Kleomenês was compelled to return to Sparta; not without unequivocal menace against Krius and the other Æginetans who had repelled him,[3] and not without a thorough determination to depose Demaratus

It appears that suspicions had always attached to the legiti

Herodot. vi, 92.

[1] Herodot vi, 50. Κρῖος — ἔλεγε δὲ ταῦτα ἐξ ἐπιστολῆς τῆς Δημαρήτου. Compare Pausan. iii, 4, 3.

[3] Herodot. vi, 50–61, 64. Δημάρητος — οἶνον καὶ ἄγη χρεώμενος.

macy of Demaratus's birth. His reputed father Aristo had had no offspring by two successive wives: at last, he became enamored of the wife of his friend Agêtus, — a woman of surpassing beauty, — and entrapped him into an agreement, whereby each solemnly bound himself to surrender anything belonging to him which the other might ask for. That which Agêtus asked from Aristo was at once given: in return, the latter demanded to have the wife of Agêtus, who was thunderstruck at the request, and indignantly complained of having been cheated into a sacrifice of all others the most painful: nevertheless, the oath was peremptory, and he was forced to comply. The birth of Demaratus took place so soon after this change of husbands, that when it was first made known to Aristo, as he sat upon a bench along with the ephors, he counted on his fingers the number of months since his marriage, and exclaimed with an oath, "The child cannot be mine." He soon, however, retracted his opinion, and acknowledged the child, who grew up without any question being publicly raised as to his birth, and succeeded his father on the throne. But the original words of Aristo had never been forgotten, and private suspicions were still cherished that Demaratus was really the son of his mother's first husband.[1]

Of these suspicions, Kleomenês now resolved to avail himself, exciting Leotychidês, the next heir in the Prokleid line of kings, to impugn publicly the legitimacy of Demaratus; engaging to second him with all his influence as next in order for the crown, and exacting in return a promise that he would support the intervention against Ægina. Leotychidês was animated not merely by ambition, but also by private enmity against Demaratus, who had disappointed him of his intended bride: he warmly entered into the scheme, arraigned Demaratus as no true Herakleid, and produced evidence to prove the original doubts expressed by Aristo. A serious dispute was thus raised at Sparta, and Kleomenês, espousing the pretensions of Leotychidês, recommended that the question as to the legitimacy of Demaratus should be decided by reference to the Delphian oracle. Through the influence of Kobôn, a powerful native of Delphi, he procured from the Pythian priestess an answer pronouncing

[1] Herodot. vi, 61, 62, 63

that Demaratus was not the son of Aristo.[1] Leotychidês thus became king of the Prokleid line, while Demaratus descended into a private station, and was elected at the ensuing solemnity of the Gymnopædia to an official function. The new king, unable to repress a burst of triumphant spite, sent an attendant to ask him, in the public theatre, how he felt as an officer after having once been a king. Stung with this insult, Demaratus replied that he himself had tried them both, and that Leotychidês might in time come to try them both also: the question, he added, shall bear its fruit, — great evil, or great good, to Sparta. So saying, he covered his face and retired home from the theatre, — offered a solemn farewell sacrifice at the altar of Zeus Herkeios, and solemnly adjured his mother to declare to him who his real father was, — then at once quitted Sparta for Elis, under pretence of going to consult the Delphian oracle.[2]

Demaratus was well known to be a high-spirited and ambitious man, — noted, among other things, as the only Lacedæmonian king down to the time of Herodotus who had ever gained a chariot victory at Olympia; and Kleomenês and Leotychidês became alarmed at the mischief which he might do them in exile. By the law of Sparta, no Herakleid was allowed to establish his residence out of the country, on pain of death: this marks the sentiment of the Lacedæmonians, and Demaratus was not the less likely to give trouble because they had pronounced him illegitimate.[3] Accordingly they sent in pursuit of him, and seized

[1] Herodot. vi, 65, 66. In an analogous case afterwards, where the succession was disputed between Agesilaus the brother, and Leotychidês the reputed son of the deceased king Agis, the Lacedæmonians appear to have taken upon themselves to pronounce Leotychidês illegitimate; or rather to assume tacitly such illegitimacy by choosing Agesilaus in preference, without the aid of the oracle (Xenophon, Hellen. iii. 3, 1–4; Plutarch, Agesilaus, c. 3). The previous oracle from Delphi, however, *φυλάξασθαι τὴν χωλὴν βασιλείαν*, was cited on the occasion, and the question was, in what manner it should be interpreted.

[2] Herodot. vi, 68, 69. The answer made by the mother to this appeal — informing Demaratus that he is the son either of king Aristo, or of the hero Astrabakus — is extremely interesting as an evidence of Grecian manners and feeling.

[3] Plutarch, Agis, c. 11. *κατὰ δή τινα νόμον παλαιὸν, ὃς οὐκ ἐᾷ τὸν Ἡρακλείδην ἐκ γυναικὸς ἀλλοδαπῆς τεκνοῦσθαι, τὸν δ' ἀπελθόντα τῆς Σπάρτης ἐπὶ ἀποικισμῷ πρὸς ἑτέρους ἀποθνήσκειν κελεύει.*

him in the island of Zakynthus. But the Zakynthians would not consent to surrender him, so that he passed unobstructed into Asia, where he presented himself to Darius, and was received with abundant favors and presents.[1] We shall hereafter find him the companion of Xerxês, giving to that monarch advice such as, if it had been acted upon, would have proved the ruin of Grecian independence; to which, however, he would have been even more dangerous, if he had remained at home as king of Sparta.

Meanwhile Kleomenês, having obtained a consentient colleague in Leotychidês, went with him over to Ægina, eager to revenge himself for the affront which had been put upon him. To the requisition and presence of the two kings jointly, the Æginetans did not dare to oppose any resistance. Kleomenês made choice of ten citizens, eminent for wealth, station, and influence, among whom were Krius and another person named Kasambus, the two most powerful men in the island. Conveying them away to Athens, he deposited them as hostages in the hands of the Athenians.[2]

It was in this state that the affairs of Athens and of Greece generally were found by the Persian armament which landed at Marathon, the progress of which we are now about to follow. And the events just recounted were of material importance, considered in their indirect bearing upon the success of that armament. Sparta had now, on the invitation of Athens, assumed to herself for the first time a formal Pan-Hellenic primacy, her ancient rival Argos being too much broken to contest it, — her two kings, at this juncture unanimous, employ their presiding interference in coercing Ægina, and placing Æginetan hostages in the hands of Athens. The Æginetans would not have been unwilling to purchase victory over a neighbor and rival at the cost of submission to Persia, and it was the Spartan interference only which restrained them from assailing Athens conjointly with the Persian invaders; thus leaving the hands of the latter free, and her courage undiminished, for the coming trial.

Meanwhile, a vast Persian force, brought together in consequence of the preparation made during the last two years in

[1] Herodot. vi, 70.

[2] Herodot. vi, 73.

every part of the empire, had assembled in the Aleïan plain of Kilikia, near the sea. A fleet of six hundred armed triremes, together with many transports, both of men and horses, was brought hither for their embarkation: the troops were put on board, and sailed along the coast to Samos in Ionia. The Ionic and Æolic Greeks constituted an important part of this armament, and the Athenian exile Hippias was on board as guide and auxiliary in the attack of Attica. The generals were Datis, a Median,[1] — and Artaphernês, son of the satrap of Sardis, so named, and nephew of Darius. We may remark that Datis is the first person of Median lineage who is mentioned as appointed to high command after the accession of Darius, which had been preceded and marked, as I have noticed in a former chapter, by an outbreak of hostile nationality between the Medes and Persians. Their instructions were, generally, to reduce to subjection and tribute all such Greeks as had not already given earth and water. But Darius directed them most particularly to conquer Eretria and Athens, and to bring the inhabitants as slaves into his presence.[2] These orders were literally meant, and probably neither the generals nor the soldiers of this vast armament doubted that they would be literally executed; and that before the end of the year, the wives, or rather the widows, of men like Themistoklês and Aristeidês would be seen among a mournful train of Athenian prisoners, on the road from Sardis to Susa, thus accomplishing the wish expressed by queen Atossa at the instance of Dêmokêdês.

The recent terrific storm near Mount Athos deterred the Persians from following the example of Mardonius, and taking their course by the Hellespont and Thrace. It was resolved to strike straight across the Ægean[3] (the mode of attack which intelligent

[1] Herodot. vi, 94. Δᾶτίν τε, ἐόντα Μῆδον γένος etc.

Cornelius Nepos (Life of Pausanias, c. 1) calls Mardonius a Mede; which cannot be true, since he was the son of Gobryas, one of the seven Persian conspirators (Herodot. vi, 43).

[2] Herodot, vi, 94. ἐντειλάμενος δὲ ἀπέπεμπε, ἐξανδραποδίσαντας Ἐρετρίαν καὶ Ἀθήνας, ἄγειν ἑωϋτῷ ἐς ὄψιν τὰ ἀνδράποδα.

According to the Menexenus of Plato (c. 17, p. 245), Darius ordered Datis to fulfil this order on peril of his own head; no such harshness appears in Herodotus.

[3] Thucyd. i, 93.

Greeks like Themistoklês most feared, even after the repulse of Xerxês), from Samos to Eubœa, attacking the intermediate islands in the way. Among those islands was Naxos, which ten years before had stood a long siege, and gallantly repelled the Persian Megabatês with the Milesian Aristagoras. It was one of the main objects of Datis to efface this stain on the Persian arms, and to take a signal revenge on the Naxians.[1] Crossing from Samos to Naxos, he landed his army on the island, which was found an easier prize than he had expected. The terrified citizens, abandoning their town, fled with their families to the highest summits of their mountains; while the Persians, seizing as slaves a few who had been dilatory in flight, burnt the undefended town with its edifices sacred and profane.

Immense, indeed, was the difference in Grecian sentiment towards the Persians, created by the terror-striking reconquest of Ionia, and by the exhibition of a large Phenician fleet in the Ægean. The strength of Naxos was the same now as it had been before the Ionic revolt, and the successful resistance then made might have been supposed likely to nerve the courage of its inhabitants. Yet such is the fear now inspired by a Persian armament, that the eight thousand Naxian hoplites abandon their town and their gods without striking a blow,[2] and think of nothing but personal safety for themselves and their families. A sad augury for Athens and Eretria!

From Naxos, Datis despatched his fleet round the other Cyclades islands, requiring from each, hostages for fidelity and a contingent to increase his army. With the sacred island of Delos, however, he dealt tenderly and respectfully. The Delians had fled before his approach to Tênos, but Datis sent a herald to invite them back again, promised to preserve their persons and property inviolate, and proclaimed that he had received express orders from the Great King to reverence the island in which Apollo and Artemis were born. His acts corresponded with this language; for the fleet was not allowed to touch the island,

[1] Herodot. vi, 95, 96. *ἐπὶ ταύτην* (Naxos) *γὰρ δὴ πρώτην ἐπείχον στρατεύεσθαι οἱ Πέρσαι, μεμνημένοι τῶν πρότερον.*

[2] The historians of Naxos affirmed that Datis had been repulsed from the island. We find this statement in Plutarch, De Malign. Herodot. c. 26, p. 869, among his violent and unfounded contradictions of Herodotus.

and he himself, landing with only a few attendants, offered a magnificent sacrifice at the altar. A large portion of his armament consisted of Ionic Greeks, and this pronounced respect to the island of Delos may probably be ascribed to the desire of satisfying their religious feelings; for in their days of early freedom, this island had been the scene of their solemn periodical festivals, as I have already more than once remarked.

Pursuing his course without resistance along the islands, and demanding reinforcements as well as hostages from each, Datis at length touched the southernmost portion of Eubœa,—the town of Karystus and its territory.[1] The Karystians, though at first refusing either to give hostages or to furnish any reinforcements against their friends and neighbors, were speedily compelled to submission by the aggressive devastation of the invaders. This was the first taste of resistance which Datis had yet experienced; and the facility with which it was overcome gave him a promising omen as to his success against Eretria, whither he soon arrived.

The destination of the armament was no secret to the inhabitants of this fated city, among whom consternation, aggravated by intestine differences, was the reigning sentiment. They made application to Athens for aid, which was readily and conveniently afforded to them by means of those four thousand kleruchs, or out-citizens, whom the Athenians had planted sixteen years before in the neighboring territory of Chalkis. Notwithstanding this reinforcement, however, many of them despaired of defending the city, and thought only of seeking shelter on the unassailable summits of the island, as the more numerous and powerful Naxians had already done before them; while another party, treacherously seeking their own profit out of the public calamity, lay in wait for an opportunity of betraying the city to the Persians.[2] Though a public resolution was taken to defend

[1] Herodot. vi, 99.

[2] Herodot. vi, 100. *Τῶν δὲ Ἐρετριέων ἦν ἄρα οὐδὲν ὑγιὲς βούλευμα, οἳ μετεπέμποντο μὲν Ἀθηναίους, ἐφρόνεον δὲ διφασίας ἰδέας. οἱ μὲν γὰρ αὐτῶν ἐβουλεύοντο ἐκλιπεῖν τὴν πόλιν ἐς τὰ ἄκρα τῆς Εὐβοίης, ἄλλοι δὲ αὐτῶν ἰδίᾳ κέρδεα προσδεκόμενοι παρὰ τοῦ Πέρσεω οἰσεσθαι προδοσίην ἐσκευάζοντο.*

Allusion to this treason among the Eretrians is to be found in a saying of Themistoklês (Plutarch, Themist. c. 11).

the city, yet so manifest was the absence of that stoutness of heart which could alone avail to save it, that a leading Eretrian named Æschinês was not ashamed to forewarn the four thousand Athenian allies of the coming treason, and urge them to save themselves before it was too late. They followed his advice and passed over to Attica by way of Orôpus; while the Persians disembarked their troops, and even their horses, in expectation that the Eretrians would come out and fight, at Tamynæ and other places in the territory. As the Eretrians did not come out, they proceeded to lay siege to the city, and for some days met with a brave resistance, so that the loss on both sides was considerable. At length two of the leading citizens, Euphorbus and Philagrus, with others, betrayed Eretria to the besiegers; its temples were burnt, and its inhabitants dragged into slavery.[1] It is impossible to credit the exaggerated statement of Plato, which is applied by him to the Persians at Eretria, as it had been before applied by Herodotus to the Persians at Chios and Samos, — that they swept the territory clean of inhabitants by joining hands and forming a line across its whole breadth.[2] Evidently, this is an idea illustrating the possible effects of numbers and ruinous conquest, which has been woven into the tissue of historical statements, like so many other illustrative ideas in the writings of Greek authors. That a large proportion of the inhabitants were carried away as prisoners, there can be no doubt. But the traitors who betrayed the town were spared and rewarded by the

The story told by Hêrakleidês Ponticus (ap. Athenæ. xii, p. 536), of an earlier Persian armament which had assailed Eretria and failed, cannot be at all understood; it rather looks like a mythe to explain the origin of the great wealth possessed by the family of Kallias at Athens, — the Λακκόπλουτος. There is another story, having the same explanatory object, in Plutarch, Aristeidês, c. 5.

[1] Herodot. vi, 101, 102.

[2] Plato, Legg. iii, p. 698, and Menexen. c. 10, p. 240; Diogen. Laërt. iii 33; Herodot. vi, 31: compare Strabo, x, p. 446, who ascribes to Herodotus the statement of Plato about the σαγήνευσις of Eretria. Plato says nothing about the betrayal of the city.

It is to be remarked that, in the passage of the Treatise de Legibus, Plato mentions this story (about the Persians having swept the territory of Eretria clean of its inhabitants) with some doubt as to its truth, and as if it were a rumor intentionally circulated by Datis with a view to frighten the Athenians. But in the Menexenus, the story is given as if it were an authentic historical fact.

Persians,[1] and we see plainly that either some of the inhabitants must have been left or new settlers introduced, when we find the Eretrians reckoned ten years afterwards among the opponents of Xerxês.

Datis had thus accomplished with little or no resistance one of the two express objects commanded by Darius, and his army was elated with the confident hope of soon completing the other. After halting a few days at Eretria, and depositing in the neighboring islet of Ægilia the prisoners recently captured, he reëmbarked his army to cross over to Attica, and landed in the memorable bay of Marathon on the eastern coast, — the spot indicated by the despot Hippias, who now landed along with the Persians, twenty years after his expulsion from the government. Forty-seven years had elapsed since he had made as a young man this same passage, from Eretria to Marathon, in conjunction with his father Peisistratus, on the occasion of the second restoration of the latter. On that previous occasion, the force accompanying the father had been immeasurably inferior to that which now seconded the son; yet it had been found amply sufficient to carry him in triumph to Athens, with feeble opposition from citizens alike irresolute and disunited. And the march of Hippias from Marathon to Athens would now have been equally easy, as it was doubtless conceived to be by himself, both in his waking hopes and in the dream which Herodotus mentions, — had not the Athenians whom he found been men radically different from those whom he had left.

To that great renewal of the Athenian character, under the democratical institutions which had subsisted since the dispossession of Hippias, I have already pointed attention in a former chapter. The modifications introduced by Kleisthenês in the constitution had now existed eighteen or nineteen years, without any attempt to overthrow them by violence. The Ten Tribes,

[1] Plutarch, De Garrulitate, c. 15, p. 510. The descendants of Gongylus the Eretrian, who passed over to the Persians on this occasion, are found nearly a century afterwards in possession of a town and district in Mysia, which the Persian king had bestowed upon their ancestor. Herodotus does not mention Gongylus (Xenoph. Hellen. iii, 1, 6).

This surrender to the Persians drew upon the Eretrians bitter remarks at the time of the battle of Salamis (Plutarch, Themistoklês, c. 11).

each with its constituent demes, had become a part of the established habits of the country, and the citizens had become accustomed to exercise a genuine and self-determined decision in their assemblies, political as well as judicial; while even the senate of Areopagus, renovated by the nine annual archons successively chosen who passed into it after their year of office, had also become identified in feeling with the constitution of Kleisthenês. Individual citizens, doubtless, remained partisans in secret, and perhaps correspondents of Hippias; but the mass of citizens, in every scale of life, could look upon his return with nothing but terror and aversion. With what degree of newly-acquired energy the democratical Athenians could act in defence of their country and institutions, has already been related in a former chapter; though unfortunately we possess few particulars of Athenian history during the decade preceding 490 B.C., nor can we follow in detail the working of the government. The new form, however, which Athenian politics had assumed becomes partially manifest, when we observe the three leaders who stand prominent at this important epoch, — Miltiadês, Themistoklês, and Aristeidês.

The first of the three had returned to Athens, three or four years before the approach of Datis, after six or seven years' absence in the Chersonesus of Thrace, whither he had been originally sent by Hippias about the year 517–516 B.C., to inherit the property as well as the supremacy of his uncle the œkist Miltiadês. As despot of the Chersonese, and as one of the subjects of Persia, he had been among the Ionians who accompanied Darius to the Danube in his Scythian expedition, and he had been the author of that memorable recommendation which Histiæus and the other despots did not think it their interest to follow, — of destroying the bridge and leaving the Persian king to perish. Subsequently, he had been unable to remain permanently in the Chersonese, for reasons which have before been noticed; yet he seems to have occupied it during the period of the Ionic revolt.[1]

[1] The chapter of Herodotus (vi, 40) relating to the adventures of Miltiadês is extremely perplexing, as I have already remarked in a former note: and Wesseling considers that it involves chronological difficulties which our present MSS. do not enable us to clear up. Neither Schweighäuser, nor the explanation cited in Bähr's note, is satisfactory.

What part he took in that revolt we do not know. But he availed himself of the period while the Persian satraps were employed in suppressing it, and deprived of the mastery of the sea, to expel, in conjunction with forces from Athens, both the Persian garrison and Pelasgic inhabitants from the islands of Lemnos and Imbros. The extinction of the Ionic revolt threatened him with ruin; so that when the Phenician fleet, in the summer following the capture of Milêtus, made its conquering appearance in the Hellespont, he was forced to escape rapidly to Athens with his immediate friends and property, and with a small squadron of five ships. One of these ships, commanded by his son Metiochus, was actually captured between the Chersonese and Imbros; and the Phenicians were most eager to capture himself,[1] — inasmuch as he was personally odious to Darius from his strenuous recommendation to destroy the bridge over the Danube. On arriving at Athens, after his escape from the Phenician fleet, he was brought to trial before the judicial popular assembly for alleged misgovernment in the Chersonese, or for what Herodotus calls "his despotism" there exercised.[2] Nor is it improbable, that the Athenian citizens settled in that peninsula may have had good reason to complain of him, — the more so as he had carried out with him the maxims of government prevalent at Athens under the Peisistratids, and had in his pay a body of Thracian mercenaries. However, the people at Athens honorably acquitted him, probably in part from the reputation which he had obtained as conqueror of Lemnos;[3] and he was one of the ten annually-elected generals of the republic, during the year of this Persian expedition, — chosen at the beginning of the Attic year, shortly after the summer solstice, at a time when Datis and Hippias had actually sailed, and were known to be approaching.

The character of Miltiadês is one of great bravery and decision, — qualities preëminently useful to his country on the present crisis, and the more useful as he was under the strongest motive

[1] Herodot. vi, 43–104.

[2] Herodot. vi, 39–104.

[3] Herodot. vi, 132. Μιλτιάδης, καὶ πρότερον εὐδοκιμέων — *i. e.* before the battle of Marathon. How much his reputation had been heightened by the conquest of Lemnos, see Herodot. vi, 136.

to put them forth, from the personal hostility of Darius towards him; but he does not peculiarly belong to the democracy of Kleisthenês, like his younger contemporaries Themistoklês and Aristeidês. The two latter are specimens of a class of men new at Athens since the expulsion of Hippias, and contrasting forcibly with Peisistratus, Lykurgus, and Megaklês, the political leaders of the preceding generation. Themistoklês and Aristeidês, different as they were in disposition, agree in being politicians of the democratical stamp, exercising ascendency by and through the people, — devoting their time to the discharge of public duties, and to the frequent discussions in the political and judicial meetings of the people, — manifesting those combined powers of action, comprehension, and persuasive speech, which gradually accustomed the citizens to look to them as advisers as well as leaders, — but always subject to criticism and accusation from unfriendly rivals, and exercising such rivalry towards each other with an asperity constantly increasing. Instead of Attica, disunited and torn into armed factions, as it had been forty years before, — the Diakrii under one man, and the Parali and Pedieis under others, — we have now Attica one and indivisible; regimented into a body of orderly hearers in the Pnyx, appointing and holding to accountability the magistrates, and open to be addressed by Themistoklês, Aristeidês, or any other citizen who can engage their attention.

Neither Themistoklês nor Aristeidês could boast of a lineage of gods and heroes, like the Æakid Miltiadês:[1] both were of middling station and circumstances. Aristeidês, son of Lysimachus, was on both sides of pure Athenian blood. But the wife of Neoklês, father of Themistoklês, was a foreign woman of Thrace or of Karia: and such an alliance is the less surprising, since Themistoklês must have been born during the dynasty of the Peisistratids, when the status of an Athenian citizen had not yet acquired its political value. There was a marked contrast between these two eminent men, — those points which stood most conspicuous in the one, being comparatively deficient in the other. In the description of Themistoklês, which we have the advantage of finding briefly sketched by Thucydidês, the circumstance

[1] Herodot. vi. 35

most emphatically brought out is, his immense force of spontaneous invention and apprehension, without any previous aid either from teaching or gradual practice. The might of unassisted nature[1] was never so strikingly exhibited as in him: he conceived the complications of a present embarrassment, and divined the chances of a mysterious future, with equal sagacity and equal quickness: the right expedient seemed to flash upon his mind extempore, even in the most perplexing contingences, without the least necessity for premeditation. Nor was he less distinguished for daring and resource in action. When engaged on any joint affairs, his superior competence marked him out as the leader for others to follow, and no business, however foreign to his experience, ever took him by surprise, or came wholly amiss to him. Such is the remarkable picture which Thucydidês draws of a countryman whose death nearly coincided in time with his own birth: the untutored readiness and universality of Themistoklês probably formed in his mind a contrast to the more elaborate discipline, and careful preliminary study, with which the statesmen of his own day — and Periklês especially, the greatest of them — approached the consideration and discussion of public affairs. Themistoklês had received no teaching from philosophers, sophists, and rhetors, who were the instructors of well-born youth in the days of Thucydidês, and whom Aristophanês, the contemporary of the latter, so unmercifully derides, — treating such instruction as worse than nothing, and extolling, in comparison with it, the unlettered courage, with mere gymnastic accomplishments, of the victors at Marathon.[2]

[1] Thucyd. i, 138. ἦν γὰρ ὁ Θεμιστοκλῆς βεβαιότατα δὴ Θύσεως ἰσχὺν δηλώσας καὶ διαφερόντως τι ἐς αὐτὸ μᾶλλον ἑτέρων ἄξιος θαυμάσαι· οἰκείᾳ γὰρ συνέσει καὶ οὔτε προμαθὼν ἐς αὐτὴν οὐδὲν οὔτ' ἐπιμαθὼν, τῶν τε παραχρῆμα δι' ἐλαχίστης βουλῆς κράτιστος γνώμων, καὶ τῶν μελλόντων ἐπὶ πλεῖστον τοῦ γενησομένου ἄριστος εἰκαστής. Καὶ ἃ μὲν μετὰ χεῖρας ἔχοι, καὶ ἐξηγήσασθαι οἷός τε· ὧν δὲ ἄπειρος εἴη, κρῖναι ἱκανῶς οὐκ ἀπήλλακτο. Τό τε ἄμεινον ἢ χεῖρον ἐν τῷ ἀφανεῖ ἔτι προεώρα μάλιστα· καὶ τὸ ξύμπαν εἰπεῖν, φύσεως μὲν δυνάμει μελέτης δὲ βραχύτητι, κράτιστος δὴ οὗτος αὐτοσχεδιάζειν τὰ δέοντα ἐγένετο.

[2] See the contrast of the old and new education, as set forth in Aristophanês, Nubes, 957–1003; also Ranæ, 1067.

About the training of Themistoklês, compared with that of the contemporaries of Periklês, see also Plutarch. Themistokl. c. 2.

There is no evidence in the mind of Thucydidês of any such undue contempt towards his own age. Though the same terms of contrast are tacitly present to his mind, he seems to treat the great capacity of Themistoklês as the more a matter of wonder, since it sprung up without that preliminary cultivation which had gone to the making of Periklês.

The general character given of Plutarch,[1] though many of his anecdotes are both trifling and apocryphal, is quite consistent with the brief sketch just cited from Thucydidês. Themistoklês had an unbounded passion, — not merely for glory, insomuch that the laurels of Miltiadês acquired at Marathon deprived him of rest, — but also for display of every kind. He was eager to vie with men richer than himself in showy exhibition, — one great source, though not the only source, of popularity at Athens, — nor was he at all scrupulous in procuring the means of doing so. Besides being assiduous in attendance at the ekklesia and the dikastery, he knew most of the citizens by name, and was always ready with advice to them in their private affairs. Moreover, he possessed all the tactics of an expert party-man in conciliating political friends and in defeating political enemies; and though he was in the early part of his life sincerely bent upon the upholding and aggrandizement of his country, and was on some most critical occasions of unspeakable value to it, — yet on the whole his morality was as reckless as his intelligence was eminent. He will be found grossly corrupt in the exercise of power, and employing tortuous means, sometimes indeed for ends in themselves honorable and patriotic, but sometimes also merely for enriching himself. He ended a glorious life by years of deep disgrace, with the forfeiture of all Hellenic esteem and brotherhood, — a rich man, an exile, a traitor, and a pensioner of the Great King, pledged to undo his own previous work of liberation accomplished at the victory of Salamis.

Of Aristeidês we possess unfortunately no description from the hand of Thucydidês; yet his character is so simple and consistent, that we may safely accept the brief but unqualified encomium of Herodotus and Plato, expanded as it is in the biography of Plutarch and Cornelius Nepos,[1] however little the details of the latter can be trusted. Aristeidês was inferior to Themistoklês in resource, quickness, flexibility, and power of coping with difficulties; but incomparably superior to him, as well as to other rivals and contemporaries, in integrity, public as well as private; inaccessible to pecuniary temptations, as well as to other seductive influences, and deserving as well as enjoying the highest measure of personal confidence. He is described as the peculiar friend of Kleisthenês, the first founder of the democracy,[2] — as pursuing a straight and single-handed course in political life, with no solicitude for party ties, and with little care either to conciliate friends or to offend enemies, — as unflinching in the exposure of corrupt practices, by whomsoever committed or upheld, — as earning for himself the lofty surname of the Just, not less by his judicial decisions in the capacity of archon, than by his equity in private arbitrations, and even his candor in political dispute, — and as manifesting throughout a long public life, full of tempting opportunities, an uprightness without flaw and beyond all suspicion, recognized equally by his bitter contemporary the poet Timokreon,[3] and by the allies of Athens, upon whom he first assessed the tribute. Few of the leading men in any part of Greece were without some taint on their reputation, deserved or undeserved, in regard to pecuniary probity; but whoever became notoriously recognized as possessing this vital quality, acquired by means of it a firmer hold on the public esteem than even eminent talents could confer. Thucydidês ranks conspicuous probity among the first of the many ascendent qualities possessed by Periklês;[4] and Nikias, equal to him in this respect, though immeasurably inferior in every other, owed to it a still larger proportion of that exaggerated confidence which the Athenian people continued so long to repose in him. The abilities of Aristeidês, though apparently adequate to every occasion on which he was engaged, and only inferior when we compare him with so

remarkable a man as Themistoklês, were put in the shade by this incorruptible probity, which procured for him, however, along with the general esteem, no inconsiderable amount of private enmity from jobbers whom he exposed, and even some jealousy from persons who heard it proclaimed with offensive ostentation.

We are told that a rustic and unlettered citizen gave his ostracizing vote, and expressed his dislike against Aristeidês,[1] on the simple ground that he was tired of hearing him always called the Just. Now the purity of the most honorable man will not bear to be so boastfully talked of as if he were the only honorable man in the country: the less it is obtruded, the more deeply and cordially will it be felt: and the story just alluded to, whether true or false, illustrates that natural reaction of feeling, produced by absurd encomiasts, or perhaps by insidious enemies under the mask of encomiasts, who trumpeted forth Aristeidês as *The* Just man at Attica, so as to wound the legitimate dignity of every one else. Neither indiscreet friends nor artful enemies, however, could rob him of the lasting esteem of his countrymen; which he enjoyed, with intervals of their displeasure, to the end of his life. Though he was ostracized during a part of the period between the battle of Marathon and Salamis, — at a time when the rivalry between him and Themistoklês was so violent that both could not remain at Athens without peril, — yet the dangers of Athens during the invasion of Xerxês brought him back before the ten years of exile were expired. His fortune, originally very moderate, was still farther diminished during the course of his life, so that he died very poor, and the state was obliged to lend aid to his children.

Such were the characters of Themistokiês and Aristeidês, the two earliest leaders thrown up by the Athenian democracy. Half a century before, Themistoklês would have been an active partisan in the faction of the Parali or the Pedieis, while Aristeidês would probably have remained an unnoticed citizen. At the present period of Athenian history, the characters of the soldier, the magistrate, and the orator, were intimately blended together in a citizen who stood forward for eminence, though they tended more and more to divide themselves during the en-

[1] Plutarch, Aristeidês, c. 7.

suing century and a half. Aristeidês and Miltiadês were both elected among the ten generals, each for his respective tribe, in the year of the expedition of Datis across the Ægean, and probably even after that expedition was known to be on its voyage. Moreover, we are led to suspect from a passage in Plutarch, that Themistoklês also was general of his tribe on the same occasion,[1] though this is doubtful; but it is certain that he fought at Marathon. The ten generals had jointly the command of the army, each of them taking his turn to exercise it for a day: in addition to the ten, moreover, the third archon, or polemarch, was considered as eleventh in the military council. The polemarch of this year was Kallimachus of Aphidnæ.[2] Such were the chiefs of the military force, and to a great degree the administrators of foreign affairs, at the time when the four thousand Athenian kleruchs, or settlers planted in Eubœa, — escaping from Eretria, now invested by the Persians, — brought word to their countrymen at home that the fall of that city was impending. It was obvious that the Persian host would proceed from Eretria forthwith against Athens, and a few days afterwards Hippias disembarked them at Marathon, whither the Athenian army marched to meet them.

Of the feeling which now prevailed at Athens we have no details, but doubtless the alarm was hardly inferior to that which had been felt at Eretria: dissenting opinions were heard as to the proper steps to be taken, nor were suspicions of treason wanting. Pheidippidês the courier was sent to Sparta immediately to solicit assistance; and such was his prodigious activity, that he performed this journey of one hundred and fifty miles, on foot, in forty-eight hours.[3] He revealed to the ephors that Eretria was already enslaved, and entreated their assistance to avert the same fate from Athens, the most ancient city in Greece. The Spartan authorities readily promised their aid, but unfortunately it was now the ninth day of the moon: ancient law or custom forbade them to march, in this month at least, during the

[1] Plutarch, Aristeidês, c. 5.

[2] Herodot. vi, 109, 110.

[3] Mr. Kinneir remarks that the Persian Cassids, or foot-messengers, will travel for several days successively at the rate of sixty or seventy miles a day (Geographical Memoir of Persia, p. 44).

last quarter before the full moon; but after the full they engaged to march without delay. Five days' delay at this critical moment might prove the utter ruin of the endangered city; yet the reason assigned seems to have been no pretence on the part of the Spartans. It was mere blind tenacity of ancient habit, which we shall find to abate, though never to disappear, as we advance in their history.[1] Indeed, their delay in marching to rescue Attica from Mardonius, eleven years afterwards, at the imminent hazard of alienating Athens and ruining the Hellenic cause, marks the same selfish dulness. But the reason now given certainly looked very like a pretence, so that the Athenians could indulge no certain assurance that the Spartan troops would start even when the full moon arrived.

In this respect the answer brought by Pheidippidês was mischievous, as it tended to increase that uncertainty and indecision which already prevailed among the ten generals, as to the proper steps for meeting the invaders. Partly, perhaps, in reliance on this expected Spartan help, five out of the ten generals were decidedly averse to an immediate engagement with the Persians; while Miltiadês with the remaining four strenuously urged that not a moment should be lost in bringing the enemy to action, without leaving time to the timid and the treacherous to establish correspondence with Hippias, and to take some active step for paralyzing all united action on the part of the citizens. This most momentous debate, upon which the fate of Athens hung, is represented by Herodotus to have occurred at Marathon, after the army had marched out and taken post there within sight of the Persians; while Cornelius Nepos describes it as having been raised before the army quitted the city, — upon the question, whether it was prudent to meet the enemy at all in the field, or to confine the defence to the city and the sacred rock. Inaccurate as this latter author generally is, his statement seems more probable here than that of Herodotus. For the ten generals would scarcely march out of Athens to Marathon without having previously resolved to fight: moreover, the question between fighting in the field or resisting behind the walls, which had already been raised at Eretria, seems the natural point on which

[1] Herodot. ix. 7–10

the five mistrustful generals would take their stand. And probably indeed Miltiadês himself, if debarred from immediate action, would have preferred to hold possession of Athens, and prevent any treacherous movement from breaking out there, — rather than to remain inactive on the hills, watching the Persians at Marathon, with the chance of a detachment from their numerous fleet sailing round to Phalêrum, and thus distracting, by a double attack, both the city and the camp.

However this may be, the equal division of opinion among the ten generals, whether manifested at Marathon or at Athens, is certain, — so that Miltiadês had to await the casting-vote of the polemarch Kallimachus. To him he represented emphatically the danger of delay, and the chance of some traitorous intrigue occurring to excite disunion and aggravate the alarms of the citizens. Nothing could prevent such treason from breaking out, with all its terrific consequences of enslavement to the Persians and to Hippias, except a bold, decisive, and immediate attack, — the success of which he (Miltiadês) was prepared to guarantee. Fortunately for Athens, the polemarch embraced the opinion of Miltiadês, and the seditious movements which were preparing did not show themselves until after the battle had been gained. Aristeidês and Themistoklês are both recorded to have seconded Miltiadês warmly in this proposal, — while all the other generals agreed in surrendering to Miltiadês their days of command, so as to make him, as much as they could, the sole leader of the army. It is said that the latter awaited the day of his own regular turn before he fought the battle.[1] Yet considering the eagerness which he displayed to bring on an immediate and decisive action, we cannot suppose that he would have admitted any serious postponement upon such a punctilio.

While the army were mustered on the ground sacred to Heraklês near Marathon, with the Persians and their fleet occupying the plain and shore beneath, and in preparation for immediate action, they were joined by the whole force of the little town of Platæa, consisting of about one thousand hoplites, who had marched directly from their own city to the spot, along the southern range of Kithærôn and passing through Dekeleia. We are

[1] Herodot. vi, 110.

not told that they had been invited, and very probably the Athenians had never thought of summoning aid from this unimportant neighbor, in whose behalf they had taken upon themselves a lasting feud with Thebes and the Bœotian league.[1] Their coming on this important occasion seems to have been a spontaneous effort of gratitude, which ought not to be the less commended because their interests were really wrapped up in those of Athens, — since if the latter had been conquered, nothing could have saved Platæa from being subdued by the Thebans, — yet many a Grecian town would have disregarded both generous impulse and rational calculation, in the fear of provoking a new and terrific enemy. If we summon up to our imaginations all the circumstances of the case, — which it requires some effort to do, because our authorities come from the subsequent generations, after Greece had ceased to fear the Persians, — we shall be sensible that this volunteer march of the whole Platæan force to Marathon is one of the most affecting incidents of all Grecian history. Upon Athens generally it produced an indelible impression, commemorated ever afterwards in the public prayers of the Athenian herald,[2] and repaid by a grant to the Platæans of the full civil rights — seemingly without the political rights — of Athenian citizens. Upon the Athenians then marshalled at Marathon its effect must have been unspeakably powerful and encouraging, as a proof that they were not altogether isolated from Greece, and as an unexpected countervailing stimulus under circumstances so full of hazard.

Of the two opposing armies at Marathon, we are told that the Athenians were ten thousand hoplites, either including or besides the one thousand who came from Platæa.[3] Nor is this state-

[1] Herodot. vi, 108–112.

[2] Thucyd. iii, 55.

[3] Justin states ten thousand Athenians, besides one thousand Platæans. Cornelius Nepos, Pausanias, and Plutarch give ten thousand as the sum total of both. Justin, ii, 9; Corn. Nep. Miltiad. c. 4; Pausan. iv, 25, 5; x, 20, 2: compare also Suidas, v, Ἱππίας.

Heeren (De Fontibus Trogi Pompeii, Dissertat. ii, 7) affirms that Trogus, or Justin, follows Herodotus in matters concerning the Persian invasions of Greece. He cannot have compared the two very attentively; for Justin not only states several matters which are not to be found in Herodotus, but is at variance with the latter on some particulars not unimportant.

ment in itself improbable, though it does not come from Herodotus, who is our only really valuable authority on the case, and who mentions no numerical total. Indeed, the number named seems smaller than we should have expected, considering that no less than four thousand kleruchs, or out-settled citizens, had just come over from Eubœa. A sufficient force of citizens must of course have been left behind to defend the city. The numbers of the Persians we cannot be said to know at all, nor is there anything certain except that they were greatly superior to the Greeks. We hear from Herodotus that their armament originally consisted of six hundred ships of war, but we are not told how many separate transports there were; and, moreover, reinforcements had been procured as they came across the Ægean from the islands successively conquered. The aggregate crews on board of all their ships must have been between one hundred and fifty thousand and two hundred thousand men; but what proportion of these were fighting men, or how many actually did fight at Marathon, we have no means of determining.[1] There were a

[1] Justin (ii, 9) says that the total of the Persian army was six hundred thousand, and that two hundred thousand perished. Plato (Menexen. p. 240) and Lysias (Orat. Funebr. c. 7) speak of the Persian total as five hundred thousand men. Valerius Maximus (v, 3), Pausanias (iv, 25), and Plutarch (Parallel. Græc. ad init.), give three hundred thousand men. Cornelius Nepos (Miltiadês, c. 5) gives the more moderate total of one hundred and ten thousand men.

See the observations on the battle of Marathon, made both by Colonel Leake and by Mr. Finlay, who have examined and described the locality; Leake, on the Demi of Attica, in Transactions of the Royal Society of Literature, vol. ii, p. 160, *seq.*; and Finlay, on the Battle of Marathon, in the same Transactions, vol. iii, pp. 360–380, etc.

Both have given remarks on the probable numbers of the armies assembled; but there are really no materials, even for a probable guess, in respect to the Persians. The silence of Herodotus (whom we shall find hereafter very circumstantial as to the numbers of the army under Xerxês) seems to show that he had no information which he could trust. His account of the battle of Marathon presents him in honorable contrast with the loose and boastful assertors who followed him; for though he does not tell us much, and falls lamentably short of what we should like to know, yet all that he does say is reasonable and probable as to the proceedings of both armies and the little which he states becomes more trustworthy on that very account, — because it *is* so little, — showing that he keeps strictly within his authorities.

certain proportion of cavalry, and some transports expressly prepared for the conveyance of horses: moreover, Herodotus tells us that Hippias selected the plain of Marathon for a landing place, because it was the most convenient spot in Attica for cavalry movements, — though it is singular, that in the battle the cavalry are not mentioned.

Marathon, situated near to a bay on the eastern coast of Attica, and in a direction E.N.E. from Athens, is divided by the high ridge of Mount Pentelikus from the city, with which it communicated by two roads, one to the north, another to the south of that mountain. Of these two roads, the northern, at once the shortest and the most difficult, is twenty-two miles in length: the southern — longer but more easy, and the only one practicable for chariots — is twenty-six miles in length, or about six and a half hours of computed march. It passed between mounts Pentelikus and Hymettus, through the ancient demes of Gargêttus and Pallênê, and was the road by which Peisistratus and Hippias, when they landed at Marathon forty-seven years before, had marched to Athens. The bay of Marathon, sheltered by a projecting cape from the northward, affords both deep water and a shore convenient for landing; while "its plain (says a careful modern observer[1]) extends in a perfect level along this

There is nothing in the account of Herodotus to make us believe that he had ever visited the ground of Marathon.

[1] See Mr. Finlay on the Battle of Marathon, Transactions, etc., vol. iii, pp. 364, 368, 383, *ut suprà*: compare Hobhouse, Journey in Albania, i, p. 432.

Colonel Leake thinks that the ancient town of Marathon was not on the exact site of the modern Marathon, but at a place called Vraná, a little to the south of Marathon (Leake, on the Demi of Attica, in the Transactions of the Royal Society of Literature, 1829, vol. ii, p. 166).

"Below these two points," he observes, "(the tumuli of Vraná and the hill of Kotróni,) the plain of Marathon expands to the shore of the bay, which is near two miles distant from the opening of the valley of Vraná. It is moderately well cultivated with corn, and is one of the most fertile spots in Attica, though rather inconveniently subject to inundations from the two torrents which cross it, particularly that of Marathóna. From Lucian (in Icaro-Menippo) it appears that the parts about Œnoê were noted for their fertility, and an Egyptian poet of the fifth century has celebrated the vines and olives of Marathon. It is natural to suppose that the vineyards occupied the rising grounds; and it is probable that the olive-

fine bay, and is in length about six miles, in breadth never less than about one mile and a half. Two marshes bound the extremities of the plain: the southern is not very large, and is almost dry at the conclusion of the great heats; but the northern, which generally covers considerably more than a square mile, offers several parts which are at all seasons impassable. Both, however, leave a broad, firm, sandy beach between them and the sea. The uninterrupted flatness of the plain is hardly relieved by a single tree; and an amphitheatre of rocky hills and rugged mountains separates it from the rest of Attica, over the lower ridges of which some steep and difficult paths communicate with the districts of the interior."

The position occupied by Miltiadês before the battle, identified as it was to all subsequent Athenians by the sacred grove of Hêraklês near Marathon, was probably on some portion of the high ground above this plain, and Cornelius Nepos tells us that he protected it from the attacks of the Persian cavalry by felled trees obstructing the approach. The Persians occupied a position on the plain; while their fleet was ranged along the beach, and Hippias himself marshalled them for the battle.[1] The native Persians and Sakæ, the best troops in the whole army, were placed in the centre, which they considered as the post of honor,[2]

trees were chiefly situated in the two valleys, where some are still growing: for as to the plain itself, the circumstances of the battle incline one to believe that it was anciently as destitute of trees as it is at the present day." (Leake, on the Demi of Attica, Trans. of Roy. Soc. of Literature, vol. ii, p. 162.)

Colonel Leake farther says, respecting the fitness of the Marathonian ground for cavalry movements: "As I rode across the plain of Marathon with a peasant of Vraná, he remarked to me that it was a fine place for cavalry to fight in. None of the modern Marathonii were above the rank of laborers: they have heard that a great battle was once fought there, but that is all they know." (Leake, *ut sup.* ii, p. 175.)

[1] Herodot. vi, 107.

[2] Plutarch, Symposiac. i, 3, p. 619; Xenophon, Anabas. i, 8, 21; Arrian, i, 8, 18; iii, 11, 16.

We may compare, with this established battle-array of the Persian armies, that of the Turkish armies, adopted and constantly followed ever since the victorious battle of Ikonium, in 1386, gained by Amurath the First over the Karamanians. The European troops, or those of Rum, occupy the left wing: the Asiatic troops, or those of Anatoli, the right

and which was occupied by the Persian king himself, when present at a battle. The right wing was so regarded by the Greeks, and the polemarch Kallimachus had the command of it; the hoplites being arranged in the order of their respective tribes from right to left, and at the extreme left stood the Platæans. It was necessary for Miltiadès to present a front equal, or nearly equal, to that of the more numerous Persian host, in order to guard himself from being taken in flank: and with this view he drew up the central tribes, including the Leontis and Antiochis, in shallow files, and occupying a large breadth of ground; while each of the wings was in stronger and deeper order, so as to make his attack efficient on both sides. His whole army consisted of hoplites, with some slaves as unarmed or light-armed attendants, but without either bowmen or cavalry. Nor could the Persians have been very strong in this latter force, seeing that their horses had to be transported across the Ægean. But the elevated position of Miltiadès enabled them to take some measure of the numbers under his command, and the entire absence of cavalry among their enemies could not but confirm the confidence with which a long career of uninterrupted victory had impressed their generals.

At length the sacrifices in the Greek camp were favorable for battle, and Miltiadès, who had everything to gain by coming immediately to close quarters, ordered his army to advance at a running step over the interval of one mile which separated the two armies. This rapid forward movement, accompanied by the war-cry, or pæan, which always animated the charge of the Greek soldier, astounded the Persian army; who construed it as an act of desperate courage, little short of insanity, in a body not only small but destitute of cavalry or archers, — but who, at the same time, felt their conscious superiority sink within them. It

wing: the Janissaries are in the centre. The Sultan, or the Grand Vizir, surrounded by the national cavalry, or Spahis, is in the central point of all (Von Hammer, Geschichte des Osmannischen Reichs, book v, vol. i, p. 199).

About the honor of occupying the right wing in a Grecian army, see in particular the animated dispute between the Athenians and the Tegeates before the battle of Platæa (Herodot. ix, 27): it is the post assigned to the heroic kings of legendary warfare (Eurip. Supplices, 657)

seems to have been long remembered also among the Greeks as the peculiar characteristic of the battle of Marathon, and Herodotus tells us that the Athenians were the first Greeks who ever charged at a run.[1] It doubtless operated beneficially in rendering the Persian cavalry and archers comparatively innocuous, but we may reasonably suppose that it also disordered the Athenian ranks, and that when they reached the Persian front, they were both out of breath and unsteady in that line of presented spears and shields which constituted their force. On the two wings, where the files were deep, this disorder produced no mischievous effect: the Persians, after a certain resistance, were overborne and driven back. But in the centre, where the files were shallow, and where, moreover, the native Persians and other choice troops of the army were posted, the breathless and disordered Athenian hoplites found themselves in far greater difficulties. The tribes Leontis and Antiochis, with Themistoklês and Aristeidès among them, were actually defeated, broken, driven back, and pursued by the Persians and Sakæ.[2] Miltiadès

[1] Herodot. vi, 112. Πρῶτοι μὲν γὰρ Ἑλλήνων πάντων τῶν ἡμεῖς ἴδμεν, δρόμῳ ἐς πολεμίους ἐχρήσαντο.

The running pace of the charge was obviously one of the most remarkable events connected with the battle. Colonel Leake and Mr. Finlay seem disposed to reduce the run to a quick march; partly on the ground that the troops must have been disordered and out of breath by running a mile. The probability is, that they really were so, and that such was the great reason of the defeat of the centre. It is very probable that a part of the mile run over consisted of declivity. I accept the account of Herodotus literally, though whether the distance be exactly stated, we cannot certain', say: indeed the fact is, that it required some steadiness of discipline to prevent the step of hoplites, when charging, from becoming accelerated into a run. See the narrative of the battle of Kunaxa in Xenoph. Anabas. i, 8, 18; Diodor. xiv, 23: compare Polyæn. ii, 2, 3. The passage of Diodorus here referred to contrasts the advantages with the disadvantages of the running charge.

Both Colonel Leake and Mr. Finlay try to point out the exact ground occupied by the two armies: they differ in the spot chosen, and I cannot think that there is sufficient evidence to be had in favor of any spot. Leake thinks that the Persian commanders were encamped in the plain of Tricorythos, separated from that of Marathon by the great marsh, and communicating with it only by means of a causeway (Leake, Transact. ii p. 170).

[2] Herodot. vi, 113. Κατὰ τοῦτο μὲν δὴ, ἐνίκων οἱ βάρβαροι, καὶ ἐδίωκον ἐς τὴν μεσόγαιαν

seems to have foreseen the possibility of such a check, when he found himself compelled to diminish so materially the depth of his centre: for his wings, having routed the enemies opposed to them, were stayed from pursuit until the centre was extricated, and the Persians and Sakæ put to flight along with the rest. The pursuit then became general, and the Persians were chased to their ships ranged in line along the shore: some of them became involved in the impassable marsh and there perished.[1] The Athenians tried to set the ships on fire, but the defence here was both vigorous and successful, — several of the forward warriors of Athens were slain, — and only seven ships out of the numerous fleet destroyed.[2] This part of the battle terminated to the advantage of the Persians. They repulsed the Athenians from the sea-shore, and secured a safe reëmbarkation; leaving few or no prisoners, but a rich spoil of tents and equipments which had been disembarked and could not be carried away.

Herodotus estimates the number of those who fell on the Persian side in this memorable action at six thousand four hundred men: the number of Athenian dead is accurately known, since all were collected for the last solemn obsequies, — they were one hundred and ninety-two. How many were wounded, we do not hear. The brave Kallimachus the polemarch, and Stesilaus, one of the ten generals, were among the slain; together with Kynegeirus son of Euphorion, who, in laying hold on the poop-staff of one of the vessels, had his hand cut off by an axe,[3] and died of the wound. He was brother of the poet Æschylus, himself present at the fight; to whose imagination this battle at the ships must have emphatically recalled the fifteenth book of the Iliad.

Herodotus here tells us the whole truth without disguise: Plutarch (Aristeidês, c. 3) only says that the Persian centre made a longer resistance, and gave the tribes in the Grecian centre more trouble to overthrow

[1] Pausan. i, 32, 6. [2] Herodot. vi, 113–115.

[3] Herodot. vi, 114. This is the statement of Herodotus respecting Kynegeirus. How creditably does his character as an historian contrast with that of the subsequent romancers! Justin tells us that Kynegeirus first seized the vessel with his right hand: that was cut off, and he held the vessel with his left: when he had lost that also, he seized the ship with his teeth, "like a wild beast," (Justin, ii, 9) — Justin seems to have found this statement in many different authors: "Cynegiri militis virtus, multis scriptorum laudibus celebrata."

Both these Athenian generals are said to have perished in the assault of the ships, apparently the hottest part of the combat. The statement of the Persian loss as given by Herodotus appears moderate and reasonable,[1] but he does not specify any distinguished individuals as having fallen.

But the Persians, though thus defeated and compelled to abandon the position of Marathon, were not yet disposed to relinquish altogether their chances against Attica. Their fleet was observed to take the direction of Cape Sunium, — a portion being sent to take up the Eretrian prisoners and the stores which had been left in the island of Ægilia. At the same time a shield, discernible from its polished surface afar off, was seen held aloft upon some high point of Attica,[2] — perhaps on the summit of Mount Pentelikus, as Colonel Leake supposes with much plausibility. The Athenians doubtless saw it as well as the Persians; and Miltiadês did not fail to put the right interpretation upon it, taken in conjunction with the course of the departing fleet. The shield was a signal put up by partisans in the country, to invite the Persians round to Athens by sea, while the Marathonian army was absent. Miltiadês saw through the plot, and lost not a moment in returning to Athens. On the very day of the battle, the Athenian army marched back with the utmost speed from the precinct of Hêraklês at Marathon to the precinct of the same god at Kynosarges, close to Athens, which they reached before the arrival of the Persian fleet.[3] Datis soon came off the port

[1] For the exaggerated stories of the numbers of Persians slain, see Xenophon, Anabas. iii, 2, 12; Plutarch, De Malign. Herodot. c. 26, p. 862; Justin, ii, 9; and Suidas, v, Ποικίλη.

In the account of Ktêsias, Datis was represented as having been killed in the battle, and it was farther said that the Athenians refused to give up his body for interment; which was one of the grounds whereupon Xerxês afterwards invaded Greece. It is evident that in the authorities which Ktêsias followed, the alleged death of Datis at Marathon was rather emphatically dwelt upon. See Ktêsias, Persica, c. 18–21, with the note of Bähr, who is inclined to defend the statement, against Herodotus.

[2] Herodot. vi, 124. Ἀνεδέχθη μὲν γὰρ ἀσπὶς, καὶ τοῦτο οὐκ ἔστι ἄλλως εἰπεῖν· ἐγένετο γάρ· ὃς μέντοι ἦν ὁ ἀναδέξας οὐκ ἔχω τὸ προσωτέρω εἰπεῖν πρὸς ἑτέων.

[3] Herodot. vi, 116. Οὗτοι μὲν δὴ περιέπλωον Σούνιον. Ἀθηναῖοι δὲ, ὡς τοῦτο εἶχον, τάχιστα ἐβοήθεον ἐς τὸ ἄστυ· καὶ ἐφθησάν τε ἀπικόμενοι

of Phalêrum, but the partisans of Hippias had been dismayed by the rapid return of the Marathonian army, and he did not therefore find those aids and facilities which he had anticipated for a fresh disembarkation in the immediate neighborhood of Athens. Though too late, however, it seems that he was not much too late: the Marathonian army had only just completed their forced return-march. A little less quickness on the part of Miltiadês in deciphering the treasonable signal and giving the instant order of march, — a little less energy on the part of the Athenian citizens in superadding a fatiguing march to a no less fatiguing combat, — and the Persians, with the partisans of Hippias, might have been found in possession of Athens. As the facts turned out, Datis, finding at Phalêrum no friendly movement to encourage him, but, on the contrary, the unexpected presence of the soldiers who had already vanquished him at Marathon, — made no attempt again to disembark in Attica, and sailed away, after a short delay, to the Cyclades.

Thus was Athens rescued, for this time at least, from a danger not less terrible than imminent. Nothing could have rescued her except that decisive and instantaneous attack which Miltiadês so emphatically urged. The running step on the field of Marathon might cause some disorder in the ranks of the hoplites; but extreme haste in bringing on the combat was the only means of preventing disunion and distraction in the minds of the citizens. Imperfect as the account is which Herodotus gives of this most interesting crisis, we see plainly that the partisans of Hippias had actually organized a conspiracy, and that it only failed by coming a little too late. The bright shield uplifted on Mount Pentelikus, apprizing the Persians that matters were prepared for them at Athens, was intended to have come to their view before any action had taken place at Marathon, and while the Athenian army were yet detained there; so that Datis might have sent a portion of his fleet round to Phalêrum, retaining the

πρὶν ἢ τοὺς βαρβάρους ἥκειν, καὶ ἐστρατοπεδεύσαντο ἀπιγμένοι ἐξ Ἡρακληίου τοῦ ἐν Μαραθῶνι ἐς ἄλλο Ἡρακληίον τὸ ἐν Κυνοσάργει.

Plutarch (Bellone an Pace clariores fuerint Athenienses, c. 8, p. 350) represents Miltiadês as returning to Athens on the *day after* the battle: it must have been on the same afternoon, according to the account of Herodotus.

rest for combat with the enemy before him. If it had once become known to the Marathonian army that a Persian detachment had landed at Phalêrum,[1] — where there was a good plain for cavalry to act in, prior to the building of the Phalêric wall, as had been seen in the defeat of the Spartan Anchimolius by the Thessalian cavalry, in 510 B.C., — that it had been joined by timid or treacherous Athenians, and had perhaps even got possession of the city, — their minds would have been so distracted by the double danger, and by fears for their absent wives and children, that they would have been disqualified for any unanimous execution of military orders, and generals as well as soldiers would have become incurably divided in opinion, — perhaps even mistrustful of each other. The citizen-soldier of Greece generally, and especially of Athens, possessed in a high degree both personal bravery and attachment to order and discipline; but his bravery was not of that equal, imperturbable, uninquiring character, which belonged to the battalions of Wellington or Napoleon, — it was fitful, exalted or depressed by casual occurrences, and often more sensitive to dangers absent and unseen, than to enemies immediately in his front. Hence the advantage, so unspeakable in the case before us, and so well appreciated by Miltiadês, of having one undivided Athenian army, — with one hostile army, and only one, to meet in the field. When we come to the battle of Salamis, ten years later, it will be seen that the Greeks of that day enjoyed the same advantage: though the wisest advisers of Xerxês impressed upon him the prudence of dividing his large force, and of sending detachments to assail separate Greek states — which would infallibly produce the effect of breaking up the combined Grecian host, and leaving no central or coöperating force for the defence of Greece generally. Fortunately for the Greeks, the childish insolence of Xerxês led him to despise all such advice, as implying conscious weakness. Not so Datis and Hippias. Sensible of the prudence of distracting the attention of the Athenians by a double attack, they laid a scheme, while the main army was at Marathon, for rallying the partisans of Hippias, with a force to assist them, in the neighborhood of Athens,

[1] Herodot. v, 62, 63.

— and the signal was upheld by these partisans as soon as their measures were taken. But the rapidity of Miltiadês so precipitated the battle, that this signal came too late, and was only given, "when the Persians were already in their ships,"[1] after the Marathonian defeat. Even then it might have proved dangerous, had not the movements of Miltiadês been as rapid after the victory as before it: but if time had been allowed for the Persian movement on Athens before the battle of Marathon had been fought, the triumph of the Athenians might well have been exchanged for a calamitous servitude. To Miltiadês belongs the credit of having comprehended the emergency from the beginning, and overruled the irresolution of his colleagues by his own single-hearted energy. The chances all turned out in his favor, — for the unexpected junction of the Platæans in the very encampment of Marathon must have wrought up the courage of his army to the highest pitch: and not only did he thus escape all the depressing and distracting accidents, but he was fortunate enough to find this extraneous encouragement immediately preceding the battle, from a source on which he could not have calculated.

I have already observed that the phase of Grecian history best known to us, amidst which the great authors from whom we draw our information lived, was one of contempt for the Persians in the field. And it requires some effort of imagination to call back previous feelings after the circumstances have been altogether reversed: perhaps even Æschylus the poet, at the time when he composed his tragedy of the Persæ, to celebrate the disgraceful flight of the invader Xerxês, may have forgotten the emotions with which he and his brother Kynegeirus must have marched out from Athens fifteen years before, on the eve of the battle of Marathon. It must therefore be again mentioned that, down to the time when Datis landed in the bay of Marathon, the tide of Persian success had never yet been interrupted, — and that especially during the ten years immediately preceding, the high-handed and cruel extinction of the Ionic revolt had aggravated to the highest pitch the alarm of the

[1] Herodot. vi, 115. Τοῖσι Πέρσῃσι ἀναδεξαι ἀσπίδα, ἐοῦσι ἤδη ἐν τῇσι νηυσί.

Greeks. To this must be added the successes of Datis himself, and the calamities of Eretria, coming with all the freshness of novelty as an apparent sentence of death to Athens. The extreme effort of courage required in the Athenians, to encounter such invaders, is attested by the division of opinion among the ten generals. Putting all the circumstances together, it is without a parallel in Grecian history, surpassing even the combat of Thermopylæ, as will appear when I come to describe that memorable event. And the admirable conduct of the five dissentient generals, when outvoted by the decision of the polemarch against them, in coöperating heartily for the success of a policy which they deprecated, — proves how much the feelings of a constitutional democracy, and that entire acceptance of the pronounced decision of the majority on which it rests, had worked themselves into the Athenian mind. The combat of Marathon was by no means a very decisive defeat, but it was a defeat, — and the first which the Persians had ever received from Greeks in the field. If the battle of Salamis, ten years afterwards, could be treated by Themistoklês as a hair-breadth escape for Greece, much more is this true of the battle of Marathon;[1] which first afforded reasonable proof, even to discerning and resolute Greeks, that the Persians might be effectually repelled, and the independence of European Greece maintained against them, — a conviction of incalculable value in reference to the formidable trials destined to follow. Upon the Athenians themselves, the first to face in the field successfully the terrific look of a Persian army, the effect of the victory was yet more stirring and profound.[2] It supplied them with resolution for

[1] Herodot. viii, 108. ἡμεῖς δε, εὕρημα γὰρ εὑρήκαμεν ἡμέας τε καὶ τὴν Ελλάδα, νέφος τοσοῦτον ἀνθρώπων ἀνωσάμενοι.

[2] Pausanias, i, 14, 4; Thucyd. i, 73. φαμὲν γὰρ Μαραθῶνί τε μόνοι προκινδυνεῦσαι τῷ βαρβάρῳ, etc.

Herodot. vi, 112. πρῶτοί τε ἀνέσχοντο ἐσθῆτά τε Μηδικὴν ὁρέοντες, καὶ ἄνδρας ταύτην ἐσθημένους· τέως δὲ ἦν τοῖσι Ἕλλησι καὶ τὸ οὔνομα τὸ Μήδων φόβος ἀκοῦσαι.

It is not unworthy of remark, that the memorable oath in the oration of Demosthenês, de Coronâ, wherein he adjures the warriors of Marathon copies the phrase of Thucydidês, — οὐ μὰ τοὺς ἐν Μαραθῶνι προκινδυνεύσαντας τῶν προγόνων, etc (Demosthen. de Coronâ, c. 60.)

the far greater actual sacrifices which they cheerfully underwent ten years afterwards, at the invasion of Xerxês, without faltering in their Pan-Hellenic fidelity; and it strengthened them at home by swelling the tide of common sentiment and patriotic fraternity in the bosom of every individual citizen. It was the exploit of Athenians alone, but of all Athenians without dissent or exception, — the boast of orators, repeated until it almost degenerated into common-place, though the people seem never to have become weary of allusions to their single-handed victory over a host of forty-six nations.[1] It had been purchased without a drop of intestine bloodshed, — for even the unknown traitors who raised the signal-shield on Mount Pentelikus, took care not to betray themselves by want of apparent sympathy with the triumph: lastly, it was the final guarantee of their democracy, barring all chance of restoration of Hippias for the future. Themistoklês[2] is said to have been robbed of his sleep by the trophies of Miltiadês, and this is cited in proof of his ambitious temperament; but without supposing either jealousy or personal love of glory, the rapid transit from extreme danger to unparalleled triumph might well deprive of rest even the most sober-minded Athenian.

Who it was that raised the treacherous signal-shield to attract the Persians to Athens was never ascertained: very probably, in the full exultation of success, no investigation was made. Of course, however, the public belief would not be satisfied without singling out some persons as the authors of such a treason; and the information received by Herodotus (probably about 450–440 B.C., forty or fifty years after the Marathonian victory) ascribed the deed to the Alkmæônids; nor does he notice any other reported authors, though he rejects the allegation against them upon very sufficient grounds. They were a race religiously

[1] So the computation stands in the language of Athenian orators (Herodot. ix, 27.) It would be unfair to examine it critically.

[2] Plutarch, Themistoklês, c. 3. According to Cicero (Epist. ad Attic. ix, 19) and Justin (ii, 9) Hippias was killed at Marathon. Suidas (v, Ἱππίας) says that he died afterwards at Lemnos. Neither of these statements seems probable. Hippias would hardly go to Lemnos, which was an Athenian possession; and had he been slain in the battle, Herodotus would have been likely to mention it.

tainted, ever since the Kylonian sacrilege, and were therefore convenient persons to brand with the odium of an anonymous crime; while party feud, if it did not originally invent, would at least be active in spreading and certifying such rumors. At the time when Herodotus knew Athens, the political enmity between Periklês son of Xanthippus, and Kimon son of Miltiadês, was at its height: Periklês belonged by his mother's side to the Alkmæônid race, and we know that such lineage was made subservient to political manœuvres against him by his enemies.[1] Moreover, the enmity between Kimon and Periklês had been inherited by both from their fathers; for we shall find Xanthippus, not long after the battle of Marathon, the prominent accuser of Miltiadês. Though Xanthippus was not an Alkmæônid, his marriage with Agaristê connected himself indirectly, and his son Periklês directly, with that race. And we may trace in this standing political feud a probable origin for the false reports as to the treason of the Alkmæônids, on that great occasion which founded the glory of Miltiadês; for that the reports were false, the intrinsic probabilities of the case, supported by the judgment of Herodotus, afford ample ground for believing.

When the Athenian army made its sudden return-march from Marathon to Athens, Aristeidês with his tribe was left to guard the field and the spoil; but the speedy retirement of Datis from Attica left the Athenians at full liberty to revisit the scene and discharge the last duties to the dead. A tumulus was erected on the spot[2] — such distinction was never conferred by Athens except in this case only — to the one hundred and ninety-two Athenian citizens who had been slain. Their names were inscribed on ten pillars erected at the spot, one for each tribe: there was also a second tumulus for the slain Platæans, a third for the slaves, and a separate funeral monument to Miltiadês himself. Six hundred years after the battle, Pausanias saw the tumulus, and could still read on the pillars the names of the immortalized warriors;[3] and even now a conspicuous tumulus exists about half a mile from the sea-shore, which Colonel Leake believes to

[1] Thucyd. i, 126.

[2] Thucyd. ii, 34

[3] Pausan. i, 32, 3. Compare the elegy of Kritias ap. Athenæ. i p. 28

be the same.[1] The inhabitants of the deme of Marathon worshipped these slain warriors as heroes, along with their own eponymus and with Hêraklês.

So splendid a victory had not been achieved, in the belief of the Athenians, without marked supernatural aid. The god Pan had met the courier Pheidippidês on his hasty route from Athens to Sparta, and had told him that he was much hurt that the Athenians had as yet neglected to worship him;[2] in spite of which neglect, however, he promised them effective aid at Marathon. The promise was faithfully executed, and the Athenians repaid it by a temple with annual worship and sacrifice. Moreover, the hero Theseus was seen strenuously assisting in the battle; and an unknown warrior, in rustic garb and armed only with a ploughshare, dealt destruction among the Persian ranks: after the battle he could not be found; and the Athenians, on asking at Delphi who he was, were directed to worship the hero Echetlus.[3] Even in the time of Pausanias, this memorable battle-field was heard to resound every night with the noise of combatants and the snorting of horses. "It is dangerous (observes that pious author) to go to the spot with the express purpose of seeing what is passing; but if a man finds himself there by accident, without having heard anything about the matter, the gods will not be angry with him." The gods, it seems, could not pardon the inquisitive mortal who deliberately pried into their secrets. Amidst the ornaments with which Athens was decorated during the free working of her democracy, the glories of Marathon of course occupied a conspicuous place. The battle was painted on one of the compartments of the portico called Pœkilê, wherein, amidst several figures of gods and heroes, — Athênê, Hêraklês, Theseus, Echetlus, and the local patron of Marathon,— were seen honored and prominent the polemarch Kallimachus and the general Miltiadês, while the Platæans were distinguished by their Bœotian leather casques.[4] And the sixth of the month Boëdromion, the anniversary of the battle, was commemorated by an annual ceremony, even down to the time of Plutarch.[1]

[1] The tumulus now existing is about thirty feet high, and two hundred yards in circumference. (Leake, on the Demi of Attica Transactions of Royal Soc. of Literat. ii, p. 171.)

Boëdromion was the third month of the Attic year, which year began near about the summer solstice. The first three Attic months, Hekatombæon, Metageitnion, Boëdromion, approach (speaking in a loose manner) nearly to our July, August, September; probably the month Hekatombæon began usually at some day in the latter half of June.

From the fact that the courier Pheidippidês reached Sparta on the ninth day of the moon, and that the two thousand Spartans arrived in Attica on the third day after the full moon, during which interval the battle took place, we see that the sixth day of Boëdromion could not be the sixth day of the moon. The Attic months, though professedly lunar months, did not at this time therefore accurately correspond with the course of the moon. See Mr. Clinton, Fast. Hellen. ad an. 490 B.C. Plutarch (in the Treatise De Malign. Herodoti, above referred to) appears to have no conception of this discrepancy between the Attic month and the course of the moon. A portion of the censure which he casts on Herodotus is grounded on the assumption that the two must coincide.

M. Boeckh, following Fréret and Larcher, contests the statement of Plutarch, that the battle was fought on the sixth of the month Boëdromion, but upon reasons which appear to me insufficient. His chief argument rests upon another statement of Plutarch (derived from some lost verses of Æschylus), that the tribe Æantis had the right wing or post of honor at the battle; and that the public vote, pursuant to which the army was led out of Athens, was passed during the prytany of the tribe Æantis. He assumes, that the reason why this tribe was posted on the right wing, must have been, that it had drawn by lot the first prytany in that particular year: if this be granted, then the vote for drawing out the army must have been passed in the first prytany, or within the first thirty-five or thirty-six days of the Attic year, during the space between the first of Hekatombæon and the fifth or sixth of Metageitnion. But it is certain that the interval, which took place between the army leaving the city and the battle, was much less than one month, — we may even say less than one week. The battle, therefore, must have been fought between the sixth and tenth of Metageitnion. (Plutarch, Symposiac. i, 10, 3, and Ideler, Handbuch der Chronologie, vol. i, p. 291.) Herodotus (vi, 111) says that the tribes were arranged in line ὡς ἠριθμεόντο, — "as they were numbered," — which is contended to mean necessarily the arrangement between them, determined by lot for the prytanies of that particular year. "In acie instruendâ (says Boeckh, Comment. ad Corp. Inscript. p. 299) Atheniensis non constantem, sed variabilem secundum prytanias, ordinem secutos esse, ita ut tribus ex hoc ordine inde a dextro cornu disponerentur, docui in Commentatione de pugnâ Marathoniâ." Prœmia Lect. Univ. Berolin. æstiv. a. 1816.

Two thousand Spartans, starting from their city, immediately after the full moon, reached the frontier of Attica, on the third

The Procemia here referred to I have not been able to consult, and they may therefore contain additional reasons to prove the point advanced, viz., that the order of the ten tribes in line of battle, beginning from the right wing, was conformable to their order in prytanizing, as drawn by lot for the year; but I think the passages of Herodotus and Plutarch now before us insufficient to establish this point. From the fact that the tribe Æantis had the right wing at the battle of Marathon, we are by no means warranted in inferring that that tribe had drawn by lot the earliest prytany in the year. Other reasons, in my judgment equally probable, may be assigned in explanation of the circumstance: one reason, I think, decidedly *more* probable. This reason is, that the battle was fought during the prytany of the tribe Æantis, which may be concluded from the statement of Plutarch, that the vote for marching out the army from Athens was passed during the prytany of that tribe; for the interval, between the march of the army out of the city and the battle, must have been only a very few days. Moreover, the deme Marathon belonged to the tribe Æantis (see Boeckh, ad Inscript. No. 172, p. 309): the battle being fought in their deme, the Marathonians may perhaps have claimed on this express ground the post of honor for their tribe; just as we see that at the first battle of Mantineia against the Lacedæmonians, the Mantineians were allowed to occupy the right wing or post of honor, "because the battle was fought in their territory," (Thucyd. v, 67.) Lastly, the deme Aphidnæ also belonged to the tribe Æantis (see Boeckh, l. c.): now the polemarch Kallimachus was an Aphidnæan (Herodot. vi, 109), and Herodotus expressly tells us, "the law or custom *then* stood among the Athenians, that the polemarch should have the right wing," — *ὁ γὰρ νόμος τότε εἶχε οὕτω τοῖσι Ἀθηναίοισι, τὸν πολέμαρχον ἔχειν κέρας τὸ δέξιον* (vi, 111). Where the polemarch stood, there his tribe would be likely to stand: and the language of Herodotus indeed seems directly to imply that he identifies the tribe of the polemarch with the polemarch himself, — *ἡγεμένου δὲ τούτου, ἐξεδέκοντο ὡς ἀριθμέοντο αἱ φυλαὶ, ἐχόμεναι ἀλλήλων*, — meaning that the order of tribes began by that of the polemarch being in the leading position, and was then "taken up" by the rest "in numerical sequence," — *i. e.* in the order of their prytanizing sequence for the year.

Here are a concurrence of reasons to explain why the tribe Æantis had the right wing at the battle of Marathon, even though it may not have been first in the order of prytanizing tribes for the year. Boeckh, therefore, is not warranted in inferring the second of these two facts from the first.

The concurrence of these three reasons, all in favor of the same conclusion, and all independent of the reason supposed by Boeckh, appears to me to have great weight; but I regard the first of the three, even singly taken, as more probable than his reason. If my view of the case be cor-

day of their march, — a surprising effort, when we consider that the total distance from Sparta to Athens was about one hundred

rect, the sixth day of Boëdromion, the day of battle as given by Plutarch, is not to be called in question. That day comes in the second prytany of the year, which begins about the sixth of Metageitnion, and ends about the twelfth of Boëdromion, and which must in this year have fallen to the lot of the tribe Æantis. On the first or second day of Boëdromion, the vote for marching out the army may have passed; on the sixth the battle was fought; both during the prytany of this tribe.

I am not prepared to carry these reasons farther than the particular case of the battle of Marathon, and the vindication of the day of that battle as stated by Plutarch; nor would I apply them to later periods, such as the Peloponnesian war. It is certain that the army regulations of Athens were considerably modified between the battle of Marathon and the Peloponnesian war, as well in other matters as in what regards the polemarch; and we have not sufficient information to enable us to determine whether in that later period the Athenians followed any known or perpetual rule in the battle-order of the tribes. Military considerations, connected with the state of the particular army serving, must have prevented the constant observance of any rule: thus we can hardly imagine that Nikias, commanding the army before Syracuse, could have been tied down to any invariable order of battle among the tribes to which his hoplites belonged. Moreover, the expedition against Syracuse lasted more than one Attic year: can it be believed that Nikias, on receiving information from Athens of the sequence in which the prytanies of the tribes had been drawn by lot during the second year of his expedition, would be compelled to marshal his army in a new battle-order conformably to it? As the military operations of the Athenians became more extensive, they would find it necessary to leave such dispositions more and more to the general serving in every particular campaign. It may well be doubted whether during the Peloponnesian war *any* established rule was observed in marshalling the tribes for battle.

One great motive which induces critics to maintain that the battle was fought in the Athenian month Metageitnion, is, that that month coincides with the Spartan month Karneius, so that the refusal of the Spartans to march before the full moon, is construed to apply only to the peculiar sanctity of this last-mentioned month, instead of being a constant rule for the whole year. I perfectly agree with these critics, that the answer, given by the Spartans to the courier Pheidippidês, cannot be held to prove a regular, invariable Spartan maxim, applicable throughout the whole year, not to begin a march in the second quarter of the moon: very possibly, as Boeckh remarks, there may have been some festival impending during the particular month in question, upon which the Spartan refusal to march was founded. But no inference can be deduced from hence to disprove the sixth

and fifty miles. They did not arrive, however, until the battle had been fought, and the Persians departed; but curiosity led them to the field of Marathon to behold the dead bodies of the Persians, after which they returned home, bestowing well-merited praise on the victors.

Datis and Artaphernês returned across the Ægean with their Eretrian prisoners to Asia; stopping for a short time at the island of Mykonos, where discovery was made of a gilt image of Apollo carried off as booty in a Phenician ship. Datis went himself to restore it to Dêlos, requesting the Delians to carry it back to the Delium, or temple of Apollo, on the eastern coast of Bœotia: the Delians, however, chose to keep the statue until it was reclaimed from them twenty years afterwards by the Thebans. On reaching Asia, the Persian generals conducted their prisoners up to the court of Susa, and into the presence of Darius. Though he had been vehemently incensed against them, yet when he saw them in his power, his wrath abated, and he manifested no desire to kill or harm them. They were planted at a spot called Arderikka, in the Kissian territory, one of the resting-places on the road from Sardis to Susa, and about twenty-six miles distant from the latter place: Herodotus seems himself to have seen their descendants there on his journey between the two capitals,

of Boëdromion as the day of the battle of Marathon: for though the months of every Grecian city were professedly lunar, yet they never coincided with each other exactly or long together, because the systems of intercalation adopted in different cities were different: there was great irregularity and confusion (Plutarch, Aristeidês, c. 19; Aristoxenus, Harmon. ii, p. 30 compare also K. F. Hermann, Ueber die Griechische Monatskunde, p. 26 27. Göttingen, 1844; and Boeckh, ad Corp. Inscript. t. i, p. 734).

Granting, therefore, that the answer given by the Spartans to Pheidippidês is to be construed, not as a general rule applicable to the whole year, but as referring to the particular month in which it was given, — no inference can be drawn from hence as to the day of the battle of Marathon, because either one of the two following suppositions is possible: 1. The Spartans may have had solemnities on the day of the full moon, or on the day before it, in *other months* besides Karneius; 2. Or the full moon of the Spartan Karneius may actually have fallen, in the year 490 B.C., on the fifth or sixth of the Attic month Boëdromion.

Dr. Thirlwall appears to adopt the view of Boeckh, but does not add anything material to the reasons in its favor (Hist. of Gr. vol. ii, Appendix, p. 488).

and to have had the satisfaction of talking to them in Greek, — which we may well conceive to have made some impression upon him, at a spot distant by nearly three months' journey from the coast of Ionia.[1]

Happy would it have been for Miltiadês if he had shared the honorable death of the polemarch Kallimachus, — "animam exhalasset opimam," — in seeking to fire the ships of the defeated Persians at Marathon. The short sequel of his history will be found in melancholy contrast with the Marathonian heroism.

His reputation had been great before the battle, and after it the admiration and confidence of his countrymen knew no bounds: it appears, indeed, to have reached such a pitch that his head was turned, and he lost both his patriotism and his prudence. He proposed to his countrymen to incur the cost of equipping an armament of seventy ships, with an adequate armed force, and to place it altogether at his discretion; giving them no intimation whither he intended to go, but merely assuring them that, if they would follow him, he would conduct them to a land where gold was abundant, and thus enrich them. Such a promise, from the lips of the recent victor of Marathon, was sufficient, and the armament was granted, no man except Miltiadês knowing what was its destination. He sailed immediately to the island of Paros, laid siege to the town, and sent in a

[1] Herodot. vi, 119. Darius — *σφέας τῆς Κισσίης χώρης κατοίκισε ἐν σταθμῷ ἑωϋτοῦ τῷ οὔνομα Ἀρδέρικκα — ἐνθαῦτα τοὺς Ἐρετριέας κατοίκισε Δαρεῖος, οἳ καὶ μέχρι ἐμέο εἶχον τὴν χώρην ταύτην, φυλάσσοντες τὴν ἀρχαίην γλῶσσαν.* The meaning of the word *σταθμὸς* is explained by Herodot. v, 52. *σταθμὸς ἑωϋτοῦ* is the same as *σταθμὸς βασιληΐος*: the particulars which Herodotus recounts about Arderikka, and its remarkable well, or pit of bitumen, salt, and oil, give every reason to believe that he had himself stopped there.

Strabo places the captive Eretrians in Gordyêné, which would be considerably higher up the Tigris; upon whose authority, we do not know (Strabo, xv, p. 747).

The many particulars which are given respecting the descendants of these Eretrians in Kissia, by Philostratus, in his Life of Apollonius of Tyana, as they are alleged to have stood even in the first century of the Christian era, cannot be safely quoted. With all the fiction there contained, some truth may perhaps be mingled; but we cannot discriminate it (Philostratus, Vit. Apollon. i, c. 24–30).

herald to require from the inhabitants a contribution of one hundred talents, on pain of entire destruction. His pretence for this attack was, that the Parians had furnished a trireme to Datis for the Persian fleet at Marathon; but his real motive, so Herodotus assures us,[1] was vindictive animosity against a Parian citizen named Lysagoras, who had exasperated the Persian general Hydarnês against him. The Parians amused him at first with evasions, until they had procured a little delay to repair the defective portions of their wall, after which they set him at defiance; and Miltiadês in vain prosecuted hostilities against them for the space of twenty-six days: he ravaged the island, but his attacks made no impression upon the town.[2] Beginning to despair of success in his military operations, he entered into some negotiation — such at least was the tale of the Parians themselves — with a Parian woman named Timô, priestess or attendant in the temple of Dêmêtêr, near the town-gates. This woman, promising to reveal to him a secret which would place Paros in his power, induced him to visit by night a temple to which no male person was admissible. He leaped the exterior fence, and approached the sanctuary; but on coming near, was seized with a panic terror and ran away, almost out of his senses: on leaping the same fence to get back, he strained or bruised his thigh badly, and became utterly disabled. In this melancholy state he was placed on ship-board; the siege being raised, and the whole armament returning to Athens.

Vehement was the indignation both of the armament and of the remaining Athenians against Miltiadês on his return;[3] and

[1] Herodot. vi, 132. *ἔπλεε ἐπὶ Πάρον, πρόφασιν ἔχων ὡς οἱ Πάριοι ὑπηρξαν πρότεροι στρατευόμενοι τριήρεϊ ἐς Μαραθῶνα ἅμα τῷ Πέρσῃ. Τοῦτο μὲν δὴ πρόσχημα τοῦ λόγου ἦν· ἀτάρ τινα καὶ ἔγκοτον εἶχε τοῖσι Παρίοισι διὰ Λυσαγόρεα τὸν Τισίεω, ἐόντα γένος Πάριον, διαβαλόντα μιν πρὸς Ὑδάρνεα τὸν Πέρσην.*

[2] Ephorus (Fragm. 107, ed. Didot; ap. Stephan. Byz. v, *Πάρος*) gave an account of this expedition in several points different from Herodotus, which latter I here follow. The authority of Herodotus is preferable in every respect; the more so, since Ephorus gives his narrative as a sort of explanation of the peculiar phrase *ἀναπαριάζειν*. Explanatory narratives of that sort are usually little worthy of attention.

[3] Herodot. vi, 136. *Ἀθηναῖοι δὲ ἐκ Πάρου Μιλτιάδεα ἀπονοστήσαντα ὦχον ἐν στόμασι, οἵ τε ἄλλοι, καὶ μάλιστα Ξάνθιππος ὁ Ἀρίφρονος· δι*

Xanthippus, father of the great Periklês, became the spokesman of this feeling. He impeached Miltiadês before the popular judicature as having been guilty of deceiving the people, and as having deserved the penalty of death. The accused himself, disabled by his injured thigh, which even began to show symptoms of gangrene, was unable to stand, or to say a word in his own defence: he lay on his couch before the assembled judges, while his friends made the best case they could in his behalf. Defence, it appears, there was none; all they could do, was to appeal to his previous services: they reminded the people largely and emphatically of the inestimable exploit of Marathon, coming in addition to his previous conquest of Lemnos. The assembled dikasts, or jurors, showed their sense of these powerful appeals by rejecting the proposition of his accuser to condemn him to death; but they imposed on him the penalty of fifty talents "for his iniquity."

Cornelius Nepos affirms that these fifty talents represented the expenses incurred by the state in fitting out the armament; but we may more probably believe, looking to the practice of the Athenian dikastery in criminal cases, that fifty talents was the

θανάτου ὑπαγαγὼν ὑπὸ τὸν δῆμον Μιλτιάδεα, ἐδίωκε τῆς Ἀθηναίων ἀπάτης εἵνεκεν. Μιλτιάδης δὲ, αὐτὸς μὲν παρεὼν, οὐκ ἀπελογέετο· ἦν γὰρ ἀδύνατος, ὥστε σηπομένου τοῦ μηροῦ. Προκειμένου δὲ αὐτοῦ ἐν κλίνῃ, ὑπεραπολογέοντο οἱ φίλοι, τῆς μάχης τε τῆς ἐν Μαραθῶνι γενομένης πολλὰ ἐπιμεμνημένοι, καὶ τὴν Λήμνου αἵρεσιν· ὡς ἑλὼν Λῆμνόν τε καὶ τισάμενος τοὺς Πελασγοὺς, παρέδωκε Ἀθηναίοισι. Προσγένομενου δὲ τοῦ δήμου αὐτῷ κατὰ τὴν ἀπόλυσιν τοῦ θανάτου, ζημιώσαντος δὲ κατὰ τὴν ἀδικίην πεντήκοντα ταλάντοισι, Μιλτιάδης μὲν μετὰ ταῦτα, σφακελίσαντός τε τοῦ μηροῦ καὶ σαπέντος, τελευτᾷ· τὰ δὲ πεντήκοντα τάλαντα ἐξέτισεν ὁ παῖς αὐτοῦ Κίμων.

Plato (Gorgias, c. 153, p. 516) says that the Athenians passed a vote to cast Miltiadês into the barathrum (*ἐμβαλεῖν ἐψηφίσαντο*), and that he would have been actually thrown in, if it had not been for the prytanis, *i. e.* the president, by turn for that day, of the prytanizing senators and of the ekklesia. The prytanis may perhaps have been among those who spoke to the dikastery on behalf of Miltiadês, deprecating the proposition made by Xanthippus; but that he should have caused a vote once passed to be actually rescinded, is incredible. The Scholiast on Aristeidês (cited by Valckenær ad Herodot. vi, 136) reduces the exaggeration of Plato to something more reasonable — *Ὅτε γὰρ ἐκρίνετο Μιλτιάδης ἐπὶ τῇ Πάρῳ, ἐβούλησαν αὐτὸν κατακρημνίσαι· ὁ δὲ πρύτανις εἰσελθὼν ἐξητήσατο αὐτόν*

minor penalty actually proposed by the defenders of Miltiadês themselves, as a substitute for the punishment of death. In those penal cases at Athens, where the punishment was not fixed beforehand by the terms of the law, if the person accused was found guilty, it was customary to submit to the jurors, subsequently and separately, the question as to amount of punishment: first, the accuser named the penalty which he thought suitable; next, the accused person was called upon to name an amount of penalty for himself, and the jurors were constrained to take their choice between these two,—no third gradation of penalty being admissible for consideration.[1] Of course, under such circum-

[1] That this was the habitual course of Attic procedure in respect to public indictments, wherever a positive amount of penalty was not previously determined, appears certain. See Platner, Prozess und Klagen bei den Attikern, Abschn. vi, vol. i, p. 201; Heffter, Die Athenäische Gerichtsverfassung, p. 334. Meier and Schömann (Der Attische Prozess, b. iv, p. 725) maintain that any one of the dikasts might propose a third measure of penalty, distinct from that proposed by the accuser as well as the accused. In respect to public indictments, this opinion appears decidedly incorrect; but where the sentence to be pronounced involved a compensation for private wrong and an estimate of damages, we cannot so clearly determine whether there was not sometimes a greater latitude in originating propositions for the dikasts to vote upon. It is to be recollected that these dikasts were several hundred, sometimes even more, in number,—that there was no discussion or deliberation among them,—and that it was absolutely necessary for some distinct proposition to be laid before them to take a vote upon. In regard to some offences, the law expressly permitted what was called a προστίμημα; that is, after the dikasts had pronounced the full penalty demanded by the accuser, any other citizen who thought the penalty so imposed insufficient, might call for a certain limited amount of additional penalty, and require the dikasts to vote upon it,—ay or no. The votes of the dikasts were given, by depositing pebbles in two casks, under certain arrangements of detail.

The ἀγὼν τιμητὸς, δίκη τιμητὸς, or trial including this separate admeasurement of penalty,—as distinguished from the δίκη ἀτίμητος, or trial where the penalty was predetermined, and where was no τίμησις, or vote of admeasurement of penalty,—is an important line of distinction in the subject-matter of Attic procedure; and the practice of calling on the accused party, after having been pronounced guilty, to impose upon himself a *counter-penalty* or *under-penalty* (ἀντιτιμᾶσθαι or ὑποτιμᾶσθαι) in contrast with that named by the accuser, was a convenient expedient for bringing the question to a substantive vote of the dikasts. Sometimes accused persons found it convenient to name very large penalties on themselves, in

stances, it was the interest of the accused party to name, even in his own case, some real and serious penalty,—something which the jurors might be likely to deem not wholly inadequate to his crime just proved; for if he proposed some penalty only trifling, he drove them to prefer the heavier sentence recommended by his opponent. Accordingly, in the case of Miltiadês, his friends, desirous of inducing the jurors to refuse their assent to the punishment of death, proposed a fine of fifty talents as the self-assessed penalty of the defendant; and perhaps they may have stated, as an argument in the case, that such a sum would suffice to defray the costs of the expedition. The fine was imposed, but Miltiadês did not live to pay it: his injured limb mortified, and he died, leaving the fine to be paid by his son Kimon.

According to Cornelius Nepos, Diodorus, and Plutarch, he was put in prison, after having been fined, and there died.[1] But

order to escape a capital sentence invoked by the accuser (see Dêmosthen. cont. Timokrat. c. 34, p. 743, R). Nor was there any fear, as Platner imagines, that in the generality of cases the dikasts would be left under the necessity of choosing between an extravagant penalty and something merely nominal; for the interest of the accused party himself would prevent this from happening. Sometimes we see him endeavoring by entreaties to prevail upon the accuser voluntarily to abate something of the penalty which he had at first named; and the accuser might probably do this, if he saw that the dikasts were not likely to go along with that first proposition.

In one particular case, of immortal memory, that which Platner contemplates actually did happen; and the death of Sokratês was the effect of it. Sokratês, having been found guilty, only by a small majority of votes among the dikasts, was called upon to name a penalty upon himself, in opposition to that of death, urged by Melêtus. He was in vain entreated by his friends to name a fine of some tolerable amount, which they would at once have paid in his behalf; but he would hardly be prevailed upon to name any penalty at all, affirming that he had deserved honor rather than punishment: at last, he named a fine so small in amount, as to be really tantamount to an acquittal. Indeed, Xenophon states that he would not name any counter-penalty at all; and in the speech ascribed to him, he contended that he had even merited the signal honor of a public maintenance in the prytaneium (Plato, Apol Sok. c. 27; Xenoph. Apol. Sok. 23; Diogen. Laërt. ii, 41). Plato and Xenophon do not agree; but taking the two together, it would seem that he must have named a very small fine. There can be little doubt that this circumstance, together with the tenor of his defence, caused the dikasts to vote for the proposition of Melêtus.

[1] Cornelius Nepos, Miltiadês, c. 7; and Kimon, c. 1; Plutarch, Kimon, c

Herodotus does not mention this imprisonment, and the fact appears to me improbable: he would hardly have omitted to notice it, had it come to his knowledge. Immediate imprisonment of a person fined by the dikastery, until his fine was paid, was not the natural and ordinary course of Athenian procedure, though there were particular cases in which such aggravation was added. Usually, a certain time was allowed for payment,[1] before absolute execution was resorted to, but the person under sentence became disfranchised and excluded from all political rights, from the very instant of his condemnation as a public debtor, until the fine was paid. Now in the instance of Miltiadês, the lamentable condition of his wounded thigh rendered

4; Diodorus, Fragment. lib. x. All these authors probably drew from the same original fountain; perhaps Ephorus (see Marx ad Ephori Fragmenta, p. 212); but we have no means of determining. Respecting the alleged imprisonment of Kimon, however, they must have copied from different authorities, for their statements are all different. Diodorus states, that Kimon put himself voluntarily into prison after his father had died there, because he was not permitted on any other condition to obtain the body of his deceased father for burial. Cornelius Nepos affirms that he was imprisoned, as being legally liable to the state for the unpaid fine of his father. Lastly, Plutarch does not represent him as having been put into prison at all. Many of the Latin writers follow the statement of Diodorus: see the citations in Bos's note on the above passage of Cornelius Nepos.

There can be no hesitation in adopting the account of Plutarch as the true one. Kimon neither was, nor could be, in prison, by the Attic law, for an unpaid fine of his father; but after his father's death, he became liable for the fine, in this sense, — that he remained disfranchised (*ἄτιμος*) and excluded from his rights as a citizen, until the fine was paid: see Dêmosthen. cont. Timokrat. c. 46, p. 762, R.

[1] See Boeckh, Public Economy of Athens, b. iii, ch. 13, p. 390, Engl Transl. (vol. i, p. 420, Germ.); Meier und Schömann, Attisch. Prozess, p. 744. Dr. Thirlwall takes a different view of this point, with which I cannot concur (Hist. Gr. vol. iii, Append. ii, p. 488); though his general remarks on the trial of Miltiadês are just and appropriate (ch. xiv, p. 273).

Cornelius Nepos (Miltiadês, c. 8; Kimon, c. 3) says that the misconduct connected with Paros was only a pretence with the Athenians for punishing Miltiadês; their real motive, he affirms, was envy and fear, the same feelings which dictated the ostracism of Kimon. How little there is to justify this fancy, may be seen even from the nature of the punishment inflicted. Fear would have prompted them to send away or put to death Miltiadês, not to fine him. The ostracism, which was dictated by fear, was a temporary banishment.

escape impossible, — so that there would be no special motive for departing from the usual practice, and imprisoning him forthwith: moreover, if he was not imprisoned forthwith, he would not be imprisoned at all, since he cannot have lived many days after his trial.[1] To carry away the suffering general in his couch, incapable of raising himself even to plead for his own life, from the presence of the dikasts to a prison, would not only have been a needless severity, but could hardly have failed to imprint itself on the sympathies and the memory of all the beholders; so that Herodotus would have been likely to hear and mention it, if it had really occurred. I incline to believe therefore that Miltiadês died at home: all accounts concur in stating that he died of the mortal bodily hurt which already disabled him even at the moment of his trial, and that his son Kimon paid the fifty talents after his death. If *he* could pay them, probably his father could have paid them also. And this is an additional reason for believing that there was no imprisonment, — for nothing but non-payment could have sent him to prison; and to rescue the suffering Miltiadês from being sent thither, would have been the first and strongest desire of all sympathizing friends.

Thus closed the life of the conqueror of Marathon. The last act of it produces an impression so mournful, and even shocking, — his descent from the pinnacle of glory to defeat, mean tampering with a temple-servant, mortal bodily hurt, undefended ignominy, and death under a sentence of heavy fine, is so abrupt and unprepared, — that readers, ancient and modern, have not been satisfied without finding some one to blame for it: we must except Herodotus, our original authority, who recounts the transaction without dropping a single hint of blame against any one. To speak ill of the people, as Machiavel has long ago observed,[2] is a strain in which every one at all times, even under a democratical government, indulges with impunity and without provok-

[1] The interval between his trial and his decease is expressed in Herodotus (vi, 136) by the difference between the present participle *σηπομένου* and the past participle *σαπέντος τοῦ μηροῦ*.

[2] Machiavel, Discorsi sopra Tito Livio, cap. 58. "L' opinione contro ai popoli nasce, perché dei popoli ciascun dice male senza paura, e liberamente ancora mentre che regnano: dei principi si parla sempre con mille timori e mille rispetti."

ing any opponent to reply; and in this instance, the hard fate of Miltiadês has been imputed to the vices of the Athenians and their democracy, — it has been cited in proof, partly of their fickleness, partly of their ingratitude. But however such blame may serve to lighten the mental sadness arising from a series of painful facts, it will not be found justified if we apply to those facts a reasonable criticism.

What is called the fickleness of the Athenians on this occasion is nothing more than a rapid and decisive change in their estimation of Miltiadês; unbounded admiration passing at once into extreme wrath. To censure them for fickleness is here an abuse of terms; such a change in their opinion was the unavoidable result of his conduct. His behavior in the expedition of Paros was as reprehensible as at Marathon it had been meritorious, and the one succeeded immediately after the other: what else could ensue except an entire revolution in the Athenian feelings? He had employed his prodigious ascendency over their minds to induce them to follow him without knowing whither, in the confidence of an unknown booty: he had exposed their lives and wasted their substance in wreaking a private grudge: in addition to the shame of an unprincipled project, comes the constructive shame of not having succeeded in it. Without doubt, such behavior, coming from a man whom they admired to excess, must have produced a violent and painful revulsion in the feelings of his countrymen. The idea of having lavished praise and confidence upon a person who forthwith turns it to an unworthy purpose, is one of the greatest torments of the human bosom; and we may well understand that the intensity of the subsequent displeasure would be aggravated by this reactionary sentiment, without accusing the Athenians of fickleness. If an officer, whose conduct has been such as to merit the highest encomiums, comes on a sudden to betray his trust, and manifests cowardice or treachery in a new and important undertaking confided to him, are we to treat the general in command as fickle, because his opinion as well as his conduct undergoes an instantaneous revolution, — which will be all the more vehement in proportion to his previous esteem? The question to be determined is, whether there be sufficient ground for such a change; and in the

case of Miltiadês, that question must be answered in the affirmative.

In regard to the charge of ingratitude against the Athenians, this last-mentioned point — sufficiency of reason — stands tacitly admitted. It is conceded that Miltiadês deserved punishment for his conduct in reference to the Parian expedition, but it is nevertheless maintained that gratitude for his previous services at Marathon ought to have exempted him from punishment. But the sentiment upon which, after all, this exculpation rests, will not bear to be drawn out and stated in the form of a cogent or justifying reason. For will any one really contend, that a man who has rendered great services to the public, is to receive in return a license of unpunished misconduct for the future? Is the general, who has earned applause by eminent skill and important victories, to be recompensed by being allowed the liberty of betraying his trust afterwards, and exposing his country to peril, without censure or penalty? This is what no one intends to vindicate deliberately; yet a man must be prepared to vindicate it, when he blames the Athenians for ingratitude towards Miltiadês. For if all that be meant is, that gratitude for previous services ought to pass, not as a receipt in full for subsequent crime, but as an extenuating circumstance in the measurement of the penalty, the answer is, that it was so reckoned in the Athenian treatment of Miltiades.[1] His friends had nothing whatever to urge, against

[1] Machiavel will not even admit so much as *this*, in the clear and forcible statement which he gives of the question here alluded to: he contends that the man who has rendered services ought to be recompensed for them, but that he ought to be punished for subsequent crime just as if the previous services had not been rendered. He lays down this position in discussing the conduct of the Romans towards the victorious survivor of the three Horatii, after the battle with the Curiatii: "Erano stati i meriti di Orazio grandissimi avendo con la sua virtù vinti i Curiazi. Era stato il fallo suo atroce, avendo morto la sorella. Nondimeno dispiacque tanto tale omicidio ai Romani, che lo condussero a disputare della vita, non ostante che gli meriti suoi fussero tanto grandi e si freschi. La qual cosa, a chi superficialmente la considerasse, parrebbe uno esempio d' ingratitudine popolare. Nondimeno chi lo esaminerà meglio, e con migliore considerazione ricercherà quali debbono essere gli' ordini delle republiche, biasimearà quel popolo piuttosto per averlo assoluto, che per averlo voluto condannare: e la ragione è questa, che nessuna republica bene ordinata, non mai cancellò

the extreme penalty proposed by his accuser, except these previous services, — which influenced the dikasts sufficiently to induce them to inflict the lighter punishment instead of the heavier. Now the whole amount of punishment inflicted consisted in a fine which certainly was not beyond his reasonable means of paying, or of prevailing upon friends to pay for him, since his son Kimon actually did pay it. And those who blame the Athenians for ingratitude, — unless they are prepared to maintain the doctrine that previous services are to pass as full acquittal for future crime, — have no other ground left except to say that the fine was too high; that instead of being fifty talents, it ought to have been no more than forty, thirty, twenty, or ten talents. Whether they are right in this, I will not take upon me to pronounce. If the amount was named on behalf of the accused party, the dikastery had no legal power of diminishing it; but it is within such narrow limits that the question actually lies, when transferred from the province of sentiment to that of reason. It will be recollected that the death of Miltiadês arose neither from his trial nor his fine, but from the hurt in his thigh.

The charge of ingratitude against the Athenian popular juries really amounts to this, — that, in trying a person accused of present crime or fault, they were apt to confine themselves too strictly and exclusively to the particular matter of charge, either forgetting, or making too little account of, past services which he might have rendered. Whoever imagines that such was the habit of Athenian dikasts, must have studied the orators to very little purpose. Their real defect was the very opposite: they were too much disposed to wander from the special issue before them, and to be affected by appeals to previous services and con-

i demeriti con gli meriti dei suoi cittadini: ma avendo ordinati i premi ad una buona opera, e le pene ad una cattiva, ed avendo premiato uno per aver bene operato, se quel medesimo opera dipoi male, lo gastiga senza avere riguardo alcuno alle sue buone opere. E quando questi ordini sono bene osservati, una città vive libera molto tempo: altrimenti sempre rovinera presto. *Perchè se, ad un cittadino che abbia fatto qualche egregia opera per la città, si aggiunge oltre alla riputazione, che quella cosa gli arreca, una audacia e confidenza di potere senza temer pena, far qualche opera non buona, di venterà in breve tempo tanto insolente, che si risolverà ogni civiltà.*" — Machiavel Discorsi sop. Tit Livio, ch. 24.

duct.[1] That which an accused person at Athens usually strives to produce is, an impression in the minds of the dikasts favorable to his general character and behavior. Of course, he meets the particular allegation of his accuser as well as he can, but he never fails also to remind them emphatically, how well he has performed his general duties of a citizen, — how many times he has served in military expeditions, — how many trierarchies and liturgies he has performed, and performed with splendid efficiency. In fact, the claim of an accused person to acquittal is made to rest too much on his prior services, and too little upon innocence or justifying matter as to the particular indictment. When we come down to the time of the orators, I shall be prepared to show that such indisposition to confine themselves to a special issue was one of the most serious defects of the assembled dikasts at Athens. It is one which we should naturally expect from a body of private, non-professional citizens assembled for the occasion, and which belongs more or less to the system of jury-trial everywhere; but it is the direct reverse of that ingratitude, or habitual insensibility to prior services, for which they have been so often denounced.

The fate of Miltiadês, then, so far from illustrating either the fickleness or the ingratitude of his countrymen, attests their just appreciation of deserts. It also illustrates another moral, of no small importance to the right comprehension of Grecian affairs; it teaches us the painful lesson, how perfectly maddening were the effects of a copious draught of glory on the temperament of an enterprising and ambitious Greek. There can be no doubt,

[1] Machiavel, in the twenty-ninth chapter of his Discorsi sopra T. Livio, examines the question, "Which of the two is more open to the charge of being ungrateful, — a popular government, or a king?" He thinks that the latter is more open to it. Compare chapter fifty-nine of the same work, where he again supports a similar opinion.

M. Sismondi also observes, in speaking of the long attachment of the city of Pisa to the cause of the emperors and to the Ghibelin party: "Pise montra dans plus d'une occasion, par sa constance à supporter la cause des empereurs au milieu des revers, combien la reconnoissance lie un peuple libre d'une manière plus puissante et plus durable qu'elle ne sauroit lier le peuple gouverné par un seul homme" (Histoire des Républ. Italiennes ch xiii, tom. ii, p. 302.)

that the rapid transition, in the course of about one week, from Athenian terror before the battle to Athenian exultation after it, must have produced demonstrations towards Miltiadês such as were never paid towards any other man in the whole history of the commonwealth. Such unmeasured admiration unseated his rational judgment, so that his mind became abandoned to the reckless impulses of insolence, and antipathy, and rapacity; — that distempered state, for which (according to Grecian morality) the retributive Nemesis was ever on the watch, and which, in his case, she visited with a judgment startling in its rapidity, as well as terrible in its amount. Had Miltiadês been the same man before the battle of Marathon as he became after it, the battle might probably have turned out a defeat instead of a victory. Dêmosthenês, indeed,[1] in speaking of the wealth and luxury of political leaders in his own time, and the profuse rewards bestowed upon them by the people, pointed in contrast to the house of Miltiadês as being noway more splendid than that of a private man. But though Miltiadês might continue to live in a modest establishment, he received from his countrymen marks of admiration and deference such as were never paid to any citizen before or after him; and, after all, admiration and deference constitute the precious essence of popular reward. No man except Miltiadês ever dared to raise his voice in the Athenian assembly, and say: "Give me a fleet of ships: do not ask what I am going to do with them, but only follow me, and I will enrich you." Herein we may read the unmeasured confidence which the Athenians placed in their victorious general, and the utter incapacity of a leading Greek to bear it without mental depravation; while we learn from it to draw the melancholy inference, that one result of success was to make the successful leader one of the most dangerous men in the community. We shall presently be called upon to observe the same tendency in the case of the Spartan Pausanias, and even in that of the Athenian Themistoklês. It is, indeed, fortunate that the reckless aspirations of Miltiadês did not take a turn more noxious to Athens than the comparatively unimportant enterprise against Paros. For had he sought to acquire dominion and gratify antipathies against enemies at

[1] Dêmosthenês, Olynth. iii, c. 9, p. 35, R

home, instead of directing his blow against a Parian enemy, the peace and security of his country might have been seriously endangered.

Of the despots who gained power in Greece, a considerable proportion began by popular conduct, and by rendering good service to their fellow-citizens: having first earned public gratitude, they abused it for purposes of their own ambition. There was far greater danger, in a Grecian community, of dangerous excess of gratitude towards a victorious soldier, than of deficiency in that sentiment: hence the person thus exalted acquired a position such that the community found it difficult afterwards to shake him off. Now there is a disposition almost universal among writers and readers to side with an individual, especially an eminent individual, against the multitude; and accordingly those who under such circumstances suspect the probable abuse of an exalted position, are denounced as if they harbored an unworthy jealousy of superior abilities. But the truth is, that the largest analogies of the Grecian character justified that suspicion, and required the community to take precautions against the corrupting effects of their own enthusiasm. There is no feature which more largely pervades the impressible Grecian character, than a liability to be intoxicated and demoralized by success: there was no fault from which so few eminent Greeks were free: there was hardly any danger, against which it was at once so necessary and so difficult for the Grecian governments to take security, — especially the democracies, where the manifestations of enthusiasm were always the loudest. Such is the real explanation of those charges which have been urged against the Grecian democracies, that they came to hate and ill-treat previous benefactors; and the history of Miltiadês illustrates it in a manner no less pointed than painful.

I have already remarked that the fickleness, which has been so largely imputed to the Athenian democracy in their dealings with him, is nothing more than a reasonable change of opinion on the best grounds. Nor can it be said that fickleness was in any case an attribute of the Athenian democracy. It is a well-known fact, that feelings, or opinions, or modes of judging, which have once obtained footing among a large number of people, are more lasting and unchangeable than those which belong only to

one or a few; insomuch that the judgments and actions of the many admit of being more clearly understood as to the past, and more certainly predicted as to the future. If we are to predicate any attribute of the multitude, it will rather be that of undue tenacity than undue fickleness; and there will occur nothing in the course of this history to prove that the Athenian people changed their opinions on insufficient grounds more frequently than an unresponsible one or few would have changed.

But there were two circumstances in the working of the Athenian democracy which imparted to it an appearance of greater fickleness, without the reality: First, that the manifestations and changes of opinion were all open, undisguised, and noisy: the people gave utterance to their present impression, whatever it was, with perfect frankness; if their opinions were really changed, they had no shame or scruple in avowing it. Secondly, — and this is a point of capital importance in the working of democracy generally, — the *present* impression, whatever it might be, was not merely undisguised in its manifestations, but also had a tendency to be exaggerated in its intensity. This arose from their habit of treating public affairs in multitudinous assemblages, the well-known effect of which is, to inflame sentiment in every man's bosom by mere contact with a sympathizing circle of neighbors. Whatever the sentiment might be, — fear, ambition, cupidity, wrath, compassion, piety, patriotic devotion, etc,[1] — and whether well-founded or ill-founded, it was constantly

[1] This is the general truth, which ancient authors often state, both partially, and in exaggerated terms as to degree: "Hæc est natura multitudinis (says Livy); aut humiliter servit aut superbe dominatur." Again, Tacitus: "Nihil in vulgo modicum; terrere, ni paveant; ubi pertimuerint, impune contemni." (Annal. i, 29.) Herodotus, iii. 81. *ὠθέει δὲ (ὁ δήμος) ἐμπεσὼν τὰ πρήγματα ἀνευ νοῦ, χειμάρρῳ ποταμῷ ἴκελος.*

It is remarkable that Aristotle, in his Politica, takes little or no notice of this attribute belonging to every numerous assembly. He seems rather to reason as if the aggregate intelligence of the multitude was represented by the sum total of each man's separate intelligence in all the individuals composing it (Polit. iii, 6, 4, 10, 12); just as the property of the multitude, taken collectively, would be greater than that of the few rich. He takes no notice of the difference between a number of individuals judging jointly and judging separately: I do not, indeed, observe that such omission leads him into any positive mistake, but it occurs in some cases calculated to

influenced more or less by such intensifying cause. This is a defect which of course belongs in a certain degree to all exercise of power by numerous bodies, even though they be representative bodies, — especially when the character of the people, instead of being comparatively sedate and slow to move, like the English, is quick, impressible, and fiery, like Greeks or Italians; but it operated far more powerfully on the self-acting Dêmos assembled in the Pnyx. It was in fact the constitutional malady of the democracy, of which the people were themselves perfectly sensible, — as I shall show hereafter from the securities which they tried to provide against it, — but which no securities could ever wholly eradicate. Frequency of public assemblies, far from aggravating the evil, had a tendency to lighten it. The people thus became accustomed to hear and balance many different views as a preliminary to ultimate judgment; they contracted personal interest and esteem for a numerous class of dissentient speakers; and they even acquired a certain practical consciousness of their own liability to error. Moreover, the diffusion of habits of public speaking, by means of the sophists and the rhetors, whom it has been so much the custom to disparage, tended in the same direction, — to break the unity of sentiment among the listening crowd, to multiply separate judgments, and to neutralize the contagion of mere sympathizing impulse. These were important deductions, still farther assisted by the superior taste and intelligence of the Athenian people: but still, the inherent malady remained, — excessive and misleading intensity of present sentiment. It was this which gave such inestimable value to the ascendency of Periklês, as depicted by Thucydidês: his hold on the people was so firm, that he could always speak with effect against excess of the reigning tone of feeling. "When Periklês (says the historian) saw the people in a state of unseasonable and insolent confidence, he spoke so as to cow them into alarm; when again they were in groundless terror, he combated it, and brought them back to confidence."[1] We shall find Dêmosthenês,

surprise us, and where the difference here adverted to is important to notice: see Politic. iii, 10. 5, 6.

[1] Thucyd. ii, 65. *Ὅποτε γοῦν αἰσθοιτό τι αὐτοὺς παρὰ καιρὸν ὕβρει θαρσοῦντας, λέγων κατέπλησσεν πάλιν ἐπὶ τὸ φοβεῖσθαι· καὶ δεδ.ότας ἐκ κλωγῶς ἀντικαθίστη πάλιν ἐπὶ τὸ θαρσεῖν.*

with far inferior ascendency, employed in the same honorable task: the Athenian people often stood in need of such correction, but unfortunately did not always find statesmen, at once friendly and commanding, to administer it.

These two attributes, then, belonged to the Athenian democracy; first, their sentiments of every kind were manifested loudly and openly; next, their sentiments tended to a pitch of great present intensity. Of course, therefore, when they changed, the change of sentiment stood prominent, and forced itself upon every one's notice,— being a transition from one strong sentiment past to another strong sentiment present.[1] And it was because such alterations, when they did take place, stood out so palpably to remark, that the Athenian people have drawn upon themselves the imputation of fickleness: for it is not at all true, I repeat, that changes of sentiment were more frequently produced in them by frivolous or insufficient causes, than changes of sentiment in other governments.

CHAPTER XXXVII.

IONIC PHILOSOPHERS.—PYTHAGORAS.—KROTON AND SYBARIS.

THE history of the powerful Grecian cities in Italy and Sicily, between the accession of Peisistratus and the battle of Marathon, is for the most part unknown to us. Phalaris, despot of Agrigentum in Sicily, made for himself an unenviable name during this obscure interval. His reign seems to coincide in time with the earlier part of the rule of Peisistratus (about 560–540 B.C.),

[1] Such swing of the mind, from one intense feeling to another, is always deprecated by the Greek moralists, from the earliest to the latest: even Demokritus, in the fifth century B.C., admonishes against it,— *Αἱ ἐκ μεγάλων διαστημάτων κινεόμεναι τῶν ψυχῶν οὔτε εὐσταθέες εἰσὶν, οὔτε εὔθυμοι* (Democriti Fragmenta, lib. iii, p. 168, ed. Mullach ap. Stobæum, Florileg I, 40.)

and the few and vague statements which we find respecting it,[1] merely show us that it was a period of extortion and cruelty, even beyond the ordinary license of Grecian despots. The reality of the hollow bull of brass, which Phalaris was accustomed to heat in order to shut up his victims in it and burn them, appears to be better authenticated than the nature of the story would lead us to presume: for it is not only noticed by Pindar, but even the actual instrument of this torture, the brazen bull itself,[2]— which had been taken away from Agrigentum as a trophy by the Carthaginians when they captured the town, was restored by the Romans, on the subjugation of Carthage, to its original domicile. Phalaris is said to have acquired the supreme command, by undertaking the task of building a great temple[3] to Zeus Polieus on the citadel rock; a pretence whereby he was enabled to assemble and arm a number of workmen and devoted partisans, whom he employed, at the festival of the Thesmophoria, to put down the authorities. He afterwards disarmed the citizens by a stratagem, and committed cruelties which rendered him so abhorred, that a sudden rising of the people, headed by Têlemachus (ancestor of the subsequent despot, Thêro), overthrew and

---

The letters of Bentley against Boyle, discussing the pretended Epistles of Phalaris,— full of acuteness and learning, though beyond measure excursive,— are quite sufficient to teach us that little can be safely asserted about Phalaris. His date is very imperfectly ascertained. Compare Bentley, pp. 82, 83, and Seyfert, Akragas und sein Gebiet, p. 60: the latter assigns the reign of Phalaris to the years 570–554 B.C. It is surprising to see Seyfert citing the letters of the pseudo-Phalaris as an authority, after the exposure of Bentley.

[2] Pindar. Pyth. 1 *ad fin*, with the Scholia, p. 310, ed. Boeckh; Polyb. xii, 25; Diodor. xiii, 99; Cicero cont. Verr. iv, 33. The contradiction of Timæus is noway sufficient to make us doubt the authenticity of the story. Ebert (*Σικελίων*, part ii, pp. 41–84, Königsberg, 1829) collects all the authorities about the bull of Phalaris. He believes the matter of fact substantially. Aristotle (Rhetoric, ii, 20) tells a story of the fable, whereby Stesichorus the poet dissuaded the inhabitants of Himera from granting a guard to Phalaris: Conon (Narrat. 42 ap. Photium) recounts the same story with the name of Hiero substituted for that of Phalaris. But it is not likely that either the one or the other could ever have been in such relations with the citizens of *Himera*. Compare Polybius, vii, 7, 2.

[3] Polyæn. v, 1, 1; Cicero de Officiis ii, 7.

slew him. A severe revenge was taken on his partisans after his fall.[1]

During the interval between 540–500 B.C., events of much importance occurred among the Italian Greeks, — especially at Kroton and Sybaris,— events, unhappily, very imperfectly handed down. Between these two periods fall both the war between Sybaris and Kroton, and the career and ascendency of Pythagoras. In connection with this latter name, it will be requisite to say a few words respecting the other Grecian philosophers of the sixth century B.C.

I have, in a former chapter, noticed and characterized those distinguished persons called the Seven Wise Men of Greece, whose celebrity falls in the first half of this century, — men not so much marked by scientific genius as by practical sagacity and foresight in the appreciation of worldly affairs, and enjoying a high degree of political respect from their fellow-citizens. One of them, however, the Milesian Thalês, claims our notice, not only on this ground, but also as the earliest known name in the long line of Greek scientific investigators. His life, nearly contemporary with that of Solon, belongs seemingly to the interval about 640–550 B.C.: the stories mentioned in Herodotus — perhaps borrowed in part from the Milesian Hekatæus — are sufficient to show that his reputation for wisdom, as well as for science, continued to be very great, even a century after his death, among his fellow-citizens. And he marks an important epoch in the progress of the Greek mind, as having been the first man to depart both in letter and spirit from the Hesiodic Theogony, introducing the conception of substances with their transformations and sequences, in place of that string of persons and quasi-human attributes which had animated the old legendary world. He is the father of what is called the Ionic philosophy, which is considered as lasting from his time down to that of Sokratês; and writers, ancient as well as modern, have professed to trace a succession of philosophers, each one the pupil of the preceding, between these two extreme epochs. But the appellation is, in truth, undefined, and even incorrect, since nothing entitled to the name of a school, or sect, or succession, —

[1] Plutarch, Philosophand. cum Principibus, c. 3, p. 778.

like that of the Pythagoreans, to be noticed presently, — can be made out. There is, indeed, a certain general analogy in the philosophical vein of Thalês, Hippo, Anaximenês, and Diogenês of Apollonia, whereby they all stand distinguished from Xenophanês of Elea, and his successors, the Eleatic dialecticians, Parmenidês and Zeno; but there are also material differences between their respective doctrines, — no two of them holding the same. And if we look to Anaximander, the person next in order of time to Thalês, as well as to Herakleitus, we find them departing, in a great degree, even from that character which all the rest have in common, though both the one and the other are usually enrolled in the list of Ionic philosophers.

Of the old legendary and polytheistic conception of nature, which Thalês partially discarded, we may remark that it is a state of the human mind in which the problems suggesting themselves to be solved, and the machinery for solving them, bear a fair proportion one to the other. If the problems be vast, indeterminate, confused, and derived rather from the hopes, fears, love, hatred, astonishment, etc., of men, than from any genuine desire of knowledge, — so also does the received belief supply invisible agents in unlimited number, and with every variety of power and inclination. The means of explanation are thus multiplied and diversified as readily as the phenomena to be explained. And though no future events or states can be predicted on trustworthy grounds, in such manner as to stand the scrutiny of subsequent verification, — yet there is little difficulty in rendering a specious and plausible account of matters past, of any and all things alike; especially as, at such a period, matters of fact requiring explanation are neither collated nor preserved with care. And though no event or state, which has not yet occurred, can be predicted, there is little difficulty in rendering a plausible account of everything which has occurred in the past. Cosmogony, and the prior ages of the world, were conceived as a sort of personal history, with intermarriages, filiation, quarrels, and other adventures, of these invisible agents; among whom some one or more were assumed as unbegotten and self-existent, — the latter assumption being a difficulty common to all systems of cosmogony, and from which even this flexible and expansive hypothesis is not exempt.

Now when Thalês disengaged Grecian philosophy from the old mode of explanation, he did not at the same time disengage it from the old problems and matters propounded for inquiry. These he retained, and transmitted to his successors, as vague and vast as they were at first conceived; and so they remained, though with some transformations and modifications, together with many new questions equally insoluble, substantially present to the Greeks throughout their whole history, as the legitimate problems for philosophical investigation. But these problems, adapted only to the old elastic system of polytheistic explanation and omnipresent personal agency, became utterly disproportioned to any impersonal hypotheses such as those of Thalês and the philosophers after him, — whether assumed physical laws, or plausible moral and metaphysical dogmas, open to argumentative attack, and of course requiring the like defence. To treat the visible world as a whole, and inquire when and how it began, as well as into all its past changes, — to discuss the first origin of men, animals, plants, the sun, the stars, etc., — to assign some comprehensive reason why motion or change in general took place in the universe, — to investigate the destinies of the human race, and to lay down some systematic relation between them and the gods, — all these were topics admitting of being conceived in many different ways, and set forth with eloquent plausibility, but not reducible to any solution either resting on scientific evidence, or commanding steady adherence under a free scrutiny.[1]

At the time when the power of scientific investigation was scanty and helpless, the problems proposed were thus such as to

[1] The less these problems are adapted for rational solution the more nobly do they present themselves in the language of a great poet as a specimen, Euripidês, Fragment. 101, ed. Dindorf.

Ὄλβιος ὅστις τῆς ἱστορίας
Ἔσχε μάθησιν, μήτε πολιτῶν
Ἐπὶ πημοσύνῃ, μητ' εἰς ἀδίκους
Πράξεις ὁρμῶν
Ἀλλ' ἀθανάτου καθορῶν φύσεως
Κόσμον ἀγήρω, πῇ τε συνέστη
Καὶ ὅπῃ καὶ ὅπως
Τοῖς δὲ τοιούτοις οὐδέποτ' αἰσχρῶν
Ἔργων μελέτημα προσίζει.

lie out of the reach of science in its largest compass. Gradually, indeed, subjects more special and limited, and upon which experience, or deductions from experience, could be brought to bear, were added to the list of *quæsita*, and examined with great profit and instruction: but the old problems, with new ones, alike unfathomable, were never eliminated, and always occupied a prominent place in the philosophical world. Now it was this disproportion, between questions to be solved and means of solution, which gave rise to that conspicuous characteristic of Grecian philosophy, — the antagonist force of suspensive skepticism, passing in some minds into a broad negation of the attainability of general truth, — which it nourished from its beginning to its end; commencing as early as Xenophanês, continuing to manifest itself seven centuries afterwards in Ænesidêmus and Sextus Empiricus, and including in the interval between these two extremes some of the most powerful intellects in Greece. The present is not the time for considering these Skeptics, who bear an unpopular name, and have not often been fairly appreciated; the more so, as it often suited the purpose of men, themselves essentially skeptical, like Sokratês and Plato, to denounce professed skepticism with indignation. But it is essential to bring them into notice at the first spring of Grecian philosophy under Thalês, because the circumstances were then laid which so soon afterwards developed them.

Though the celebrity of Thalês in antiquity was great and universal, scarcely any distinct facts were known respecting him: it is certain that he left nothing in writing. Extensive travels in Egypt and Asia are ascribed to him, and as a general fact these travels are doubtless true, since no other means of acquiring knowledge were then open. At a time when the brother of the Lesbian Alkæus was serving in the Babylonian army, we may easily conceive that an inquisitive Milesian would make his way to that wonderful city wherein stood the temple-observatory of the Chaldæan priesthood; nor is it impossible that he may have seen the still greater city of Ninus, or Nineveh, before its capture and destruction by the Medes. How great his reputation was in his lifetime, the admiration expressed by his younger contemporary, Xenophanês, assures us; and Herakleitus, in the next generation, a severe judge of all other

philosophers spoke of him with similar esteem. To him were traced, by the Grecian inquirers of the fourth century B.C., the first beginnings of geometry, astronomy, and physiology in its large and really appropriate sense, the scientific study of nature: for the Greek word denoting nature (φύσις,) first comes into comprehensive use about this time (as I have remarked in an earlier chapter),[1] with its derivatives *physics* and *physiology*, as distinguished from the *theology* of the old poets. Little stress can be laid on those elementary propositions in geometry which are specified as discovered, or as first demonstrated, by Thalês, — still less upon the solar eclipse respecting which, according to Herodotus, he determined beforehand the year of occurrence.[2] But the main doctrine of his physiology, — using that word in its larger Greek sense, — is distinctly attested. He stripped Oceanus and Tethys, primeval parents of the gods in the Homeric theogony, of their personality, — and laid down water, or fluid substance, as the single original element from which everything came, and into which everything returned.[3] The doctrine of one eternal element, remaining always the same in its essence, but indefinitely variable in its manifestations to sense, was thus first introduced to the discussion of the Grecian public. We have no means of knowing the reasons by which Thalês supported this opinion, nor could even Aristotle do more than conjecture what they might have been; but one of the statements urged on behalf of it, — that the earth itself rested on water,[4] — we may safely refer to the Milesian himself, for it would hardly have been advanced at a later age. Moreover, Thalês is reported to have held, that everything was living and full of gods; and that the magnet, especially, was a living thing. Thus the gods, as far as we can pretend to follow opinions so very faintly transmitted, are conceived as active powers,

and causes of changeful manifestation, attached to the primeval substance: [1] the universe being assimilated to an organized body or system.

Respecting Hippo, — who reproduced the theory of Thalês under a more generalized form of expression, substituting, in place of water, moisture, or something common to air and water,[2] — we do not know whether he belonged to the sixth or the fifth century B.C. But Anaximander, Xenophanês, and Pherekydês belong to the latter half of the sixth century. Anaximander, the son of Praxiadês, was a native of Milêtus, — Xenophanês, a native of Kolophon; the former, among the earliest expositors of doctrine in prose,[3] while the latter committed his opinions to the old medium of verse. Anaximander seems to have taken up the philosophical problem, while he materially altered the hypothesis of his predecessor Thalês. Instead of the primeval fluid of the latter, he supposed a primeval principle, without any actual determining qualities whatever, but including all qualities potentially, and manifesting them in an infinite variety from its continually self-changing nature, — a principle, which was nothing in itself, yet had the capacity of producing any and all manifestations, however contrary to each other,[4] — a primeval something, whose essence

[3] Apollodorus, in the second century B.C., had before him some brief expository treatises of Anaximander (Diogen. Laërt. ii, 2): Περὶ Φύσεως, Γῆς Περίοδον, Περὶ τῶν Ἀπλανῶν καὶ Σφαῖραν καὶ ἄλλα τινα. Suidas, v, Γῆς Περίοδον, Περὶ τῶν Ἀπλανῶν καὶ Σφαῖραν καὶ ἄλλα τινα. Themistius. Orat. xxv, p. 317: ἐθάρρησε πρῶτος ὢν ἰσμεν Ἑλλήνων λόγον ἐξενεγκεῖν περὶ Φύσεως συγγεγραμμένον.

[4] Irenæus, ii, 19, (14) ap. Brandis, Handbuch der Geschichte der Griech. Röm. Philos. ch. xxxv, p. 133: "Anaximander hoc quod immensum est, omnium initium subjecit, seminaliter habens in semetipso omnium genesin, ex quo immensos mundos constare ait." Aristotel. Physic. Auscult. iii, 4, p. 203, Bek. οὔτε γὰρ μάτην αὐτὸ οἷόν τε εἶναι (τὸ ἄπειρον), οὔτε ἄλλην ὑπάρχειν αὐτῷ δύναμιν, πλὴν ὡς ἀρχήν. Aristotle subjects this ἄπειρον to an elaborate discussion, in which he says very little more about Anaximander, who appears to have assumed it without anticipating discussion or objections. Whether Anaximander called his ἄπειρον divine, or god, as

it was to be eternally productive of different phenomena, — a sort of mathematical point, which counts for nothing in itself, but is vigorous in generating lines to any extent that may be desired. In this manner, Anaximander professed to give a comprehensive explanation of change in general, or generation, or destruction, — how it happened that one sensible thing began and another ceased to exist, — according to the vague problems which these early inquirers were in the habit of setting to themselves.[1] He avoided that which the first philosophers especially dreaded, the affirmation that generation could take place out of Nothing; yet the primeval Something, which he supposed was only distinguished from nothing by possessing this very power of generation.

In his theory, he passed from the province of physics into that of metaphysics. He first introduced into Grecian philosophy that important word which signifies a beginning or a principle,[2] and first opened that metaphysical discussion, which was carried on in various ways throughout the whole period of Grecian philosophy, as to the one and the many — the continuous and the variable — that which exists eternally, as distinguished from that which comes and passes away in ever-changing manifestations. His physiology, or explanation of nature, thus conducted the mind into a different route from that suggested by the hypothesis of Thalês, which was built upon physical considerations, and was therefore calculated to suggest and stimulate observations of physical phenomena for the purpose of verifying or confuting it, — while the hypothesis of Anaximander admitted only of being

Tennemann (Gesch. Philos. i, 2, p. 67) and Panzerbieter affirm (ad Diogenis Apolloniat. Fragment. c. 13, p. 16,) I think doubtful: this is rather an inference which Aristotle elicits from his language. Yet in another passage, which is difficult to reconcile, Aristotle ascribes to Anaximander the water-doctrine of Thalês, (Aristotel. de Xenophane, p. 975. Bek.)

Anaximander seems to have followed speculations analogous to those of Thalês, in explaining the first production of the human race (Plutarch Placit. Philos. v, 19, p. 908), and in other matters (ibid. iii, 16, p. 896).

[1] Aristotel. De Generat. et Destruct. c. 3, p. 317, Bek. *ὁ μάλιστα φοβούμενοι διετέλεσαν οἱ πρῶτοι φιλοσοφήσαντες, τὸ ἐκ μηδενὸς γίνεσθαι προϋπάρχοντος*· compare Physic. Auscultat. i, 4, p. 187, Bek.

[2] Simplicius in Aristotel. Physic. fol. 6. 32. *πρῶτος αὐτὸς Ἀρχὴν ὀνομάσας τὸ ὑποκείμενον.*

discussed dialectically, or by reasonings expressed in general language; reasonings sometimes, indeed, referring to experience for the purpose of illustration, but seldom resting on it, and never looking out for it as a necessary support. The physical explanation of nature, however, once introduced by Thalês, although deserted by Anaximander, was taken up by Anaximenês and others afterwards, and reproduced with many divergences of doctrine, — yet always more or less entangled and perplexed with metaphysical additions, since the two departments were never clearly parted throughout all Grecian philosophy. Of these subsequent physical philosophers I shall speak hereafter: at present, I confine myself to the thinkers of the sixth century B.C., among whom Anaximander stands prominent, not as the follower of Thalês, but as the author of an hypothesis both new and tending in a different direction.

It was not merely as the author of this hypothesis, however, that Anaximander enlarged the Greek mind and roused the powers of thought: we find him also mentioned as distinguished in astronomy and geometry. He is said to have been the first to establish a sun-dial in Greece, to construct a sphere, and to explain the obliquity of the ecliptic;[1] how far such alleged authorship really belongs to him, we cannot be certain, — but there is one step of immense importance which he is clearly affirmed to have made. He was the first to compose a treatise on the geography of the land and sea within his cognizance, and to construct a chart or map founded thereupon, — seemingly a tablet of brass. Such a novelty, wondrous even to the rude and ignorant, was calculated to stimulate powerfully inquisitive minds, and from it may be dated the commencement of Grecian rational geography, — not the least valuable among the contributions of this people to the stock of human knowledge.

Xenophanês of Kolophon, somewhat younger than Anaximander, and nearly contemporary with Pythagoras (seemingly from about 570–480 B.C.), migrated from Kolophon[2] to Zanklê and Katana in Sicily and Elea in Italy, soon after the time when

[1] Diogen. Laërt. ii, 81. 2. He agreed with Thalês in maintaining that the earth was stationary. (Aristotel. de Coelo, ii. 13, p. 295, ed Bekk.)

[2] Diogen. Laërt. ix, 18.

Ionia became subject to the Persians, (540–530 B.C.) He was the founder of what is called the Eleatic school of philosophers, — a real school, since it appears that Parmenidês, Zeno, and Melissus, pursued and developed, in a great degree, the train of speculation which had been begun by Xenophanês, — doubtless with additions and variations of their own, but especially with a dialectic power which belongs to the age of Periklês, and is unknown in the sixth century B.C. He was the author of more than one poem of considerable length, one on the foundation of Kolophon and another on that of Elea; besides his poem on Nature, wherein his philosophical doctrines were set forth.[1] His manner appears to have been controversial and full of asperity towards antagonists; but what is most remarkable is the plain-spoken manner in which he declared himself against the popular religion, and in which he denounced as abominable the descriptions of the gods given by Homer and Hesiod.[2]

He is said to have controverted the doctrines both of Thalês and Pythagoras: this is probable enough; but he seems to have taken his start from the philosophy of Anaximander, — not, however, to adopt it, but to reverse it, — and to set forth an opinion which we may call its contrary. Nature, in the conception of Anaximander, consisted of a Something having no other attribute except the unlimited power of generating and cancelling phenomenal changes: in this doctrine, the something or substratum existed only in and for those changes, and could not be said to exist at all in any other sense: the permanent was thus merged and lost in the variable, — the one in the many. Xenophanês laid down the exact opposite: he conceived Nature as one unchangeable and indivisible whole, spherical, animated, endued with reason, and penetrated by or indeed identical with God: he denied the objective reality of all change, or generation, or destruction, which he seems to have considered as only changes or modifications in the percipient, and perhaps different in one percipient and another. That which exists, he maintained, could not have been generated, nor could it ever be destroyed: there was neither real generation nor real destruction of anything; but that which

[1] Diogen. Laërt. ix, 22; Stobæus, Eclog. Phys. i, p. 294.
[2] Sextus Empiricus, adv. Mathem. ix, 193.

men took for such, was the change in their own feelings and ideas. He thus recognized the permanent without the variable,[1] — the one without the many. And his treatment of the received religious creed was in harmony with such physical or metaphysical hypothesis; for while he held the whole of Nature to be God, without parts or change, he at the same time pronounced the popular gods to be entities of subjective fancy, imagined by men after their own model: if oxen or lions were to become religious, he added, they would in like manner provide for themselves gods after their respective shapes and characters.[2] This hypothesis, which seemed to set aside altogether the study of the sensible world as a source of knowledge, was expounded briefly, and as it should seem, obscurely and rudely, by Xenophanês; at least we may infer thus much from the slighting epithet applied to him by Aristotle.[3] But his successors, Parmenidês and Zeno, in the succeeding century, expanded it considerably, supported it with extraordinary acuteness of dialectics, and even superadded a second part, in which the phenomena of sense — though considered only as appearances, not partaking in the reality of the one Ens — were yet explained by a new physical hypothesis; so that they will be found to exercise great influence over the speculations both of Plato and Aristotle. We discover in Xenophanês, moreover, a vein of skepticism, and a mournful despair as

[1] Aristot. Metaphys. i, 5, p. 986, Bek. *Ξενοφάνης δὲ πρῶτος τούτων ἐνίσας, οὐθὲν διεσαφήνισεν, οὐδὲ τῆς φύσεως τούτων (τοῦ κατὰ τὸν λόγον ἑνὸς καὶ τοῦ κατὰ τὴν ὅλην) οὐδετέρας ἔοικε θιγεῖν, ἀλλ' εἰς τὸν ὅλον οὐρανὸν ἀποβλέψας τὸ ἓν εἶναί φησι τὸν θεόν.*

Plutarch. ap. Eusebium Præparat. Evangel. i, 8. *Ξενοφάνης δὲ ὁ Κολοφώνιος ἰδίαν μέν τινα ὁδὸν πεπορευμένος καὶ παρηλλαχυῖαν πάντας τοὺς προειρημένους, οὔτε γένεσιν οὔτε φθορὰν ἀπολείπει, ἀλλ' εἶναι λέγει τὸ πᾶν ἀεὶ ὅμοιον.* Compare Timon ap. Sext. Empiric. Pyrrh. Hypotyp. i, 224, 225 *ἐδογμάτιζε δὲ ὁ Ξενοφάνης παρὰ τὰς τῶν ἄλλων ἀνθρώπων προλήψεις, ἓν εἶναι τὸ πᾶν, καὶ τὸν θεὸν συμφυῆ τοῖς πᾶσιν· εἶναι δὲ σφαιροειδῆ καὶ ἀπαθῆ καὶ ἀμετάβλητον καὶ λογικόν,* (Aristot. de Xenoph. c. 3, p. 977, Bek.) *Ἀδύνατόν φησιν (ὁ Ξενοφάνης) εἶναι, εἴ τι ἐστὶν, γενέσθαι,* etc.

One may reasonably doubt whether all the arguments ascribed to Xenophanês, in the short but obscure treatise last quoted, really belong to him.

[2] Clemens Alexand. Stromat. v, p. 601, vii, p. 711.

[3] Aristot. Metaphysic. i, 5, p. 986, Bek. *μικρὸν ἀγροικότερος.*

to the attainability of certain knowledge,[1] which the nature of his philosophy was well calculated to suggest, and in which the sillograph Timon of the third century B.C., who seems to have spoken of Xenophanês better than of most of the other philosophers, powerfully sympathized.

The cosmogony of Pherekydês of Syrus, contemporary of Anaximander and among the teachers of Pythagoras, seems, according to the fragments preserved, a combination of the old legendary fancies with Orphic mysticism,[2] and probably exercised little influence over the subsequent course of Grecian philosophy By what has been said of Thalês, Anaximander, and Xenophanês, it will be seen that the sixth century B.C. witnessed the opening of several of those roads of intellectual speculation which the later philosophers pursued farther, or at least from which they branched off. Before the year 500 B.C. many interesting questions were thus brought into discussion, which Solon, who died about 558 B.C., had never heard of, — just as he may probably never have seen the map of Anaximander. But neither of these two distinguished men — Anaximander or Xenophanês was anything more than a speculative inquirer. The third eminent name of this century, of whom I am now about to speak,— Pythagoras, combined in his character disparate elements which require rather a longer development.

Pythagoras was founder of a brotherhood, originally brought together by a religious influence, and with observances approaching to monastic peculiarity, — working in a direction at once religious, political, and scientific, and exercising for some time a real political ascendency, — but afterwards banished from government and state affairs into a sectarian privacy with scientific pursuits, not without, however, still producing some statesmen individually distinguished. Amidst the multitude of false and apocryphal statements which circulated in antiquity respecting this celebrated man, we find a few important facts reasonably attested and deserving credence. He was a native of Samos,[3]

[2] See Brandis, Handbuch der Griech. Röm. Philosophie, ch. xxii.

[3] Herodot. iv, 95. The place of his nativity is certain from Herodotus,

son of an opulent merchant named Mnêsarchus, — or, according to some of his later and more fervent admirers, of Apollo; born, as far as we can make out, about the 50th Olympiad, or 580 B.C. On the many marvels recounted respecting his youth, it is unnecessary to dwell. Among them may be numbered his wide-reaching travels, said to have been prolonged for nearly thirty years, to visit the Arabians, the Syrians, the Phenicians, the Chaldæans, the Indians, and the Gallic Druids. But there is reason to believe that he really visited Egypt[1] — perhaps also Phenicia — and Babylon, then Chaldæan and independent. At the time when he saw Egypt, between 560–540 B.C., about one century earlier than Herodotus, it was under Amasis, the last of its own kings, with its peculiar native character yet unimpaired by foreign conquest, and only slightly modified by the admission during the preceding century of Grecian mercenary troops and traders. The spectacle of Egyptian habits, the conversation of the priests, and the initiation into various mysteries or secret rites and stories not accessible to the general public, may very naturally have impressed the mind of Pythagoras, and given him that turn for mystic observance, asceticism, and peculiarity of diet and clothing, — which manifested itself from the same cause among several of his contemporaries, but which was not a common phenomenon in the primitive Greek religion. Besides visiting Egypt, Pythagoras is also said to have profited by the teaching of Thalês, of Anaximander, and of Pherekydês of

but even this fact was differently stated by other authors, who called him a Tyrrhenian of Lemnos or Imbros (Porphyry, Vit. Pythag. c. 1–10), a Syrian, a Phliasian, etc.

Cicero (De Repub. ii, 15: compare Livy, i, 18) censures the chronological blunder of those who made Pythagoras the preceptor of Numa; which certainly is a remarkable illustration how much confusion prevailed among literary men of antiquity about the dates of events even of the sixth century B.C. Ovid follows this story without hesitation: see Metamorph. xv, 60, with Burmann's note.

[1] Cicero de Fin. v, 29; Diogen. Laërt. viii, 3; Strabo, xiv, p. 638; Alexander Polyhistor ap. Cyrill. cont. Julian. iv, p. 128, ed. Spanh. For the vast reach of his supposed travels, see Porphyry, Vit. Pythag. 11; Jamblic 14, *seqq.*

The same extensive journeys are ascribed to Demokritus, Diogen. Laërt ix, 35.

Syros.[1] Amidst the towns of Ionia, he would, moreover, have an opportunity of conversing with many Greek navigators who had visited foreign countries, especially Italy and Sicily. His mind seems to have been acted upon and impelled by this combined stimulus, — partly towards an imaginative and religious vein of speculation, with a life of mystic observance, — partly towards that active exercise, both of mind and body, which the genius of an Hellenic community so naturally tended to suggest.

Of the personal doctrines or opinions of Pythagoras, whom we must distinguish from Philolaus and the subsequent Pythagoreans, we have little certain knowledge, though doubtless the first germ of their geometry, arithmetic, astronomy, etc. must have proceeded from him. But that he believed in the metempsychosis or transmigration of the souls of deceased men into other men, as well as into animals, we know, not only by other evidence, but also by the testimony of his contemporary, the philosopher Xenophanês of Elea. Pythagoras, seeing a dog beaten, and hearing him howl, desired the striker to desist, saying: "It is the soul of a friend of mine, whom I recognized by his voice." This — together with the general testimony of Hêrakleitus, that Pythagoras was a man of extensive research and acquired instruction, but artful for mischief and destitute of sound judgment — is all that we know about him from contemporaries. Herodotus, two generations afterwards, while he conceives the Pythagoreans as a peculiar religious order, intimates that both Orpheus and Pythagoras had derived the doctrine of the metempsychosis from Egypt, but had pretended to it as their own without acknowledgment.[2]

[1] The connection of Pythagoras with Pherekydês is noticed by Aristoxenus ap. Diogen. Laërt. i, 118, viii, 2; Cicero de Divinat. i, 13.

[2] Xenophanês, Fragm. 7, ed. Schneidewin; Diogen. Laërt. viii, 36: compare Aulus Gellius, iv, 11 (we must remark that this or a like doctrine is not peculiar to Pythagoreans, but believed by the poet Pindar, Olymp. ii, 68. and Fragment, Thren. x, as well as by the philosopher Pherekydês, Porphyrius de Antro Nympharum, c. 31).

Καί ποτέ μιν στυφελιζομένου σκύλακος παριόντι
Φασὶν ἐποικτεῖραι, καὶ τόδε φάσθαι ἔπος —
Παῦσαι, μηδὲ ῥάπιζ· ἐπεὶη φίλου ἀνερός ἐστι
Ψυχὴ, τὴν ἔγνων φθεγξαμένης ἀϊων.

Consult also Sextus Empiricus, viii, 286, as to the *κοινωνία* between gods,

Pythagoras combines the character of a sophist (a man of large observation, and clever, ascendent, inventive mind, — the original sense of the word Sophist, prior to the polemics of the Platonic school, and the only sense known to Herodotus[1]) with that of an inspired teacher, prophet, and worker of miracles, — approaching to and sometimes even confounded with the gods, — and employing all these gifts to found a new special order of brethren, bound together by religious rites and observances peculiar to themselves. In his prominent vocation, analogous to that of Epimenidês, Orpheus, or Melampus, he appears as the revealer of a mode of life calculated to raise his disciples above the level of mankind, and to recommend them to the favor of the gods; the Pythagorean life, like the Orphic life,[2] being intended

men and animals, believed both by Pythagoras and Empedoklês. That Herodotus (ii, 123) alludes to Orpheus and Pythagoras, though refraining designedly from mentioning names, there can hardly be any doubt: compare ii, 81; also Aristotle, De Animâ, i, 3, 23.

The testimony of Hêrakleitus is contained in Diogenes Laërtius, viii, 6; ix, 1. Ἡρακλείτος γοῦν ὁ φυσικὸς μονονουχὶ κέκραγε καί φησι· Πυθαγόρης Μνησάρχου ἱστορίην ἤσκησεν ἀνθρώπων μάλιστα πάντων, καὶ ἐκλεξάμενος ταύτας τὰς συγγραφὰς, ἐποιήσατο ἑαυτοῦ σοφίην, πολυμαθίην, κακοτεχνίην. Again, Πολυμαθίη νόον οὐ διδάσκει· Ἡσίοδον γὰρ ἂν ἐδίδαξε καὶ Πυθαγόρην, αὖθις δὲ Ξενοφάνεά τε καὶ Ἑκαταῖον.

Dr. Thirlwall conceives Xenophanês as having intended in the passage above cited to treat the doctrine of the metempsychosis "with deserved ridicule." (Hist. of Greece, ch. xii, vol. ii, p. 162.) Religious opinions are so apt to appear ridiculous to those who do not believe them, that such a suspicion is not unnatural; yet I think, if Xenophanês had been so disposed, he would have found more ridiculous examples among the many which this doctrine might suggest. Indeed, it seems hardly possible to present the metempsychosis in a more touching or respectable point of view than that which the lines of his poem set forth. The particular animal selected is that one between whom and man the sympathy is most marked and reciprocal, while the doctrine is made to enforce a practical lesson against cruelty.

[1] Herodot. i, 29; ii, 49; iv, 95. Ἑλλήνων οὐ τῷ ἀσθενεστάτῳ σοφιστῇ Πυθαγόρῃ. Hippokratês distinguishes the *σοφιστὴς* from the *ἰητρὸς*, though both of them had handled the subject of medicine, — the general from the special habits of investigation. (Hippokratês, Περὶ ἀρχαίης ἰητρικῆς, c. 20, vol. i, p. 620, Littré.)

[2] See Lobeck's learned and valuable treatise, Aglaophamus, Orphica, Lib. ii, pp. 247, 698, 900; also Plato, Legg. vi. 782, and Eurip. Hippol. 946.

as the exclusive prerogative of the brotherhood, — approached only by probation and initiatory ceremonies which were adapted to select enthusiasts rather than to an indiscriminate crowd, — and exacting entire mental devotion to the master.[1] In these lofty pretensions the Agrigentine Empedoklês seems to have greatly copied him, though with some varieties, about half a century afterwards.[2] While Aristotle tells us that the Krotoniates identified Pythagoras with the Hyperborean Apollo, the satirical Timon pronounced him to have been "a juggler of solemn speech, engaged in fishing for men."[3] This is the same character, looked at from the different points of view of the believer and the unbeliever. There is, however, no reason for regarding Pythagoras as an impostor, because experience seems to show, that while in certain ages it is not difficult for a man to persuade others that he is inspired, it is still less difficult for him to contract the same belief himself.

Looking at the general type of Pythagoras, as conceived by witnesses in and nearest to his own age, — Xenophanês, Hêrakleitus, Herodotus, Plato, Aristotle, Isokratês,[4] — we find in him

[1] Plato's conception of Pythagoras (Republ. x, p. 600) depicts him as something not unlike St. Benedict, or St. Francis, (or St. Elias, as some Carmelites have tried to make out: see Kuster ad Jamblich. c. 3) — Ἀλλὰ δὴ, εἰ μὴ δημοσίᾳ, ἰδίᾳ τισιν ἡγεμὼν παιδείας αὐτὸς ζῶν λέγεται Ὅμηρος γενέσθαι, οἱ ἐκεινον ἠγάπων ἐπὶ συνουσίᾳ καὶ τοῖς ὑστέροις ὁδόν τινα βίου παρέδοσαν Ὁμηρικήν· ὥσπερ Πυθαγόρας αὐτός τε διαφερόντως ἐπὶ τούτῳ ἠγαπήθη, καὶ οἱ ὕστερον ἔτι καὶ νῦν Πυθαγορεῖον τροπὸν ἐπονομάζοντες τοῦ βίου διαφανεῖς πη δοκοῦσιν εἶναι ἐν τοῖς ἄλλοις.

The description of Melampus, given in Herodot. ii, 49, very much fills up the idea of Pythagoras, as derived from ii, 81–123, and iv, 95. Pythagoras, as well as Melampus, was said to have pretended to divination and prophecy (Cicero, Divinat. i, 3, 46; Porphyr. Vit. Pyth. c. 29: compare Krische, De Societate a Pythagorâ in urbe Crotoniatarum conditâ Commentatio, ch. v, p. 72, Göttingen, 1831).

Πυθαγόρην τε γόητος ἀποκλίναντ' ἐπὶ δόξαν
Θήρη ἐπ' ἀνθρώπων, σεμνηγορίης ἀριστήν.

[4] Isokratês, Busiris, p. 402, ed. Auger. Πυθαγόρας ὁ Σάμιος, ἀφικόμενος

chiefly the religious missionary and schoolmaster, with little of the politician. His efficiency in the latter character, originally subordinate, first becomes prominent in those glowing fancies which the later Pythagoreans communicated to Aristoxenus and Dikæarchus. The primitive Pythagoras inspired by the gods to reveal a new mode of life,[1] — the Pythagorean life, — and to promise divine favor to a select and docile few, as the recompense of strict ritual obedience, of austere self-control, and of laborious training, bodily as well as mental. To speak with confidence of the details of his training, ethical or scientific, and of the doctrines which he promulgated, is impossible; for neither he himself nor any of his disciples anterior to Philolaus — who was separated from him by about one intervening generation — left any memorials in writing.[2] Numbers and lines, studied

εἰς Αἴγυπτον, καὶ μαθητὴς τῶν ἱερέων γενόμενος, τήν τε ἄλλην φιλοσοφίαν πρῶτος εἰς τοὺς Ἕλληνας ἐκόμισε, καὶ τὰ περὶ τὰς θυσίας καὶ τὰς ἁγιστείας ἐν τοῖς ἱεροῖς ἐπιφανέστερον τῶν ἄλλων ἐσπούδασε.

Compare Aristotel. Magn. Moralia, i, 1, about Pythagoras as an ethical teacher. Dêmokritus, born about 460 B.C., wrote a treatise (now lost) respecting Pythagoras, whom he greatly admired: as far as we can judge, it would seem that he too must have considered Pythagoras as an ethical teacher (Diogen. Laërt. xi, 38; Mullach, Democriti Fragmenta, lib. ii, p 113; Cicero de Orator. iii, 15).

[1] Jamblichus, Vit. Pyth. c. 64, 115, 151, 199: see also the idea ascribed to Pythagoras, of divine inspirations coming on men (ἐπίπνοια παρὰ τοῦ δαιμονίου). Aristoxenus apud Stobæum, Eclog. Physic. p. 206; Diogen. Laërt. viii, 32.

Meiners establishes it as probable that the stories respecting the miraculous powers and properties of Pythagoras got into circulation either during his lifetime, or at least not long after his death (Geschichte der Wissenschaften, b. iii, vol. i, pp. 504, 505).

[2] Respecting Philolaus, see the valuable collection of his fragments, and commentary on them, by Boeckh (Philolaus des Pythagoreers Leben, Berlin, 1819). That Philolaus was the first who composed a work on Pythagorean science, and thus made it known beyond the limits of the brotherhood — among others to Plato — appears well established (Boeckh, Philolaus, p. 22; Diogen. Laërt. viii, 15–55; Jamblichus, c. 119). Simmias and Kebês, fellow-disciples of Plato under Sokratês, had held intercourse with Philolaus at Thebes (Plato, Phædon, p. 61), perhaps about 420 B.C. The Pythagorean brotherhood had then been dispersed in various parts of Greece, though the attachment of its members to each other seems to have continued long afterwards.

partly in their own mutual relations, partly under various symbolizing fancies, presented themselves to him as the primary constituent elements of the universe, and as a sort of magical key to phenomena, physical as well as moral. And these mathematical tendencies in his teaching, expanded by Pythagoreans, his successors, and coinciding partly also, as has been before stated, with the studies of Anaximander and Thalês, acquired more and more development, so as to become one of the most glorious and profitable manifestations of Grecian intellect. Living as Pythagoras did at a time when the stock of experience was scanty, the license of hypothesis unbounded, and the process of deduction without rule or verifying test, — he was thus fortunate enough to strike into that track of geometry and arithmetic, in which, from data of experience few, simple, and obvious, an immense field of deductive and verifiable investigation may be travelled over. We must at the same time remark, however, that in his mind this track, which now seems so straightforward and well defined, was clouded by strange fancies which it is not easy to understand, and from which it was but partially cleared by his successors. Of his spiritual training much is said, though not upon very good authority. We hear of his memorial discipline, his monastic self-scrutiny, his employment of music to soothe disorderly passions,[1] his long novitiate of silence, his knowledge of physiognomy, which enabled him to detect even without trial unworthy subjects, his peculiar diet, and his rigid care for sobriety as well as for bodily vigor. He is also said to have inculcated abstinence from animal food, and this feeling is so naturally connected with the doctrine of the metempsychosis, that we may well believe him to have entertained it, as Empedoklês also did after him.[2] It is certain that there were peculiar

[1] Plutarch, De Isid. et Osirid. p. 384, ad fin. Quintilian, Instit. Orat. ix. 4.

[2] Empedoklês, ap. Aristot. Rhetoric. i, 14, 2; Sextus Empiric ix, 127; Plutarch, De Esu Carnium, pp. 993, 996, 997; where he puts Pythagoras and Empedoklês together, as having both held the doctrine of the metempsychosis, and both prohibited the eating of animal food. Empedoklês supposed that plants had souls, and that the souls of human beings passed after death into plants as well as into animals. "I have been myself heretofore (said he) a boy, a girl, a shrub, a bird, and a fish of the sea."

observances, and probably a certain measure of self-denial embodied in the Pythagorean life; but on the other hand, it seems equally certain that the members of the order cannot have been all subjected to the same diet, or training, or studies. For Milo the Krotoniate was among them,[1] the strongest man and the unparalleled wrestler of his age, — who cannot possibly have dispensed with animal food and ample diet (even setting aside the tales about his voracious appetite), and is not likely to have bent his attention on speculative study. Probably Pythagoras did not enforce the same bodily or mental discipline on all, or at least knew when to grant dispensations. The order, as it first stood under him, consisted of men different both in temperament and aptitude, but bound together by common religious observances and hopes, common reverence for the master, and mutual attachment as well as pride in each other's success; and it must thus be distinguished from the Pythagoreans of the fourth century B.C., who had no communion with wrestlers, and comprised only ascetic, studious men, generally recluse, though in some cases rising to political distinction.

The succession of these Pythagoreans, never very numerous, seems to have continued until about 300 B.C., and then nearly died out; being superseded by other schemes of philosophy more suited to cultivated Greeks of the age after Sokratês. But during the time of Cicero, two centuries afterwards, the orientalizing tendency — then beginning to spread over the Grecian and Roman world, and becoming gradually stronger and stronger — caused the Pythagorean philosophy to be again revived. It was revived too, with little or none of its scientific tendencies, but with more than its primitive religious and imaginative fanaticism, —

ἤδη γάρ ποτ' ἐγὼ γενόμην κοῦρός τε κόρη τε,
θάμνος τ', οἰωνός τε καὶ ἐξ ἁλὸς ἔμπυρος ἰχθύς.

(Diogen. L. viii, 77; Sturz. ad Empedokl. Frag. p. 466.) Pythagoras is said to have affirmed that he had been not only Euphorbus in the Grecian army before Troy, but also a tradesman, a courtezan, etc., and various other human characters, before his actual existence; he did not, however, extend the same intercommunion to plants, in any case.

The abstinence from animal food was an Orphic precept as well as a Pythagorean (Aristophan. Ran. 1032).

[1] Strabo, vi, p. 263; Diogen. L. viii, 40

Apollonius of Tyana constituting himself a living copy of Pythagoras. And thus, while the scientific elements developed by the disciples of Pythagoras had become disjoined from all peculiarity of sect, and passed into the general studious world, — the original vein of mystic and ascetic fancy belonging to the master, without any of that practical efficiency of body and mind which had marked his first followers, was taken up anew into the pagan world, along with the disfigured doctrines of Plato. Neo-Pythagorism, passing gradually into Neo-Platonism, outlasted the other more positive and masculine systems of pagan philosophy, as the contemporary and rival of Christianity. A large proportion of the false statements concerning Pythagoras come from these Neo-Pythagoreans, who were not deterred by the want of memorials from illustrating, with ample latitude of fancy, the ideal character of the master.

That an inquisitive man like Pythagoras, at a time when there were hardly any books to study, would visit foreign countries, and converse with all the Grecian philosophical inquirers within his reach, is a matter which we should presume, even if no one attested it; and our witnesses carry us very little beyond this general presumption. What doctrines he borrowed, or from whom, we are unable to discover. But, in fact, his whole life and proceedings bear the stamp of an original mind, and not of a borrower, — a mind impressed both with Hellenic and with non-Hellenic habits and religion, yet capable of combining the two in a manner peculiar to himself; and above all, endued with those talents for religion and personal ascendency over others, which told for much more than the intrinsic merit of his ideas. We are informed that after extensive travels and inquiries he returned to Samos, at the age of about forty: he then found his native island under the despotism of Polykratês, which rendered it an unsuitable place either for free sentiments or for marked individuals. Unable to attract hearers, or found any school or brotherhood, in his native island, he determined to expatriate. And we may presume that at this period (about 535–530 B.C.) the recent subjugation of Ionia by the Persians was not without influence on his determination. The trade between the Asiatic and the Italian Greeks, — and even the intimacy between Milêtus and Knidus on the one side, and Sybaris and Tarentum

on the other, — had been great and of long standing, so that there was more than one motive to determine him to the coast of Italy; in which direction also his contemporary Xenophanês, the founder of the Eleatic school of philosophy, emigrated, seemingly, about the same time, — from Kolophon to Zanklê, Katana, and Elea.[1]

Kroton and Sybaris were at this time in their fullest prosperity, — among the first and most prosperous cities of the Hellenic name. To the former of the two Pythagoras directed his course. A council of one thousand persons, taken from among the heirs and representatives of the principal proprietors at its first foundation, was here invested with the supreme authority: in what manner the executive offices were filled, we have no information. Besides a great extent of power, and a numerous population, the large mass of whom had no share in the political franchise, Kroton stood at this time distinguished for two things, — the general excellence of the bodily habit of the citizens, attested, in part, by the number of conquerors furnished to the Olympic games, — and the superiority of its physicians, or surgeons.[2] These two points were, in fact, greatly connected with each other. For the therapeutics of the day consisted not so much of active remedies as of careful diet and regimen; while the trainer, who dictated the life of an athlete during his long and fatiguing preparation for an Olympic contest, and the professional superintendent of the youths who frequented the public gymnasia, followed out the same general views, and acted upon the same basis of knowledge, as the physician who prescribed for a

[1] Diogen. Laërt. ix, 18.

[2] Herodot. iii, 131; Strabo, vi, p. 261: Menander de Encomiis, p. 96, ed. Heeren. Ἀθηναίους ἐπὶ ἀγαλματοποιΐᾳ τε καὶ ζωγραφικῇ, καὶ Κροτωνιάτας ἐπὶ ἰατρικῇ, μέγα φρονῆσαι, etc.

The Krotoniate Alkmæon, a younger contemporary of Pythagoras (Aristotel. Metaph. i, 5), is among the earliest names mentioned as philosophizing upon physical and medical subjects. See Brandis, Handbuch der Geschicht. der Philos. sect. lxxxiii, p. 508, and Aristotel. De Generat. Animal. iii, 2, p. 752, Bekker.

The medical art in Egypt, at the time when Pythagoras visited that country, was sufficiently far advanced to excite the attention of an inquisitive traveller, — the branches of it minutely subdivided and strict rules laid down for practice (Herodot. ii, 84; Aristotel. Politic. iii. 10, 4).

state of positive bad health.[1] Of medical education properly so called, especially of anatomy, there was then little or nothing.

[1] See the analogy of the two strikingly brought out in the treatise of Hippokratês Περὶ ἀρχαίης ἰητρικῆς, c. 3, 4, 7, vol. i, p. 580–584, ed. Littré.

Ἔτι γοῦν καὶ νῦν οἱ τῶν γυμνασίων καὶ ἀσκησίων ἐπιμελόμενοι αἰεί τι προσεξευρίσκουσι, καὶ τὴν αὐτέην ὁδὸν ζητέοντες ὅ, τι ἔδων καὶ πίνων ἐπικρατήσει τε αὐτέων μάλιστα, καὶ ἰσχυρότερος αὐτὸς ἑωϋτοῦ ἔσται (p. 580); again, p 584: Τί οὖν φαίνεται ἑτεροῖον διανοηθεὶς ὁ καλεύμενος ἰητρὸς καὶ ὁμολογημένως χειροτέχνης, ὃς ἐξεῦρε τὴν ἀμφὶ τοὺς κάμνοντας δίαιταν καὶ τροφὴν, ἢ κεῖνος ὁ ἀπ' ἀρχῆς τοῖσι πᾶσιν ἀνθρώποισι τροφὴν, ἣ νῦν χρεόμεθα, ἐξ ἐκείνης τῆς ἀγρίης καὶ θηριώδεος εὑρών τε καὶ παρασκευασας διαίτης: compare another passage, not less illustrative, in the treatise of Hippokratês Περὶ διαίτης ὀξέων, c. 3, vol. ii, p. 245, ed. Littré.

Following the same general idea, that the theory and practice of the physician is a farther development and variety of that of the gymnastic trainer, I transcribe some observations from the excellent Remarques Rétrospectives of M. Littré, at the end of the fourth volume of his edition of Hippokratês (p. 662).

After having observed (p. 659) that physiology may be considered as divided into two parts, — one relating to the mechanism of the functions; the other, to the effects produced upon the human body by the different influences which act upon it and the media by which it is surrounded; and after having observed that on the first of these two branches the ancients could never make progress from their ignorance of anatomy, — he goes on to state, that respecting the second branch they acquired a large amount of knowledge: —

"Sur la physiologie des influences extérieures, la Grèce du temps d'Hippocrate et après lui fut le théâtre d'expériences en grand, les plus importantes et les plus instructives. Toute la population (la population libre, s'entend) étoit soumise à un système régulier d'éducation physique (N. B. this is a little too strongly stated): dans quelques cités, à Lacédémone par exemple, les femmes n'en étoient pas exemptées. Ce système se composoit d'exercices et d'une alimentation, que combinèrent l'empirisme d'abord, puis une théorie plus savante: il concernoit (comme dit Hippocrate lui-même, en ne parlant, il est vrai, que de la partie alimentaire), il concernoit et les malades pour leur rétablissement, et les gens bien portans pour la conservation de leur santé, et les personnes livrées aux exercices gymnastiques pour l'accroissement de leurs forces. On savoit au juste ce qu'il falloit pour conserver seulement le corps en bon état ou pour traiter un malade — pour former un militaire ou pour faire un athlète — et en particulier, un lutteur, un coureur, un sauteur, un pugiliste. Une classe d'hommes, les maîtres des gymnases, étoient exclusivement adonnés à la culture de cet art, auquel les médecins participoient dans les limtes de leur profession, et Hippocrate, qui dans les Aphorismes, invoque l'exemple des athlètes, nous parle dans le Traité des Articulations des personnes maigres qui n'ayant pas été amaigris par un procédé régulier de l'art, ont les chairs muqueuses. Les anciens médecins savoient, comme on le voit, procurer l'amaigrissement conformément à l'art, et reconnoitre à ses effets un amaigrissement irrégulier: toutes choses auxquelles nos médecins sont étrangers, et dont on ne retrouve l'analogue que parmi les *entraineurs* Anglois. Au reste cet ensemble de connoissances empiriques et theoriques doit être mis au rang des pertes fâcheuses qui ont accompagné la longue et turoulente transition du monde ancien au monde moderne. Les admirables institutions destinées dans l'antiquité à développer et affermir le corps, ont disparu: l'hygiène publique est déstituée à cet égard de toute direction scientifique et générale, et demeure abandonnée complètement au hasard."

See also the remarks of Plato respecting Herodikus, De Republicâ, iii, p 406; Aristotel Politic. iii, 11, 6; iv, 1, 1 · viii, 4, 1.

The physician acquired his knowledge from observation of men sick as well as healthy, and from a careful notice of the way in which the human body was acted upon by surrounding agents and circumstances: and this same knowledge was not less necessary for the trainer; so that the same place which contained the best men in the latter class was also likely to be distinguished in the former. It is not improbable that this celebrity of Kroton may have been one of the reasons which determined Pythagoras to go thither; for among the precepts ascribed to him, precise rules as to diet and bodily regulation occupy a prominent place. The medical or surgical celebrity of Dêmokêdês (son-in-law of the Pythagorean Milo), to whom allusion has been made in a former chapter, is contemporaneous with the presence of Pythagoras at Kroton; and the medical men of Magna Græcia maintained themselves in credit, as rivals of the schools of the Asklepiads at Kôs and Knidus, throughout all the fifth and fourth centuries B.C.

The biographers of Pythagoras tell us that his arrival there, his preaching, and his conduct, produced an effect almost electric upon the minds of the people, with an extensive reform, public as well as private. Political discontent was repressed, incontinence disappeared, luxury became discredited, and the women, hastened to exchange their golden ornaments for the simplest attire. No less than two thousand persons were converted at his first preaching; and so effective were his discourses to the youth, that the Supreme Council of One Thousand invited him into their assembly, solicited his advice, and even offered to constitute him their

prytanis, or president, while his wife and daughter were placed at the head of the religious processions of females.[1] Nor was his influence confined to Kroton. Other towns in Italy and Sicily, — Sybaris, Metapontum, Rhêgium, Katana, Himera, etc., all felt the benefit of his exhortations, which extricated some of them even from slavery. Such are the tales of which the biographers of Pythagoras are full.[2] And we see that even the disciples of Aristotle, about the year 300 B. C., — Aristoxenus, Dikæarchus, Herakleidês of Pontus, etc., are hardly less charged with them than the Neo-Pythagoreans of three or four centuries later: they doubtless heard them from their contemporary Pythagoreans,[3] the last members of a declining sect, among whom

[1] Valerius Maxim. viii, 15, xv, 1; Jamblichus, Vit. Pyth. c. 45; Timæus, Fragm. 78, ed. Didot.

[2] Porphyry, Vit. Pythag. c. 21–54; Jamblich. 33–35, 166.

[3] The compilations of Porphyry and Jamblichus on the life of Pythagoras, copied from a great variety of authors, will doubtless contain some truth amidst their confused heap of statements, many incredible, and nearly all unauthenticated. But it is very difficult to single out what these portions of truth really are. Even Aristoxenus and Dikæarchus, the best authors from whom these biographers quote, lived near two centuries after the death of Pythagoras, and do not appear to have had any early memorials to consult, nor any better informants than the contemporary Pythagoreans, — the last of an expiring sect, and probably among the least eminent for intellect, since the philosophers of the Sokratic school in its various branches carried off the acute and aspiring young men of that time.

Meiners, in his Geschichte der Wissenschaften (vol. i, b. iii, p. 191, *seq.*), has given a careful analysis of the various authors from whom the two biographers have borrowed, and a comparative estimate of their trustworthiness. It is an excellent piece of historical criticism, though the author exaggerates both the merits and the influence of the first Pythagoreans: Kiessling, in the notes to his edition of Jamblichus, has given some extracts from it, but by no means enough to dispense with the perusal of the original. I think Meiners allows too much credit, on the whole, to Aristoxenus (see p. 214), and makes too little deduction for the various stories, difficult to be believed, of which Aristoxenus is given as the source: of course the latter could not furnish better matter than he heard from his own witnesses. Where Meiners's judgment is more severe, it is also better borne out, especially respecting Porphyry himself, and his scholar Jamblichus. These later Pythagorean philosophers seem to have set up as a formal canon of credibility, that which many religious men of antiquity acted upon from a mere unconscious sentiment and fear of giving offence

the attributes of the primitive founder passed for godlike, by who had no memorials, no historical judgment, and no means of forming a true conception of Kroton as it stood in 530 B.C.[1]

To trace these tales to a true foundation is impossible: but we may entertain reasonable belief that the success of Pythagoras, as a person favored by the gods and patentee of divine secrets, was very great, — that he procured to himself both the reverence of the multitude and the peculiar attachment and obedience of many devoted adherents, chiefly belonging to the wealthy and powerful classes, — that a select body of these adherents, three hundred in number, bound themselves by a sort of vow both to Pythagoras and to each other, and adopted a peculiar diet, ritual, and observances, as a token of union, — though without anything like community of property, which some have ascribed to them. Such a band of men, standing high in the city for wealth and station, and bound together by this intimate tie, came by almost unconscious tendency to mingle political ambition with religious and scientific pursuits. Political clubs with sworn members, under one form or another, were a constant phenomenon in the Grecian cities,[2]

to the gods, — That it was *not right to disbelieve any story* recounted respecting the gods, and wherein the divine agency was introduced: no one could tell but what it *might be true:* to deny its truth, was to set bounds to the divine omnipotence. Accordingly, they made no difficulty in believing what was recounted about Aristæus, Abaris, and other eminent subjects of mythes (Jamblichus, Vit. Pyth. c. 138–148) — *καὶ τοῦτό γε πάντες οἱ Πυθαγόρειοι ὁμως ἐχουσι πιστευτικῶς, οἱον περὶ Ἀρισταίου καὶ Ἀβάριδος τὰ μυθολογούμενα καὶ ὅσα ἄλλα τοιαῦτα λέγεται.....τῶν τοιούτων δὲ τῶν δοκούντων μυθικῶν ἀπομνημονεύουσιν, ὡς οὐδὲν ἀπιστοῦντες ὅτι ἂν εἰς τὸ θεῖον ἀνάγηται.* Also, not less formally laid down in Jamblichus, Adhortatio ad Philosophiam, as the fourth Symbolum, p. 324, ed. Kiessling. *Περὶ θεῶν μηδὲν θαυμαστὸν ἀπιστεῖ, μηδὲ περὶ θείων δογμάτων.* Reasoning from their principles, this was a consistent corollary to lay down; but it helps us to estimate their value as selectors and discriminators of accounts respecting Pythagoras. The extravagant compliments paid by the emperor Julian in his letters to Jamblichus will not suffice to establish the authority of the latter as a critic and witness: see the Epistolæ, 34, 40, 41, in Heyler's edit. of Julian's letters.

[1] Aulus Gell. N. A. iv, 11. Apollonius (ap. Jamblich. c. 262) alludes to *τὰ ὑπομνήματα τῶν Κροτωνιατῶν*: what the date of these may be, we do not know, but there is no reason to believe them anterior to Aristoxenus.

[2] Thucyd. viii, 54. *τὰς ξυνωμοσίας, αἵπερ ἐτύγχανον πρότερον οὐσαι ἐν τῇ πόλει ἐπὶ δίκαις καὶ ἀρχαῖς, ἁπάσας ἐπελθὼν*, etc.

and the Pythagorean order at its first formation was the most efficient of all clubs; since it presented an intimacy of attachment among its members, as well as a feeling of haughty exclusiveness against the public without, such as no other fraternity could parallel.[1] The devoted attachment of Pythagoreans towards each other is not less emphatically set forth than their contempt for every one else. In fact, these two attributes of the order seem the best ascertained, as well as the most permanent of all: moreover, we may be sure that the peculiar observances of the order passed for exemplary virtues in the eyes of its members, and exalted ambition into a duty, by making them sincerely believe that they were the only persons fit to govern. It is no matter of surprise, then, to learn that the Pythagoreans gradually drew to themselves great ascendency in the government of Kroton. And as similar clubs, not less influential, were formed at Metapontum and other places, so the Pythagorean order spread its net and dictated the course of affairs over a large portion of Magna Græcia. Such ascendency of the Pythagoreans must have procured for the master himself some real, and still more supposed, influence over the march of government at Kroton and elsewhere, of a nature not then possessed by any of his contemporaries throughout Greece.[2] But his influence was probably exercised in the background, through the medium of the brotherhood who reverenced him: for it is hardly conformable to Greek manners that a stranger of his character should guide personally and avowedly the political affairs of any Grecian city.

On this important passage, in which Thucydidês notes the political clubs of Athens as sworn societies, — numerous, notorious, and efficient, — I shall speak farther in a future stage of the history. Dr. Arnold has a good note on the passage.

[1] Justin, xx, 4. "Sed trecenti ex juvenibus cum sodalitii juris sacramento quodam nexi, separatam a ceteris civibus vitam exercerent, quasi cœtum clandestinæ conjurationis haberent, civitatem in se converterunt."

Compare Diogen. Laërt. viii, 3; Apollonius ap. Jamblich. c. 254; Porphyry, Vit. Pyth. c. 33.

The story of the devoted attachments of the two Pythagoreans Damon and Phintias appears to be very well attested: Aristoxenus heard it from the lips of the younger Dionysius the despot, whose sentence had elicited such manifestation of friendship (Porphyry, Vit. Pyth. c. 59-62, Cicero. De Officiis, iii, 10; and Davis ad Cicero, Tusc. Disp. v. 22).

[2] Plutarch, Philosoph cum Principib. c. i, p. 777. *ἀν δ' ἀρχοντος ἀνόρὸς κα*

Nor are we to believe that Pythagoras came originally to Kroton with the express design of creating for himself an ascendent political position, — still less that he came for the purpose of realizing a great preconceived political idea, and transforming Kroton into a model-city of pure Dorism, as has been supposed by some eminent modern authors. Such schemes might indeed be ascribed to him by Pythagoreans of the Platonic age, when large ideas of political amelioration were rife in the minds of speculative men, — by men disposed to forego the authorship of their own opinions, and preferring to accredit them as traditions handed down from a founder who had left no memorials; but it requires better evidence than theirs to make us believe that any real Greek born in 580 B.C. actually conceived such plans. We cannot construe the scheme of Pythagoras as going farther than the formation of a private, select order of brethren, embracing his religious fancies, ethical tone, and germs of scientific idea, — and manifesting adhesion by those observances which Herodotus and Plato call the Pythagorean orgies and mode of life. And his private order became politically powerful, because he was skilful or fortunate enough to enlist a sufficient number of wealthy Krotoniates, possessing individual influence which they strengthened immensely by thus regimenting themselves in intimate union. The Pythagorean orgies or religious ceremonies were not inconsistent with public activity, bodily as well as mental: probably the rich men of the order may have been rendered even more active, by being fortified against the temptations of a life of indulgence. The character of the order as it first stood, different from that to which it was afterwards reduced, was indeed religious and exclusive, but also active and domineering; not despising any of those bodily accomplishments which increased the efficiency of the Grecian citizen, and which so particularly harmonized with the preëxisting tendencies of Kroton.[1] Niebuhr

πολιτικοῦ καὶ πρακτικοὺ καθάψηται (ὁ φιλόσοφος) καὶ τοῦτον ἀναπλήση καλοκαγαθίας, πολλοὺς δι' ἑνὸς ὠφέλησεν, ὡς Πυθαγόρας τοὶς πρωτεύουσι τῶν Ἰταλιωτῶν συγγενόμενος.

[1] I transcribe here the summary given by Krische, at the close of his Dissertation on the Pythagorean order, p. 101: "Societatis scopus fuit mere politicus, ut lapsam optimatium potestatem non modo in pristinum restitueret, sed firmaret amplificaretque: cum summo hoc scopo duo conjunct

and O. Muller have even supposed that the select Three Hundred Pythagoreans constituted a sort of smaller senate at that

fuerunt; moralis alter, alter ad literas spectans. Discipulos suos bonos probosque homines reddere voluit Pythagoras, et ut civitatem moderantes potestate suâ non abuterentur ad plebem opprimendam; et ut plebs, intelligens suis commodis consuli, conditione suâ contenta esset. Quoniam vero bonum sapiensque moderamen nisi a prudente literisque exculto viro exspectari (non) licet, philosophiæ studium necessarium duxit Samius iis, qui ad civitatis clavum tenendum se accingerent."

This is the general view (coinciding substantially with that of O. Müller, — Dorians, iii, 9, 16) given by an author who has gone through the evidences with care and learning. It differs on some important points from the idea which I conceive of the primitive master and his contemporary brethren. It leaves out the religious ascendency, which I imagine to have stood first among the means as well as among the premeditated purposes of Pythagoras, and sets forth a reformatory political scheme as directly contemplated by him, of which there is no proof. Though the political ascendency of the early Pythagoreans is the most prominent feature in their early history, it is not to be considered as the manifestation of any peculiar or settled political idea, — it is rather a result of their position and means of union. Ritter observes, in my opinion more justly: "We must not believe that the mysteries of the Pythagorean order were of a simply political character: the most probable accounts warrant us in considering that its central point was a mystic religious teaching," (Geschicht. der Philosophie, b. iv, ch. i, vol. i, pp. 365–368:) compare Hoeck. Kreta, vol. iii, p. 223.

Krische (p. 32) as well as Boeckh (Philolaus, pp. 39–42) and O. Müller assimilate the Pythagorean life to the Dorian or Spartan habits, and call the Pythagorean philosophy the expression of Grecian Dorism, as opposed to the Ionians and the Ionic philosophy. I confess that I perceive no analogy between the two, either in action or speculation. The Spartans stand completely distinct from other Dorians; and even the Spartan habits of life, though they present some points of resemblance with the bodily training of the Pythagoreans, exhibit still more important points of difference in respect to religious peculiarity and mysticism, as well as to scientific element embodied with it. The Pythagorean philosophy, and the Eleatic philosophy, were both equally opposed to the Ionic; yet neither of them is in any way connected with Dorian tendencies. Neither Elea nor Kroton were Doric cities; moreover, Xenophanês as well as Pythagoras were both Ionians.

The general assertions respecting Ionic mobility and inconstancy, contrasted with Doric constancy and steadiness, will not be found borne out by a study of facts. The Dorism of Pythagoras appears to me a complete fancy. O. Müller even turns Kroton into a Dorian city, contrary to all evidence.

city,[1] — an hypothesis no way probable; we may rather conceive them as a powerful private club, exercising ascendency in the interior of the senate, and governing through the medium of the constituted authorities. Nor can we receive without great allowance the assertion of Varro,[2] who, assimilating Pythagoras to Plato, tells us that he confined his instructions on matters of government to chosen disciples, who had gone through a complete training, and had reached the perfection of wisdom and virtue. It seems more probable that the political Pythagoreans were those who were most qualified for action, and least for speculation. And we may reasonably suppose in the general of the order that skill in turning to account the aptitudes of individuals, which two centuries ago was so conspicuous in the Jesuits; to whom, in various ways, the Pythagoreans bear considerable resemblance. All that we can be said to know about their political principles is, that they were exclusive and aristocratical, adverse to the control and interference of the people; a circumstance no way disadvantageous to them, since they coincided in this respect with the existing government of the city, — had not their own conduct brought additional odium on the old aristocracy, and raised up an aggravated democratical opposition, carried to the most deplorable lengths of violence.

All the information which we possess, apocryphal as it is, respecting this memorable club, is derived from its warm admirers; yet even their statements are enough to explain how it came to provoke deadly and extensive enmity. A stranger coming to teach new religious dogmas and observances, with a tincture of science and some new ethical ideas and phrases, though he would obtain some zealous votaries, would also bring upon himself a certain measure of antipathy. Extreme strictness of observances, combined with the art of touching skilfully the springs of religious terror in others, would indeed do much both to fortify and to exalt him. But when it was discovered that science, philosophy, and even the mystic revelations of religion, whatever they were, remained confined to the private talk and practice of

[1] Niebuhr, Römisch. Gesch. i, p. 165, 2d edit.; O. Müller, Hist of Dorians, iii, 9, 16: Krische is opposed to this idea, sect. v, p. 84

[2] Varro ap. Augustin. de Ordine, ii, 30; Krische, p. 77.

the disciples, and were thus thrown into the background, while all that was seen and felt without, was the political predominance of an ambitious fraternity, — we need not wonder that Pythagorism in all its parts became odious to a large portion of the community. Moreover, we find the order represented not merely as constituting a devoted and exclusive political party, but also as manifesting an ostentatious self-conceit throughout their personal demeanor,[1] — refusing the hand of fellowship to all except the brethren, and disgusting especially their own familiar friends and kinsmen. So far as we know Grecian philosophy, this is the only instance in which it was distinctly abused for political and party objects: the early days of the Pythagorean order stand distinguished for such perversion, which, fortunately for the progress of philosophy, never presented itself afterwards in Greece.[2] Even at Athens, however, we shall hereafter see that Sokratês, though standing really aloof from all party intrigue, incurred much of his unpopularity from supposed political conjunction with Kritias and Alkibiadês,[3] to which, indeed, the orator Æschinês

[1] Apollonius ap. Jamblichum, V. P. c. 254, 255, 256, 257. *ἡγεμόνες δὲ ἐγένοντο τῆς διαφορᾶς οἱ ταῖς συγγενείαις καὶ ταῖς οἰκειότησιν ἐγγύτατα καθεστηκότες τῶν Πυθαγορείων. Αἴτιον δ' ἦν, ὅτι τὰ μὲν πολλὰ αἰσχὺνει τῶν πραττομένων*, etc.: compare also the lines descriptive of Pythagoras, c. 259. *Τοὺς μὲν ἑταίρους ἦγεν ἴσους μακάρεσσι θεοῖσι. Τοὺς δ' ἄλλους ἡγεῖτ' οὐτ' ἐν λόγῳ, ἐν ἀριθμῷ.*

That this Apollonius, cited both by Jamblichus and by Porphyry, is Apollonius of Tyana, has been rendered probable by Meiners (Gesch. der Wissensch. v. i, pp. 239–245): compare Welcker, Prolegomena ad Theognid pp. xlv, xlvi.

When we read the life of Apollonius by Philostratus, we see that the former was himself extremely communicative: he might be the rather disposed therefore to think that the seclusion and reserve of Pythagoras was a defect, and to ascribe to it much of the mischief which afterwards overtook the order.

[2] Schleiermacher observes, that "Philosophy among the Pythagoreans was connected with political objects, and their school with a practical brotherly partnership, such as was never on any other occasion seen in Greece." (Introduction to his Translation of Plato, p. 12.) See also Theopompus, Fr. 68, ed. Didot, apud Athenæum, v, p. 213, and Euripidês, Mêdêa, 294

[3] Xenophon, Memorab. i, 2, 12; Æschines, cont. Timarch. c. 34. *ἡμεῖς, ὦ Ἀθηναῖοι, Σωκράτη τὸν σοφιστὴν ἀπεκτείναμεν, ὅτι Κριτίαν ἐφάνη πεπαιδευκὼς, ἕνα τῶν τριάκοντα*

distinctly ascribes his condemnation, speaking about sixty years after the event. Had Sokratês been known as the founder of a band holding together intimately for ambitious purposes, the result would have been eminently pernicious to philosophy, and probably much sooner pernicious to himself.

It was this cause which brought about the complete and violent destruction of the Pythagorean order. Their ascendency had provoked such wide-spread discontent, that their enemies became emboldened to employ extreme force against them. Kylon and Ninon — the former of whom is said to have sought admittance into the order, but to have been rejected on account of his bad character — took the lead in pronounced opposition to the Pythagoreans; and the odium which the latter had incurred extended itself farther to the Senate of One Thousand, through the medium of which their ascendency had been exercised. Propositions were made for rendering the government more democratical, and for constituting a new senate, taken by lot from all the people, before which the magistrates should go through their trial of accountability after office; an opportunity being chosen in which the Senate of One Thousand had given signal offence by refusing to divide among the people the recently conquered territory of Sybaris.[1] In spite of the opposition of the Pythagoreans, this change of government was carried through. Ninon and Kylon, their principal enemies, made use of it to exasperate the people still farther against the order, until they provoked actual popular violence against it. The Pythagoreans were attacked when assembled in their meeting-house near the temple of Apollo, or, as some said, in the house of Milo: the building was set on fire, and many of the members perished;[2] none but the younger and more vigorous escaping. Similar disturbances, and the like violent suppression of the order, with destruction of several among the leading citizens, are said to have taken place

[1] This is stated in Jamblichus, c. 255; yet it is difficult to believe; for if the fact had been so, the destruction of the Pythagoreans would naturally have produced an allotment and permanent occupation of the Sybaritan territory, — which certainly did not take place, for Sybaris remained without resident possessors until the foundation of Thurii.

[2] Jamblichus, c. 255–259; Porphyry, c. 54–57; Diogen. Laërt. viii. 39; Diodor. x, Fragm vol. iv, p. 56, Wess.

in other cities of Magna Græcia, — Tarentum, Metapontum, Kaulonia. And we are told that these cities remained for some time in a state of great disquietude and commotion from which they were only rescued by the friendly mediation of the Peloponnesian Achæans, the original founders of Sybaris and Kroton, — assisted, indeed, by mediators from other parts of Greece. The cities were at length pacified, and induced to adopt an amicable congress, with common religious festivals at a temple founded expressly for the purpose, and dedicated to Zeus Homarius.[1]

Thus perished the original Pythagorean order. Respecting Pythagoras himself, there were conflicting accounts; some representing that he was burnt in the temple with his disciples;[2] others, that he had died a short time previously; others again affirmed that he was alive at the time, but absent, and that he died not long afterwards in exile, after forty days of voluntary abstinence from food. His tomb was still shown at Metapontum in the days of Cicero.[3] As an active brotherhood, the Pythagoreans never revived; but the dispersed members came together as a sect, for common religious observances and common pursuit of science. They were readmitted, after some interval, into the cities of Magna Græcia,[1] from which they had been originally expelled, but to which the sect is always considered as particularly belonging, — though individual members of it are found besides at Thebes and other cities of Greece. Indeed, some of these later Pythagoreans sometimes even acquired great political influence, as we see in the case of the Tarentine Archytas, the contemporary of Plato.

It has already been stated that the period when Pythagoras arrived at Kroton may be fixed somewhere between B.C. 540-530; and his arrival is said to have occurred at a time of great depression in the minds of the Krotoniates. They had recently been defeated by the united Lokrians and Rhegians, vastly inferior to themselves in number, at the river Sagra; and the humiliation thus brought upon them is said to have rendered them docile to the training of the Samian missionary.[2] As the birth of the Pythagorean order is thus connected with the defeat of the Krotoniates at the Sagra, so its extinction is also connected with their victory over the Sybarites at the river Traeis, or Trionto, about twenty years afterwards.

---

[1] Polyb. ii, 39; Plutarch, De Genio Socratis, c. 13, p. 583; Aristoxenus, ap. Jamblich. c. 250. That the enemies of the order attacked it by setting fire to the house in which the members were assembled, is the circumstance in which all accounts agree. On all other points there is great discrepancy, especially respecting the names and dates of the Pythagoreans who escaped: Boeckh (Philolaus, p. 9, *seq.*) and Brandis (Handbuch der Gesch. Philos. ch. lxxiii, p. 432) try to reconcile these discrepancies.

Aristophanês introduces Strepsiadês, at the close of the Nubes, as setting fire to the meeting-house (*φροντιστήριον*) of Sokratês and his disciples possibly the Pythagorean conflagration may have suggested this.

[2] "Pythagoras Samius suspicione dominatûs injustâ vivus in fano crematus est." (Arnobius adv. Gentes, lib. i, p. 23, ed. Elmenhorst.)

[3] Cicero, De Finib. v, 2 (who seems to have copied from Dikæarchus: see Fuhr. ad Dikæarchi Fragment. p. 55); Justin, xx, 4; Diogen. Laërt. viii, 40; Jamblichus, V. P. c. 249.

O. Müller says (Dorians, iii, 9, 16), that "the influence of the Pythagorean league upon the administration of the Italian states was of the most beneficial kind, which continued for many generations after the dissolution of the league itself."

The first of these two assertions cannot be made out, and depends only on the statements of later encomiasts, who even supply materials to contradict their own general view. The judgment of Welcker respecting the influence of the Pythagoreans, much less favorable, is at the same time more probable. (Præfat. ad Theognid. p. xlv.)

The second of the two assertions appears to me quite incorrect; the influence of the Pythagorean order on the government of Magna Græcia ceased altogether, as far as we are able to judge. An individual Pythagorean like Archytas might obtain influence, but this is not the influence of the order. Nor ought O. Müller to talk about the Italian Greeks giving up the Doric customs and adopting an Achæan government. There is nothing to prove that Kroton ever had Doric customs.

[1] Aristotel. de Cœlo, ii, 13. *οἱ περὶ τὴν Ἰταλίαν, καλούμενοι δὲ Πυθαγορεῖοι.* "Italici philosophi quondam nominati." (Cicero, De Senect. p. 21.)

[2] Heyne places the date of the battle of Sagra about 560 B.C.; but this is very uncertain. See his Opuscula, vol. ii, Prolus. ii, pp. 53, and Prolus. x, p. 184. See also Justin, xx, 3, and Strabo, vi, pp. 261–263. It will be seen that the latter conceives the battle of the Sagra as having happened after the destruction of Sybaris by the Krotoniates; for he states twice that the Krotoniates lost so many citizens at the Sagra, that the city did not long survive so terrible a blow: he cannot, therefore, have supposed that the complete triumph of the Krotoniates over the great Sybaris was gained afterwards.

Of the history of these two great Achæan cities we unfortunately know very little. Though both were powerful, yet down to the period of 510 B.C., Sybaris seems to have been decidedly the greatest: of its dominion as well as of its much-denounced luxury I have spoken in a former chapter.[1] It was at that time that the war broke out between them which ended in the destruction of Sybaris. It is certain that the Sybaritans were aggressors in the war; but by what causes it had been preceded in their own town, or what provocation they had received, we make out very indistinctly. There had been a political revolution at Sybaris, we are told, not long before, in which a popular leader named Têlys had headed a rising against the oligarchical government, and induced the people to banish five hundred of the leading rich men, as well as to confiscate their properties. He had acquired the sovereignty and become despot of Sybaris;[2] and it appears that he, or his rule at Sybaris, was much abhorred at Kroton, — since the Krotoniate Philippus, a man of splendid muscular form and an Olympic victor, was exiled for having engaged himself to marry the daughter of Têlys.[3] According to the narrative given by the later Pythagoreans, those exiles, whom Têlys had driven from Sybaris, took refuge at Kroton, and cast themselves as suppliants on the altars for protection. It may well be, indeed, that they were in part Pythagoreans of Sybaris. A body of powerful exiles, harbored in a town so close at hand, naturally inspired alarm, and Têlys demanded that they should be delivered up, threatening war in case of refusal. This demand excited consternation at Kroton, since the military strength of Sybaris was decidedly superior. The surrender of the exiles was much debated, and almost decreed, by the Krotoniates, until

[1] See above, vol. iii, chap. xxii.

[2] Diodor. xii, 9. Herodotus calls Têlys in one place *βασιλῆα*, in another *τύραννον* of Sybaris (v, 44): this is not at variance with the story of Diodorus.

The story given by Athenæus, out of Herakleidês Ponticus, respecting the subversion of the dominion of Têlys, cannot be reconciled either with Herodotus or Diodorus (Athenæus, xii p 522). Dr. Thirlwall supposes the deposition of Têlys to have occurred between the defeat at the Traeis and the capture of Sybaris; but this is inconsistent with the statement of Herakleidês, and not countenanced by any other evidence.

[3] Herodot. v, 47.

at length the persuasion of Pythagoras himself is said to have determined them to risk any hazard sooner than incur the dishonor of betraying suppliants.

On the demand of the Sybarites being refused, Têlys marched against Kroton, at the head of a force which is reckoned at three hundred thousand men.[1] He marched, too, in defiance of the strongest religious warnings against the enterprise, — for the sacrifices, offered on his behalf by the Iamid prophet Kallias of Elis, were decisively unfavorable, and the prophet himself fled in terror to Kroton.[2] Near the river Traeis, or Trionto, he was met by the forces of Kroton, consisting, we are informed, of one hundred thousand men, and commanded by the great athlete and Pythagorean Milo; who was clothed, we are told, in the costume and armed with the club of Hêraklês. They were farther reinforced, however, by a valuable ally, the Spartan Dorieus, younger brother of king Kleomenês, then coasting along the gulf of Tarentum with a body of colonists, intending to found a settlement in Sicily. A bloody battle was fought, in which the Sybarites were totally worsted, with prodigious slaughter; while the victors, fiercely provoked and giving no quarter, followed up the pursuit so warmly that they took the city, dispersed its inhabitants, and crushed its whole power[3] in the short space of seventy days. The Sybarites fled in great part to Laus and Skidrus,[4] their settlements planted on the Mediterranean coast, across the Calabrian peninsula. And so eager were the Krotoniates to render the site of Sybaris untenable, that they turned the course of the river Krathis so as to overwhelm and destroy it: the dry bed in which the river had originally flowed was still visible in the time of Herodotus,[5] who was among the settlers in the town of Thurii, afterwards founded, nearly adjoining.

[1] Diodor. xii, 9; Strabo, vi, p. 263; Jamblichus, Vit. Pythag. c. 260 Skymn. Chi. v, 340.

[2] Herodot. v, 44.

[3] Diodor. xii, 9, 10; Strabo, vi, p. 263.

[4] Herodot. vi, 21; Strabo, vi, p. 253.

[5] Herodot. v, 45; Diodor. xii, 9, 10; Strabo, vi, p. 263. Strabo mentions expressly the turning of the river for the purpose of overwhelming the city, — *ἐλόντες γὰρ τὴν πόλιν ἐπήγαγον τὸν ποταμὸν καὶ κατέκλυσαν*. It is to this change in the channel of the river that I refer the expression in Herodotus, — *τέμενός τε καὶ νηὸν ἐόντα παρὰ τὸν ξηρὸν*

It appears, however, that the Krotoniates for a long time kept the site of Sybaris deserted, refusing even to allot the territory among the body of their own citizens: from which circumstances, as has been before noticed, the commotion against the Pythagorean order is said to have arisen. They may perhaps have been afraid of the name and recollections of the city; wherein no large or permanent establishment was ever formed, until Thurii was established by Athens about sixty-five years afterwards. Nevertheless, the name of the Sybarites did not perish. Having maintained themselves at Laos, Skidros, and elsewhere, they afterwards formed the privileged Old-citizens among the colonists of Thurii; but misbehaved themselves in that capacity, and were mostly either slain or expelled. Even after that, however, the name of Sybaris still remained on a reduced scale in some portion of the territory. Herodotus recounts what he was told by the Sybarites, and we find subsequent indications of them even as late as Theokritus.

The conquest and destruction of the original Sybaris — perhaps in 510 B.C. the greatest of all Grecian cities — appears to have excited a strong sympathy in the Hellenic world. In Milêtus, especially, with which it had maintained intimate union, the grief was so vehement, that all the Milesians shaved their heads in token of mourning.[1] The event happened just at the time of the expulsion of Hippias from Athens, and must have made a sensible revolution in the relations of the Greek cities on

---

Κράθιν. It was natural that the old deserted bed of the river should be called "*the dry Krathis*:" whereas, if we suppose that there was only one channel, the expression has no appropriate meaning. For I do not think that any one can be well satisfied with the explanation of Bähr: "Vocatur Crathis hoc loco ξηρὸς *siccus*, ut qui hieme fluit, æstatis vero tempore exsiccatus est: quod adhuc in multis Italiæ inferioris fluviis observant." I doubt whether this be true, as a matter of fact, respecting the river Krathis (see my preceding volume, ch. xxii), but even if the fact were true, the epithet in Bähr's sense has no especial significance for the purpose contemplated by Herodotus, who merely wishes to describe the site of the temple erected by Dorieus. "Near the Krathis," or "near the dry Krathis," would be equivalent expressions, if we adopted Bähr's construction; whereas to say, "near the deserted channel of the Krathis," would be a good local designation

[1] Herodot. vi, 21.

the Italian coast with the rustic population of the interior. The Krotoniates might destroy Sybaris, and disperse its inhabitants, but they could not succeed to its wide dominion over dependent territory; and the extinction of this great aggregate power, stretching across the peninsula from sea to sea, lessened the means of resistance against the Oscan movements from the inland. From this time forward, the cities of Magna Græcia, as well as those of Ionia, tend to decline in consequence, while Athens, on the other hand, becomes both more conspicuous and more powerful. At the invasion of Greece by Xerxês, thirty years after this conquest of Sybaris, Sparta and Athens send to ask for aid both from Sicily and Korkyra, — but not from Magna Græcia.

It is much to be regretted that we do not possess fuller information respecting these important changes among the Greco-Italian cities, but we may remark that even Herodotus, — himself a citizen of Thurii, and dwelling on the spot not more than eighty years after the capture of Sybaris, — evidently found no written memorials to consult; and could obtain from verbal conversation nothing better than statements both meagre and contradictory. The material circumstance, for example, of the aid rendered by the Spartan Dorieus and his colonists, though positively asserted by the Sybarites, was as positively denied by the Krotoniates, who alleged that they had accomplished the conquest by themselves, and with their own unaided forces. There can be little hesitation in crediting the affirmative assertion of the Sybarites, who showed to Herodotus a temple and precinct erected by the Spartan prince in testimony of his share in the victory, on the banks of the dry, deserted channel, out of which the Krathis had been turned, and in honor of the Krathian Athênê.[1] This of itself forms a proof, coupled with the positive assertion of the Sybarites, sufficient for the case. But they produced another indirect argument to confirm it, which deserves notice. Dorieus had attacked Sybaris while he was passing along the coast of Italy to go and found a colony in Sicily, under the express mandate and encouragement of the oracle; and after tarrying awhile at Sybaris, he pursued his journey to the south

---

[1] Herodot. v, 45.

western portion of Sicily, where he and nearly all his companions perished in a battle with the Carthaginians and Egestæans, — though the oracle had promised him that he should acquire and occupy permanently the neighboring territory near Mount Eryx. Now the Sybarites deduced from this fatal disaster of Dorieus and his expedition, combined with the favorable promise of the oracle beforehand, a confident proof of the correctness of their own statement that he had fought at Sybaris. For if he had gone straight to the territory marked out by the oracle, they argued, without turning aside for any other object, the prophecy on which his hopes were founded would have been unquestionably realized, and he would have succeeded; but the ruinous disappointment which actually overtook him was at once explained, and the truth of prophecy vindicated, when it was recollected that he had turned aside to help the Krotoniates against Sybaris, and thus set at nought the conditions prescribed to him. Upon this argument, Herodotus tells us, the Sybarites of his day especially insisted.[1] And while we note their pious and literal faith in the communications of an inspired prophet, we must at the same time observe how perfectly that faith supplied the place of historical premises, — how scanty their stock was of such legitimate evidence, — and how little they had yet learned to appreciate its value.

It is to be remarked, that Herodotus, in his brief mention of the fatal war between Sybaris and Kroton, does not make the least allusion to Pythagoras or his brotherhood. The least allusion to Pythagoras or his brotherhood. The least allusion which we can infer from such silence is, that the part which they played in reference to the war, and their general ascendency in Magna Græcia, was in reality less conspicuous and overruling than the Pythagorean historians set forth. Even making such allowance, however, the absence of all allusion in Herodotus, to the commotions which accompanied the subversion of the Pythagoreans, is a surprising circumstance. Nor can I pass over a perplexing statement in Polybius, which seems to

[1] Herodot. v, 45. Τοῦτο δὲ, αὐτοῦ Δωριέος τὸν θάνατον μαρτύριον μέγιστον ποιεῦνται (Σιβαρῖται), ὅτι παρὰ τὰ μεμαντευμένα ποιέων διεφθάρη. Εἰ γὰρ δὴ μὴ παρέπρηξε μηδὲν, ἐπ' ᾧ δὲ ἐστάλη ἐποίεε, εἷλε ἂν τὴν Ἐρυκίνην χώρην καὶ ἑλὼν κάτεσχε, οὐδ' ἂν αὐτός τε καὶ ἡ στρατιὴ διεφθάρη.

show that he too must have conceived the history of Sybaris in a way different from that in which it is commonly represented. He tells us that after much suffering in Magna Græcia, from the troubles which followed the expulsion of the Pythagoreans, the cities were induced by Achæan mediation to come to an accommodation, and even to establish something like a permanent league, with a common temple and sacrifices. Now the three cities which he specifies as having been the first to do this, are Kroton, Sybaris, and Kaulonia.[1] But according to the sequence of events and the fatal war, just described, between Kroton and Sybaris, the latter city must have been at that time in ruins; little, if at all, inhabited. I cannot but infer from this statement of Polybius, that he followed different authorities respecting the early history of Magna Græcia in the beginning of the fifth century B. C.

Indeed, the early history of these cities gives us little more than a few isolated facts and names. With regard to their legislators, Zaleukus and Charondas, nothing is made out except their existence, — and even that fact some ancient critics contested. Of Zaleukus, whom chronologists place in 664 B.C., I have already spoken; the date of Charondas cannot be assigned, but we may perhaps presume that it was at some time between 600–500 B.C. He was a citizen of middling station, born in the Chalkidic colony of Katana in Sicily,[2] and he framed laws not only for his own city, but for the other Chalkidic cities in Sicily

[1] Polyb. ii, 39. Heyne thinks that the agreement here mentioned by Polybius took place Olymp. 80, 3; or, indeed, after the repopulation of the Sybaritan territory by the foundation of Thurii (Opuscula, vol. ii; Prolus. x, p. 189). But there seems great difficulty in imagining that the state of violent commotion — which, according to Polybius, was only appeased by this agreement — can possibly have lasted so long as half a century; the received date of the overthrow of the Pythagoreans being about 504 B.C.

[2] Aristot. Politic. ii, 9, 6; iv, 9, 10. Heyne puts Charondas much earlier than the foundation of Thurii, in which, I think, he is undoubtedly right: but without determining the date more exactly (Opuscul. vol. ii; Prolus. ix, p. 160), Charondas must certainly have been earlier than Anaxilas of Rhêgium and the great Sicilian despots; which will place him higher than 500 B.C.: but I do not know that any more precise mark of time can be found.

and Italy, — Leontini, Naxos, Zanklê, and Rhêgium. The laws and the solemn preamble ascribed to him by Diodorus and Stobæus, belong to a later day,[1] and we are obliged to content ourselves with collecting the brief hints of Aristotle, who tells us that the laws of Charondas descended to great minuteness of distinction and specification, especially in graduating the fine for offences according to the property of the guilty person fined,[2] — but that there was nothing in his laws strictly original and peculiar, except that he was the first to introduce the solemn indictment against perjured witnesses before justice. The perjured witness, in Grecian ideas, was looked upon as having committed a crime half religious, half civil; and the indictment raised against him, known by a peculiar name, partook of both characters, approaching in some respects to the procedure against a murderer. Such distinct form of indictment against perjured testimony — with its appropriate name,[3] which we shall find maintained at Athens

[1] Diodorus, xii, 35; Stobæus, Serm. xliv. 20–40; Cicero de Legg. ii, 6. See K. F. Hermann, Lehrbuch der Griech. Staatsalterthümer, ch. 89; Heyne, Opuscul. vol. ii, pp. 72–164. Brandis (Geschichte der Röm. Philosophie, ch. xxvi, p. 102) seems to conceive these prologues as genuine.

The mistakes and confusion made by ancient writers respecting these lawgivers — even by writers earlier than Aristotle (Politic. ii, 9, 5) — are such as we have no means of clearing up.

Seneca (Epist. 90) calls both Zaleukus and Charondas disciples of Pythagoras. That the former was so, is not to be believed; but it is not wholly impossible that the latter may have been so, — or at least that he may have been a companion of the earliest Pythagoreans.

[2] Aristotel. Politic. ii, 9, 8. *Χαρώνδου δ' ἴδιον μὲν οὐθέν ἐστι πλὴν αἱ δίκαι τῶν ψευδομαρτύρων· πρῶτος γὰρ ἐποίησε τὴν ἐπίσκηψιν· τῇ δ' ἀκριβείᾳ τῶν νόμων ἐστὶ γλαφυρώτερος καὶ τῶν νῦν νομοθετῶν.* To the fulness and precision predicated respecting Charondas in the latter part of this passage, I refer the other passage in Politic. iv, 10, 6, which is not to be construed as if it meant that Charondas had graduated fines on the rich and poor with a distinct view to that political trick (of indirectly eliminating the poor from public duties) which Aristotle had been just adverting to, — but merely means that Charondas had been nice and minute in graduating pecuniary penalties generally, having reference to the wealth or poverty of the person sentenced.

[3] *Πρῶτος γὰρ ἐποίησε τὴν ἐπίσκηψιν* (Aristot. Politic. ii, 9, 8). See Harpokration, v, Ἐπεσκήψατο, and Pollux, viii, 33; Dêmosthenês cont. Stephanum, ii, c. 5; cont. Euerg. et Mnêsibul. c. 1. The word *ἐπίσκηψις* carries with it the solemnity of meaning adverted to it in the text, and seems

throughout the best-known days of Attic law — was first enacted by Charondas.

to have been used specially with reference to an action or indictment against perjured witnesses: which indictment was permitted to be brought with a less degree of risk or cost to the accuser than most others in the Attic dikasteries, (Dêmosth. cont. Euerg. et Mn. l. c.)
